(A ʿA.)

AARON. [See HĀRŪN.]

ĀB (P. — Z. *āp-em*), water; metaphorically, eclat, splendor, freshness. — River. The word is often used either at the beginning or at the end, in the composition of geographical names. — [Comp. MĀʾ.]

Āb-i ḥayāt, fount of immortality (Barbier de Meynard, *Boustan*, p. 172, note 2). — *Āb-anbār*, a supply of water, a reservoir in which water is always kept fresh (J. Dieulafoy, *Perse*, p. 100). — *Āb-dār*, a servant whose business it is to prepare drinks (J. Dieulafoy, *loc. cit.*, p. 169); an official who gives the prince water to drink or to wash with (Ch. Schefer, *Siasset-Nameh*, p. 142, note 1). (CL. HUART.)

AB, or *Ab*, the name of the fifth or eleventh month respectively in the calendars of the Jews, Syrians, &c. In its Syro-Roman use the month Āb corresponds to the sixth month (*Aghostos*) of the Turkish *Māliye* (i. e. the financial and civil) year, that is to say the month of August in the Julian calendar. [See TAʾRĪKH.] (E. MAHLER.)

ʿABĀʾ (ʿ*abāʾa*, ʿ*abāya*), the name of a kind of dress used by the Arabs. Native lexicographers generally give to ʿ*abāʾ* the value of a collective name, of which ʿ*abāʾa*, or ʿ*abāya* (both forms are old) would be the form of unity. ʿ*Abāʾ*, however, has already been used by classic writers with the meaning of unity, and the word has thus subsisted in the dialects of Mesopotamia, of Arabia and even of Egypt. It is also in the form of ʿ*abā* that the Turks have borrowed it, though they discard the initial guttural (ʿ*ain*). On the other hand, ʿ*abāya* is the word now generally employed when speaking of the extremely antiquated dress described in the next paragraphs.

1. Syro-Arabic ʿ*abāya*: a short, full blouse, reaching to a little below the knee, with an opening at the top for the head, and a gap at each side for the arms: this is the ʿ*abāya* of the Bedouins of Syria, of Arabia and of ʿIrāḳ. It has no sleeves. It is made of a coarse, thick woolen material, or woven camel's or goat's hair; it is either of a single color — generally varying from light to very dark brown, — or in stripes of alternate brown and white. Sometimes, but very seldom, it is made of cloth, or silk, and decorated with embroidery; then it is the gala dress of the rich. In certain parts this ʿ*abāya* is the ordinary dress not only of the men but also of the women.

2. Egyptian ʿ*abāya*: the old Bedouin ʿ*abā* has undergone some transformations in Egypt; there this dress comes down to the feet, and has sleeves, but has kept the alternate stripes of light and dark brown of the primitive ʿ*abāya*.

3. Maghrib ʿ*abāya*: in Eastern Algeria the name ʿ*abāya* is sometimes given to a dress with very short sleeves, made of a thick material, square in shape, with a hood resembling very much the Moroccan *djellāba* or *ḳashshāba*. In the West of Algeria the ʿ*abāya* is a white blouse of linen, of cotton, or, more rarely, of wool, or silk, which is worn over the shirt and under the *bernūs* or the *djellāba*. It falls midway down the leg and has no sleeves; sometimes shoulder-pieces cover the half-way down the upper arm. Finally, in the West of Algeria the word ʿ*abāya* is still used for a dress of the women; over her chemise a woman wears an ʿ*abāya* of cambric, of silk, or even of velvet. It is a long flowing sleeveless dress with a deeply hollowed-out opening behind and long slits at the sides under the arms. This first ʿ*abāya* is covered by another of embroidered tulle, of the same shape and with the same openings.

Bibliography: Dozy, *Diction. des noms de vêtements*, pp. 292—297; idem, *Supplément aux diction. arabes*, ii. 90; Barbier de Meynard, *Diction. turc*, i. 1; ii. 345; Burckhardt, *Notes on the Bedouins and Wahabys* (London, 1831), i. 47. — A description and illustration of an ʿ*abāya* of ʿIrāḳ will be found in M. von Oppenheim's *Vom Mittelmeer zum persischen Golf* ii. 121; and a description and illustration of an Egyptian ʿ*abāya* in E. W. Lane's *Modern Egyptians* (5th ed.) i. 38, 41.

(W. MARÇAIS.)

ʿABĀBDE (ʿ*Abābida*), a highland people chiefly nomadic in their habits, dispersed between the Nile and the Red Sea, who extend north as far as the latitude of Asiūṭ and south to the tropics and even further in the valley of the Nile. An inveterate antipathy separates the ʿAbābde from their northern neighbours, the Maʿāza, and from their southern neighbors, the Bishārīye. To this antipathy is added, with regard to the former their descent and, to the latter, their language. Their name appears to be derived from that of an ancestor, ʿAbbād, who has disappeared from history, but whose name survives in that of certain places: Bīr ʿAbbād and Wādī ʿAbbād, the latter of which debouches into the Nile valley opposite Edfū. They number from thirty to forty thousand souls. They are distinguished very clearly by their anthropological characteristics as much from the pure Arabs as from the inhabitants of the interior of Africa. Klunzinger describes them in the following terms: „dolichocephalous, orthognathous, with an oval face, large glowing eyes, nose straight, a little short and broad, hair smooth and jet black but not woolly, skin dark brown

verging on black, the expression of the face completely European (Caucasian), body remarkable for its beauty of form". They are thus distinguished from the Arabs less by their structure and hair than by the color of their skin and by the shape of their nose. Anthropologically they approach very nearly their congeners, the Bishārīye; nevertheless differences in their social condition have given rise to many divergencies of a secondary nature. The greater part of the 'Abābde lead a very unassuming nomadic life in the mountains; their domestic animals are camels, goats and sheep, with the addition in the Nile valley of pigeons and poultry; they have no horses. Instead of the Bedouin tent of strongly woven hair they only inhabit miserable huts covered with matting or rags, rarely a sort of *gourbi*; some of them are content for shelter with natural caves, thus justifying the name of Troglodytes which the ancients gave them (comp. Schweinfurth, p. 288; Klunzinger, p. 252). Those who inhabit the shores of the Red Sea are now still for the main part the real Ichthyophagi of former ages. Being without nets and boats, they content themselves with what the sea throws up to them or what it allows them to catch easily. In the Nile valley, where they have formed a great number of small colonies between Kene (Gene) and Aswān, especially in the vicinity of Darāw, of Edfū, and in Lekēta (Legēta), some of them devote themselves to agriculture. The principal resource of the rest to get their durra, consequently their bread, is trading, or the presents they receive from travellers. Owing to their situation and the poverty of their country, they have for centuries learned to seek their livelihood as camel-drivers and caravan guides. In this respect their activity has sometimes expanded greatly in three principal directions: firstly on the road from Ḳūs to 'Aidhāb ('Aidāb), between Rās Elba and Suākin, which was much frequented in the Middle Ages and which took from thirteen to seventeen days; secondly the road, more and more frequented in modern times, from Kene to al-Ḳoṣair, which takes from four to five days; thirdly the routes connecting Egypt, Nubia, the Upper Nile and Abyssinia. Being honest and docile they have gained the confidence of the Egyptian government, which has lately confided to them the route from Korosko to Abū Ḥāmid also, which traverses the territory of the Bishārīye, who obstinately refuse to submit. Without any doubt the fact that the 'Abābde now speak mostly Arabic is a consequence of their long established practice of acting as guides and camel-drivers. Except for a little among themselves in intimate intercourse, they no longer use their old Hamitic tongue, which closely approaches the *to-Bedawiye*; sometimes, in order that they may not be understood by strangers, they mix Arabic expressions with their own language; which explains why a secret conventional language of the 'Abābde has been mentioned. If the collective name of the people is Arabic, the names of the principal groups of tribes — Ashabab (Oshabab), Melikab, Nimrab, Shawātir — are essentially Hamitic in form.

The material culture of the 'Abābde is, as has already been said, still very primitive. As amongst the nomadic Arabs, their furniture is limited to kitchen-pots, leather bottles, a few dishes, some mats, ropes, hearthstones, knives and fire stones; their kitchen utensils recall to a certain extent the stone age; often hand-mills, with which their grain is ground, are improvised, on the spot if necessary, from two flat stones. Their food is milk, durra bread, fruit, vegetables, occasionally game, poultry and, near the Red Sea, fish. Their flocks and herds in the mountains graze the scanty herbage there, while towards the Red Sea they often browse the leaves of the thorn. They make a certain amount of money also from the sale of charcoal, senna and other medicinal plants, and gum-arabic. At Ḳoṣair and in its environs, they make a little as water-carriers and by other inferior employments. The scent of the inhabitants of the desert in following up tracks is very famous, and for that reason they are employed even in criminal researches.

Naturally the 'Abābde dress in conformity with the climate and their social status. The children often go quite naked, the men wear a loin-cloth, the women, for decency, a belt made of thongs of leather (*rahat*), and to protect themselves from the cold, a blue chemise or even a cloak. In the matter of ornaments the women know scarcely any but things made of fluor-spar or of brass, and shells. The boys and men, like the Bishārīye, take very great care of their hair, which they coat with butter or grease, and which they braid, plait and fasten in diverse manners (Klunzinger, p. 247). Sometimes they go bare-foot, sometimes they wear sandals. Their arms, which seem to be more for adornment than for use, are a knife, spear and sword, rarely a shield and never a rifle.

The chiefs of the clans and of the tribes are subordinate to a *Shaikh*, the head of all the 'Abābde, who is personally responsible to the Egyptian government for the maintenance of peace and security. As a matter of fact, since the time of Muḥammad 'Alī, the country has been quiet and intercommunication sure, the more so in that it is a great advantage to the 'Abābde that the caravan routes for which they furnish the escort should be well frequented. The radical change in the state of things, due to the firmness of Muḥammad 'Alī Pasha, fully explains the contradictory reports about the character of the 'Abābde. Descriptions earlier than or shortly after the year 1800 depict them as being, like the Blem(m)yes formerly and the Bishārīye now, a plundering, perfidious, cruel and treacherous people. Nowadays we are told the contrary, for they are extolled as being inoffensive, discreet, peaceful and absolutely reliable. It is a complete transformation which could only have been carried out by such a man as the founder of the New-Egypt, whose work extends so far as into Arabia, Syria and the Sudan.

The faith of the 'Abābde is Islām, adapted, however, to the nature of the country and its population. The confession of faith is the only one of the so called „pillars of Islām" which stands fast. The women are veiled; the children are circumcised. Veneration of the Saints is widely spread especially in the neighborhood of the Red Sea, where the belief in the Patron Saint is perhaps blended with ancient pagan ideas. They eat the flesh of many animals that are *harām* for the strict Mussulman. From the Islāmic practices they have borrowed polygamy, facility of divorce and marriage at an early age. On the contrary, they

have remained untouched by the belief in the Djinn, which causes so much trouble to the soul of many an Arab. In their intercourse between the sexes they do not observe any greater severity than the nomadic Arabs. Like their congenerous tribes they love to have war dances executed during their festivals. In the case of a death the ordinary lamentations are indulged in, and generally stones are thrown on the grave.

Little is known of the past of the ʿAbābde. They are a people without a history, whose domicile and conditions of life have remained almost the same for thousands of years. We believe we are right in identifying them with the Blem(m)yes, of whom mention has often been made ever since the time of Theocritos and later, in the Christian epoch. Arab geographers unite the ʿAbābde with their southern neighbors under the name of Bedja. Quatremère has written a work on the information given by Maḳrīzī and other authors. The trade-route of the Middle Ages which we mentioned above, going from Ḳūṣ to ʿAidhāb and connecting Egypt and the Maghrib with Djidda, ʿAden and Suākin, crossed the southern portion of the territory of the ʿAbābde, reached the sea probably near Berenice and then went along the territory of the Bishārīye. On this account and because of the rich mines situated in the territory of al-ʿAllāḳī, the Arabs became acquainted with the Bedja. European accounts begin with that of Wansleb, and, since then, they have been completed and corrected progressively, first in the eighteenth century by Bruce, then by the scholars in Napoleon's expedition, and finally by travellers under the protection of the New Egypt. Many of these writers think they can identify the name of the ʿAbābde with that of the Gebadaei mentioned by Pliny (*Hist. Nat.*, vi. 29), but that appears to me inadmissible. We can with more certainty recognize in the ʿAbābde the Troglodytes and Ichthyophagi of the ancient geographers.

(K. Vollers.)

ĀBĀD (P. — Pehl. *āpātān*, from a hypothetical **ā-pāta*), a Persian adjective signifying "flourishing", speaking of a tract of land, and, subsequently, "inhabited, cultivated" as opposed to "desert"; after that it is used as a substantive and appears in the composition of the names of a great number of places, such as Ruknābād, and of towns, especially in India: Aḥmedābād, Ḥaidarābād (Hyderabad), etc. (Cl. Huart.)

ABAD (A.), a theological term signifying an eternity which is without end, but not without beginning. [Comp. AZAL.]

ABĀDEH, or *Abādhah*, a town in Persia situated on the road from Iṣṭakhr to Iṣpahān. Mention of it is found in oriental writings of the Middle Ages; see G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905) pp. 282, 284, 297. At the present time it contains about 5000 inhabitants; comp. Reclus, *Nouv. géogr. univ.*, ix. 270. Celebrated for the Persian wood carvings produced there; see Brugsch, *Reise der Kgl. Preuss. Gesandtsch. nach Persien* (Leipzic, 1862—1863), ii. 126, 222. — Arab geographers mention another Persian town of the same name situated in the district of Barm, on the road from Sābik to Iṣṭakhr, on the north shore of the lake Bakhtagān; it was also called *Ḳaryat ʿAbd al-Raḥmān*; comp. Barbier de Meynard, *Diction. géogr. hist. et littér. de la Perse* (Paris, 1861), p. 7; G. le Strange, *loc. cit.*, p. 279. This southern Abādeh seems now to have disappeared. (M. Streck.)

ABĀḌITES. In Northern Africa this name [see IBĀḌITES] is used to designate a branch of the Khawāridj which separated from ʿAlī when he accepted arbitration with Muʿāwiya. In the first half of the second century of the Hegira, Khāridjism in an Abāḍite and Ṣofrite form was introduced in the Maghrib, it developed rapidly amongst the Berbers and became the national doctrine, which served as a pretext for the struggle between the African and the orthodox Arabs.

The Abāḍites of Tripoli and of Ifrīḳiya under the guidance of their principal Imāms, Abu 'l-Khaṭṭāb and Abū Ḥātim [see these articles] played the principal part in the Berber rising of the second century, which nearly deprived the Caliphate of Africa.

An Abāḍite dynasty, the Rostemides, held power at Tāhert (Tagdemt) for more than 130 years, and only disappeared when the Fāṭimides founded their empire in the Maghrib.

After the destruction of Tāhert by Abū ʿAbd Allāh al-Shīʿī (296 = 908-909) the Abāḍites lived sporadically in the Algerian and Tunisian Sahara, as well as at Djerba.

In these days they are still found in pretty compact groups at Wargla, Mzāb, Djebel Nefūsa and in the island of Djerba. They have an important historical and religious literature and communities in constant communication with each other, carefully keep up their fervor. They have likewise fairly frequent intercourse with the Abāḍites of ʿOmān and of Zanzibar.

But three principal schisms, both political and religious, namely the Nakkārites, the Khalfites, and the Nafāthites, occurred amongst the African Abāḍites. The Nakkārites, who have had their place in the history of African risings, are the only ones who are still represented by some small groups at Djerba and at Zuāgha (Tripoli).

Naturally the Abāḍites object energetically to the name of heretics which the orthodox sects give them. They claim that they alone have preserved the pure doctrine of Islām and maintain that theirs alone amongst the seventy-three Musulman sects, has the right to salvation.

As was said above, the starting point of the falling away of the Khawāridj was the difference of opinion with ʿAlī at the time of the arbitration. Without contesting the legitimacy of the first four caliphs as the Shīʿites do, they insist that the only impeccable examples after the Prophet were Abū Bekr and ʿOmar. ʿOthmān has not followed

in their footsteps; the Abāḍites carefully point out in their books what they call his innovations.

Musulmans are required to officiate as Imām when they have the necessary strength and knowledge to do so; it is not necessary that the Imām should be a Ḳuraishite; it is enough if he be virtuous and pious and rule in conformity with the Ḳor'ān and the Sunna; if they deviate from them they must be deposed.

The Ḳor'ān is the word of God, created by Him. God could not be seen in Paradise.

Recompenses and punishments in the other world are both eternal; Hell will not be destroyed any more than will Paradise.

God pardons venial sins; but grievous sins cannot be pardoned unless they are blotted out by repentance.

It is the duty of every Musulman to enjoin the Good and reprove the Evil as far as he is able.

All Musulmans are strictly compelled to acknowledge their solidarity which they express by word and action, but the individual who acts contrary to the prescriptions of the religious law loses all claim on the friendship of his co-religionists and should be treated as an enemy until he performs the act of repentance. There is a kind of excommunication which has grave religious and civil consequences.

The Abāḍites of Algeria effect a great austerity in moral, at least in the *ḳṣūr* of the Mzāb, where they cannot get away from the tyrannical supervision of the *Tolba*. In the towns of the Algerian Tell, where they congregate for the purposes of commerce, the practice is not always in accordance with the theory.

It must, however, be admitted that generally they keep their beliefs very jealously. Except for the exigencies of their very brisk commerce, they do not mix with orthodox Musulmans; their marriages with the latter are rare exceptions and are reprobated by the whole community. This puritanism, be it sincere or pharisaical, has formed them into a homogeneous and compact group, which is very clearly distinguishable by its behavior, character and tendencies amidst the orthodox Arabs or Berbers of Northern Africa.

Basset, *Le Zenatia du Mzab, de Ouargla et de l'Oued Rir'*; idem, *Les sanctuaires du Djebel Nefousa*; A. de Motylinski, *Les livres de la secte abadhite*; idem, *l'Aqida des Abadhites* (*Recueil de Mémoires et de Textes publié en l'honneur du XIVe Congrès des Orientalistes* etc., pp. 409 *et seq*.

(A. DE MOTYLINSKI.)

ABĀḲĀ, second Mongol (Ilkhān) prince of Persia (1265—1282), born in Mongolia in March 1234. He came to Persia with his father Hūlāgū [q. v.] in 1256, and, after the death of the latter, was elected as prince by the representatives of this dynasty; five years later, the great khān Khubilai confirmed his election. The struggle with the Mamlūks of Egypt, begun by Hūlāgū, was continued by Abāḳā, but unsuccessfully, although the Mongols of Kipčāk, who had formerly been allied with the Mamlūks, had at the beginning of Abāḳā's reign made a treaty of peace with their congeners of Persia. Before this, in 1266, Abāḳā had had a wall built from the farther side of the Kūr to protect himself against incursions from the north; his vizier Shams al-Dīn subdued the tribes of the Caucasus in 1278. In order to enable himself better to fight against the common enemy, Abāḳā tried to establish relations with the Western Christians, the natural enemies of the Mamlūks, and his ambassadors appeared at Lyons in 1274 and at Rome in 1277. These overtures were received with joy in Europe: Abāḳā received letters from King Edward I of England (1274), and from Popes Clement IV (1267), Gregory X (1274) and Nicholas III (1277). Previously he had married in 1265 a Greek princess. They did not, however, succeed in organising any combined action against Egypt; the Mamlūks kept the upper hand against the Mongols as well as against the crusaders. In 1266, 1273 and 1275 they invaded Armenia Minor, and in 1277 they occupied a part of Asia Minor, although for a short time only. In the same year they defeated a Mongol army near Albistān. In 1280 the Mongols penetrated into Syria and destroyed Aleppo; but in the following year Abāḳā's brother, Mengu-Timur, sustained a notable defeat between Ḥamāt and Ḥimṣ (Emessa) at the hands of the Mamlūks. On the other hand, Abāḳā's troops met with great success in the East; an invasion by a large Čagatai army under Burāḳ was in 1270 victoriously repulsed near Herāt. In order to make such attacks more difficult in the future, Abāḳā took advantage of the disturbances which had broken out in Transoxania, and in January 1273 had the town of Bokhārā, which served as a base of operations and a secure support for the invading armies, destroyed. A Čagatai prince, Tekuder (often called *Niguder* on account of a faulty reading), who had come from Persia with Hūlāgū and been given by him a part of Georgia in fief, tried to join his congeners at the time of the invasion of Burāḳ, but he was defeated. The hordes under his command got a footing in the eastern portion of the empire, devastated the province of Fārs during the lifetime of Abāḳā (1279), and for a long time disturbed Khorāsān and the neighboring countries. At home the reign of Abāḳā was on the whole peaceable. Extensive reductions were made in the taxes in favor of impoverished country people. Like almost all the Mongol princes, Abāḳā was given to drink. He died on the 1st April 1282 of an illness which seems to have been *delirium tremens*. His successor was his brother Tekuder (whose Musulman name was Aḥmed). Mention will be made elsewhere of Abāḳā's vizier Shams al-Dīn and of his brother 'Alā' al-Dīn [see DJUWAINĪ].

(W. BARTHOLD.)

ĀBĀN (P.), name of the eighth month of the moveable solar year of the Persians, as well as, in the same calendar, of the tenth day of each month. To prevent confusion the month is called „Ābān-*Māh*" (the month of Ābān) and the day „Ābān-*Rūz*" (the day of Ābān). [See TA'RĪKH.]

(E. MAHLER.)

ABĀN B. 'ABD AL-ḤAMĪD (*Fihr.*: Ḥumaid) AL-LĀḤIḲĪ (i. e. son of Lāḥiḳ b. 'Ufair), also known as AL-RAḲĀSHĪ, because his family was under the patronage of the Banū Raḳāsh, Arab poet, died in the year 200 (815-816). He was a friend of the Barmakides, for whom he put into verse the *Kalīla wa-Dimna* [q. v.]. He ap-

plied himself also to the same kind of work with other writings, particularly Persian and Hindoo: e. g. *Sīrat Ardashīr*, *Sīrat Anūshirwān*, *Kitāb Bilawhar wa-Būdāsf*, *Kitāb Sindbād*, and *Kitāb Mazdak*. Besides this he wrote a cosmogonical poem entitled *Dhāt al-Ḥulal*, a work on the wisdom (*ḥilm*) of the Hindues, and another on fasting and meditation; these works are all lost. Like almost every Arab poet he wrote panegyrics, elegies and satires. With regard to the former two, there can be cited a panegyric of the ʿAbbāsides, in which he argues against the pretentions of the ʿAlides to the succession, and an elegy, which is still extant, on the Barmakides. The former poem brought him into favor with the caliph Hārūn al-Rashīd, who rewarded him with 20000 dirhems. In his satires he attacked his contemporary poets and the celebrated grammarian Abū ʿUbaida. Many members of his family, his son Ḥamdān for instance, also distinguished themselves by their poetic skill.

Bibliography: *Fihrist*, i. 119, 163; *Aghānī*, xx. 73—78; Goldziher, *Muhamm. Stud.*, i. 198 *et seq.*; ii. 101; *Verhandl. d. VII intern. Orient.-Congr.*, Sem. Sect. (Vienna, 1888), pp. 118 *et seq.* (M. TH. HOUTSMA.)

ABĀN B. ʿOTHMĀN B. ʿAFFĀN, governor, son of the third caliph. His mother was called Umm ʿAmr bint Djundab b. ʿAmr al-Dawsīya. Abān accompanied ʿĀʾisha at the battle of the Camel in Djumādā I 36 (November 656); on the battle terminating otherwise than was expected, he was one of the first to run away. On the whole, he does not seem to have been of any political importance. The caliph ʿAbd al-Malik b. Marwān appointed him as governor of Medina. He occupied this position for seven years; he was then dismissed and his place was taken by Hishām b. Ismāʿīl. Abān owes his celebrity not so much to his activity as official at the service of the Umaiyads as to his wonderful knowledge of Musulman traditions. In this respect he was held in great esteem, and his *Maghāzī* (a biography of Muḥammed) is perhaps the oldest literary production on that subject. He was struck with apoplexy and died a year later at Medina in 105 (723-724) according to report, at any rate during the reign of Yazīd b. ʿAbd al-Malik.

Bibliography: Ibn Saʿd, v. 112 *et seq.*; Nawawī (ed. Wüstenf.), pp. 125 *et seq.* (K. V. ZETTERSTÉEN.)

ABANŪS (variants: *ābinūs*, *ābunūs*, *abnūs* and *ābnus*), ebony. This word is derived from the Greek ἔβενος (comp. also the Hebrew *hoben*, the old Egyptian *heben*) which passed to the Aramean (*abnūsā*) and from there to the Persian, Arabic, Turkish and other languages. Although ebony had been already well known in the old days by the Semites, who imported it from India and Ethiopia, it was very little used at the early times of Islām, on account of its rarity and the scanty requirements of artistic goods. Absolute faith must not be given to the story according to which, when the so called Mosque of ʿOmar was being built at Jerusalem under the Umaiyad caliph ʿAbd al-Malik, the venerable rock was enclosed with a palisade of ebony. It is certain that this wood had been already used under the caliphs together with ivory in the manufacture of chess-men and dice in mosaics of the sort very often used later with great skill on furniture, doors, lattice work and wainscots; many examples of them may be seen at the Arab museum of Cairo.

In literature *ābanūs* is not spoken of as a rich wood, but as a medicine. As early as the ninth century the Persians and Arabs knew it as such from the translations of Dioscorides and Galen; it was considered to be a useful astringent for phlyctenous inflamation and chronic catarrh of the eyes; it was also taken internally in the form of a powder for the bowels and stomach, and was dusted over burns. — According to Dioscorides, Abyssinian ebony was generally considered to be more efficacious than Indian. To the former were ascribed the properties which at the present time are only found in the wood of the *Diospyros* and *Maba* kinds of the East Indies, of the Indian Archipelago, of Madagascar, and of St. Mauritius; i. e. an intense black and a fineness of grain which almost makes it impossible to distinguish the fibre. The African species of ebony which the Arabs prefer, are nowadays rightly held in little estimation, and particularly the ebony tree of Abyssinia (*shadjar habanūs*) which according to Brehm (*Reisesk. in Nordostafrika*) is rather a shrub than a tree; its wood which is of an inferior quality, but fit for use, dries up and rots for want of being used.

Bibliography: Abū Manṣūr Muwaffaḳ, *Kitāb al-Abniya* (ed. Seligmann); Ibn al-Baiṭār, *al-Djāmiʿ* (Būlāḳ, 1291); translated by L. Leclerc in *Notices et Extraits des Manuscr. de la Biblioth. Nation.*, xxiii. 1; Ḳazwīnī (ed. Wüstenf.), i. (J. HELL.)

ABARḲOBĀDH, or *Barḳobādh*, a district of the Babylonian department of the Tigris, a tract of land along the western frontier of Ahwāz (Khūzistān), between Wāsiṭ on the north and Baṣra on the south; see Streck, *Babylonien nach den Arab. Geogr.* (Leyden, 1900), i. 15, 19. The name of this country is derived from that of the Sāsānide king Kawādh I (Ḳobādh; reigned from 488 to 531 A. D.); at any rate the first part of the name is *Abar* and not *Abaz* (nor *Abādh*), as the Arab geographers give it; comp. Nöldeke, *Gesch. der Perser u. Araber zur Zeit der Sasaniden* (Leyden, 1879), p. 146, note 2. The Persian *abar*, or *abr*, „a cloud" is often seen at the beginning of the names of places in Persia. Some Arab authors assert that Abarḳobādh is also the name of that district in which Arradjān is situated, but that appears to spring from a mistake. (M. STRECK.)

ABARḲŪH, a town in Persia, north of Iṣṭakhr, about halfway between that town and Yezd. Another form of the name is *Abarḳūya*; the abbreviation *Barḳūh* (also *Warḳūh*) is often met with. In the Middle Ages the population of Abarḳūh was about the third of that of Iṣṭakhr; comp. P. Schwarz, *Iran im Mittelalter nach den arab. Geogr.* (Leipsic, 1896), i. 17 *et seq.*, and G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905), pp. 284 *et seq.*, 294, 297. It still exists under the name of *Abergūh*; see A. de Bode in the *Journ. of the Roy. Geogr. Soc.* (London), 1843, p. 78, and H. L. Wells, in *Proceed. of the Roy. Geogr. Soc.* (London), 1883, p. 16. (M. STRECK.)

AL-**ABARZĪ** ʿAMĪD AL-DĪN ASʿAD B. NAṢR AL-ANṢĀRĪ, poet and minister to Saʿd b. Zengī, the atābeg of Fārs, a native of Abarz, a canton of this province (Luṭf ʿAlī Beg, *Ātesh-Kede*, p. 8), now *Abardj*, north of Shīrāz (Ḥādjdjī Mīrzā Ḥasan

Yezdī, *Fārs-Nāme-i Nāṣirī*, Shīrāz, 1313 = 1895-1896, ii. 170). He was sent by his master the atābeg as an ambassador to the sultan Muḥammed Khwārizm-Shāh, refused the offers which were made to him, succeeded Rukn al-Dīn Ṣalāḥ Kirmānī as minister and held his position until the death of the atābeg Saʿd. The son and successor of the latter, Abū Bekr, had him arrested on the charge of having held a correspondence with the king of Khwārizm and of having acted as a spy for him. He was shut up in the fortress of Ushkunwān, the state prison which rises above the ruins of Persepolis, and died there at the end of five or six months (Djumādā I or II 624 = April-June 1227), after having dictated to his son Tādj al-Dīn Muḥammed an Arabic ode of 111 verses (*al-Ḳaṣīda al-ushkunwāniya*), which has made him famous and in which he deplores his ill-fate. [See AL-ABZARĪ.]

(CL. HUART.)

ʿABASA (A.), title of the eightieth Sūra. [See ḲURʾĀN.]

ĀBASKŪN, or *Ābiskūn* and *Ābeskūn*, a town situated on the south-east shore of the Caspian Sea, in the province of Djordjān, about a day's journey to the north-west of Asterābād, close to the mouth of the river Djordjān-Rūd. It was considered in the Middle Ages, if not as the most important, as one of the most important ports of the Caspian Sea, which for this reason was often called the Sea of Ābaskūn; comp. Barbier de Meynard, *Diction. géogr. histor. et littér. de la Perse* (Paris, 1861), p. 1; G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905), p. 379.

(M. STRECK.)

ĀBĀZA, Turkish name for the Abazes [see ABKHĀZ], given as a surname to many persons in Ottoman history who descended from those people.

1. ĀBĀZA PASHA, taken prisoner at the defeat of the rebel Djanbulād, whose treasurer he was, was brought before Murād-Pasha and only had his life spared through the intercession of Khalīl, agha of the Janizaries, who, having become *ḳapūdān-pasha*, gave him the command of a galley, and conferred upon him the government of Marʿash when he was promoted to the dignity of grand vizier. Later he became governor of Erzerūm and planned to destroy the Janizaries; those in his province lodged a complaint against him; he was deposed, but refused to obey the orders of the Porte (1032 = 1623); he levied taxes and raised troops on the pretext of avenging the death of the sultan ʿOthmān II, marched upon Angora and Siwās, and took Brusa, but did not succeed in seizing the citadel. In 1033 (1624), the grand vizier Ḥāfiẓ Pasha defeated him in a battle near Kaisāriya, at the bridge across the Ḳara-ṣū, owing to the defection of Ṭaiyār Pasha and the Turkomans. Ābāza took refuge at Erzerūm, of which he succeeded in having himself made governor on condition that he should admit a guard of Janizaries into the fortress. In 1036 (1627), suspecting that the expedition against Akhiska was in reality directed against himself, he massacred a great number of the Janizaries belonging to the army. His old master Khalīl besieged Erzerūm in vain and was obliged to retreat because of the snow (1037 = 1627). In the following year, the Bosnian Khosrew Pasha, having been made grand vizier, again besieged him and forced him to capitulate after a fortnight's siege; the rebel was granted his pardon and the government of Bosnia. There he again persecuted his enemies, the Janizaries, was deposed and went to Belgrade, where on a hill to the south of the town he erected Ābāza Köshki. Then he was sent to Widdin and commanded the troops who invaded Poland (1633). Being honoured with the confidence of Murād IV, he accompanied him to Adrianople when preparations were being made for a new campaign against Poland; but his success excited envy; reports, having been cleverly disseminated, estranged the sultan, who had him executed (29th Ṣafar 1044 = 24th August 1634).

Bibliography: Hammer-Purgstall, *Gesch. des Osman. Reiches*, iv. 569, 582; v. 26, 85, 173 *et seq.*, 189 *et seq.*; Muṣṭafā-Efendi, *Natāʾidj al-Wuḳūʿāt*, ii. 48, 82; Ewliya Efendi, *Travels*, i. 119 *et seq.*

2. ĀBĀZA ḤASAN had been given the command of the Turkomans of Asia Minor as a recompense for his capture of the rebel Ḥaidar Oghlu. Having been dismissed for no reason, he revolted in his turn, held the country between Gerede and Bolu, defeated the old bandit Ḳatirdji Oghlu who had been sent to fight against him, and submitted on condition that he should have the title of *voivode* of the Turkomans; later as the result of complaints lodged against him, he was imprisoned in the Seven Towers and was only released by the elevation of Behayī to the position of Shaikh al-Islām (1062 = 1652); his friend conferred on him the sandjaḳ of Okhri. When Ipshir Pasha, who was also one of the Abaza nation, was made grand vizier by Muḥammed IV, he sent for him. At his execution he remained faithful to him, returned to Asia Minor with the remainder of his troops and regained the office of *voivode* of the Turkomans (1065 = 1655). He settled at Aleppo and committed such ravages in Syria that the Dīwān wanted to have him banished from the empire; the grand vizier, Sulaimān Pasha, however, confirmed him in his position of governor and entrusted the defenses of the Dardanelles to him. In 1066 (1656) he was sent to Diyār Bekr as governor. Two years later he rebelled, put himself at the head of a considerable army under the pretext of demanding the dismissal of Muḥammed Köprülü, at that time grand vizier, and threatened Brusa. In the neighborhood of Ilghin he completely defeated Murtaḍā Pasha, who had been sent against him (15th Rabīʿ I 1069 = 11th December 1658); but he fell into a trap which had been set for him, left ʿAintāb for Aleppo to make terms for his submission and was treacherously assassinated there.

3. ĀBĀZA MUḤAMMED PASHA was the beilerbei of Marʿash when, during the campaign against the Russians (1183 = 1769), he was ordered to act in concert with the Khān of the Crimea. He commanded the fortress of Bender and received the third *ṭūgh* in recompense for the part he had taken in raising the siege of Chocim. Having been entrusted with the defense of this place and

seeing himself abandoned by the Ottoman troops, he fled and was commissioned to defend Moldavia, which he failed to accomplish. At the battle of Kaghul (1st Aug. 1770), he commanded the right wing; after the defeat of the Turks he took Ismā'īl. Having been made governor of Silistria, he was dismissed after having squandered the money given to him for the purpose of raising troops, and was exiled to Kustendil. At the time of the conquest of the Crimea and the flight of Selim-Gerāi he refused to land the few troops he was bringing up and returned to Sinope; he was decapitated (1185 = 1771).

ABB. [See ibb.]

'ABBA. [See 'abā'.]

'ABBĀD b. Ziyād, governor, nephew of the caliph Mu'āwiya I. His uncle made him governor of Sidjistān and he occupied the position for seven years. He undertook expeditions against the East and conquered Kandahār. Yazīd b. Mu'āwiya, on succeeding his father, dismissed him in 61 (680-681), and in his place appointed his brother Salm b. Ziyād as governor of Sidjistān and Khorāsān.

'ABBĀDĀN, the most southern town of Babylonia. Originally it was on an island in the Persian Gulf and was still there in the tenth century; but now it is more than twenty miles from the coast; comp. G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905), pp. 44, 48 *et seq.*; idem, in the *Journ. of the Roy. As. Soc.*, 1895, p. 302; Ch. Schefer, *Sefer-Nameh* (Paris, 1881), pp. 245 *et seq.*, and especially note 2 on page 245. As to the situation of 'Abbādān, comp. especially H. Wagner, in the *Nachr. d. Kgl. Gesellsch. d. Wissensch. zu Göttingen*, Phil.-hist. Kl., 1902, fasc. 2, p. 255. (M. Streck.)

'ABBĀDĀNĪ, twisted rush work, deriving its name from 'Abbādān, although it is made in other places, Egypt for example. See A. von Kremer, *Culturgesch. des Orients unter den Chalifen*, ii. 298.

al-**'ABBĀDĪ.** The following persons are known under this *nisba*:

1. Abū 'Āṣim Muḥammed b. Aḥmed b. Muḥammed b. 'Abd Allāh b. 'Abbād al-'Abbādī, often called *al-Ḳāḍī 'l-Harawī*, celebrated Shāfi'ite jurisconsult, born in 375 (985) at Herāt and died there in Shawwāl 458 (1066). He undertook distant travels and wrote several works, the titles of which are enumerated by Ibn Khallikān.

Bibliography: Ibn Khallikān (ed. Wüstenf.), No. 558; Wüstenfeld, *Schāfi'iten*, p. 204; Brockelmann, *Gesch. d. arab. Litter.*, i. 386.

2. Ḳuṭb al-Dīn Abū Manṣūr al-Muẓaffar b. Ardashīr al-'Abbādī (so called from his birthplace, Sindj 'Abbād, in the district of Merw), celebrated preacher, born in 491 (1098) and died in 547 (1152). He studied at Nīsābūr, then came to Baghdād, where his oratorical talent won him the favor of the caliph, who entrusted him with diplomatic missions.

3. Raḍī al-Dīn Abū Bekr b. 'Alī b. Muḥammed al-Ḥaddād al-'Abbādī al-Miṣrī al-Ḥanafī, died at Zabīd in 800 (1397). He wrote commentaries on the Ḳor'ān and on other theologico-jurisprudential works.

Bibliography: Brockelmann, *loc. cit.*, ii. 189; comp. i. 175, 525. (M. Th. Houtsma.)

'ABBĀDIDES, Arabic dynasty of Seville, which reigned from 414 (or 422) to 484 = 1023 (or 1031)—1091. The 'Abbādides founded the most important and brilliant principality amongst the numerous little states which arose in the eleventh century on the dismemberment of the Musulman empire in Spain after the fall of the Umaiyad caliphate of Cordova (422 = 1031). These petty kings were called *Reyes de Taifas*, in Arabic: *Mulūk al-Ṭawā'if*, like the dynasties founded by the successors of Alexander. The founder of the dynasty was the ḳāḍī Abu 'l-Ḳāsim Muḥammed I b. Ismā'īl, of the Yemeno-Lakhmite family, 'Abbād (414—434 = 1023—1042), which emigrated from Syria. His son and successor was Abū 'Amr 'Abbād b. Muḥammed *al-Mu'taḍid* [q. v.] (434—461 = 1042—1068), who was succeeded in his turn by his son, the poet king, Abu 'l-Ḳāsim Muḥammed II b. 'Abbād *al-Mu'tamid* [q. v.] (461—484 = 1068—1091). The latter was dethroned by the Almoravides and died in captivity at Aghmāt, Morocco, in 1095.

F. von Schack, *Kunst und Poesie der Araber in Spanien und Sicilien*, 2d ed. (Stuttgart, 1877), i. 235 *et seq.*; Müller, *Der Islam im Morgen- und Abendland*, ii. 589 *et seq.* (C. F. Seybold.)

'ABBĀS I, surnamed the Great, king of Persia of the Ṣafawī dynasty, son and successor of Muḥammed Khudābende, was born in 965 (1557) and died at Faraḥābād on the 19th Djumāda I 1037 (27th January 1628), after a reign of forty-three years. He revolted against his father at Herāt, took Ḳazwīn and was from that time recognized as the sovereign (995 = 1587). He reorganized the State, which, in the feeble hands of Ismā'īl II and of his father, was on the point of ruin, created regiments of troops whom he paid from the royal treasury and called by the Turkish name of *tüfenkči* (fusiliers); in imitation of the Janissaries, they were recruited from Christian Georgians and Armenians converted to Islamism. He formed, to serve him as a body-guard and to diminish the importance of the seven tribes Ḳizil Bāsh, the support of the first Ṣafawī, a new Turkish tribe bearing the name of Shāh-sewen ("who love the king"). He fought against the Özbegs, who had seized upon Meshhed, and inflicted upon them, in 1597, near to Herāt, a sanguinary defeat from which few escaped. He vanquished the Ottoman Turks at Ṣufyān, near Tibrīz, which capitulated as did Erivan and Ḳārs (1012 = 1603). He directed the battle against the Ottomans, commanded by Djighāl Oghlu, in the neighborhood of Sīs (1015 = 1606). The peace concluded at Sarāw (1027 = 1618), conditional on an annual

delivery of a hundred loads of silk, was not of long duration, for he took from the Ottomans Bagdad and the sacred Shī'ite towns of Kerbelā' and Nadjaf or Meshhed 'Alī (1033 = 1623), Mosul, and Diyār Bekr; Georgia was occupied by his troops. In another direction, with the support of the East Indian Company, which lent him the co-operation of an English fleet, he took the islands in the Persian Gulf, including Ormuz, from the Portuguese; in place of this old factory he substituted Gumrūn to which he gave the name of Bender-i 'Abbās (the port of 'Abbās) which it bears to this day.

His part in the internal administration of his empire was not less important than that which he played abroad. He built roads, namely the highway which traversed Māzanderān, bridges, palaces and caravanserais; among the remarkable works carried out in his reign, especial mention is made of the monumental buildings at Iṣpahān: the Great Mosque, the palace of Čihil-sutūn (forty columns), the Čār-bāgh (four gardens) and the great bridge of Zende-rūd, and in Māzanderān: the palace Djihān-numā at Faraḥābād, that of Sefer- (or Sefī-) ābād between Sārī and Astarābād, etc. He established the security of intercommunication by the pitiless hunting down of brigands. He caused the Armenian population of Djulfa, a town on the Araxes, to be removed to Iṣpahān, and this population built there a quarter which still bears the name of Djulfa. He was favorable to foreign monastic establishments such as that of the Carmelites at Iṣpahān. Desirous of establishing relations with the European powers, he welcomed two English gentlemen, Sir Anthony and Robert Sherley, who had come to his court as simple travellers; he made use of their cooperation to teach his troops discipline and artillery drill; he entrusted to Sir Anthony, in company with Ḥasan Bei, a diplomatic mission, having for its object the uniting of Europe in a league against the Ottomans. A Roman gentleman, Pietro della Valle, was also employed and accompanied him to the siege of Gumrūn.

Despite the great qualities that he possessed, he was yet cruel; at the beginning of his reign he did not hesitate to have Murshid Kulī Khān, to whom he owed his elevation, put to death (994 = 1586), and later he had his eldest son Ṣafī Mīrzā, whose popularity he feared, assassinated. He gave the order for the massacre of the population of Sukhūm, which had become too numerous for the liking of its governor; this order through chance circumstances was not carried out.

(Cl. Huart.)

'ABBĀS II, son of Sām Mīrzā (Shāh Ṣafī) and great-grandson of 'Abbās I, was born in 1043 (1633), died in 1077 (1666) at Dāmghān, and was buried at Kumm. He ascended the throne of Persia at the age of ten (1052 = 1642), he saw a reaction of religious intolerance introduced against the abuse of wine which had been encouraged by the example of his predecessors, but the severe measures adopted by his ministers were unable to put a stop to it. 'Abbās II, as he grew older, returned to the drunken habits of his ancestors. He retook Kandahār and received as guests the Özbeg chiefs, who had been driven out by the revolutions. He sent back Tahmūras Khān, prince of Georgia, who had made war upon him, safe from harm (1070 = 1659). Worn out by debauchery, he was only thirty-four years of age when he died. It appears that he was a poet, and a verse of his composition is quoted.

Bibliography: Riḍā Kulī Khān, *Madjma' al-Fuṣaḥā'*, i. 40; *Rawḍat al-Ṣafā-i Nāṣirī*, viii. 193 *et seq.* (Cl. Huart.)

'ABBĀS III, Ṣafawī prince, was born in 1145 (1732) and died at Iṣpahān in 1149 (1736). He was placed on the throne by Nādir Shāh after the conqueror had dethroned Tahmāsp by stratagem and had exiled him to Khorāsān (1145 = 1732). He was then a child of eight months. During his reign, Nādir besieged Bagdad and took Georgia and Armenia (1147 = 1734). On his premature death, Nādir seized the opportunity of assuming the title of Shāh himself.

Bibliography: Riḍā Kulī Khān, *Rawḍat al-Ṣafā-i Nāṣirī*, viii. 221 *et seq.*

(Cl. Huart.)

'ABBĀS I, viceroy of Egypt (1848—1854), born in 1816 at Djidda, where his father Ṭūsūn Pasha, son of Muḥammed 'Alī, had stayed to take part in the campaign of Ibrāhīm Pasha against the Wahhābites. 'Abbās was his grandfather's favorite, although the beginning of that brutality of character which he later showed so strongly could already be seen in his childhood.

Having been at a very early age entrusted with important offices, he behaved as a full-blooded despot of the best oriental type. Ibrāhīm Pasha died in 1848 after a long illness, eight months before Muḥammed 'Alī, who had fallen into idiotcy. The Porte recognized 'Abbās as the successor of Ibrāhīm, but, seeing how young and inexperienced the new viceroy was, wanted to take the opportunity to strengthen the supremacy of the sultan over him in Egypt. The English wanted to construct a railway between the Nile and the Red Sea; 'Abbās was favorable to this project, but this was a formal violation of the firmān of 1841, which stipulated that the hereditary pasha of Egypt was bound to ask the consent of the Porte in all important affairs. On the 4th September 1851, a severe note of the Porte reminded him of his obligations and he was forced to yield. Moreover the Porte required of him that he should enforce in Egypt the fundamental state-laws of the Ottoman empire (*tanẓīmāt*), and a commission was appointed to formulate the modifications which might be necessary in Egypt for that purpose. The work of this commission having proved futile, the sultan, in 1852, sent the clever Fu'ād Efendi, who obtained permission from 'Abbās that the

order with regard to the enforcement of the *tanẓīmāt* in Egypt should be read in public. He was rewarded for his complaisance and financial support by being granted, first for seven years and later for life, the right of having condemned murderers executed, that of exacting statute labor and military service, and the control over the Muḥammed 'Alī family, which the suspicious and despotic 'Abbās had already treated with great cruelty. The diplomatic victory of the Porte had therefore been a mere formality. During the Crimean war, 'Abbās acted loyally towards the sultan, at whose disposal he placed 15000 men and the Egyptian fleet.

As to the internal government of Egypt, 'Abbās acted as a narrow-minded and stupid fanatic. He gave up the costly experiments of his two predecessors to introduce European civilization into his country, only it was not from any economical motive, but purely out of hate of the Franks and his hostility to culture. He became more and more suspicious and hard-hearted and he retired to the castle Benha 'l-'Asl, which he possessed in the desert not far from Cairo. There he died suddenly in July 1854, having most probably been poisoned. His uncle Sa'īd Pasha, fourth son of Muḥammed 'Alī, succeeded him.

(J. Oestrup.)

'ABBĀS II (Ḥilmī), khedive now reigning in Egypt, son of Tawfīḳ Bei (Pasha) and of his wife, Emine Hānum, was born on the 1st Djumādā II. 1291 (16th July 1874) in the palace of Nimre Telāte at Alexandria. He received a well cared for education, semi-Oriental and semi-European. In 1887 his father, who had become viceroy in 1879, first thought of sending him with his brother Muḥammed 'Alī (born 1292 = 1875) to Potsdam, but gave up the project from political motives and chose the Theresianum of Vienna. The two brothers there received a sound education suited to their position.

The father died suddenly on the 7th January 1892, and on the following day 'Abbās was approved of by the Porte as his successor. He arrived at Cairo a few days later. The firmān of the Porte for his inauguration, dated the 27th Sha'bān 1309 (27th March 1892), was solemnly read at Cairo on the 14th of April. The tenor of this firmān had already caused the exchange of notes between Sir Evelyn Baring (later Lord Cromer), who represented the English government, and the Egyptian government. 'Abbās, influenced by counsellors, several of whom were not Egyptian, took up a political attitude hostile to England without taking into account the situation brought about by the events of 1882, nor of the anglicisation of the internal politics of the country which had for several years been firmly and perseveringly carried on by Lord Cromer. Continual friction was the result. In the month of April, Sir Grenfell, serdār of the Egyptian troops, had to retire and was replaced by H. Kitchener. The new „national" feeling showed itself in various ways, by the newspapers, by the charitable societies, by the preference shown to the Arabic tongue, and by the purism of language. One year after the accession of 'Abbās, the antagonism between him and the power which occupied the country burst out with violence.

'Abbās desired to replace the sickly President of the Council, Muṣṭafā Pasha Fahmī, by Fakhrī Pasha, a cultured man, but a pure stubborn Turk. Lord Cromer rejected the latter and insisted upon being consulted on every appointment that might be made. The quarrel became so bitter towards the middle of January 1893 that it almost came to mobilizing the army of occupation. It did not, however, reach so far; on the 18th January, the Riyāḍ (Riyāz) Pasha ministry was accepted by the two parties; an unsuitable adviser of 'Abbās, the Swiss Rouiller Bei, was given leave to depart and finally dismissed, and the English army of occupation was re-enforced. The conflict, however, lasted for a long time on various points, on the administration, on the press, and on education. 'Abbās went to Stamboul in July, hoping to secure the support of the Porte, but returned without having obtained what he desired. The Egyptian petition to the sultan was labor in vain. Among the manifestations of the press of the Arab party of that period, the radical *Ustādh* and the letters of the Saiyid al Bakrī and of the „Fallāḥ" Sulaimān Hazzā' which were published in *The Times*, are worthy of mention. The quarrel gradually lost its bitterness. After 1894, 'Abbās has been in the habit of going on a journey to Europe every year, usually to Switzerland, France and England.

One must not conclude from the check which 'Abbās suffered in his first plunge into politics that he is a man without gifts or talent; he has learned too much by being in contact with Europe to fall back into the oriental narrow-mindedness; he is a sincere Mussulman, but sets the spirit of the religion above the form. He has literary taste and speaks Turkish, Arabic, French, German and English. He enjoys life in the country and in the desert immensely, and loves beautiful horses and costly camels, which he attracts to his stables. He would certainly be a man who could do useful work for the intellectual and social progress of his people, if the political situation in which he lives did not condemn him to inaction.

(K. Vollers.)

'ABBĀS, lord of the city of al-Raī, and an influential emīr under the last Seldjuḳides, put to death in 541 (1147) by order of Sulṭān Mas'ūd. As a slave of the emīr Djawhar, he had governed al-Raī in his master's name; the latter having been assassinated by the Ismā'īlites, 'Abbās took possession of the town in 534 (1139) and, to avenge Djawhar, he made a war of extermination against the Ismā'īlites, of whom it is said he killed a hundred thousand. He became, with Buzābeh [q. v.] and 'Abd al-Raḥmān Ṭaghairak [q. v.], one of the most powerful emīrs of the Seldjuḳide empire, against whom even the sultan could make no head. At last he got rid of Ṭaghairak, whom he caused to be assassinated, and then summoned 'Abbās to come to him and had him put to death.

(M. Th. Houtsma.)

AL-**'ABBĀS**, b. 'Abd al-Muṭṭalib, surnamed Abu 'l-Faḍl, uncle of Muḥammed. He was only three or, according to Ibn Ḥadjar, two years older than the latter. He was a merchant and, differing in this very much from his brothers Abū Ṭālib and 'Abd Allāh, he made a large fortune; he lent money at interest and possessed a garden at Ṭā'if; according to Ibn Hishām (p. 953) and

Ṭabarī (i. 1739), he took in his commerce travels the style of a descendant of the ancient kings. It may therefore well be, as it is reported, that the right of supplying drink to pilgrims was conferred upon him; it is said that he put dried raisins from his garden at Ṭā'if in Zamzam water. One must not, however, trust implicitly to the traditions current about him; for the partisans of the 'Abbāsides have in the course of time invented many legends in his honor. The traditions agree in representing him as opposed to the religious movement initiated by Muḥammed, as long as the latter lived at Mecca. But he did not belong, however, to the implacable adversaries of the Prophet, and, when Abū Ṭālib died and he thereby became the protector of his nephew, it is not impossible, though by no means certain, that he defended his cause in the Assembly of 'Aḳaba as tradition has it. An awkward fact is that he fought in the ranks of the Meccans at Bedr and was taken prisoner. But to extenuate this enormity it was pretended that he had been forced by the Meccans to take part in this campaign against his will. Further, the story was embellished with different traits in his honor; e. g. it was said that he was taken prisoner by the help of an angel and that Muḥammed could not sleep from thinking that his uncle was in chains. Ibn Hishām uses the convenient method of passing over the story of his ransom in silence. It is further certain that having paid his ransom he returned to Mecca; but tradition explains this by pretending that he had really accepted Islām, but from motives of a pecuniary nature kept temporarily his conversion secret: tradition even goes so far as to say that he wished to settle at Medina and only remained at Mecca on the solicitations of Muḥammed. In order not to remain quite inactive, he not only protected there the followers of the Prophet but also, acting as a spy, revealed to his nephew the plans of campaign of his fellow-citizens, which is imputed to him as a great merit. As a matter of fact it is not only possible but quite probable that this man, being discreet and very indifferent to the religious side of the question, looked with increasing sympathy at the rapid development of his nephew's power, and in his heart felt disposed to make common cause with him. Thus it may well be that he did in reality manifest joy when they came in secret to tell him of the taking of Khaibar. When Muḥammed visited Mecca in the year 7 (628-629), 'Abbās gave him his sister-in-law Maimūna to wife. The following year, when Muḥammed marched upon Mecca, 'Abbās threw off all disguise and joined him before his arrival in front of the town; but the story that he then took Abū Sufyān under his protection is apocryphal. At Mecca Muḥammed confirmed him in his right to supply pilgrims with drink. In the battle of Ḥunain he kept at the Prophet's side, who was beholden to the power of his uncle's voice for the happy turn the fight took. According to Wāḳidī, he contributed from his purse to the fitting out of the great campaign against the Byzantines; he also took part in washing the Prophet's dead body. There is very little mention made of him after this. He accompanied Fāṭima when she went to Abū Bekr to claim her part of inheritance. He had his share in the great endowments of 'Omar. In the reign of this caliph, he made a present of his house for the purpose of enlarging the Mosque of Medina. But the story that he obtained rain during a severe drought through prayer must be considered to be an 'Abbāside legend. Considering how old he was at that time, it is very doubtful whether he was present in the Arab army east of the Jordan; but, it is said, he dissuaded 'Omar from going in person to the theatre of war against the Persians. It is said that he fruitlessly endeavoured to make 'Alī accept his advice not to have any share in the election of 'Omar's successor. He died at Medina in the year 32 (652-653) or, according to others, in the year 34 at the age of 88. The 'Abbāside caliphs descended from his son 'Abd Allāh [q. v.].

(FR. BUHL.)

'ABBĀS B. ABI 'L-FUTŪḤ, his full name, AL-AFḌAL RUKN AL-DĪN ABU 'L-FAḌL 'ABBĀS B. ABI 'L-FUTŪḤ B. TAMĪM B. MU'IZZ B. BĀDĪS AL-ṢINHĀDJĪ, a descendant of the well known princely house of the Banū Bādīs [q. v.] of Northern Africa. He seems to have been born shortly before 509 (1115), for in that year he was still a nursling. His father, Abu 'l-Futūḥ, was then in prison, and was banished in 509 to Alexandria, whither his wife Bullāra and the little 'Abbās accompanied him. After Abu 'l-Futūḥ's death his widow married 'Alī b. Sallār, commandant of Alexandria and of Buḥaira, one of the most powerful lords of the Fāṭimide empire, which was then on the way towards dissolution. When, in 544 (1149-1150), the caliph al-Ẓāfir bi-Amr Allāh appointed the emir Ibn Maṣāl to the position of vizier, which had for some time been vacant, Ibn Sallār revolted, marched upon Cairo at the head of his troops and forced the caliph to invest him with the vizierate. It is during these troubles that 'Abbās appeared for the first time on the political scene; he took the side of his step-father and was entrusted by him with the pursuit of Ibn Maṣāl who had taken flight. Ibn Maṣāl fell, and, on the 23[d] Dhu 'l-Ḳa'da of the above mentioned year (24[th] March 1150), Ibn Sallār made his entry into Cairo. During the following years, 'Abbās lived at the court of Cairo, and his son Naṣr was considerably the favor of the caliph. In the beginning of 548 (spring of 1153), the garrison of Askalon, the last place the Fāṭimides still possessed in Syria, having according to custom to be relieved, 'Abbās was made commandant of the new garrison. Before, however, coming to Syria, whilst still on Egyptian soil, at Bilbīs, he considered it useless to waste his strength to no purpose in defending an advanced post which could not be saved, and decided to assassinate his step-father and seize the vizierate. It is probable that in this he submitted to the influence of the Syrian emir, Usāma b. Munḳidh, who accompanied him. Usāma has left a circumstantial story of this intrigue as well as of the later events in the life of 'Abbās; he does not in the least attempt to extenuate the doubtful part he played in this affair — he lived in a time of brazen-faced intrigues; — perhaps he even represents himself a little too strongly as the suggester and

heard of what took place. Anyway, the result was that Naṣr, 'Abbās's son, returned secretly to Cairo, obtained the consent of the caliph, who idolized him, and assassinated Ibn Sallār on the 6th Muḥarram 548 (3d April 1153). 'Abbās returned as fast as he could and took possession of the vizierate, whilst Askalon, being strictly invested, fell into the hands of the Franks on the 27th Djumādā I 548 (20th August 1153). 'Abbās did not enjoy the position he had won for long. As the caliph would have preferred his favorite Naṣr for vizier, the latter seemed to have thought of assassinating his father, and, on the other hand, 'Abbās would seem to have been incited against Naṣr. The historical accounts we possess only reflect those psychological facts in a very indistinct manner. At any rate, Usāma acted as a conciliator, seeing that he must have been uncomfortable between two fires. He succeeded in bringing the father and son together in a common act, and they resolved to kill the caliph rather than risk being the victims of his machinations. Naṣr lured the caliph to his house and assassinated him on the last day of Muḥarram 549 (16th April 1154). Thereupon 'Abbās charged the nearest male relations of the caliph with this crime; they were put to death and the minor son of al-Ẓāfir was placed upon the throne under the name of al-Fā'iz bi-Naṣr Allāh. These proceedings stirred up the court and the population; a message was sent to Ṭalā'i' b. Ruzzīk, a highly valued military leader, who was then to the south of Cairo. 'Abbās, abhorred on all hands, could not hold out and fled into Syria with Naṣr and Usāma. The Franks, having been warned, surprised them near al-Muwailiḥ and 'Abbās was killed (23d Rabī' I 549 = 7th June 1154).

'ABBĀ' B. AL-AḤMAR. [See IBN AL-AḤMAR.]

AL-**'ABBĀS** B. 'AMR AL-GHANAWĪ, general and governor of note of the 'Abbāside caliphs towards the end of the third century of the Hegira (about 900), known principally for the defeat suffered by him at the hands of the Karmathians, for his captivity and for his release. He was born in the country of Raḳḳa. Being the governor of Yamāma and Baḥrain, he was sent by the caliph al-Mu'taḍid, against the celebrated Karmathian general, Abū Sa'īd al-Djannābī, by whom, after a sanguinary battle, he was taken prisoner at the end of Radjab 287 (end of July 900). All the other prisoners were executed; he alone was spared to carry a message to the caliph. M. J. de Goeje (*Mémoire sur les Carmathes du Bahraïn et les Fatimides*, 2d ed., pp. 37 *et seq.*) has set out the details of this occurrence from the principal sources. Afterwards 'Abbās did nothing else of importance; in 289 (901-902) he was one of Badr's generals who, at the instigation of the caliph al-Muktafī, turned against him. He seems after that to have been temporary governor of the towns of Ḳumm and Ḳāshān near Iṣpahān. Toward the end of his life he was military prefect of Diyār Muḍar and had Raḳḳa for a residence, where he died in 305 (917-918). His name is connected with a Ḳaṣr al-'Abbās mentioned by Yāḳūt (*Mu'djam*, iv. 114 *et seq.*).

He must not be confounded with another 'Abbās b. 'Amr, whom Ṭabarī (iii. 2190) and Abu 'l-Maḥāsin (ii. 195) mention as having accompanied the eunuch Mu'nis. The indexes make them one and the same person.

Bibliography: Ṭabarī, iii. 2193, 2196 *et seq.*, 2210; 'Arīb (ed. de Goeje), p. 69; Ibn al-Athīr (ed. Tornb.), vii. 358; viii. 42, 344 *et seq.*; Abu'l-Maḥāsin (ed. Juynb. et Matth.), ii. 128; Ibn Khallikān (ed. Wüstenf.), N°. 745; de Goeje, *loc. cit.* (C. H. BECKER.)

AL-**'ABBĀS** B. AL-ḤASAN B. AḤMED B. AL-ḲĀSIM B. 'ABD ALLĀH B. AIYŪB AL-DJARDJARĀ'Ī ABŪ AḤMED, born in 250 (864), and assassinated in 296 (908), vizier of the caliph al-Muktafī bi-'llāh from 291 (904) after the death of his predecessor, al-Ḳāsim b. 'Ubaid Allāh [q. v.], and the rejection of 'Alī b. 'Īsā. This choice was not a fortunate one, for 'Abbās was an insignificant man who neglected his duties and occupied himself only in his pleasures; he also made many enemies through his haughtiness. He brought about his own fall by his opposition to Ibn al-Mu'tazz [q. v.] whom, during an illness of al-Muktafī, the majority of the influential officials wished to proclaim as the heir to the throne, which plans he succeeded in baffling. It was doubtless due to his influence that al-Muktafī, having recovered his health, appointed as his successor the insignificant al-Muḳtadir bi-'llāh; the latter on his accession to the throne in 295 (908) confirmed the vizier in his position. The partisans of Ibn al-Mu'tazz had not, however, given up their design; they resolved to rid themselves of the vizier and had him assassinated.

AL-**'ABBĀS** B. AL-ḤASAN (al-Ḥusain?) AL-SHĪRĀZĪ ABU 'L-FAḌL. On the death of al-Muhallabī [q. v.] in 352 (963), he was entrusted by the Būyide Mu'izz al-Dawla with the care of the government conjointly with Ibn Fasāndjas. On the death of Mu'izz al-Dawla (356 = 967) he became vizier to the latter's son Bakhtiyār, who, in 358, for the purpose of extorting money from him and his people, dismissed him for some time, but afterwards reappointed him to his office. Four years later (362 = 973) he was again dismissed and died shortly afterwards. Report says that during his vizierate he made himself hated through his extortions and violence.

Bibliography: Ibn al-Athīr (ed. Tornb.), viii. 405 *et seq.* (M. TH. HOUTSMA.)

AL-ʿABBĀS B. AL-MAʾMŪN, pretender to the throne under al-Muʿtaṣim. His father, the caliph al-Maʾmūn, appointed him in 213 (828-829) as governor of Mesopotamia and the neighboring frontier district, and he then showed great bravery in fighting the Byzantines. On the death of al-Maʾmūn in 218 (833), his brother, Abū Isḥāḳ Muḥammed al-Muʿtaṣim bi-'llāh, by choice of the deceased, ascended the throne of the ʿAbbāsides. The army, which al-Maʾmūn had collected against the Greeks, proclaimed, however, al-ʿAbbās caliph, although he himself was not in the least disposed to comply with the wishes of his troops and took the oath of fealty to his uncle. After that, he went back to his army and succeeded in appeasing its discontent. Then the caliph, in order to strengthen his position, took many measures of precaution; he had the fortress of Ṭuwāna (Tyana) razed, stopped the war against the Byzantines and disbanded the army. Later, having organized some Turkish regiments as his guard, he loaded them with honors so far as highly to disaffect the Arab troops who had shown themselves sufficiently ill-disposed ever since the death of al-Maʾmūn. ʿUdjaif b. ʿAnbasa, an Arab general in the service of al-Muʿtaṣim utilized this discontent for the purpose of organizing a conspiracy, the object of which was to assassinate the caliph and to put al-ʿAbbās on the throne. The latter allowed himself to be persuaded; but the plot was discovered, and the conspirators paid for their attempt with their lives. Al-ʿAbbās died in prison at Manbidj in 223 (838).

(K. V. ZETTERSTÉEN.)

AL-ʿABBĀS B. MIRDĀS B. ABĪ ʿĀMIR, surnamed ABU 'L-ʿABBĀS, Sulaimite poet, contemporary of Muḥammed. His father Mirdās having later married al-Khansāʾ, the celebrated poetess of the same tribe, ʿAbbās was often called her son, but this is certainly a mistake. His family was in possession of the idol Ḍimād. This gave rise to a number of fables about the conversion of ʿAbbās, but without doubt he, like the rest of the Sulaimites, only embraced Islamism to comply with the solicitations of the Prophet. This took place in the year 8 (629-630); at the most, ʿAbbās paid homage to the Prophet some time before the mass of the Sulaimites. It is said that whilst he was still a pagan he abstained from wine. The very material motives of his conversion showed themselves after the taking of Mecca, in which ʿAbbās took part with a troop of heavy Sulaimite cavalry, about 900 strong (the numbers given vary from 700 to 1000), and the submission of the Hawāzin after the battle of Ḥunain, when the booty was used to recompense the men „with softened hearts". ʿAbbās, as a neophyte, received his share, but was discontented with it, and he composed some sarcastic verses, by which he succeeded in increasing what fell to him. He seems to have retired later into the desert to live with his own people; it is at least stated that he did not settle either at Mecca or Medina. He and his son Djulhuma are spoken of as traditionists. He was still living in the time of ʿOmar I. Although no collection of his poetry has been preserved for us, several of them have survived in *Aghānī* as also in Ibn Hishām's biography of the Prophet; many of these give accounts of the battle of Ḥunain, in which, as has been said, ʿAbbās had taken part. Comp. also Abū Tammām's *Ḥamāsa*.

Bibliography: Ibn Ḳotaiba (ed. de Goeje), pp. 467 *et seq.*; Nawawī (ed. Wüstenf.), p. 333; *Aghānī*, xiii. 64 *et seq.* (N. RHODOKANAKIS.)

AL-ʿABBĀS B. MUḤAMMED B. ʿALĪ B. ʿABD ALLĀH, brother of the caliphs Abu 'l-ʿAbbās al-Saffāḥ and Abū Djaʿfar al-Manṣūr. ʿAbbās helped to retake Malaṭya in 139 (756), and three years later was appointed by al-Manṣūr as governor of Mesopotamia and the neighboring frontier district. He was dismissed in 155 (772); that does not prevent his name from figuring frequently in the history of the times which followed immediately, however little important his political part may have been. He especially and often distinguished himself in the wars against the Byzantines. In 159 (775-776) he was put at the head of the troops, which the caliph al-Mahdī mustered for an expedition against Asia Minor, and it was with great success that he acquitted himself of the charge committed to him.

(K. V. ZETTERSTÉEN.)

AL-ʿABBĀS B. AL-WALĪD, Umaiyad general, son of the caliph Walīd I. ʿAbbās owes his celebrity principally to the energetic part he took in the continual struggles of the Umaiyads with the Byzantines. With regard to the details, the Arab and Byzantine sources do not, certainly, always agree. In the early part of the reign of Walīd I, he and his uncle, Maslama b. ʿAbd al-Malik, seized Ṭuwāna, the most important fortress of Cappadocia. The Mussulmans had begun to be discouraged and ʿAbbās had to display the greatest energy to succeed in stopping the fugitives and renewing the battle. The Greeks were forced to retire into the town which was immediately invested and had to surrender after a long siege. Arab historians give Djumādā II 88 (May 707) as the date of the fall of the fortress, but the Byzantines put it two years later. With regard to the following period, the Arab chronicles mention many military expeditions undertaken by the two Umaiyad generals, sometimes conjointly, sometimes by one independently of the other. The most salient facts, however, are the taking of Sebastopol in Cilicia by ʿAbbās, and of Amasia in Pontus by Maslama in 93 (712). In the following year, ʿAbbās seized Antioch in Pisidia. He continued to support Maslama faithfully in the subsequent battles. When, after the death of ʿOmar II, in 101 (720), Yazīd b. al-Muhallab, the governor of ʿIrāḳ, fomented a dangerous insurrection, first ʿAbbās alone and then Maslama also were sent against him. Yazīd was killed in a battle against the caliph's troops in 102 (720), and tranquility was soon afterwards established. In the reign of Walīd II, Yazīd b. al-Walīd, the brother of ʿAbbās, who desired the throne, refused to be shaken by his remonstrances, and ʿAbbās found himself forced to acknowledge him. Later he was thrown into prison by the last Umaiyad caliph, Marwān II; he died in 132 (750) in prison at

Ḥarrān from an epidemic which was raging there.

Bibliography: Ṭabarī, ii. 1191 *et seq.*; Ya'ḳūbī (ed. Houtsma), ii. 350 *et seq.*; Belādhorī (ed. de Goeje), pp. 170, 189, 369; Weil, *Gesch. d. Chalifen*, i. 510 *et seq.*; Müller, *Der Islam im Morgen- und Abendland*, i. 415 *et seq.*; *Journ. of Hellenic studies*, xviii. 182 *et seq.*

(K. V. Zetterstéen.)

'ABBĀS EFENDI, eldest son of Bahā' Allāh [q. v.] and spiritual leader of the party among the Bābīs that had rallied to his father, and who were therefore called the party of the Bahā'īs. He assumed his dignity on the death of his father in 1892, and, like the latter, resided at Akka. He is spoken of in the writings of the Bābīs under the mystic name of *Ghuṣn-i A'ẓam* (Branch of the Most High), and also under that of *Āḳa-yi Sirr Allāh* (Āḳa, Mystery of God). He wrote a history of the Bāb, published by Browne under the title of *A Traveller's narrative to illustrate the episode of the Bāb* (Cambridge, 1891); comp. Browne in the *Journ. of the Roy. As. Soc.*, 1892, p. 665.

(M. Th. Houtsma.)

'ABBĀS MĪRZĀ, eldest son of Fatḥ 'Alī Shāh, born in Dhu'l-Ḥidjdja 1203 (Sept. 1789), in the small market-town of Newā, died on the 10th Djumādā II 1249 (25th October 1833). On his mother's side he was the grandson of Fatḥ 'Alī Khān Ḳādjār Dawalū. He had been named presumptive heir to the throne of the Ḳādjārs, with the title of *Nā'ib al-Salṭana*, but died, in his father's lifetime at Meshhed of a tumor on the kidneys, which had affected him for long time; this happened during the siege of Herāt by his son Muḥammed Mīrzā, who, in the following year, succeeded his grandfather, under the name of Muḥammed Shāh. European travellers who knew him are unanimous in their praise of the high qualities he possessed. He was passionately fond of military art and introduced European tactics amongst the troops of Adharbaidjān, which he commanded, entering the ranks himself as a simple soldier. He was very strict about discipline and attended to it himself; he had become very popular in the district of which he was the governor.

(Cl. Huart.)

'ABBĀSA, daughter of the caliph al-Mahdī, sister of the caliphs Hārūn al-Rashīd and al-Hādī; it is to her that the locality Suwaiḳat al-'Abbāsa owes its name. She had three husbands in succession, who all predeceased her; that inspired Abū Nuwās to write some satirical verses, in which he recommended the caliph, should he want to have a traitor killed, to marry him to 'Abbāsa. Her name is connected with the fall of the Barmakides through the amorous intrigue with Dja'far b. Yaḥya 'l-Barmakī, with which she is credited. According to Ṭabarī, Hārūn could *not* deprive himself of the society of either his sister or Dja'far, so that, in order to have them both with him at the same time, he made them contract a purely formal marriage. They, however, were not contented with the form alone; and when Hārūn learned that they had children, and was convinced that the reports in circulation about them were true, he caused Dja'far to be executed. — Some earlier historians than Ṭabarī do not mention this fact; especially it must be noticed that the commentaries on the verses of Abū Nuwās give the names of 'Abbāsa's husbands, without mentioning that of Dja'far. Further, Ṭabarī, like the other chroniclers who repeat this story, only mentions it as *one* of the events which were reported to have been the cause of Dja'far's execution. Later chroniclers amplify the love story of Dja'far and 'Abbāsa more and more, so that Ibn Khaldūn calls the truth of it in question, without, however, the arguments he employs to refute it being very conclusive. If one detail, found in the Persian Ṭabarī, must be believed, 'Abbāsa was already forty years old when her relations with Dja'far began. It is quite certain that her second husband died eleven years before Dja'far, and these figures put all idea of a *youthful romance* out of the question. We may then reasonably look upon this anecdote as the product of popular imagination, which attempted to make the fall of this favorite minister poetical. This is the more likely in that pagan Arab stories contain a remarkably similar episode of the marriage of the minister of a king with the latter's sister; it was very easy to make Dja'far the hero of this story. What the greater number of authorities report on the subject of 'Abbāsa is reported by some about two other fictitious sisters of Hārūn, Maimūna and Fākhita! The older authorities say nothing about what happened to 'Abbāsa after the death of Dja'far; it is only the later writers who have woven mysterious horrors about her end. The love of 'Abbāsa and Dja'far has frequently appealed to the imagination of European as well as Arabian authors: in 1753 a French romance entitled *Abassai* appeared, and then quite recently, in 1904 (Aimé Giron and Albert Toza, *Les nuits de Bagdad*).

(J. Horovitz.)

AL-**'ABBĀSA**, name of different places:

1. Capital of a canton (*nāḥiya*) of the same name, with 2083 inhabitants (3844 with its twenty-five dependancies) in Lower Egypt, province of Sharḳīya, district of Zaḳāzīḳ where the Wādī Ṭūmilāt discharges its waters into the Delta, between Abū Ḥammād, a station on the Ismā'īlīya railway, and Tell-el-Kebīr, which is renowned for the defeat of 'Arabī Pasha. Now it is an insigni-

fluent village, but in the Middle Ages it held a decided importance in that it was the last Egyptian town on the road from Syria, and the place where more than one Egyptian prince had a villa with a castle for hunting. ʿAbbāsa bint Aḥmad b. Ṭūlūn is said to have founded it on the occasion of her niece's departure for the court of the caliph al-Muʿtaḍid; others would have it that ʿAbbās b. Aḥmad b. Ṭūlūn was born at ʿAbbāsa. It is probable that the foundation of the town goes back to the beginning of the epoch of the Ṭūlūnides or even further. According to Abu 'l-Maḥāsin (ed. Juynb. et Matth., ii. 116 *et seq.*), Hārūn b. Khumārawaih was assassinated there. Later (375 = 985-986), ʿAbbāsa is described by Muḳaddasī as very flourishing and as being better built than Fusṭāṭ. It reached its greatest prosperity under the Aiyūbides, in particular under Muḥammed al-Kāmil. Its decay was brought about by the foundation of al-Ṣāliḥiya by Aiyūb al-Ṣāliḥ, the second in succession to Muḥammed al-Kāmil. It did not disappear, however; it is met with in the time of the Mamlūks and on to the present time as a small market-town. Beside al-ʿAbbāsa, the name *al-ʿAbbāsiya* — given without doubt to the same place — is met with not only in the old, but also in the recent times — That quarter of Cairo, known as ʿAbbāsiya, was founded by the khedive ʿAbbās, and has nothing in common with ʿAbbāsiya = (Ḳaṣr) ʿAbbāsa.

Bibliography: Muḳaddasī (ed. de Goeje), p. 196; Yāḳūt, *Muʿdjam*, iii. 599 *et seq.*; Maḳrīzī, *Khiṭaṭ*, i. 232; Ibn Duḳmāḳ, v. 56; Ibn al-Djīʿān, p. 19; *Diction. géogr. de l'Égypte*, 1899, s. v.

2. An insignificant village of 595 inhabitants, in the district of Ḳūṣ, and the province of Ḳenā, in Upper Egypt (see *Diction. géogr. de l'Égypte*, s. v.). (C. H. BECKER.)

ʿABBĀSĀBĀD, i. e. „founded by ʿAbbās", name of several places:

1. A Persian town in the north of the salt steppe of Khorāsān, about half-way between Sabzawār on the east and Shāhrūd on the west. It owes its foundation to Shāh ʿAbbās I (died 1628), who settled a hundred Georgian families there. This colony, which he fortified, could, according to his plans, serve as a centre for the North-East of Persia and as a base to make his rule over these regions secure. Comp. Ritter, *Erdkunde*, viii. 335—336.

2. and 3. There are two places of this name in the Māzanderān country, south of the Caspian Sea, one in the valley of Thalarrūd, and the other on the river Maḥmūd Ḥusain; comp. de Morgan, *Mission scientifique en Perse*, i. 357.

4. There is still another ʿAbbāsābād in the neighborhood of Teheran, the existence of which was known of in the Middle Ages; see Quatremère, *Hist. des Mongols de la Perse* (Paris, 1836), i. 204, 205, note 35.

5. There is a fifth ʿAbbāsābād in Persia to the south of Meshhed, near the frontier of Afghānistān, latitude 35° 20' north and longitude 60° 20' east (Greenw.). (M. STRECK.)

ʿABBĀSĪ, Persian silver coin stamped by ʿAbbās I, the Great, divided into 2 *maḥmūdī* and, towards the middle of the 17th century, was still worth 93 centimes. 50 *ʿabbāsī* made a toman. In 1660 five *ʿabbāsī* equalled nine livres. In order to procure the metal needed for the coinage, Mexican piasters brought through Turkey by the commerce of Marseilles were melted. There were also *ʿabbāsī* of two and a half *maḥmūdī*, and pieces of five *ʿabbāsī*; the last were not used in commerce. In 1806 the *ʿabbāsī* was an imaginary coin, used only in reckoning, worth 40 centimes.

ʿABBĀSIDES (Abbassides), the name of different dynasties:

1. Caliphs of Baghdād, the most celebrated dynasty of Islām, descended from the uncle of the Prophet, al-ʿAbbās b. ʿAbd al-Muṭṭalib b. Hāshim. His descendants multiplied under the first four caliphs and under the Umaiyads in the countries taken by the Arabs, and their relationship to the Prophet won them high consideration everywhere. They had many partisans, especially in Khorāsān, the Persian province of that name being then much larger than it is now. By degrees the idea of upsetting the Umaiyads and of placing their own family on the throne matured among the ʿAbbāsides. They found themselves backed in this design by the descendants of the caliph ʿAlī, who for their part considered themselves to have the best right to the caliphate and who had won over a great many adherents, particularly in the eastern portions of the empire. The ʿAbbāsides showed great skill in assuring to themselves the support of the ʿAlides for the purpose of conjointly disseminating an active propaganda in the hearts of the people of Persia and amongst the Arab garrisons of the eastern provinces. Muḥammed b. ʿAlī b. ʿAbd Allāh b. ʿAbbās, the great-grandson of ʿAbbās, was the one who made active preparations for the final fall of the Umaiyad dynasty. After his death between 124 and 126 (742—744), his son Ibrāhīm was recognized as chief of the ʿAbbāsides, who made themselves more and more formidable. The revolt, so long prepared, broke out in the month of Ramaḍān 129 (June 747) in Khorāsān, and rapidly became serious. The caliph's troops were beaten, and, as fortune continued to be against the Umaiyad arms, the ʿAbbāsides began little by little to throw off their mask and to show their aims openly. Ibrāhīm, it is true, was taken prisoner in 130 (748) by Marwān II, but his two brothers Abu 'l-ʿAbbās and Abū Djaʿfar took his place at the head of the ʿAbbāside party, and, after Kūfa had surrendered to the insurgents, Abu 'l-ʿAbbās caused himself to be proclaimed caliph in the year 132 (749). In spite of his bravery, Marwān was defeated on the banks of the Greater Zāb in Djumādā II 132 (January 750); he attempted to fly towards Egypt, but the enemy overtook him and inflicted a second defeat upon him, after which he was killed in the same year. Abu 'l-ʿAbbās, who gave himself the surname of *al-Saffāḥ* "The Bloody" carried out the extermination of the Umaiyads without pity. He could not, however, stop one of them, ʿAbd al-Raḥmān b. Muʿāwiya, from escaping and reaching Spain, where he founded another Umaiyad kingdom at Cordova.

Al-Saffāḥ's brother and successor, Abū Djaʿfar al-Manṣūr, made Baghdād his residence, thus moving the centre of gravity of the empire more to the east. The advent of a new dynasty exercised a

very great influence on the development of the sciences and peaceful progress generally. Soon, however, signs of decay began to show themselves, and, more and more, the impossibility of maintaining the integrity of such a vast empire as that of the 'Abbāsides became evident. Already in 172 (788), Idrīs b. 'Abd Allāh, a descendant of 'Alī, had founded an independent 'Alīde kingdom in Morocco. Troubles also broke out at Kairawān, and, because Ibrāhīm b. al-Aghlab re-established order there, the caliph Hārūn al-Rashīd was, in 184 (800), obliged to give him the province as a hereditary fief subject to an annual tribute. Shortly afterwards, the province of Khorāsān also made itself independent; in 207 (822) its governor, the energetic Ṭāhir Dhu 'l-Yamīnain, denied the authority of the caliph. After that, Aḥmed b. Ṭūlūn, who had been governor of Egypt since 254 (868), showed that he had little concern for the authority at Bagdad and extended his power even to embrace Syria. It is true that the Ṭūlūnide dynasty lasted hardly more than thirty-seven years, but in the course of the following century Egypt none the less freed itself definitely from the power of the 'Abbāsides.

Moreover, the caliph al-Mu'taṣim (218—227 = 833—842) took the fatal step of creating an army composed principally of Turkish mercenaries. These foreign pretorians became more and more arrogant, so much so that in 296 (908) the caliph al-Muḳtadir was forced to give the title of *Amīr al-Umarā'* to the captain of the guard, the eunuch Mu'nis, and, under that title, to entrust him with almost unrestricted civil powers. Even the religious supremacy of the caliphs was threatened when the *Fāṭimides* entered upon the scene. In 334 (945) they fell under the sway of the Būyides and, a century later, under that of the Seldjuḳides (447 = 1055). When the power of these Turkish sultans disappeared, the 'Abbāsides had time to breathe; their power, however, no longer went beyond Bagdad and the country immediately surrounding it. Finally Bagdad was conquered by the Mongols under Hūlāgū (656 = 1258), and the last caliph, al-Musta'ṣim, was killed. Some of the 'Abbāsides, nevertheless, managed to escape, and the Mamlūk sultan in Egypt, Baibars, made one of them caliph at Cairo, under the name of al-Mustanṣir. The caliphs of Cairo, however, had nothing more than a purely ecclesiastical dignity; the only vestige they retained of the vast power possessed by the old caliphs was the right of investiture of those Mamlūk sultans, who considered such a confirmation as desirable. When in 923 (1517) the Turkish sultan Selīm I overthrew the Mamlūks, he took the last 'Abbāside caliph, al-Mutawakkil, to Constantinople and compelled him to resign all his authority, both civil and religious, in his favor, after which he allowed him to return to Egypt, where he died in 945 (1538).

The following is a list of the 'Abbāside caliphs of Bagdad:

A. H.		A. D.
132	al-Saffāḥ	750
136	al-Manṣūr	754
158	al-Mahdī	775
169	al-Hādī	785
170	al-Rashīd	786
193	al-Amīn	809
198	al-Ma'mūn	813
218	al-Mu'taṣim	833
227	al-Wāthiḳ	842
232	al-Mutawakkil	847
247	al-Muntaṣir	861
248	al-Musta'īn	862
252	al-Mu'tazz	866
255	al-Muhtadī	869
256	al-Mu'tamid	870
279	al-Mu'taḍid	892
289	al-Muktafī	902
295	al-Muḳtadir	908
320	al-Ḳāhir	932
322	al-Rāḍī	934
329	al-Muttaḳī	940
333	al-Mustakfī	944
334	al-Muṭī'	946
363	al-Ṭā'i'	974
381	al-Ḳādir	991
422	al-Ḳā'im	1031
467	al-Muḳtadī	1075
487	al-Mustaẓhir	1094
512	al-Mustarshid	1118
529	al-Rāshid	1135
530	al-Muḳtafī	1136
555	al-Mustandjid	1160
566	al-Mustaḍī'	1170
575	al-Nāṣir	1180
622	al-Ẓāhir	1225
623	al-Mustanṣir	1226
640—656	al-Musta'ṣim	1242—1258

2. Sometimes the name 'Abbāsides is given to the Ṣafawide kings of Persia, from 'Abbās I (995 = 1587) to 'Abbās III (1149 = 1736), which, however, deserves no consideration. [Comp. ṢAFAWIDS and the special articles on the different sovereigns.]

Let us, however, notice the fact that the princes of Wadai in the Sudan, who have reigned there since about 1650, claimed descent from Ṣāliḥ b. 'Abd Allāh b. 'Abbās, whence Wadai is also called Dār Ṣāliḥ. Nachtigal (*Sahara und Sudan*, iii. 271) traces this family to a certain Yame, who settled with his people at Debba, to the north-east of Wa'ra, and who like his congeners, the Dja'liye of Shendī, in the valley of the Nile, north of Kharṭūm, gave himself out as a descendant of the 'Abbāsides. Yame's son, 'Abd al-Karīm, founded a Musulman community at Wa'ra and in 1655 put an end to the supremacy of the pagan Tundjer. [Comp. WADAI.]

AL-'**ABBĀSIYA**, name of two towns in Northern Africa:

1. A town generally designated under the name of Ṭobna, the ruins of which still exist four kilometres to the south of Barika, in the department of Constantine, at an elevation of 460 metres (about 1180 feet), on the quaternary plateau which separates the Wādī Barika from the Wādī Baitam. It was a flourishing town known as Thubunae in the time of the Romans but was destroyed by the Vandals; it was restored by the Byzan-

times, who built a castle there the ruins of which may yet be seen. According to tradition, it was conquered by Mūsā b. Noṣair, and played an important part in the first period of the Arab rule. This prosperity was due to 'Omar b. Hafṣ Hazarmard, who built it up from its ruins (154 = 771) and called it 'Abbāsiya (Belādhorī, ed. de Goeje, p. 233) in honor of the 'Abbāside caliph, al-Manṣūr. It was not long before he was besieged there by the Abāḍites, whose principal chiefs were Abd al-Raḥmān, the Rostemide Imām of Tāhert, Abū Ḥatim al-Saddarātī (al-Sidrātī), the Imām of the Khāridjites of Tripoli, and Abū Ḳurra, the Imām of the Ṣofrite Khāridjites of Tlemcen. The disloyalty of the last allowed 'Omar, who paid him 40000 dirhems (or 40000 dīnārs), to retire to Ḳairawān, where he soon succumbed (Dhu'l-Ḥidjdja 154 = November-December 771). Tobna, which soon resumed its old name, remained the capital of Hodna (Ḥudna), an advanced post against the Berbers, who were always in a state of revolt: at the end of the 9th century it was the residence of a governor. The inhabitants, some of Arabian origin, others a mixture of Latins and Berbers, were often at war with each other, the former supported by the Arabs of Tahūda and Setif, the latter by the population of Biskra. The Byzantine castle of Tobna, preserved by the Musulmans, had become the palace of the governor and the residence of his officers. The town still had five gates in the 11th century of the Christian era: Bāb Khaḳān, Bāb al-Fatḥ, Bāb Tahūda, Bāb al-Djadīd and Bāb Katāma; it was the largest town to be met with going from Ḳairawān to Sidjilmāsa; and the land in its neighborhood, irrigated by the Wādī Baitam, was the most fertile. It passed successively under the dominion of the Aghlabides and of the Fāṭimides, and suffered during the revolt of Abū Yazīd, „The Man on the Ass". It was, however, prosperous at the time of the invasion of the Banū Hilāl. Then al-Idrīsī only speaks of it as a pretty town situated in the midst of well watered gardens. Its decay steadily increased and its importance passed to Msīla and Ngāws. It is credible, judging from the silence of historians, that its definite abandonment dates from the 13th perhaps from the 14th century of the Christian era. Recent excavations have brought to light, besides relics of the Roman and Byzantine epoch, ancient specimens of Berber art, like those which the ruins of Isedraten, to the south of Wargla, offer us.

Bibliography: Besides the *Histoire des Berbers* of Ibn Khaldūn and the *Bayān al-Maghrib* of Ibn 'Adhārī, al-Bakrī, *al-Masālik* (*Descr. de l'Afrique Septentr.*), ed. de Slane, pp. 90—92; de Goeje, *Descriptio al Magribi*, pp. 83—84 (Leyden, 1860); Blanchet, in *Recueil de Notices et Mémoires de la Société Archéologique de Constantine*, xxxiii (1899), 285—293 (Constantine, 1900); Grange, *Monographie de Tobna* (ib. xxxv, 1901, pp. 1—90, Constantine, 1902).

2. A second town of the same name, built in 184 = 800 (according to Ibn 'Adhārī, in 189 = 805) by Ibrāhīm b. al-Aghlab, was also known as Ḳaṣr al-Ḳadīm and Ḳaṣr al-Abyaḍ. It was situated two or three miles south of Ḳairawān, on land bought from the Banū Ṭālūt. It was here that Ibrāhīm gave audience to Charlemagne's ambassadors, who came to ask for the relics of St. Cyprian. It contained baths, bazars, a cathedral mosque, the cylindrical tower of which was built of bricks and ornamented with seven sets of columns one above the other. It had many gates, amongst others, Bāb al-Raḥma, Bāb al-Ḥadīd, Ghalbun and Bāb al-Rīḥ on the east, and Bāb al-Sa'āda on the west. In the town there was a great square called Maidān, and, in the neighborhood, the palace of Ruṣāfa. The Aghlabides resided there from the time of Ibrāhīm b. al-Aghlab to that of Ibrāhīm b. Aḥmed who founded Raḳḳāda in 268 (876), and settled there with all his troops and his suite. It was not long before al-'Abbāsiya fell to ruin and completely disappeared.

'ABD (A.), slave, servant.

a. ISLĀM AND SLAVERY IN GENERAL.

It is known that Islām has kept up the ancient Arabic institution of slavery, the legality of which the old Biblical world admitted. The Musulman's religion, allows him to appropriate to his own use the infidels of any country, which is neither subject to nor allied with the Islāmic empire, and the slave-trade has for long been an important business for the Musulman countries.

A male slave is generally called in Arabic *'Abd* (plur. *'abīd*) or *mamlūk*, a female slave *ama* or *djāriya*.

Prisoners of war, including women and children, taken in the wars of the Prophet against the Arab tribes, were, unless ransomed, reduced to slavery, according to the ancient Arab custom. Thus in the campaign against the Banu 'l-Muṣṭaliḳ, a very considerable number of women fell into the hands of the Musulmans. One of them was Djuwairiya bint al-Ḥārith, who formed part of the booty of Thābit b. Ḳais. She belonged to a distinguished family and therefore knew that her ransom would be paid. Thābit agreed with her to set her free for nine or ten ounces of gold; when that had been arranged she went to the Prophet and implored his aid. She was very beautiful, and the Prophet, who was subjugated by her charms, paid her ransom and demanded her in marriage. This induced the Musulmans to set free the other women who had fallen into their hands; for, said they, it is not fitting that the women of a tribe to which our master has become allied should be our slaves.

In Arabia slaves were also obtained by purchase or by brigandage. For example, Zaid, one of Muḥammed's slaves — the first who embraced Islamism, — came from the noble tribe of the Banū Kalb. One day his mother, wishing to pay a visit to her tribe, took Zaid, who was still an infant, with her. Some horsemen surprised them and Zaid fell into their hands. They put him up for sale at 'Ukāẓ, where he was bought by Khadīdja, who presented him to her husband after her marriage with Muḥammed. Zaid's father appeared inconsolable when he knew of the loss of his son. After some time, some Kalbites saw Zaid at Mecca, and told his father they had discovered

him, and he at once hurried to Mecca. "Give him his liberty for the ransom we will pay", said he to the Prophet; but Zaid declared that he preferred to remain with Muḥammad.

There were at that time many Arabs amongst the slaves. But even earlier, in the time of paganism, slaves were kept, some black others white, who had been brought from Africa and the northern countries (comp. G. Jacob, *Altarab. Beduinenleben*, 2d ed., p. 137; 'Antara, *Mu'allaḳa*, verse 27, ed. Arnold, p. 153). The caliph 'Omar, it is said, was the first to lay down the principle that an Arab could not be a slave, even though purchased for money or a prisoner of war; only foreigners could be reduced to slavery (comp. A. von Kremer, *Culturgesch. des Orients unter den Chalifen*, i. 104). In any case canonical law forbids the Mussulman to make his co-religionists slaves. Parents are therefore not allowed to sell their children (comp., however, E. W. Lane, *Modern Egyptians*, i. ch. vii: Domestic life; the lower orders), and a creditor may not sell his Mussulman debtor into slavery, as Roman law permitted. If, however, slaves adopt the Mohammedan faith later — and they mostly do so — they remain in servitude.

During the mixing of the Arabs with foreign peoples in the Middle Ages, the slave trade played an important part, for black as well as white slaves were annually imported in thousands into the Muslim empire. Great numbers of Turkish slaves from Central Asia (Turkistān, Ferghāna, etc.) came annually to the bazar of Bagdad, where they were sold to rich people and more especially to the Court. But just as the farthest East had to pay its human tribute to Bagdad, so had the provinces lying in the farthest West of the empire; Africa and the Maghrib (Mauritania) .... From the interior of Africa, Sudan proper, a considerable export trade in slaves was carried on with the coast towns of the Mediterranean, which were under Arabian dominion. Many white slaves also came from Frankish and Grecian countries. From Spain and from Italian ports, especially from Civitavecchia, the slave trade was considerable, and in the 8th century the Venetians possessed their own slave market in Rome, which was only abolished in 748 by Pope Zacharias (A. von Kremer, *loc. cit.*, i. 234; ii. 152-155).

In recent times Mecca became the centre of the slave trade through political circumstances. The slaves were mostly obtained from Africa and the Caucasus. „Circassians, male and female", says C. Snouck Hurgronje, (*Mekka*, ii. 11 *et seq.*), „come via Constantinople; owing to high prices ... their number is small; they are never sold in the open market at Mecca .... Much more important, both for trade and for the composition of the population of Mecca, are the African slaves ..... Incredible as it may appear to many, yet it is true that the slave market of Mecca ... occasionally receives small supplies of slaves from British India, and the Dutch East-Indies .... I saw many young slaves from Hindustan ... I could not ascertain whether they had been kidnapped or sold by their parents nor from what region they came". On the slave trade of the present day in Singapore see the *fetwā* on concubinage with Chinese female slaves, in C. Snouck Hurgronje, *Ein Arabischer Beleg zum heutigen Sklavenhandel in Singapore*, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xlv. 395—402. „During my stay in Mecca", says this author (*loc. cit.*, p. 401), „I noticed that Chinese female slaves were not seldom imported into the Holy City from Singapore".

A. Legal position of slaves according to the terms of the canonical law. Concubinage and marriage.

Theoretically slaves have no legal rights whatever; according to Mohammedan law they are merely things, the property of their owner. The latter can alienate them as he likes, by sale, gift, dowry, or in other ways. In the eyes of the law they are incapable of making any enactment, can therefore neither alienate, nor undertake responsibilities, nor make wills, and therefore cannot be guardians or testamentary executors; what they earn belongs to their master. Neither can a slave appear as witness in a court of Justice. He can, however, at the order of his master (e. g. as shop-assistant) make contracts concerning property and accept liabilities (he is then *ma'dhūn lahu*, as he is styled in the Muslim law books).

Between slaves and their masters, according to the terms of the law, marriage is impossible and only concubinage is permitted, but in all other cases even for slaves marriage is recognized as legal. Slaves may marry with the consent of their masters. According to most jurisconsults, slaves may have only two wives (slaves or free women), but according to the Mālikites they may have four like free Mohammedans. The slave, like the freeman, is obliged to give a dowry and must work for it. The dowry due to female slaves, however, belongs to their owner, since a slave, as such, cannot acquire property. The slave may only repudiate his wife twice. When he repudiates her for the first time, he may, if her waiting term is not terminated, demand her back again; but if he repudiates her a second time, the divorce cannot be annulled. The waiting term (*'idda*) for female slaves is the same as for free women with the following difference: if a female slave loses her husband by death, she must observe a waiting time of 2 months and 5 days only, and if she loses him through any other cause, it is of 2 *ḳur'* only, instead of 3 *ḳur'*.

The children of a married female slave belong to her master.

A freeman may also according to the law contract a marriage with the female slave of another master. The serious part of this is that the children of such marriages become the slaves of the mother's master. For this reason marriage between a freeman and a female slave is, according to most jurisconsults, permissible only under the following conditions: 1) that he is not yet married; 2) that he does not possess the required dowry for a free woman; 3) that he may be exposed to the danger of unchastity if he remains a celibate; 4) that the female slave is a Mohammedan (comp. Ḳor'ān, iv. 29-30). Only the Ḥanafites permit such marriages also with a Jewish or Christian slave and do not insist on the 2d and 3d stipulations. That female slaves are married by freemen is „a case that happens more frequently than might be expected" (*Mekka*, ii. 136).

If a master by virtue of his right of ownership begets a child of his slave, the child belongs to its father's class and is therefore free. This principle was first laid down in Islām. Amongst the

ancient Arabs the rule was *partus sequitur ventrem*. The best known case is probably that of the poet 'Antara; he was originally a slave, his mother being an Abyssinian slave; it was only later in life that his father gave him his freedom as a reward for his bravery. In the earliest times of Islām, the true Arabian mind was shocked at the idea that slaves should bear „their own masters", i. e. free children, and that even caliphs could be descended from slaves (see J. Wellhausen, *Die Ehe bei den alten Arabern*, in the *Nachr. d. Kgl. Gesellsch. d. Wissensch. zu Göttingen*, Phil.-hist. Kl., 1893, p. 440; A. von Kremer, *loc. cit.*, ii. 106; G. Jacob, *loc. cit.*, p. 213; *Aghānī*, vii. 149; comp. J. L. Burckhardt, *Notes on the Bedouins and Wahabys*, London, 1831, i. 182). The slave, who has born her master a child, is called *umm walad*, i. e. „mother of [his] child". On the death of her master she recovers her freedom. On this account a master can neither sell nor pawn his *umm walad*.

The master may have sexual relations only with his Muhammedan, Christian or Jewish slaves, not with unbelievers, and according to the Shāfi'ite school, the modern Christians and Jews are to be placed in the same category as other unbelievers, with whom concubinage is absolutely forbidden on account of their „forged" books of revelation.

Anybody who has obtained a female slave by purchase or in any other way, may not cohabit with her before he has ascertained that she is not pregnant, so that no doubt shall arise concerning the paternity of the child. In Arabic this is called *istibrā'* (i. e. waiting or examination as to whether the uterus of the slave is free). To this end the law ordains a certain period of probation. If the slave is pregnant, the master must of course wait until she is delivered.

c. Liberation (*'itḳ*) and patronage (*walā'*).

The liberation of slaves is looked upon in Islām as a good work (*ḳurba*), and gives right to a reward in the other world. „He who sets free a Musalman slave, shall be freed from the fires of Hell", Muḥammad is said to have declared.

Naturally only the legal owner of a slave can set him free. If, however, a slave is the common property of several persons and one of the latter gives him his freedom, the slave becomes entirely free if his liberator is able to pay the co-owners the value of part due to them; otherwise the slave is only partly free. Such a slave is called *mubaʿʿaḍ*, literally „a divided one".

The *umm walad*, as already mentioned, becomes free on the death of her master. Anybody also who becomes the property of his nearest relative becomes *ex ipso* free. According to the Shāfi'ite school, only the direct relatives in descending or ascending line of the owner can become free in this way; according to the Mālikites, also his brothers and sisters, and according to the Ḥanafites, every person who stands in such blood-relationship to the owner that marriage between them would be illegal i. e. every *dhu'l-maḥram*).

If anyone says to his slave: „When I die you shall be free", this is called „*tadbīr*" liberation. According to most jurisconsults (Ḥanafites and Mālikites), the owner cannot recall the *tadbīr* and the slave (i. e. the *mudabbar*) is unalienable. According to the Shāfi'ites, the owner may cancel the *tadbīr* as any other testamentary disposition, e. g. by selling the *mudabbar*, the *tadbīr* being thereby annulled. In any case all are unanimous that on the death of the owner, the *tadbīr* is to be considered as a testamentary enactment. If therefore the value of the *mudabbar* exceeds one third of the value of the estate, only a part of the *mudabbar* becomes free and the rest of him remains a slave.

The *kitāba* is a form of buying oneself free, which Islām has received from the old Arabian custom (comp. above the case of Djuwairiya and Ḳor'ān, xxiv. 33). It is a contractual liberation, and a *sine qua non* of it is that the slave pays his owner a certain equivalent for his freedom, according to the Shāfi'ite opinion, in at least 2 or 3 instalments. This contract cannot be canceled by the owner (*mukātib*), but the slave (*mukātab*) alone can annul it if he wishes. The owner must allow the slave to obtain property, whilst the slave binds himself to pay the price agreed upon. The *mukātab* is unalienable. On payment of the last instalment he is free.

It is praiseworthy to help the slave in his efforts to obtain freedom, and according to the Shāfi'ites, the owner should grant the *mukātab* a reduction on the purchase price of his freedom. A portion of the poor-rates (*zakāt*) is to be specially set aside for the *mukātab*. If a slave asks for the *kitāba*, it is praiseworthy of the owner to grant it, but not obligatory (as many of the older jurisconsults in Islām asserted).

The slave is called *ḳinn*, if he or she is neither *mukātab*, nor *mudabbar*, nor *umm walad*, nor *mubaʿʿaḍ*, but entirely unfree.

A legal consequence of every liberation is the „clientship" or „patronage" (*walā'*). The freed slave is the client of the liberator; if he dies without heirs, his patron inherits his estate, or if the latter be dead, then the latter's male heirs (*'aṣabāt*) inherit him. On the death of the patron, his patronage is transferred to his *'aṣabāt*, and besides the right of inheritance it gives its holder certain other prerogatives. The patron is "bridal attorney" (*walī*) for the freed female slave, and he receives the blood-money if the freed slave is murdered etc.

d. Slavery amongst modern Mohammedans. Treatment of slaves.

„Honor God and be kind .... even to your slaves", says the Ḳor'ān (iv. 40), and according to many impartial testimonies, the treatment of slaves in general, in spite of their lack of legal rights in Islām, is not bad. Comp. E. W. Lane, *The thousand and one nights* (note 13 to chap. i. On slaves): „The Prophet strongly enjoined the duty of kindness to slaves. ‚Feed your memlooks', said he, ‚with food of that which ye eat, and clothe them with such clothing as ye wear; and command them not to do that which they are unable'. These precepts are generally attended to, either entirely, or in a great degree. The owner may cohabit with any of his female slaves ... if he has not married her to another man. The condition of many concubine slaves is happy ... These and all other slaves of either sex are generally treated with kindness ... Their services are commonly light ... The general assertions of travellers in the East are satisfactory

evidence in favor of the humane conduct of most Muslims to their slaves".

"Public opinion on Muslim slavery", says C. Snouck Hurgronje (*Ueber meine Reise nach Mekka*, in the *Verhandl. d. Gesellsch. für Erdk. zu Berlin*, xiv (1887), 150 *et seq.*), "in Europe has been led astray by confusing American and Oriental conditions; on this account the English regulations for the prevention of the slave trade have been wrongly applauded. As soon as the African tribes are capable of esteeming the value of life and liberty, slaveraiding will come to an end. As things now are, it is a blessing for most of them that they are made slaves. Nearly all slaves, whom, in the form of an essay, I invited to go back to their homes only accepted on the stipulation that I would bring them back to Mecca again. They are received into the family of their masters and, after a few years' servitude, are received into society as freemen generally; they are even convinced that slavery has made men of them.... Taken all in all, as I know the state of affairs, the anti-slavery propaganda is distasteful to me". Comp. also Snouck Hurgronje, in the *Bijdr. tot de Taal-, Land- en Volkenk. v. Ned. Indië*, 5th series, ii. 375 *et seq.*, J. F. Keane, *Six months in Mecca*, pp. 94—100; L. Stross, *Sklaverei und Sklavenhandel in Ostafrika und im rothen Meere* (*Oesterr. Monatsschr. für den Orient*, 1886, N°. 12, pp. 211—215).

„The concubines, especially Abyssinian ones", says Snouck Hurgronje (*Ueber meine Reise*, *loc. cit.*), „are for several reasons more highly esteemed by the Meccans than their free wives; the relation is completely recognized by both religion and custom". Comp. the same writer's *Mecca*, ii. 136 *et seq.*: „As mother of one or more Meccans the [viz. the *umm walad*] belongs to society in Mecca practically as a free member, although her serfdom continues nominally. Theoretically [her] children are in every way equal to those born of a free mother; as a fact they are more often favored by the father than neglected by him. In general it may be said that in every well to do family sons of both classes of mothers, free women and slaves, are represented; neither in appearance, nor in their mutual behavior can the stranger remark the difference".

Concerning the position of the slave as craftsman, laborer, servant, etc., see *Mekka* ii. 11 *et seq.* In general their lot is not a heavy one; their food is ample. "After their liberation the laborers seek work as hirelings, water-carriers, etc.; they generally prefer the guardianship of the owner to go on, especially when their owner allows them to marry.... Domestic servants are almost regularly freed at the age of 20, one reason being that their occupation brings them into daily contact with free women and female slaves. The well to do owner also feels obliged, if possible, to give his faithful servant a home of his own, and the liberation of a slave in itself is considered to be a good work; the family tie remains as strong as before".

„Hardly any office or position whatever is unattainable for the freed slave; they compete on equal standing with the free-born, and the results show that they are not the worst equipped for the strife, for amongst the most influential citizens, proprietors of house property and of businesses, they have many representatives" (*loc. cit.*, ii. 13-14).

„Taken all in all the condition of the Muslim slave is only formally differentiated from that of the European servant and workman" (*loc. cit.*, ii. 19).

Comp. concerning the Mecca slave market: *Mekka*, ii. 15 *et seq.*, and concerning certain peculiarities of language amongst slaves: Snouck Hurgronje, *Mekkanische Sprichwörter und Redensarten*, pp. 111 *et seq.* (= *Bijdr. tot de Taal-, Land- en Volkenk. v. Ned.-Indië*, 5th series, i. 545 *et seq.*).

Black slaves, male and female, are found in numbers in the desert, says J. L. Burckhardt (*loc. cit.*, i. 181—183, 357); they are kindly treated, as severe treatment might drive them to flight. After a certain lapse of time they are always set free. The life of the Bedouins is similar to that of the Negro slaves in their own country. They soon become fond of the Bedouins and are soon as if they were naturalised in the tribe. Slaves and their offspring, however, can only marry among themselves; no free Bedouin ever marries a black girl. Comp. also C. M. Doughty, *Travels in Arabia deserta*, i. 553—555: „To speak of the African blood in these countries; there are bondsmen and bondwomen and free Negro families in every tribe and town ... The condition of a slave is always tolerable and is often happy in Arabia... It is not many years, ,if their householder fears Ullah', before he will give them their liberty; and then he sends them not away empty; but in Upland Arabia (where only substantial persons are slave holders) the good man will marry out his freed servants, male and female, endowing them with somewhat of his own substance, whether camels or palm-stems... In those Africans there is no resentment that they have been made slaves, — they are often captives of their own wars, — the patrons who paid their price have adopted them into their households, the males are circumcised ... ,God has visited them in their mishap'; they can say: ,It was His grace'; since they be thereby entered into the saving religion. This therefore they think is the better country, where they are the Lord's free men, a land of more civil life... for such they do give God thanks that their bodies were sometime sold into slavery!"

(TH. W. JUYNBOLL.)

'ABD ALLĀH B. AL-'ABBĀS, surnamed Abu 'l-'Abbās, cousin of the Prophet. His birth is said to have taken place when the Hāshimides were blocked in al-Shi'b, a couple of years before Muhammed's emigration to Medina. According to al-Bukhārī, he and his mother had already been converted before his father al-'Abbās [see AL-'ABBĀS B. 'ABD AL-MUṬṬALIB] accepted the Islamic faith. But this is doubtlessly a pleasant fiction invented either by himself or by others. He began to come into prominence under 'Othmān. The caliph, to whom, according to his own statement, he was faithful, entrusted him with the leadership of the pilgrimage in the fateful year 35 (655-656), and it was to this that he owed his fortunate absence from Medina when the caliph was murdered. He then went over to 'Alī, who frequently employed him as an ambassador and appointed him governor of Baṣra. All what is related of him after that time must be accepted with caution, as later on 'Abbāside party interests or fear of the 'Abbāside rulers played an important role. Thus he is said to have commanded a portion of 'Alī's army at Ṣiffīn, which is, however, hardly possible, if he conducted the

pilgrimage in the year 35. When 'Alī was obliged to accept arbitration, he wanted to make 'Abd Allāh his representative, but his own followers refused to accept this arrangement. Nevertheless he accompanied Abū Mūsā, and was in Dūmat al-Djandal with him. When 'Alī lost Egypt, he consoled him with words of friendship. Concerning his farther doings, reports differ very greatly. But one fact is confirmed on all sides, viz. that he took a large sum of money (some say 6 million dirhem) from the state treasury of Baṣra and then left the town. But, whereas several authorities, as for instance al-Madā'inī, 'Omar b. Shabba and Belādhorī, make this incident happen before the assassination of 'Alī, others, as Abū 'Ubaida and al-Zuhrī, place it during Ḥasan's caliphate, and represent it as being much more reprehensible, since, according to their version, 'Abd Allāh went over to Mu'āwiya, and got the latter to secure the stolen sum for him as a reward for his treachery. At the same time it is true that this perfidy is ascribed to 'Abd Allāh's brother 'Ubaid Allāh by al-Madā'inī, Belādhorī, and Ya'kūbī; yet it can hardly be doubtful but that this is a later distortion of the facts made in order to whitewash the celebrated member of the 'Abbāside family and that 'Abd Allāh really betrayed his cousin. The fact that after al-Ḥasan's abdication he recognized the rule of the godless Umaiyad could not be denied even by the 'Abbāside historians. In order to palliate to a certain extent the undeniable fact that he was a renegade, al-Madā'inī makes him protest, in company with the four candidates for the caliphate, against Mu'āwiya's efforts to secure the sovereign authority for his son Yazīd, but this is certainly a merely harmless fiction. After Mu'āwiya's death he quietly did homage to Yazīd on perceiving that the latter had a majority on his side. He died in Ṭā'if in the year 68 (687-688), or, according to some, in the year 69 or 70.

'Abd Allāh does not owe his fame to his political activity, which is but touched upon by his biographers, but to his greatly admired knowledge of profane and sacred tradition, of jurisprudence and commenting the Ḳor'ān. He is celebrated as the Doctor (Rabbi) of the Community (*Ḥibr al-Umma*), and is called „the sea"; the traditions contain the most exaggerated accounts of his infallible scholarship and of the interest the Prophet took in this infant prodigy. Criticism has, however, come to a different conclusion and has exposed him as a conscienceless liar, whose forgeries quite correspond to his cunning political tricks. A partial justification for him might no doubt be found in the possibility that several of the traditions, which go under his name, may have been foisted upon him by later forgers. Amongst his traditions which refer to his own times or to the immediately preceding period, there are to be found the most barefaced inventions, as, for instance, the dream of his aunt 'Ātika (Ibn Hishām, ed. Wüstenf., pp. 428 *et seq.*), the collapse of the idols at Muḥammed's bidding (*ib.*, pp. 824 *et seq.*), the participation of Iblīs in the council of the Ḳuraishites (*ib.*, p. 324), etc. He did not, however, confine himself to relating occasional traditions and to answering the questions put to him; he welded his tales into a great system which took into account the creation, the history of mankind, and the pre-Islamic times. For this purpose, since he could not possibly invent everything, he made use of information supplied to him by some Jewish converts to Islām, especially that supplied by a South Arabian Jew, Ka'b b. Māti', but he so moulded the matter thus obtained till it agreed with the Ḳor'ān and Islamic ideas. Amongst other things he sketched a theory of the rise and development of ancient Arabian idolatry, in which the suggestions of the Ḳor'ān and all sorts of Biblical and other reminiscences are most brazenly mingled. Only in those rare cases, where there is absolutely no reason to suspect lying, may his traditions be used for historical research.

'ABD ALLĀH B. 'ABD ALLAH. [See AL-MAYORḲĪ.]

'ABD ALLĀH B. 'ABD AL-ḲĀDIR (Malay pronunciation ABDU'LLAH BIN ABDU'L-KADIR), surnamed MUNSHĪ, i. e. teacher of languages, was born in 1796 in Malacca, where his grandfather, the son of Shaikh 'Abd al-Ḳādir, who came originally from Yemen, had settled. At an early age, 'Abd Allāh received lessons in Malay from his father, who is said to have been an expert Malay scholar, and endeavored to make himself fully master of this language by reading Malay writings and by associating with educated Malays. As he learned foreign languages and continually came into contact with Europeans, as for instance, Farquhar, Raffles, and the missionaries Milne, Morrison and Thomson, his culture increased regularly.

Shortly after the founding of Singapore (1819), he established himself in that town and earned his living in many different ways. He acted as an interpreter, gave lessons in Malay, wrote letters, and assisted the American missionaries North, Keasberry and others in translating mission books and school books.

'Abd Allāh must be ranked amongst the best Malay writers of the 19th century, and his works are an undeniable testimony of his extraordinary range of knowledge (for a Malay) and his great culture. It is to be regretted that he did not always pay attention to style and that his language is often lacking in purity; both defects which are to be ascribed to his intercourse with Europeans.

His principal book is the so-called *Hikāyat 'Abd Allāh*, an autobiography, in which *inter alia* he mentions politically important personages, as Farquhar and Raffles (whose secretary he was), and emphasizes the advantages of a European administration over an Indian one, even though he at the same time sharply criticizes the administrative measures of the English and Dutch. A

full extract from this work is to be found in the *Tijdschrift van Nederlandsch-Indië*, 1854; fragments are given in Niemann's *Anthologie* and the *Maleische Leesboek*, iii. by Meursinge. In Singapore the whole work has been repeatedly lithographed and printed; by H. C. Klinkert as *Autobiographie van ʿAbdullah* (Leyden, 1882).

In 1838 was published at Singapore under the title of *Bahwa ini Kissa Pelayaran ʿAbd Allah dari Singapura ke-Kelantan*, a description of a journey to the Malay States on the east coast of the Peninsula of Malaca, giving most important information in every department of knowledge concerning them; a second edition appeared in 1852 (reprinted several times since then). Pijnappel in Leyden brought out a printed edition in 1855, and H. C. Klinkert, a lithographed one in 1889. Dulaurier translated this traveller's diary into French (Paris 1850), an abridged translation was made by De Hollander (*Gids*, Jan. 1851).

ʿAbd Allāh translated from Tamil the collection of Indian Fables known under the name of *Panča Tantra*, into Malay under the title of *Ḥikāyat Pandja Tanderan*. Besides the Singapore editions there is another by H. N. van der Tuuk (*Maleische Leesboek*, vi. by Meursinge, 1866), whilst H. C. Klinkert furnished a translation of it into Dutch in 1871.

Of his remaining and less important writings only his *Voyage to Mecca* may be mentioned; the narrative concludes with the description of Djidda (shortly after his arrival at Mecca, ʿAbd Allāh died in 1854). This work was published at Singapore and also at Leyden by Klinkert, who also published a translation of it in the *Bijdragen van het Koninklijk Instituut*.

ʿAbd Allāh edited the *Malay Chronicles* = *Sḥadjāra Melayu* (Singapore), of which a new edition was made in 1884 in Leyden, under the supervision of H. C. Klinkert.

(VAN OPHUYSEN.)

ʿABD ALLĀH B. ʿABD AL-MALIK B. MARWĀN, son of the caliph ʿAbd al-Malik b. Marwān [q. v.], was born about the year 60 (680-681), perhaps somewhat earlier, as he is said to have been 27 years old in the year 85 (704). He grew up in Damascus and accompanied his father in several campaigns. We first meet him as an independent general in the year 81 (700-701), in one of the usual razzias against the Eastern Romans. Then in the year 82 (701-702), he was sent with Muḥammed b. Marwān to help al-Ḥadjdjādj against al-Ashʿath and played a part in the negotiations of Dair al-Djamādjim. Thereupon he again led expeditions against the Eastern Romans, and in the year 84 (703-704) conquered al-Maṣṣīṣa, which he converted into a military camp. After the death of his uncle ʿAbd al-ʿAzīz b. Marwān, he was appointed governor of Egypt in the year 85 (704). On the 11th Djumādā II he made his entry into Fosṭāṭ. He was to wipe out all traces of ʿAbd al-ʿAzīz, and therefore changed all the officials. His administration is decried in tradition, because he accepted bribes and embezzled public moneys. The only really important achievement of his rule was the introduction of the Arabian language into the Dīwāns of the capital. His administration gave offence in Damascus; in the year 88 (706-707) he made there a passing visit, and in 90 (708-709) he was definitely recalled. He departed to Syria with many presents, but they were taken from him in the province of the Jordan by order of the caliph. Thereupon he disappeared from the political arena. Only Yaʿḳūbī has the information that he was executed on the ʿAbbāsides coming into power. He is said to have been crucified by al-Saffāḥ in the year 132 (749-750) in Ḥīra.

(C. H. BECKER.)

ʿABD ALLĀH B. ʿABD AL-MUṬṬALIB, Muḥammed's father. Tradition has handed down but little concerning him, and this little consists of worthless legends. Al-Kalbī gives the 24th year of Anūshirwān's reign as the year of his birth. That he was the finest of Ḳoraishites is self evident. The well-known story of his father's vow to sacrifice one son if he had ten, and of the rescue of ʿAbd Allāh on whom the lot had fallen, makes ʿAbd Allāh the youngest son notwithstanding the fact that his brother ʿAbbās was but little older than Muḥammed. In the same way the account of his marriage with Āmina [q. v.] has been embellished by legend. That Muḥammed became an orphan early in life is, according to Ḳorʾān, xciii. 6, certain, but opinions differ as to whether ʿAbd Allāh died before the birth of his son or shortly after it. Possibly the former opinion is based on a dogmatic theory (comp. Baḥīrā's utterance, in Ṭabarī, i. 1124, „it is not seemly that his father be still alive"). He is said to have sickened and died during a business trip in Medina, and his grave is shown in the courtyard of a certain Nābigha. According to a wide spread statement, he died at the age of twenty-five.

ʿABD ALLĀH B. ʿABD AL-ẒĀHIR. [See IBN ʿABD AL-ẒĀHIR.]

ʿABD ALLĀH B. AL-AFṬAS, founder of the dynasty of the Afṭasides [q. v.] in Badajoz, with the surname of al-Manṣūr, reigned until about 422 (1031). He belonged to the Berber family of the Banū Afṭas and is therefore called Ibn al-Afṭas, for the name of his father was Muḥammed b. Maslama.

Bibliography: Hoogvliet, *Spec. e litt. Orient. exhibens diversorum scriptorum locos de regia Aphtasidarum familia* etc. (Leyden, 1839).

ʿABD ALLĀH B. AḤMED. [See IBN AL-BAIṬĀR.]

ʿABD ALLĀH (Abū Fāris) B. AḤMED AL-MANṢŪR B. MUḤAMMED SHAIKH AL-MAHDĪ, surnamed AL-WĀTHIḲ BI-'LLĀH, governor of Marrākush (Morocco), was proclaimed sultan in this town on Friday, 28 Rabīʿ I 1012 (5 Sept. 1603), a few days after the death of his father and the proclamation of his brother Zaidān by the inhabitants of Fez.

Immediately after he was proclaimed, the new sultan of Morocco was forced to fight against his brother, who contested the supreme authority. The *'ulamā'* of Fez, having been won over to the party of Mawlā Zaidān, decided by a *fetwā* (judicial decision) that Abū Fāris 'Abd Allāh had been illegally proclaimed, firstly because the legitimate sultan had been already proclaimed, and secondly because the rights of a son of a slave ('Abd Allāh's mother was a freed slave of al-Manṣūr) are not equal to those of a son of a free woman. War immediately broke out and the two sultans marched against each other.

The sultan Aḥmed al-Manṣūr had had three sons. The eldest, Muḥammed Shaikh, brother of Abū Fāris 'Abd Allāh by the same mother, had been entrusted with the government of Fez. But, recognizing his old father's partiality for Zaidān, he revolted and attempted to seize the sway. Al-Manṣūr immediately left his capital, Morocco, went to Fez, succeeded in seizing the rebel and sent him to Morocco as a prisoner. He was still there in confinement at the time the following events took place.

Muḥammed Shaikh was adored by his troops. Abū Fāris was persuaded to pardon him and to put him in command of an army corps. This was done on condition that Muḥammed Shaikh should give himself up to Abū Fāris again after the battle.

When the two hostile armies met on the banks of the Umm al-Rabī'a, half of Zaidān's soldiers left him in the lurch and joined Muḥammed Shaikh. The defeated Zaidān in vain tried to reach Fez and fortify himself there, and was obliged to flee and take refuge with the Turks at Wadjda. Muḥammed Shaikh, for his part, sent back to Abū Fāris the regiments entrusted to him, and he added to them, as prisoners, the mufti and ḳāḍī of Fez, who had brought about the elevation of Zaidān; but did not return to give himself up again to his brother.

Abū Fāris had to accept matters as they stood. The only manner in which he could mark his displeasure was to send back the ḳāḍī to Fez, fully pardoned and loaded with presents. The mufti had died on the way.

The two brothers were not long in beginning to fight for the possession of Morocco. Their armies met, according to some, at Aklim, according to others, at Mars al-Ramād. Abū Fāris 'Abd Allāh was defeated and had to flee towards Sūs (1015 = 1606). The army of Muḥammed Shaikh, being mistress of Morocco, committed such atrocities that the people revolted and proclaimed Zaidān, who was roaming in the neighborhood, as their sovereign.

This proclamation caused the reconciliation of Abū Fāris and Muḥammed, who first retreated to Fez and then to Ḳaṣr al-Kabīr, pursued by Zaidān's Turkish ḳā'id, Muṣṭafā Pasha. Muḥammed Shaikh then went to Spain to implore the aid of Philip III, whilst Abū Fāris and 'Abd Allāh, the son of Muḥammed Shaikh, tried to hold the country against Zaidān by the side of Tāza (1017 = 1608). With the help of some Berber contingents they delivered an attack near Fez. The death of the ḳā'id Muṣṭafā Pasha in the battle, followed by the rout of Zaidān's troops, enabled Abū Fāris and his nephew to seize the town (Rabī' II 1618 = July 1609). But Abū Fāris did not enjoy the fruits of their joint victory for long. A plot of the ḳā'ids of the Sherāga to proclaim him sovereign at the expense of Muḥammed Shaikh was discovered by his nephew. The latter resolved to prevent it and, accompanied by his ḳā'id, Hasan Abū Dubaira, went by night to Abū Fāris's bedroom. He was on his prayer-carpet surrounded by his wives. 'Abd Allāh b. Muḥammed Shaikh sent the women out and strangled his uncle, who fought to the last gasp and tried to strike him with his feet (Djumādā I 1018 = August 1609).

'Abd Allāh was a religious and credulous man. He had inaugurated his rule by building a mosque at Morocco near the tomb of the saint Abu'l-'Abbās al-Sabtī. In front of this mosque he built a library, which he filled with rare books and valuable registers. He hoped by so doing to obtain the assistance of the saint in the affairs of his government.

(A. COUR.)

'ABD ALLĀH b. 'ALĪ, uncle of the caliphs Abu 'l-'Abbās al-Saffāḥ and Abū Dja'far al-Manṣūr. 'Abd Allāh was one of the most active participators in the battle of the 'Abbāsides against the last Umaiyad caliph, Marwān II. He was commander-in-chief in the decisive battle at the Greater Zāb, where Marwān lost his crown, and when the latter took to flight, 'Abd Allāh pursued him, soon after conquered Damascus and marched on to Palestine, whence he had the fugitive caliph pursued to Egypt. Even more implacably than his brother Dā'ūd b. 'Alī did 'Abd Allāh wage war on the Umaiyads, who were still alive, and shrank from no method to wipe them out root and branch. During his stay in Palestine, he had seventy of them murdered at one blow. Such cruelties naturally caused ill-will against the new ruler, and a dangerous rebellion in Syria broke out under the leadership of Abū Muḥammed, a descendant of Mu'āwiya I, and Abu'l-Ward b. al-Kawthar, the governor of Ḳinnasrīn. The rebels at first inflicted a defeat on the 'Abbāside troops, but were beaten by 'Abd Allāh in 132 (750) at Mardj al-Akhram. As governor of Syria, 'Abd Allāh soon threatened the safety of the new dynasty. After the death of Abu 'l-'Abbās, or according to others at the end of his reign, he made claims to the caliphate, which he could base not only on his age but also on his important services in the war against the Umaiyads. Moreover he had at his disposal a considerable army, which in reality he was to lead against the Byzantines. When he learned that the powerful governor of Khorāsān, Abū Muslim, had declared for the caliph al-Manṣūr, he butchered 17000 Khorāsānians in his army, because he knew that they would never fight against Abū Muslim, and with his remaining troops proceeded against the latter. He was, however, in Djumādā II 137 (Nov. 754) defeated at Nisibis and had to flee to his brother Sulaimān, the governor of Baṣra. After a couple of years, the latter was dismissed, and 'Abd

Allāh was arrested by order of the caliph al-Manṣūr. He remained some 7 years in prison; then in the year 147 (764) he was taken into a house that had been purposely undermined; it fell down on him and buried him under the ruins. At his death he is said to have been 52 years old.

Bibliography: Ṭabarī, iii. 27 *et seq.*; Weil, *Gesch. d. Chalifen*, i. 700; ii. 8 *et seq.*; A. Müller, *Der Islam im Morgen- und Abendland*, i. 456 *et seq.* (K. V. ZETTERSTÉEN.)

ʿABD ALLĀH B. ʿĀMIR, governor of Baṣra, was born at Mecca in the year 4 (626). He was a Ḳuraishite and a cousin of ʿOthmān b. ʿAffān. ʿAbd Allāh is principally known as the conqueror of a great part of Persia; when, in the year 29 (649-650), ʿOthmān gave him the government of Baṣra, ʿAbd Allāh went towards Khorāsān and brought it, as well as Sidjistān and many other places, under the rule of the Arabs. Nīsābūr and Sarakhs capitulated, and Merw only obtained peace on condition of paying an annual tribute of two million dirhems. In the year 36 (656-657), ʿAbd Allāh was one of the first to respond to the appeal of ʿĀʾisha to avenge the death of ʿOthmān. He helped ʿĀʾisha with money and camels in her march towards Baṣra. After ʿĀʾisha's forces were defeated by ʿAlī, ʿAbd Allāh took refuge with a man of the Banū Ḥurḳūṣ, who took him to Damascus. He lived there till 41 (661-662), when Muʿāwiya reinstated him in the government of Baṣra. But, finding him too lenient towards criminals, Muʿāwiya dismissed him in 44 (664-665). Since then he seems to have lived in retirement until his death at Mecca in 59 (678-679).

ʿAbd Allāh was also renowned on account of his numerous public works: he planted date palms, dug wells at al-Nibādj and Ḳaryatain, and made two canals at Baṣra and the canal of Ubulla, a suburb of Baṣra. He was also a traditionist; he transmitted a tradition from the Prophet himself.

ʿABD ALLĀH B. ASʿAD. [See AL-YĀFIʿĪ.]

ʿABD ALLĀH B. BARRĪ. [See IBN BARRĪ.]

ʿABD ALLĀH B. DJAʿFAR B. ABĪ ṬĀLIB, nephew of the caliph ʿAlī. ʿAbd Allāh's father had gone over to Islām very early, and took part in the emigration of the first believers to Abyssinia, where, according to the common belief, ʿAbd Allāh was born. On his mother's side he was a brother of Muḥammed b. Abī Bekr; the mother's name was Asmāʾ bint ʿUmais al-Khathʿamīya. After some years the father returned to Medina taking his son with him. ʿAbd Allāh became known chiefly on account of his great generosity, and received the honorific surname of *Baḥr al-Djūd*, „the Ocean of Generosity". He appears to have played no very important part in politics, although his name crops up from time to time in history during ʿAlī's time and that following. When Muʿāwiya tried to throw suspicion on Ḳais b. Saʿd, the valiant governor of Egypt, to damage him in ʿAlī's eyes, ʿAbd Allāh advised the removal of Ḳais; ʿAlī allowed himself to be persuaded and took the fateful step to replace him by Muḥammed b. Abī Bekr, who in a very short time brought the whole of Egypt into the greatest confusion. This took place in the year 36 (656-657). When in the year 60 (680), after Yazīd's accession, the Shīʿites in Kūfa summoned Ḥusain b. ʿAlī to proceed to that city to have himself proclaimed caliph, ʿAbd Allāh amongst others endeavored to dissuade him from this dangerous enterprise, but without success. The date of ʿAbd Allāh's death is generally given as 80 (699-700) and the place Medina, but according to others, he did not die before the year 84 or 85. Besides, 87 or 90 is also given as the year of his death.

Bibliography: Ṭabarī, i. 3243 *et seq.*; ii. 3 *et seq.*; iii. 2339 *et seq.*; Ibn al-Athīr (ed. Tornb.), iii. 224 *et seq.*; Nawawī (ed. Wüstenf.), pp. 337 *et seq.* (K. V. ZETTERSTÉEN.)

ʿABD ALLĀH B. DJAḤSH, one of the first followers and nephew of the Prophet. ʿAbd Allāh belonged to those that had emigrated to Abyssinia and later came back to Medina. He was the leader of the ill-renowned raid on Nakhla during the sacred month, of which Ḳorʾān, ii. 214, treats. He took part in the battles of Bedr and Uḥud and met his death in the latter.

Bibliography: Ibn Saʿd, iii¹. 62 *et seq.*; Ibn al-Athīr, *Usd al-Ghāba*, iii. 131. (M. TH. HOUTSMA.)

ʿABD ALLĀH B. ḤAMDĀN B. ḤAMDŪN, called Abu ʾl-Haidjāʾ, of the tribe of Taghlib, was appointed governor of al-Mawṣil (Mosul) by the caliph al-Muktafī in the year 293 (905), in which place he had to fight against the loot-loving Kurds. He took no part in the conspiracy to proclaim Ibn al-Muʿtazz [q. v.] caliph instead of al-Muḳtadir, in which his brother Ḥusain played a leading part; he was indeed, on the failure of this enterprise, entrusted with the task of capturing his fugitive brother, in which he was successful. When, however, he was dismissed from his office in the year 301 (913-914), he rose against the caliph. As he submitted to Muʾnis [q. v.], who was sent against him, he was pardoned by al-Muḳtadir and presented with a state dress; more than this, he was reinstated as governor of al-Mawṣil. It is, however, true that, when his brother Ḥusain again rebelled in the year 303 (915-916) and was taken prisoner, he was arrested together with all his family. Set free in 305 (917-918), he was in 308 (920) entrusted with guarding the road to Khorāsān and Dīnawar and was again made governor of al-Mawṣil, whither he, however, sent his son Ḥasan as his representative. The latter became his successor. After many wars (to which he owed his *kunya* ʿAbu ʾl-Haidjāʾ „the father of fighting") with the Karmathians, with Yūsuf b. Abi ʾl-Sādj [q. v.] and others, he met his death in the year 317 (929), when the revolution, which he and others, dissatisfied with al-Muḳtadir's rule, had instigated to proclaim al-Ḳāhir caliph, was frustrated after some initial success. ʿAbd Allāh was the real founder of the power of the Ḥamdānides [q. v.].

Bibliography: *ʿArīb* (ed. de Goeje), pp. 30 *et seq.*; Hilāl al-Ṣābiʾ, *Kitāb al-Wuzarāʾ*; Ibn al-Athīr (ed. Tornb.), vii.; viii.; Weil, *Gesch. d. Chalifen*, ii. 531 *et seq.*; A. Müller, *Der Islam im Morgen- und Abendland*, i. 563 *et seq.* (M. TH. HOUTSMA.)

ʿABD ALLĀH B. ḤAMZA B. SULAIMAN AL-IMĀM AL-MANṢŪR BI-ʾLLĀH, South Arabian poet, born in Rabīʿ I 561 (January 1166), became Imām of the Shīʿite sects of Zaidites in Jemen in 594 (1198) and died in 614 (1217) at Kawkabān. His Dīwān is to be found in manuscript in Berlin

(comp. Ahlwardt, *Verz. d. arab. Handschr.*, Nº. 7703), Leyden (comp. *Catalog. cod. or. bibl. ac. Lugduno-Batavae*, 2^d^ ed., Nº. 673), and in British Museum (comp. C. Rieu, *Supplement*. Nº. 1065); a Radjaz on horses with commentary, in Berlin (comp. Ahlwardt, *loc. cit.*, Nº. 6181), and in British Museum (comp. C. Rieu, *loc. cit.*, Nº. 814). Besides these the Berlin Library possesses twelve other theological and polemical writings of his; others enumerated by Ahlwardt, *loc. cit.* Nº. 4950, XI.

Bibliography: Abū Makhrama, in *Catalog. cod. or. bibl. ac. Lugduno Batavae* (2^d^ ed.), i. 417 *et seq.*; Brockelmann, *Gesch. d. arab. Litter.*, i. 403. (BROCKELMANN.)

'ABD ALLĀH B. ḤANẒALA, one of the leaders of the uprising against Yazīd I. 'Abd Allāh was born in the year 4 (625); his father had fallen in the battle at Mount Uḥud. In the year 62 (682) 'Abd Allāh came before the caliph as a member of the deputation, which the governor of Medina, 'Othmān b. Muḥammed, sent to Damascus to bring about a reconciliation between the dissatisfied element in Medina and the Umaiyads. The deputies were received with many marks of honor by Yazīd and were loaded with costly presents; but when they had returned to Medina, they denounced the caliph as a godless and voluptuous man, entirely unworthy of the caliphate, and 'Abd Allāh distinguished himself especially by his calumnies against him. Dissatisfaction spread; the members of the Umaiyad family were ignominiously driven out and the government was handed over to 'Abd Allāh. In these circumstances the caliph was obliged to punish the rebels with armed force, and towards the year 63 (683) he sent an army under the tried leadership of the old general Muslim b. 'Oḳba against Medina. He received exact information of the state of affairs in Medina from one of the exiled Umaiyads, subsequently caliph 'Abd al-Malik b. Marwān, and then took up a favorable position on the Ḥarra, the lava covered region east of the town. After lapse of a three days grace, which Muslim had been ordered by Yazīd to accord to the Medinians, a bitter fight began and ended with the complete defeat of the rebels (Dhu 'l-Ḥidjdja 63 = August 683). 'Abd Allāh took part in the battle and showed great courage. About noon he retired to say his prayers, then rushed into the thick of the fight again, till he was attacked by two Syrians, and finally succumbed under their blows. His head was cut off and brought to Muslim. The two soldiers who had killed him received valuable gifts from the caliph as a reward.

Bibliography: Ibn Sa'd, v. 46 *et seq.* Ṭabarī, ii. 402 *et seq.*; Ibn al-Athīr (ed. Tornb.), iv. 87 *et seq.*; A. Müller, *Der Islam im Morgen- und Abendland*, i. 365 *et seq.*; Wellhausen, *Das arab. Reich und sein Sturz*, pp. 96 *et seq.* (K. V. ZETTERSTEEN.)

'ABD ALLĀH B. AL-ḤASAN B. AL-ḤASAN, chief of the 'Alides. 'Abd Allāh was treated with great favor by the caliphs of the Umaiyad dynasty, and when he visited the first 'Abbāside caliph Abu 'l-'Abbās al-Saffāḥ at Anbār, the latter received him with great distinction. Thence he returned to Medina, where he soon fell under the suspicion of the successor of al-Saffāḥ, al-Manṣūr. Yet 'Abd Allāh owed his misfortune not so much to himself as to his two sons Muḥammed and Ibrāhīm. As early as the year 136 (754), when al-Manṣūr led the pilgrimage, the latter's suspicions were aroused, because they did not appear with the other Hashimides to greet him, and his suspicions fell more especially on Muḥammed. After his accession al-Manṣūr tried to sound the Hashimides as to Muḥammed's real opinions, but they spoke only good of him and endeavored to excuse his absence. Only al-Ḥasan b. Zaid advised the caliph to beware of this dangerous 'Alide. In order to remove all doubts, al-Manṣūr ordered 'Oḳba b. Salm to get into 'Abd Allāh's confidence by means of presents and forged letters from Khorāsān, the usual centre of 'Alide propaganda. At first 'Abd Allāh was very cautious, but finally fell into the trap, and when 'Oḳba asked him for an answer for his supposed companions in Khorāsān, he did indeed refuse to give one in writing, but asked him to inform them by word of mouth that he greeted them and that his two sons would rise up in the near future. As soon as 'Oḳba had in this manner convinced himself of the rebellious intentions of the 'Alides, he at once informed the caliph, and when the latter in the year 140 (758) again made a pilgrimage, he invited 'Abd Allāh to come to him, and asked him if he could really count on his fidelity. 'Abd Allāh assured him of his honorable sentiments, but when 'Oḳba suddenly appeared, he understood that he had been betrayed and took refuge in entreaties. Al-Manṣūr, however, had him arrested. 'Abd Allāh's relative shared his fate, but the caliph was not able to seize his two sons. When he again came to Medina in the year 144 (762) after having accomplished another pilgrimage, he took the prisoners with him to Babylonia, and soon afterwards 'Abd Allāh died there in prison at the age of 75. According to current accounts, he was murdered by al-Manṣūr's orders.

Bibliography: Ṭabarī, ii. 1338 *et seq.*; iii. 143 *et seq.*; Ibn al-Athīr (ed. Tornb.), v. 172 *et seq.*; Weil, *Gesch. d. Chalifen*, ii. 40 *et seq.* (K. V. ZETTERSTEEN.)

'ABD ALLĀH B. IBĀḌ (ABĀḌ) AL-MURRĪ AL-TAMĪMĪ. The chronicles of the African Abāḍites, which are so valuable with respect to the history of Khāridjism, are very sparing in details about this personage. And yet he has given his name to the branch of the Wahbites, who opposed the arbitration between 'Alī and Mu'āwiya, and who have developed principally in the Maghrib, where they still exist [see ABĀḌITES]. He is mentioned as having been a member of the *ṭabaḳa* of the doctors of the 2^d^ half of the 1st century of the Hegira.

He maintained many controversies with the Khāridjites, who gave themselves up to the worst excesses and exaggerated the primitive doctrine of the *Muḥakkima*; and, following the suggestion of Djābir b. Zaid, rallied round him the Wahbites, who wished to remain within the limits of common sense and the Sunna.

Abāḍite chronicles say that 'Abd Allāh b. Ibāḍ took no part in the rebellions of the Khāridjites against the Caliphate but lived in retirement. Al-Barrādī in his *Kitāb al-Djawāhir* gives in extenso a very dignified letter on religious polemics, which he sent to 'Abd al-Malik b. Marwān (comp. Sachau, *Mittheil. d. Semin. für Orient. Sprach.*, ii. 2^d^ pt. pp. 52 *et seq.*, who gives a German translation of two letters by 'Abd Allāh) in reply to a missive, which this prince had sent him by a certain Sinān b. 'Āṣim.

According to Shammākhī (*Kitāb al-Siyar*, p. 77), 'Abd Allāh b. Ibāḍ was one of the Mussulmans who went to Mecca to defend that town against Muslim b. 'Oḳba [q. v.] in 64 (683-684).

(A. de Motylinski.)

'ABD ALLĀH b. Ibrāhīm I b. al-Aghlab Abu 'l-'Abbās, second Aghlabide emir (Ṣafar 197 = Oct.-Nov. 812); died on the 6th Dhu 'l-Ḥidjdja 201 (25th June 817). In his father's reign he commanded the troops that defended Tripoli against the Ibāḍite Berbers, who were led by the Rostemide emir 'Abd al-Wahhāb, and made a treaty with him. He seems to have governed with the *djund* against the popular party of the *fuḳahā'*. [For *bibliography*, see AGHLABIDES.]

(M. G. D.)

'ABD ALLĀH (Muḥammed) b. Ibrāhīm II b. Aḥmed Abu 'l-'Abbās, tenth Aghlabide emir. He was entrusted with many commands by his father; it was he who in 280 (893) massacred the *djund* of Bilizma; in 284 (897) he fought the Nefūsa; in 286 (899) he made a campaign at Biskra. Finally in 287 (900) his father nominated him governor of Sicily, where he took possession of Palermo and Reggio. Ibrāhīm recalled him in 289 (902) and abdicated in his favor (Rabī' I = Feb.-March). He was assassinated on the 28th Sha'bān 290 (27th July 903), by order of his son Ziyādat Allāh. After his accession he appears to have affected the conduct of an ascetic, although not at all going over to the party of the *fuḳahā'*. [For *bibliography*, see AGHLABIDES.]

(M. G. D.)

'ABD ALLĀH b. Iskandar, a Shaibānide, the greatest prince of this dynasty, born in 940 (1533-1534; the dragon year 1532-1533 is probably more accurately given as the year of the cycle) at Āfarīnkent in Miyānkāl (an island between the two arms of the Zarafshān). The father (Iskandar Khān), grandfather (Djānī Beg) and great-grandfather (Khwādja Muḥammed, son of Abu 'l-Khair [q. v.]) of this ruler of genius are all described as very ordinary, almost stupid men. Djānī Beg (d. 935 = 1528-1529) had at the distribution of 918 (1512-1513) received Karmīna and Miyānkāl; Iskandar was at the time of his son's birth lord of Āfarīnkent; later, probably after the death of one of his brothers, he emigrated to Karmīna. There 'Abd Allāh first proved his power as a ruler in 958 (1551); the country had been attacked by Nawrūz Aḥmed Khān of Tashkend and 'Abd al-Laṭīf Khān of Samarḳand; Iskandar had fled across the Āmū; 'Abd Allāh assumed his father's duties and successfully repulsed the attack. In the following years 'Abd Allāh tried to extend his possessions westerly in the direction of Bukhārā and south-easterly in the direction of Ḳarshī and Shahr-i Sebz, at first without permanent success; in 963 (1555-1556) he was even obliged to evacuate the lands inherited by his father and flee to Maimana. In the same year (Dhu 'l-Ḳa'da = September-October 1556) there died his powerful enemy Nawrūz Aḥmed Khān, Khān of the Özbegs and lord of Tashkend since 959 (1552). 'Abd Allāh immediately reasserted his supremacy in Karmīna and Shahr-i Sebz, and in Radjab 964 (May 1557) conquered Bukhārā, since that time his capital. There he had his weak-minded father proclaimed in 968 (1560-1561) khān of all the Özbegs, in order to rule himself in the latter's name. Only in 991 (1583) after the death of his father did he accept the vacant throne. After severe fighting against insubordinate supporters of the ruling house he subjugated Balkh in 981 (1573-1574), Samarḳand in 986 (in Rabī' II = June 1578), Tashkend and the remaining country north of the Sir in 990 (1582-1583) and Ferghāna in 991 (1583). 'Abd Allāh also made a campaign, besides the above-mentioned conquests, in the first half of the year 990 (spring 1582) in the steppes as far as Ulugh Tagh. As early as the year 996 (1587-1588) a stubborn insurrection was suppressed in Tashkend, and the enemy pursued far into the steppes. In the south-east Badakhshān was conquered, in the west Khorāsān, Gīlān and Khwārizm, the last one first in 1002 (1593-1594) and then, after an insurrection, reconquered in 1004 (1595-1596). An expedition to East Turkistān only resulted in the laying waste of the provinces of Kāshghar and Yārkand. 'Abd Allāh's last years were darkened by a quarrel with his only son 'Abd al-Mu'min, who ruled in Balkh from the end of 990 (autumn 1582) in the name of his father. As 'Abd Allāh had been the real ruler under Iskandar, in the same way 'Abd al-Mu'min wanted to occupy the same position with regard to his father now growing old. 'Abd Allāh would, however, not hear of any diminution of his power, and only the mediation of the clergy prevented an open breach between father and son, and compelled 'Abd al-Mu'min to yield. On hearing of the strained relations between father and son, the nomads had penetrated into the region of Tashkend and had defeated between Tashkend and Samarḳand an army sent against them. At the beginning of a punitive expedition against this enemy 'Abd Allāh was overtaken by death in Samarḳand (end of the „hen year" 1006 = beginning of 1598).

'Abd al-Mu'min was murdered but 6 months later by his subjects. The conquests in Khorāsān and Khwārizm were lost, and in the Özbegs' own country the power fell into the hands of another dynasty. Of greater permanence were the results of 'Abd Allāh's work in home affairs; the administration, especially the coinage system, was remodeled by him, many public works (bridges, caravanserais, wells, etc.) were completed. Even at the present day the people ascribe all such monuments either to Tīmūr or to 'Abd Allāh.

Bibliography: The life of this ruler up to the year 996 (1587-1588) is described in detail by his eulogist Ḥāfiẓ Tanīsh: *Sharaf Nāme-i Shāhī* (Persian), usually called *'Abd Allāh Nāme*. Much information (especially about the last few years) is given by 'Abd Allāh's Persian contemporary Iskandar Munshī in *Ta'rīkh-i 'Ālam Ārā-i 'Abbāsī* (biography of Shāh 'Abbās I, Teheran, 1897). Extracts from both works are in Welyaminow-Zernow, *Issledowaniya o kasimowskikh tsaryakh i tsarewičakh*, ii (in the *Trudi wostoč. otd. imper. arkheol. obshč.*, x.; German transl., Leipzig, 1867), and before that in his *Monetî bukharskiya i khiwinskiya*. See also my extracts from the little known *Baḥr al-asrār* by Maḥmūd b. Walī in the *Zapiski wostoč. otd. imper. russk. arkheol. obshč.*, xv. On the *Baḥr al-asrār*, comp. Ethé, *India Office cat.*, No. 575. The information given by Vambéry, *Gesch. Bochara's*, and by Howorth, *Hist. of the Mongols*, ii. div. 2, who follows him, is to be accepted with great caution.

(W. Barthold.)

'ABD ALLĀH B. KHĀZIM AL-SULAMĪ, governor of Khorāsān and one of the companions of the Prophet whose traditions he transmitted. In the year 31 (651-652), he held the command of that part of the troops of 'Abd Allāh b. 'Āmir [q. v.] which subdued Herāt and Sarakhs. In the following year, 'Abd Allāh b. Khāzim, at the head of 4000 men, by an ingenious stratagem routed Ḳārin's 40000 men and killed Ḳārin. It was then that he obtained from 'Abd Allāh b. 'Āmir the governorship of Khorāsān.

After the death of Mu'āwiya b. Yazīd (64 = 684), 'Abd Allāh, having recognised 'Abd Allāh b. al-Zubair as caliph, rebelled against the Umaiyads. He also seized Merw and Herāt, where he appointed one of his sons as governor. As soon as his authority was established, he began to oppress the Tamīmites, although they had helped him in his struggles with the Umaiyad forces, and a sanguinary war broke out between them. 'Abd Allāh remained governor of Khorāsān till the year 72 (692), when 'Abd al-Malik invited him to swear fealty to him, promising him the revenues of Khorāsān for seven (or ten) years. 'Abd Allāh refused; a battle was fought near Merw in which 'Abd Allāh b. Khāzim was killed in the year 73, some time after 'Abd Allāh b. al-Zubair.

Bibliography: Ṭabarī, i. 886; ii. 25-26; Belādhorī (ed. de Goeje), pp. 356 *et seq.*; Ibn al-Athīr, *Usd al-Ghāba*, iii. 148.

(M. SELIGSOHN.)

'ABD ALLĀH B. MAIMŪN, well-known sectarian, died about 261 (874-875), came originally from al-Ahwāz. His father Maimūn practiced as an oculist in that place, whence his name Maimūn al-Ḳaddāḥ. In that district there dominated since long heretical religious views hostile to Islām, and the oculist appears indeed to have had relations with the Khaṭṭābīya [q. v.] and the Bardesanians [q. v.]. The son became a learned theologian, who according to Maḳrīzī examined nearly all religious systems and evolved one of his own, which is, however, not more definitely known to us. He takes his place in history not as a writer but as the founder of a religious-political party. Starting from the ideas which join the Shī'ites with the Imāms, he won followers in the name of an 'Alide who had not yet made a public appearance, no doubt from the beginning with the ambitious desire to put himself in the latter's place. Even a branch of the 'Alides, the descendants of 'Aḳīl b. Abī Ṭālib, appears to have joined him, for he was received by them in Baṣra after his activity in 'Askar Mukram, whither he had gone, had for some reason or other come to an end. Thence, no doubt under compulsion, he later went to Salamia in Syria, where after his death the agitation was continued by his descendants, till finally the whole movement culminated in the uprising of the Fāṭimides [q. v.]. 'Abd Allāh and his successors worked through secret missionaries, who systematically endeavored to excite the scepticism of the faithful, and thereby were able to direct their attention to the „Lord of the Time" (*Ṣāḥib al-Zamān*) who was soon to make his public appearance. He is also said to have given himself an air of supernatural knowledge by diverse tricks, especially by using carrier pigeons, but as a matter of fact we know nothing with certainty as to his methods of propaganda. To his most zealous proselytizers belonged Muḥammed b. al-Ḥusain, usually called Dendān (or Zaidān), Ḥamdān Ḳarmaṭ, after whom the Karmathians [see KARMATS] were named, and a certain 'Abdān, who endeavored to defend the opinions of the sect in different writings which have not been preserved. Varying statements are made concerning the descendants of 'Abd Allāh [comp. FĀṬIMIDES.]

'ABD ALLĀH B. MAS'ŪD. [See IBN MAS'ŪD.]

'ABD ALLĀH B. MU'ĀWIYA, 'Alide rebel. After the death of Abū Hāshim, a grandson of 'Alī, claims were laid to the Imamate from several quarters. Some asserted that Abū Hāshim had formally transferred his rights to the dignity of Imām to the 'Abbāside Muḥammed b. 'Alī. Others thought he had spoken in favor of 'Abd Allāh b. 'Amr al-Kindī and wanted to proclaim him Imām. As he, however, did not come up to the expectations of his followers, they turned from him and declared 'Abd Allāh b. Mu'āwiya, a great-grandson of 'Alī's brother Dja'far, to be the rightful Imām. The latter asserted that both the godhead and the propheticalness were united in his person, because the spirit of God had been transferred from the one to the other and had finally come to him. In accordance with this his followers believed in the metempsychosis and denied the resurrection. In Muḥarram 127 (Oct. 744) 'Abd Allāh revolted in Kūfa where many joined him. He gained especially many followers amongst the Zaidites [q. v.]. The latter captured the citadel and expelled the prefect. In a short time, however, 'Abd Allāh b. 'Omar b. 'Abd al-'Azīz, the governor of 'Irāḳ, made an end to his doings. When it came to fighting, the ever unreliable Kūfans deserted; only the Zaidites fought bravely and continued the battle till 'Abd Allāh was granted an unimpeded retreat. From Kūfa he proceeded at first to Madā'in and then to Media. His power was in no way broken. From Kūfa and from other places numbers of people poured in to him and he soon succeeded in winning over several important points in Persia. After he had resided for some time in Iṣpahān, he went to Iṣṭakhr. The descendants of 'Alī had from before been honored as the rightful heirs to the Imamate especially in the eastern provinces of the empire. It was therefore easy for him to extend his rule over a great part of Media, Ahwāz, Fārs and Karmān. The Khāridjites, who had fought against Marwān II on the Tigris, withdrew into 'Abd Allāh's domain, and other opponents of the caliph also joined him. In the end, however, his power was not able to hold out. 'Āmir b. Ḍubāra, one of Marwān's generals, who had been entrusted with the pursuit of the Khāridjites, made a raid into 'Abd Allāh's domains and brought his rule to a sudden end. In the year 129 (746-747) 'Abd Allāh was defeated at Merw al-Shādjān and forced to

flee to Khorāsān, where Abū Muslim, the well-known general of the 'Abbāsides, had him executed. After his death, some of his followers, called al-Ḥanaḥīya [q. v.], maintained that he was still alive and would return; on the other hand, others, the so-called Ḥārithites, believed his spirit had entered Isḥāḳ b. Zaid b. al-Ḥārith al-Anṣārī.

(K. V. Zetterstéen.)

'ABD ALLĀH b. Muḥammed, Umaiyad prince in Spain. 'Abd Allāh, who ascended the throne of Cordova after the sudden death of his brother al-Mundhir in 275 (888), has been characterized as „one of the most repulsive phenomena in the whole history of Islām," and in truth his twenty-four years of power were a most unhappy period for his subjects. In order to secure his life and his throne against imaginary dangers, the suspicious tyrant treated his nearest relatives in the most cruel manner possible. His brother and predecessor al-Mundhir was according to all appearances poisoned by 'Abd Allāh's influence. His brother al-Ḳāsim met with a similar fate. His third brother Hishām was put to death on a trumped-up charge, and 'Abd Allāh employed the same means to get rid of his own sons Muḥammed and Muṭarrif. He had them both executed on a mere suspicion. Whilst such horrors were happening in 'Abd Allāh's presence, the country was divided by different parties, who fought each other, and at last the Emirate possessed little more than the capital and its environs. 'Abd Allāh's most dangerous rival was the Spanish popular hero 'Omar b. Ḥafṣūn. Even at the beginning of his reign 'Abd Allāh was obliged to offer him peace and to confirm his governorship of the provinces over which he ruled. The treaty of peace was, however, soon broken. When the Christians of Cordova became weary of 'Abd Allāh's tyrannical rule, they broke out of the town, and after they had succeeded in capturing the fortress of Polei, the present Aguilar, they turned to 'Omar and begged him to join them. The latter at once appeared at Polei, but was defeated by 'Abd Allāh's troops in 278 (891). After a war lasting several years with varying success, 'Omar became a Christian, which, however, only rendered his position worse. In the year 287 (900) he made an alliance with Ibrāhīm, the chief of the Banū Ḥadjdjādj in Seville. Thereupon 'Abd Allāh had indeed to be satisfied with a treaty of peace, but as early as 289 (902) hostilities again broke out. After 'Omar and Ibrāhīm had separated, 'Abd Allāh succeeded in winning several battles, and at his death in Ṣafar 300 (Oct. 912) the war had already entered into a quieter stage. 'Abd Allāh's grandson, 'Abd al-Raḥmān b. Muḥammed, became his successor, he having had homage paid to him before his death.

(K. V. Zetterstéen.)

'ABD ALLĀH b. Muḥammed, the second important sherif of Mecca of the family of the 'Abādila, succeeded his father as sherif in 1274 (1858) and held this dignity peacefully enough till his death in 1294 (1877). The opening of the Suez Canal, which took place during his term of office, greatly facilitated the work of the Turks in enforcing their sovereign rights. Several measures which were brought out or prepared under 'Abd Allāh's government gave proof of this: Djidda, Mecca and Ṭā'if were connected by telegraph with the outer world, Turkish administrative offices were installed in these towns, as well as in Medina, whilst the reconquest of Yemen (1872) completely established the Turkish rule in Arabia.

Although 'Abd Allāh was no less anxious than other sherifs to use his office for enriching himself, yet he knew how to win the affection of the population of the Ḥidjāz. His amiable, dignified conduct and tact in dealing with Bedouins and townsfolk, as well as with the representatives of the Stamboul sovereign are to the present day praised as being unexcelled.

Bibliography: C. Snouck Hurgronje, *Mekka*, i. 170—173. (Snouck Hurgronje.)

'ABD ALLĀH b. Muḥammed, successor of the Mahdī in the Sudan. 'Abd Allāh b. Muḥammed al-Ta'āishī, the notorious Khalīfa and successor of the Sudanese Mahdī Muḥammed Aḥmed [q. v.], was born, it seems, in the middle of the forties of the 19th century. He was a native of the South-West Dārfūr and belonged to the tribe of the Arab-Sudanese Baggāra (Baḳḳāra), more particularly to the Djubarāt and here again to the group of the Awlād Umm Surra. His father Muḥammed al-Faḳīh left his home in the seventies with his whole family with the intention to emigrate to Mecca, but died on the way at Dār Djimā'. Then 'Abd Allāh went to the Djazīra to Muḥammed Aḥmad who had then not yet publicly appeared as the Mahdī, and was received into his Ṭarīḳa [q. v.]. He soon became the Mahdī's right hand and seems to have inspired him with many things, e. g. with his journey to Kordofān, where he prepared beforehand the elevation of the latter. He then, in August 1881, took part in the bloody fight between the Mahdī and Muḥammed Abū Sa'ūd on the island of Aba, and here soon after followed his nomination as Khalīfa. He is called „the first of the four caliphs", „Abū Bekr al-Ṣiddīḳ", which title was solemnly confirmed in a later proclamation between the capture of al-'Ubaid and that of Kharṭūm. „He belongs to me and I belong to him", says the Mahdī in this edict. For the rest, his history is that of the Mahdī, as he always accompanied the latter and was present during the victorious campaign of the Mahdīya [q. v.] till the capture of Kharṭūm (26th Jan. 1885). Some months later (22nd June) the Mahdī died suddenly, and naturally 'Abd Allāh assumed the reins of government. The Mahdīya proper was buried together with the Mahdī; the religious enthusiasm had to be replaced by a severe and cruel absolute government. To this end the Khalīfa, who was a stranger in the region round Kharṭūm, needed the help of his fellow-tribesmen, and his interior policy was therefore directed to bring the tribes of the Western Sudan (Kordofān, Dārfūr) willy-nilly to Umm Dermān, and on the other hand to remove the tribes of the Nile region to distant outposts. Without any moral restraint, his rule was one of terror, of which eye-witnesses, such as Slatin, Ohrwalder, Neufeld and others, give most dreadful details.

'Abd Allāh's principal object was to create a family dynasty and, in stead of a religious Mahdiya, to found a hereditary sultanate for his family. Rudolf Slatin in his *Fire and sword in the Sudan*, chaps. xvi and xvii, has given the best description of his empire and rule. Naturally insurrections against 'Abd Allāh were not lacking. He was indeed able to suppress them, but in the long run the bonds that held his empire together weakened more and more and only the ever present fear of death held his hordes together, until the battle of Umm Dermān (Omdurman) brought about the complete downfall of his power. The empire he had inherited from the Mahdī grew under his rule towards the north, the south and especially towards the east (Abyssinia), though he himself no longer left Umm Dermān. This growth was due to the English withdrawing from the Sudan and to the defeat of the Abyssinians. The battle of Toshī (3 Aug. 1889) was the turning point, then came the famous building of the railway, Kitchener's advance, the battle of the Atbara on the 8th April 1898, and finally on the 2nd Sept. 1898 the battle of Omdurman. With a few faithful followers 'Abd Allāh fled to Kordofān, where he died fighting like a madman on the 22nd November 1899.

'ABD ALLĀH B. MUḤAMMED. [See IBN AL-FARAḌĪ.]

'ABD ALLĀH B. AL-MUḲAFFA'. [See IBN AL-MUḲAFFA'.]

'ABD ALLĀH B. MŪSA B. NUṢAIR, eldest son of the famous conqueror of the Maghrib and of Spain. He was entrusted by his father, when the latter set out for Spain, with the administration of Ifrīḳiya (93 = 711). He likewise took his father's place when the latter, having been denounced by Ṭārīḳ, left for the East, whence he never returned. Involved in the downfall of his family brought about by the caliph Sulaimān, who could not see without distrust one son of Mūsa ('Abd Allāh) the governor of Ifrīḳiya, another ('Abd al-'Azīz) of Spain, and a third ('Abd al-Malik) of the Maghrib, he was deposed in 96 (714-715) and was replaced by Muḥammed b. Yazīd, who took possession of his government in 97 (715). His end is obscure. According to Ibn 'Adhārī (*al-Bayān al-Mughrib*, i. 33), Abu'l Maḥāsin (ed. Juynb. et Matth., i. 261) and al-Nowairī, who give the year 99 (717) as the date of the arrival of Muḥammed, the last named, after having tortured 'Abd Allāh, threw him into prison, where he kept him until he put him to death by order of the caliph. Belādhorī (ed. de Goeje, p. 231) ascribes this execution to Bishr b. Ṣafwān, who, he thinks, punished 'Abd Allāh (102 = 720) for having been in sympathy with the Berbers, who assassinated the governor Yazīd b. Abī Muslim. The author of *Fatḥ al-Andalus* (ed. Jones, pp. 15-16) has reproduced this story with romantic details. (R. BASSET.)

'ABD ALLĀH B. MUSLIM. [See IBN ḲUTAIBA.]

'ABD ALLĀH B. AL-MU'TAZZ. [See IBN AL-MU'TAZZ.]

'ABD ALLĀH B. MUṬĪ', one of the leaders of the insurrection against the caliph Yazīd I, and later governor of the opposing caliph 'Abd Allāh b. al-Zubair. On account of the increasing discontent with the Umaiyad rule after the accession of Yazīd I, 'Abd Allāh intended to leave Medina, but was persuaded by 'Abd Allāh b. 'Omar [q. v.] to remain in the town. When the inhabitants of Medina shortly afterwards revolted against the new caliph, they gave the government to 'Abd Allāh b. Ḥanẓala; with him, however, the honoured and influential Ibn Muṭī' is also named as one of the leaders of the insurgents. In Dhu 'l-Ḥidjdja 63 (August 683) the decisive battle between the troops of the caliph and the Medinian rebels took place on the Ḥarra. Ibn Muṭī' participated in the fight, escaped the general destruction and fled to Mecca to 'Abd Allāh b. al-Zubair, who appointed him governor of Kūfa. In the year 66 (685) he was, however, expelled by the ambitious adventurer Mukhtār b. Abī 'Ubaid, and went first to Baṣra and then to Mecca where he fought for Ibn al-Zubair. He there met with his death in the year 73 (692), shortly before Ibn al-Zubair.

Bibliography: Ibn Sa'd, v. 106 *et seq.*; Ṭabarī, ii. 232 *et seq.*; Ibn al-Athīr (ed. Tornb.), iv. 14 *et seq.*; Weil, *Gesch. d. Chalifen*. (K. V. ZETTERSTÉEN.)

'ABD ALLĀH B. 'OMAR B. 'ABD AL-'AZĪZ, son of the caliph 'Omar II. In the year 126 (744) 'Abd Allāh was appointed governor of the 'Irāḳ by Yazīd III, but in a short time aroused the discontent of the Syrian chiefs in that place, who felt that they were unfavorably treated by the new governor compared with the inhabitants of the 'Irāḳ. After the accession of Marwān II, 'Abd Allāh b. Mu'āwiya [q. v.], a descendant of 'Alī's brother Dja'far, rebelled in Kūfa in Muḥarram 127 (October 744), but was expelled by 'Abd Allāh b. 'Omar, whereupon he removed his propaganda work to another place. When Marwān transferred to al-Naḍr b. Sa'īd al-Harashī the governorship of the 'Irāḳ, 'Abd Allāh energetically refused to leave his post. Al-Naḍr appeared at Kūfa, whilst 'Abd Allāh remained at Ḥīra and it came to a battle royal between them. In a short time, however, a common enemy appeared in the person of the Khāridjite chief al-Ḍaḥḥāk b. Ḳais, and then the two adversaries had to come to terms, nay they had to join forces. In Radjab 127 (April-May 745) they were defeated by al-Ḍaḥḥāk and 'Abd Allāh withdrew to Wāsiṭ, whilst the victor captured Kūfa. Then the old enmity between the two governors again blazed out, but for a second time al-Ḍaḥḥāk put an end to their hostilities. After a siege lasting several months 'Abd Allāh was obliged to make peace with al-Ḍaḥḥāk. Subsequently Marwān had 'Abd Allāh arrested. According to the most current account, he died of the plague in the prison of Ḥarrān in the year 132 (749-750).

Bibliography: Ṭabarī, ii. 1854 *et seq.*; Ibn al-Athīr (ed. Tornb.), v. 228 *et seq.*; Weil, *Gesch. d. Chalifen*; Wellhausen, *Das arab. Reich und sein Sturz*, pp. 230 *et seq.* (K. V. ZETTERSTÉEN.)

'ABD ALLĀH B. 'OMAR B. AL-KHAṬṬĀB, eldest son of the caliph 'Omar I, and one of the most respected of all Muḥammed's companions, generally called Ibn 'Omar. 'Abd Allāh was born several years before the Hidjra, his mother's name was Zainab bint Maẓ'ūn. He became a con-

vert to Islām in his boyhood at the same time as his father. At the battles of Bedr and Uhud he was kept in the background by Muhammed, because he was still too young, but he took part in the campaign of the Ditch and fought in all the battles of the Prophet. Subsequently also his name is often mentioned in connection with military expeditions. First of all he followed Khālid b. al-Walīd in the latter's expedition against the rebellious tribes in the interior Arabia, in the time of Abū Bekr's reign, then he took part in the battle of Nehāwend, the date of which is usually given as 21 (642). He was further amongst the Medinian reinforcements, which 'Othmān sent to 'Abd Allāh b. Sa'd b. Abī Sarḥ, his governor in Egypt, to subjugate the rest of North Africa, and soon afterwards — in the year 30 (650-651) — he marched to Ṭabaristān under the command to Sa'īd b. al-'Āṣī. Again in the year 49 (669) Ibn 'Omar took part in an expedition against the Byzantines, which was undertaken by Yazīd b. Mu'āwiya. As to home politics, 'Abd Allāh took up a strictly neutral position amongst the different parties which fought for supremacy. When 'Omar on his death-bed appointed, from amongst Muhammed's most tried companions, six trustworthy men to elect a new ruler, he nominated his son 'Abd Allāh as consultative member. In the year 37 (658) the latter was present at the court of arbitration that was appointed to settle the dispute between 'Alī and Mu'āwiya, without, however, himself making any claim to the caliphate. He was indeed one of the candidates proposed by Abū Mūsā al-Ash'arī, but was not considered suitable. After 'Othmān's death, 'Alī had required Ibn 'Omar to do homage to him, a thing the latter energetically refused to do, declaring he would only pay homage to him when all Mussulmans would do so. Later on Mu'āwiya received the same answer when he demanded homage for his son Yazīd. When, however, the latter ascended the throne, 'Omar made no difficulties, but at once took the oath of allegiance. 'Abd Allāh b. 'Omar was personally a religious man, who was everywhere held in great esteem on account of his noble and unselfish character. He is moreover esteemed as one of the most trustworthy authorities on the earliest history of Islām; and with reason, for through his intimate intercourse with Muhammed and many other influential men of that period he had acquired an exact knowledge of all the important factors of that period. His traditions were handed down to posterity by his sons and other disciples. 'Abd Allāh b. 'Omar died at Mecca in the year 73 (beginning of 693), after the pilgrimage, at the age of 84 according to general report.

Bibliography: Ibn Sa'd, iii. 1st part, introduction; Ṭabarī, i. 1358 *et seq.*; Nawawī (ed. Wüstenf.), pp. 357 *et seq.*; Muir, *Annals of the early caliphate*.

(K. V. ZETTERSTÉEN.)

'ABD ALLĀH B. RASHID. [See IBN RASHID.]

'ABD ALLĀH B. RAWĀḤA, a Khazradjite, belonging to the most esteemed clan of the Banu 'l-Ḥārith. At the second 'Aḳaba assembly in March 622, 'Abd Allāh was one of the 12 trustworthy men, whom the already converted Medinians conformably to the Prophet's wish had chosen. When Muhammed had emigrated to Medina, 'Abd Allāh proved himself to be one of the most energetic and upright champions of his cause. Muhammed appears to have thought a great deal of him, and often entrusted him with honorable missions. After the battle of Bedr in the year 623, in which the Mussulmans were victorious, 'Abd Allāh together with Zaid b. Ḥāritha had to hasten to Medina to bring the tidings of victory. During the so-called „second campaign against Bedr", at the beginning of 625, 'Abd Allāh remained behind in Medina as lieutenant-commander. When in 627, at the commencement of the siege of Medina, the fidelity of the Banū Ḳuraiẓa, his allies, was suspected, the Prophet sent 'Abd Allāh together with three other influential Medinians to find out the real sentiments of his allies. After Khaibar had been conquered in the year 628 and its territory divided, Muhammed sent there 'Abd Allāh as appraiser. On sending the Mu'ta expedition in the year 629, 'Abd Allāh was appointed by the Prophet as second lieutenant-commander-in-chief of the army, and when his superiors had both fallen, he sought and met his death as they had done fighting for the Faith.

Besides his military talents 'Abd Allāh possessed other qualities which made him valuable to his master; he belonged to the few pre-Islamic men who could write, and was for this reason, together with other faithful followers, chosen as secretary by the Prophet. Muhammed appears to have esteemed him very highly more especially on account of his poetical gifts. In the *Kitāb al-Aghānī* it is expressly stated that the Prophet considered his poems equal to those of his favorite poets Ḥassān b. Thābit and Ka'b b. Mālik. It is characteristic of 'Abd Allāh's „literary tendency" that he abused the Ḳoraishites for their unbelief, whilst the two other poets always reproached them with their evil deeds. Only about 50 verses of his have been preserved and they are for the most part to be found in Ibn Hishām.

Bibliography: Ibn Sa'd, iii. 2d part, 79 *et seq.*; Ibn Hishām (ed. Wüstenf.), i. 457. 675; Ṭabarī, i. 1460, 1610 *et seq.*; Aghānī, xi. 80; xv. 29; Weil, *Mohammed der Prophet*, p. 350, note.

(A. SCHAADE.)

'ABD ALLĀH B. SABA, often called by Arabian historians, Ibn al-Sawdā' after his mother, was said to be a Jew from Ṣan'ā', having been converted to Islām during the government of the caliph 'Othmān. After wandering about in the Ḥidjāz, in Baṣra and Kūfa, whence he was expelled, he proceeded to Egypt via Syria and there joined the regiment of 'Othmān's malcontents. He here evolved a peculiar dogma which was subsequently further developed by his followers and has made his name famous. It is, however, difficult to settle exactly what belonged to him and what to his successors, because, amongst others, al-Shahrastānī in his account of it, does not entirely distinguish between the two constituent parts. If we keep to the accounts of Ṭabarī and Maḳrīzī, he taught the return (*radj'a*) of Muhammed. This must not be considered a palingenesis of the Prophet in 'Alī, as Wellhausen regards it, because he is said to have based this dogma on the example of Christ's parusia and with reference to Ḳor'ān, xxviii. 85. It is true that later, as Wellhausen with reason asserts, the dogma of return coincides with that of palingenesis or re-birth, which they tried to explain by transmigration of the

soul and by comparison with the all-pervading sunlight. He also introduced the doctrine that to every Prophet was appointed a plenipotentiary (*waṣī*) and that Muḥammed's *waṣī* was 'Alī; whence he deduced the duty of every believer to stand up for 'Alī's rights with word and deed. 'Abd Allāh is said to have therefore employed missionaries for the propagation of these ideas. He was amongst those who in Shawwāl 35 (April 656) marched from Egypt to Medina, and afterwards he accompanied the caliph 'Alī, whom he, however, embarrassed with his excessive veneration, so that the latter banished him to al-Madā'in. We know nothing concerning the manner nor the date of his death. If he survived his master's murder it is quite possible that he afterwards altered his doctrine of the return of Muḥammed, making it more in harmony with the views of the extreme Shī'ites.

'ABD ALLĀH b. Sa'd, Muslim statesman and general. Abū Yaḥyā 'Abd Allāh b. Sa'd b. Abī Sarḥ al-'Āmirī belonged to the clan of 'Āmir b. Lu'aiy of Ḳoraish and was as foster brother of the subsequent caliph 'Othmān a chief partisan of the Umaiyads. He was less a soldier than a financier. The judgements of historians on his character vary greatly. His name is connected in many ways with the beginnings of Islām. First he is mentioned as one of Muḥammed's scribes: he is supposed to have arbitrarily altered the revelation, at least he boasted of doing so after his apostasy from Islām, whereby he incurred the hate of the Prophet. For this reason the latter desired to have him executed after the capture of Mecca, but 'Othmān obtained, though with difficulty, the Prophet's pardon. This story became afterwards very famous. 'Abd Allāh later on showed himself grateful to 'Othmān for his rescue by agitating for the latter's election as caliph. He belongs to the Hidjra companions who took part in the conquest of Egypt under 'Amr b. al-'Āṣī [q. v.] and appears to have governed Upper Egypt independently under 'Omar, after the latter's quarrel with 'Amr. It is impossible exactely to fix the date when he was appointed governor of the whole of Egypt; according to Ibn Taghrībirdī, as early as the year 25 (645-646), and therefore before the revolt of Alexandria under Manuel. As he was not able to suppress this rising, 'Amr was recalled, who, however, immediately after his victory had to hand back the government to 'Abd Allāh. 'Othmān desired to ratify 'Abd Allāh's appointment as financial prefect and 'Amr's as military governor, but the latter declined. 'Abd Allāh now succeeded in considerably increasing the state revenues of Egypt much to the satisfaction of the caliph. Although his principal aim was the administration of the finances, he also became renowned as a general. 'Abd Allāh regulated the relations between the Musalmans and the Nubians and supported Mu'āwiya's expedition against Cyprus. He himself undertook several expeditions against Roman Africa, the first probably in the year 25 (645-646), the most important and most successful certainly in the year 27 (647-648). He subjugated the district of Carthage to Islām. His most important military performance was the naval battle of Dhāt al-Ṣawārī, equal in importance to the battle of Yarmūk [q. v.], in which the Roman fleet was completely destroyed. This battle took place in the year 31 (651-652), hardly later, as is given by some sources. Soon afterwards all over the empire there commenced uprisings against 'Othmān. 'Abd Allāh appears as the principal champion of the régime represented by the caliph. He endeavored to warn the caliph and even left Egypt in order to support him. His lieutenant al-Sā'ib b. Hishām was expelled by the Egyptian revolutionary party under Muḥammed b. Ḥudhaifa and 'Abd Allāh himself was forbidden to return to Egypt. On the frontier 'Abd Allāh learned of the murder of the caliph, and fled to Mu'āwiya. Shortly before the latter's departure to Ṣiffīn, he died in Askalon or Ramla (in 36 or 37 = 656-657 or 657-658). His supposed participation in the battle of Ṣiffīn and his late death in the year 57 (676-677) belong to the numberless myths connected with the battle of Ṣiffīn.

'ABD ALLĀH b. Salām, a Jew from Medina, originally called al-Ḥuṣain and belonged to the Banū Ḳainuḳā'. Muḥammed gave him the name of 'Abd Allāh when he embraced Islām. This conversion is said to have taken place immediately after Muḥammed's arrival at Medina, but according to others, when Muḥammed was still in Mecca. Another account which makes him accept Islām in the year 8 (629-630) is worthy of more credence — though Mohammedan critics think it badly accredited, — for his name is sought in vain in the battles which Muḥammed had to wage in Medina. The few unimportant mentions in the *Maghāzī* may well have been inserted in order to remove the glaring contradiction with the generally accepted tradition. He was with 'Omar in Djābiya and Jerusalem, and under 'Othmān stood at the latter's side in the fight against the rebels, whom he in vain endeavored to dissuade from murdering the caliph. After 'Othmān's death he did not do homage to 'Alī and implored him not to march to 'Irāk against 'Ā'isha; legend makes him meet Mu'āwiya also. He died in 43 (663-664). In Muslim tradition he has become the typical representative of that group of Jewish scribes which honored truth and admitted that Muḥammed was the Prophet predicted in the Tawrāt (Torah), whom they protected from the

intrigues of their co-religionists. The questions which 'Abd Allāh is made to ask Muhammed and which only a prophet could answer, the contents of the Ḥadīth, which tradition works ascribe to him, and the story of Bulūḳyā, which Tha'labī puts into his mouth, mostly have their origin in Jewish sources; if they do not really come from 'Abd Allāh himself, they certainly come from Jewish renegade circles. Whilst his contemporaries often reproached him with his Jewish origin, later on traditions were circulated, in which Muhammed assures him of his entering Paradise, or in which the Prophet and celebrated companions give him high praise. Certain verses of the Ḳor'ān are also said to refer to him. The „questions" which he asked Muhammed were subsequently enlarged to whole books, and in the same manner several other works were foisted on him, which are partly based on what he related in the Ḥadīth. Together with his sons Muhammed and Yūsuf, Abū Huraira and Anas b. Mālik handed down his traditions. Ṭabarī put in his Chronicle more especially Biblical accounts taken from 'Abd Allāh.

'ABD ALLĀH B. SA'ĪD. [See IBN SA'ĪD.]

'ABD ALLĀH B. SURAIḌJ. [See IBN SURAIḌJ.]

'ABD ALLĀH B. ṬĀHIR, statesman, general and poet, born about 182 (798) and died in 230 (844). 'Abd Allāh's father Ṭāhir b. al-Ḥusain had already rendered the caliph al-Ma'mūn great services, and 'Abd Allāh himself soon won the good graces of the caliph not only for his father's sake, but also on account of his personal merits. In 206 (821-822) he was appointed governor of the regions between al-Raḳḳa and Egypt, and at the same time received the supreme command in the battle against one of al-Amīn's followers named Naṣr b. Shabath, who first made his appearance in the neighborhood of Haleb (Aleppo), and in a short time extended his sway over a large district. It is true that Ṭāhir had already checked the further spread of this uprising, but Naṣr's complete subjugation only took place in the year 209 (825), when he had to surrender to 'Abd Allāh. When the latter had put an end to Naṣr's doings, use was made of him in Egypt. There as early as 199 (814-815) a great number of Spanish fugitives had landed, and shortly afterwards brought that province, which was already in a tottering state, into a still greater confusion. In the year 210 (825-826) 'Abd Allāh went to Egypt by order of the caliph and quickly succeeded in restoring order there. After establishing there a deputy governor, he returned as early as the year 211, or according to other authorities, not before the following year to 'Irāḳ. While he tarried at Dīnawar and raised an army in order to help the governor of Ādharbaidjān against the seceder Bābek and his followers, he was made governor of Khorāsān, in succession to his brother Ṭalḥa, who died in 213 (828-829). Like the other Ṭāhirides 'Abd Allāh ruled in this province according to the maxims of government recommended to him by his father Ṭāhir [q. v.], in the famous writings which have been preserved by many authors. He ruled almost as an independent prince, although he formally acknowledged the suzerainty of the caliph, and as generalissimo commanded the latter's troops. As often as he came to Baghdad he resided in the magnificent palace built by his father on the right bank of the Tigris (le Strange, *Baghdad*, pp. 118 *et seq.*). At the beginning of the reign of al-Mu'taṣim, a certain 'Alide, Muhammed b. al-Ḳāsim, appeared as pretender to the throne, but was overcome by the troops of 'Abd Allāh b. Ṭāhir, surrendered to the latter and was sent by him to the caliph. This happened in the year 219 (834). Two years later a much more dangerous mutiny broke out in Ṭabaristān which belonged to the governorship of Khorāsān under the rule of 'Abd Allāh. Through the intrigues of the Turkish general Afshīn, who was envious of the great power of the Ṭāhirides, the Ispehbed Māziyār b. Ḳārin of Ṭabaristān was induced to rebel against the caliph. But when troops assembled from all sides against him, he was betrayed by his own people and rendered harmless by 'Abd Allāh. To his soldierly and statesmanlike talents 'Abd Allāh united still other qualities. He was also celebrated for his poetical and musical abilities and the compiler of the Ḥamāsa, Abū Tammām, found in him a benevolent patron. That he was not insensible to the pleasures of the table is clearly to be inferred from the fact that an excellent sort of Egyptian melon has been named after him 'Abdallāwī; in general the greatest luxury reigned in his palace. According to the usual account, 'Abd Allāh b. Ṭāhir died Monday, the 11th Rabī' I 230 (26th November 844) at the age of 48. Yet by some his death has been fixed as early as the year 228. This account of his end passes as incorrect, yet the week day seems to pronounce in favor of it (comp. Wüstenfeld's *Tabellen*!). His son was confirmed as his successor by the caliph al-Wāthiḳ.

ʿABD ALLĀH b. Thawr, usually called Abū Fudaik, a Khāridjite of the Banū Ḳais b. Thaʿlaba, after he had killed Nadjda b. ʿĀmir [q. v.] obtained the dominion over al-Baḥrain in the year 72 (691). He put to flight the troops sent against him from Baṣra, but was himself in 73 (693) vanquished and slain by the troops which ʿAbd al-Malik had sent against him.

ʿABD ALLĀH b. Ubaiy, also called Ibn Salūl after his mother, chief of the Khazradjites. Before the coming of Muḥammed to Medina ʿAbd Allāh had dominion over Aws and Khazradj — the only case, says Ibn Hishām explicitly, in which these two tribes united under a common chief. — After the coming of Muḥammed ʿAbd Allāh was obliged to follow the example of the masses and embrace Islām, in order not to be entirely set aside; but in his heart he bore a bitter grudge against his rival, whom he now looked on as a political adventurer, and ceaselessly endeavored to shake the latter's reputation. Therefore among Muslim authors, who neglect no opportunity of saying evil things of him, he is regarded as the head of the hypocrites (*munāfiḳūn*) [q. v.]. When in the year 624 the Prophet proceeded against the Banū Ḳainuḳāʿ, the allies of ʿAbd Allāh, and a year later the Banū Naḍīr, also allied with the Khazradjites, ʿAbd Allāh dared not undertake anything serious on their behalf. Only when, after a long siege, they were constrained to yield to Muḥammed, did he interpose and oblige the latter to spare at least the life of the besieged. In the council of war before the battle of Uḥud in 625, ʿAbd Allāh was himself of the opinion, reasonable in itself, that they should remain quietly in the town and allow the enemy to come up thither; this was also the opinion of the Prophet, who, however, determined, but only on account of the urging of his men, to march against the enemy. Whether on the following day ʿAbd Allāh actually first marched out with the army and then, when halfway, turned back with 300 men, as Ibn Hishām assures us, or whether he had remained behind from the first, as appears from Korʾān, iii. 160, is doubtful; one thing is sure, he did not fight with the rest at Uḥud. With regard to ʿAbd Allāh, Muḥammed showed most admirable self-restraint and kept this unusually cautious political bearing from then until the last moment. On the march to Tabūk ʿAbd Allāh is said to have again played the same part. Nevertheless the Prophet, when his rival died shortly after the return from the same expedition, had sufficient self-control to pray over his tomb and to pay him every honor due to an eminent ally.

Bibliography: Ibn Hishām (ed. Wüstenf.), i. 411 *et seq.*, 546, 558 *et seq.*, 591, 653, 726, 734, 927; Ṭabarī, i. 1695; Wellhausen, *Muhammed in Medina*, p. 438; Sprenger, *Das Leben und die Lehre des Mohammad*, iii. 572. (A. Schaade.)

ʿABD ALLĀH b. Wahb al-Rāsibī, a Khāridjite, bore the surname of the „Man with the callosities" (*dhu 'l-thafināt*), because he had received callosities from his many prostrations. ʿAbd Allāh belonged to the prominent men amongst the first Khāridjites, so that he was chosen to be caliph by his followers, when they had separated from ʿAlī (37 = 658). He fell in the same year (May-June 658) in the bloody battle of Nahrawān.

Bibliography: Mubarrad, *Kāmil*, pp. 558 *et seq.*; Ṭabarī, i. 3363 *et seq.*; Dīnawarī (ed. Guirgass and Rosen) pp. 215 *et seq.*; Brünnow, *Die Charidschiten*, pp. 18 *et seq.*; Wellhausen, *Die religiös-politischen Oppositionsparteien*, pp. 17 *et seq.* (M. Th. Houtsma.)

ʿABD ALLĀH b. Yāsīn al-Djazūlī, founder of the Almoravides (*al-murābiṭūn*). He owed his *nisba* to his mother Tin Izamaran, who belonged to the Djazūla or Kuzūla tribe, dwelling on the boundaries of the Morocco of to-day and the Sahara. ʿAbd Allāh was indicated by al-Aggāg, a pupil of Abū ʿImrān al-Fāsī, to a chief of a colony of the Lamtūna in the south of the Western Sahara, who wished to convert those people to Islām, as a man capable of fulfilling the mission. Accordingly he went to the Lamtūna and began his missionary work. Great difficulties seem to have stopped him at the very beginning. These obstacles determined him to take refuge with some companions on an island in the Senegal, where they founded a sort of ascetic community styled by Mussulman writers *ribāṭ* („hermitage"). They took from there their name of *murābiṭūn*, whence the word *almoravide*. Then their renown having spread and their number having been increased by numerous adhesions, they soon formed a formidable power, to the extent of being able afterwards to reduce by force the tribes, who had received them so badly at first. ʿAbd Allāh became the head of the religious community, which was above all distinguished by its severe, ascetic rules; it appeared at the same time to be the commencement of the Holy War. ʿAbd Allāh soon hurled his *murābiṭūn* against the infidel tribes of Lamtūna and other Ṣanhādja, and the sword converted those who had resisted the Apostolate. Though remaining the religious head of the Ṣanhādja, ʿAbd Allāh left the command of them to a native chief chosen from amongst them: the first was Yaḥyā b. Ibrāhīm of the tribe of Djadāla, then Yaḥyā b. ʿOmar al-Lamtūnī. ʿAbd Allāh retained the power of the Imām, the direction of the Holy War, and the receipt of canonical taxes, and sometimes inflicted deserved corporal punishment on the emir. ʿAbd Allāh's zeal, however, appears to have been more lively than his religious instruction was extended. From this point his history becomes part of the early history of the Almoravides. It is sufficient here to recall that they conquered the Maghrāwa of Sidjilmāsa about the year 446 (1054-1055); the date is uncertain. Almost immediately afterward they seized Awdaghast, a town belonging to the Negro kingdom of Ghāna. Then about 449 (1057-1058), ʿAbd Allāh brought them to his native country; Darʿa, Sūs, the Maghrāwa kingdom of Aghmāt, then the principal southern town of Morocco with Nafīs, fell into their hands; and the Almoravide empire was founded. Everywhere ʿAbd Allāh strove to make prevail the strict rules of piety, which he had instituted among the Almoravides and which up to our own epoch have not ceased to flourish among the tribes of the Sahara Mauritania. About 451 (1059) he gave battle to the Barghawāṭa of the Atlantic coast (Tāmesna),

in the course of which he met his death in a place called by the authors Karfīa or Karīfalt, where he was buried. A chapel was built there, which was still much frequented in the time of al-Bakrī. The true personality of 'Abd Allāh is difficult to be evolved; the use of his name in magic and in the orthodox liturgy gives him falsely the appearance of a magician.

(E. Doutté.)

'ABD ALLĀH b. al-Zubair, a Koraishite general, who contested the caliphate of the Umaiyads for nine years, was born at Medina in the year 1 (622), or, according to al-Wāķidī, 20 months after the Hidjra (Sha'bān 2 = Feb. 624), killed in a battle against al-Ḥadjdjādj, near Mecca, on the 17th Djumādā I 73 (4th Oct. 692); comp., however, Wellhausen, *Das arabische Reich und sein Sturz*, p. 124. Besides the fact that his father, al-Zubair, belonged to one of the noblest families of Koraish and was on his mother Ṣafīya's side a cousin of the Prophet, 'Abd Allāh himself was through his mother Asmā' the grandson of Abū Bekr and consequently nephew to 'Ā'isha. According to some Mussulman authors, 'Abd Allāh was the first child born at Medina in Islām.

When barely fourteen, 'Abd Allāh was present with his father at the battle of al-Yarmūk (14 = 633). Three years later he was with his father in the army of 'Amr b. al-'Āṣ, who made himself master of Egypt. He played a leading part in the conquest of Ifrīķiya, and in an engagement between him and the patricius Gregory killed the latter (29 = 649-650). The following year he was with Sa'īd b. al-'Āṣ in the expedition against Khorāsān, and in the same year was one of the theologians appointed by 'Othmān to write down the Ķor'ān. On the day of the House (18 Dhu'l-Ḥidjdja 35 = 17 June 656) 'Abd Allāh was one of the most valiant defenders of 'Othmān. At the battle of the Camel (10 Djumādā II 36 = 4 Dec. 656) he had the command of his aunt 'Ā'isha's infantry.

During the reign of Mu'āwiya b. Abī Sufyān 'Abd Allāh concealed his ambition for the caliphate, only, when Mu'āwiya requested him to acknowledge his son Yazīd as heir presumptive, he refused. On the death of Mu'āwiya (60 = 680) 'Abd Allāh declared openly against Yazīd and refused to take the oath of allegiance. Being informed that Yazīd had ordered his head to be cut off, 'Abd Allāh escaped at night, and set out with al-Ḥusain for Mecca. By Yazīd's orders, 'Amr b. al-Zubair, a brother of 'Abd Allāh and hostile to him, was sent at the head of an army against 'Abd Allāh. But the latter defied his brother's forces, 'Amr was taken prisoner and died under the rod.

'Abd Allāh, however, feared the rivalry of al-Ḥusain and treacherously advised him to undertake his journey towards Kūfa, which was sure to be fatal for him. Directly the news of al-Ḥusain's death reached Mecca, 'Abd Allāh had himself proclaimed caliph by the inhabitants of that town and assumed the title of *Amīr al-Mu'minīn* (61 = 680-681). The people of Medina having rebelled against the Umaiyad caliph, 'Abd Allāh b. al-Zubair was proclaimed caliph by the entire population of the Ḥidjāz. But the inhabitants of Medina were defeated by Muslim b. 'Oķba in the battle of al-Ḥarra (27th Dhu'l-Ḥidjdja 63 = 27th Aug. 683), and Ḥuṣain b. Numair al-Sakūnī, who took Muslim's place in command of the army, proceeded to besiege 'Abd Allāh in Mecca. The siege, which lasted 64 days (26th Muḥarram — 1st Rabī' II 64 = 24th Sept. — 27th Nov. 683), had become very distressing for 'Abd Allāh, when, having learned of the death of Yazīd, Ḥuṣain raised it.

The greater portion of the Mussulman empire then joined 'Abd Allāh, and he was at one swoop proclaimed caliph in 'Irāķ, Southern Arabia and in a great part of Syria. He sent emissaries into Egypt, Palestine and elsewhere to induce the inhabitants to recognise him as caliph, and everywhere appointed governors devoted to his cause. But 'Abd Allāh suffered a blow in the defeat and death of al-Ḍaḥḥāk al-Fihrī, one of the principal agitators in his favor, at the battle of Mardj Rāhiṭ (end of 64 or beginning of 65 = 684). Having established his power, 'Abd Allāh set to work to rebuild the temple of the Ka'ba (65 = 684-685), which had been partially destroyed at the time of the siege of Mecca by Ḥuṣain b. Numair. Meanwhile he began to oppress the Khāridjites. In the following year he caused Muḥammed b. al-Ḥanafiya with all his family and seventeen notables of Kūfa to be imprisoned near the well of Zamzam. A serious injury to 'Abd Allāh's power was the defeat and death of his brother Muṣ'ab b. al-Zubair, his governor of 'Irāķ (71 = 691). 'Abd Allāh soon found his authority limited to Mecca alone, to which al-Ḥadjdjādj, sent by 'Abd al-Malik, laid siege on the 1st Dhu'l-Ķa'da 72 (25th March 692). The town and the temple were again bombarded, but 'Abd Allāh kept resolute for six and a half months, when his companions, even his two sons Ḥamza and Khubaib, being weary and at the end of their strength, surrendered to al-Ḥadjdjādj. 'Abd Allāh, urged on by his mother, a woman of truly Roman pride, returned to the field of battle and fought valiantly till he was slain. His body was fixed by al-Ḥadjdjādj to a gibbet at al-Ḥadjūn, and after it was hanging for some time, it was by 'Abd al-Malik's orders given back to his mother. Asmā' buried it in the house of Ṣafīya at Medina, near the tombs of the Prophet, Abū Bekr and 'Omar.

'Abd Allāh is depicted by Mussulman authors as a man endowed with very good qualities and very great faults. He was greatly devout, passing his time in prayer and fasting, he was a poet and one of the prolific traditionists; above all he was very brave and courageous. On the other hand he was avaricious, envious and ill-natured.

(M. Seligsohn.)

'ABD ALLĀH PASHA Muḥsin Zāde Čelebi, an Ottoman general, whose family originally

came from Aleppo. He was made *defterdār* by the rebels, who put Sultan Aḥmed III on the throne of Turkey (9th Rabī' II 1115 = 22d Aug. 1703), filled many positions in the Financial Service, and was entrusted with the subjugation of Ḳaiṭās-beg, who had revolted in Egypt in 1126 (1714; comp. Rāshid Efendi, *Ta'rīkh*, ii. 92a, Constantinople, 1153), and he sent his head to the Porte. He was the son-in-law of two grand viziers, Čorlilu 'Alī Pasha and Ibrāhīm Pasha; he was governor of several provinces, and, amongst others, Nish, where he was governor three times. When Saiyid Muḥammed Pasha became grand vizier he succeeded him as grand chamberlain and retained his office until his nomination as grand vizier (1150 = 1737). After the check received at the conference of Niemirow, he requested, as his predecessor had already done, the mediation of France from Cardinal Fleury; but he was dismissed the very day after his return from the army (26th Sha'bān 1150 = 19th Dec. 1737) and replaced by Yegen Muḥammed Pasha. He was the father of Muḥammed Pasha Muḥsin Zāde, who concluded the peace of Kainardje.

'ABD ALLĀH SARI. [See SARI 'ABD ALLĀH.]

'ABD AL-'AZĪZ B. 'ABD AL-RAḤMĀN SANCHOL ABU 'L-ḤASAN, grandson of the great Almanzor (al-Manṣūr). 'Abd al-'Azīz became prince of Valencia in 412 (1021), and in the year 429 (1038) when Zohair, the prince of Almeria, had died, he took possession of the latter's principality. Through this action, however, he came at loggerheads with Mudjāhid, the prince of Denia, and therefore in the year 1041 he installed his brother-in-law Abu'l-Aḥwaṣ, who soon made himself independent [see ṢUMĀDIḤ]. 'Abd al-'Azīz, who, like his grandfather, also bore the surname of al-Manṣūr, continued to rule in Valencia till 453 (1061) [comp. 'AMIRIDES].

Bibliography: Ibn al-Athīr (ed. Tornb.), ix. 204; Dozy, *Hist. des Musulmans d'Espagne*, iv. 4, 21, 43, 47; idem, *Recherches sur l'hist. et la littér. de l'Espagne* (3d ed.), i. 240. *et seq.* (C. F. SEYBOLD.)

'ABD AL-'AZĪZ B. ABĪ DULAF, a governor. 'Abd al-'Azīz was the son of an officer, Abū Dulaf, who had served under the caliph al-Amīn and then retired to Karadj, a town between Iṣpahān and Hamadhān, where as chief of his clan he occupied an independent position. In the year 252 (866) 'Abd al-'Azīz, who had joined al-Musta'īn's party during the struggle for the throne, was entrusted by Waṣīf, the governor of Persian 'Irāḳ, with the administration of that province. When in the following year al-Mu'tazz conferred the same governorship on Mūsā b. Boghā, 'Abd al-'Azīz refused to leave his post, but was defeated by Mūsā's general Mufliḥ first in the neighborhood of Hamadhān, then at Karadj, and had to take to flight. Nevertheless he succeeded in re-establishing his authority in Karadj. 'Abd al-'Azīz died in the year 260 (873-874).

Bibliography: Ṭabarī, iii. 1685 *et seq.*; Ibn al-Athīr (ed. Tornb.), vii. 119 *et seq.*; Ibn Khaldūn, *'Ibar*, iii. 296; Weil, *Gesch. d. Chalifen*, ii. 407 *et seq.* (K. V. ZETTERSTÉEN.)

'ABD AL-'AZĪZ B. AL-ḤĀDJDJ IBRĀHĪM, an Abāḍite doctor of the Banū Isgen (Mzāb), born about 1130 (1717), died in the month of Radjab 1223 (August-September 1808). He left in the Mzāb a well merited reputation for his science and piety. He devoted his life to the composition of many works on theology and jurisprudence.

His chief work is the *Kitāb al-nīl wa-shifā' al-'alīl*, autographed at Cairo in 1305 (1887-1888). This treatise, conceived on the plan of the *Mukhtaṣar* of Khalīl, but written in a less concise style, is a complete statement of Abāḍite legislation taken from the most reliable authorities of 'Omān, Djebel Nefūsa, Djerba and the Mzāb.

The *Kitāb al-nīl*, which is the code now used by the Abāḍites of Southern Algeria, consists of two volumes each of which is divided into 12 books. It was the basis of the studies published by M. Zeys on this subject (*Législation mozabite, son origine, ses sources, son présent, son avenir*, Paris, 1886, and *Le mariage et sa dissolution dans la législation mozabite*, in the *Revue algérienne de législation et de jurisprudence*, Algiers, 1887-1888). Another of his works, *al-Nūr*, is a religious, grammatical and literary commentary on the Ḳaṣīda riming with *nūn* of Abū Naṣr Fatḥ b. Nūḥ al-Malūsha'ī (Cairo, 1306). A note at the end shows that 'Abd al-'Azīz finished this work in 1209 (1794).

Amongst the works of 'Abd al-'Azīz not yet published the *Kitāb ma'ālim al-dīn* must be mentioned as ranking first; in it the principles of Islām are set forth in a scientific manner, in conformity with the doctrines of the Abāḍite sect.

The following list of other treatises by the same author are mentioned in a notice appearing at the end of a MS. of the *Kitāb al-nīl*:

Ḍiyā' 'l-lau'ain fī mardj al-baḥrain; *al-Sirādj*, abridgment of the *Minhādj*; *al-Ward al-bassām fī riyāḍ al-aḥkām*; *'Iḳd al-djawāhir*, an epitome of the *Ḳanāṭir*; *al-Miṣbāḥ*, an abridgment of the *Kitāb al-alwāḥ*, and of the book known as *Abū masāla*; an abridgment of *Hawāshī tartīb*, traditions; *al-Asrār al-nūrāniya 'alā sharḥ al-manẓūma al-rā'iya*. (A. DE MOTYLINSKI.)

'ABD AL-'AZĪZ B. AL-ḤADJDJĀDJ B. 'ABD AL-MALIK, an Umaiyad general. 'Abd al-'Azīz was a faithful partisan of his cousin Yazīd III and one of his most eminent assistants. Already in al-Walīd II's reign he helped Yazīd, who headed the malcontents, to enlist troops against the caliph, and when they had succeeded in getting together an army in Damascus, 'Abd al-'Azīz received the supreme command and marched against al-Walīd. Yazīd's brother 'Abbās, who was about to go to the caliph's assistance, was attacked and forced to pay homage to Yazīd. Soon afterwards 'Abd al-'Azīz stormed the castle of Bakhrā', whither al-Walīd had withdrawn, and beheaded the caliph. This was in the year 126 (744). Now Yazīd was proclaimed caliph; the inhabitants of Ḥimṣ (Emesa), however, energetically refused to do homage to the usurper and marched against Damascus. Yazīd sent two army divisions against them, and whilst the rebels were fighting with one division, 'Abd al-'Azīz advanced with the other and decided the combat, whereupon the rising was suppressed. In the same year Yazīd died after having settled the succession on his brother Ibrāhīm and after him on 'Abd al-'Azīz. The inhabitants of Ḥimṣ, however, again refused to do homage to the new ruler, who for that matter was hardly recognized

outside the capital. At Ibrâhîm's orders 'Abd al-'Azîz therefore began to lay siege to the town, but withdrew when the then governor of Armenia and Âdharbaidjân, Marwân b. Muḥammed, advanced. Ḥimṣ opened its gates to him, the followers of the late caliph were defeated in Ṣafar 127 (Nov. 744) at 'Ain al-Djarr, and Marwân had himself proclaimed caliph in Damascus. As soon as he had entered the town, 'Abd al-'Azîz b. al-Ḥadjdjâdj was murdered by the man liberated by al-Walîd II.

(K. V. ZETTERSTEEN.)

'ABD AL-**'AZÎZ** B. AL-ḤASAN, the present sultan of Morocco, born on the 18th Rabî' I 1298 (18th February 1881), son of Lalla Roḳiya, who was bought as a slave for the sultan in 1878 at Cairo. The little 'Abd al-'Azîz, whilst yet a child, accompanied his father in most of his expeditions. As he grew up he soon manifested, unseemly for an orthodox, a taste for images and drawing. He was always extremely rebellious against studies of the Kor'ân, his education was partly entrusted to Aḥmed b. Mûsâ, the chamberlain (*ḥâdjib*) known as Ba Aḥmed, who, in strict sympathy with Lalla Roḳiya, kept him under a close guardianship. On the death of Mûlâi Ḥasan on the 9th June 1894, Ba Aḥmed, in spite of the opposition of the grand vizier, who favored the candidature of Mûlâi Muḥammed, the brother of 'Abd al-'Azîz, succeeded in placing the latter on the throne. A little later Ba Aḥmed had Ḥâdjdj al-Maṭî' Djâmi'î, the grand vizier, imprisoned and took his place as grand vizier. A great revolt of the Reḥâmna marked the commencement of the new reign. 'Abd al-'Azîz, however, remained very much of a child and took no part in the government. Ba Aḥmed was omnipotent. In truth 'Abd al-'Azîz appeared to be little interested in politics and it could not be truly said that Ba Aḥmed had usurped the power of his sovereign. Ba Aḥmed's health, which for a long time had been impaired by the strain due to being the sultan's favorite, was completely broken at the beginning of 1900; but in spite of that he continued to spend every day at the Palace and only took to his bed at the very end; after a few days' illness he died on the 13th of May 1900. His cousin al-Ḥâdjdj Mukhtâr succeeded him as grand vizier; he was a very learned man with a great reputation but utterly unfitted for the life of intrigues that the high officials of the Makhzen must lead; the power was really in the hands of al-Mahdî al-Mnebbhî (of the Manabha) formerly a *mokhazni* (man-at-arms), the creature of Ba Aḥmed, whom the latter on his death-bed had specially recommended to the sultan. Al-Mnebbhî, who was an uneducated upstart, displayed, however, both tact and energy later. On the outbreak of the struggle between him and al-Ḥâdjdj Mokhtâr, the sultan, who was himself indifferent as to religious questions, sided with al-Mnebbhî, who well knew how to incite the sultan's propensities for sport, plays, and diversions generally. He met with valuable co-operation in an Englishman called Maclean, who had been long with the Makhzen as military instructor to the Moroccan Infantry. Sir Harry Maclean was at the same time the intermediary of the Makhzen in its intercourse with European merchants. Billiards, tennis, cycling, photography, and fire-works became the ordinary amusements of the sultan. Many Europeans had the entrée to the sultan's palace and joined in his amusements: one of them a Frenchman, Veyre, has since published a book on his life (*Dans l'intimité du sultan*, Paris, 1905). He appears there as a man of curious spirit, not very broad-minded, but after all exempt from fanaticism and as favorable to the cause of civilization as is possible for a sultan. In April 1901 al-Ḥâdjdj was deposed; al-Mnebbhî was unable to claim his position; he had Faḍḍûl Gharnît appointed in his place, who immediately did what he could to ruin him. He succeeded in sending him on a mission to England and Germany, whilst 'Abd al-Karîm b. Slîmân, Minister of Foreign Affairs, went to France. During his absence he was intrigued against, and was obliged to return suddenly in order to save his head; he succeeded in doing it with an address which imposed upon his enemies. But the sultan's amusements, which had been denounced as irreligious by the '*Ulamâ'*, had deeply irritated the population, principally that of the towns and above all that of Fez. The party opposed to al-Mnebbhî pressed the sultan to leave Marrâkush, where he had resided for many years, to go to Fez, in which city they expected to be supported by the powerful party of Mussulman scholars to check-mate the Minister of War. The sultan started about the end of 1901, and after remaining for a long time at Rabâṭ entered Fez. Not only did 'Abd al-'Azîz offend his administrated by the very unorthodox amusements, to which he devoted himself, but he was also to call forth their protestations on account of the tendency to reform which he showed. He attempted in fact, or at least he was credited with attempting, a kind of reorganization of the empire which was called the *tartîb*, and fiscal reform was the first that he wished to try. Taxes, according to the new rules, would be collected by specially appointed collectors instead of by the ḳâ'ids. This reform displeased both the ḳâ'ids and the population; it could not be enforced and for many years, to the present time in fact, the tribes of Morocco have paid no duty, neither the new nor the old. The *tartîb* ended in making 'Abd al-'Azîz unpopular and was one of the incentives to revolt of which Bû Ḥmâra made use. This man, whose real name was Djilâlî b. Drîs al-Zarhûnî al-Yûsufî, came into public notice in the district of Wad Innaûen in the summer of 1902; he passed himself off as the brother of 'Abd al-'Azîz, Mûlâi Muḥammed, formerly Khalîfa of Marrâkush, afterwards in disgrace and imprisoned at Mequinez (Miknâsa), but still very popular. His expressed aim was to replace 'Abd al-'Azîz by a Sherîf who was not compromised with the Christians, and he had no pretentions — ostensibly at least — to secure the throne for himself. Several columns sent out against him in 1902 having miscarried, he succeeded in advancing with rather important contingents to within two leagues of Fez. Having been repulsed, he retreated to Tâza; al-Mnebbhî, who showed great energy in the course of this affair, was commanded to pursue him, with the order not to return without bringing as his prisoner the Rogî — so are called the agitators in Morocco, from one Djilâlî al-Rogî (of the Roga), who rebelled in 1862. — Al-

Mnebbhī succeeded in entering Tāza, he wrote to the sultan to join him there and the latter started to do so; but, his route having been again cut off, he could not join his minister and so returned to Fez. The Rogī had fled to the East: al-Mnebbhī's exhausted column with difficulty succeeded in returning to Fez. Having fallen into disgrace, al-Mnebbhī avoided a worse fate by obtaining permission to make the pilgrimage to Mecca. It is common history how, on his return from this pilgrimage in 1906, he was definitely dismissed and replaced by Muḥammed Gebbās; the friendship of England enabled him to escape prison and the confiscation of his goods and he retired to Tangiers. As for the Rogī, he continued to remain encamped in the enemy's country in the East and the Rīf with varying fortunes, and he still remains there now (April 1906). The reign of ʿAbd al-ʿAzīz is also notable for the famous Algeciras affair [q. v.]. (E. Doutté.)

ʿABD AL-ʿAZĪZ (Abdu'l-Azīz) b. Maḥmūd, a Turkish sultan. ʿAbd al-ʿAzīz, the second son of Maḥmūd II, was born in 1830, and on the 25th June 1861 ascended the Ottoman throne. At first he renounced a considerable part of his civil list, promised to content himself with one wife and reduced all household expenses, but soon his licentious nature broke out all the more violently. His reign was indeed spared foreign wars, but on the other hand it was year by year sorely tried by troubles at home. Montenegro rose to fight for its freedom, but was defeated and had to submit unconditionally (1862). Roumania contrarily to the treaty of Paris elected a Hohenzollern as Prince (1866) and made its appearance as an independent State. In Servia national feeling was incensed at the presence of Turkish troops; in 1867 the Turks had after long and tedious negotiations to vacate the citadel of Belgrade and the other fortresses. As early as 1866 the Cretans had demanded from the sultan radical changes in the administration of the island, and when this was not granted had insisted on being annexed to the kingdom of Greece. The indefatigable grand vizier Meḥmed Emīn ʿAlī Pasha went himself to Crete to introduce the most liberal reforms. But in spite of their pitiful failure in the battle-field the insurgents refused to come to terms. Greece also prepared for war. In 1867 King George married a Russian princess and then the Czar demanded categorically of the European Powers the union of the Cretans with their kinsmen on the continent. Nevertheless the Porte undismayed presented an ultimatum to the Athens Cabinet and the powers urged both parties to keep calm. Crete was saved for Turkey and this was the only renowned success of Turkish policy under ʿAbd al-ʿAzīz. In 1867 and 1868 thanks to the financial distress of the Porte, Egypt became practically if not formally separated from the Ottoman empire, the dynasty ruling there acquired the right of direct succession to the throne and the governor was elevated to the rank of Khedive.

In Oct. 1870 through Russia's declaration that she no longer considered herself bound by the prohibition to pass the Dardanelles, the Oriental question was again brought up in its entirety. The supple Russian ambassador in Constantinople, Count Ignatieff, was henceforth the centre for stirring up discontent amongst the subjects of the Porte — Slavs, Albanese, and even Arabs and Egyptians. Meanwhile the government of the spendthrift ʿAbd al-ʿAzīz got further and further into difficulties, so that in October 1875 it had to declare the State bankrupt. Through Russian influence sanguinary disorders had already broken out in Herzegovina and Bosnia in July 1875. Reforms which the Porte earnestly took in hand were wrecked by the religious hatred of Christians and Musulmans. In 1876 the Bulgarians entered the lists and demanded a semi-sovereign kingdom, and in May the whole country rose in open rebellion.

Under the impression of these events a widespread agitation amongst the theologists took place in Constantinople on the 10th May 1876, which brought about an immediate change of ministry. Shortly afterwards the misrule of the sultan kindled a conspiracy, at the head of which was Midḥat Pasha, the life and soul of the reforms, and in second command the energetic Minister of War, Ḥusain ʿAwnī Pasha, an Old Turk. On the 30th May the sultan was forcibly dethroned and murdered on the 4th June by order of the conspirators, who feared a revulsion in public opinion.

Angelegenheit im Zeitraum des Pariser und des Berliner Friedens* (Berlin, 1892). (K. Süssheim).

ʿABD AL-ʿAZĪZ b. Marwān, son of Caliph Marwān I. ʿAbd al-ʿAzīz was appointed governor of Egypt by his father, and after ʿAbd al-Malik had ascended the throne, the latter confirmed the appointment. During his twenty years' sojourn in Egypt, ʿAbd al-ʿAzīz proved himself a good ruler who really had the welfare of his province at heart. When in the year 69 (689) ʿAbd al-Malik, after the assassination of the rebellious governor ʿAmr b. Saʿīd, was going to have the latter's relatives executed also, ʿAbd al-ʿAzīz interceded for them and persuaded the incensed caliph to spare their lives. Towards the end of his life ʿAbd al-ʿAzīz suffered from the ill-will of his brother ʿAbd al-Malik. Marwān had appointed him the latter's successor, but ʿAbd al-Malik wished to secure the throne for his two sons al-Walīd and Sulaimān, and therefore cherished the project of deposing his brother from the governorship and excluding him from the succession to the throne, when in the year 85 (704) news suddenly reached Damascus that ʿAbd al-ʿAzīz was dead.

Bibliography: Ibn Saʿd, v. 175; Ṭabarī, ii. 576 *et seq.*; Ibn al-Athīr (ed. Tornb.), iv. 156 *et seq.*; Yaʿḳūbī (ed. Houtsma), ii. 306 *et seq.*; Weil, *Gesch. d. Chalifen*, i. 349 *et seq.*; A. Müller, *Der Islam im Morgen- und Abendland*, i. 383 *et seq.* (K. V. Zetterstéen.)

ʿABD AL-ʿAZĪZ b. Muḥammed b. Saʿūd, a Wahhābite ruler in Central Arabia (1765-1803). ʿAbd al-ʿAzīz was born in 1721, and on the 14th Oct. 1803 during a service in the Mosque of Darʿīya was stabbed by a fanatical Shīʿite, who was enraged at the looting and destruction of the Shīʿite sanctuary in Kerbelā by the Wahhābites (1801). During his reign the dominion of the Wahhābites was extended far over the frontiers of Central Arabia (Nedjd), but it was not ʿAbd al-ʿAzīz himself who played the most important

part in bringing this about, but his son Saʿūd, who had been his co-regent since 1787. [For details see SAʿŪD and WAHHABITES, under which the bibliography is also to be found.]

(M. TH. HOUTSMA.)

ʿABD AL-ʿAZĪZ B. MŪSĀ B. NUṢAIR, a governor. When his father, the famous conqueror of Spain, left this country in the year 95 (713), he remained behind as governor and married the widow of the Gothic king Roderick, named by the Arabs Eyilo, Ailu (Egilona), or Umm ʿĀṣim after her son. According to al-Wāḳidī and other Arabian chroniclers, it was the arrogance of this woman which caused the Arab troops to murder him in the year 97 (715) in the monastery of Santa Rufina near Seville, to day known as the Convento Capuchinos, formerly Convento de Santa Justa y Rufina before the Puerta de Cordoba. Others assert that they had received their orders from the Umaiyad caliph Sulaimān.

Bibliography: Ibn al-Athīr (ed. Tornb.), v. 14; Ibn ʿAdhārī, *al-Bayān al-mughrib*, ii. 22 *et seq.*; Ibn ʿAbd al-Ḥakam, *Fatḥ al-Andalus* (ed. Jones), p. 188; Ibn al-Ḳūṭiya, ed. ʿABD AL-ʿAZĪZ B. AL-WALĪD, son of Caliph al-Walīd I. Under the generalship of his uncle Maslama b. ʿAbd al-Malik, in 91 (709-710), ʿAbd al-ʿAzīz made the campaign against the Byzantines, and is also said to have later on taken part in the battles against the same enemy. In 96 (714-715) his father endeavored to exclude from the succession Sulaimān b. ʿAbd al-Malik, who had already been appointed as his successor, in ʿAbd al-ʿAzīz's favor; the effort proved fruitless though. After Sulaimān's death in Dābiḳ (99 = 717), ʿAbd al-ʿAzīz was on the point of coming forward as pretender to the throne, but when he learnt that ʿOmar had already been proclaimed caliph, he went to him and took the oath of allegiance.

Bibliography: Ṭabarī, ii. 1217 *et seq.*; Ibn al-Athīr (ed. Tornb.), iv. 439 *et seq.*; Yaʿḳūbī (ed. Houtsma), ii. 345 *et seq.*; Weil, *Gesch. d. Chalifen*, i. 511 *et seq.*; A. Müller, *Der Islam im Morgen- und Abendland*, i. 463.

(K. V. ZETTERSTÉEN.)

ʿABD AL-ʿAZĪZ EFENDI ḲARA ČELEBĪ ZĀDE, ḳāḍī-ʿaskar and historian of the Ottoman empire, the son of Ḥusām. He was nominated Istambol ḳāḍī-si by the sultan Murād IV (1043 = 1633), and then deprived of his office in the same year on account of a famine which he had not remedied; he was put on board a boat to be drowned at Prince's Island; he was saved through the intercession of the vizier, Bairām Pasha, and was banished to Cyprus (Ḥādjdjī Khalīfa, ed. Flügel, v. 233). It was on this occasion that he wrote his poem *Gulshan-i niyāz*. By his intrigues he succeeded in obtaining the title of honorary mufti (7th Ramaḍān 1059 = 14th Sept. 1649), he was deprived of his position as ḳāḍī-ʿaskar (8th Shawwāl = 15th Oct.), then, through the influence of the Sultana-Wālida, was made mufti in the place of Bahāyī (11th Djumādā I 1061 = 2d May 1651). He was forced by mutinous bodies to march at their head, in connection with the alteration of the coinage, but succeeded in dispersing the crowd; he was again deprived of office after the assassination of the sultana Kösem, and later exiled to Chio, where he died on the 6th Rabīʿ II 1068 (11th Jan. 1658). He wrote a treatise on Musulman law which is a new redaction of Ibn Nudjaim's *al-Ashbāh wa'l-naẓā'ir* (Ḥādjdjī Khalīfa, i. 312), which he dedicated to the sultan Muḥammed; *Rawḍat al-abrār* (Būlāḳ, 1248 = 1833), a general history up to the year 1058 = 1648 (Ḥādjdjī Khalīfa, iii. 494); *Sulaimān nāme* (Būlāḳ, 1248), a history of the sultan Sulaimān (Ḥādjdjī Khalīfa, ii. 123); a chronicle of events from the deposition of Ibrāhīm to the 18th of Ṣafar 1067 (25th Nov. 1657). Being arrogant and fanatical with depraved morals he made many enemies by his malignant jealousy.

Bibliography: Hammer-Purgstall, *Gesch. des osman. Reiches*, see index. (CL. HUART.)

ʿABD AL-DJABBĀR B. ʿABD AL-RAḤMĀN AL-AZDĪ, a governor. ʿAbd al-Djabbār, who had already taken part in the battles against the partisans of the Umaiyads, was according to the usual accounts appointed governor of Khorāsān in 140 (757-758) by Caliph al-Manṣūr, and there he soon made himself known through his cruelty. In the following year, however, the caliph grew suspicious of him, and after some correspondence, in which al-Manṣūr and his governor each tried to outwit the other, the caliph sent an expedition against ʿAbd al-Djabbār under his son Muḥammed al-Mahdī. When al-Mahdī's general, Khāzim b. Khuzaima, approached, the inhabitants of Merw al-Rūdh revolted and took ʿAbd al-Djabbār prisoner, whereupon he was taken to the caliph and executed after suffering terrible tortures.

ʿABD AL-DJALĪL ABU 'L-MAḤĀSIN. [See AL-SHIHRISTĀNĪ.]

ʿABD AL-FATTĀḤ FŪMANĪ, Persian historian, lived probably in the 16th and 17th centuries. Having entered the government service at Gīlān (Ch. Schefer, *Chrest. pers.*, ii. 93), he was entrusted with the surpervision of the accounts by the vizier of this place, Behzād-beg, about 1018 or 1019 (1609-1610), and was then sent by ʿĀdil Shāh to ʿIrāḳ. He wrote, in Persian, the *Taʾrīkh-i Gīlān*, a history of Gīlān from 923 (1517) to 1038 (1628), which has been published by B. Dorn.

Bibliography: *ʿAbdu'l-Fattāh Fūmeny's Gesch. von Gīlān* (3d vol. of the *Muhamm. Quellen zur Gesch. d. Südl. Küstenländer des Kaspischen Meeres*), pp. 21—270.

(CL. HUART.)

ʿABD AL-GHAFFĀR B. ʿABD AL-KARĪM. [See AL-ḲAZWĪNĪ.]

ʿABD AL-GHAFFĀR AL-AKHRAS. [See AL-AKHRAS.]

ʿABD AL-GHANĪ AL-NĀBULUSĪ, a mystic and very voluminous writer, born on the 5th Dhu 'l-Ḥidjdja 1050 (19th March 1641). Having lost his father at an early age, he entered the Ṣūfī order of the Ḳādirīya and of the Naḳshbandīya and studied for seven years in Damascus in his house in the vicinity of the Umaiyad Mosque the mystical works of Ibn ʿArabī and ʿAfīf al-Dīn al-Tilimsānī. At the age of 25 he made his first journey to Bagdad and stayed there some time. In his manhood, as he had already gained a certain

reputation as a mystic, he made several circular journeys, especially in his native country, in order to get into connection with men holding similar views so that they might honour him, and also to visit as many holy sepulchres and other places of pilgrimage as possible. In this manner in the year 1100 (1688) he came to Lebanon, in 1101 to Jerusalem and Hebron; in 1108 (1696) to Egypt and the Ḥidjāz, in 1112 (1700) to Ṭarābulus. In 1114 (1702) he again settled in Damascus at the Ṣāliḥiya and died on the 24th Sha'bān 1143 (5th March 1731).

'Abd al-Ghanī's literary importance is of our opinion principally based on his books of travel: 1. *al-Ḥaḳīḳa wa'l-madjāz fī riḥlat al-Shā'm wa-Miṣr wa'l-Ḥidjāz* (comp. Flügel, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xvi. 659 *et seq.*; v. Kremer, in the *Sitzungsberichten der phil.-hist. Classe der Kais. Akademie d. Wissensch.*, v. 319 *et seq.*) 2. *al-Ḥaḍra al-unsiya fi'l-riḥla al-ḳudsiya*, a journey from Damascus to Jerusalem and back, from the 17th Djumādā II till 1st Sha'bān 1101 (29th March till 10th May 1690), finished on the 9th Dhu 'l-Ḥidjdja 1101 (14th September; — comp. v. Kremer, *loc. cit.*, p. 316; Gildemeister, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxxvi. 385 *et seq.*). 3. *Ḥullat al-dhahab al-ibrīz fī riḥlat Ba'labakk wa'l Biḳā' al-'azīz*. 4. *al-Riḥla al-ṭarābulusiya*. It was not his intention in these works to give descriptions of existing conditions, but what appeared of most importance to him was, besides his own edifying experiences, information concerning the legendary history of holy places; he obtained such information more especially out of al-'Ulaimī and al-Harawī. Nevertheless his accounts furnish us with a few positive dates for historical topography of Syria. The real centre of his literary energy lay, however, in mysticism, which he endeavored to advance in commentaries to the works of earlier Ṣūfīs and in innumerable writings from his own pen. He also several times took part in the discussions which his contemporaries carried on on questions of practical religious life. Thus in 1096 (1685) he wrote a defence of the Mawlawī-Derwishes (comp. Ahlwardt, *Verz. d. arab. Handschr. d. königl. Bibl. zu Berlin*, No. 5385; *Catalog Wetzstein*, No. 136); further he endeavored to justify the dancing and music of the Derwishes (Ahlwardt, *loc. cit.*, Nos. 5384, 5522; *Fihrist . . . . al-kutubkhāne al-Khidīwiya*, ii. 125), as well as their use of tobacco. He was also a poet and used not only the old Ḳaṣīda forms but also the popular Muwashshaḥ (comp. Hartmann, *Muwashshaḥ*, p. 6). The first part of his Dīwān is printed with the title of *Dīwān al-ḥaḳā'iḳ wa-madjmū' al-raḳā'iḳ* (Būlāḳ, 1270; Cairo, 1302, 1306). His poem in praise of the Prophet with a detailed commentary on the rhetorical subtilities, entitled: *Nafaḥāt al-azhār 'alā nasamāt al-asḥār fī madḥ al-nabī al-mukhtār* was published in 1299. In the East he is, however, still most popular as the author of a work on dreams entitled *Ta'ṭīr al-anām fī ta'bīr al-manām*, in 2 vols. (Cairo, 1287, 1301, 1304, 1306, 1316, in margin of Ibn Sīrīn's *Muntakhab al-kalām*). He also applied himself to the pseudo-science of prophecy, and wrote two pamphlets on the events to be expected under the rule of the Ottomans up to the years 1159 (1746) and 1284 (1867; de Slane, *Catalogue des manuscr. arabes de la Bibl. Nat.*, Nos. 1626 *et seq.*). Biographies of 'Abd al-Ghanī are to be found in Murādī, *Silk al-durar* (Būlāḳ, 1291-1301), iii. 30-38; Djabartī, *'Adjā'ib al-āthār* (Cairo, 1297), i. 154-157; a list of his writings in the year 1105 (1693) is given by Flügel, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xvi. 664 *et seq.*, another by Pertsch, *Die arab. Handschriften . . . . zu Gotha*, No. 1860; concerning the writings still preserved comp. Brockelmann, *Gesch. d. arab. Litter.*, ii. 345 *et seq.* (BROCKELMANN.)

'ABD AL-ḤAKK ABŪ MUḤAMMAD B. ABĪ KHĀLID MAḤYU'L-MARĪNĪ, chief of the Zanāta-Marīnides and founder of the dynasty of the Marīnides. His father, Abū Khālid Maḥyū, the chief of his tribe, having died in 592 (1197), 'Abd al-Ḥaḳḳ was chosen as his successor.

At that time the Marīnides overran the high table-lands of the Central Maghrib (Algeria), to the south of the Tāhert and Tlemsen mountains from the Zāb to Sidjilmāsa in a nomadic state. They had their summer camps in the valleys of the Wādī Za and of the Upper Mulūya, between Aḳersīf and al-Waṭāṭ. The regions to the north corresponding to these countries were occupied by other Zanāta, namely by the Banū 'Abd al-Wād. Just contrary to these, the Marīnides had been always hostile to the Almohades. They thus took part in the merciless struggles carried on by the Banū Ghāniya, descendants of the Almoravides, against the 'Abd al-Mu'min dynasty. So that in 605 (1209) they helped in crushing the Almohade general, Abū 'Imrān Mūsā, the emir al-Nāṣir's uncle, and in sacking Tāhert and al-Baṭḥa.

The Almohade emir succeeded, however, in pacifying the Central Maghrib and the Eastern (Ifrīḳiya). He took advantage of this to call the Arab and Berber quotas together for a Holy War against the Christians in Spain. This expedition was brought to an end in 609 (1212) by the disaster of al-'Uḳāb (Las Navas). The Almohades were cut to pieces; nearly all their chiefs were killed, or perished from the plague which broke out among them. The survivors carried the epidemic into what is now Moroccan territory, where, so say the Musulman authors, were so many victims „that the country seemed to be emptied". The emir al-Nāṣir himself died from it at Marrākush in 610 (1214). His son and successor, Yūsuf al-Mustanṣir, being too young and too weak to manage the Almohade chiefs, allowed them to contend round him for pre-eminence and to bring in dissensions, confusion and anarchy everywhere. 'Abd al-Ḥaḳḳ chose this moment to invade the north-west of Morocco with his Marīnides.

He was connected through his wives with the Shurafā' Banū 'Alī b. Idrīs, with many Berber tribes, specially the Baṭṭūya of the Rīf. The Marīnides were encamped with these when the report of their raids on the peoples subject to the Almohades obliged the emir al-Mustanṣir to despatch an army against them. They left their baggage at Tāzūṭā (Rīf), met the Almohades near Wādī Nukūr, overthrew them, despoiled them, and forced them to go back to Fes naked (615 = 1217). In the same year 'Abd al-Ḥaḳḳ marched upon Tāza. The Almohade governor of the town met him with a strong army of Riāḥ and Tulī Arabs and of Miknāsa Berbers. The Almohade leader was beaten and killed. An enormous amount of booty, gained by 'Abd al-Ḥaḳḳ, was divided, but he gave up his share to his allies the Berbers of the Rīf and

to the Ma'ḳil, or Dhawī 'Ubaid Allāh Arabs.

One year later 'Abd al-Ḥaḳḳ threatened the neighbourhood of Fez. The Almohades, the Riāḥ and the Marīnide group of the Banū 'Askar, who had broken away from 'Abd al-Ḥaḳḳ out of jealousy, went to meet him. The battle on the banks of the Sabū, some miles from Tāfarṭāst, cost 'Abd al-Ḥaḳḳ and his eldest son, Idrīs, their lives. But the Marīnides swore not to bury them without taking revenge. The Riāḥ and their allies were beaten and perished in great numbers, the remainder fled (614 = 1218). 'Abd al-Ḥaḳḳ and his son Idrīs were buried in a Zāwiya, and were taken later to the tomb of the Marīnides at Fez. His second son, 'Othmān, was elected by the Marīnides as his successor.

'Abd al-Ḥaḳḳ, an accomplished soldier, was also, according to the Mussulman authors, very devout; he visited all the tombs of the saints pointed out to him, and fasted often. His holiness was such, says the legend, that sick persons who could touch the hem of his garment or his turban were cured. He was a true ascetic contrasting sharply with the Almohades, persecutors of the Mālikite jurisconsults and religious men, such as Abū Madīn of Tlemcen (d. 594 = 1197-1198), whose fame or religious influence annoyed them.

Bibliography: *Rawḍat al-nisrīn fī akhbār dawlat mulūk Banī Marīn*, MS. Nº. 41 of the Madrasa of Tlemcen, folios 1-5; and MS. COUR.)

'ABD AL-ḤAKḲ B. SAIF AL-DĪN AL-TURK AL-DIHLAWĪ AL-BUKHĀRĪ, with the *takhallus* Ḥaḳḳī, a Persian historian, born 958 (1551), died 1052 (1642). 'Abd al-Ḥaḳḳ in 996 (1588) visited the Ḥidjāz to study there the traditions. Of his many writings the following may be quoted: Persian commentaries to the Arabic collections of traditions *Mishkat al-maṣābīḥ* and *Safar al-sa'āda* (in manuscript in British Museum; C. Rieu, *Cat. of Persian MSS.*, pp. 14 *et seq.*); a general history of India entitled *Dhikr al-mulūk* (*loc. cit.*, pp. 823, 855); biographies, mainly of Indian Saints, *Akhbār al-akhyār fī asrār al-abrār* (*loc. cit.*, p. 355); a history of the City of Medina (Lucknow, 1865, 1869).

Bibliography: Badā'ūnī, *Muntakhab al-tawārīkh*, iii. 113; Elliot and Dowson, *The History of India*, vi. 175 *et seq.*; the catalogues of manuscripts by Rieu and Pertsch (Berlin). (M. TH. HOUTSMA.)

'ABD AL-ḤAKḲ ḤAMID, a modern and still living Turkish statesman and poet, born at Bebek (Constantinople), on the 5th Feb. 1852. His father, the well-known historian Khair Allāh Efendi was Turkish ambassador in Teheran; his grandfather 'Abd al-Ḥaḳḳ, physician in ordinary to the sultans Maḥmūd and 'Abd al-Madjīd, founded the Faculty of Medicine in Constantinople. 'Abd al-Ḥaḳḳ received his education in Constantinople and Paris and began his official career as secretary to the Turkish embassy in Teheran, then returned to the capital and, after filling several important offices in the government, was made secretary of the embassy at Paris (1877—1880). In the years following he was consul in Greece, Russia and British India (Bombay) till 1885, when he was appointed first secretary of the embassy in London. With but one short interval, 1895-1897, when he was plenipotentiary at the Hague, he has since remained in London. He had already been appointed second and then first counsellor to the legation.

'Abd al-Ḥaḳḳ is the founder of the modern Turkish school of poetry. Whilst Shināsī in his *Muntakhabāt* (*Selected poems*), which form the starting-point of modern Turkish literature, was the first to publish Occidental poetry in Turkish translations, 'Abd al-Ḥaḳḳ was the first to write Turkish poems on European models. Of epoch-making importance is his poem *Ṣaḥrā* (*The Land*), published in 1296 (1879), by which he freed Turkish poetry from the spell of Persian influence and established it on its own basis. His works are still prohibited in Turkey and are difficult to obtain, many having been printed abroad only. During the last 20 years nothing has been published by him. The following works, mostly poetry — lyrical and dramatical — have been published: *Macera-i 'ishḳ* (*Love's fate*), *Ṣabr we-thebāt* (*Patience and perseverance*), *Içli ḳiz* (*The Maiden thoughtful*), *Dukhter-i Hindu* (*The Indian girl*), *Nesife*, *Nesteren* (both proper names), *Ṣaḥrā* (*The Land*), *Tezer*, *Eshber* (both proper names), *Maḳbar* (*The Cemetery*), *Hadjele* (*The Bridal chamber*), *Tārīḳ* (a proper name), *Belde yaḥod Dīwānelikleim* (*The Town* — i. e. Paris, — *or My Follies*), *Ölü* (*Death*), *Bunlar o dur* (*'Tis they*), *Bir sefilenin ḥasbi ḥāli* (*Story of an unhappy woman*). The following poems which were said to be in preparation, have never appeared: *Ibn Mūsā*, *Sardanapal*, *Zaineb*, *Liberté*, *Ḳahḳa*, *Gharām*, *Medjmū'a-i ash'ār*, *Hep yaḥod hič*. Of 'Abd al-Ḥaḳḳ's followers in literature the most important is Ekrem Bei [q. v.].

'ABD AL-ḤAMĪD I (Turkish pronunciation ABDU 'L-HAMID), Turkish sultan. 'Abd al-Ḥamīd was born in 1725, and was the son of Aḥmed III. He ascended the Ottoman throne on the 21st Jan. 1774. He carried on the war with Russia pompously, but the fresh victories of the Czarina in Bulgaria forced him to accept the terms dictated to his representatives at Kütchük-Kainardje on the 16th July 1774, which were decisive for the future. Besides Asow Russia obtained the fortified ports of Kertsh, Yenikal'e and Kinburn and thus became the strongest naval power in the Black Sea. She further received Kabardei Major and Minor in the Caucasus, and the protectorate over Moldavia and Wallachia and over the islands of the Archipelago; the Tartars of the Crimea became independent under a khān elected freely by themselves. The next task of the

new ruler was to subjugate the provinces which had revolted in consequence of the fateful war. In Syria and Palestine the almost ninety year old Shaikh 'Omar al-Ṭāhir and his sons were the virtual masters of the country. The Egyptian Mamlūk beis proved themselves incapable of destroying them; but the energetic *Ḳapūdān Pasha* Ḥassān succeeded in the same year in getting the shaikh into his power dead, and in completely stamping out the rebellion, thanks to the support of the subsequently famous Aḥmed Bei al-Djazzār in 1776.

A short time thereafter Turkey was to measure its strength against Irān. Karīm Khān, the most powerful of the petty Persian princes had annexed Ottoman ground. The caliph's army was attacked by the Persians at Kerkuk (December 1776) and driven back to Mawṣil (Mosul) with considerable losses. Baṣra, too, remained in the power of that experienced general, Karīm.

The plans of the European governments became more dangerous still to Turkey. Peace with Russia had hardly been concluded when Austria at one blow seized Bukowina. The Porte was helpless and finally renounced all claims to the lost province by treaty (May 1775).

From the beginning the Porte unwisely set the Powers in movement against the ratified Peace of Küčük-Kainardje, nay it even demanded from Russia most extensive modifications. The Czarina, however, supported in every way the Tartar khān, whom Russia had appointed and who was a phil-european, and as the grand vizier continued to resist, she entered Perekop which is the key to the Crimea (December 1776). Finally war was averted by Turkey's recognition of the Russophile khān (March 1779). A revolt against her protégé gave Catharine in the spring of 1783 an excuse for annexing the coasts of the Black Sea and the whole of Tartary. 'Abd al-Ḥamīd submitted to this by the decree of the 8th January 1784.

Matters seemed to be taking a peaceful turn, when in 1784 all the khāns and tribes of Christian and Mohammedan faith in the Caucasus took up arms against the Russophile Heraclius, prince of Georgia. This feud so rich in deeds of valor was stirred up by both parties and finally, as Russia insisted on settling the affair alone, brought about a declaration of war by the Porte and the great struggle which enflamed the whole East. The attack by which the Turks immediately surprised the hero of this war, Suvoroff, the general in command at Kinburn, was repulsed with little trouble. The sultan's position became still more pitiful when Emperor Joseph II, who had already invaded Servia, declared war in Febr. 1778. Even Ḥassān Pasha, the Lion of Islām as he was called, saw his entire fleet destroyed in the Liman off the Crimean shore (June and July 1788). It was fortunate for Turkey that at least little Sweden overran Russia and that Austria, although fairly successful in Bessarabia, cut no very brilliant figure in either Servia or Siebenbürgen. The great event of the war was the incomparable feat of arms of Suvoroff's, the storming of Ochakov (December 1788): 10000 Turks and inestimable booty covered the ramparts. Bessarabia was thus as good as lost to the sultan. In 1789 no further collision had taken place, when in April 7th 'Abd al-Ḥamīd died from apoplexy.

The portrait which contemporaries sketch of the sultan is not exactly flattering; physically clumsy, mentally undeveloped, he possessed neither discernment nor determination. He was unable either to take advantage of the promising national and religious movement in the Caucasus, or to use with success the means that his navy and army afforded him.

Bibliography: Brosset, *Hist. de la Géorgie* (St. Petersburg, 1850-1859); Aḥmed Djewdet, *Ta'rīkh-i Djewdet* (Constantinople), i-iii; I. W. Zinkeisen, *Gesch. d. Osman. Reiches in Europa* (Gotha, 1857-1859), v.; vi; A. Sorel, *La Question d'Orient* (Paris, 1878).

(K. SüSSHEIM.)

'ABD AL-ḤAMĪD II, the present sovereign ruler in the Ottoman empire, son of Sultan 'Abd al-Madjīd, born the 4th Sha'bān 1258 (21st Sept. 1842), was thirty-three when the ministers, having deposed his brother, Murad V, called him to the throne of 'Othmān (10th Sha'bān 1293 = 31st Aug. 1876). For particulars about the principal events in his reign, the insurrection in Bosnia and Herzegovina, the war with Servia and Montenegro, then with Russia, etc. see special articles.

'Abd al-Ḥamīd II has continued the work of reform (*tanẓīmāt*): during his reign legislation has been perfected by the completion of the Medjella or civil code, by the appointment of public prosecutors empowered to proceed, in the name of the State, against misdemeanors and crimes (taken from the French system), and by the promulgation of numerous laws. At the same time he raised the credit of the empire by constituting an international administration, representing the interest of the bondholders, i. e. the bearers of shares of the foreign debt, and authorized to receive the revenues of the State (indirect taxes), such as the salt tax, duty on spirits etc., which were granted to it; the tobacco tax, over which it had control at first, was later entrusted to a participant administration. The establishment of numerous primary Mussalman schools, the making of a net-work of roads, unhappily not yet finished, the building of bridges, and the concession of certain railways (in Europe, the junction of the lines from Constantinople and Salonica with the European system, the line from Monastir and the junction between Salonica and Constantinople; in Asia, the Mersina-Adana line, the Angora line, the Konia line, with extension towards Bagdad and the Persian Gulf, the Mecca line, finished as far as Ma'ān, and the Jaffa line to Jerusalem; a cog-wheeled steam tramway from Beyrout to Damascus) and of the ports (Salonica and Beyrout) show the desire and firm resolution of the sovereign to maintain, in the face of a thousand difficulties, the progress begun by his predecessors and to continue their work.

'ABD AL-ḲĀDIR BADĀ'ŪNĪ. [See BADĀ'ŪNĪ.]

'ABD AL-ḲĀDIR DIHLAWĪ B. WALĪ ALLĀH B. 'ABD AL-RAḤĪM translated the Ḳor'ān into Urdu under the title of *Mūḍiḥ-i Ḳur'ān* (i. e. *Mūḍiḥ-i Ḳor'ān* = "Interpretation of the Ḳor'ān"). This work, finished by the author in 1205 (1790-1791), was edited by Hooghly in 1829; another edition, Bombay, 1270 (1853-1854).

Bibliography: Garcin de Tassy, *Hist. de la littér. Hindouie* (2d ed.), i. 76 *et seq.*; idem, *Chrestomathie hindoustanie*; *Journal des Savants* (1873), pp. 435—443.

'ABD AL-ḲĀDIR AL-DJĪLĪ (GĪLĀNĪ) MUḤYĪ 'L-DĪN ABŪ MUḤAMMED B. ABĪ ṢĀLIḤ ZENGĪ DŪST, preacher and Ṣūfī, after whom the Ḳādirī order is named, born in 470 (1077-1078), died in 561 (1166). The numerous biographies of this personage teem with fictions, out of which some history may be gleaned. Thus his pedigree is traced on the father's side to al-Ḥasan, grandson of the Prophet, in the direct line. But this is contradicted by the foreign name of his father, and the fact that the shaikh was called 'Adjamī (foreigner) in Bagdad, and indeed the pedigree was shown to be a fabrication of his grandson the ḳāḍī Abū Ṣāliḥ Naṣr, to whom some more fictions may be traced. His mother is said to have been Fāṭima daughter of 'Abd Allāh al-Ṣawma'ī, both, we are told, saints; and the name of the village where he was born is given as Nīf or Naif, in the district of Gīlān, south of the Caspian. He was sent to Bagdad at the age of eighteen to study, and was there at first supported by his mother. He attended the philology classes of Tibrīzī (d. 502 = 1109), and learned Ḥanbalite (and according to some, Shāfi'ite) law from a number of shaikhs: in his works he usually quotes traditions from Hibat Allāh b. al-Mubārak and Abū Naṣr Muḥammed b. al-Bannā'. Little is known of his life between 488 (1095) and 521 (1127), except that he appears to have gone on pilgrimage during that period, and that he also married, since of his forty-nine children one was born in 508 (1114-1115). According to some authorities, he was guardian of the tomb of Abū Ḥanīfa. He learned Ṣūfism of Abu 'l-Khair Muḥammed b. Muslim al-Dabbās (d. 525 = 1131), a saint of sufficient eminence to be included in Sha'rānī's list; by whose gaze he was converted on the occasion of a visit when one or other of them had caught a falcon (in consequence whereof 'Abd al-Ḳādir was surnamed al-Bāz 'l-Ashhab, according to Damīrī). Training by al-Dabbās involved considerable hardship, and it would seem that the other Ṣūfī aspirants resented the intrusion of a jurist amongst them. After a time, 'Abd al-Ḳādir was considered worthy to receive the Ṣūfī livery called *khirḳa*, which was given him by the ḳāḍī Abū Sa'd Mubārak al-Mukharrimī, the head of a school of Ḥanbalite law near the Bāb al-Azadj in Bagdad, which 'Abd al-Ḳādir appears to have attended. In 521 (1127), on the advice of the Ṣūfī Yūsuf al-Hamadhānī (440—535 = 1048—1140) he began to preach in public, at first to a small audience, which gradually increased, till he took a chair in the oratory at the Ḥalba gate of Bagdad, and owing to the constant increase of his hearers, he found it necessary to go outside the gate. There a *ribāṭ* was built for him; and in 528 (1134—1143), by public subscription the school of Mubārak al-Mukharrimī (probably then dead or retired) was enlarged by taking in the space occupied by the neighboring buildings, and 'Abd al-Ḳādir was installed as its head. The nature of his courses was probably similar to those of Djamāl al-Dīn al-Djawzī which are so vividly described by Ibn Djubair. On Friday mornings and Monday evenings 'Abd al-Ḳādir preached in his school, on Sunday mornings in his monastery. Of his numerous pupils many were afterwards famous as saints, while some (like the biographer Sam'ānī) acquired distinction of another sort. His sermons are said to have effected the conversion of many Jews and Christians to Islām, as well as of many Moslems to the higher life. Presents, often in the form of vows, were sent him from the numerous regions whither his fame penetrated: one day's such receipts often amounted to more than one dīnār. These enabled him to keep open house for aspirants. Legal questions were addressed to him from all parts, and these he is said to have answered impromptu. Caliphs and viziers are supposed to have figured among his clients.

'Abd al-Ḳādir's works are all religious in character, and largely consist of reports of his sermons or addresses; the following are known:

1. *Al-Ghunya li-ṭālibī ṭarīḳ al-ḥaḳḳ*, a ritual and ethical treatise (Cairo, 1288).

2. *Al-Fatḥ al-rabbānī*, 62 sermons preached in the years 545-546 (1150-1152) with appendix (Cairo, 1302). MSS. sometimes bear the title *Sittīn madjālis*.

3. *Futūḥ al-ghaib*, 78 sermons on various subjects, compiled by the shaikh's son 'Abd al-Razzāḳ, followed by his dying injunctions, his pedigree on the father's and mother's side, proof of his connection with Abū Bekr and 'Omar, his creed, and some of his poems, (on the margin of al-Shaṭṭanawfī's *Bahdjat al-asrār*, Cairo, 1304).

4. *Ḥizb bashā'ir al-khairāt*, mystical prayer (Alexandria, 1304).

5. *Djalā' al-khāṭir* (mentioned by Ḥādjdjī Khalīfa), a collection of sermons of which the first bears the same date as 59 and the last the same as 57 of Nº. 2; perhaps it is another title for the same work.

6. *Al-Mawāhib al-raḥmānīya wa'l-futūḥ al-rabbānīya fī marātib al-akhlāḳ al-sanīya wa'l-maḳāmāt al-'irfānīya* quoted in *Rawḍāt al-djannāt*, p. 441; possibly identical with 2 or 3.

7. *Yawāḳīt al-ḥikam* (mentioned by Ḥādjdjī Khalīfa).

8. *Al-Fuyūḍāt al-rabbānīya fi'l-awrād al-ḳādirīya*, collection of prayers (Cairo, 1303).

9. Sermons included in the *Bahdjat al-asrār* and other biographical works (MS. 622 in the India Office Catalogue is an imperfect copy of this work, and Persian writers speak of them generally as *Malfūẓāt-i Ḳādirī*).

In these works 'Abd al-Ḳādir figures as a capable theologian, and an earnest, sincere, and eloquent preacher. Many a sermon is introduced

into his *Ghunya*, which also contains an account of the 73 Islamic sects, grouped in ten divisions. He occasionally refers to the grammarians, such as Mubarrad, more frequently to the old commentators on the Ḳurʾān and the Ṣūfī saints. His doctrine in this work is strictly orthodox, and the tone uniformly sober; there are however some mystic interpretations of the Ḳorʾān, and the practice of repeating certain formulae fifty or a hundred times is recommended. The sermons included in Nº. 2 are some of the very best in Muslim literature; the spirit which they breathe is one of charity and philanthropy; the preacher would like ‚to close the gates of Hell and open those of Paradise to all mankind'. He employs Ṣūfī technicalities very rarely, and none that would occasion the ordinary hearer much difficulty, though one visitor to his courses declared that he could not understand a word. The general theme of the sermons is the necessity of a period of asceticism during which the aspirant can wean himself from the world, after which he may return and enjoy his portion while converting others. The Ṣūfī doctrine that everything, whether it be the prizes of this world or the next, is a veil between the aspirant and the Deity, and that the aspirant's thoughts should be directed to the Deity only, is also a leading topic. The hearers are urgently advised to bestow their goods on the saints even to the exclusion of their own families. The preacher says little about himself, and that in no very arrogant strain; where he calls himself ‚the touchstone of the people of the earth', the meaning is only that he can easily discern the serious from the triflers among his audience. On the other hand he emphatically claims to speak only after divine authorization.

The accounts of ʿAbd al-Ḳādir by his disciples ʿAbd Allāh b. Muḥammed al-Baghdādī, ʿAbd al-Muḥsin al-Baṣrī, and ʿAbd Allāh b. Naṣr al-Ṣiddīḳī (called *Anwār al-nāẓir*, quoted in *Bahdjat al-asrār* p. 109), are not at present accessible: in the dictionary of Samʿānī the name of the shaikh is mentioned s. v. Djīl, with an empty space left after it. An account of the shaikh by Samʿānī's son is preserved, which is respectful, but not enthusiastic; in another by Muwaffaḳ al-Dīn ʿAbd Allāh al-Maḳdisī, who was with him the last fifty days of his life, we are told that he was highly respected by the people of Bagdad, and miracles attributed to him, but the narrator had himself seen none. He and another were at the time the shaikh's only pupils. In the works of Ibn ʿArabī (born 560 = 1165), ʿAbd al-Ḳādir is mentioned as a just man, the *ḳuṭb* of his time (*Meccan revelations*, i. 262), ‚the ruler in this path, the authoritative judge of the men' (*ib.*, ii. 24), ‚one of the Malāmatiya' (iii. 44): he is also quoted for the statement that ʿAbd al-Ḳādir praised God in the womb, and that he had a rank which placed him over all beings save God. The *Bahdjat al-asrār*, by an author who died in 713 (1314), contains the narrative of many miracles performed by the shaikh, and authenticated by chains of witnesses: whence Ibn Taimiya (d. 728 = 1328) declared that they satisfied the requirements of credibility, though others were less credulous: the book is, e. g., condemned by Dhahabī as containing frivolous tales, whereas Ibn al-Wardī (*Taʾrīkh*, ii. 70, 71) copies it. Much more offence was given by the arrogant claims put in the shaikh's mouth: thus the *Bahdjat al-asrār* begins with a list of persons who heard him say ‚My foot is on the neck of every saint': and he is similarly made out to have claimed the possession of seventy gates of knowledge, each one of them broader than the distance between heaven and earth, &c. Late followers of ʿAbd al-Ḳādir (such as the author of the Persian treatise *Makhāzin al-ḳādiriya*, MS. Brit. Mus. Or. 248) while endeavoring to restrict the universality of the first of these sayings, try to show that ʿAbd al-Ḳādir was justified in uttering it; and pious writers (such as Damīrī, i. 320) only find in it evidence of ʿAbd al-Ḳādir's dignity. Sayings of this sort do not seem to be found in the genuine works of the shaikh (though there are parallels to them in the poems ascribed to him), and are probably due to the enthusiasm of his followers. With them his fame has in some places nearly displaced that of the Prophet Muhammed, and he is regularly styled the Sultan of the Saints, nor is his name ever uttered without one of the following epithets: *Mushāhid Allāh, Amr Allāh, Faḍl Allāh, Amān Allāh, Nūr Allāh, Ḳuṭb Allāh, Saif Allāh, Firmān Allāh, Burhān Allāh, Āyat Allāh, Ghawth Allāh, al-Ghawth al-Aʿẓam*. [See ḲĀDIRĪYA.] The growth of the legend was probably aided by his many sons, of whom eleven are mentioned in the *Bahdjat al-asrār* as following in their father's steps: ʿĪsā (d. 573 = 1177-1178 in Egypt), ʿAbd Allāh (d. 589 = 1193 in Bagdad), Ibrāhīm (d. 592 = 1196 in Wāsiṭ), ʿAbd al-Wahhāb (d. 593 = 1197 in Bagdad), Yaḥyā and Muḥammed (d. 600 = 1204 in Bagdad), ʿAbd al-Razzāḳ (d. 603 = 1207 in Bagdad), Mūsā (d. 618 = 1221 in Damascus), ʿAbd al-ʿAzīz (migrated to Djiyāl, a village of Sindjār, d. 602 = 1205-1206), ʿAbd al-Raḥmān (d. 587 = 1191), and ʿAbd al-Djabbār (d. 575 = 1179-1180). Some authorities add a few more names. Of these ʿAbd al-Wahhāb inherited his father's school, in which he was succeeded by his son ʿAbd al-Salām (548—611 = 1153—1215): who was followed by his cousin Abū Ṣāliḥ Naṣr son of ʿAbd al-Razzāḳ (564—633 = 1168—1236). During the reign of Nāṣir the family of ʿAbd al-Ḳādir were temporarily exiled from Bagdad. Some of them perished when Bagdad was taken by the Mongols, but the headquarters of the society (except for the brief interval mentioned) have always been in that city.

Bibliography: A list of biographies of ʿAbd al-Ḳādir is given by Ahlwardt, *Verz. d. arab. Handschr.*, Nos. 10072—92, of these the following have been published: al-Shaṭṭanawfī, *Bahdjat al-asrār* (Cairo, 1304); Muḥammed b. Yaḥya ʾl-Tādafī, *Ḳalāʾid al-djawāhir* (Cairo, 1303); Muḥammed al-Dilāʾī, *Natīdjat al-taḥḳīḳ* (Fez, 1309), translated by Weir, in *Journ. of the Roy. As. Soc.*, 1903. Further, *Ghibṭat al-nāẓir* ascribed to Ibn Ḥadjar (not in Ahlwardt's list), edited by D. Ross (Calcutta, 1903). Probably the best extant biography is that in Dhahabī's *Taʾrīkh al-Islām*, largely based on Ibn al-Nadjdjār (published in *Journ. of the Roy. As. Soc.*, 1907, pp. 267 *et seq.* Shaikh Sanūsī is said to have recently written the biography of ʿAbd al-Ḳādir. Modern European writers dealing with ʿAbd al-Ḳādir and the Ḳādiris are: L. Rinn, *Marabouts et Khouan* (Paris, 1884); A. Le Chatelier, *Confréries Musulmanes du Hedjaz* (Paris, 1887); Depont et Coppolani, *Confréries religieuses musulmanes* (Algiers, 1897); Carra de Vaux, *Gazali* (Paris, 1902).

(D. S. MARGOLIOUTH.)

'ABD AL-ḲĀDIR b. MUḤYI'L-DĪN AL-ḤASANĪ, the Emīr, born in 1223 (1808) near al-Ma'askar (Mascara). His family was one of the most influential in the Hāshim tribe, which, after having resided for a longtime in Morocco, removed and established itself in the 18th century in the beylic of Oran. In addition to the prestige derived by this family from its princely source was added the reputation for holiness gained by Muṣṭafā b. Muḥammed b. Mukhtār, the grandfather of 'Abd al-Ḳādir, and above all by Muḥyi'l-Dīn, his father. 'Abd al-Ḳādir, then, grew up in a religious environment. Without neglecting his training in arms and athletics, in which he soon excelled, he applied himself especially to examine the sciences of reason and revelation. Like his father he became a littérateur and theologian, and he always was so even when circumstances made him a warrior and head of the State. Having been sent by his father to Oran, he came back with the sentiment of the military and political weakness of the Turks. His father, who was almost openly recognized as their chief by the malcontents in the south of the province, was arrested by order of Ḥasan Bei. He succeeded, however, in obtaining permission to leave Algeria and went to Arabia, taking with him 'Abd al-Ḳādir, who spent two years (1827-1829) in Asia.

On their return to Africa in 1829, 'Abd al-Ḳādir and his father pretended at first to live in retirement. But the events consequent upon the taking of Algiers by the French furnished them with the opportunity of putting themselves at the head of the tribes and of posing as the irreconcilable adversaries of the Turks. Thus it was that 'Abd al-Ḳādir having stopped his father from giving help to Ḥasan, the bei of Oran, the latter was obliged to tender his submission to France. Muḥyi'l-Dīn, although he declined the honor of being the supreme chief of his compatriots, took the command of the troops who were fighting with the French garrison of Oran. In the course of these expeditions 'Abd al-Ḳādir showed much courage and aroused the admiration of his compatriots by his skill on horse-back and his coolness. Therefore, when Muḥyi'l-Dīn declined to accept the title of sulṭan for the second time, he was easily able to persuade the tribes to recognize 'Abd al-Ḳādir as their leader, and the latter was proclaimed sulṭan on the 21st Nov. 1832. However, in deference to the Sharīf of Fez, whose unfriendliness he was afraid to excite, he refused to make use of this title and contented himself with that of emīr.

'Abd al-Ḳādir's political life may be divided into three periods: 1. From the date on which he was proclaimed sulṭan to the Tafna treaty (30th May 1837). — 2. From this treaty to the breaking of peace (20th Nov. 1839). — 3. From the recommencement of hostilities with France to his voluntary surrender (23d Dec. 1847).

I. In the first period 'Abd al-Ḳādir strove to bring the whole western beylic under subjection. Having made Mascara his capital, he proclaimed a Holy War through the whole province. At first he was unfortunate, for he had at one and the same time to fight the French and to subdue his Mussulman rivals. He succeeded, however, in seizing Tlemcen, but could not get the better of the Turks, who were occupying the citadel, the "Meshwar". His position became more advantageous through the convention, called by historians the "Desmichel treaty" (26th Febr. 1834), which, being drawn up ambiguously with considerable differences between the French and the Arabic texts, was entirely to the benefit of 'Abd al-Ḳādir. In reality he obtained free possession of the entire beylic of Oran with the exception of Oran itself, Arzeu (Arzāw) and Mostaghānem. He was authorized to appoint consuls in these towns as well as in Algiers and to provide himself with arms and munitions of war. Thus with the consent of France 'Abd al-Ḳādir became the legitimate ruler of all the Western Mussulmans. The alliance with France also helped him to triumph over his Mussulman enemies, who had risen against him on account of the convention he had just concluded with the French. He at once busied himself with subduing all parts of the country where the French were not yet established, and, despite the protestations of Governor-General Drouet d'Erlon, he took possession of Médéa and Miliāna, where he left garrisons and placed lieutenants. Being recalled to the province of Oran by the defection of the Smalas and Douairs, who had just gone over to the French, 'Abd al-Ḳādir commenced hostilities against General Trézel, who refused to give up the rebels, and the victory of the Macta followed (26th July 1835). This victory drove the French government to act with energy and 'Abd al-Ḳādir saw his capital, Mascara, invaded by a French column under Marshal Clauzel. His position was at one moment very precarious: — repulsed by the Turks who were enclosed in the "Meshwar" at Tlemcen, he was defeated by General Bugeaud on the banks of the Sikka. But, thanks to his diplomatic ability, 'Abd al-Ḳādir managed to get General Bugeaud to sign (30th May 1837) the Tafna treaty, which extended the dominion of 'Abd al-Ḳādir in Algeria even further than the Desmichel treaty. It granted him, without any concession on his part, nearly the whole of the province of Oran, a considerable portion of that of Algiers, and the entire beylic of Tīṭarī, making together as much as two thirds of Algeria.

II. The two years which followed the Tafna treaty were employed by 'Abd al-Ḳādir in strengthening his authority. The tribes of Tīṭarī having refused to pay him taxes, he defeated them on two occasions and forced them to submit. Despite the clauses of the treaty, which kept the eastern province under the influence of France, he placed lieutenants in Medjāna and the Zībān as wel as in Laghwāt. The Marabout, Muḥammed Tidjānī, who was very influential in the Sahara, was the only one who tried to resist him. The emīr went in person to attack the Ḳṣar of 'Ain-Mahdī, the residence of his opponent, and after a siege of five months (11th June—17th Nov. 1838) succeeded in taking it. The capitulation of this place, to which the Turks had never penetrated, showed the native chiefs that not one amongst them was in a position to refuse to obey 'Abd al-Ḳādir.

Having thus created a Mussulman state by diplomacy and war 'Abd al-Ḳādir attempted to organize it by substituting relative order in place of the anarchy which reigned in Algeria after the overthrow of the Turkish government [see ALGERIA]. He busied himself especially with the formation of an army capable of resisting the Christians. He added to the contingents furnished by the tribes, who were brave enough but undisciplined,

a regular army comprising infantry, cavalry and artillery, composed of soldiers enrolled as volunteers and paid by the beylic. The instruction of these soldiers was confided to Tunisian and Tripolitan soldiers, and also to deserters from the French army. 'Abd al-Ḳādir drew up regulations as to uniform, food, pay, hierarchy, promotion, discipline and the decorations of the soldiers. To supply them with necessaries of life he established silos of grain; he organised manufactories of arms; and had fortresses repaired or built, as much to guarantee the country against invasion by the Christians, as to keep the tribes in submission.

III. 'Abd al-Ḳādir and the French could not agree about the interpretation of certain obscure clauses in the Tafna treaty. Marshal Vallée opened negotiations with 'Abd al-Ḳādir for the purpose of modifying the convention of 1837, but they came to nothing. Soon the expedition of the "Portes-de-Fer" in the course of which a French army, led by Marshal Vallée and Duke d'Orleans, passed through the whole province of Constantine from East to West, was taken by the emir to be a violation of the Tafna treaty. He declared at Médéa a Holy War and began hostilities by ordering his lieutenant Ben Salem to invade Mitidja, where the farms were sacked and the settlers massacred (20th Nov. 1839).

From that time it was a fight to the death between the emir and France. From 1841 'Abd al-Ḳādir lost many fortified positions, but it was in 1842 that the irreparable blows were given to his power by Marshal Bugeaud, who took all his fortresses one after the other. Thus he lost Boghar, Tāza, Tagdemt, Mascara and the valley of the Chélif. He still held out in the West, but the occupation of Tlemcen and of the district of Nedroma, obliged him to fall back towards the South. In the following year he received an irreparable blow; a part of his smala [see the article] was taken by surprise by Duke d'Aumale at Taguine on the 16th of May 1843. Closed in by the French columns and abandoned by most of his partisans the emir had to take refuge in Morocco.

However, he did not yet allow that he was beaten. Through intrigue he brought about a rupture between France and Morocco, in the hope that by means of this diversion he might again have the best of it. But the Sherif's army was defeated by General Bugeaud at the battle of Isly (12th Aug. 1844), and by the treaty of Tangiers (10th Sept. 1844) the sultan undertook to render 'Abd al-Ḳādir harmless. This clause was not observed, and the emir remained cantoned near the Algerian frontier, watching events. He took advantage of the insurrectionary movements which took place in 1846 to recommence hostilities and made a bold excursion into the land of the Kabyles. But, being pursued by the French columns without any respite, he had to beat a retreat and regain Morocco. Finally 'Abd al-Raḥmān, in compliance with the repeated injunctions of France decided to send a strong army against him. 'Abd al-Ḳādir, who was at the end of his resources, offered his submission to General Lamoricière on condition that he should be permitted to retire with his family to Alexandria or to St. Jean d'Acre. This request was received favorably and the emir delivered himself up to the French on the 23d December 1847.

Circumstances delayed the fulfilment of this promise. The emir had been taken across to Toulon, whence he should have embarked for the East. He was still in fort Lamalgue when the revolution of February 1848 broke out. The Provisory Government did not think it right to ratify the promises made by Lamoricière and Duke d'Aumale, and 'Abd al-Ḳādir remained in France in captivity. He was confined at Pau and then at Amboise, the 3d Nov. 1848, and remained there until the 16th Sept. 1852, when Louis Napoleon went in person to announce to him his enlargement. After a short stay in Paris he went to Constantinople and to Brusa, where he resided from 1853 to 1855; then, on account of the earthquake which destroyed this town, he went, with the authorisation of the Turkish and French governments, to settle at Damascus. In this town he led a retired life, dividing his time between study, religious exercises and the education of his children. In 1860 when the insurgent Druses threatened to massacre the Christian population, 'Abd al-Ḳādir with the co-operation of Algerian emigrants released the French consul and saved nearly 1500 persons. The French government recompensed this conduct by giving 'Abd al-Ḳādir the Grand Cross of the Legion of Honor. In all circumstances besides this the emir most scrupulously observed his promises to France. In 1870 he disavowed the intrigues of one of his sons; in 1871 he openly censured the fomentors of disorder, who were using his name and seal to stir up rebellion among the peoples of the East. When the revolt broke out he wrote, without success though, to the insurgents to induce them to lay down their arms. He died at Damascus in 1883.

Belonging by birth to the religious aristocracy 'Abd al-Ḳādir was above all a convinced believer. His faith was ardent; his mystic enthusiasm excited the admiration of his co-religionists, and even struck the few Europeans who had the opportunity of approaching him. More a theologian than a warrior, knowing the Ḳor'ān and religious literature from end to end, he made free use of spiritual weapons, adopted texts to serve his ends and fought his enemies with eloquence as much as with arms. But he was also clever enough to make use of a fanaticism, the sincerity of which we ought not to doubt, for his personal ambition. He was a Musulman in his faults as much as in his good qualities; without doubt loyal but having recourse unscrupulously to perfidiousness and artifice to assure the success of his cause, which he confused with that of Islām; just from an Oriental point of view; generous and humane, but bloody and merciless when he deemed it necessary to intimidate his enemies. In short he was a true descendant of the Maghribine empire founders in the Middle Ages, of 'Abd al-Mu'min for example, rather than a reformer impressed with Western ideas.

'Abd al-Ḳādir attached much importance to intellectual culture, and wrote poetry of different kinds himself. During his residence in Brusa he wrote a philosophical treatise called *Dhikra 'l-'āḳil wa-tanbīh al-ghāfil*. In the first part of this work the author criticizes the character and nature of Philosophy and Religion; in the second he reviews the history of the nations that have shown a marked taste for science. According to M. Mornand, 'Abd al-Ḳādir also wrote an *Autobiography*

and a treatise called *De la fidélité des musulmans à observer leurs traités d'alliance et autres* during his captivity in Amboise.

Bibliography: *Nuzhat al-khāṭir fī ḳarīḍ al-amīr ʿAbd al-Ḳādir*, a collection of poems (Cairo, n. d.); *Dhikrā'l-ʿāḳil wa-tanbīh al-ghāfil* (Beyrout, n. d.), translated by Gustave Dugat under the title of *Rappel à l'intelligent, avis à l'indifférent* (Paris, 1858); *Wiḳāḳ al-katāʾib* (ʿAbd al-Ḳādir's military regulations for the standing army, translated by V. Rosetty in the *Spectateur Militaire* of the 15th Febr. 1844; re-edited by L. Patorni, Algiers, 1890); al-Ḥusain b. ʿAlī, *Histoire d'el-Hadj Abd el-Kader* (translated by Delpech in the *Revue Africaine*, 1876, xx. 417-470); A. de Lacroix, *Histoire privée et politique d'Abd el-Kader* (Paris, 1849); Alex. (G. YVER.)

ʿABD AL-ḲĀDIR B. ʿOMAR AL-BAGHDĀDĪ, a well-known philologist, born in 1030 (1621) at Bagdad, studied for a year in Damascus and then at the Azhar Mosque in Cairo, where al-Khafādjī was his teacher. In 1085 (1674) he returned to Damascus and there made the acquaintance of the grand-vizier Aḥmed Köprülü, who then took him to Adrianople. As he could not stand the northern climate, he soon went back to Cairo. Later on he again tried his luck in Rumelia, but caught a disease of the eye and arrived at Cairo almost blind. He died there in 1093 (1682).

ʿAbd al-Ḳādir's chief work is a commentary on the quotations from poets in the commentary of al-Asterābādī (d. 686 = 1287) on the *Kāfiya*, the text-book of syntax by Ibn al-Ḥādjib (d. 646 = 1248). This super-commentary is entitled *Khizānat al-adab wa-lubb lubāb lisān al-ʿarab* (4 vols., Būlāḳ, 1299). In it he made use of many philological and literary-historical works, which are no longer extant, and gives long extracts of them. He was also an excellent Persian scholar and in 1067 (1656-1657) compiled a dictionary to Firdawsī and also a commentary to the poem of Shāhidī [q. v.]. Comp. *ʿAbdulḳâdiri Baghdâdensis Lexicon Šahnâmianum*, ed. C. Salemann, St. Petersburg, 1895.

(BROCKELMANN.)

ʿABD AL-ḲAIS (but very rarely ʿAbd Ḳais; in Ptolemy Ἀβουκαιοι?), i. e. "servant of (the god) Ḳais", the name of a North Arabian tribe, which dwelt in Baḥrain; also a man's name. — The *nisba* formed from it is *ʿAbdī*, more rarely *ʿAbḳasī*; a derived verb *taʿabḳas*.

The pedigree of ʿAbd al-Ḳais, the founder of the tribe called after him, is stated as follows: ʿAbd al-Ḳais b. Afṣā b. Duʿmī b. Djadīla b. Asad b. Rabīʿa. The most important branches of the Banū ʿAbd al-Ḳais, or ʿAbdites (comp. Wüstenfeld, *Genealog. Tabellen*, A.), were the Labū and the Afṣā, which latter consisted of the two groups, Shann and Luḳaiz; the latter appears indeed as the representative of Baḥrain. The Banū Nakra b. Luḳaiz had in parts but a loose connection with the main body of the Banū ʿAbd al-Ḳais. By the side of the ʿAbdites there lived in Baḥrain numerous Tamīmites and Bakrites (the ʿAbdite Duhn are also called Wāʾilı), and here and there Kindites also. They shared the place al-Tuʾām with Azdites and Ḥanīfites. Many places were lost by the Saʿdites. Persians settled amongst the ʿAbd al-Ḳais especially at the time of the Persian sovereignty. A portion of the foreign working-class population, which had settled in Hadjar in Khosrew's time, were absorbed in the Banū ʿAbd al-Ḳais. Nevertheless the population of Baḥrain was preponderately ʿAbdite, and the ʿAbdites dwelt on the coast as well as in the oases of the interior. To the west the entirely uninhabited desert south of Baḥrain formed the frontier of their province, but there were ʿAbdites also on the other side in ʿOmān. Here dwelt a part of the Nukrites, whose most numerous and respected branch, however, remained in Baḥrain. Further there were Dīlites and ʿAwakites in ʿOmān. A number of Nukrites lived even in Yemen. To the north were the Tamīmites.

The following were ʿAbdite settlements in Baḥrain: al-Aḥsāʾ (subsequently capital of the Karmathians), Athwāʾ, Baḥrs, Dārāʾ (or Dār), Djabala, al-Ḥiyār, Djuwāthāʾ (a strong place), Hadjar (an important place inhabited by the Muḥārib), al-Ḥuṭṭ, al-Ḳaṭīf (a province with a capital of the same name, well-watered and fertile. The town inhabited by the Djadhīma, with an island lying in front of it is in a bight to the north-west of the island of Baḥrain; it became an important base of operations for the Karmathians), al-Ḳulaiʿa, Luʿbāʾ (in the far South), al-Mushaḳḳar (a strong castle near Hadjar), al-Nabāṭ, Nadjwa, Raimān, al-Ṣafā (close to al-Mushaḳḳar), al-Sharīr, Salmī, Udjfād, al-ʿUḳair (in the vicinity of al-Ḳaṭīf). — Probably al-Tuʾām (see above), was situated in the Yamāma, no doubt the present Tuʾaim.

ʿAbdite rivers of Baḥrain were: ʿAinān (also name of a district; the poet Khulaid ʿAinain is called after it), Ḳilā, Muḥallim (or al-ʿAin; designated as *nahr* and of such abundant water supply that the fortress-moats of al-Mushaḳḳar could be fed from it), Ṣulāṣil (in the province of the ʿĀmirites whose possession of it was, however, contested).

Outside of Arabia there were in pre-Muhammedan times ʿAbdite settlements, at least Shāpūr is said to have brought ʿAbdites into Persia. It may be stated with certainty that Tawwadj (also called Tawwaz) first received ʿAbdite settlers in ʿOmar's time. In this hot but palm-beplanted town and province in the sea-coast region of Fārs there lived numerous Labūʾ ʿAbdites are further traceable in Baṣra (Dīlites), Kūfa (in considerable number, with their own mosque), Mosul (Labūʾites), Iṣpahān (amongst the rare Arabs in that place) and Merw. In the days of Ḳutaiba b. Muslim there were 4000 ʿAbdites among the Baṣrite troops of Khorāsān.

Historical. The early inhabitants who were driven out of Baḥrain by the ʿAbdites are said to have been the Iyādites. When later on al-Ḥārith b. ʿAmr, the grandfather of the poet Imruʾu 'l-Ḳais, made his sons kings of the Nizār tribes at their own request, he is said to have sent his son ʿAbd Allāh to the ʿAbdites. As the ʿAbdites dwelt near

the frontier of the territory of the Lakhmides of Ḥīra, both peaceful and warlike relations ensued, e. g. with 'Amr b. Hind, Ḳābūs b. Hind, al-No'mān b. al-Mundhir. Like the other Baḥrain Arabs, the 'Abdites also ravaged the Persian coast. For this reason the Sāsānides always endeavored for their part to have, if possible, one of their trusted friends made Shaikh of the 'Abdites. Shāpūr II scourged their land pitilessly on a march to Baḥrain; the city of Hadjar was laid in ruins and the tribe only found refuge in the deserts, which were impracticable for the Persians. Thereupon it is true Shāpūr started to re-settle Hadjar with 'Abdites. The accounts of the 'Abdites' connection with Muḥammed in the first year of his flight, or according to others even before the flight, are merely tendentious inventions. It was not before the year 8 (630), after Muḥammed had returned from Ḏjiʿrāna, that Islām firmly took root amongst the 'Abdites. Muḥammed in that year, some say as early as the year 6 (628), sent al-'Alā' to al-Mundhir b. Sāwā, who together with a part of the inhabitants of Hadjar embraced Islām. Then followed Muḥammed's customary treaty with the tribe and the embassy of the tribe to Muḥammed. Shortly after the Prophet, al-Mundhir b. Sāwā also died. When soon after this the Baḥrain Bekrites took part in the general apostasy of Arabia, there was great agitation amongst the 'Abdites, but the influential 'Abdite al-Ḏjārūd, who at once stepped into the breach, succeeded in keeping the tribe true to Islām and at least neutral in the war which was breaking out. After his death it is true the rebellious spirits got the upperhand, his people were besieged in two places but delivered by the general al-'Alā', who had hurried up at Abū Bekr's command. The 'Abdites of 'Omān remained faithful and gave real assistance at a critical moment. 'Abdites took part in the reconquest of 'Omān, Mahra and Yemen. Al-'Alā' remained commander-in-chief of the 'Abdites under 'Omar also. There were 'Abdites in the army which undertook the conquest of Fārs with Baḥrain as basis; members of this tribe are also mentioned as being present at the battle at Buwaib (14 = 635). In 'Alī's wars against al-Zubair no doubt for the most part they stood by 'Alī, although a few fought for al-Zubair. We also find them on 'Alī's side at the battle of Ṣiffīn (37 = 657) against Mu'āwiya. In the Khāridjite wars they were on the Government's side, just as they were in 'Alī's days and in the Umaiyad period, e. g. in the battle of Dūlāb (65 = 684-685), and so also the Nedjdite agitation in Baḥrain and Fārs was opposed by the 'Abdites. This did not prevent them from being hostile to al-Ḥadjdjādj. In the 'Abbāside period they took an active part in the great revolt of the slaves which broke out in 'Irāḳ in the year 255 (869) and was kindled by an 'Abdite, who styled himself a descendant of Caliph 'Alī. The Karmathian war [see ḲARMAṬĪ] was also carried on with the help of the 'Abdites and in it they played for the last time an important rôle in history.

No details are known concerning their religion during the heathen epoch. There were at that time also Zoroastrians, Christians and Jews amongst them. Ri'āb b. al-Barā' is mentioned as a Christian and highly respected personage; the pious Iyādite Christian Ḳass is also said to have found followers among them. Al-Ḏjārūd, who was one of the ambassadors of the 'Abdites to Muḥammed in the year 8 (630), was also a Christian. — It is supposed that the poetical school which treats of scorn for wordly things took its rise among the 'Abdites.

As a linguistic peculiarity is mentioned the fact that the word for „vessel", which was otherwise *du'ī* and has been handed down to us as especially Kināniti, was pronounced *dui* by the Ḥanīfites and *dī* by the 'Abdites. It is also the name of an 'Abdite minor tribe. A kind of leek (called *kurrāth*, also *rohī* or *rukhāf*), which was said to spoil the color of the teeth, passed for a favorite national dish.

'Abū 'Ubaida Ma'mar b. al-Muthannā, who is said to have been versed in the history of the Arabian tribes, wrote *Kitāb Akhbār 'Abd al-Ḳais*; 'Allān al-Shu'ūbī wrote *Mathālib 'Abd al-Ḳais*. The former probably, the latter certainly contained for the most part calumnies. Further al-Madā'inī wrote *Kitāb ashrāf 'Abd al-Ḳais*. All of these three works have been lost.

(RECKENDORF.)

'ABD AL-KARĪM B. 'ADJARRAD. [See IBN 'ADJARRAD.]

'ABD AL-KARĪM BUKHĀRĪ, a Persian historian, wrote in 1233 (1818) a short summary of the geographical relations of Central Asiatic countries (Afghānistān, Bukhārā, Khīwa, Khōḳand, Tibet and Kashmir), and of historical events in those countries from 1160 (accession of Aḥmed Shāh Durrānī [q. v.] till his own time. 'Abd al-Karīm had already left his native country in 1222 (1807-1808) and accompanied an embassy to Constantinople; he remained there till his death, which took place after 1246 (1830), and wrote his book for the master of ceremonies 'Ārif Bei. The only manuscript was obtained by Ch. Schefer from 'Ārif Bei's estate and published in the *Publications de l'École des Langues Orientales Vivantes* (the text was printed in Būlāḳ, 1290 = 1873-1874, the French translation in Paris in 1876). The *Histoire de l'Asie Centrale* is a most important authority for the most recent history of Central Asia, especially for Bukhārā, Khīwa and Khōḳand.

(W. BARTHOLD.)

'ABD AL-KARĪM B. IBRĀHĪM AL-DJĪLĪ, celebrated Musulman mystic from Djīl in the district of Bagdad, born about 767 (1365-1366); the date of his death is uncertain (811 = 1408—820 = 1417). No exact data concerning his life have been handed down to us; in his works he mentions as his shaikh Sharaf al-Dīn Ismā'īl b. Ibrāhīm al-Djabartī, with whom he lived in Zabīd; at the same time he gives the following dates: 790 (1393-1394), 799 (1396-1397), 805 (1402-1403). 'Abd al-Karīm followed the mystic ideas of Muḥyi 'l-Dīn b. 'Arabī [see IBN AL-'ARABĪ], whose works he commented, but whom he now and then contradicts in some details. Of his numerous works (see list in Brockelmann, *Gesch. d. arab. Litter.*, ii. 205) his *al-Insān al-kāmil fī ma'rifat al-awākhir wa'l-awā'il* (Cairo, 1301, 1304, 1316; Azhariya, 2 parts) has been printed. He himself borrowed from Ibn 'Arabī the idea and the name of the „perfect man", who as a microcosmos of a higher order reflected not only the powers of nature but also the divine powers „as in a mirror" (comp. the *yenikós ánthropos* of Philo); he endeavors (in the 60th chapter) to allegorize Muḥammed as such an ideal man. The souls of the remainder of huma-

nity possess the divine powers, as 'Abd al-Karīm is fond of putting it, only as „a copy" (*nus*k*ha*). 'Abd al-Karīm often interweaves mystic fictions into the presentation of his theories; in the introduction he has incorporated a *Maḳāma*. His work has had great influence in the moulding of religious ideas in the greater part of Islām and especially in East India.

'ABD AL-KARĪM KASHMĪRĪ, a Persian historian, died in 1198 (1784). 'Abd al-Karīm entered Nādir Shāh's service in 1151 (1738-1739) and accompanied this prince on his march from Delhi to Ḳazwīn. From there he travelled to Mecca and returned to India by water. He is the author of a history of Nādir Shāh, entitled *Bayān-i wāḳi'*. Comp. Khojeh Abdulkurreem (A Cashmerian), *Memoirs of a travel from Hindostan to Persia, when accompanying Nadirshāh*, transl. from the Persian by F. Gladwin (London, 1793); *Voyage de l'Inde à la Mecque*, trad. par Langlès (Paris, 1797).

'ABD AL-KARĪM MUNSHĪ. [See MUḤAMMED 'ABD AL-KARĪM.]

'ABD AL-KARĪM NĀDIR PASHA, a Turkish general, born at Čirpan in East Rumelia. In 1871 he was victorious over the Servians, and in the Russo-Turkish war he had the supreme command of the Turkish army of the Danube, but was dismissed for not being able to prevent the passage of the Russians across the Danube, and exiled to Rhodes where he died in 1300 (1883).

Bibliography: Comp. works on the Servo-Turkish and Russo-Turkish wars.

'ABD AL-LAṬĪF KASTAMUNILI. [See LAṬĪFĪ.]

'ABD AL-LAṬĪF (Muwaffaḳ al-Dīn Abū Muḥammed) b. YŪSUF b. MUḤAMMED b. 'ALĪ AL-BAGHDĀDĪ, also called IBN AL-LABBĀD, one of the versatile Arab scholars and prolific writers, born at Bagdad in 557 (1162), died there in 629 (1231). In Bagdad he studied grammar, Fiḳh, tradition, etc., and was induced by a Maghribine, who had come to the city of the caliphs to devote himself to philosophy, natural and secret sciences, which his great application enabled him to master. In 585 (1189) he went to al-Mawṣil (Mosul) and thence to Syria and Egypt, where he was held in great esteem by Ṣalāḥ al-Dīn and his successors, and where he became acquainted with the most celebrated men, e. g. 'Imād al-Dīn, al-Ḳāḍī 'l-Fāḍil, Moses Maimonides and many others. In 604 (1207) he was again in Damascus, but after some time he went to Arzandjān via Aleppo and sojourned for a length of time at the court of Prince 'Alā' al-Dīn Dāwūd Shāh, who was a great enthusiast for natural sciences. When, however, this prince ascended the throne, he quarrelled with the Seldjuḳ Kaiḳobād, who took him prisoner and annexed his lands. Thereupon (in 626 = 1228) 'Abd al-Laṭīf returned via Aleppo to his native town of Bagdad, where he soon afterwards died. His numerous writings cover almost the whole domain of the knowledge of those days. In Europe he became known principally by a short description of Egypt (translated into Latin, German and French). Comp. S. de Sacy, *Relation de l'Égypte par Abd al-Latif* (Paris, 1810).

Bibliography: Ibn Abī Uṣaibi'a, ii. 201—213 (for the most part autobiography, especially published by J. Mousley, Oxford, 1808); al-Kutubī, *Fawāt*, ii. 9 *et seq.*; Leclerc, *Hist. de la médecine arabe*, ii. 182; Brockelmann, *Gesch. d. arab. Litter.*, i. 481. (M. TH. HOUTSMA.)

'ABD AL-MADJĪD, Turkish sultan, born on the 11th Sha'bān 1238 (23d April 1823), eldest son of Maḥmūd II, whom he succeeded on the 25th Rabī' II 1255 (8th July 1839). The first thing he did was to order the suspension of hostilities against Muḥammed 'Alī Pasha of Egypt, who had just won the victory of Nezib; but the High-Admiral refused to comply with this order and led his fleet into the port of Alexandria. He ordered the proclamation of the *Khaṭṭ-i sherīf* of Gulkhāne (26th Sha'bān = 3d Nov.), an imperial edict which confirmed, continued and extended the work of reform (*tanẓīmāt*). Thanks to his efforts the Porte entered into the quadruple alliance which deprived Muḥammed 'Alī of the fruits of all his victories (15th Djumādā I 1256 = 15th July 1840). Serious troubles in Lebanon (1261 = 1845) and the rising in Wallachia and Moldavia, which ended in the simultaneous occupation of both provinces by the Russians and the Turks (Balta-Liman convention, 1265 = 1849) were conspicuous events in his reign before the question of the Holy-Places brought about the Crimean war. 'Omar Pasha defended Widdin by an advanced position on the left bank of the Danube; but in Asia the Turks were defeated at Akhaltsikh and their fleet was burned at Sinope by Admiral Nakhimow (1st Ṣafar 1270 = 3d Nov. 1853). Salīm Pasha after being at first successful was surrounded in Ḳalafat, and the Russians laid siege to Silistria (1270 = 1854) and then withdrew, after six ineffectual assaults; on France and England taking part in the war, the Russians were obliged to evacuate the principalities. In the following year Sebastopol fell (25th Dhu'l-Ḥidjdja 1271 = 8th Sept. 1855) for which the taking of Kars was no compensation; peace was signed at Paris (23d Radjab 1272 = 30th March 1856): the integrity of Turkey was acknowledged; the Straits were closed against warships; the Russian protectorate over the principalities was abolished; Servia, Moldavia and Wallachia were made independent states under the suzerainty of the Ottoman empire; and in addition this international document made Turkey emphatically join the European concert.

A short time before the treaty of Paris 'Abd al-Madjīd had promulgated the *Khaṭṭ-i humāyūn* (10th Djumādā II 1272 = 18th Febr. 1856), which recognized the civil equality of all his subjects, established a new assessment of taxes and threw open the military service to those who were not Musulmans. Unfortunately the liberal inclinations of the sovereign clashed with a powerful reactionary party. Massacres took place at Djidda (3d Dhu'l-Ḥidjdja 1274 = 15th July 1858) and at Lebanon (Shawwāl 1276 = May 1860); Fu'ad Pasha was sent as Commissioner Extraordinary to the

latter province, where the French troops had just disembarked. ʿAbd al-Madjīd, a worthy successor of his father, a humane and well-meaning prince, lacked the strength necessary for overcoming obstacles, whilst his extravagances wasted the treasury. He died on the 15th Dhu'l-Ḥidjdja 1277 (25th June 1861), and was succeeded by his brother ʿAbd al-ʿAzīz.

ʿABD AL-MADJĪD B. ʿABD ALLĀH. [See IBN ʿABDŪN.]

ʿABD AL-MALIK B. HISHĀM. [See IBN HISHĀM.]

ʿABD AL-MALIK B. ḲAṬAN B. NUFAIL B. ʿABD ALLĀH AL-FIHRĪ, successor of ʿAbd al-Raḥmān b. ʿAbd Allāh [q. v.] as governor of Spain. It was not on account of his crimes and extortions but for political reasons that in 116 (end of 734) he was forced to abdicate his position in favor of ʿOkba b. al-Ḥadjdjādj al-Salūlī. When, however, the latter in 123 (741) fell dangerously ill during an uprising of the Berbers in Africa, he found himself obliged to restore ʿAbd al-Malik to his former post. Meanwhile the troops sent against the Berbers by Caliph Hishām under the command of Kulthum b. ʿIyāḍ were dispersed, a part of them under Baldj b. Bishr fled to Ceuta. From this place Baldj sent to ʿAbd al-Malik to ask him if he might sail over to Spain. At first ʿAbd al-Malik refused to hear anything of such a plan, but when the Berbers began to give trouble in Spain also, he was obliged, willy-nilly, to put up with the assistance of Baldj's troops. As soon as the Berber danger was over, ʿAbd al-Malik did indeed insist on these troops again leaving Spain. Baldj, however, would have none of this, and hostilities broke out. ʿAbd al-Malik was defeated, captured and killed (123 = 741). He was then 90 years old.

Bibliography: Ibn ʿAdhārī, *al-Bayān al-Mughrib*, ii. 28 *et seq.*; Ibn al-Athīr (ed. Tornb.), v. 190 *et seq.*; Dozy, *Hist. des Musulmans d'Espagne*, i. 252 *et seq.* (M. TH. HOUTSMA.)

ʿABD AL-MALIK B. AL-MANṢŪR. Two ʿĀmirides bore this name together with the surname of AL-MUẒAFFAR:

1. ʿABD AL-MALIK, the son of the famous Almanzor, had already in his father's lifetime the title of *Ḥādjib* (since 991), and after the latter's death in 392 (1002) became his successor. His short reign (till 399 = 1008), was a happy one for his people.

2. ʿABD AL-MALIK B. ʿABD AL-ʿAZĪZ AL-MANṢŪR B. ʿABD AL-RAḤMĀN, grandson of Almanzor, reigned after his father in Valencia (453—457 = 1061—1065). He was hard pressed by Ferdinand I, king of Castile and Leon, and was finally taken prisoner by his father-in-law al-Maʾmūn of Toledo, when the latter annexed Valencia to his own dominions (457 = 1065). [Comp. ʿĀMIRIDES.]

Bibliography: Dozy, *Hist. des Musulmans d'Espagne*, iii. 259; iv. 124 *et seq.* (C. F. SEYBOLD.)

ʿABD AL-MALIK B. MARWĀN, Umaiyad caliph. According to general report he was born in the year 26 (646-647). His father was Caliph Marwān I; his mother's name was ʿĀʾisha bint Muʿāwiya. As a boy of ten he was an eyewitness of the storming of the palace of ʿOthmān, and at the age of 16 he was appointed President of the Dīwān of Medina by Caliph Muʿāwiya. Here he remained till the outbreak of the rebellion against Muʿāwiya's son, Yazīd I, in 63 (682). When the Umaiyads were expelled by the rebels, ʿAbd al-Malik had to leave the town with his father. On the way they met the Syrian army under Muslim b. ʿOkba, and turned back with him, ʿAbd al-Malik having previously given Muslim exact information concerning the position of the town and other details. Then the battle on the Ḥarra took place and ended with the complete defeat of the Medinians. After the assassination of his father, ʿAbd al-Malik ascended the throne in Ramaḍān 65 (April 685), but from the very beginning he had great difficulties to combat. In Mecca ʿAbd Allāh b. al-Zubair had himself long since proclaimed caliph, and was at least nominally recognized in a great part of the empire. In the West the Byzantines gave the caliph trouble, and in addition to this there were several dangerous uprisings in different provinces. Nevertheless ʿAbd al-Malik showed himself quite equal to the onerous task, and after wars lasting for several years, he at last succeeded in again uniting the Musulman empire under one sceptre. In Kūfa, which at that time still obeyed the rival caliph Ibn al-Zubair, a dangerous disturber of the peace named al-Mukhtār b. Abī ʿUbaid had appeared before ʿAbd al-Malik assumed the reins of government. By all manner of intrigue he managed to form a party amongst the ʿAlides, which preached revenge for the assassination of al-Ḥusain. In the year 66 (685) the al-Zubair's troops were defeated in Kūfa and his governor ʿAbd Allāh b. Mutīʿ expelled so that al-Mukhtār could now easily make himself master of the capital and of the whole province. In the following year his general Ibrāhīm b. Mālik al-Ashtar succeeded in inflicting a severe defeat on the army that ʿAbd al-Malik sent against him. That was, however, the end of al-Mukhtār's successes. Muṣʿab, a brother of ʿAbd Allāh b. al-Zubair and the latter's governor in Baṣra, united with the tried commander al-Muhallab b. Abī Ṣufra and marched against him, and in Ramaḍān 67 (April 687) a decisive battle took place at Ḥarūra, in which al-Mukhtār was defeated and killed. Now the issue was between Muṣʿab and the caliph. In 69 (688-689) ʿAbd al-Malik set out from Damascus to march against Muṣʿab, but was soon obliged to return, because ʿAmr b. Saʿīd al-Ashdaḳ had stirred up a dangerous revolt in the capital. ʿAmr blockaded himself in the residence, but when the caliph appeared before the gates, he nevertheless soon let himself be persuaded to capitulate after having been promised his life and liberty. Notwithstanding this ʿAbd al-Malik soon afterwards had him seized and is generally reported to have executed him with his own hand. When order had been restored in Damascus the caliph started for the second time in 70 (690) against Muṣʿab, but returned without having achieved anything. In the following year a new campaign was undertaken. The two armies met in the neighborhood of Maskin on the Lesser Tigris, and in the same year Muṣʿab here met his death after a desperate battle. ʿAbd al-Malik received the homage of the inhabitants of ʿIrāḳ

and then returned to the capital. He had now his hands free to fight against his dangerous rival ʿAbd Allāh b. al-Zubair and was able to send an army to Mecca. The command was transferred to the energetic al-Ḥadjdjādj b. Yūsuf. The latter invested the town, and after a siege of several months ʿAbd Allāh was killed in 73 (692) and Mecca fell into the hands of al-Ḥadjdjādj, who was rewarded with the governorship of the Ḥidjāz. Order had, however, not been restored everywhere. In Central Arabia the Nadjdāt had long been committing excesses, but in the long run were unable to hold their ground. Much more dangerous was another Khāridjite sect, the so-called Arraḳites, who preached the Holy War against all heterodoxes without exception and committed terrible atrocities in the Persian provinces. In vain did al-Muhallab endeavor to suppress these cruel fanatics, and it was only when the severe al-Ḥadjdjādj had in 75 (694) been appointed governor of ʿIrāḳ and had by his energetic measures compelled the degenerate ʿIrāḳians to place themselves under al-Muhallab's orders, that he succeeded after hard fighting in breaking the power of the sectarians, and in 78 (697) the two generals were finally able to cherish the hope that they had rendered the dangerous rebels harmless. But a couple of years later fresh trouble broke out. After the repression of the Khāridjite rebellion the general ʿAbd al-Raḥmān b. Muḥammed b. al-Ashʿath was appointed governor of Sidjistān, where he succeeded in winning several important victories against the warlike neighboring nations. As however al-Ḥadjdjādj, who combined with his duties in Kūfa the control of the eastern provinces, was dissatisfied with ʿAbd al-Raḥmān's performances and required still greater feats of him and his troops, ʿAbd al-Raḥmān in 81 (700-701) revolted against the tyrannical governor and soon afterwards had himself proclaimed caliph. When in the same year he had defeated at Tuster the army sent against him, his power grew to such an extent that ʿAbd al-Malik had to condescend to negotiate with his rebellious subject, but the negotiations fell through. After lengthy preparations a decisive battle took place at Dair al-Djamādjim in Djumādā II 83 (July 702) when ʿAbd al-Raḥmān was defeated and had to take to flight. — During the first few years of ʿAbd al-Malik's reign, the Byzantines also gave him much trouble. It is true that in this matter also all the details are not sufficiently clear, but it is at least certain that the caliph had to conclude a dearly-bought peace and had at the same time to engage himself to pay a considerable tribute. On account of a quarrel concerning etiquette, the peace was soon after declared by the Byzantine emperor as null. Hostilities again blazed out and lasted with but little interruption during the whole of ʿAbd al-Malik's reign. His brother Muḥammed especially distinguished himself as a general. The war was carried on partly in Asia Minor, partly in Armenia, and although the Muslims suffered severe losses, yet they became more and more dangerous to the Byzantine empire. After ʿAbd al-Malik's death, the envenomed war was continued by his son and successor al-Walīd. The far West also resounded with the clash of arms. After Ibn al-Zubair's death, ʿAbd al-Malik sent Ḥassān b. al-Noʿmān at the head of an army against Africa to subjugate the united Greeks and Berbers, and at the same time appointed him governor of the province. This duty Ḥassān performed with great success, and when he left Africa, the conquests were continued by his successor Mūsā b. Nuṣair, and the caliph's rule was firmly established. In spite of these continual wars against foes abroad and at home, ʿAbd al-Malik found time to look after the peaceful development of his immense empire. He especially endeavored by means of reforms, which touched the whole community, to blend the diverse elements, of which the population of the Caliphate consisted. To this end the numerous officials of other confessions were expelled from the State service and replaced by Arabian officials. In the end, however, it proved difficult to keep to this principle, because there was a lack of suitable candidates amongst the Mussulmans. Arabic was introduced as the official language for the future. One of the most important measures was the reform of the coinage. Up to ʿAbd al-Malik's time Byzantine and Persian money circulated in the Caliphate, a fact which gave rise to numerous evils. ʿAbd al-Malik first of all regulated the monetary system and had gold and silver coins struck with an Arabian impression. It is not quite certain when this important reform was undertaken. In any case it must be placed shortly after the defeat of the rival caliph Ibn al-Zubair. Finally the postal facilities were improved. In his reforms ʿAbd al-Malik found a powerful assistant in the cruel but energetic governor al-Ḥadjdjādj, who administered the important province of ʿIrāḳ for twenty years. ʿAbd al-Malik's brother ʿAbd al-ʿAzīz had been appointed his successor by Marwān. The caliph, however, wanted to transfer the power to his two sons al-Walīd and Sulaimān, and was already scheming to exclude his brother from the succession when news of ʿAbd al-ʿAzīz's death suddenly arrived. Shortly after it in Shawwāl 86 (October 705), the caliph died. ʿAbd al-Malik's treacherous and cruel conduct towards ʿAmr b. Saʿīd throws indeed a dark shadow on his character, but this deed seems to stand alone. In any case extraordinary means were needed in his position at that time to break the resistance which was arising in all parts. For the rest he combined with his recognised gifts of statesmanship a poetical talent and an education, which was considerable according to the standard of those days. None of the Umaiyads has in any case equalled him in statesmanship.

ʿABD AL-MALIK b. Nūḥ, the name of two Sāmānides.

1. ʿAbd al-Malik (Abu 'l-Fawāris) b. Nūḥ I, prince of Khorāsān and Transoxania (343—350 = 954—961), successor to his father Nūḥ b. Naṣr. According to a more recent authority (Aḥmed al-Ḳubāwī, *Narshakhī*, ed. Schefer, p. 95, l. 19), he was only 10 years old on his accession. The war commenced by Nūḥ against the Būyides was put

an end to in his reign by a peace which was disadvantageous to the Sāmānides (344 = 955-956); as the coins prove, this peace was conditional on the recognition of the caliph al-Muṭīʿ. Little is known of the conditions ruling in the country under 'Abd al-Malik; whether the youthful monarch deserved the praise bestowed on him by al-Muḳaddasī (pp. 337 *et seq.*), cannot be judged from the scanty information we possess. The actual power seems to have remained in the hands of the Turkish Pretorians who came into existence under Nūḥ; very significant is the assassination of the governor of Khorāsān, Bekr b. Mālik, in Bukhārā before the gates of the Palace. 'Abd al-Malik's early death is said to have been caused by a fall from his horse whilst playing polo; his son Naṣr was according to al-Muḳaddasī recognised as ruler for the space of but a single day.

Cambridge (King's College, N°. 213, f°s. 100ᵃ-101ᵇ) and Oxford (Bodleiana, Ouseley, N°. 240, f°s. 124—126). — Ethé, *Catalogue*, pp. 9-10; (extracts therefrom in Barthold, *Turkestan im Zeitalter des Mongoleneinfalls*, i. 10 *et seq.*

2. 'ABD AL-MALIK (Abu 'l-Fawāris) B. NŪḤ II, prince of Transoxania, son of Prince Nūḥ b. Manṣūr, successor to his brother Manṣūr b. Nūḥ, who was dethroned on the 11th Ṣafar 389 (1st Feb. 999). Having been defeated at Merw on the 27th Djumādā I (16th May) by Maḥmūd the Ghaznawide, 'Abd al-Malik had to abandon Khorāsān to his opponent and retire to Bukhārā. In the autumn of the same year he was attacked by Ilek Naṣr in his last possessions, the endeavor to organize a national war against the approaching enemy failed; the Government's appeal, which was read from the pulpits, was received with complete indifference by the population; the leaders of the Turkish body-guard deserted to the enemy. On Monday, the 10th Dhu 'l-Ḳaʿda 386 (23d October 999) the Ilek entered Bukhārā without striking a single blow and had 'Abd al-Malik with the other members of the dynasty taken to Uzgand.

(W. BARTHOLD.)

'ABD AL-MALIK B. ṢĀLIḤ B. 'ALĪ, a cousin of the caliphs Abu 'l-ʿAbbās al-Saffāḥ and Abū Djaʿfar al-Manṣūr. In Hārūn al-Rashīd's reign 'Abd al-Malik undertook several expeditions against the Byzantines. Such campaigns took place under his command in the years 174 (790-791) and 181 (797-798), according to some authorities also in 175 (791-792), whilst others state that in the latter year not 'Abd al-Malik himself, but his son 'Abd al-Raḥmān held the command. Besides this he was governor of Medina for some time and he also filled the same post in Egypt. In the end, however, he could not escape the suspicion of the caliph. In 187 (803) he was deprived of his liberty on insufficient grounds and had to remain in prison till Hārūn's death in the year 193 (809). The latter's successor al-Amīn set him free again and in 196 (811-812) appointed him governor of Syria and Mesopotamia. 'Abd al-Malik proceeded to al-Raḳḳa, fell ill soon after and died there in the same year. A few years later the caliph al-Maʾmūn is said to have had his grave desecrated, because 'Abd al-Malik had during the war between al-Amīn and al-Maʾmūn sworn he would never do homage to him.

'ABD AL-MALIK B. ZUHR. [See IBN ZUHR.]

'ABD AL-MU'MIN B. 'ALĪ, a Zanāta chief and founder of the Almohade dynasty, born towards the end of 487 = 1094 (other dates are also given) in a village, a day's journey from Tlemcen. In accordance with a custom which exists to this day 'Abd al-Muʾmin studied the Korʾān in his village and afterwards went to Tlemcen to complete his studies.

The chroniclers vie with one another in praising his physical and moral qualities and the height of his intelligence. His attractive appearance, his open countenance, the broadness of his views and the width of his judgment immediately struck the Mahdī Ibn Tūmart on his return from the East, and the religious reformer, who laid the foundation of the Almohade empire at once made him his disciple and constant companion. 'Abd al-Muʾmin was always able to efface his own personality before that of the Mahdī, to whom he lent the valuable support of a limitless devotion accompanied by an honest and enlightened disposition, tried courage and lively character. When the Mahdī retired to Tīn Mallal, he lived there a saintly life, spending his time between fasting and prayer, and left the care of governing the Almohade community and the struggle with the Almoravides almost entirely in the hands of 'Abd al-Muʾmin.

According to al-Marrākushī, 'Abd al-Muʾmin was in 517 (1123) for the first time endowed with the title of *Amīr al-Muʾminīn*, which the Mahdī conferred upon him when he put him at the head of an expedition against Marrākush. From this moment he was looked upon as the generalissimo of the Almohade army. Until the death of the Mahdī, 'Abd al-Muʾmin was the recipient of every sort of kindness and consideration from the latter, who often ordered him to preside in his place at Friday's solemn prayer.

It is quite evident that 'Abd al-Muʾmin was formally chosen by Ibn Tūmart to be his successor; a few days before his death the Mahdī said: „We have chosen the one among you who is to be your chief, after having tried him in all circumstances and times for initiative and executive power; we have scrutinized his thoughts and their manifestation and have always seen that his faith is firm and his conduct prudent, wherefore I hope that I have made no mistake. We mean 'Abd al-Muʾmin: listen to him and obey him so long as he listens to and obeys his Master; if he changes, swerves from his duty or hesitates, the Almohades have the blessing from God, that the Lord Almighty should give the power to whom he will amongst his servants!" (Comp. *Revue Africaine*, xxxvi. 274).

In spite of the very decided wish of the majority of the grandees of the two assemblies (that of the

Ten and that of the Fifty), to follow the instructions of the Mahdi, it was necessary to make the Almohade community accept them. 'Abd al-Mu'min was in the eyes of these people, all Maṣmūda Berbers, a foreigner, on which account they were able to raise objections to submitting to his authority.

Thanks to the skill and devotion of many members of the Council of Ten, amongst whom must be particularly mentioned the Shaikh Abū Ḥafṣ 'Omar, the revered chief of the Hintāta, the Maṣmūda were ready about two years after the death of the Mahdi to pay homage to 'Abd al-Mu'min. It was only then that the news of the death of the Mahdi, which had till then been kept secret, was published, and 'Abd al-Mu'min was proclaimed as the Mahdi's successor (524 = 1130 or 526 = 1132).

Having thus become the supreme head of the Almohades, 'Abd al-Mu'min kept the assemblies instituted by the Mahdi [see ALMOHADES]; he was inspired by their advice and made them approve of his projects and actions. For many years 'Abd al-Mu'min continued the policy followed in the Mahdi's time, which consisted in preventing the Almoravide troops from entering the mountains of Tin Mallal and Maṣmūda, by harassing the enemy with incursions in the plain. When he thought the time was come to take the offensive, he led his warriors to the conquest of the Almoravide provinces. He began by subduing the southern provinces of what is now Morocco; then, returning north, he undertook a gigantic expedition, which lasted about seven years and finished in 541 (1146-1147) at the capture of Marrākush.

Before the success of 'Abd al-Mu'min, Tāshfīn b. 'Alī, the Almoravide sovereign, had decided to shake off his apathy; he had left his capital, Marrākush, to march against his foe. But, having taken fright he fled from Tlemcen, where he had hoped to be able to hold the Almohades in check, to Oran, where he was accidentally killed. Thus Tlemcen and Oran fell successively under the power of the Almohades (539 = 1144-1145). Then it was Fez's turn (540). On this occasion 'Abd al-Mu'min is reported to have said to those who asked that the ramparts of the town, a great part of which had been destroyed, should be repaired: „We have no need of surrounding walls; our ramparts are our swords and our justice!" (Ibn Abī Zar', *Ḳarṭās*, ed. Fez, p. 139). These words give a very good summary of the policy of this great conqueror. In 541 (1146-1147) 'Abd al-Mu'min seized Aghmāt, Tangiers and Marrākush, the famous capital founded by Yūsuf b. Tāshfīn. According to Ibn Khallikān, the taking of Marrākush only took place after eleven months of siege, in the beginning of 542 (1147). The Almoravide throne was then occupied by a child, Isḥāḳ b. 'Alī, grandson of the founder of the Almoravide empire, who, in spite of his tears, was pitilessly executed by order of the Almohade caliph.

During this time Spain was the scene of a general revolt of the Andalusian Musulmans (los agarenos) against the Almoravides. On the solicitation of the leaders of the revolt 'Abd al-Mu'min sent there an army, commanded by Barrāz. For some years 'Abd al-Mu'min's power inclined to this side; little by little by a series of victories he established his authority there. The Balearic Isles alone remained in the hands of the last representatives of the Almoravide empire, the Banū Ghāniya, until the reign of 'Abd al-Mu'min's third successor, the caliph al-Nāṣir (comp. A. Bel, *Benou Ghânia*, Paris, 1903).

As soon as his authority was firmly established to the furthest end of the Maghrib and all the revolts suppressed and matters in Spain progressing to his utmost desire, 'Abd al-Mu'min undertook his first expedition into Ifrīḳiya (546-547 = 1151-1152) and by the capture of Bougie (Bidjāya) and of al-Ḳal'a swept away the kingdom of the Banū Ḥammād; he made an Almohade province of it, and put one of his sons at the head of it.

In consequence of the conquests made by Roger II, king of Sicily, on the coasts of Ifrīḳiya and Tripoli, 'Abd al-Mu'min left his capital in 554 (1159), putting Shaikh Abū Ḥafṣ 'Omar in his place at the head of the government, and marched rapidly upon Eastern Ifrīḳiya, which he completely subdued before he returned to his capital (555 = 1160).

In 556 (1161) he went to Spain to examine the state of the country. In 557 he prepared a great expedition against Spain, where Ibn Mardanīsh had risen against the Almohades. It was in the same year that he brought a strong body of his compatriots, the Kūmiya, to Marrākush to act as his body-guard.

'Abd al-Mu'min at first (549 = 1154) chose his son Muḥammed as his successor. But, having fallen ill just as he was concentrating his troops to go to Spain, he annulled that decision by an official deed which was published throughout the empire; it was then, without doubt, that he chose the Saiyid Abū Ya'ḳūb Yūsuf, another of his sons, as presumptive heir to the Almohade throne. 'Abd al-Mu'min died at Salā a few weeks afterwards (Djumādā II 558 = May-June 1163). His body was taken to Tin Mallal where it was buried by the side of the tomb of the Mahdi.

The long reign of 'Abd al-Mu'min was glorious and the first caliph of the Almohade empire had realised all his hopes and had founded the empire, of which the Mahdi had dreamed. He had destroyed the Almoravide government in Africa and Spain and had extended the boundaries of his empire as far as Gabes. Only in the Balearic Isles was there an Almoravide sovereign.

'Abd al-Mu'min founded many towns and restored a great number of them; besides he fitted up and repaired several sea-ports to shelter his fleet. He was the first Musulman sovereign to ordain a kind of cadastre for the purpose of making regulations with respect to property and taxes. The towns and provinces of his empire were placed under the control of governors chosen generally either from members of his own family or from that of Shaikh Abū Ḥafṣ. From every pulpit in this immense empire prayers were read in the name of the Mahdi or Caliph instead of that of the 'Abbāside caliphs of the East as had formerly been the case.

Bibliography: See ALMOHADES; R. Basset, *Documents géographiques* (Paris, 1898), p. 21, note 2; idem, *Nédromah et les Traras* (Paris, 1901), pp. 30 *et seq.*, 92 *et seq.* (A. BEL.)

'ABD AL-MUṬṬALIB, the last Sherif of Mecca, of the powerful sherif family of the Dhawī Zaid which was in power for about 200 years. He was the son of Ghālib, who was exiled from the Ḥidjāz after the defeat of the Wahhābites. In 1243 (1827) he took up the duties of sherif for

35059

the first time, but was shortly afterwards at the orders of the Egyptian viceroy Muḥammed 'Alī replaced by Muḥammed b. 'Awn of the 'Abādila family. He spent the whole of his long life (he only died in 1886) in endeavoring to wrest the power from the 'Abādila that were favored both by Muḥammed 'Alī and later by the Turkish government. He tried to bring this about partly by open fighting, partly by intrigues and bribing Turkish dignitaries, for which his being repeatedly under honorable confinement in Constantinople afforded him good opportunities.

It was only in 1267 (1851) that he succeeded in ousting out his adversary thanks to the influence of the grand vizier, who was on his side. As, however, he could not get on with any of Turkey's representatives in Arabia, he was again removed from office in 1272 (1856). After six months of continuous fighting he yielded to superior force, and set off for Constantinople for the second time.

After the noble sherif Ḥusain had fallen by an assassin's hand, 'Abd al-Muṭṭalib returned for the third time (1297 = 1880) as Grand-Sherif, but again he endeavored in vain to enforce the Turkish wills to respect the mediaeval tradition of the authority of the sherifs. 'Othmān Pasha succeeded in arresting him by surprise in 1299 (1882), and thereafter he lived quietly under strict surveillance in his country house to the east of Mecca. The lower orders feared and respected him as the inflexible representative of the unadulterated tyranny of former times.

Bibliography: C. Snouck Hurgronje, *Mekka*, i. 158—160, 165—169, 174—177.

(SNOUCK HURGRONJE.)

'ABD AL-MUṬṬALIB B. HĀSHIM, the Prophet's grandfather. The only tradition concerning him, which is perhaps of historical value, is that which relates how he looked after his grandson after the death of his son 'Abd Allāh [q. v.].

All other stories about him are Meccan or Medinian fictions. His real name is said to have been Shaiba. It is told of his mother Salma, who belonged to the Banū Naddjār in Medina, that she had stipulated with his father Hāshim, that she should give birth to her child in Medina. Hāshim died shortly after while travelling, and Shaiba grew up in Medina till he was recognized by the family and brought to Mecca by his uncle al-Muṭṭalib, whence he received the name 'Abd al-Muṭṭalib, i. e. Muṭṭalib's servant. Another uncle of Shaiba's, Nawfal, wished to withhold his inheritance from him, but was compelled by Shaiba's relatives on his mother's side to give it up [comp. further AMINA for these Medinian tendentious fictions]. Advised by a vision, he excavated the choked up Zamzam spring and, in spite of the opposition of the Koraishites, was able to make good his ownership. He consequently possessed the privilege of giving drink to the pilgrims. In the Abraha legend [comp. ABRAHA] he is the Shaikh of the Koraishites and as their ambassador was treated with great respect by Abraha. [As to the story of his vow to sacrifice a son, see 'ABD ALLĀH B. 'ABD AL-MUṬṬALIB.] Still more exaggerated legends about him are to be found in Ya'kūbī (ed. Houtsma, ii. 8 *et seq.*); he has even become a religious reformer who introduces many customs afterwards confirmed by the Ko'rān and Ḥadīth. — Abu'l-Ḥārith is given as his Kunya.

Remarkably enough al-Mas'ūdī in the *Murūdj* (Paris, iv. 121) gives amongst the Meccan tribes the Banu'l-Ḥārith b. 'Abd al-Muṭṭalib as being subordinate to the Banū Hāshim and the Banu'l-Muṭṭalib, whilst they, being according to the common genealogy a branch of the Hāshimides, are coordinate with the Banu'l-Muṭṭalib. Sprenger has on this account set it down as questionable whether 'Abd al-Muṭṭalib is not possibly a mythical personage. The second part of the name without doubt designates an old Arabian divinity.

'ABD AL-RAḤĪM B. 'ALĪ. [See AL-ḲĀḌĪ'L-FĀḌIL.]

'ABD AL-RAḤĪM B. MUḤAMMED. [See IBN NUBĀTA.]

'ABD AL-RAḤĪM KHĀN KHĀN-I KHANĀN, known to his contemporaries as Khān Mīrzā, was the son of the emperor Akbar's first prime minister, Bairām Khān, and belonged to the Bahārlū tribe of Black Sheep Turkomans. His mother was a daughter of Djamāl Khān Mewātī, whose elder daughter the emperor Humāyūn had married from motives of policy. He was born in Lahore on the 14th Ṣafar 964 (16th Dec. 1556) and died at the age of 71, in 1036 (1627) in Dihlī, where his tomb still stands near that of Shaikh Niẓām al-Dīn Awliyā. His chief wife was Māh Bānū, sister of Mīrzā 'Azīz Kūka; at least one of his sons was by a mother of an Umarkot family. He survived his four sons; one of his daughters married Prince Dānyāl and one of his grand-daughters, Prince Khurram (Shāh Djahān). 'Abd al-Raḥīm became one of the most distinguished men of his time, both in arms and letters. He was four when his father was murdered and thereafter was brought up by the emperor Akbar. In 980 (1572) he, being then a youth of sixteen, accompanied Akbar to Gudjrāt and there had assigned to him, under the tutelage of Saiyid Aḥmed, of Barha, the district of Paṭan, within which his father had been murdered.

In Rabī' II 981 (August 1573) he was one of the small party who made with Akbar a historic journey of great rapidity to Gudjrāt and he shared the command of the centre in the battle of Sarnāl, which destroyed the power of the rebel Bāy-ḳarā Mīrzās. He is described by Niẓām al-Dīn Aḥmed, in the *Ṭabaḳāt-i akbarī*, as being at this time a young man of great parts and promise. In 984 (1576) he was made governor of Gudjrāt under the guidance of Vizier Khān Harawī; in 988 (1580) he was appointed *mīr 'arḍ* and three years later, *atālīḳ* to Prince Salīm who was then 13 years old. In 991 (1583) he was deputed to put down Shāh Muẓaffar Gudjrātī and, at this time, Niẓām al-Dīn Aḥmed was *bakhshī* of the province and partner and chronicler of the Mīrzā's feats of arms. On the 3rd Muḥarram 992 (16th Jan. 1584) when he was 28 years old, he won the battle of Sarkidj and followed this by that of Nadōt; the

wo successes completely breaking down the opposition of Muẓaffar. He was himself made khān-i khānān in recognition of his victories.

He next obtained leave to serve under the emperor against Mīrzā Muḥammed Ḥakīm, but later returned to Gudjrāt. In 996 (1588) he was welcomed with much honor to Court and in the following year, presented to the emperor his Persian translation of the *Bābar nāme* and also was appointed to the *wakalāt* and made governor of Djawnpūr. In 999 (1591) he was appointed governor of Multān and Bhakkar and sent to annex Sind from Djānī Beg Arghūn. With him as *bakhshī* went Muḥammed Muḳīm Harawī, the father of Niẓām al-Dīn Aḥmed. On the 26th Muharram 1000 (13th Nov. 1591) he defeated Djānī Beg and having made conditions of which one was the marriage of his son, Shāh Nawāz (Iridj), to a daughter of the defeated Arghūn, he returned to Court.

His services were now directed to the Dekkan, and, with short breaks of absence, continued so directed for nearly thirty years. He was first associated with Prince Murād, but without effective co-operation. In Djamādā II 1005 (January 1597) he won one of the great battles of Akbar's reign, defeating a largely outnumbering force under Suhail Khān of Bidjāpūr.

In 1007 (1599) he, with Prince Dānyāl, who had married his daughter, Djānī Begam, went again to the Dekkan. The campaign was mainly fought against Aḥmed Nagar and the heroic Čānd Bībī. Under the emperor Djahān-gīr, he served with Prince Khurram in 1025 (1616) again in the Dekkan. ʿAbd al-Raḥīm was proficient in Arabic and Persian, in Turkī and in Hindī, writing all with fluency. He was a poet with pseudonyme *Raḥīm*; he was the generous friend of ʿAbd al-Bāḳī Nehāwendī who named the *Maʾāṯir-i raḥīmī* after him. He was professedly a Sunnī but was suspected of practicing *taḳiya* and of following his father's Shīʿa tenets.

(A. S. BEVERIDGE.)

ʿABD AL-RAḤMĀN, the name of five Spanish Umaiyads:

1. ʿABD AL-RAḤMĀN I B. MUʿAWIYA B. HISHĀM escaped from the slaughter which the ʿAbbāsides in 750 perpetrated on his family, and after long wanderings in North Africa came to Spain, where in 756 he founded the independent Emirate (subsequently also Sultanate) of the Umaiyads at Cordova. By his statesmanlike cunning and restless energy, which with all his determination and strength of character yet for the most part never degenerated into the often so useless cruelty and blind revengefulness of the Arab, ʿAbd al-Raḥmān became master of the complicated situation. This came to pass, however, only after infinite difficulties with the help of his *protégés* and — although he himself was a North Arabian — of the South Arabian opposition party of the Yemenites. He put aside the weak emīr Yūsuf, who was not intelligent enough to adapt himself to the new state of affairs, and also the latter's energetic general and brave soldier Ṣomail, in spite of the fact that he had always been loyal. Subsequently he was able by means of a strong and just administration and a safe home and foreign policy, but especially by raising a standing army, mostly of Berber mercenaries, to hold in check the rivalry of the proud Arabian aristocracy and the longing of the democracy for independence of the Berbers. With good reason does his ʿAbbāside adversary in Bagdad, the powerful al-Manṣūr, call him the „Falcon of Ḳoraish". — ʿAbd al-Raḥmān successfully crossed swords with Charlemagne too in the Spanish north-eastern marches, so that the great emir of Cordova proved himself the equal of the two greatest rulers of that time, the great king of the Franks and the ʿAbbāside caliph. He reigned from 138 to 172 (756—788). — ʿAbd al-Raḥmān was also the founder of the Great Mosque of Cordova.

2. ʿABD AL-RAḤMĀN II B. AL-ḤAKAM, the fourth Umaiyad emīr of Cordova (206—238 = 822—852). In spite of continual wars with the Christians and revolts at home, he was a zealous patron of all arts and sciences.

3. ʿABD AL-RAḤMĀN III B. MUḤAMMED B. ʿABD ALLĀH, the eighth Umaiyad of Cordova (300—350 = 912—961). ʿAbd al-Raḥmān III was the first Spanish Umaiyad to assume the title of *al-Khalīfa al-Nāṣir* („the Saviour-Caliph"). And he had good claim to this name: he put an end to the eternal civil war between Arabs, Spaniards and Berbers in Andalusia, protected the frontiers against Leon, Castile and Navarre, founded the magnificent residence of al-Zahrāʾ at Cordova, commanded the West of the Mediterranean with his navy and exercised a sovereign influence over North Africa. Art and science found in him a discerning patron and trade a benevolent protector. Arabic Spain became under him and his successors the most civilized and best governed country of the Middle Ages.

4. ʿABD AL-RAḤMĀN IV AL-MURTAḌĀ, great-grandson of ʿAbd al-Raḥmān III, caliph of Cordova (408 = 1018).

5. ʿABD AL-RAḤMĀN V AL-MUSTAẒHIR, also a great-grandson of ʿAbd al-Raḥmān III, caliph of Cordova in 414 (1023). [Comp. UMAIYADS.]

(C. F. SEYBOLD.)

ʿABD AL-RAḤMĀN B. ʿABD ALLĀH AL-GHĀFIḲĪ, a governor of Spain, first temporarily in 103 (728), then from 112 to 114 (730—732). After defeating Duke Eudo of Aquitaine at Toulouse, he penetrated far into France, but was together with the greater part of his army annihilated by Charles Martel in Ramaḍān 114 (October 732) between Tours and Poitiers. The battle-field is called by the Arabs Balāṭ al-Shuhadāʾ, the Pavement of the Martyrs (pavement = paved Roman road) or briefly al-Balāṭ.

Bibliography: al-Ḍabbī (ed. Codera et Ribera), N°. 1021. Maḳḳarī, i. 146; ii. 9; Weil, *Gesch. d. Chalifen*, i. 646. (C. F. SEYBOLD.)

ʿABD AL-RAḤMĀN B. ABĪ BEKR ABŪ ʿABD ALLĀH, son of the first caliph. His mother, Umm Rūmān, was also that of ʿĀʾisha. His original name is said to have been ʿAbd al-Kaʿba, which was changed to ʿAbd al-Raḥmān only on his conversion, which took place very late, for he fought side by side with the Meccans at Bedr.

Ḳor'ān, xlvi. 16 is therefore said to refer to him. He accompanied his sister in the battle of the Camel and was later on with 'Amr b. al-'Āṣī when the latter marched against his brother, Muḥammed b. Abū Bekr, the governor of Egypt, but 'Abd al-Raḥmān was not able to save the latter's life. Afterwards he was, with Ḥusain b. 'Alī, 'Abd Allāh b. 'Omar and 'Abd Allāh b. al-Zubair, considered the head of the Medina opposition, which refused to pay homage to Yazīd b. Mu'āwiya. He died in 53 (673); according to a few less trustworthy accounts, he died 2 or even 5 years later.

'ABD AL-RAḤMĀN B. 'ALĪ. [See IBN AL-DAIBA'.]

'ABD AL-RAḤMĀN B. 'AWF, a Ḳoraishite of the family of Zuhra, originally called 'Abd 'Amr (or 'Abd al-Ka'ba). He was early converted to Islām, took part in both the Hidjras to Abyssinia and to Medina, and was present at the battle of Bedr as well as at the other battles. He was the leader of the troops which Muhammed sent against Dūmat al-Djandal, and after the conquest of this oasis he married the daughter of the defeated prince. He belonged to the ten, to whom Muhammed, according to Musulman tradition, had promised Paradise. He had acquired a considerable fortune in trade, and his authority was correspondingly great. After 'Omar's death he was one of the six, who had to elect a new caliph. Renouncing all claims for himself, he voted for 'Othmān. He died in the year 31 (652).

'ABD AL-RAḤMĀN B. ḤABĪB B. ABĪ 'UBAIDA B. 'OḲBA B. NĀFI' AL-FIHRĪ, governor of Ifrīḳiya, died in 137 (755). When his father, whom he had in his youth accompanied on raids in Sicily and other places, had fallen in the Berber revolt (122 = 740), 'Abd al-Raḥmān fled to Spain, but afterwards returned to Africa and rebelled in Tunis in 126 (744) against the Umaiyads. The Umaiyad governor Ḥanẓala b. Ṣafwān thereupon quitted Ḳairawān, and since the 'Abbāside uprising was in progress, it was not a very difficult task for 'Abd al-Raḥmān to seize the reins of government and to keep them; the 'Abbāsides were cunning enough at first to confirm him in his governorship. Then when the caliph al-Manṣūr threatened to enforce his sovereignty, 'Abd al-Raḥmān, who was continually making war against Sicily and Sardinia, and the Berbers, renounced all homage to him. Through wishing to settle the succession on his son Ḥabīb he incurred the enmity of his two brothers Ilyās and 'Abd al-Wārith, who soon afterwards murdered him.

(M. TH. HOUTSMA).

'ABD AL-RAḤMĀN B. HISHĀM, emperor of Morocco, born in 1778. 'Abd al-Raḥmān was the son of Mūlāi Hishām, governor of Mogador, brother of the sultan Mūlāi Sulaimān. His uncle nominated him on two occasions as his successor. On the death of Mūlāi Sulaimān on the 4th Rabī' I 1238 (22d Nov. 1822), 'Abd al-Raḥmān had little difficulty in having himself proclaimed sultan. The Bokhārī handed over to him the 40000 piastres accumulated by his predecessor; two claimants, Ibrāhīm b. Yazīd and Sulaimān, his own cousin, who was proclaimed sultan by the people of Tafilelt, submitted almost immediately. Morocco remained not less disturbed and the sultan had to spend the first years of his reign in repressing rebellions that broke out all over the country. The Zemmūr, who had revolted, were vanquished, and their chief, Muḥammed b. al-Ghāzī, was imprisoned at Mogador in 1240 (1825). Some years later the Wadāya, who were angry because the sultan had arrested three of their ḳā'ids, shut themselves up in Fās al-Djedīd and underwent a six months' siege there. Being victorious, thanks to his negro guard, 'Abd al-Raḥmān routed the Wadāya at Marrākush, Rabāṭ and Casablanca (1247 = 1831). In 1244 (1828) the Sherārda took up arms against the governor of Marrākush, but were cut to pieces by the sultan himself in a seven days' battle. In 1250 (1834-1835) the Marabout Sīdī Muḥammed b. Ṭaiyib made himself master of Fez and maintained his position there for some time. On being obliged to capitulate, he was exiled to Tafilelt and twenty-six of his partisans were immured alive. At the end of 'Abd al-Raḥmān's reign fresh insurrections broke out at Tafilelt (1273 = 1856-1857) and amongst the Zemmūr, to the south of Miknāsa, against whom the sultan led an expedition in person (1276 = 1858).

In spite of difficulties with which he found himself confronted in the interior of Morocco, Mūlāi 'Abd al-Raḥmān, adhering to the policy begun by Mūlāi Ismā'īl [q. v.], attempted to extend his kingdom at the expense of his eastern neighbors. He commenced by supporting the Tidjānīya enemies of the Turks of Algiers, then he tried to take advantage of the fall of the Turkish State in 1830. After the capitulation of Algiers he sent his nephew Mūlāi 'Alī to invade the province of Tlemcen. But his designs were frustrated by the opposition of France. The occupation of Oran and of Mars al-Kabīr by French troops, and the diplomatic representations of the French government forced him to abandon his schemes of conquest. He nevertheless continued his intrigues in the West and even in the centre of Algeria. Being forced, in consequence of Count Mornay's mission to Tangiers to recall his representatives, whom he had established at Miliāna and Médéa, and to abandon his claims to the province of Oran, he still kept in touch with the malcontents of the West. In spite of his promises of neutrality given to a French envoy, Colonel Larue, in 1836, he encouraged 'Abd al-Ḳādir. When, as a result of the campaigns of 1841, 1842 and 1843, the emir was driven from all the positions occupied by him in Algeria, 'Abd al-Raḥmān allowed him to

take refuge in Morocco. Soon, at his instigation, he entered into open conflict with France. Being unsupported by England, upon whom they believed they could rely, the Moroccans were defeated. Bugeaud's troops occupied Wadjda (Ujda) and dispersed the Moroccan army at the battle of Isly (14th August 1844) whilst Prince de Joinville's fleet bombarded Tangiers (4th Aug.) and Mogador (15th Aug.). The treaty of Tangiers (10th Sept. 1844) put an end to the hostilities. 'Abd al-Raḥmān promised to abandon the cause of the emir and to imprison him if he would succeed in seizing him. Another convention of the 18th March 1845, settled the boundary between Algeria and Morocco. Morocco kept the lower stream of the Mulūya and, in the Sahara, the oases of Figig and Tuāt.

In consequence of these events relations between France and Morocco became cordial again. The sultan decided in 1847 to have nothing more to do with 'Abd al-Ḳādir, compelled him to leave Moroccan territory and thus forced him to give himself up to General Lamoricière [see 'ABD AL-ḲĀDIR]. Claims presented on the occasion of acts of violence committed against Frenchmen or French protégés at Tangiers, Mogador and on the Rif coast were listened to. It was necessary however to bombard the port of Salā (Saleh), the inhabitants of which had pillaged a French ship in 1852. Similar acts of violence forced different European Powers to have recourse also to naval demonstrations. The English blockaded the ports of Morocco in 1828; the Austrians cannonaded the entrance to the river of Tetuan and bombarded Arzila in 1829, but attempted to land at Larache without success. The assassination of the head of the municipality of Ceuta, Don Jose Valverde, and the murder of Darmon, the Spanish consular agent, raised very strong protestations from Spain.

Despite these manifestations of hostility to foreigners Morocco became more accessible than formerly to European commerce. Sweden and Denmark ceased to pay tribute for the protection of their ships from piracy. The treaty of commerce and amity entered into by France and Mūlāi Muḥammed in 1767 was renewed in 1825. England after having, in 1824, renewed the treaty of 1801, negotiated in 1853 a convention, which was changed into a treaty of commerce in 1856. The advantages conceded to the English by this treaty (the abolition of monopolies in importation — the limiting of the duty on exports to 10%) were afterwards granted to the other European nations. But at the same time a reactionary movement against foreigners made itself felt. After 1842 the consuls could only hold communication with the Makhzen through the Pasha of Tangiers; troubles arose on account of the exportation of wools. The population complained, as the historian al-Salāwī testifies, of the raising of the price of commodities, which it attributed to the measures taken in favor of the Christians and to the progress of their influence in the empire of the Sherif.

In spite of these reservations, the same historian nevertheless considers 'Abd al-Raḥmān as one of the most remarkable sovereigns of Morocco. „He was" he writes „a second Mūlāi Ismā'īl and restored the dying dynasty to life". He compliments him on having freed himself from the influence of the viziers and of having directed his government personally. He praises his activity, piety, humanity and his aversion to the shedding of blood. Finally he points out his taste in building (the restoration of the port of Tangiers — the adornments and repairs of the mosques at Fes, Marrākush and Salā — the building of the Bū Ḥassān, Kanarin, al-Wusṭa mosques at Marrākush — the planting of the Aghdal park near this capital, etc.). 'Abd al-Raḥmān died on the 29th Muḥarram 1276 (6th September 1859).

Bibliography: Aḥmed al-Salāwī, *Kitāb al-istiḳṣā'* (Cairo, 1312), iv. 172—210; Godard, *Description et hist. du Maroc* (Paris, 1860), ii. 585—629; Rouard de Card, *Traités entre la France et le Maroc* (Paris, 1860); Pelissier de Raynaud, *Annales algériennes* (Paris, 1854). (G. YVER.)

'ABD AL-RAḤMĀN HUSĀM ZĀDE, Shaikh al-Islām, son of Tulumdju Khodja Husām (died 1055 = 1645): born in 1003 (1594-1595), ḳāḍī at Aleppo (1050 = 1640), at Constantinople (1054 = 1644), ḳāḍī 'askar at Anatolia (1059 = 1649), then in Roumelia (1062 = 1652), at first refused and then accepted the title of Shaikh al-Islām (1065 = 1655) in place of Abū Sa'īd Muḥammed Efendi. During the troubles of Djumādā I 1066 (April 1656), known as the events of the Platane (Čenar waḳ'a-si), having seen Ḳara 'Abd Allāh massacred by the insurgent Sipāhīs (Hammer-Purgstall, *Hist. de l'empire ottoman*, x. 380; Jouannin and Van Gaver, *Turquie*, p. 260; *Ta'rīkh-i Na'īmā*, ii. 559), he tendered his resignation to save the sultan Muḥammed IV and at his request was made ḳāḍī at Jerusalem, then at 'Aintāb and at Gize, near Cairo; he died in Djumādā I 1081 (Oct.-Nov. 1670). He was clever in wrestling; his writing in the *ta'līḳ* style was remarkable.

'ABD AL-RAḤMĀN B. 'ĪSĀ. [See IBN AL-DJARRĀḤ.]

'ABD AL-RAḤMĀN B. AL-ḲĀSIM. [See IBN AL-ḲĀSIM.]

'ABD AL-RAḤMĀN B. KHĀLID B. AL-WALĪD, the Bar Khālid of the Syriac chroniclers, seemed to have inherited the ascendancy and military faculties of his father, "The Sword of God". When barely 18, he commanded a division at the battle of al-Yarmūk, and later at Ṣiffīn, where he distinguished himself by the side of Mu'āwiya. He figures also at the head of the principal expeditions in Anatolia. The memory of his father, who died and was buried at Ḥimṣ (Emesa), and the government of this important province to which Mu'āwiya had appointed him, had given him a preponderate influence in the district. His name was mentioned by the Arabs of Syria as a possible successor to Mu'āwiya. Having become suspicious, the caliph ordered his Christian physician, Ibn Uthāl, to rid him of this future rival of his son Yazīd, promising him as a recompense, the management of the finances of Ḥimṣ. The following seems to be proved in these assertions: first, the appointment of Ibn Uthāl — contested by Wellhausen (*Das arab. Reich und sein Sturz*, p. 85) — immediately after the death of 'Abd al-Raḥmān (46 = 666-667); then the assassination of the Christian official by a Makhzūmite, probably the nephew of 'Abd al-Raḥmān, urged thereto by the insinuations of the people of Medina. The other details

appear to us to be inventions, especially the intervention of Mu'awiya, which is sometimes quoted to prove that this prince made use of poison. We admit, however, that relations between him and 'Abd al-Raḥmān were certainly strained and that the distrust with which the growing popularity of the son of Khālid inspired him was real. The auto-da-fe of the bishop of Ḥimṣ, which, according to Theophanes (p. 533), took place about this time — Lequien (*Oriens christ.*, ii. 842) adds that the bishop was burned by the Mussulmans, — is connected with these events, thus making up for the deficiency due to the silence on this point in the works of the Byzantine chroniclers and the Arab annalists. We think that the sudden death of 'Abd al-Raḥmān immediately after his return as a conqueror from Anatolia, followed at once by the appointment of a Christian official, and the exactions, true or false, laid to the charge of the latter, must have caused a lively commotion in Ḥimṣ. A Makhzūmite took advantage of the general discontent to assassinate Ibn Uthāl, under the pretext of avenging his relative. It is very probable that a rising of the populace took place on behalf of the family of the great Khālid, a rising in which the bishop lost his life. If we admit the authenticity of Lequien's inference, this local outbreak of fanaticism was one of the rare acts of intolerance belonging to the reign of Mu'awiya.

Bibliography: Ṭabarī, i. 2093, 2913; ii. 82-83; *Aghānī*, xv. 13; Ya'ḳūbī (ed. Houtsma), ii. 265; Dinawarī (ed. Girgas et Rosen), pp. 164, 183, 198; Ibn 'Abd Rabbihi, *'Iḳd*, ii. 154; H. Lammens, *Études sur le règne de Mo'âwia Ier*, pp. 3—15, 218-219. (H. LAMMENS.)

'ABD AL-RAḤMĀN B. AL-MANṢŪR MUḤAMMED, the last 'Āmiride of Cordova. After the premature death of his brother 'Abd al-Malik b. al-Manṣūr (q. v.) he became in the year 399 (1008) imperial administrator (Ḥādjib) with the surname al-Nāṣir for the Umaiyad pretender-caliph, Hishām II. He was born about 376 (986) of a Christian princess, the daughter of a certain Sancho, for which reason he is also sometimes called Sanchol, i.e. little Sancho. On account of his origin he was but little loved by the Mussulmans, and they impute many evil deeds to him: he is said to have poisoned his brother, to have been addicted to drink, etc. He offended them most deeply, however, by having induced the caliph Hishām to proclaim him his successor to the throne. When therefore in the same year (399 = beginning of 1009) he undertook a campaign against Alfonso V of Leon, there broke out in the capital, Cordova, a revolt under the leadership of the Umaiyad Muḥammed b. Hishām al-Mahdī. On hearing the news 'Abd al-Raḥmān immediately started to return home, but was abandoned by his troops on the way back and killed by al-Mahdī's orders (4th Radjab 399 = 4th March 1009).

Bibliography: Ibn al-Athīr (ed. Tornb.), viii. 497; Dozy, *Hist. des Musulmans d'Espagne*, iii. 268 *et seq.*; idem, *Recherches sur l'hist. et la littér. de l'Espagne* (3d ed.), i. 188 *et seq.* (C. F. SEYBOLD.)

'ABD AL-RAḤMĀN B. MUḤAMMED. [See IBN KHALDŪN.]

'ABD AL-RAḤMĀN B. MUḤAMMED B. AL-ASH'ATH, a Kindite general, who revolted against al-Ḥadjdjādj. Being descended from the old kings of Kinda, 'Abd al-Raḥmān was at first the recipient of much kindness from al-Ḥadjdjādj, who went so far as to marry his son Muḥammed to 'Abd al-Raḥmān's sister. In 76 (695-696) al-Ḥadjdjādj sent him with an army to defend Madā'in against Shabīb. In 80 (699) after the defeat of 'Ubaid Allāh b. Abī Bakra by Rutbīl (or Zenbīl; comp. Wellhausen, *Das arab. Reich und sein Sturz*, p. 144, note), king of Kābulistān, al-Ḥadjdjādj gave 'Abd al-Raḥmān the lieutenancy of Sidjistān and the command of an army magnificently equipped, and known for that reason as "The Army of Peacocks", to make war against Rutbīl. 'Abd al-Raḥmān's campaigns were replete with successes, but al-Ḥadjdjādj nevertheless sent him rough letters blaming his conduct. Urged by his soldiers, he openly revolted and declared war against al-Ḥadjdjādj (81 = 700). Before setting out for 'Irāḳ 'Abd al-Raḥmān concluded a treaty of alliance with Rutbīl, who pledged himself to help him in case of need and to afford him a place of refuge in his country. In the beginning 'Abd al-Raḥmān was victorious, but presently, at the battle of al-Zāwiya, his army was routed. He fled to Kūfa, where the caliph 'Abd al-Malik sent his son 'Abd Allāh and his brother Muḥammed to negotiate with him, even proposing the recall of al-Ḥadjdjādj. 'Abd al-Raḥmān did not accept the offers of the caliph and thus declared himself as his enemy. The battle of Dair al-Djamādjim (Sha'bān 82 = Sept. 701; comp., however, J. Périer, *Vie d'al-Hadjdjâdj*, p. 186, note 3) was disastrous for 'Abd al-Raḥmān, and that of Maskin completed his downfall. He fled towards Sidjistān and on his arrival at Bust the prefect, 'Iyāḍ b. Himyān, loaded him with chains, intending to give him up to al-Ḥadjdjādj. But Rutbīl, true to his promise, came to free him and took him to his own country. Once more, however, at the instigation of his army 'Abd al-Raḥmān returned to Bust to try his luck against al-Ḥadjdjādj, but he soon returned to Rutbīl. Finally Rutbīl himself, yielding to the promises and especially to the threats of al-Ḥadjdjādj, gave 'Abd al-Raḥmān up to the emissary of the latter. When 'Abd al-Raḥmān reached al-Rukhkhadj he threw himself from the top of the tower and was killed (85 = 704; comp. Périer, *loc. cit.*, p. 225, note 2). The chronology of the events is not quite certain; comp. Wellhausen, *loc. cit.*, pp. 150 *et seq.*

(M. SELIGSOHN.)

'ABD AL-RAḤMĀN B. ROSTEM, founder of the new Tāhert and head of an Abāḍite dynasty, which held its own ground in Central Maghrib from 160 or 162 to 296 (776 or 778 to 908). 'Abd al-Raḥmān was of Persian descent: according to the chroniclers of the Abāḍite sect he was the son of Rostem b. Bahrām (comp. Yāḳūt, *Mu'djam*, i. 815) b. Shābūr b. Bābek Dhi'l-Aktāf. This genealogy, which is evidently inexact and mutilated, is given by the historians to establish the fact that 'Abd al-Raḥmān was of royal stock and was descended from the dynasty of the Sāsānides.

'Abd al-Raḥmān was born in 'Irāḳ, his father, Rostem, having taken him with his mother on a

pilgrimage, died at Mecca. ʿAbd al-Raḥmān, being yet a child, accompanied his mother, who had married a pilgrim from the Maghrib, and was brought up at Ḳairawān.

He became one of the five missionaries who spread the Abāḍite doctrine in the Maghrib after a course of study under ʿAbū ʿUbaida Muslim b. Abī Karīma at Baṣra.

When Abu'l-Khaṭṭāb, the first Imām of the Abāḍites, had taken Ḳairawān from the Warfādjūma barbarians, he confided the government of this place and of several parts of Ifrīḳiya to ʿAbd al-Raḥmān (Ṣafar 141 = June 758), but in Djumādā I (Sept.) of the same year Ibn al-Ashʿath retook Ḳairawān from him. ʿAbd al-Raḥmān accompanied by his son ʿAbd al-Wahhāb and his retainers fled to Central Maghrib, and, after evading the pursuit of Ibn al-Ashʿath, founded the town of Tāhert, the present Tagdemt, at the foot of Djebel Djuzūl (or Kuzūl). The new city grew apace, its population being Abāḍite emigrants from Ifrīḳiya and Djebel Nefūsa.

When the Abāḍites of Tāhert thought themselves strong enough, they raised ʿAbd al-Raḥmān to the Imāmate (160 or 162 = 776 or 778). Arab chroniclers say that ʿAbd al-Raḥmān had in 154, led a strong contingent of Abāḍites from Tāhert to Tobna, where an immense concourse of Berbers were besieging ʿOmar b. Hazārmard.

ʿAbd al-Raḥmān's reign seems to have been fairly peaceable. He applied himself with a simplicity, which recalls that of Caliph ʿOmar, to make justice prevail in his country. The Abāḍite communities of the East recognized the validity of his Imāmate and sent several embassies to him to bring him money and presents. It is said that he died, being then very old, in 168 (784). His son ʿAbd al-Wahhāb succeeded him.

(A. DE MOTYLINSKI.)

ʿABD AL-RAḤMĀN AL-ṢŪFĪ (his full name is ABU'L-ḤUSAIN ʿABD AL-RAḤMĀN B. ʿOMAR AL-ṢŪFĪ AL-RĀZĪ), one of the most eminent astronomers and astrologers of the Arabs, born at Rai in December 903 and died in May 986. He was a friend, teacher, and astrologer of the Būyide ʿAḍud al-Dawla, who proudly boasted of three of his teachers: in grammar, Abū ʿAlī al-Fārisī al-Fasawī; in the knowledge of astronomical tables, Sherīf Ibn al-Aʿlam; and in the knowledge of the positions and movements of the fixed stars, ʿAbd al-Raḥmān al-Ṣūfī. He wrote: 1) *Kitāb al-kawākib al-thābita* (or also *al-Ṣuwar al-samāʾiya*) *muṣawwar* (*The Book of the fixed stars, illustrated with figures*); 2) *Kitāb al-tadhkira wa-maṭāriḥ al-shuʿāʿāt* (*The Book of the notice and positions of radiojection* — this last word is an astrological technical expression); 3) *Mudkhal fi 'l-aḥkām* (*Introduction into the judgments*, i. e. by aid of the stars); 4) *Risāla fi 'l-asṭurlāb* (*A Treatise on the astrolabe*). Nº. 1 is to be found in Arabic in Berlin, Paris, Oxford, London (British Museum, India Office), St. Petersburg (Institut des Langues Orientales), Constantinople (Aja Sofia, in Persian); a French translation was published by Schjellerup: *Description des étoiles fixes par Abd al-Rahman al-Sûfi* (St. Petersburg, 1874); the text and translation of the introduction was published by Caussin de Perceval in the *Notices et extraits*, xii. 236 *et seq.* The title of Nº. 2 is probably faulty; *al-Tadhkira* has no meaning, and Abu'l-Faradj has only *Maṭāriḥ al-shuʿāʿāt*. It is probably but a portion of Nº. 3, still extant in Paris, London (India Office), Madrid (Escurial). Nº. 4 is found in Paris, Constantinople (Aja Sofia), St. Petersburg (Institut des Langues Orientales). — His son Abū ʿAlī b. Abi'l-Ḥusain al-Ṣūfī wrote an *Urdjūza* on the fixed stars, also illustrated with figures, preserved in Paris, Munich, Gotha, Bologna (Marsigli), Cairo.

(H. SUTER.)

ʿABD AL-RAḤMĀN B. ṬAGHAIRAK, an influential Turkish emīr during the second period of the Seldjuk supremacy. His father was one of the emīrs of Sultan Barkiyāruḳ and held the town of Khalkhāl [q. v.] in fee. ʿAbd al-Raḥmān himself was in 1141 appointed by Sultan Masʿūd majordomo (*ḥādjib kabīr*) with the surname of Fakhr al-Dīn. When in 1145 Buzābeh and ʿAbbās rebelled against the sultan, he was able to restore peace by allying himself with these men, by having the administration of Ādharbaidjān and Arrān transferred to himself, and by keeping a watch over the sultan almost as if he were a prisoner. In the end the latter found his position insupportable and gave one of his trusted servants secret orders to get the Ḥādjib out of the way when occasion offered; in 1146-1147 ʿAbd al-Raḥmān was murdered treacherously near Gandja (Elisabethpol).

(M. TH. HOUTSMA.)

ʿABD AL-RAḤMĀN (ʿAbdu'r-Raḥmān) **KHĀN**, emīr of Afghānistān (1844-1901), was perhaps the most remarkable ruler of an independent Musulman state in the present day. His life may be conveniently dealt with under the following four heads: 1. Childhood and youth, up to the death of Emīr Dost Muḥammed (1844—1863). — 2. The period of civil wars (1863—1869). — 3. Exile (1869—1880). — 4. Reign as emīr (1880—1901).

I. ʿAbd al-Raḥmān was the son of Afḍal, the eldest son of Dost Muḥammed after Akbar Khān's death in 1266 (1849). Dost Muḥammed had five sons by a wife of the Bāmezai Popalzai clan, whom he preferred to those by a wife drawn from the Shīʿa Bangash of Kurram. Of these five sons Shīr ʿAlī was the eldest surviving at his father's death, and the sons of the second wife, Afḍal and Aʿẓam, though older than Shīr ʿAlī, were set aside. This is an important point, as it ex-

plains the position of the rival brothers at Dost Muhammed's death. 'Abd al-Raḥmān himself has consistently maintained that in questions of succession the position of the mother is unimportant, and that primogeniture should be the rule if possible, and that Dost Muḥammed's own mother was a Ḳizil-bāsh, and not an Afghān. He considered that Shēr 'Alī injured his own prospects by appointing 'Abd Allāh Djān as his heir, and he adhered to these views in arranging for the succession of Ḥabīb Allāh to his own throne, although Muhammed 'Omar was the son of a mother of higher rank. 'Abd al-Raḥmān was born about the year 1844, shortly after Dost Muḥammed had recovered his kingdom, and spent his early years in Kābul. After 1850 his father Afḍal was absent in Afghān Turkistān as governor of Balkh. 'Abd al-Raḥmān joined his father when he was nine years old, and spent the next ten years in Turkistān; his own autobiography is the principal authority for the events of these years. He relates that he did not learn easily to read and write, being devoted to outdoor exercises, and when he was about 18 years old he had apparently forgotten anything he had learnt, for on receiving a private letter from the daughter of his uncle A'ẓam, he was ashamed at being unable to read it. He prayed for enlightenment, and in the night saw in a vision a holy man who told him to rise and write. This he did, and in the morning he found himself able to recall what he had learnt, and very soon he was able to read and write. Pashino (1876), however, says that he could read and write but little, and no doubt it was always a labor to him, only overcome by his strong will. His military education was more thorough and more congenial to him. His first instructor was, as he says, an Englishman named Campbell, who was taken prisoner at Ḳandahār in 1250 (1834) in Shāh Shudjā''s attempt of that year. This man was in reality a Eurasian, or as Kaye (*Afghān War*, 1874, i. 131) calls him an Indo-Briton, and appears to have been a brave and able man. He had become a Musulman, was known as Shēr Muhammed Khān, and was now commanding Afḍal's troops in Turkistān. 'Abd al-Raḥmān expresses great admiration for him, and was under his tuition for three years. At the end of this period the capricious Afḍal allowed himself to be influenced against his son by 'Abd al-Raḥīm a distant relation, and threw him into prison for a year. He was then pardoned and restored to favor, and, Shēr Muhammed Khān having just died, was made general in his place. His uncle A'ẓam came to Turkistān as commander-in-chief about this time, and 'Abd al-Raḥmān was under his orders, but in spite of his youth he seems to have taken a real part in the operations which extended Dost Muḥammed's power through Kataghān, Badakhshān and Derwāz, and all the territory south of the Oxus up to the Pamīr. The first war was against Mīr Atālīḳ of Kataghān, who refused to admit the emīr's authority. He was defeated and took refuge in Badakhshān. He instigated a rising in Andarāb and obtained assistance from the Mīr of Kolāb, who was a feudatory of Bukhārā, and from the Mīrs of Badakhshān. 'Abd al-Raḥmān was besieged in Tālikhān, but emerged successfully from his difficulties. His father, however, ordered him to retire on Khānābād which he did successfully. Peace was made, evidently against his will, and he was as he says for a year occupied in the organization of the army at Takhtapul. After this war broke out again and continued in a desultory manner till the death of the emīr Dost Muḥammed after the capture of Herāt in 1863, when 'Abd al-Raḥmān was nineteen years old. He was then at Khānābād in Kataghān, his father was at Takhtapul and A'ẓam was with the emīr when he died, but quickly fled as Shēr 'Alī was too powerful at Herāt to be opposed. 'Abd al-Raḥmān was for a time in a dangerous position as the Kataghān chiefs were roused by the news of the great emīr's death, but he won a decisive victory at Narīn and succeeded in maintaining his authority. These troubled years of fighting and intrigue developed his strong character and prepared him for the part he was to play in the internecine struggle of the next few years.

II. Shēr 'Alī succeeded Dost Muḥammed as emīr without immediate opposition, but Afḍal and A'ẓam began at once to intrigue against him. Open war soon burst out; A'ẓam was defeated by Rafīḳ Khān, Shēr 'Alī's general, and took refuge in British India. Afḍal then made an attempt, and contrary to 'Abd al-Raḥmān's advice, gave back Kataghān to Mīr Atālīḳ in order to secure his neutrality. He was defeated by Rafīḳ Khān at Bādjgāh in the Hindū-Kūsh mountains, and was shortly afterwards imprisoned treacherously by Shēr 'Alī. 'Abd al-Raḥmān states that he had himself shortly before proposed to his father to imprison Shēr 'Alī in a similar manner, but that he refused to avail himself of the opportunity. 'Abd al-Raḥmān evidently despised his father for what he considered a foolish scruple, and points out that Shēr 'Alī was not hampered by any such fantastic ideas of honor. 'Abd al-Raḥmān then fled across the Oxus, and took refuge with the emīr of Bukhārā who received him unwillingly. When the Russians took Tashkend and the emīr left Bukhārā for Samarḳand 'Abd al-Raḥmān opened up communications with his uncle A'ẓam who was at Rāwalpindi, but made his escape and met him at Bādjgāh. Uncle and nephew collected some forces, and made a bold dash at Kābul, taking advantage of the absence of Shēr 'Alī at Ḳandahār where he had been engaged in war with his own whole brothers. He had been successful, but had lost his eldest son, and had alienated Rafīḳ Khān his best general, who came over to 'Abd al-Raḥmān. Kābul was taken without difficulty and 'Abd al-Raḥmān then marched against Shēr 'Alī, defeated him at Saidābād, and took Ghaznī, releasing his father who was confined there. Afḍal now became emīr (his coins struck at Kābul are dated 1283), but Shēr 'Alī retained possession of Ḳandahār and Herāt, and Faiḍ Muḥammed the governor of Balkh, who had at first helped 'Abd al-Raḥmān, now declared for Shēr 'Alī. — A'ẓam, who was a man of stronger character than Afḍal, was cruel and tyrannical, while Afḍal had lost all energy and became a confirmed drunkard. The treacherous assassination of Rafīḳ Khān, to whom so much of their success had been due, led to great unpopularity, and it was only the ability and determination of 'Abd al-Raḥmān which upheld their throne for a time. The defeat of Shēr 'Alī at Kilāt-i Ghilzai in Jan. 1867, and the subsequent capture of Ḳandahār were mainly due to him, and after this he fol-

lowed Shēr 'Alī into Turkistān and defeated him and Faiḍ Muḥammed in the Fandjshīr Valley. Faiḍ Muḥammed was killed in this action. 'Abd al-Raḥmān returned to Kābul, and no doubt hoped to succeed his father who died in Oct. 1867, but found it advisable to support his uncle who succeeded. He was not however trusted, and was compelled to lead an army to Balkh again in the heart of winter. He and his troops suffered greatly from the cold, but for the time he was successful, and suppressed all opposition with the utmost severity. The whole garrison of Nimlak, 2500 men, was massacred. Akča and Maimana in the west of the province were also taken. Shēr 'Alī still held possession of Herāt and his son Ya'ḳūb now recovered Ḳandahār. Shēr 'Alī joined him, and their army advanced up the Tarnak valley towards Ghaznī. A'ẓam left Kābul to meet them, and his favorite Ismā'īl Khān, against whom 'Abd al-Raḥmān had in vain warned him, treacherously seized Kābul in his absence, and made it over to Shēr 'Alī. A'ẓam was joined by 'Abd al-Raḥmān near Ghaznī but they were overthrown at Zana Khān, and forced to take to flight with a few followers only.

III. Shēr 'Alī was now (at the end of 1868) established as emīr over the whole of Afghānistān, and retained the position till 1879. After the defeat of Zana Khān 'Abd al-Raḥmān for some time led a wandering life of great hardship. He describes his adventures in detail with spirit and humor, and it is not too much to say that this part of his memoirs bears comparison with the celebrated autobiography of the emperor Bābar. He met his uncle at a place called Maimana in the translation (i. 104); evidently not the Maimana of Turkistān, but some village near Ghaznī, and thence they found their way to the Wazīrī country on the Indian frontier. Subsequently they went through Zhob and Peshīn, and by way of Čaghai to Pallāk on the Helmand River and so into Sīstān. They then entered Persian territory and went by way of Birdjand to Meshhed. There 'Abd al-Raḥmān left his uncle as the Shāh's guest. He was ill at that time and died shortly afterwards at Shahrūd. He left a son named Isḥāḳ, who was yet to be a cause of trouble. 'Abd al-Raḥmān travelled over the Ḳara-Kum desert, undergoing great hardships by the way, to Khīwa, which was still independent although 'Abd al-Raḥmān, with his usual foresight, warned the Khān that he could not maintain his independence for long and advised him to come to terms with Russia, — advice which was not followed. Ultimately he arrived at Samarḳand, and after an interview with the Russian governor went on to Tashkend, where he was received by Gen. Kaufmann, the Governor-General. He asked for assistance against Shēr 'Alī. This was refused him but he was given an allowance for his maintenance and a house at Samarḳand, where he continued to live for the next eleven years. He waited quietly for his opportunity, which did not arrive as soon as he had hoped. Shēr 'Alī had met Lord Mayo the viceroy of India in 1869, and very exaggerated reports were circulated in Central Asia as to the results of the meeting, but his friendship with the English did not last long, and he showed greater friendliness towards Russia. This did not improve 'Abd al-Raḥmān's position, and perhaps rendered him more willing to accept English help when the occasion arrived. So he remained until the year 1880 when the events following the British invasion of Afghānistān and the flight and death of Shēr 'Alī led to the revival of his hopes.

IV. The history of the war of 1879-80 will be dealt with elsewhere [see AFGHĀNISTĀN]. It is sufficient to note here that the failure of Ya'ḳūb and his removal to India left the throne vacant, and that an offer was made to 'Abd al-Raḥmān by Sir Lepel Griffin on behalf of the British Government to recognize him as emīr of the whole country with the exception of the Ḳandahār province, which it was proposed to maintain as a separate state. 'Abd al-Raḥmān accepted the offer with some reservations, and was soon justified in his action from his own point of view. Aiyūb the second surviving son of Shēr 'Alī invaded Kandahār from his base at Herāt, and won the battle of Maiwand. This led to Gen. Robert's march from Kābul to Ḳandahār where he defeated Aiyūb on the 1st Sept. 1880. The English Government then gave up the scheme for a separate state of Ḳandahār, and 'Abd al-Raḥmān received possession of it in April 1881. Aiyūb, however, was able to collect another army, and again invaded Ḳandahār, but was finally defeated by 'Abd al-Raḥmān in Sept. 1881, not without the aid of bribery. He fled into Persia, and 'Abd al-Raḥmān for the next twenty years ruled a united Afghānistān. During this period his external boundary was to some extent modified: (1) by the action of the Anglo-Russian boundary Commissions of 1885 and 1895 regulating the extreme northwestern and northeastern frontiers; (2) by the regulation of the British and Afghān spheres in the debateable land occupied by unsubdued hill-tribes, under the Durand treaty of 1893; and (3) by the annexation of Kāfiristān in 1896.

The first of these events is generally known as the Pendjdeh dispute. The boundary of Afghān Turkistān to the N. W. was imperfectly defined by the Anglo-Russian agreement of 1873, and after the annexation of the Merw Oasis by Russia it became necessary to lay down a more definite line. A joint commission was appointed for this purpose, but before any delimitation could be made some fighting took place between the Russians under Alikhanow and the Afghāns under Shams al-Dīn, in which the latter suffered severely. At the time of the collision 'Abd al-Raḥmān was at Rāwalpindi in British India, where he was received by the viceroy Lord Dufferin. The action of the Russians was much resented, and at one time it seemed possible that the incident might lead to war between England and Russia, but 'Abd al-Raḥmān was not willing that it should be regarded as a *casus belli*, and did not insist on the inclusion of the Sārïk Turkomans in Afghānistān. He accepted the line finally laid down by the commission; which left Pendjdeh to the Russians, while Dhu 'l-Fiḳār which they had also occupied was returned to Afghānistān. Nevertheless he was much displeased at the methods followed, and always considered that he had not received fair treatment, but he did not allow his feelings to divert him from the main object of his policy which was to maintain the independence of Afghānistān, and he clearly perceived that a war between England and Russia would not contribute to this result.

Secondly, the arrangements as regards the independent tribes were not altogether to his taste. He regarded the inclusion of the province of Zhob in British Belučistān as an infringement of his rights, although none of his predecessors had held the country, and he also resented the extension of the Bolān railway to Čaman. He agreed to a demarcation being made under the treaty of 1893 (the Durand treaty), but the actual demarcation made in 1895-96 displeased him, and his general Ghulām Ḥaidar effectually prevented the boundary from being carried, as had been agreed, through the lands of the Mohmand tribe. It is generally believed that in his dissatisfaction he gave some encouragement to the Mullās who organized the outbreaks along the frontier in 1897 on the Toči, among the Mohmands and Afridis, and in Swāt, but he avoided an actual rupture with the British Government.

Thirdly, he took immediate advantage of the recognition of Kāfiristān as within his boundaries, and in the course of 1896 he thoroughly conquered and annexed this hitherto independent and pagan mountain-land, and the conversion of its inhabitants to Islām has been proceeding ever since. The above were the principal events affecting the outer fringe of the country, but 'Abd al-Raḥmān had also to grapple with several internal difficulties, which will now be noticed.

THE GHALZAI REBELLION. This large and important tribe broke into rebellion in 1886 instigated by the chiefs and Mullās who found that the emir's severe and repressive system interfered with their power and influence. Some of them, such as 'Aṣmat Allāh Khān, were connected with Shēr Alī's family and intrigued with Aiyūb. — 'Aṣmat Allāh was arrested in 1882, but the actual outbreak did not take place till the autumn of 1886. One of the principal rebels was the Mullā 'Abd al-Karīm, son of the notorious Mushk-i 'Ālam, whom the emir nicknamed Mush-i 'Ālam, i. e. „mouse of the world" instead of "musk of the world". The Tarakki, Andar and Hotak clans took part in the rising, and at first won some successes. The Ghalzais who formed part of the Herāt garrison also mutinied, and attempts were made to communicate with Aiyūb. The general Taimūr Shāh a Ghalzai who was deputy commander-in-chief took part in the rebellion. After severe fighting it was put down chiefly through the efforts of Ghulām Ḥaidar Tokhī, afterwards commander-in-chief. Taimūr Shāh was taken prisoner and stoned to death by the emir's orders. Aiyūb's attempt at invasion was a failure. He went to Gen. Maclean, the British consul general at Meshhed, and surrendered himself, and was taken to India where he has since lived as a state prisoner.

ISḤĀḲ'S REBELLION. Isḥāḳ son of the emir A'ẓam was employed as viceroy of Turkistān after 1880, but was never loyal to 'Abd al-Raḥmān, and soon began to intrigue against him, making use especially of the sect of Nakhshbandī Derwīshes, of which he was a member. In 1888 when 'Abd al-Raḥmān was seriously ill with gout, and a rumor of his death was circulated, Isḥāḳ thought his time was come, and proclaimed himself emir, striking rupees in his own name bearing the legend „Struck at Kābul 1302", although in fact he never had possession of Kābul, and the coins were minted at Balkh. Sultan Muḥammed Khān, in his translation of the emir's *Memoirs* (i. 267) states that he had himself seen a rupee of Isḥāḳ, with the legend *Lā ilāh amīr Muḥammed Isḥāḳ Khān*. He rebukes this as blasphemous although it should have been clear to him that he had not read it correctly. No Musulman coin, has ever borne such a legend. The correct reading is *Muḥammed Isḥāḳ amīr ghāzī khalad allāh mulkahu al-amīr ibn al-amīr*. Gen. Ghulām Ḥaidar was sent with a strong force from Kābul, and 'Abd Allāh Khān cooperated from Balkh. The united forces met Isḥāḳ's army at Ghazni-Gak near Tāshkurghān. For some time the issue was doubtful, and Isḥāḳ obtained a partial success over 'Abd Allāh Khān's force, many of the fugitives from which reached Kābul before the news of the final victory was received, and spread false rumors of a defeat which were believed for a time even by the emir himself. Ghulām Ḥaidar's troops had stood firm throughout, and defeated Isḥāḳ who fled and took refuge with the Russians at Kerki. They detained him as a kind of state prisoner at Samarḳand. After this 'Abd al-Raḥmān himself visited Turkistān leaving Ḥabīb Allāh as regent at Kābul, and punished all concerned with extreme severity, so much so as to lead Lord Lansdowne the viceroy of India to send him a formal remonstrance, which as 'Abd al-Raḥmān records he was unable to comply with. He also suppressed a rising in Badakhshān.

In December of the same year (1888) he had a narrow escape from assassination. A soldier fired at him while he was reviewing his troops, but missed. 'Abd al-Raḥmān attributes his escape to a charm written by a holy man which he had worn on his arm since childhood.

THE HAZĀRA RISING. The Hazāra tribes of the mountains west of Kābul, of Mongolian descent, Persian in language and Shī'ites by creed have never loved the Afghāns, and began to give trouble about the time of Isḥāḳ's rebellion. In 1891 and 1892 serious fighting took place and the victorious Ghulām Haidar was ordered to advance into Hazāristān from Turkistān. The outbreak was put down and the leaders taken prisoners. Since then the country has been quiet, in accordance with the natural disposition of its sturdy, good-tempered and hardworking people. No such excessive severities as had marked the suppression of the Turkistān revolt seem to have been employed on this occasion.

In dealing with unruly tribes, whether Paṭhān, Hazāra or Uzbeg, 'Abd al-Raḥmān acted according to the traditional Oriental rule. Any means of ensuring submission are considered lawful and proper, and in some cases the utmost severity and cruelty was used. He considered that his people could be governed in no other way, and was thoroughly persuaded that he had Divine Sanction for all his acts. His methods, however, excited violent hatred among the more independent tribes, who saw their leaders killed, their villages destroyed, and whole clans driven from their homes and their pastures, or transplanted wholesale to some distant part of the country. In general, however, where there was no actual rebellion, justice was done, and an amount of peace and order, to which it had long been a stranger, was gradually established throughout the country. 'Abd al-Raḥmān was a sincere but not a bigoted Sunnite. He encouraged Mullās and religious enthusiasts up to a certain point, and

would make use of them to gain his own ends, but he never allowed them to take the lead, and was not under their influence, as his successor is believed to be. In his Memoirs he insists again and again on the folly of fighting and war between Sunnites and Shī'ites, and he seems to have been on the whole just in his dealings with the Shī'a Hazāras. Nor does the conquest and conversion of the heathens of Kāfiristān seem to have been accompanied by religious persecution. His remark regarding the feuds between the Persians and Turkomans is characteristic. He says: „The Persians and Turkomans are enemies although they are both Muslims, yet their priests being servants of the Devil instruct them to kill and sell each other.... Though these two races call themselves Muslims, they treat each other as heathens through ignorance. Thus the unbelievers triumph over the faithful, because the latter are disunited. The fault is not in Islām, it is we who are full of faults". Great efforts were made by the emīr to improve the condition of his country by the promotion of trade and manufactures. His methods were not always those best calculated to succeed, the heavy transit duties being a severe tax on traffic, but on the whole there can be no doubt that Afghānistān made a great advance in prosperity during his reign.

Military organization received much attention and the manufacture of arms and ammunition was organized under the direction of English experts such as S. Pyne, A. Martin, and others. The main spring of 'Abd al-Raḥmān's policy was his determination to preserve the independence of Afghānistān from his powerful European neighbors, and his keen intellect made it clear to him that in order to effect this object it was necessary to remain on good terms with both England and Russia; with England to which he was bound by treaties and through which his relations with the rest of the world were conducted, and with his near northern neighbor Russia. This intention he carried out consistently, and though often displeased at the action of both powers he always succeeded in avoiding a rupture; while clinging tenaciously to everything he believed to be his by right. His character can be best studied in the frank self-revelation of his autobiography, one of the most remarkable and attractive works ever produced by an Oriental monarch.

'Abd al-Raḥmān suffered for many years from gout, and towards the end of his life this was complicated by the appearance of Bright's disease. On the 1st Oct. 1901 he died from the immediate effect of a paralytic stroke, after declaring Ḥabīb Allāh his eldest surviving son to be his successor. Ḥabīb Allāh and Naṣr Allāh are the sons of Bībī Gulrēz, a girl of Wakhān whom he married at Samarḳand. Bībī Ḥalīma whom he married afterwards is a member of his own tribe, and her son Muḥammed 'Omar was at one time thought to be the emīr's favorite. But whatever his preference, he adhered in this matter to his declared principle, and designated the eldest son as heir to the throne.

'ABD AL-RASHĪD b. 'ABD AL-GHAFŪR AL-ḤUSAINĪ AL-MADANĪ AL-TATTAWĪ, a Persian lexicographer, born in Tatta, but a Saiyid by descent; died after 1069 (1658). His principal work is a Persian dictionary, usually called *Farhang-i Rashīdī*, which was compiled in 1064 (1683-1684) and published in 1875 in the *Bibliotheca Indica*. Splieth revised the preface (*Muḳaddama*): *Grammaticae persicae praecepta ac regulae* (Halle, 1846). 'Abd al-Rashīd dedicated an Arabic-Persian dictionary, *Muntakhab al-lughāt* (1046 = 1636-1637), to the Shāhdjahān (editions: Calcutta 1808, 1816, 1836; Lucknow 1835, 1869; Bombay, 1279 = 1862-1863).

'ABD AL-RAZZĀḲ KAMĀL AL-DĪN B. ABI 'L-GHANĀ'IM AL-ḲĀSHĀNĪ (or KĀSHĀNĪ or ḲĀSHĪ or KĀSĀNĪ), celebrated Ṣūfī author, died, according to Ḥādjdjī Khalīfa (ed. Flügel, iv. 427), in 730 (1329). Ḥādjdjī Khalīfa, however, confusing him with the historian of the same name, the author of the *Maṭla' al-sa'dain*, says in another place (ii. 175) that he died in 887 (1482) and, besides, gives his name as Kamāl al-Dīn Abu'l-Ghanā'im 'Abd al-Razzāḳ b. Djamāl al-Dīn al-Kāshī al-Samarḳandī. Little is known of 'Abd al-Razzāḳ's life; according to Djāmī (*Nafaḥāt al-uns*, quoted by St. Guyard), he was a pupil of Nūr al-Dīn 'Abd al-Ṣamad and a contemporary of Rukn al-Dīn 'Alā' al-Dawla, with whom he carried on a somewhat acrimonious controversy, and who died in 736 (1336). The immediate cause of this correspondence was a conversation which 'Abd al-Razzāḳ had with a certain emīr Iḳbāl Sīstānī, a pupil of 'Alā' al-Dawla's, on the road to Sulṭāniya on the vexed question of the orthodoxy of Ibn 'Arabī. Djāmī then gives a long letter which 'Abd al-Razzāḳ wrote to 'Alā' al-Dawla on this question, in which he says that he has just read 'Alā' al-Dawla's book, the *'Urwa*. As this work was written in 721 (1321), the date 730 (1329) given as that of his death must be assumed as the correct one. We have then to place 'Abd al-Razzāḳ in the Djibāl province (Kāshān) under the Īlkhāns of Persia, and especially in the reign of Abū Sa'īd (716—736 = 1316—1335).

He was the author of a large number of works, several of which have been published. So far back as 1828, Tholuck used his *Laṭā'if al-i'lām* in *Die speculative Trinitätslehre des späteren Orients* (pp. 15—22, 28 *et seq.*) and translated some passages, but without knowledge of the author. In 1845 Sprenger published at Calcutta the first half of his *Iṣṭilāḥāt al-ṣūfiya*, or *Dictionary of the technical terms of the Sufies*. An analysis of the second part had been given by Hammer-Purgstall, in the *Jahrbücher der Literatur* (lxxxii. 68 *et seq.*). This book also was used by Tholuck, and cited under the author's name (*loc. cit.* pp. 7, 11, 18, 26, 73). It is of special interest because in the preface he states that it

was written after he had finished his commentary on the *Manāzil al-sā'irīn* of al-Harawī in order to explain the Ṣūfī technical terms which occur but are inadequately explained in that work, and also in his commentary on the *Fuṣūṣ al-Ḥikam* of Ibn 'Arabī (Cairo, 1309) and in his *Ta'wīlāt al-Ḳor'ān*. According to Ḥādjdjī Khalīfa (ii, 175) the *Ta'wīlāt* of 'Abd al-Razzāḳ extend to Sūra xxxviii only, yet Berlin MS. N°. 872 covers the entire Ḳur'ān, but apparently in abstract. *Risāla fi'l-ḳaḍā' wa'l-ḳadar*, treatise on predestination and free will, first translated into French (*Journ. As.*, 1873, revised edition 1875), then the text published by St. Guyard (1879); it will be dealt with in detail below. The treatise seems to have excited attention, for Ḥādjdjī Khalīfa (iii. 429) gives three answers to it by Ibn Kamāl Pasha Ṭāshköprī Zāde and Bālī Khalīfa Ṣūfiyahwī. A commentary on the *Tā'iya* poem of Ibn al-Fāriḍ (Cairo, 1310). His works as yet unpublished are: *Risālat al-Sarmadiya*, on the idea of an eternal Being; *Risālat al-Kumailiya*, on the traditional answer by 'Alī to the question of Kumail b. Ziyād fi'l-ḥaḳīḳa (comp. the Berlin MS. N°. 3462; Ḥādjdjī Khalīfa iv. 38; *Journ. As.* 14, 83); a commentary on the *Mawāḳi' al-nudjūm* of Ibn Arabī and *Tadhkirat al-ẓāhiriya*. Ḥādjdjī Khalīfa (v. 587) adds *Miṣbāḥ al-hidāya*. For MSS. reference will suffice to Brockelmann, *Gesch. d. arab. Litter.*, ii. 203; 204 *et seq.*, 345), the Gotha cat. N°. 76, 2, and Palmer's *Trinity College cat.* p. 116.

It will already be tolerably clear what 'Abd al-Razzāḳ's interests and positions were. He was a Ṣūfī of the school of Ibn 'Arabī, the great theosophist of the Western Arabic type, though with touches of independence, and he gave much labor to defence and exposition of his master. In the three great divisions of Muslim theologians, the upholders of tradition (*naḳl*), of reason (*'aḳl*), and of the unveiling of the mystic (*kashf*), he took his place with the third. It may be significant that his name never indicates to what legal school he adhered. Like many mystics, he may have regarded such matters as beneath notice, or he may, like Ibn 'Arabī, have been a belated Ẓāhirite in law, as he was evidently a Bāṭinite in theology. The last is plain through the title itself of his exposition of the Ḳur'ān, *ta'wīl*, not *tafsīr*, and is shown in detail in his *Iṣṭilāḥāt* and his treatise on *ḳadar*. In the last we have the normal combination of the Aristotelian universe, the Neo-Platonic metaphysics and theology and the Ḳor'ānic mythology of Muḥammed. These all appear, too, in Ibn 'Arabī, but perhaps 'Abd al-Razzāḳ is more anxious to keep the last element prominent, and to proclaim thus his essential orthodoxy. Certainly, he strives to avoid the absolute merging of the individual, and the consequent fatalism of Ibn 'Arabī and to lay a possible basis for individual responsibility, for freedom and rewards and punishments hereafter. His method in this is as follows. In order to bring out clearly the forces leading to any event and the close interweaving of all causes and effects to make up the great organism of the universe, he begins with a description of the universe on the Ṣūfī scheme. It is the Neo-Platonic chain. Above is God, the One, the Alone; from him proceeds, by a dynamic emanation, the Universal Reason (*al-'aḳl al-awwal*), called also the Primary or Universal Spirit (*al-rūḥ al-awwal*) and the Highest Knowledge (*al-'ilm al-a'lā*). This is a spiritual substance and the first of the properties which the divine essence implies. From it two other substances are produced, one spiritual (*rūḥāniya*) which is the substance of the world of the Universal Reason, considered as apart from God and inhabited by particular intelligences, somewhat as fractions of the Universal Reason, which are the angels of revealed religion; the other is psychical, being the Universal Soul (*nafs*). Finally come the material elements with their natural forces and laws. In the Universal Reason are the types of all things, as universals, and this Reason, with its types, is known directly by God. God's omnipotence (*ḳāhiriya*) is manifested through these angels or Intelligences, and their world is therefore called the World of Power (*'ālam al-ḳudra*). But they also, in their perfection, repair the imperfections of other beings. Their world again, therefore, is called the World of Repairing (*'ālam al-djabarūt*). Some, however, take the other sense of the root *djabar* and render it, the World of Constraint, because they constrain other beings towards perfection. This world is also called the Mother of the Book (*umm al-kitāb*; Ḳur'ān, xiii. 39, xliii. 3), from it comes all knowledge of divine mysteries, it is above all fetters of time and change. The world of the Universal Soul, on the other hand, called the World of Ruling (*'ālam al-malakūt*), is a step nearer the particular, material world. The types which exist in the Universal Reason become in it general conceptions, and these are further specialized, determined, limited, brought near to what we know, by being engraved on the individual reasonable souls, which are the souls of the heavenly bodies, corresponding to the angelic Intelligences, the fractions of the Universal Reason. This world, from its likeness to the human imagination, is called the Imagination of the World (*khayāl al-'ālam*) and the Nearer Heaven (*al-samā' al-dunyā*). From it issue all beings in order to appear in the World of Sense (*'ālam al-shahāda*), it moves and directs everything, measuring out matter and assigning causes. The heavenly bodies, then, have reasonable souls just like our own, these are the imaginative faculties of the particular reasonable souls, into which the Universal Soul divides. On their changes all change in this world below depends (comp. al-Ghazzālī's scheme, in *Journ. of Amer. Orient. Soc.*, xx. 116 *et seq.*).

Further, this constitution of the universe corresponds to man's body, macrocosm to microcosm. Just as the brain is the seat of man's ruling spirit, so the Universal Spirit or Reason is seated in the throne (*'arsh*) above the sphere of the fixed stars. The fourth heaven, the sphere of the sun, which vivifies all, is the seat of the Universal Soul, in man this is the heart, wherein is his particular, reasonable soul. So the fourth sphere is like the breast, and the sun like the physical heart. The individual soul of the sun corresponds to the animal spirit in the heart, which is the source of human life.

Next, as to the place of predestination in this scheme, for that there are three words, *ḳaḍā'*, *ḳadar* and *'ināya*. *Ḳaḍā'* means the existence of the universal types of all things in the world of the Universal Reason. *Ḳadar* is the arrival in the world of the Universal Soul of the types of

existing things, after being individualized in order to be adapted to matter, these are joined to their causes, produced by them, and appear at their fixed times. *'Ināya* is, broadly, Providence and covers both of the above, just as they contain everything that is actual. It is the divine knowledge, embracing everything as it is, universally and absolutely. It is not in any place, for God's knowledge, in His essence, is nothing else than the presence of His essence before His essence, which is essentially one and goes with all the qualities which inhere in Him. Further, while the essence (*ḥaḳīḳa*) of *ḳaḍā'* is part of the *'ināya* of God, its entelechy (*kamāl*) is in the world of the Universal Reason. The Universal Soul is sometimes called the Preserved Tablet (*al-lawḥ al-maḥfūẓ*), for on it are preserved unalterable all the general conceptions which are on their way to the individual heavenly souls.

It is the world, then, of *ḳadar*, of the Soul, which sets everything in motion. This is by the yearning of the reasonable souls of the heavenly bodies towards their spiritual source, the Universal Reason. They try to assimilate themselves to this, to universalize themselves. Step by step, they mount up, and with each advance they receive a new outpouring from that source, drawing them on further. With each movement, there flows from them an influence upon matter according as it is adapted to receive it, and thus there is a series of changes in the material world, corresponding to those in the world of the Soul. These changes may be either absolute, of creation and destruction, or, between those extremes, simply of condition. The duration of existence constitutes the Ḳor'ānic *adjal*, and all these are fixed by *ḳadar*.

Finally, this exegesis of Ḳor'ān, lii. 1—6 will show how 'Abd al-Razzāḳ applied Scripture. „By the Mount and by a Book Inscribed in a Parchment Outspread, and by the Frequented House, and by the Raised Roof, and by the Flowing Sea!" The Frequented House is the Spirit of the fourth sphere, that of the sun. Therefore Jesus, the Spirit of God, has been placed there, whose miracle is the raising of the dead. The Mount is the *'arsh*, the seat of the Universal Reason. The Book Inscribed is *ḳaḍā'*, which is in that Reason; and the Parchment Outspread is the Reason itself. The Raised Roof is the nearest heaven, where are the individual celestial souls; it is mentioned immediately after the Frequented House, because from this heaven the forms descend on the earth, and from the Frequented House comes the breath of the Spirit, by the combination of which the creation of animated beings is achieved. The Flowing Sea is the sea of primary matter which spreads everywhere and is filled with forms.

How, then, is such a scheme related to predestination and free will? It is highly complicated, consisting of a remote first cause and an infinity of intermingling and crossing, nearer, secondary causes. It is possible to look at these last only, and so to assign absolute creative and deciding power to our own wills. Or to look only at the first cause and become fatalists. We must preserve the balance and hold by both. The complete cause of anything into which human will can enter must have as an element in it, among so many others, free will. It sets all the others in movement. Under this conception, though never clearly stated, is evidently implied that man has in him an element of the divine deciding power. If there is freedom in the divine nature, there must be also in its emanations. For Ibn 'Arabī the oneness of the divine nature over against the creation had overcome everything. 'Abd al-Razzāḳ lays stress on the multitudinous interweaving causes of the world, its constantly developing processes, to show that in life, purpose and will there must be multiplicity. The divine is spread down through the sub-lunar things, it does not simply rule from above. Again, amongst the many causes working in the world and upon man are the restraints and influences of religion, the promises and threatenings of the prophets. These we should permit to have their effects upon us as parts of the whole scheme, the process of training under which we are. But, again, why should training be necessary? Why are there good and bad? Here, again, is an implication, once pretty clearly expressed. Matter is of very differing nature, grosser and finer. It can receive only a corresponding soul, therefore souls also vary. Character and disposition is a combination of both, and it is for the soul to overcome its material body and itself rise. This evidently is the fundamental thought, but 'Abd al-Razzāḳ does not give much space to it. Rather, he uses the old theological catch. This must be the best possible creation, otherwise God would have created a better. Further, if all things were equal, there could be neither order nor organization. This would also be hard on those less perfect things thus ruled out of existence. All things should have a chance; it is for them to use it. God knows their differences and will allow for them. The most and the greatest sins are from ignorance, and God will so treat them. In the life to come the same thing is to go on. Some will attain felicity, others, because they might have done better, must undergo purification by punishment, but that will not be eternal. Here, perhaps, 'Abd al-Razzāḳ is most unsatisfactory. He passes over into the normal Muslim conception although it is not at all clear that his system can permit individuality apart from matter. Freed souls, we should expect, would either return into the unity, or else be sent forth again to another material life. Like so many in Muslim theology and philosophy, this tractate was adapted to an audience, and was not perfectly ingenuous. Yet behind its caution of statement the real system is tolerably plain. It is nearer orthodoxy than that of Ibn 'Arabī, but not as near as this eschatology would suggest.

Bibliography: St. Guyard, in *Journ. As.*, viii ser., i. 125 *et seq.*, which is the main source; Brockelmann, *Gesch. d. arab. Litter.*, ii. 203—204, who made of him two different persons.

(MACDONALD.)

'ABD AL-RAZZĀḲ KAMĀL AL-DĪN B. ISḤĀḲ AL-SAMARḲANDĪ, a Persian historian, author of the well-known *Maṭla' al-sa'dain wa-madjma' al-baḥrain*, born at Herāt in 816 (1413), where he died in 887 (1482). His father was ḳāḍī and Imām at the court of Sulṭān Shāhrukh [q. v.]. In 845 (1441) 'Abd al-Razzāḳ went to India as an ambassador (returned in 848 = 1444), and in 850 (1446) to Gīlān; he died in the reign of the sultan Ḥusain Baiḳarā [q. v.] as governor of the Khānḳāh of Shāhrukh. His work depicts, with a

brief mention of the birth (704 = 1304-1305) and accession (716 = 1316-1317) of the Ilkhān Abū Saʿīd [q. v.], the events of the years 717—875 (1317—1471), in chronological order, in two volumes (vol. I up to the death of Timur in 807 = 1404-1405); up to the year 830 (1426-1427) use is principally made of the *Zubdat al-tawārīkh* of Ḥāfiẓ-i Abrū [q. v.], which is at times quoted literally. Some portions of this work are known to us only through 'Abd al-Razzāk; from the same work (the original text appears to be preserved in only one MS., Bodl. Elliot 422, not recognized by Ethé, *Catalogue*, p. 90) the famous account of the embassy to China in 823—825 (1420—1422) is also taken. For the periods from 830 to 875 (1426—1471) 'Abd al-Razzāk's work is one of the most important original sources of information. We do not yet possess a complete edition of the *Maṭlaʿ al-saʿdain*; MSS. are to be found in nearly all the larger european collections but they are now rare in the East. E. Quatremère gives extracts in the *Notices et extraits des manuscrits*, xiv. part 1. As also H. M. Elliot in his *History of India*, iv. 89—126, and others.

Bibliography: Elliot, *loc. cit.*, pp. 92 *et seq.* (W. BARTHOLD.)

'ABD AL-SALĀM B. MASHĪSH AL-ḤASANĪ, a celebrated Moroccan Saint, was murdered about the year 625 (1227-1228). He appeared to be a paragon of Ṣūfism in Northern Africa. He was a disciple of Abū Madyān Shoʿaib [q. v.] and the master of Abu'l-Ḥasan 'Alī al-Shādhilī, who has given his name to one of the largest Musulman confraternities. Little is known of his life, which is for the greater part legendary: he seems to have had as a rival Muhammed b. Abī Ṭawādjin, who was the religious head of the Moroccan Katāma, as he himself was of the Banū 'Arūs. Muhammed, however, had him assassinated or murdered him himself, and he was buried on Djabal 'Alam amongst the Banū 'Arūs. There are numberless pilgrimages to his shrine; the Moroccans maintain that all the trees on the mountain lean towards him. It has, however, been impossible for any European to visit Djabal 'Alam, because of the extreme fanaticism of the inhabitants: it is one of the least accessible parts of Morocco. The reverence for the memory of 'Abd al-Salām and the prestige which surrounded his descendants was greater than one could imagine in the whole district. He was one of the most revered Ṣūfīs in the entire Musulman world, and figures in a number of mystic *chaînes*. Legend has naturally embellished his biography with a great number of miraculous events: at his birth swarms of bees from every point of the horizon settled upon him; 'Abd al-Kādir al-Gīlānī, another celebrated Ṣūfī of the East, who lived more than a hundred years before him, did him homage. His death is also surrounded with miraculous episodes: there were extraordinary signs in the heavens and on earth. His shrine is still a place of many miracles. Every year after the feast of the *Mawlid* (the birth of the Prophet), the inhabitants of Eshshawn (Sheshawn), a small town not far from Tetouan, arrange a great pilgrimage which attracts enormous crowds. The people of the tribe of al-Akhmās (Lekhmās), have the privilege of coming every year as pilgrims to the shrine of the Saint and of driving the 'Alamiyūn Sherīfs away from it: none of the latter can be there at that time without running the risk of being molested. These 'Alamiyūn Sherīfs are very rich, as the revenues from the sanctuary are considerable. Further, as these Sherīfs are descendants of Idrīs, they inherit a part of the revenue from the great Zāwiya of Mulāi Idrīs al-Ṣaghīr at Fez; they send a delegation there every year, which settles there for a month and collects one twelfth of the annual revenue of the Zāwiya.

'ABD AL-WĀD, an ancestor of the kings of Central Maghrib (Tlemcen) [see 'ABDALWĀDIDES].

The following is the genealogy of 'Abd al-Wād as given by Yaḥyā b. Khaldūn: „The origin of this name goes back to 'Abd al-Wādī, so called from the ascetic life led by the ancestor of the 'Abdalwādides. — He was a son of Shadjīḥ . . . b. Muḍar b. Nizār b. Maʿadd b. 'Adnān, according to the opinion given to us by Ibn Abi'l-Faiyāḍ and other authors". Notwithstanding the slight value of this genealogy, it still shows that 'Abd al-Wād lived before Islām. This fact is confirmed by ('Abd al-Raḥmān) Ibn Khaldūn, according to whom, part of the Banū 'Abd al-Wād inhabited Awrās from very ancient times and were there at the moment of the first Musulman invasion.

In the absence of documentary evidence it is impossible to fix the epoch or the country in which 'Abd al-Wād lived. As to the name 'Abd al-Wād, it is apparently a corruption of the regular 'Abd al-Wādī, and not, as de Slane thought, a change from the Arabic 'Abd al-Wāḥid in consequence of Berber influence (comp. A. Bel, *Hist. des Beni 'Abd el-Wād, rois de Tlemcen*, Algiers, 1904, introd., p. ix).

'Abd al-Wād gave his name first to a portion of a tribe, which was, according to all Musulman authors, a part of the great Berber tribe of the Zanāta (Zenetes). The name of Banū 'Abd al-Wād was afterwards extended to twelve other parts of the same tribe.

Bibliography: Muḥammed al-Tanasī, *al-Durr wa'l-ʿiḳyān fī sharaf Banī Zaiyān* (MS. Nº. 4, of the Madrasa of Tlemcen), i. 3; Bargès, *Hist. des Beni Zeiyān, rois de Tlemcen* (Paris, 1852), introd., p. xxxiii; Ibn Khaldūn, *'Ibar* (*Hist. des Berb.*), ii. 85, 100; Abū Zakariyā' Yaḥyā b. Khaldūn, *Bughyat al-ruwwād* (ed. and trans. into French by A. Bel, under the title, *Hist. des Beni 'Abd al-Wād, rois de Tlemcen*, i. introd. pp. viii-ix, trans. p. 124, text p. 90). (A. BEL.)

'ABDALWĀDIDES (BANŪ 'ABD AL-WĀD). This name was at first given to a part of the great Berber tribe of the Zanāta and was afterwards extended to many other portions of the same tribe.

The dynasty of the kings of Central Maghrib, who took Tlemcen as their capital and whose kingdom lasted from 637 to 962 (1239—1554) was of the Banū 'Abd al-Wād family.

During this period of 315 years, twenty-seven kings of this family (of whom two reigned together) ascended the throne of Tlemcen. These kings are also often called Banū Zaiyān, because one of their ancestors, the father of the first independent

king of Tlemcen was called Zaiyān. The two names Banū 'Abd al-Wād ('Abdalwādides) and Banū Zaiyān (Zaiyānides) may be used indifferently for all the kings of this dynasty, although sometimes it was thought, but wrongly, that only the first five of the kings should come under the name of Banū 'Abd al-Wād (637—737 = 1239—1336) and all the others under that of Banū Zaiyān.

Almost all the Musulman historians have ascribed a noble genealogy to the 'Abdalwādides, without, however, being able to establish the fact decisively. Abū Ḥammū's historiographer, after having asserted the nobility of the family, adds that he has done so only on the verbal testimony which has been given him; he says that in default of exact and duly established knowledge one must on this point agree with the generally admitted opinion.

The 'Abdalwādides belonged to the Berbers who were settled in Maghrib long before Islām; they were not of the nobility. Ibn Khaldūn and Yaghmurāsan, the first king of Tlemcen who spoke Berber, did not hesitate to express doubts about the nobility of the 'Abdalwādides, or to make reservations on the subject which say more to us than all the assertions of paid chroniclers. Besides these, more recent chronicles, written after the fall of the kingdom of Tlemcen, such as *al-Durra al-saniya* (*Recueil des actes du Congrès des Orientalistes*, 14th session, Algiers, 1905) deny their title to nobility.

The attainment of kingly power by the members of a family of a portion of the Banū 'Abd al-Wād in 637 (1239) brought this Berber tribe, the name of which without this would hardly have been known, into notice; for nothing certain is known of the history of the 'Abdalwādides before the founding of the kingdom of Tlemcen. In fact we have only the fantastic accounts of the Musulman chroniclers who were contemporary with the kings of Tlemcen, and who sought to aggrandise the lustre of the tribe and the part it had played in the general history of the Maghrib after the introduction of Islām. It was at the beginning of the 13th century of the Christian era that the 'Abdalwādides really took part in the political history of Northern Africa. Their capital, Tlemcen, became an important city full of mosques, schools and magnificent palaces. The monuments and ruins which are still found at Tlemcen have preserved the memory of this ancient splendor for us. The list of works relating to the 'Abdalwādides is enough to show how much everything that has reference to Tlemcen and its kings has been studied. Apart from certain details which still remain obscure, the political history of Tlemcen and the history of its civilization at the period of the 'Abdalwādide kings are now well established in the main, thanks to the Arab chronicles, inscriptions and archeology; but numismatics future archeological and epigraphical discoveries will perhaps throw some more light on and bring new knowledge of the history of the kings of Central Maghrib. It may, however, be said that few of the Berber dynasties have been the object of so many researches and scientific works as that of the Banū 'Abd al-Wād.

'ABD AL-WAHHĀB. [See Muḥammed 'Abd al-Wahhāb and Wahhābites.]

'ABD AL-WAHHĀB b. 'Abd al-Raḥmān b. Rostem, second Imām of the Abāḍite dynasty of the Rostemides of Tāhert. He succeeded his father in 168 (784-785) and died in 208 (823-824).

At the time of his accession the town of Tāhert, founded by 'Abd al-Raḥmān, had already greatly developed. The great merchants of Ifrīḳiya, of the Maghrib and even of Egypt and the East, who were sure of finding justice and safety in this town, had brought their wealth there. 'Abd al-Wahhāb himself, before he attained to power, had devoted himself to commerce and had acquired a considerable private fortune.

This influx of people who were strangers one to the other and the preponderate part that certain personages, who relied upon the powerful chiefs of nomad tribes, longed to take in the town soon caused divisions in Tāhert. A group of ambitious men, led by Yazid b. Fendin, with whom a certain Shu'aib b. al-Ma'rūf associated himself later, contested the right of 'Abd al-Wahhāb's Imāmate and claimed that he could not govern without the assistance of an assembly of the leading men of the town.

These dissidents took the name of Nukkar. 'Abd al-Wahhāb was obliged to subdue them by force of arms; but his victory never completely re-established harmony. He himself only escaped by his vigilance and energy from being assassinated and even then saw his son fall, stabbed by the dissidents. He had also to repress a rising of the Wāṣilite Berber tribes, the Howāra and the Lowāta. When he had restored peace to his kingdom, he went to Djebel Dammar and to Djebel Nefūsa where he spent many years.

It was whilst he resided there that the Howāra and the Nefūsa took possession of Tripoli. But the town was retaken by Abu'l-'Abbās 'Abd Allāh b. Ibrāhīm b. al-Aghlab. 'Abd al-Wahhāb besieged him there in 196 (811). During the siege Ibrāhīm b. al-Aghlab died; his son Abu'l-'Abbās, wishing to leave Tripoli, concluded a treaty with 'Abd al-Wahhāb. The city and the sea were retained by the 'Abbāsides and the country by the Abāḍite prince.

Abāḍite chroniclers add that the Imām sent Ḳaṭan b. Salma to lay siege to Gabes. The outlying tribes, the Matmāta, Zanāfa, Zuwāgha and others as well as the island of Djerba were under his authority.

'Abd al-Wahhāb appointed governors at Sort and in the country of Ḳasṭilia. At the request of his subjects, he chose as commander of the Nefūsa the son of Abu'l-Khaṭṭāb, the first Imām of the Abāḍites, called al-Samaḥ, who was his vizier. He performed his duty with distinction and loyalty; but his son Khalf later caused the Imām and his successor Aflaḥ serious trouble.

'ABD AL-WĀḤID B. 'ALĪ AL-TAMĪMĪ AL-MARRĀKUSHĪ ABŪ MUḤAMMAD, surnamed Muḥyi'l-Dīn, was born in Morocco in 581 (1185), and subsequently sojourned in Spain and Egypt. The date and place of his death are unknown. In 621 (1224) he wrote a history of the Almohades entitled: *al-Mu'djib fī talkhīṣ akhbār al-Maghrib* (edited by Dozy; transl. into French by Fagnan). Comp. Brockelmann, *Gesch. d. arab. Litter.*, i. 322.

'ABD AL-WĀḤID AL-RASHĪD, ninth Almohade emperor, son of and successor to Abu'l-'Alā' Idrīs (al-Ma'mūn). His mother, Ḥabāb, who was a Christian captive, helped by her cleverness in having the young prince, then only fourteen years old, proclaimed emperor.

The death of al-Ma'mūn took place suddenly on the last day of 629 (17th Oct. 1232) according to the author of the *Ḳarṭās*, or at the beginning of 630 according to Ibn Khaldūn, when he had just raised the siege of Ceuta — where his brother Abū Mūsā had stirred up a revolt against him — and was marching on Marrākush, which had fallen into the hands of Yaḥyā b. al-Nāṣir, one of the pretenders to the throne. 'Abd al-Wāḥid, who was with his father, was immediately proclaimed his successor by the army and partisans who accompanied him, and marched quickly upon Marrākush, taking care to conceal the fact of his father's death. After having beaten the pretender Yaḥyā b. al-Nāṣir, who had advanced to meet him, he entered the city without meeting with much resistance and was immediately solemnly proclaimed emperor under the name of al-Rashīd.

When he attained the power the Almohade empire was fast going to pieces. After the death of al-Nāṣir, who was the last striking figure in the Almohade empire, or, rather, after the famous defeat of Las Navas de Tolosa, the hour had struck for the decadence of the Almohade dynasty. The sovereigns allowed themselves to be guided by their ministers, often unconsciously; the many members of 'Abd al-Mu'min's family all longed to cut for themselves an independent fief or a kingdom out of the empire. The fights against the Banū Ghāniya had in Ifrīkiya enabled the descendant of the famous Shaikh Abū Ḥafṣ 'Omar to become independent and to found the Ḥafṣide kingdom of Tunis. The Almohade possessions in Spain had passed little by little into the hands of the Christians and, above all, into those of Ibn Hūd.

One of al-Ma'mūn's brothers, as has been said, occupied Ceuta, one of his nephews contended for Marrākush, his capital; the Berber and Arab tribes were everywhere restless, taking the part sometimes of one sometimes of another of the pretenders and adventurers.

Al-Ma'mūn had rejected the greater part of the religious precepts of the Mahdī Ibn Tūmart, which formed the very foundation of the Almohade empire (comp. Goldziher, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xli. 30 *et seq.*; A. Bel, *Les Benou Ghânya*, Paris, 1903; *Le livre d'Ibn Toumert*, edited by Luciani, with a preface by Goldziher, Algiers, 1903); he had publicly made concessions to the Christians, which scandalized his subjects; he had gone so far as to build them a church at Marrākush with permission to ring bells in it. This policy had alienated a great number of his partisans among the Mussulmans.

Al-Rashīd — or rather his advisers — saw that in order to bring the dissidents over it would be necessary to make a change of policy; he re-established the institutions of the Mahdī, which did some good. Nevertheless the Khulṭ Arabs and many Berber parties of the Haskūra sent for Yaḥyā b. al-Nāṣir, the pretender to the trone who was first cousin to al-Rashīd, and besieged Marrākush, of which they took possession. Al-Rashīd, who had gone to make war in the South-East, near Sidjilmāsa, returned and recaptured his capital (633 = 1235-1236). After this initial success he went to take possession of Fez, where the head of his opponent Yaḥyā was brought to him by some Arabs who had assassinated him.

In 635 (1237) the people of Seville, having repudiated the sovereignty of Ibn Hūd, tendered their submission to al-Rashīd, as also happened at Ceuta.

Being continuously occupied with the defence of his capital and throne and with the pacification of farther Maghrib, al-Rashīd was unable to hinder Yaghmurāsan b. Zaiyān from proclaiming himself independent at Tlemcen and founding the 'Abdalwādide kingdom of Central Maghrib there. In spite of his efforts al-Rashīd did not succeed in stopping the powerful Banū Marīn, parties of the Zanāta, who invaded his country and established their influence there by a series of victories won by them against the Almohades. It was the Marīnides who were to become from that time the most formidable enemies of the Almohades. After several years of a cleverly conducted struggle, they succeeded in their turn in wresting farther Maghrib and Spain from the last successors of 'Abd al-Mu'min.

Al-Rashīd died after a reign of ten years on the 10th Djumādā II 640 (5th Dec. 1242), being drowned in a cistern at his palace in Marrākush. He was only twenty-four years of age. Although the chroniclers say nothing on this point, it appears that it was his mother who, in reality, governed the kingdom.

'ABD AL-WĀSI' DJABALĪ B. 'ABD AL-DJĀMI', a Persian poet, one of the panegyrists of the Seldjuk Sultan Sandjar. A native of the province of Ghardjistān, he lived at first for some time at Herāt, and then went to Ghazna, where he entered the service of Sultan Bahrām Shāh, son of Mas'ūd, of the dynasty of the Ghaznewides; after four years, when Sultan Sandjar came to Ghazna to support Bahrām Shāh, who was his first cousin on his mother's side, he took advan-

tage of the occasion to address an ode to him. It is said that he died in 555 (1160). His Dīwān was published at Lahore in 1862.

Bibliography: Dawlat Shāh, *Tadhkirat al-shuʿarā* (ed. Browne), pp. 73—76; Muhammed ʿAwfī, *Lubāb al-albāb* (ed. Browne), ii. 104—110; Riḍā Ḳulī Khān, *Madjmaʿ al-fuṣaḥā*, i. 185—192; Hammer-Purgstall, *Gesch. d. schön. Redekünste Persiens*, p. 101; Ethé, in *Grundr. d. iran. Philol.*, ii. 261. (Cl. Huart.)

ABDĀL (A.; plur. of *badal*, „substitute"), one of the degrees in the Ṣūfī hierarchical order of saints, who, unknown by the masses (*ridjāl al-ghaib*), participate by means of their powerful influence in the preservation of the arrangement of the universe. The different accounts in the Ṣūfī literature disagree as to the details about this hierarchy. According to the most generally accepted opinion, the *Abdāl*, forty in number, take the fifth place in the saints' hierarchy issuing from the great *Ḳuṭb* [q. v.]. They are preceded after the *Ḳuṭb* by: 2) both assistants of the latter (*al-imāmān*); 3) the five „stakes" or „pillars" (*al-awtād* or *al-ʿumud* [q. v.]); 4) the seven "incomparable" (*al-afrād*). After the *Abdāl*, who, as was said above, are the fifth degree, come: 6) the seventy „preferable" (*al-nudjabāʾ*); 7) the 300 „chiefs" (*al-nuḳabāʾ*); 8) the "troops" (*al-ʿaṣāʾib*), 500 in number; 9) the „wise", or the „lonely" (*al-ḥukamāʾ* or *al-mufradūn*), of an unlimited number; 10) *al-Radjabiyūn*. Each of these ten classes is confined to a special region and a particular sphere of action is assigned to each of them. The lacunae which happen in single classes are filled up by the promotion to that class of a member of the class immediately below it. The *Abdāl* (also called *al-Ruḳabāʾ*, „the guardians") have their residence in Syria. Their merit and intercession bring about the necessary rain, the victory over the enemy, and avert general calamities. Every individual of them is *badal* (sing.); still *badīl*, which grammatically corresponds to another plural (*budalāʾ*), is a more used designation for a single one.

ABDĀLĪ, the former name of the Afghān tribe now known as Durrānī. This tribe belongs to the Sarbanī branch of the Afghān race, and is believed by the Afghāns to derive its name from Abdāl (commonly called Avdal) b. Tarīn b. Sharkhabūn b. Sarban b. Ḳais, who received this name from Khwādja Abū Aḥmed, an Abdāl or saint of the Čishtiya order, in whose service he was. The Abdālī as the result of wars with the Ghalzai had abandoned their original lands near Ḳandahār, and had long been settled near Herāt, but were restored by Nādir Shāh to their old home, and when Aḥmed Shāh was crowned king at Ḳandahār after Nādir Shāh's death, his tribe served as a nucleus for the new empire. Influenced by a faḳīr named Ṣābar Shāh he took the royal title of Durr-i Durrān „pearl of pearls", and the Abdālī tribe was henceforth known by the name of Durrānī. The two principal clans were the Popalzai and Bārakzai, to the first of which belonged the royal section, the Sadozai. The name Abdālī was commonly used for some time after these events, but gradually fell into disuse, and was replaced by Durrānī. It is seldom heard now. [For further history of the tribe see AFGHĀNS.]

Dorn, *Hist. of Afghans*, ii. 42. (M. Longworth Dames.)

ʿABDALĪ (ʿAbdelī), plur. ʿAbādil, collective name for the inhabitants of the sultanate of Laḥedj (Laḥdj) in South Arabia [see LAḤEDJ].

AL-ʿABDARĪ (i. e. descendant of ʿAbd al-Dār b. Ḳuṣaiy b. Kilāb b. Murra, of the great family of the Ḳoraishites), his real name Abū Muḥammed Muḥammed b. Muḥammed b. ʿAlī b. Aḥmed b. Suʿūd (or Saʿūd or Masʿūd), known chiefly for the description of a journey called *al-Riḥla al-maghribiya*.

We have no information about this learned traveller; it is only known that he was a native of Valencia and that he was living not far from Mogador, in the Ḥāḥa tribe, where his family was, when he started for Mecca on the 25th Dhu'l-Ḳaʿda 688 (11 Dec. 1289).

Of his masters are known only those, under whom he studied during his journey, taking advantage of the forced stops of the caravan, and who are therefore mentioned in his *Riḥla*: Sharaf al-Dīn al-Dimyāṭī (al-Dhahabī, *Tadhkira*, iv. 278; Brockelmann, *Gesch. d. arab. Litter.*, ii. 73), the celebrated traditionist and jurist Ibn Daḳīḳ al-ʿĪd (Suyūṭī, *Ḥusn al-muḥāḍara*, i. 143, Cairo, 1321; Ibn al-Subkī, *Ṭabaḳāt al-shāfiʿiya*, vi. 2—22, Cairo, 1324), Zain al-Dīn b. al-Munaiyir (Ibn Farḥūn, *al-Dībādj*, p. 205, Fez, 1317; Aḥmed Bābā, *Nail al-ibtihādj*, p. 191, Fez, 1317), ʿAbd Allāh b. Hārūn and Ṭāʾī al-Ḳurṭubī at Tunis, Abū Zaid ʿAbd al-Raḥmān b. al-Asadī at Ḳairawān, Abu'l-Ḥasan ʿAlī b. Aḥmed al-Ḳarāfī and others. Among his pupils only his son Muḥammed and Abu'l-Ḳāsim b. Riḍwān are mentioned.

His *Riḥla*, the writing of which was only begun at Tlemcen, is an instructive and useful book not only because of its exactness in topographical information, but more especially for its archeological details and its studies of the customs and full show of the Mussulman scholars of the 7th century of the Hegira.

Looking at things from a lofty standpoint and rarely stopping for geographical details, al-ʿAbdarī, who was a master in Arabic, was specially solicitous about the state of Mussulman science, searched out men of letters, whose companionship would interest him, and in consequence lost no opportunity of devoting himself to literary exercise, which was full of lexical eccentricities, alliterations, puns, metaphors, etc. His style, however, changed on leaving Cairo, it became temperate and clear, and to a certain extent it ceased to be declamatory.

The work contains a great many pieces of poetry, of which the principal are: 1) *al-Ḳaṣīda al-Shaḳrāṭīsiya* by Abū Muḥammed ʿAbd Allāh b. Abū Zakarīyāʾ Yaḥyā b. ʿAlī al-Ḳumshī (d. 8th Rabīʿ I 466 = 13th Nov. 1073), a poem in honor of the Prophet, which without doubt Shaikh al-Būṣīrī imitated in his *Burda*; 2) a *takhmīs* of the *Munfaridja* or *Umm al-faradj*; 3) an epistle rhyming in *yā*, which al-ʿAbdarī sent from Ḳairawān to his son Muḥammed, and in which he gave him good moral precepts; 4) a piece rhyming in *rā*, which al-ʿAbdarī sent to Sulṭān Ṣalāḥ al-Dīn Yūsuf b. Aiyūb, and in which he begged him to free the country of Islām from the yoke of the Christians; 5) a piece of 105 verses, rhyming in *yā*, which resumes with emphasis the *Riḥla* etc.

Bibliography: al-ʿAbdarī, *Riḥla*, MS. in the University Library of Algiers, N°. 2017; Ibn al-Ḳāḍī, *Djadhwat al-iḳtibās* (Fez, 1309), p. 179; *Tādj al-ʿArūs*, s. v. *ʿAbdarī*; Brockelmann, *Gesch. d. arab. As.*, 5th series, iv. 144 *et seq.*; Motylinski, *Itinéraires entre Tripoli et l'Egypte*; *El Aiachi, Moulai Ahmed et El-Ourtilani* (*Extr. du Bull. de la Soc. de Géogr. d'Alger*), Algiers, 1900, p. 4.

(MOHAMMED BEN CHENEB.)

AL-**ʿABDARĪ** MUḤAMMED B. MUḤAMMED B. MUḤAMMED B. AL-ḤĀDJDJ AL-FĀSĪ AL-ḲAIRAWĀNĪ AL-TILIMSĀNĪ AL-MAGHRIBĪ AL-MĀLIKĪ ABŪ ʿABD ALLĀH, a theologian, studied in Fez, went to Cairo whilst on a pilgrimage, settled there as a professor and died in Djumādā I 737 (December 1336). He was probably the son of the author of the *Riḥla* [comp. preceeding article], to which his appellation of Ibn al-Ḥādjdj perhaps refers. That he is not identical with this latter, as Goldziher (in the *Zeitschr. d. Deutsch. Palästinavereins*, xvii. 116 and *Götting. Gelehrt. Anzeig.*, 1899, p. 466) assumes, is shown by the difference of the Kunya, apart from the difference of age. His principal work is the *Kitāb al-madkhal ilā tanmiyat al-aʿmāl bi-taḥsīn al-niyāt wa'l-tanbīh ʿalā baʿḍ al-bidaʿ wa'l-ʿawāʾid allatī ʾntuḥilat wa-bayān shanāʿatihā wa-ḳubḥihā* or more briefly *Madkhal al-sharʿ al-sharīf ʿala'l-madhāhib*, in which he attacks the innovations (*bidaʿ*) which had spread amongst the Musulmans of the East. It is printed in 3 volumes in Alexandria, 1293, and in Cairo, 1320. He further wrote a mystical book on the secrets of the letters of the alphabet, *Shumūs al-anwār wa-kunūz al-asrār*.

Bibliography: Goldziher, *Das Patriarchengrab in Hebron nach al-ʿAbdarī*, in the *Zeitschr. d. Deutsch. Palästinavereins*, xvii. 115—122; *Fihrist ...... al-Kutubkhāna al-Khidīwīya*, v. N°. 346; Brockelmann, *Gesch. d. arab. Litter.*, ii. 83.

(BROCKELMANN.)

ĀBDAST (P.), ablution. [See WUḌŪʾ.]

ʿ**ABDĪ** (abbreviation of ʿAbd al-Raḥmān), an Ottoman historian, was brought up as a page (*ič oghlān*) at Galata-Serai; he was entrusted by the sultan Muḥammed IV to write the annals of his reign and the sovereign condescended to collaborate with him, drawing some insignificant facts to his notice. He was appointed private secretary (1079 = 1668); in the following year he took the place of ʿAbdī Pasha as Nishāndji (scribe appointed to make out the *tughra* and was promoted to the rank of vizier. He was chosen as Ḳāʾim maḳām during the campaign of Cehryn (8th Rabīʿ II 1089 = 30th May 1678). In 1093 (1682) he was appointed governor of Baṣra and from that moment he stopped writing his annals. He died governor of Candia (1102 = 1690), adored by his subordinates on account of his love for justice. His history (*Taʾrīkh-i Nishāndji ʿAbd al-Raḥmān Pasha*) extends from 1054 (1648) to 1093 (1682).

Bibliography: Hammer-Purgstall, *Gesch. des osman. Reiches*, see index. (CL. HUART.)

ABDJAD (or ABUDJAD), the first of the 8 *voces memoriabiles*, with which the Arabs used to designate the letters of their alphabet. These eight words are usually pronounced as follows: *abdjad hawwaz ḥuṭṭiy kalaman saʿfaṣ ḳarashat thakhadh ḍaẓagh*. The Maghrib Musulmans arrange the last four words as follows: *saʿfaḍ ḳarasat thakhadh ẓaghash*.

The order of the letters — only the consonants are to be counted — in this series is the same as in Hebrew and Aramaic, and thus, together with the paleographic proofs, confirms the theory that the Arabs have received their alphabet through the Nabataeans. The six letters peculiar to Arabic alone have been placed at the end of the series. The above order has, besides these 8 mnemonic words which in themselves are meaningless, been preserved to the present day in the use of the letters as numerals, again analogously to the Hebrew and Aramaic; from ʾ to ḳ they are used for 1—100 and the remaining nine as hundreds up to 1000.

Side by side with this old order, which takes us back to the origin of the Arabic alphabet, the order as used at the present day was early evolved. It grew out of the idea of putting letters of the same graphic form behind the first letter which occurs under this form, so that, for instance, ت and ث come behind ب etc., only ه, و and ى are placed at the end. The Maghribine alphabet has preserved the order thus obtained to the present day.

ا ب ت ث ج ح خ د ذ ر ز ط ظ ك ل م ن ص
ض ع غ ف ق س ش ه و ى

In the East Islāmic order adopted by European scholars the original form already so completely unrecognizable is further altered; it is impossible to recognize in it any underlying principle exactly carried out, but it is seen that phonetic considerations have had some influence. Together with these two popular forms of the alphabet, a few scholars have arranged the letters entirely on a phonetic-physiological basis in such a manner that the sounds produced lowest down in the throat, the gutturals, are at the beginning and those produced in the front of the mouth, the labials, at the end. Thus the order given by al-Khalīl in his *Kitāb al-ʿain* is as follows:

ع ح ه خ غ ق ك ج ش ض ص س ز ط د ت
ظ ذ ث ر ل ن ف ب م و ا ى

Likewise are those given by al-Azharī in the *Tahdhīb* and Ibn Sīde in the *Muḥkam*.

The Hebrew-Aramaic origin of the Arabic alphabet is beyond doubt, yet the Arabs, entirely ignorant of the other Semitic languages, and being besides prejudiced in consequence of their profound self-consciousness and pride of descent, have sought for other explanations of the origin of the mnemonics

'abdjad etc., handed down to them by tradition. All that they have said about it is, however interesting it may be, to be put down as fabulous. According to some, six kings of Madyan had based the order of the Arabic alphabet on their own names; according to another tradition, the first six words are the names of demons, and finally according to a third, they were the names of the days of the week. Silvestre de Sacy has pointed out that in these traditions only the first six words are used and that, for instance, Friday is not *thalâtha* but *'arûba*; but to assume that Arabic originally had but 22 letters is not, on the grounds of this vague tradition, scientifically admissible (comp. de Sacy, *Grammaire arabe*, 2d ed., i. § 9). For the rest there have been also amongst the Arabs judicious grammarians, as al-Mubarrad and Sîrâfî, who were not satisfied with the traditional explanation of the *'abdjad*, but frankly declared that the words must be of foreign origin.

Relying on the properties of the letters as representing numerical values, the mystics early made use of the words *'abdjad* etc. as incantations and magic charms. To each of the letters ا to غ there corresponds according to this system a name of God and certain other powers of nature, and on the basis of this mutual relationship of numeral and letter on the one side, and the symbols corresponding to them on the other, a whole system of practical mysticism has been erected. Thus for instance the introductory formulae of the incantations are added together as numbers letter by letter and the resulting total again brought into relation with the world of the *Djinn*. An analogy to this use of letters is found in the Jewish practical Cabala of the Middle Ages.

Bibliography: Hughes, *Dict. of Islâm*, s. v. *Da'wah*; Lane, *Arab. Engl. Lex.*, s. v. *Abdjad*; *Tâdj al-'Arûs*, s. v. *bdjd*; *Fihrist* (ed. Flügel), i. 4-5; Cantor, *Vorl. über Gesch. d. Math.* (3d ed.), i. 709. (WEIL.)

ABEL. [See HÂBÎL.]

ABEN, ABN, AVEN, pronunciation of the Spanish Arabs for *ibn*, "son". Hence: Avicen(n)a = Ibn Sînâ; Averroes = Ibn Rushd; Avempace = Ibn Bâdjdja; Aben Pascualis = Ibn Bashkuwâl; often also by the Spanish-Arabic Jews, as Avencebrol, Avicebron = Ibn Gabirol; Abendana; Abenatar; [see also ABENCERAGES]. — The classical form *ibn* also occurs though rarely; comp. Pedro de Alcalá, s. v. *hijo* = *ibn* and *Anales Toledanos*, II: Ibnahâmer, a surname of Almanzor [comp. KUNYA]. (C. F. SEYBOLD.)

ABEN RAGEL = IBN ABI RIDJÂL. [See ALBOHAZEN.]

ABENCERAGES (also ABENCERRAGES), an Arabian noble family, whose name occurs only in the mythical history of the last days of Granada, and who are said to have been treacherously murdered by Boabdil in the Alhambra. The myth no doubt refers to executions under Abu'l-Hasan 'Alî (1461—1482); comp. Müller, *Der Islam im Morgen- und Abendland*, ii. 672, 676, who, however, also endeavors (as does Schack, *Poesie und Kunst der Araber in Spanien und Sicilien*, 2d ed., ii. 135: Ibn al-Sarrâdj) to derive the name from Ibn Sarrâdj, "the son of the saddler" (as the name of a former vizier), whilst in my opinion only the family of the Banû Sirâdj, whose native town was Cordova, and who probably emigrated to Granada, can be taken into consideration. The pronunciation of the word in Spanish also supports this: Abencer(r)aje (French: Abencérage); comp. in al-Makkarî and in the *Bibliotheca Hispano-Arabica* names such as Sirâdj b. Sirâdj; Gayangos, *History*, i. 315; ii. 26, 370, 403, 541.

(C. F. SEYBOLD.)

ABESHR, ABESHE, capital of Wadai in Central Sudan, 14° north lat. and 21° east long, to the south of the old capital Wara. It was founded in 1850, has from 20000 to 30000 inhabitants. [Comp. WADAI, where also will be found a bibliography.]

ABHAR, an ancient town in Persia, between Kazwin and Zandjân fortified by a citadel as early as under the Sâsânides. In the year 24 (645) it was conquered by the Muhammedans under al-Barâ' b. 'Âzib, the governor of Rai. Though in the Middle Ages it was a fairly important town, it has now sunk to the position of an insignificant place.

Bibliography: Barbier de Meynard, *Diction. géogr., hist. et littér. de la Perse* (Paris, 1861), p. 11; G. le Strange, *The Lands of the Eastern Caliphate* (Cambridge, 1905), p. 221 *et seq.*

AL-ABHARÎ ATHÎR AL-DÎN MUFADDAL B. 'OMAR, a philosophical writer, concerning whose life nothing is known; died in the year 663 (1264; according to Barhebraeus as early as 1262). He was the author of two greatly used and often commented works on scholastic philosophy: 1) *Hidâyat al-hikma*, in three parts, *a.* Logic (*al-Mantik*); *b.* Physics (*al-Tabî'iyât*); *c.* Theology (al-Ilâhiyât). Amongst the commentaries the best known is that of the Indian Mîr Husain al-Maibudî, written in 880 (1475), printed at Calcutta, lithographed at Lucknow (n. d.). — 2) *Kitâb al-îsâghûdjî*, an adaptation from the *εἰσαγωγή* of Porphyrius. Of the commentaries that of Shams al-Dîn Ahmed al-Fanârî (died in 834 = 1430) was printed in 1820 at Constantinople and further glosses to the commentaries of Zakariyâ' al-Ansârî (died in 926 = 1520) by al-Hifnâwî (died in 1178 = 1764) were published in Cairo in 1305, 1306, 1310. Besides the above, al-Abharî wrote three small astronomical treatises; comp. Brockelmann, *Gesch. d. arab. Litter.*, i. 464. (BROCKELMANN.)

ABHUR, plur. of *bahr* [q. v.].

ABÎB is the designation used by the Arabs for the month of *Epiphi* which occurs in the calendar of the Egyptians or Copts (*Ta'rîkh al-Kibt*); comp. also the *Hodesh hâ-Âbîb* of the ancient Hebrews (Exodus, xiii. 4).

(E. MAHLER.)

'ÂBID (A.), plur. *'abada* or *'ubbâd*, worshiper of God.

'ABÎD B. AL-ABRAS, a pre-Islamic poet of the tribe of Asad b. Khuzaima (Mudar). More exact data concerning his life are not known; he was a contemporary of al-Nâbigha al-Dhubyânî, and lived, highly esteemed as a poet, a great deal at the court of al-Hîra. His poems which have been handed down to us are distinguished by their flexibility of language and lively descriptions. Several anecdotes about him are to be found in the *Kitâb al-Aghânî*, which also tells of his violent death at the hands of King al-Mundhir b. Mâ' al-Samâ'.

ĀBIĶ (A.), a runaway grown up slave.

ĀBISH, a Salghuride princess, a daughter of Atabeg Sa'd b. Abū Bekr. After the death of Seldjūkshāh (1264) she was appointed to rule over Fārs by Hulāgū and married his son Mengu Timūr. She, however, ruled in name only, for the Mongols were the actual masters of the country, and died in Tibriz in 1287. The dynasty of the Salghurides [q. v.] became extinct with her.

Bibliography: D'Ohsson, *Hist. des Mongols*, iii. 402.

ABĪWARD, a town east of Nisā' (Nasā), probably the present Muḥammedābād, and lying to the west of Merw, once belonging to the Persian province of Khorāsān, now to Russian Turkistān. Abīward is mentioned as the see of a Syrian bishopric in the 6th century. For the name (also abbreviated Bāward) comp. Nöldeke, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxxiii. 147, and Marquart, *ib.*, xlix. 628.

Deutsch. Morgenl. Gesellsch.*, xliii. 403, 407. (Streck.)

al-**ABĪWARDĪ** Muḥammed b. Aḥmed Abu'l-Muẓaffar, an Arabian poet and genealogist, of Umaiyad descent from the branch of the younger Mu'āwiya, a descendant of 'Anbasa b. Abū Sufyān, born in Abīward in Khorāsān, or according to al-Sam'ānī in the village of Kūḳan in the neighborhood of the latter town, for which reason he is also called al-Kūḳanī, died from poison at Iṣpahān in the year 507 (1113; not in 557 = 1161-1162, as in the Būlāḳ edition of Ibn Khallikān). His linguistic and historical-genealogical works, amongst which a history of Abīward and a work on the difference and identity of Arabian tribal names are especially mentioned, have been lost; the latter work, however, was extensively made use of by Muḥammed b. Ṭāhir al-Maḳdisī b. al-Ḳaisarānī. Of his Dīwān only the three most important divisions have each been preserved separately in several manuscripts: *al-Nadjdiyāt*, *al-'Irāḳiyāt* (mostly about the caliphs al-Muḳtadī, 467—487 = 1075—1094, al-Mustaẓhir, 487—512 = 1094—1118, and their viziers) and *al-Wadjdiyāt*. A selection of smaller poems, *Muḳaṭṭa'āt al-Abīwardī al-Umawī*, appeared in Cairo in 1277 (1860-1861).

Bibliography: Ibn Khallikān (ed. Wüstenf.), N°. 646; Abu 'l-Fidā', *Mukhtaṣar*, vii. 380; Yāḳūt, *Mu'djam*, i. 111; Wüstenfeld, *Die Geschichtsschreiber der Araber*, p. 223; Brockelmann, *Gesch. d. arab. Litter.*, i. 253. (Brockelmann.)

ABKĀRIUS Iskender Agha b. Ya'ḳūb, a born Armenian, who lived in Beyrout and had devoted himself enthusiastically to the study of Arabic poetry. His work *Nihāyat al-arab fī akhbār al-'Arab* (Marseilles, 1852; a revised edition as *Tazyīn nihāyat al-arab*, Beyrout, 1858) was formerly much used also in Europe, but must now be considered obsolete since his authorities, viz. the *Kitāb al-Aghānī*, as well as the *Khizānat al-adab* of 'Abd al-Ḳādir al-Baghdādī, are accessible to us. A third edition of his *English-Arabic Dictionary* appeared in Beyrout as late as 1892. A history of Lebanon is to be found in manuscript in the Cairo Library (*Fihrist ... al-kutubkhāne al-khidīwīya*, v. 171). — Abkārius died in 1303 (1885). (Brockelmann.)

ABKHĀZ, a tribe of West Caucasia, on the Black Sea. The country of Abkhāzia comprises the region extending from the main ridge of the Caucasus to the sea-coast, between Gagry in the north and the mouth of the Ingur in the south. Before the union with Russia it was divided politically into three parts: 1) Abkhāzia proper, on the coast from Gagry to the Galidaga under the princely family of Sherwashidse; 2) the Highlands of Tsebelda (without any centralized government); 3) the country of Samurzakan on the coast extending from the Galidaga to the Ingur (ruled by a branch of the house of Sherwashidse, subsequently united with Mingrelia). Since the 17th century a portion of the tribe has crossed the main ridge and settled on the southern tributaries of the Kuban. In the thirties of the 19th century the population of Abkhāzia was estimated at about 90000 and the number of all the Abkhāz at 128800 souls. Philologically the Abkhās language is considered as representing a special family of the Caucasian languages.

The Abkhāz are mentioned in the ancient times as Abaskoi (by Arrian) or Abasgi (by Pliny); according to Procopius (5th century A. D.) they were under the sovereignty of the Lazes (*Lazoi*); in those days slaves (eunuchs) were brought to Constantinople from Abkhāzia. Subjugated by Justinian and converted to Christianity, about the year 800 A. D. the Abkhāz won their independence with the help of the Khazars; the prince (eristaw) Leo II, married to a Khazar princess, assumed the title of king. Under the governor of Tiflis, Isḥāḳ b. Ibrāhīm (c. 830—853), the Abkhāz are said to have paid tribute to the Arabs; geographical reasons alone sufficed to put any idea of really subjugating the country out of the question. The most prosperous period to the Abkhaz kingdom was between 850 and 950; the kings ruled over Abkhāzia, Mingrelia, Imeretia and Kartalinia and also interfered in Armenian affairs. Since that period Georgian has remained the literary language and the language of the educated classes in Abkhāzia. After the extinction of the dynasty (at the end of the 10th century) the throne went to the Georgian Bagratides (Bagratunians), but Abkhāzia still did not lose its importance for the whole kingdom. In Arabian and Persian sources up to the Mongolian epoch, the Bagratides are always called „Kings of the Abkhāz"; the Byzantine Cedrenus designates the king of Georgia as Μάγιστρος (or ἐξουσιαστής) 'Αβασγίας; even in the form of the title as used by the kings themselves the title of „King of the Abkhāz" takes the first place. The origin of the dominion of the Bagratides is also to be looked for in the West (on the Čorokh and Rion). About the year 1325 the house of Sherwashidse (alleged to be descended from the dynasty of Shīrwān-shāh) was enfeoffed with Abkhāzia; in 1462 (under King Bagrat II) the confirmation of the Sherwashidse as princes (eristaw) of the country took place. In the Turkish epic *Kitāb-i Ḳorḳud* (probably originated about the year 1400 in the Armenian plateau; only MS. extant in Dresden; comp. Barthold, in the *Zapiski wost. otd. russk. arkheol. obshč.*, viii. 203-204) the Abkhāz together with the

Greeks of Trebizond are called the enemies of the Muslims; a hero, offended by his people, will „go to the tribe of the Abkhāz, take a golden cross in his hand and kiss the hand of a man clothed in the chasuble (pilun)". According to a letter from the emperor of Trebizond in the year 1459, the princes of the Abkhāz are said to have disposed of an army of 30000 men.

After the settlement of the Ottomans on the east coast of the Black Sea, the Abkhāz could not escape the Turkish dominion and the influence of Islām, although Christianity was but slowly supplanted. The Dominican John of Lucca asserts that still in his time (1637) the Abkhāz passed as Christians although the Christian usages were no longer observed. Since the separation from Georgia the country had been under its own Catholicos (for the rest mentioned as early as the 13th century) in Pitsund. Up to the present day the ruins of eight large and about 100 small churches, including chapels, are said to exist in Abkhāzia. The house of Sherwashidze did not embrace Islām until the second half of the 18th century (Prince Leon), at the same time recognizing the Turkish sovereignty. On this account he was given the fort of Sukhum, which had already been besieged by the Abkhāz about 1725—1728. After the union of Georgia with Russia in 1801, the Abkhāz had also to put themselves in relation with this powerful neighbor. The first attempt was made in 1803 by Prince Kelesh-Beg, but was abandoned soon afterwards. Only after the assassination of this prince in 1808 did his son Sefer-Beg get into closer touch with Russia, and claimed its help against his brother, the parricide Arslan-Beg. In 1810 Sukhum was taken by the Russians; Sefer-Beg, who had become converted to Christianity and assumed the name of George, was installed as prince, but nevertheless Sukhum has since that time always been occupied by a Russian garrison. The two sons of Sefer-Beg, Demetrius (1821) and Michael (1822, after the poisoning of his elder brother) had to be put in power by the Russians with armed force. Their power, moreover, was limited to the neighborhood of Sukhum, whose garrison could only remain in communication with the other corps by the sea route. By the incorporation of the whole coast-line from Anapa to Poti, based on the Peace of Adrianople in 1829, Russia's position was naturally strengthened, but even in 1835 only the north-western part of the country, the district on the Bzyb, is said to have been in the possession of Prince Michael. The other parts had remained under the dominion of his Muḥammedan uncles. Later on the prince succeeded, with the help of Russia, in establishing firmly his power, and, contrary to all his predecessors, in acting towards his subjects almost like an absolute ruler, but he too, in spite of his Christian faith, had surrounded himself with Turks.

After the final subjugation of West Caucasia by the Russians (1864) the dominion of the House of Sherwashidze, like that of the other native princes, came to an end; as early as November 1864 Prince Michael had to renounce his rights and leave the country. Abkhāzia was incorporated into the Russian empire as a special province (*otdyel*) of Sukhum and divided into three districts (*okrug*) — Pitsund, Očemčiri and Tsebelda. An attempt made by the new government to get for the purpose of taxation more exact information concerning the economic conditions of the Abkhāz, led to a revolt in 1866, and, after this had been repressed, to the emigration of a great part of the Abkhāz to Turkey, causing the population to decrease from 70000 to 65000, it is said. The almost depopulated district of Tsebelda ceased to be a district and was placed under a special „Settlement Curator" (*popečitel naselenīya*). At present the whole of Abkhāzia under the name of district (*okrug*) of Sukhum-Kale (Sukhum-Ḳal'a) forms a part of the government of Kutais. The population has been greatly diminished by fresh emigration and especially after the participation of the Abkhāz in the rebellion of the Highlanders (1877) caused by the landing of Turkish troops; in 1881 the number of Abkhāz was estimated at about only 20000.

Under the superintendence of General Bartholomew, the owner of the well-known collection of coins described by Dorn, a book on Biblical history has been published by the „Society for the Restoration of Orthodox Christianity in the Caucasus", the work being done by three native Abkhāz: the priest Gečia and the officers Margani and Kortsikidze. An attempt to introduce the Abkhāz language as a school subject in the gymnasium of Novočerkask failed completely.

'ABLA, Arabic woman's name, for example, that of the sweetheart of 'Antara [q. v.].

AL-**ABLAḲ**, the name of a strong castle which belonged to the Jew Samaw'al (Samuel) b. 'Ādiyā' [q. v.], so called on account of the variety of its colors (*Bibliotheca Geograph.*, ed. de Goeje, vi. 128 *et seq.*; vii. 179; viii. 258). This castle became proverbial for its resistance to every assault, for which reason it is sometimes described under the name of *al-Ablaḳ al-fard* (al-Ablaḳ the incomparable). According to two verses of Samuel (*Aghānī*, ii. 45; Ḥarīrī, *Maḳāmāt*, 2d ed., p. 278), al-Ablaḳ had been built by 'Ādiyā', the father (or grandfather) of Samuel. But al-A'shā, singing the praises of the castle and of its owner, through whom he had recovered his freedom, says that al-Ablaḳ was built by King Solomon. If we must give credence to legend, the building was at any rate older than it is said to be in the verses of Samuel mentioned above. For the story goes that the famous queen al-Zabbā', who lived in the third century, tried unsuccessfully to seize Mārid — another strong castle — and al-Ablaḳ, that which gave rise to the proverb: „Mārid proved rebellious and al-Ablaḳ inaccessible" (Freytag, *Arab. Proverb.*, i. 218). Al-Ablaḳ is mentioned again in the case of the cuirasses of Imru'u 'l-Ḳais, which the latter had entrusted to Samuel b. 'Ādiyā', when he went to implore the emperor Justinian II to aid him against his father's murderers (comp. de Slane, in the preface to his edition of the Dīwān

of Imru'u 'l-Kais). Al-Ablaḳ was, in the time of Yāḳūt, in ruins. This author adds that the ruins are near Taimā' [q. v.] and that the sun-baked bricks of which the castle was built do not in anyway show its ancient strength, which had been so much extolled. It is a remarkable fact that whilst the name of Mārid has remained until our own days, and that travellers like Palgrave and Euting (*Tagebuch* i. 125) have visited its ruins, the name of al-Ablaḳ is not mentioned by any traveller, not even by Benjamin of Tudela, the Jewish traveller of the twelfth century, who generally failes not to mention any remarkable fact of Jewish history.

Bibliography: Yāḳūt, *Mu'djam*, i. 94 *et seq.*; al-Bakri (ed. Wüstenf.), i. 62; *Ḳāmūs*, s. v. *balaḳ*; *Revue des Études Juives*, vii. 176 *et seq.* (M. SELIGSOHN.)

AL-**ABNĀ'**, literally „the sons":

1. The descendants of Sa'd b. Zaid Manāt b. Tamīm, with the exception of his two sons Ka'b and 'Amr. This tribe dwelt in the sandy plain of al-Dahnā'.

2. The descendants of the Persian immigrants born in Yemen. Even in early times the Ethiopians, who had since long cast covetous glances towards the Arabian coast lying opposite them, had sent military expeditions against Yemen, and as their attacks were in the course of time repeated with increasing success, they at last became dangerous not only to the population of Yemen, but also to the Persian vassals in al-Ḥīra. For this reason the inhabitants of Yemen were obliged to seek assistance from the Persian king Khosrew I Anūshirwān (531—579). According to the usual account, Saif b. Dhī Yazan, a descendant of the old Ḥimyarite royal family, turned up in Ctesiphon where he succeeded in inducing the king of the Persians to undertake a campaign against South Arabia. Through the united forces of the South Arabians and the Persians under the command of Wahriz, the Ethiopians were certainly driven back for some time and Saif made king. After the withdrawal of the foreign auxiliary forces Saif was, however, murdered and his country again subjugated, causing Wahriz to return with a stronger army. The resistance of the Abyssinians was now completely broken up and Yemen transformed into a Persian vassal state. Later on the Persian governor Bādhām (Bādhān) and his family were converted to Islām and by doing so recognized Muḥammed's sovereignty. Subsequently, however, troubles broke out in Yemen and soon brought about a state of anarchy, nor was order restored before Abū Bekr's reign.

3. Under the 'Abbāsides [q. v.] the descendants of the first followers of this dynasty were called al-Abnā' (abbreviated from Abnā' al-Da'wa).

ZETTERSTÉEN.)

ABNIYA. [See BINĀ'.]

ABRAHA. (Ethiopic form for Abraham) with the surname AL-ASHRAM, an Ethiopian governor of Yemen about the middle of the 6th century C. E. According to Procopius, who makes him out to have originally been the slave of a Roman in Adulis, he put himself at the head of an uprising against the Ethiopian king (Ela Aṣbeḥa) and took prisoner the then governor of Yemen, Esimiphaeus, the Sumaifa' of the inscription of Ḥiṣn al-Ghurāb. He repeatedly defeated the army sent out against him; but after the death of the king he submitted to the payment of tribute to the latter's successor, and was recognized by him as viceroy. The year 531 serves as *terminus a quo* of his rule, when Esimiphaeus was still governor. With this account of Procopius the Arabian legends agree in so far as they relate in various forms that he fought against a generel named Aryāṭ sent against him by the Ethiopian king, and was finally reconciled with the latter. It is therefore certainly wrong to make the Ethiopian king appoint the pious Christian Abramios as viceroy as early as the year 525 (directly after the conquest of Yemen) as is stated in the Acts of St. Arethas. This same Abraha has lately been unexpectedly brought nearer home to us by the Dam Inscription, found and published by E. Glaser. In this Abraha calls himself „Vassal Prince of the Abyssinian King, King of Saba, Raidan, Ḥaḍramawt, Yamanat and of the Arabs of the Highlands and of the Coast." As the most important event of his reign the inscription mentions that in the year 657 (i. e. according to the usual estimate 542 A. D., according to Glaser, however, perhaps 539) a number of embassies came to Ma'rib, amongst them those of the two rival powers of Byzantium and Persia. When the great war between these two states broke out in the year 540, Abraha in spite of all the efforts of the Byzantine emperor did not take part in it at first. It was only later that he allowed himself to be persuaded to make an attack on the Persians, which, however, according to Procopius, he soon abandoned. This campaign, which certainly could not have taken place before the year 570, can be placed side by side with what the Arabian legends, based on Ḳor'ān, cv. relate of his unsuccessful attack on Mecca and the Ka'ba. Side by side with the legendary embellishments, which are indeed in the Ḳor'ān, there is found in the stories the prosaic statement that at that time an epidemic of small-pox broke out, and it may well be assumed that it was this calamity which brought about Abraha's retreat, or at any rate gave him an excuse to abandon this difficult campaign. The year of this event, the so-called "Elephant Year" — from the elephants which Abraha is said to have had with him, — is calculated by later authorities to be 570 A. D., and is generally taken to be the year of Muḥammed's birth. Nöldeke has, however, rightly pointed out the fact that between the attack on Mecca and the conquest of South Arabia in 570 there is no time left for Abraha's further reign and that of his sons. Further Wellhausen has conjectured that what is related of the attack of a Tubba' on Medina really refers to a former episode in this same campaign of Abraha's. The statement of Greek writers and of the Arabian legends that Abraha was a Christian has been confirmed by the above-mentioned inscription which begins with an invocation to the Trinity. The church in Ma'rib, the consecration of which is mentioned therein forms a pendant to the church built by Abraha in San'ā', which according to the Arabs is said to have been an incomparable piece of architecture.

(F. Buhl.)

ABRAHAM. [See IBRĀHĪM AL-KHALĪL.]

ABRASHAHR, the more ancient name of Nīsābūr or Nīshāpūr [q. v.].

'ABS, the name of several Arabian tribes, also that of persons and the name of a mountain as well as of a river in the territory of the Banū Asad. To the root *'bs* belong besides the names 'Abas, 'Abasa, 'Ābis, (al-)'Abbās, 'Ubais; Safaitic עבסם · עבסן; Palmyrenian עבסא · עבסי ([illegible]), Nabataean עבישת ([illegible]); all probably from *'abasa* „to frown". It is to be observed, however, that an appellative adjective *'abs* does not occur; perhaps therefore as *rafḳat* = *ṣaḥb*, or collective of *'ābis*, as *ṣaḥb* of *ṣāḥib* (the plural tribal names of *Kilāb* and *Anmār* also occur as names of persons).

Besides the best known 'Abs, with which we have alone to deal here, and which together with the Dhubyān and Anmār form the group of Baghīḍ amongst the Ghaṭafān, there were also tribes of the same name amongst the Asad, Ḥanīfa, Hawāzin b. Aslam (a Khuzā'a tribe), 'Amr b. Ḳais 'Ailān and 'Akk. See the sub-tribes of 'Abs in Wüstenfeld, *Geneal. Tabellen*, H.

The dwelling-places of the 'Absites were situated in the central part of the Wādī'l-Rumma, the largest valley of the Nedjd, here running from west to east. Their neighbors were in the East the Asadites, who dwelt in the Lower Wādī'l-Rumma, in the West the Kilābites occupying the Upper Wādī'l-Rumma. The 'Absites possessed the lower and the Asadites the upper portions of the Wādī Thādiḳ and the Wādī Djuraiyir. They shared the water Khubaib with the Ashdja'ites.

Mountains mentioned as belonging to the 'Absites are: Abān (the white one, the black Abān belonging to the Fazāra—both of them striking mountains between which the Wādī'l-Rumma flows), al-Aim (a landmark), al-An'amān, Ḳalhā, al-Ḳalīb, Ḳaṭan, al-Khaima, Rummān or Rummatān (two hills), Sabādj (a solitary, massive mountain), Tisān (a landmark), Ubāl (on the great road from Medina to Baṣra). Further the Ḥarrat al-Nār and the Ḥarrat Radjil belonged to the 'Absites.

'Absite waters: al-'Āḳira, Baḳ'ā' (brackish), Dailam, Dhāt al-Isād, al-Djadd, Djafr al-Shaḥm, Djuraiyir, al-Ghamrīya, al-Ghubāra, Habdjarā, Ḥusā', Ḳarwarā, Khubaib, al-La'ā, Māwān, Milḥaba, al-Minhā, Mudarradj, al-Muḳanna'a, Nāṣim, Shardj, al-Sulai', Thādiḳ, al-Thaiyila, Wabal, Zunḳub.

Settlements of the 'Absites: Dhāt al-Ḥawāl, Dhāt al-'Ushaira or Dhāt al-'Ushar (far in the East, west of Māwīya, on the pilgrims' road from Baṣra to Mecca; perhaps not settled by 'Absites before the Muḥammedan epoch), Djilb, Ḳalhā, al-Khaima, Māwān, Rabada, al-Zawāiya. — At the time of the Muslim wars of conquest many 'Absites came to al-Madā'in. A great number remained there when the majority of them went to the newly-founded Kūfa, where they had their own mosque in the quarter named after them. The 'Absites were also among the tribes which under 'Amr conquered Egypt. Like other Arabs they had their special place in Fusṭāṭ; 'Absites are also mentioned as being in Bilbīs near Fusṭāṭ. 'Absites in Maghrib are said to have given a mountain there the name of Ḳaṭan, after a mountain in their native country (see above).

Historical. The tribe of 'Abs is said to have belonged to the three *Djamarāt* (who never made alliances). Although not precisely large it is said to have been respected. Many feuds are mentioned: with the Asad, Badr, Ḍabba, Djusham, Fak'as, Ghanī, Ḥanẓala, Kalb, Sa'd b. Zaid Manāt, Sulaim, Ṭaiy' (it was a Ṭaiyite who killed 'Antara), Tamīm, Yarbū'. Part of these feuds belong to the Dāḥis War (with the sister-tribe of Dhubyān) in the second half of the sixth century A. D. This war, many episodes of which are related, is the best known event of the pagan period. It broke out in consequence of the disloyal conduct of the Dhubyānites at a horse race, was prolonged for decades into Islamic time and caused great losses on both sides. These unfortunate battles of the 'Absites against the numerically superior coalition of their enemies forced the tribe to make several migrations. The 'Absites also claim to have had their monotheist in the heathen period, namely Khālid b. al-Sinān. Some are said to have accepted Islām at an early date, but the whole tribe followed suit much later. After Muḥammed's death they joined, after much hesitation, the Asadite Anti-Prophet and rebel Ṭulaiḥa, but were repeatedly beaten by the Muḥammedans and lost a great part of their pasture lands. In Mu'āwiya's time they unsuccessfully resisted the Nedjdites. Under 'Abd al-Malik, whose wife Wallāda was an 'Absite, they were happy and prosperous, as also under his sons al-Walīd and Sulaimān. Later on, too, we still meet with 'Absites. In the first half of last century, three or four days' journey to the north of Yanbu' on the Djebel Hassanī on the island of al-Ḥarra laying opposite, there were a few 'Absite families of fishers, who as late as the beginning of the 18th century had still formed a numerous tribe. They were shepherds and sailors and but little respected.

'Allān al-Shu'ūbī wrote *Mathālib* of the 'Absites, which, however, has not been preserved.

(Reckendorf.)

AL-**ABSHĪHĪ**, wrong spelling of Ibshīhī [q. v.].

ABŪ, that form of the word *ab* (father) which is used with a following genitive in order to designate a person, animal or any thing whatever as the possessor of a thing, a state or a property. This combination is most natural when anybody is called after his son (more rarely after his daughter) and for this reason many Arabian masculine names are compounded with *Abū* (sometimes abbreviated to *Bū*). Such a name is, it is true, not the real name of the person but his surname (*Kunya*), which, however, is generally so frequently used in every day life when addressing the person, that the real name often gets forgotten. Such com-

pound names are greatly adapted to nicknames, and popular etymology has to be taken into account when explaining them. Examples follow below. [Comp. KUNYA.]

ABŪ 'L-'ABBĀS AL-SAFFĀḤ, the first 'Abbāside caliph. His real name was 'Abd Allāh: but to distinguish him from his brother, the subsequent caliph Abū Dja'far 'Abd Allāh al-Manṣūr, he was usually called Abu'l-'Abbās. His father Muḥammed b. 'Alī was a great-grandson of the Prophet's uncle; his mother's name was Raiṭa bint 'Ubaid Allāh b. 'Abd Allāh. On account of their relationship to the Prophet, the 'Abbāsides thought they had stronger claims to the caliphate than the Umaiyads, and on this account early began to intrigue against the ruling dynasty. This was especially the case with Muḥammed, the father of Abu'l-'Abbās, and his work was continued by his sons, first by Ibrāhīm, then by Abu'l-'Abbās and Abū Dja'far. According to the usual account, the latter was the elder, but he renounced his rights in favor of his brother. In Ramaḍān 129 (June 747), the black flag, the ensign of the 'Abbāsides, was unfurled in Khorāsān. The Umaiyad troops were defeated, Kūfa surrendered and in the year 132 (749) Abu'l-'Abbās had himself proclaimed caliph in that place. The town became the temporary residence of the new dynasty. The last Umaiyad caliph Marwān II, in Djumādā II 132 (Jan. 750) suffered a decisive defeat on the Upper Zāb and was soon afterwards killed. Now the great point was to secure the throne against any danger from the Umaiyads, and the new caliph saw to this in the most dreadful manner. By force and by cunning the descendants of the previous reigning family were got rid of by the caliph and his uncles 'Abd Allāh and Dāwūd. In his speech from the throne in the Great Mosque of Kūfa, Abu'l-'Abbās called himself the „pitiless blood-shedder" (*al-Saffāḥ*) and he honestly did his best to make himself worthy of this terrible name. The Umaiyads were, however, not the only victims of his bloodthirstiness. The new caliph had many difficulties to face, but in every case the opposition was broken down with the greatest severity. For the rest Abu'l-'Abbās found but little time to care for the development of his empire. This task was reserved for his successor al-Manṣūr, who indeed appears to have played during his brother's reign an important rôle as governor and counsellor. In Dhu'l-Ḥidjdja 136 (June 754) Abu'l-'Abbās died at Anbār on the Euphrates, at the age of about thirty, after having had homage paid to his brother as his successor to the throne — according to the usual tradition.

ABŪ 'ABD ALLĀH AL-MUḤTASIB or AL-SHĪ'Ī, as he is also called, the establisher of the Fāṭimide rule in Africa. His real name was al-Ḥusain b. Aḥmed b. Muḥammed, and was a native of Ṣan'ā' in Yemen; his surname al-Muḥtasib is said to be due to the fact that he was a market overseer (*Muḥtasib*) in al-Baṣra or somewhere else in the 'Irāḳ. Later on he was chosen by the Ismā'īliya propaganda to work amongst the Berbers as an emissary. He therefore made the acquaintance of some Berber pilgrims in Mecca and was taken by them to their native country. In 280 (893), or according to others in 288 (901), Abū 'Abd Allāh began his work amongst the tribe of Kotāma and with such success that almost the whole tribe rose up under his leadership and soon became dangerous to the Aghlabides [q. v.]. Thereupon the Mahdī, 'Ubaid Allāh [q. v.], whose speedy coming had been announced by Abū 'Abd Allāh, started on his journey to the West, but was nevertheless attacked and kept a prisoner in Sidjilmāsa. Meanwhile Abū 'Abd Allāh after several battles succeeded in breaking the power of the Aghlabides and in occupying their residence, Raḳḳāda [q. v.] in the year 296 (909). Thereupon he took Tāhert, the seat of the Banū Rostem, and Sidjilmāsa, where the Banū Midrār held the power. Here he set free the Mahdī, who made his entry into Raḳḳāda on the 29[th] Rabī' II 297 (15[th] January 910), and who conferred great honors on his rescuer as well as on the latter's brother, Abu'l-'Abbās Muḥammed. But suspicion arose between the ruler and his servitors, and the former did not hesitate to have them both murdered in the year 298 (911).

ABŪ 'ABD ALLĀH YA'ḲŪB B. DĀWŪD, a vizier. Ya'ḳūb, who is eulogized by Arabian writers not only on account of his learning but also for his noble and amiable character, had joined the two 'Alide rebels Muḥammed and Ibrāhīm b. 'Abd Allāh. He was on account of this, together with his brother 'Alī, thrown into prison by Caliph al-Manṣūr after the suppression of the uprising, and only received his liberty from the latter's son and successor Muḥammed al-Mahdī. By means of giving skilful advice he managed to win the confidence of this ruler and after being appointed vizier in 163 (779-780) he gradually succeeded in making himself almost omnipotent in the 'Abbāside Court. Nevertheless the doughty vizier at last fell a victim to the envy of his ambitious adversaries. The reason of his fall is stated in different ways. According to some accounts the caliph is said to have ordered him to get rid of an 'Alide secretly; Ya'ḳūb, who showed a certain preference for the 'Alides, let him however escape, and the incident was at once reported to the caliph by a female slave. According to others, Ya'ḳūb is said to have reproached al-Mahdī for drinking wine and to have fallen into disgrace on this account. In any case he was imprisoned in the year 166 (782-783) and only set free several years later by caliph Hārūn at the request of the vizier Yaḥyā b. Khālid al-Barmakī. On Hārūn giving him permission to settle down where he liked, he went to Mecca. It was there that the once so powerful vizier, who had become blind during his long confinement, died some time afterwards. The year of his death is not exactly known.

ABU 'L-'AINÂ' MUḤAMMED B. AL-ḲÂSIM B. KHALLÂD B. YÂSIR B. SULAIMÂN AL-HÂSHIMÎ, an Arabian littérateur and poet. He was born about the year 190 (805) in al-Ahwâz (his family came from al-Yamâma) and grew up in Baṣra, where he received instruction from the most famous philologists, Abû 'Ubaida, al-Aṣma'î, Abû Zaid al-Anṣârî and others. He was renowned amongst his contemporaries not only for his linguistic attainments, but also for his quickness at repartee. Ibn Abî Ṭâhir collected anecdotes concerning him in a special work entitled *Akhbâr Abi 'l-'Ainâ'*, many of which are to be found in the *Kitâb al-Aghânî*. The book itself as well as the collection of his poems have not been preserved. He became blind at the age of 40, later on he emigrated to Bagdad, but returned to Baṣra again and died there in the year 282 or 283 (896).

ABÛ AIYÛB KHÂLID B. ZAID AL-ANṢÂRÎ, standard bearer of the Prophet, died of dysentery under the walls of Constantinople during the siege of that city by the Arabs in 52 (672); he was buried there and his tomb was, it is pretended, recognized by Shaikh Aḳ Shams al-Dîn, when Sultan Muḥammed II came to invest the city. A mosque was built on this spot (863 = 1458), it was enlarged in 1000 (1591) by Emekdji Zâde Aḥmed Pasha; two new minarets with galleries were built in 1136 = 1723. Sultan Maḥmûd deposited there the relics of the Prophet, which had been found in the treasure of the Serai (foot-print). The grand vizier Sinân Pasha (d. 1133 = 1729), the sultana Mâh Fîrûz Khadîdja, mother of Othmân III, the grand viziers Semiz 'Alî Pasha and Gurdjî Muḥammed Pasha, Lala Muṣṭafâ Pasha, the conqueror of Cyprus and many other well-known great personages are buried in the *turbe* or in the immediate approaches of the parvis. The mosque, situated outside the Byzantine enceinte and round which an important suburb has grown up, is venerated by Mussulmans, and an unbeliever is not allowed to enter it. It is here that at the commencement of each new reign of the 'Othmân dynasty the ceremony of enthroning the sovereign takes place; he is solemnly girded with the sword of his ancestor by the hands of the čelebî, the General-superior of the religious order of the Mawlawiya (Mewlewî) or dancing derwishes, who is a direct descendant of Djalâl al-Dîn Rûmî, and who comes expressly for this purpose from Ḳonya his usual residence.

Ḥâdjdjî Ismâ'îl, *Ḥadîḳat al-djawâmi'* (Constantinople, 1281), i. 243; Abridgment of the same in Hammer-Purgstall, *Hist. de l'empire ottoman*, xviii. 57; Cl. Huart, *Konia, la ville des derviches tourneurs*, p. 206. (CL. HUART.)

ABU 'L-'ALÂ' AḤMED B. 'ABD ALLÂH B. SULAIMÂN AL-MA'ARRÎ, the celebrated Muḥammedan poet; born in 363 (973) at Ma'arrat al-Nu'mân, a small town in Northern Syria, between Aleppo and Emessa. He belonged to a respectable Arab family claiming descent from the tribe of Tanûkh, which had long been settled in this region. His grandfather had filled the office of ḳâḍî, and his father seems to have been a man of some cultivation. Abu 'l-'Alâ' was scarcely four years old when an attack of small-pox left him almost totally blind; and we may well be astonished by the extraordinary powers of memory which enabled him, in spite of this deprivation, to display in his works variety and range of learning that have seldom been surpassed. His youth fell in troubled times. The Ḥamdânides still maintained a precarious hold on Northern Syria, but they were hard pressed between the Fâṭimides advancing from the south and the Byzantines on the north. Circumstances, however, were not wholly unfavorable to literature. Although the brilliant epoch of Saif al-Dawla had passed away, the revival which he inaugurated had not yet spent its force, and the literary renown of Syria stood very high at this time, as it may be learned from al-Tha'âlibî, Abu 'l-'Alâ''s contemporary (see Margoliouth, *The letters of Abu 'l-'Alâ*, introduction, p. xvi). Abu 'l-'Alâ' received his education in Aleppo, Tripoli, and Antioch under the pupils of the grammarian Ibn Khâlûya and other Syrian scholars. The career to which his studies were directed seems to have been that of a professional encomiast, like Mutanabbî, and several of his panegyrics on the Ḥamdânide Sa'îd al-Dawla have come down to us. In any case he soon abandoned a calling which, however successful it might be, would have exposed his proud and sensitive nature to intolerable humiliation. „Never", he says in the preface to the *Saḳṭ al-zand*, „did I tickle the ears of princes with chants or eulogize any one in the hope of gaining a reward". On his return to Ma'arra he supported himself by a small annual pension of 30 dinars, paid from a trust-fund, and possibly by the fees of pupils whom his already great reputation must have attracted. That he was not without honor in his native town appears from the fact that he was chosen by his fellow-citizens to answer an official communication addressed to them by the well-known politician and author, Abu 'l-Ḳâsim b. 'Alî al-Maghribî. Abu 'l-'Alâ' remained at Ma'arra until 401 (1010), when, for somewhat obscure reasons, he resolved to settle in Bagdad. It is not strange that in the prime of life he should have felt the chafing limitations of provincial society and pined for a larger field in which his talents might obtain their merited recognition. To the capital accordingly he went, but after a year and seven months he was once more on the way home. He himself says that his mother's illness, and his own lack of resources were the causes of his return; but the latter cause seems improbable as he had many influential friends who could have come to his aid, if necessary. At the same time his reception, cordial and even flattering as it was, was marred by some instances of incivility; and moreover, the poet's refusal to write verse professionally stood in the way of his ambition. An indignity which he suffered at the hands of al-Murtaḍâ, brother of the famous poet, al-Sharîf al-Raḍî, may have finally decided him to leave the city (Margoliouth, *loc. cit.*, pp. xxvii *et seq.*). His visit to Bagdad

marks the turning-point in his life. Hitherto he had won distinction as an erudite savant and as an accomplished poet in the style of Mutanabbī, for whom he cherished an enthusiastic admiration. His peculiar genius is revealed only in his later works written after his return to Ma'arra — the *Luzūmiyāt* and the *Risālat al-ghufrān*, and it can hardly be doubted that in Bagdad he was first imbued with many of the unorthodox ideas and speculations by which these works are characterized. The assertion that he attended the lectures of the leading scholars of the day is contradicted by his own testimony: in a letter informing his uncle that he had arrived in Ma'arra from Bagdad he observes that since passing his twentieth year it never occurred to him to seek knowledge from any inhabitant of 'Irāḳ or Syria. He reached home only to be greeted by the tidings of his mother's death, an event which affected him deeply and confirmed him in his intention of renouncing the world. It is said that henceforth he lived in a cave and adopted strictly ascetic habits, eating no animal food and abstaining even from eggs and milk. The name *rahn al-maḥbasain*, („the double prisoner"), which is sometimes given to him, refers to his seclusion and his blindness. He was not allowed, however, to be a hermit. The fame and fortune which he had missed at Bagdad he found awaiting him at Ma'arra. Pupils came from far countries to read with him, and his letters which have been edited by Margoliouth show that he was frequently in correspondence with scholars anxious to profit by his learning. The Persian traveller and poet, Nāṣir-i Khosrew, who visited Ma'arra in 439 (1047) eleven years before Abu 'l-'Alā''s death, speaks of him as exercising absolute authority in the town and possessing great wealth which he distributed amongst the poor, while he himself practised austerities and lived like a saint. Abu 'l-'Alā' passed nearly forty years in retirement, but not in idleness, as may be judged from the long list of his works which were composed, for the most part, during this period. He died in 449 (1058).

He owes his popularity in the East to the collection of his early poems entitled *Saḳṭ al-zand*, of which there are numerous MSS. in European libraries. It was first published at Būlāḳ (1869), then at Beyrout (1884), and forms the subject of a dissertation by C. Rieu (*De Abul-Alae vita et carminibus*, Bonn, 1843). The best known commentaries are those by the author himself (*Ḍaw' al-saḳṭ*) and his pupil al-Tibrīzī. Most of the poems in the *Saḳṭ al-zand* were written before Abu 'l-'Alā''s journey to Bagdad, but it includes some of later date. They consist of encomia, elegies, occasional pieces, etc., a special section being devoted to the *carmina loricaria* (*al-dir'iyāt*). The influence of Mutanabbī is apparent not only in the artificial and allusive style but also in the freedom with which conventional rules are ignored or defied. Though the poet sometimes betrays irreverence in touching on religious matters, there is no trace of the quite unorthodox views which are commonly associated with him. These form a striking feature in the second collection of his poems entitled *Luzūm mā lām yalzam*, generally known as the *Luzūmiyāt*, a name which refers to the technical difficulty of the rhyme. Their contents have been fully discussed by von Kremer (in the *Sitzungsber. d. phil. hist. Classe d. Kais. Akad. d. Wissensch.*, cxvii. 6th part, Vienna, 1889), who has also published the text and translation of selected passages in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, (xxix—xxxi and xxxviii). Von Kremer's estimate of the work is perhaps too favorable, but it must be admitted that here Abu 'l-'Alā' proves himself to be a singularly bold and original thinker as well as a lofty moralist. Not satisfied with fearlessly denouncing political and social abuses, he takes the whole of human life for his theme and meditates on its deepest problems. To compare him with Abu 'l-'Atāhiya, whom he obviously resembles in some respects, is to do him less than justice. In the *Luzūmiyāt* Abu 'l-'Alā' shakes off the fetters of dogma which bound his predecessor and rises to a higher plane. Another remarkable work, the *Risālat al-ghufrān*, of which there are manuscripts at Constantinople and Cambridge, has been described and in part translated by the present writer (*Journ. of the Roy. As. Soc.*, 1900, pp. 637—720; 1902, pp. 75—101, 337—362, 813—847). It is an epistle in ornate prose addressed to a certain 'Alī b. Manṣūr of Aleppo. The heathen poets who have been forgiven — hence the title — and raised to Paradise, where the scene is laid, are introduced as the principal characters in what may be called a burlesque *Divina Commedia* or, as it really is, an audacious parody of Muhammedan ideas concerning the Afterworld. Besides this, it contains a great deal of miscellaneous learning and in particular an account of the *zindīḳs* (freethinkers) with specimens of their poetry and reflections on the nature of their belief. The extant correspondence (*mukātabāt*) of Abu 'l-'Alā' has been edited with a translation, valuable notes, and an exhaustive biography by D. S. Margoliouth (Oxford, 1898). Of his other works, about sixty in number, very few have been preserved.

The question of Abu 'l-'Alā''s orthodoxy was warmly debated during his lifetime, and though he did not lack defenders, many of his contemporaries looked upon him as a heretic, a view which has generally prevailed ever since. The evidence afforded by his writings is ambiguous and contradictory. It is said that he composed a work entitled *al-Fuṣūl wa'l-ghāyāt* in imitation of the Ḳor'ān (see Goldziher, *Muhamm. Studien*, ii. 403), but in his *Risālat al-ghufrān* he severely censures Ibn al-Rāwandī for having done the same thing, and accepts the orthodox view as to the incomparable style of the Sacred Volume. If in some passages of the *Luzūmiyāt* he seems to speak as a pious Muslim, yet there is scarcely any dogma of Islām that he has not ridiculed. Different explanations have been given of this fact, but none so curious as the suggestion that the course of his thoughts was determined by the difficult metre in which he chose to write. One cannot help feeling that he was a thorough sceptic at heart and that his most characteristic utterances are in this vein. The orthodox passages were probably meant to throw dust in the eyes of his critics, or it is conceivable that he sometimes doubted his own doubts and saw no harm in having two strings to his bow. In reading him one is often reminded of Lucian, and often again of Lucretius. He is a monotheist, but the God in whom he believes is little more than an impersonal Fate. He does not accept the theory of

divine revelation. Religion in his view is a product of the human mind, the result of education and habit, and he repeatedly inveighs against those who take advantage of the superstitious credulity of mankind in order to gain power and riches for themselves. He admits no prospect of a future life and looks forward to annihilation as a happy release from the burden of mortality. His despairing pessimism leads him to the doctrine that it is sinful to beget children and expose them to all the miseries that flesh is heir to. But his philosophy is not merely negative. He favors active piety, active righteousness, which he sets far above fasting and prayer. „The man of true religion is he that fights against evil and has girded himself with the girdle and loin-cloth of asceticism". Every one should follow the promptings of reason and conscience, which are the only sure guides to Truth. Indian influence is probably discernible in his creed that no living creature should be slain for food or injured, and in other opinions of a peculiar kind. He himself says that he adopted vegetarianism in his thirtieth year, *i. e.* before his journey to Baghdad, partly from motives of economy (*Journ. of the Roy. As. Soc.* 1902, pp. 319—320), but he obstinately evades giving an answer to the plain question, „On what religious ground do you abstain from meat"? It would be unfair to tax him with hypocrisy, though several passages might be quoted which indicate that he considered himself free to practise dissimulation, whenever it suited him to do so, in any matter connected with his religion.

Bibliography: In addition to the sources quoted in this article, Brockelmann, *Gesch. d. arab. Litter.*, i. 255. (NICHOLSON.)

ABŪ 'ALĪ KALANDAR SHARAF AL-DĪN PĀNĪPATĪ, an Indian saint, came from the 'Irāk to Pānīpat, where he died in 724 (1324). It is related that he met there the famous saint Kuṭb al-Dīn Bakhtiyār Kākī [q. v.], although this latter died as early as 630 (1232). Quite as fabulous is the account which tells how, after a long stay in Pānīpat, suddenly moved by the divine spirit, he went to Asia Minor to receive instruction from the famous mystics Shams al-Dīn Tibrīzī and Djalāl al-Dīn Rūmī. It is, however, certain that he is highly honored in India under the name of Shaikh (or Shāh) Sharaf Bū 'Alī Kalandar, that many miracles are ascribed to him and that his grave is a much visited place of pilgrimage.

ABŪ 'ALĪ AL-ĶĀLĪ. [See AL-ĶĀLĪ.]

ABŪ 'ALĪ MUḤAMMED B. ILYĀS, lord of Kirmān, a native of Sogdiana. A brigand at first, then a general in the service of the Būyides, he made himself independent afterwards as the master of the province of Kirmān, which he governed for thirty-seven years; whilst in this position he received a flag of honor from the 'Abbāside caliph Mutī' li-'llāh in 348 (959). Having been struck with paralysis and fearing for his life, he invested his eldest son Alyasa' with the government of Kirmān; then, becoming suspicious, he had him confined in a fortress, from which the young man escaped, whilst his father was in one of his long swoons, and at the head of an army returned to besiege him. The latter abdicated and retired to Bukhārā, where he was well received by the Sāmānide Manṣūr I b. Nūḥ; he stayed with him until his death, which took place the same year (356 = 967). He advised him to attack the Būyides' country. Kirmān was subdued the following year by the Būyide 'Aḍud al-Dawla.

ABŪ 'ALĪ B. MUḤTĀDJ. [See AḤMED B. ABĪ BEKR MUḤAMMED.]

ABŪ 'ALĪ B. SĪMDJŪR (MUḤAMMED B. MUḤAMMED), successor to his father Abu'l-Ḥasan [q. v.] as governor of Khorāsān and hereditary vassal prince of Kūhistān. During his father's lifetime he had been governor of Herāt; after the former's death (Dhu'l-Ḥidjdja 378 = March-April 989) he successfully stood his ground against the Sāmānides and the Pretorian Fā'iḳ, at that time governor of Balkh. Without openly rebelling he in reality assumed the status of an independent ruler, gave himself high-sounding titles — as is proved by his coins, — and took possession of all the government revenues of his province on the pretext of having to provide for the maintenance of his army. He is said to have had a secret agreement with the Ḳarākhānide Boghrā Khān Hārūn, the conqueror of Transoxania, and to have arranged with him to divide the Sāmānide territory on the understanding that he should have the land up to the Oxus frontier. However, after the occupation of Bukhārā (Rabī' I 382 = May 992) the khān, entirely neglecting the agreement, wished to treat Abū 'Alī as his governor. The latter, therefore, joined the Sāmānide Nūḥ b. Manṣūr and received ample assurances from him, which were, however, likewise not kept, as the Sāmānide succeeded, owing to favorable circumstances, in returning to Bukhārā without any outside help (on Wednesday 14th Djumādā II = 17th August of the same year). Abū 'Alī now endeavored with the assistance of his former enemy Fā'iḳ to maintain his supremacy, but the allies were defeated on Tuesday the 15th Ramaḍān 384 (23d Oct. 993) by the Sāmānide and his allies the Ghaznawides. Abū 'Alī went to Āmul (the present Čārdjūī) and thence to Khwārizm. Being treacherously made prisoner at Hazārasp by Khwārizmshāh, Abū 'Alī was liberated by his friend Ma'mūn, the prince of Gurgāndj, and through his mediation returned to Bukhārā. At first Nūḥ received him with great pomp, but shortly afterwards he was cast into prison and handed over to his enemy Sebuktegīn of Ghazna (Sha'bān 386 = August-September 996). He is said to have perished miserably in the fortress of Gardīz where he was imprisoned. His coffin was transported to Ḳāyin in Kūhistān (Radjab 388 = July 998); according to the statement of the priests, whom Abū 'Alī always favored, on the opening of the coffin his corpse clothed only in a shirt of white wool (*ṣūf*) was found in a state of perfect preservation. — His brother Abu'l-Ḳāsim 'Alī b. Muḥammed followed him in Kūhistān.

(W. BARTHOLD.)

ABŪ 'ALĪ B. SĪNĀ. [See IBN SĪNĀ.]

ABŪ 'AMR (Zabbān) B. AL-'ALĀ' B. 'AMMĀR B. AL-'URYĀN AL-MĀZINĪ, one of the founders of Arabian philology and one of the seven canonical readers of the Ḳor'ān. He was born about the year 70 (689) in Mecca, and lived in Baṣra where he had intercourse with 'Īsā b. 'Omar al-Thaḳafī, the teacher of al-Khalīl and of Sībawaih, and where al-Aṣma'ī was his pupil for ten years. He died about the year 154 (770) in Kūfa on his return journey from Damascus where he had been visiting the governor 'Abd al-Wahhāb. His main work consisted of compiling the ancient poetry of the heathen period and he went about it in a more conscientious manner than Khalaf al-Aḥmar and other compilers, though on his own confession he is said to have forged at least one verse of al-A'shā (comp. *Muzhir*, ii. 211, l. 10). He later on burnt his very extensive compilation, it is said from pious motives, to devote himself entirely to the study of the Ḳor'ān. His recension of the sacred Book was much studied later whilst nothing has been preserved of his profane philological works. A verse in praise of him is in Farazdaḳ, *Dīwān*, N°. 696.

'Omar (d. 246 = 860), and Ṣāliḥ b. Ziyād (died 261 = 874), Berl. MS. N°. 639. (BROCKELMANN.)

ABŪ 'ARĪSH, chief place of a district (*Ḳaḍā'*) of the same name in the Sandjaḳ of Hodaida, six hours journey from the sea. In 1834 the town contained 7000 to 8000 inhabitants, amongst them being a number of trading Banians and Hadramawtans. The port of the country, Djīsān (the ancient Djaishān), has been of no importance for a long time past in comparison with Ḥodaida.

Historical: Abū 'Arīsh was formerly subject to the rulers of Yemen, but in the 18th century a certain Sherīf Aḥmed founded there an independent sovereignty. Through the Turkish campaign of 1871 the town became nominally Turkish territory.

ABU 'L-ASWAD ẒĀLIM B. SUFYĀN AL-DU'ALĪ (this according to the pronunciation of the Baṣrians; Kūfic pronunciation al-Di'lī), a poet of the Dīl tribe, which he, however, left in order to settle amongst the Hudhailites; he also dwelt some time with the Banū Ḳushair the tribe of his wife. He was a partisan of 'Alī and was sent by 'Alī's Baṣrian representative as a negotiator to 'Ā'isha, Ṭalḥa and al-Zubair, and he also fought for 'Alī at Ṣiffīn. When Ibn al-'Abbās was 'Alī's governor in Baṣra (from the year 36 = 656-657), Abu'l-Aswad held a high office there. He gave vent to the ill temper, which occasionally arose from his duties, in his poems. In the Khāridjite wars he acted as leader of Ibn al-'Abbās' troops. It was he that brought to 'Alī's notice the latter's embezzlements, and after the latter's dismissal he is said to have himself been governor in Baṣra for a short time. This, however, is improbable, for a man, who in his own poems calls himself the „down-trodden one" and for every kick was ready to kiss the giver's hand, was by no means the man for the delicate state of affairs in Baṣra. The assassination of 'Alī furnished him with a fresh theme for his lamentations. In a poem, for the rest quite insignificant, written under the fresh impression of the event, he already accuses the Umaiyads of being the moral instigators of the crime. The agreement between 'Abd Allāh b. 'Āmir, Mu'āwiya's governor in Baṣra, and Ibn al-'Abbās is therefore painful to him, for in consequence of Abu'l-Aswad's feelings for the 'Alides, Ibn 'Āmir let their friendship cool down considerably. He had also to complain of the behavior of Ziyād b. Sumaiya, who in 'Alī's time was his subordinate but subsequently, after Ibn 'Āmir, was himself governor of Baṣra; still Ziyād is said to have stirred up ill blood against him even in 'Alī's time. His wife, too, like her tribe, was to his great sorrow a friend of the Umaiyads. — Abu'l-Aswad was not always favored by fortune and like all Arabs was envious of clients who were better off than he. In the year 69 (688-689) at the age of 85, he is said to have died of the plague; the last dated event mentioned in his poems took place in the year 61 (680-681). It is mere invention to say that he laid the foundation of Arabic grammar. The anecdotes about him are not favorable, but according to the evidence of his poems they are partly at least well-contrived.

(RECKENDORF.)

ABŪ 'AṬĀ' AFLAḤ (or MARZŪḲ) B. YASĀR AL-SINDĪ, an Arabian poet. He owes his surname al-Sindī to the fact that his father came from Sind; he himself was born in Kūfa and lived there as a client of the Banū Asad. He fought for the decaying Umaiyad dynasty with pen and sword, praising them and casting scorn on their adversaries. It is true, however, that when the 'Abbāsides obtained the power, he lowered himself so far as to endeavor by singing the praise of the new rulers to wheedle himself into their favor. But the iron character of the „Bloodshedder" was but little sensible to such fawning, and during his successor al-Manṣūr's reign the poet was even obliged to keep himself hidden. Only after al-Manṣūr's death in 158 (774) did he again make his appearance and no doubt died shortly afterwards; the exact date is not known. Abū 'Aṭā' was considered a good poet — his elegy on Ibn Hubaira [q. v.] being especially famous, — although he pronounced Arabic badly and even stammered, so that he was obliged to have his poetry recited by others.

(A. SCHAADE.)

ABU 'L-'ATĀHIYA, one of the most important Arabian poets of the 'Abbāside epoch. Abū Isḥāḳ Isma'īl b. al-Ḳāsim b. Suwaid b. Kaisān, surnamed Abu'l-'Atāhiya, was born in 130 (748) in 'Ain al-Tamr, a small village not far from al-Anbār (according to other accounts in the neighborhood of Medina). His forefathers belonged to the Beduin tribe of 'Anaza; his father al-Ḳāsim was a cupper. He himself and his brother Zaid had a small pottery in Kūfa, and it is related that people who visited him wrote down on potsherds the poems he recited. When he had begun to make a name for himself as a poet, he went to Bagdad with the musician Ibrāhīm al-Mawṣilī who became famous afterwards. At first, however, he was not able to make himself heard, and for a while he was obliged to retire to the modest Ḥīra. From that place, however, his fame as a poet succeeded in reaching the ears of Caliph al-Mahdī, who summoned him back to Bagdad. But Abu'l-'Atāhiya was not to enjoy the princely favor for long. He was imprudent enough to mention and to describe in his poems a female slave of al-Mahdī's, named 'Otba, and the caliph, highly incensed at this, cast him into prison. But he was soon set free and thereafter was on a friendly if not an intimate footing with al-Mahdī as well as with the latter's successors. His early developed, earnest and ascetic notion of life made him detest the frivolous court life, and after Hārūn al-Rashīd's accession he even wanted to abandon entirely the vanity of poetry, a decision which the despot endeavored to shake by again putting him in prison. There are several accounts as to the year of his death; according to a tradition ascribed to his son Muḥammed, he died in 210 (825), according to another in 211 (826) or 213 (828).

Abu'l-'Atāhiya's contemporaries have represented him as a free-thinker, because he had denied the resurrection of the dead. He endeavored to solve the eternal riddle of dualism by assuming that God had created two mutually opposing substances (*djawhar*), from which everything had been evolved and into which everything would resolve itself.

Abu'l-'Atāhiya's poems have only been incompletely preserved. They are distinguished by a clear range of ideas and simplicity of expression; he thoroughly despised the pomposity of the old desert-poetry, which, under changed conditions, had sunk to mere conventional elegance. He desired to write poetry comprehensible for the people, and the contemplative meaning of his Ḳaṣīdas was the main point in his eyes; most of them consist of loosely connected sayings and admonitions. The greater part of his works which have been preserved belong to the *Zuhdīyāt* kind (i. e. religious poems). The main feature of them is the poet's frank pessimism; asceticism is warranted by the nullity of the things of this world. „The world", he says, „is a lasting rotation of pain; everywhere purity is mingled with the colors of matter, and only he can hope to be satisfied, who carries contentment in his own heart." In spite of this melancholy view of life there is no question of effeminate whimpering in his philosophy; robust and determined, even if not glad and joyous, he bears the burden of life simply because it must be so.

The second and smaller part of what has been handed down of his writings falls into six divisions: 1) Eulogies (only very fragmentary) mostly in praise of the caliphs al-Mahdī, al-Hādī, Hārūn and al-Ma'mūn; 2) occasional poems, amongst which are many pretty and witty trifles; 3) satires; 4) tragic poems; 5) extempore poems; 6) epigrammatic maxims.

Abu'l-'Atāhiya is the first philosophical poet in Arabian literature; he stands alone — unfortunately — in the independence of the form he chose. The Society of Jesus of Beyrout has furnished a good edition of his poems (*al-Anwār al-zāhiya fī dīwān Abi'l-'Atāhiya*, Beyrout, 1887).

ABU 'L-A'WAR 'AMR B. SUFYĀN AL-SULAMĪ, of the powerful Sulaim tribe, whence the „relative" Sulamī. His mother was a Christian and his father fought at Ohod for the Ḳoraishites. The son, who does not seem to have frequented the Prophet, went to Syria, probably with the column commanded by Yazīd b. Abī Sufyān. He played a conspicuous part at al-Yarmūk as divisional commander, remained from that time bound to the lot of the Umaiyads, and in consequence drew upon himself the maledictions of 'Alī, particularly after the part he took in the battle of Ṣiffīn. He helped 'Amr b. al-'Āṣī to conquer Egypt for Mu'āwiya, and was in command of several naval expeditions. He proved himself as good a diplomatist as an administrator. At Ṣiffīn he entered into negotiations with 'Alī and drew up the preliminary protocol to the conference of Adhroḥ; he was commanded to take a census of the fellaḥs in Palestine with a view to a new assessment of tribute. Mu'āwiya also intended that he should replace, in Egypt, 'Amr. b. al-'Āṣī, who showed too much independence, an undertaking in which he miscarried. He was governor of the Province of the Jordan. His manifold services caused him to be ranked by the Arab annalists amongst the principal lieutenants of Mu'āwiya, forming his *shī'a* or *biṭāna*. He disappeared from the political scene before the end of the reign of this caliph.

LAMMENS.)

ABŪ 'AWN 'ABD AL-MALIK B. YAZĪD AL-KHORĀSĀNĪ, a general in the service of the 'Abbāsides. After the outbreak of the rebellion in Khorāsān on the 25[th] Ramaḍān 129 (9[th] June 747) Abū 'Awn several times took part in the war against the Umaiyads. At first he accompanied the 'Abbāside general Ḳaḥṭaba b. Shabīb; then he was sent by the latter to Shahrazūr, where on the 20[th] Dhu'l-Ḥidjdja 131 (10[th] August 749), in conjunction with Mālik b. Ṭarīf, he defeated 'Othmān b. Sufyān. Whilst Abū 'Awn remained in the vicinity of Mosul, the Umaiyad caliph Marwān II marched on against him. Under the supreme command of 'Abd Allāh b. 'Alī, Abū 'Awn took part in the battle by the Greater Zāb (11[th] Djumādā II 132 = 25[th] January 750), and in the pursuit of Marwān and in the capture of Damascus by 'Abd Allāh b. 'Alī. When the latter remained

behind in Palestine, he sent Ṣāliḥ b. 'Alī together with Abū 'Awn and a few others to continue the pursuit to Egypt, and it was there that the caliph, after a fresh defeat, was tracked down and killed in the same year. Abū 'Awn remained in Egypt till further orders as governor. In 159 (775-776) he was appointed governor of Khorāsān by al-Mahdī, but deposed in the following year.

(K. V. Zetterstéen.)

ABŪ BAIHAS al-Haiṣam b. Djābir, a Khāridjite of the Banū Sa'd b. Ḍubai'a. In order to escape from the persecutions of the well-known al-Ḥadjdjādj, he fled to Medina, but was taken prisoner by the governor, 'Othmān b. Ḥaiyān, and executed in a most cruel manner (94 = 713). He appears to have held a prominent position as a teacher, for a section of the Khāridjites is named Baihasiya after him, this section taking up an intermediate position between the harsh Azraḳites and the more gentle Ṣofrites and Ibāḍites (Abāḍites). It is true that the Baihasites admitted that the Muslims who did not share their views were unbelievers, but they considered it was permissible to live with them, to marry into them and to accept legacies from them. For the rest their views were in disagreement so that they fell into several subdivisions.

(M. Th. Houtsma.)

ABŪ BAKRA called himself a freedman of the Prophet's after he had been converted to Islām. He lived at first as a slave in Ṭā'if. When Muḥammed besieged this town in the year 8 (630) and invited all the slaves of the Thaḳīfites to desert to him, he obeyed this summons and thus obtained his freedom. As he had let himself down the walls by means of a trough-gutter (*bakra*) he thenceforth as a Mussulman bore the surname of Abū Bakra. His real name was Nufai' b. al-Ḥārith (Masrūḥ); but better known than his supposed father is his mother Sumaiya, a Persian slave, who was brought by chance to Ṭā'if, and bore three sons, of whom Ziyād b. Abīhi [q. v.] is the best known. Abū Bakra subsequently lived in Baṣra and was scourged by 'Omar when his accusation against al-Mughīra b. Shu'ba [q. v.] was not confirmed by his brother Ziyād. During the fight between 'Alī and 'Ā'isha he kept in the background. He died in 51 or 52 (671-672) and is said to have left forty children. Amongst his descendants the Ḳāḍī Bakkār b. Ḳotaiba (comp. about him Ibn Khallikān, ed Wüstenf., N[o]. 115), who also happened to bear the Kunya of Abū Bakra, and who was born in 182 (798) and died in 270 (884), is the best known.

Bibliography: Ibn Ḳotaiba (ed. Wüstenf.), p. 147; Ibn al-Athīr, *Usd al-ghāba*, v. 151; Ṭabarī, i. 2529 *et seq*; iii. 477 *et seq.*; Balādhorī (ed. de Goeje), pp. 343 *et seq.*

(M. Th. Houtsma.)

ABŪ BARĀḲISH, a fabulous bird, similar to a sparrow, or, according to Ḳazwīnī, similar to a stork, and living in the *'iḍāh* bushes. It is generally credited with the peculiarity of altering the color of its feathers continuously. The predominating color is said to be dark grey („between white and black", according to Ibn Khālawaih cited in the *Lisān al-'Arab*), the ends of the feathers being ash-grey, the middle red and the bottom part black, so that the feathers assume different colors according as the bird ruffles them. Like the chameleon (*abū ḳalamūn*) the *abū barāḳish* also became proverbial for inconstant, changeable people.

(Hell.)

ABU 'L-BASHAR (A.), a surname of Adam. [See Adam.]

ABŪ BEKR 'Abd Allāh, with the surname of 'Atīḳ, variously interpreted by tradition, the first caliph. It is not related why he was given the surname of Abū Bekr (i. e. „father of the camel's foal"), which his enemies mockingly twisted into Abū Faṣīl („father of the weaned young of a camel"). His father 'Othmān, also called Abū Ḳuḥāfa, and his mother Umm al-Khair Salmā bint Ṣakhr both belonged to the Meccan family of Ka'b b. Sa'd b. Taim b. Murra. According to the current account, Abū Bekr was three years younger than Muḥammed. He lived as a well-to-do merchant in Mecca and is said, according to a but little trustworthy account (Ibn Ḥadjar, *Iṣāba*, II, 828), to have been on friendly terms with Muḥammed before the latter was called to be a prophet. He belongs to Muḥammed's oldest supporters, even though it remains doubtful whether he was the first male believer, as many maintain. He soon took an important position in the newly formed community, not only on account of his close friendship with the Prophet, but also by virtue of his own personal qualities, which make him one of the most attractive figures of ancient Islām. Especially characteristic of him was the unshakable, blind faith with which he considered Muḥammed as the chosen instrument of divine revelation, and which made him accept his every word as absolute truth. On occasions when others doubted, e. g. after the Prophet's account of his journey at night, or when they did not know what to make of his conduct, as on the occasion of the Ḥudaibiya covenant, he remained unshaken. His was a gentle character. During the reading of the Ḳor'ān he shed tears, a thing that made a great impression on many, but especially on the women; and, as his daughter related, he wept with joy at the news that he might accompany Muḥammed in his emigration. At the same time he was of an open, right-thinking nature and was several times able to restrain Muḥammed from rash actions by his sensible advice. He was very susceptible of the purely moral thoughts in the Prophet's preaching, proving this by purchasing the freedom of several slaves and by similar other actions. If, after the impressive conduct of the Jew al-Zabīr, he really uttered the bigoted words, which sound so harsh to our ears, and which tradition puts in his mouth („He will meet his beloved ones again in Hell!"), it must be explained by his complete absorption in the religious ideas with which his friend inspired him. No sacrifice was too great in his eyes for the sake of the new faith. Thus it came about that of his considerable fortune, estimated at 40000 dirhem, he brought to Medina the small

sum of 5000 dirhem. Amidst the greatest dangers he faithfully stood by his friend and master, and was among the few who during the worst period did not flee to Abyssinia. But once, during the exclusion of the Hāshimides from the Meccan community, he is said to have lost his courage. He therefore quitted Mecca, but soon returned under the protection of an influential Meccan, and from that time forward remained in the city although his protector left him in the lurch. His life attained its apogee when Muḥammed chose him to accompany him on the flight from Mecca, and his self-sacrificing friendship was rewarded by his name being immortalized in the Ḳor'ān as „the second of the two". His family also went to Mecca with the exception of his son 'Abd al-Raḥmān, who, strangely enough, had remained a heathen and fought at Bedr against the faithful, till he too finally was converted and migrated to Medina. In this new home Abū Bekr, who went on supporting the „cause" with the rest of his fortune, set up a modest household in the suburb of al-Sunḥ. Through his daughter 'Ā'isha, whom Muḥammed had married shortly after the emigration and greatly loved, the tie between the two men was strengthened still more, and would probably not have been broken by the scandal which the frivolous young woman brought about, even if it had not taken such a fortunate turn through revelation. Abū Bekr was nearly always with the Prophet and accompanied him on all his campaigns, during which he, though little warlike himself, never stirred from his side even in the most perilous moments. On the other hand he was very seldom and in exceptional cases employed as a leader of military enterprises, e. g. in the Tabūk campaign he was entrusted with a standard. But the Prophet sent him in the year 9 (631) to Mecca to conduct the pilgrimage, and it is quite possible that it was he and not 'Alī, as traditions maintain, who on this occasion read out the act of separation to the heathens. When Muḥammed fell ill, Abū Bekr had to read the prayers in the mosque to the Muslims in his stead. This distinction made it possible for 'Omar and his friends, after Muḥammed's death on the 8th June 632, to propose Abū Bekr as the head of the community, thus preventing the threatened split. But also from other points of view this choice was the happiest that could have been made. In no way did Abū Bekr represent new ideas or principles, but clung to Muḥammed's way of thinking and held fast to everything his friend had ordered or hinted at. In this manner he was able, in spite of all mutual antipathy, to hold together the talented men who had gathered round Muḥammed, and make use of them for the good of the community. Through his absolute lack of originality and his simple but sturdy character he became a reincarnation of Muḥammed, conducted the young religious Community through the most difficult and dangerous times, and left it at his death in such a firm position that it could support the rule of the powerful and talented 'Omar. He gave a proof of his scrupulous obedience to Muḥammed's orders first after the latter's death, by sending, in spite of the threatening state of affairs in Arabia, the young Usāma with an army on a quite unimportant expedition to the country east of the Jordan. Meanwhile the tribes in the country round about began to rise up against the political centralization in Medina. Abū Bekr indignantly rejected the demand for the remission of the taxes, considering it as a betrayal of the Prophet's instructions. When Usāma's army had returned home, he marched out against Dhu 'l-Ḳaṣṣa and was lucky enough to choose the talented general Khālid b. al-Walīd as commander of his forces. This latter defeated the Asad and Fazāra at al-Buzākha, subjugated the Tamīm and finally, after the bloody battle at 'Aḳrabā' in the Garden of Death, brought the Banū Ḥanīfa under the power of Islām, a thing that even Muḥammed had not succeeded in doing. His fortune in war made it possible for other generals to suppress the revolts in Baḥrain and 'Omān, and finally also Yemen and Ḥaḍramawt were again brought under the dominion of Medina by 'Ikrima and al-Muhādjir. Following his master's example, Abū Bekr treated the vanquished mercifully and probably thus helped to re-establish peace in the country; cruelties, as for instance on some women who had sung parodies on Muḥammed's death, or the burning of al-Fudjā'a, but seldom occurred. After the subjugation of Arabia, which was complete in less than a year, it was the lot of the conservative and unwarlike Abū Bekr to set afoot an enterprise which was in a short time to alter completely the political situation of the whole world; he sent Khālid and other tried generals on a campaign of conquest against Persia and Byzantium. It can safely be assumed that the energetic men who were behind him originated this idea in order, by means of a campaign made in common and promising rich booty, to put an end to home troubles and to teach the Arabs in a practical manner the unity of Islām. Abū Bekr was able to consent to this campaign with a calm conscience, since the repeated expeditions which Muḥammed sent against the Byzantine districts in the latter part of his life could be interpreted as an indication of the great universal task of the new religion. He had the satisfaction of seeing during his short rule the first great victories of the Arabian army on both theatres of war; in Persia the conquest of Ḥīra in May or June 633, and in Palestine the battle of Adjnādain in July 634. Shortly after this latter success he died on the 22d Djumādā II 13 (23d August 634), and was buried beside Muḥammed. In order to mark him out as a martyr, a tradition makes him die of poisoned food, of which he is said to have partaken a year previously; but a more prosaic tradition, according to which he fell ill through bathing on a cold day, does not sound very credible either, as it does not suit the season in which he died. His short reign, which was mostly taken up in wars, did not bring about any epoch-making changes in ordinary life. It is important to note that he had the first compilation of the Ḳor'ān made, although he hesitated to carry out such an undertaking without the Prophet's express authorisation. Moreover his share in it was probably inconsiderable, as according to another account 'Omar had the first copy drawn up. As to the division of the spoils of war, he kept to the dictum of the Ḳor'ān, that all true believers had equal rights, a principle which 'Omar later abandoned. As caliph he lived as simply as before, at first in his house in al-Sunḥ and subsequently, when the distance became inconvenient, in the town itself. Tradition relates many anecdotes of his modesty and his

aversion to enrich himself at the expense of the State. It also gives a good description of his appearance: a lean, somewhat bent form, with ungraceful, loosely hanging clothes; a narrow face with a high forehead and sunken eyes; hair prematurely grey and beard dyed red with ḥinnā'; thin hands with knotted, swollen veins. The impression which his character made can be seen from several of the speeches attributed to him, which he delivered on different occasions (see Ibn Hishām, ed. Wüstenf., p. 1017; Ṭabarī, i. 1845 *et seq.*; Mubarrad, *Kāmil*, pp. 5 *et seq.*

ABŪ BEKR B. 'ABD ALLĀH. [See IBN ABI 'L-DUNYĀ.]

ABŪ BEKR B. AḤMED. [See IBN ḲĀḌI SHUHBA.]

ABŪ BEKR AḤMED B. 'ALĪ B. THĀBIT. [See AL-KHAṬĪB AL-BAGHDĀDĪ.]

ABŪ BEKR B. 'ALĪ. [See IBN ḤIDJDJA.]

ABŪ BEKR AL-BAIṬĀR. [See IBN AL-MUNDHIR.]

ABŪ BEKR AL-KHWĀRIZMĪ. [See AL-KHWĀRIZMĪ.]

ABŪ BEKR B. SA'D B. ZENGĪ, atābeg of Fārs of the Salghuride dynasty. He did not wish to accept the conditions of the peace concluded by his father with Sultan Muḥammed Khwārizm Shāh in 623 (1226), laid an ambuscade for the former on his return to Shīrāz and even struck him with his sword without wounding him; his father countered with a mace which stretched him at his feet and threw him into prison in the citadel of Iṣṭakhr. He regained his freedom the same year on the death of the atābeg Sa'd (21st Djumādā I 623 = 20th May 1226), restored prosperity to the province of Fārs and added to it some possessions in the islands of the Persian Gulf and on the coast of Arabia, such as Ḳaṭīf and Baḥrain: he was even recognized as suzerain in certain Indian towns. He caused the public buildings of Shīrāz, which were tottering, to be repaired and added thereto a hospital. On the approach of the Mongol conquerors, he sent his brother Tehemten on an embassy to Ogotai, confirmed him in the possession of his hereditary estates with the title of Ḳutlugh Khān (Prince Fortunate), in consideration of an annual tribute of 30000 pieces of gold. He died on the 5th Djumādā II 658 (18th May 1260). He liked to surround himself with derwishes and Ṣūfīs; he was amongst others the protector of the poet Sa'dī, who dedicated to him some beautiful verses in the preface to the *Gulistān*.

ABŪ BILĀL. [See MIRDĀS B. UDAIYA.]

ABŪ BURDA. [See AL-ASH'ARĪ.]

ABŪ ḌAMḌAM, the hero of a collection of anecdotes, which is quoted as early as in the tenth century. He is made to say all sorts of foolish maxims, and especially to give ridiculous decisions on legal questions; similarly to Ḳarāḳūsh later. This Abū Ḍamḍam is perhaps identical with the pious man, who, in or before Muḥammed's time, in lieu of paying the poor-rate offered his good name to the servants of God; for this express renunciation of the respect of mankind could easily be understood as a permission and a challenge to set him up as a model of stupidity. Extraordinary knowledge of ancient poetry is ascribed to a man who bore the same name, but it has been impossible to decide whether it was the same person as the above.

Grünert), p. 32; idem, *Kitāb al shi'r* (ed. de Goeje), pp. 3 *et seq.*; *Fihrist*, p. 313; Ibn 'Abd Rabbihi, *'Iḳd* (Cairo, 1302), iii. 445; Ibn al-Athīr, *Usd al-ghāba*, v. 232; Ibn Ḥadjar, *Iṣāba*, iv. 204; M. Hartmann, in the *Zeitschr. d. Vereins für Volkskunde*, v.; Horovitz, *Spuren griechischer Mimen*, p. 31, note.

(J. HOROVITZ.)

ABU 'L-DARDĀ' AL-KHAZRADJĪ AL-ANṢĀRĪ, one of the younger contemporaries of Muḥammed; his real name was according to some 'Uwaimir, according to others 'Āmir. His father's name, too, is diversely given. He was late converted to Islām, so that it is doubtful whether he took part in the battle of Uḥud, but afterwards became one of the greatest Ḳor'ān scholars. Under 'Othmān he was the public prayer-reader and ḳāḍī in Damascus, where he died in 31 (652) or a few years later.

Bibliography: Ibn al-Athīr, *Usd al-ghāba*, iv. 159; v. 185.

(M. TH. HOUTSMA.)

ABŪ DAWŪD SULAIMĀN B. AL-ASH'ATH AL-AZDĪ AL-SIDJISTĀNĪ, traditionist, born in 202 (817). In his youth he undertook long journeys in search of the *ḥadīth*. He studied at Baghdād under the Imām Aḥmed b. Ḥanbal; eventually he settled definitely at Baṣra, where he died in 275 (888).

Abū Dāwūd's principal work is a collection of traditions, known under the generic title of *Kitāb al-sunan*. Like all other books of this name, Abū Dāwūd's work is distinguished from the collections of traditions known as *Djāmi'* in that it does not concern itself with historical, ethical or dogmatical enquiries. As a principle it contains nothing but traditions relating to the *aḥkām*, things ordained, or allowed, or forbidden by law; its contents are almost exclusively juridical. Other peculiarities distinguish Abū Dāwūd's *Kitāb al-sunan* from earlier collections of traditions, the two *Ṣaḥīḥs* for example: it has, to begin with, less severity in its criticism of testimony; every *rāwī* is thought by Abū Dāwūd to be worthy of belief in his information, whenever no formal proof has been given of his reproachableness. Besides very often Abū Dāwūd makes the text of the *ḥadīth* transmitted by him to be followed by his personal appreciations as to the value which he considers should be allowed to them. These short notices may be considered as the first examples of that criticism of the *ḥadīth* which in later times was bound to develop into autocephalous discipline. Abū Dāwūd himself recommended his *Sunan* to the scholars of the two holy cities in a *Risāla*,

in which he set forth his views, pointed out the usefulness of his work and showed the system of his criticism. The work at once met with great success, and still in the fourth century enthusiastic admirers styled it "The wonder of the world" and "The prop of Islām"; but subsequently, although it was definitely considered as one of the „six bases" which composed the canonical „corpus traditionum" of Islām, the *Kitāb al-sunan* did not possess nearly as much authority and veneration as was acquired by the *Ṣaḥīḥ* of Bukhārī and the *Ṣaḥīḥ* of Muslim. The work was published at different times in the East (Cairo, 1280; 1310 on the margin of Zarkānī's commentary to the *Muwaṭṭa'* of Mālik; Lucknow, 1888; Delhi, 1890 with glosses). A small collection of *mursal* traditions is also due to Abū Dāwūd; the *Kitāb al-marāsīl* was also published (Cairo, 1310).

Bibliography: Ibn Khallikān (ed. Wüstenf.), Nº. 271; al-Dhahabī, *Ṭabaḳāt al-ḥuffāẓ* (ed. Wüstenf.), ix. Nº. 66; idem, *Tadhkirat al-asmā'*, pp. 708-712; Brockelmann, *Gesch. d. arab. Litter.*, i. 161; Goldziher, *Muhamm. Stud.*, ii. 250-251, 255-256; Marçais, *Taqrīb d'en-Nawawi*, pp. 24—26. (W. Marçais.)

ABŪ DHARR al-Ghifārī, a companion of Muḥammed highly honored on account of his piety. His real name was Djundub b. Djunāda al-Rabadhī, but there are several different accounts of this as well as of his descent. He was considered, with 'Abd Allāh b. Mas'ūd, as one of the best traditionists of Islām, and was distinguished for his beautiful pronunciation of Arabic. It is, however, principally on account of his ascetic tendencies that he became in the later traditions of the Ṣūfīs and Shī'ites, who relate many stories about him, a model of a pious Mussulman. He died in al-Rabadha in the neighborhood of Medina, whither he had retired, in the year 32 or 33 (653).

Bibliography: Ibn Sa'd, iv. 161 *et seq.*; Ibn Ḳotaiba (ed. Wüstenf.), p. 130; Ya'ḳūbī (ed. Houtsma), ii.; Mas'ūdī, *Murūdj* (Paris), iv.; Ibn Hadjar, *Iṣāba*, iv. 116; Ibn al-Athīr, *Usd al-ghāba*, v. 186; Sprenger, *Das Leben und die Lehre des Mohammad*, i. 454 *et seq.* (M. Th. Houtsma.)

ABŪ DHU'AIB al-HUDHALĪ, his real name Khuwailid b. Khālid b. Muḥarrith, an Arabian poet of the tribe of Hudhail, belonged to the so-called Mukhaḍramūn and therefore lived to see Islām. He takes a high place among the poets of his tribe and of his time. His name is not to be found in the portion of the Hudhailite poems which have been preserved, but the Dīwān of his poems has been handed down in manuscripts, which have unfortunately not yet been published, namely, in the Landberg MS. mentioned by Brockelmann, *Gesch. d. arab. Litter.*, i. 42, and in the Constantinople MS. (Public Library), Nº. 5598 of which the Imperial Library in Vienna possesses a copy made by N. Rhodokanakis, under Supplement, Nº. 4164. — The year of Abū Dhu'aib's birth is not known, but it is certain that he went over to Islām late in life. In the year 26 (647) he went to Africa under the command of 'Abd Allāh b. Sa'd b. Abī Sarḥ, and took part in the conquest of the country. Being sent by his general to accompany the youthful 'Abd Allāh b. al-Zubair to Caliph 'Othmān, he died during the journey, probably in the year 28 (649) whilst still in Egypt.

Bibliography: Brockelmann, *Gesch. d. arab. Litter.*, i. 41 *et seq.*; Ibn Ḳotaiba, *Kitāb al-shi'r* (ed. de Goeje), pp. 415—416). (A. Haffner.)

ABŪ DJA'FAR Ustādh Hormuz, i. e. „Lord of Hormuz" [q. v.], was the representative (*Nā'ib*) of the Būyide Sharaf al-Dawla in 'Omān, but later on recognized the supremacy of Ṣamṣām al-Dawla. The former therefore sent troops against him and took him prisoner in 374 (984). After the death of Sharaf al-Dawla in 379 (989) he was placed over the province of Kermān by Ṣamṣām al-Dawla. After the latter had been killed in 388 (998), Abū Dja'far retained the command over the Dailamitic troops there. Afterwards he entered the service of the Būyide Bahā' al-Dawla, but his great age forced him to retire shortly after. He died in 406 (1015), at the age of 105. His son Ḥasan was also a general of the Būyides. [Comp. Ḥasan b. Ustādh Hormuz.]

Bibliography: Ibn al-Athīr (ed. Tornb.), ix. 28 *et seq.* (M. Th. Houtsma.)

ABŪ DJAHL, properly Abu 'l-Ḥakam 'Amr b. Hishām b. al-Mughīra, also named Ibn al-Ḥanẓaliya after his mother, an influential Meccan of the illustrious Ḳoraishite family of Makhzūm. According to one anecdote he was of about the same age as the Prophet. The traditions concerning him possess but little historical value; in any case it is evident from them that he was one of Muḥammed's most embittered opponents amongst the aristocrats of Mecca. He eagerly took part in all conferences against the Prophet. He is said to have maltreated the weaker of the Muslims and even to have killed a woman; he persecuted the Prophet himself with his abuse and was only prevented by miraculous visions from doing him bodily harm. Some commentators connect this, though wrongly, with Ḳor'ān, xcvi. 6 *et seq.*, whereas Ḳor'ān, xvii. 62 and xliv. 43 are said to have been called forth by his mockery at Muḥammed's description of Hell. It was very much against his wish that the proscription against the Hāshimides was again abrogated. In the conference of the Koraishites shortly before Muḥammed's emigration he advised them to have him killed by men from every family in Mecca. When hostilities broke out between Muḥammed and the Meccans he met a host sent out under Ḥamza's command, but it did not come to a battle. It is nevertheless put down to his pugnacity that a fight did take place at Bedr. On this occasion 'Otba b. Rabī'a gave him the nickname of „the man with the perfumed buttock". Through his prayer before the battle: „Let him perish who mostly cuts the tie of blood-relation", he, according to tradition, called down his own destruction. In the battle he was wounded and killed by Mu'ādh b. 'Amr b. al-Djamūḥ and Mu'awwidh b. 'Afrā'. When Muḥammed saw his corpse, he is said to have called him „the Pharaoh of his people". His picture, naturally drawn very one-sidedly by tradition, is completed by the mourning songs of the Meccans on him, in which he is called „the Meccan chief, the noble-minded man, never vulgar nor greedy".

Bibliography: Ibn Hishām (ed. Wüstenf.), see index; Ibn Sa'd, iii¹. 55; viii. 193; Ṭabarī, see index; Ya'ḳūbī (ed. Houtsma), ii. 27; Nawawī (ed. Wüstenf.), p. 686; Sprenger, *Das Leben und die Lehre des Mohammad*, ii. 115. (F. Buhl.)

ABŪ DULAF. [See AL-ḲĀSIM B. 'ĪSĀ'L-'IDJLĪ and MIS'AR B. MUHALHIL.]

ABŪ DULĀMA ZAND B. AL-DJAWN, a black slave, client of the Banū Asad in Kūfa. He is already mentioned in the history of the last Umaiyad caliph, but appears as a „poet" only under the 'Abbāsides and plays the part of a court jester in the palace of al-Saffāḥ and especially in those of al-Manṣūr and al-Mahdī. His poem on the death of Abū Muslim (137 = 754-755) is said to have been the first of his works which made his name. Examples of his poetry show him to us as a clever, witty versificator, who readily seizes upon low expressions and displays all sorts of filth with cynical joy; but he does not despise the most insipidly fulsome praise when this form of mendicancy promises some reward. He laughs at the praise of the crowd and his spiteful tongue is feared by all. It is true he does not spare himself and still less his near relatives; he would even occasionally revenge himself for the coarse jokes which the magnates played on him when one of his patrons was pleased to ridicule an other through him. He also enjoyed the jester's liberty of being above the Islāmic laws and could also make them the butt of his insolent mockery. He has given proverbial fame to his mule that possessed all possible defects and to which he dedicated a witty Ḳaṣīda. Statements as to the date of his death vary: according to some he died in 160 (776-777), according to others in 170 (786-787).

(J. HOROVITZ.)

ABŪ EIYŪB AL-ANṢĀRĪ. [See ABŪ AIYŪB KHĀLID B. ZAID].

ABU 'L-FAḌL. [See AL-'AMĪD and others.]

ABU 'L-FAḌL (FAIL) 'ALLĀMĪ (Shaikh), the secretary and prime-minister of the emperor Akbar, was born at Āgra on the 16th Muḥarram 958 (14th January 1551). He was the second son of Shaikh Mubārak Nāgōrī (d. 1593), the author of the commentary on the Ḳor'ān, and the younger brother of Shaikh Faiḍī [q. v.], the poet. On his father's side, he was of an Arabian family which had emigrated to Hindūstān and had settled first in Sind and later at Nāgōr, in Djodhpūr (Rādjpūtāna). Hence his father is generally spoken of as Nāgōrī though he had settled and married in Āgra some years before Abu'l-Faḍl's birth. On his mother's side, Abu'l-Faḍl was connected with Mīr Rafī' al-Dīn Ṣafawī of Īdj near Shīrāz, who was regarded as a saint and consulted both by the emperor Humāyūn and his adversary and conqueror, Shēr Shāh. Abu'l-Faḍl was a student from childhood and early interested himself in religious questions. In his account of his mental development, given in the third volume of his *Inshā'* (Newal Kishore lithographed edition, p. 266), he says he began his studies at the age of five and that when he was fifteen, he was versed in all current science. For ten years later, he taught pupils and discussed religious matters with himself and others. But he found no inner peace and often was tempted to renounce the world and become an anchorite. In the *Akbar nāme* he thus writes of himself: „Though during the day, my cell was made bright by teaching science, yet at night I would take the path of the fields and approach the enthusiasts of the 'Way of Search' and implore inspiration from those treasure-possessing paupers . . . . . But no helpful remedy touched the troubled spot of my soul. Whiles my heart was drawn to the Sages of Cathay; whiles it inclined to the ascetics of Lebanon (the Druses); whiles a desire for discoursing with the Lamas of Tibet broke my peace and whiles a sympathy with the priests of Portugal tugged my skirt. Sometimes a conference with the *mōbids* of Persia, sometimes a knowledge of the secrets of the *Zand-awestā* robbed me of my repose, for my soul was alienated both from the rationalists and the enthusiasts of mine own land."

From the struggle between jarring thoughts and from the antagonism between the contemplative and the active life, he was relieved, according to his own account, by the introduction to Akbar, which he regarded as his second birth. Before this, however, he had to undergo, in common with his father and brother, considerable persecution at the hands of the *'ulamā'* and had to flee to Āgra and remain in hiding for a time.

Abu'l-Faḍl was presented to Akbar in the nineteenth year of the reign (1574), just before the latter set out on an expedition to Bihār. Faiḍī, who had been restored to favor, was instrumental in introducing his brother to the emperor. At this time, Akbar held orthodox opinions and was zealous for the Muḥammedan Faith; Abu'l-Faḍl also was a believer at least in appearance. He therefore presented, as a scholar's gift, a commentary on the famous Throne-verse of the Ḳor'ān. Next year, when Akbar returned victorious to Āgra, he received, as appropriate to the occasion, one on the opening of the Chapter of Victory.

Faiḍī and Abu'l-Faḍl soon gained high favor with the emperor and rendered him the service of helping him in his discussions with the *'ulamā'*. Indeed it was they and in particular the latter, who are accused of destroying Akbar's faith in Muhammedanism. In the words of Badā'ūnī (Badāyūnī) Abu'l-Faḍl was the man who set the world in flames. The brothers, however, did not rise rapidly in rank. Faiḍī never held a higher command than that of Four Hundred and it was not until 1585 and after eleven years of service, that Abu'l-Faḍl became a Commander of One Thousand. In the following year, he was associated with the veteran Shāh 'Alī Maḥram in the joint-government of Dihlī; in 1592 his command was doubled; in 1600 he was promoted to the *manṣab* of Four Thousand. A year earlier he had been sent on service to the Dekkan, at the instigation of Prince Sālim and others, who were jealous of his influence over the emperor. If they hoped he would fail in this, his first independent military command, they were mistaken; he distinguished himself greatly and amongst other exploits, captured the strong fort of Asīrgarh. He was much assisted in his campaign by his son, Shaikh 'Abd al-Raḥmān Afḍal Khān who, in the language of the author of the *Ma'āṣir al-umarā'*, was the arrow of the front of his quiver (*tīr-i rū-yi tarkash-i ū*). His success still more embittered Prince Sālim who, when he had heard that Abu'l-Faḍl was returning

to rejoin the emperor with whom he himself was at feud, procured his assassination. A Bundela chief way-laid Abu'l-Faḍl near Narwār, killed him and sent his head to Salīm in Allahābād. The murder was committed on the 4th Rabī' I 1011 (22d August 1602); the headless body was conveyed to Antrī in Gwāliōr and there buried. The grave still exists but in a neglected state.

Abu'l-Faḍl was a man of great industry and the *Akbar nāma* is a monument to his toil. The most valuable part of the book is the third volume; this contains the *Ā'īn* or Institutes which are the best authority for Akbar's administration. As the work of a contemporary, the *Akbar nāma* can never be superseded, but it must be admitted that the historical narrative is neither interesting nor philosophical. Beside this voluminous book, Abu'l-Faḍl wrote several others, the *Iyār-i dānish* which is an abridgment of the *Anwār-i suhailī*, and many letters which were published after his death by members of his family in two collections: *Mukātabāt-i 'Allāmī* and *Ruḳa'āt-i Shaikh Abu'l-Faḍl* (or *Inshā-i Abu'l-Faḍl*). His name is also associated with the Persian version of the *Mahābhārata* and with the *Ta'rīkh-i Alfī*.

Bibliography: Shāh Nawāz Khān, *Ma'āthir al-umarā'*; *Darbār-i Akbarī*; Blochmann, in the preface to his translation of the *Ā'īn-i Akbarī*; Elliot and Dowson, *The history of India*, vi. 1 *et seq.* (A. S. Beveridge.)

ABU 'L-FARADJ, a very frequent *Kunya*. [See BĀBAGHĀ, BARHEBRAEUS, IBN AL-DJAWZĪ, AL-NADĪM etc.].

ABU 'L-FARADJ 'Alī b. al-Ḥusain b. Muḥammed b. Aḥmed al-Ḳorashī al-Iṣbahānī (or al-Iṣfahānī), an Arabian historian. Abu 'l-Faradj, a descendant of the Umaiyads, was born at Iṣpahān in 284 (897) and studied in Bagdad. He then led the life of a wandering littérateur and enjoyed the patronage of Saif al-Dawla and of the Būyide viziers Ismā'īl b. 'Abbād and al-Muhallabī and also of the Spanish Umaiyads, whom he, however, did not seek for personally. He died on the 14th Dhu 'l-Ḥidjdja 356 (21st November 967). His chief work, which alone has been preserved, is the great *Kitāb al-Aghānī*; in this he collected the songs which were popular in his time, adding the accounts of their authors and their origin which appeared of interest to him. He had previously made a more extensive collection of songs with the indication of their airs but without any additional notices. The book begins with the collection of 100 songs which, at the orders of the caliph Hārūn al-Rashīd, the most famous musicians of his time, Ibrāhīm al-Mawṣilī (comp. Frank Dyer Chester, in the *Journ. of the American Oriental Society*, xvi. 221—274), Ismā'īl b. Djāmi' and Fulaiḥ b. al-'Awrā' had written and which were revised under al-Wāthiḳ by Isḥāḳ b. Ibrāhīm. Then follow other selected songs, especially those of the caliphs and their descendants. With every song there is indicated, besides the text, the air according to the musical terminology of Isḥāḳ b. Ibrāhīm al-Mawṣilī, to these are added very detailed accounts concerning the poet, often also concerning composers and singers of both sexes. In spite of its unsystematic order this book is our most important authority not only for literary history till into the third century of the Hidjra, but also for the history of civilization. It was printed in 20 volumes in Būlāḳ, 1285; a new edition in 21 volumes appeared in Cairo, 1905-1906. Wellhausen filled in a gap in the 14th volume from the Munich MS. Nº. 470 (*Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, l. 145—151). Brünnow gives gleanings from MSS. in *The twenty-first volume of the Kitāb al-aghānī* (Leyden, 1888). I. Guidi published an index under the title of *Tables alphabétiques du Kitāb al-Aghānī* (Leyden, 1895—1900). The supplement of Brünnow and Guidi's index are also reproduced in the Cairo edition. Kosegarten's edition did not get further than the first volume, under the title of *Alii Ispahanensis liber cantilenarum magnus* (Greifswald, 1840). Of the more recently revised editions of the work that of the author of the *Lisān al-'Arab*, Muḥammed b. al-Mukarram al-Anṣārī (died in 711 = 1311) has independent value, because it completes historical and literary statements from other sources (*Die arab. Handschr. .... zu Gotha*, Nº. 2126; Rieu, *Supplement*, Nº. 1280).

Bibliography: Wüstenfeld, *Die Geschichtschreiber der Araber*, Nº. 132; Brockelmann, *Gesch. d. arab. Litter.*, i. 146. (Brockelmann.)

ABU 'L-FATḤ. [See IBN AL-'AMĪD, IBN AL-FURĀT, AL-MUẒAFFAR and others.]

ABU 'L-FATḤ al-Iskandarānī, name of the hero in Hamadhānī's *Maḳāmāt*.

ABU 'L-FIDĀ' Ismā'īl b. 'Alī b. Maḥmūd b. 'Omar b. Shāhanshāh b. Aiyūb 'Imād al-Dīn al-Aiyūbī, an Arabian prince, historian and geographer. He was born in Djumādā I 672 (November 1273) in Damascus, whither his father al-Malik al-Afḍal, a brother of the then prince of Hamāt, al-Malik al-Manṣūr (a branch of the Egyptian Aiyūbides), had fled with his family from the Mongols. In the service of his uncle he early began his military career in the latter's feuds against the crusaders; when, however, after the death of his childless cousin Maḥmūd II on the 21st Dhu 'l-Ḳa'da 698 (20th August 1299) the vacant principality of Ḥamāt was conferred not on him but on the emir Sonḳor, he entered the service of Sulṭan al-Malik al-Nāṣir. Only when he had served faithfully for 12 years was he installed as governor of Ḥamāt on the 18th Djumādā I 710 (14th October 1310). Two years later, when on a visit in Cairo, he received the rank of prince and the title of al-Malik al-Ṣāliḥ. A further recognition of his faithfulness as a vassal was accorded him on the 17th Muḥarram 720 (1st March 1320) when he was given the title of al-Malik al-Mu'aiyad and the hereditary rank of Sulṭan. He died on the 23d Muḥarram 732 (27th October 1331) at Ḥamāt. As prince he was deserving in that he erected useful buildings round his residence. His fame is, however, mostly based on his literary work, the most important of which are his History of the world and his Geography. The former under the title of *Mukhtaṣar ta'rīkh al-bashar* treats of pre-Islāmic history and that of Islām till the year 729 (1329) and was printed in full in 2 volumes at Constantinople in 1286 (1869-1870). Single parts are: *Abulfedae historia anteislamica arab. ed. vers. lat. auxit* H. O. Fleischer (Leipsic, 1831). *Ismail Abulfedae de vita et rebus gestis Mohamedis, textum arab. primus ed. lat. vert.* J. Gagnier (Oxford, 1723). *Vie de Mohammed, texte arabe d'Abulfeda, accompagné d'une trad. franç. et de notes* par Noël des Vergers (Paris, 1837). *Life of Mohammed*

transl. from the Arabic of Abulfeda by W. Murray (London, n. d.). *Abulfedae Annales Muslemici arab. et lat. op. et stud. J. J. Reiskii* ed. J. G. Chr. Adler (Copenhagen, 1789—1794). *Abulfedae annales moslemici lat. ex arab.* fecit J. J. Reiske (up to the year 406 = 1015-1016; Leipsic, 1754, 1778). *Historia anteislamica* [?] *ex Abulfeda* ed. F. W. C. Umbreit (Göttingen, 1816). — The Leyden Library possesses under N°. 727 the MS., corrected by his own hand, of the Geography, *Taḳwīm al-buldān*, which he completed in the year 721 (1321). Single parts were printed in Europe as early as 1650. *Géographie d'Aboulféda, texte arabe* par Reinaud et Mac Guckin de Slane (Paris, 1840; autographed by Ch. Schier, Dresden, 1846). *Trad. de l'arab. en franç.* par Reinaud; i. (*Introduction générale à la géographie des Orientaux*), ii¹, Paris, 1848, ii², 2 by St. Guyard, *ib.*, 1883.

Litter.*, ii. 44.

(BROCKELMANN.)

ABŪ FIRĀS AL-ḤAMDĀNĪ, an Arabian poet, born in 320 (932). He was a cousin of the famous patron of arts and prince of Ḥimṣ, Saif al-Dawla, whom he represented as governor in Manbidj. His life was, as also the prince's, taken up with the frontier feuds with the Eastern Romans in Asia Minor. In 348 (959) he fell into their hands as a prisoner and was taken to al-Kharshana on the Euphrates. He succeeded in escaping thence, probably by means of a bold leap, but was again seized in 351 (962) and brought to Constantinople, where he was kept a prisoner for many years. From this time date a number of touching elegies addressed to his family, amongst them being the well-known poem to his mother, which Ahlwardt has translated (*Über Poesie und Poetik der Araber*, p. 44). A year after his liberation from captivity Saif al-Dawla died, and thereupon he tried to make himself master of Ḥimṣ, but was defeated by the troops which Saif al-Dawla's son sent against him, and fell in battle in the year 357 (968). His poems are distinguished from those of other poets by their strongly personal tone, they are to a certain extent a diary of his adventures. His style, however, is not different from that of his contemporaries, even though he is not quite so bombastic as Mutanabbī. His Dīwān, revised by Ibn Khālawaih (d. 370 = 980), was printed in Beyrout in 1873, and with explanatory notes by Nakhla Kalfāṭ in 1900 in the same town; a few poems in German by Rückert, in Lagarde's *Symmikta*, pp. 206—208; comp. R. Dvořak, *Der arab. Dichter Abū Firās und seine Poesie*, in the *Actes du Xe congrès des orient.*, sect. iii. pp. 69—83; idem, *Abū Firās, ein arab. Dichter und Held, mit Ṯa'ālibī's Auswahl seiner Poesie, in Text und Übersetzung mitgeteilt* (Leyden, 1895); comp. Wellhausen, in the *Götting. Gelehrt. Anzeig.*, 1896, pp. 175—176.

(BROCKELMANN.)

ABŪ FUDAIK. [See 'ABD ALLĀH B. THAWR.]

ABŪ FUṬRUS, the Arabic name for the ancient Antipatris, which is to be sought for in the Wādī 'l-'Awdjā', perhaps in Ḳal'at Ra's al-'Ain. The shorter form „Fuṭrus" is also met with for the town. Usually, however, Nahr Abī Fuṭrus (also Nahr Fuṭrus, by Abū Nuwās) is meant, which properly designates the Wādī (Nahr al-'Awdjā') that flows by the town. Here Marwān II rested on his flight to Egypt from Damascus in the year 132 (750), and shortly afterwards the town was the scene of the butchering of 72 or 80 Umaiyads (comp. Theophanes, *Chronographia*, ed. de Boor, i. 427, who certainly has the same event in mind and places it at Antipatris). Subsequently diverse battles took place in the vicinity of this town.

(F. BUHL.)

ABU 'L-FUTŪḤ ḤASAN (384—430 = 994—1039), Sherīf of Mecca, of the family of the Mūsawī (called after Ḥasan's great-grandson Mūsā 'l-Djūn). Abu 'l-Futūḥ is especially known amongst the lords of Mecca, who reigned before the house of the Banū Ḳatāda (this latter being in power from 1200 till the present day), because in 1011-1012 he let himself be persuaded to lay claims to the dignity of caliph. A son of a grand-vizier, who, after his father had been killed at the orders of the Fāṭimide caliph Ḥākim, had fled to Arabia, seems to have induced him to take this step. When he had journeyed to Syria with supposed relics of Muḥammed and 'Alī, he received news of a revolt in Mecca. As he had besides but little confidence in his followers, he hurried back and reconciled himself with Ḥākim.

For the rest his rule, as that of his son Muḥammed Shukr, was distinguished from that of most of the predecessors of Ḳatāda by its great duration.

Bibliography: C. Snouck Hurgronje, *Mekka*, i. 59 *et seq.*

(C. SNOUCK HURGRONJE.)

ABU 'L-GHĀZĪ BEHĀDUR KHĀN, Turkish historian and sovereign of Khwārizm, was the 2^d son of 'Arab Muḥammed Khān, whose capital was Urgandj, and who was descended from Cinggiz Khān. He was born near Urgandj in 1603 (the year of the hare; the date given by himself of the Hegira — 1014 = 1605 — cannot be correct). Being on bad terms with his brothers, his father invested him with the government of the town of Kāt; he commanded the right wing when his father was defeated by his rebellious sons, and took refuge at Samarḳand with Imām Ḳulī Khān. On the accession of his brother Isfendiyār he received Urgandj as his appanage (1033 = 1623), which had become almost a desert since the Amū-daryā had changed its bed to flow into the Aral Sea (about 1575). He was afterwards exiled to Persia and remained ten years at Iṣpahān. After the death of Isfendiyār at the beginning of the year of the sheep (1643), he was proclaimed khan of Khwārizm. He declared war against the Turkomans and killed a great number of

them, retook Khîwa, fought the Kalmucks and twice laid waste the environs of Bukhârâ (1065 = 1655 and 1072 = 1662). He died in 1074 (year of the hare, 1663), after a reign of 23 years. His work called *Shadjara-i Turk*, written in Turkî (Čaghatai), contains the history of the ancestors of Čingiz together with that of this conqueror and his descendants, especially of the branch of Shaibân b. Djûdjî; he began to write it in 1074 (1663) at the end of his life; feeling that he could not complete it, he commanded his son Abu 'l-Muzaffar Anûsha Muḥammed Behâdur to finish it; the latter wrote the part from 1054 (1644) to the end; the work was finished in 1076 (1665). The first known manuscript of it was found in Siberia by Tabbert von Strahlenberg, a Swedish officer, who was made prisoner at the battle of Poltawa, and who made the German translation published by Messerschmidt (Göttingen, 1780).

ABÛ ḤABBA („father of grain"; so called on account of the fertility of that region), the name of an extensive group of ruins, south-west of Baghdad and north-east of Musaiyib, a short distance from the east bank of the Euphrates. The excavations conducted there by H. Rassam in the years 1881 and 1882 proved that Abû Ḥabba is the site of the old Babylonian town of Sippar, which had formerly been sought for in the ruins of Sifeira (or Sifêra; Peters writes Sfeira), situated much more to the north, on account of the similarity of the names. The excavations undertaken by Father Scheil in 1894 in Abû Habba were also crowned with great success. The cuneiform inscriptions obtained by Rassam, Scheil and certain Arabs consist mostly of texts of the so-called contract literature, i. e. of juristic or business documents. These for the most part come from the archives of the famous temple of the sun god (Shamash). Sippar was one of the most ancient towns of Babylonia; its existence can be traced back in documentary records at least as far as the beginning of the third millenium before Christ. The Euphrates probably flowed close by the town; at the present day its bed is some 12 km. (7½ miles) distant from the ruins. Sippar formed with Agade (also called Sippar sha Anunitu, i. e. Sippar [the town] of the goddess Anunit), which was probably only separated from it by the Euphrates, a double town, and to distinguish it from Agade is also sometimes called Sippar sha Shamash, i. e. Sippar, the town of Shamash. It is still a moot point whether these towns together correspond to the Biblical Sepharwaim (II Kings, xviii. 34; xix. 13; Isaiah, xxxvi. 19; xxxvii. 13).

ABÛ ḤAFṢ 'OMAR AL-BALLÛṬÎ AL-BETRÔDJÎ AL-IḲRÎṬISHÎ, of Betrôdj (= Pedroche) in the Faḥṣ al-Ballûṭ (i. e. Los Pedroches north of Cordova in the Sierra Morena), leader of the *Rabaḍîyûn*, who in the year 199 (814) were driven out of the south-west suburb (*Rabaḍ*) of Cordova by al-Ḥakam I al-Rabaḍî, and who for a long time held their ground in Egypt, especially in Alexandria. Being driven out of that town by the 'Abbâsides, they subjugated the isle of Crete in 210 (825). There Abû Ḥafṣ 'Omar founded a dynasty which held out against the Byzantines till 350 (961).

Bibliography: Yâḳût, *Mu'djam*, i. 536 *et seq.*; Dozy, *Hist. des Musulmans d'Espagne*, ii. 76; Amari, *Storia dei Musulmani di Sicilia*, i. 162—165, 287; ii. 376; A. Müller, *Der Islam im Morgen- und Abendland*, i. 506 *et seq.*, ii. 470. (C. F. SEYBOLD.)

ABÛ ḤAFṢ 'OMAR B. DJAMI', of the Djebel Nefûsa, an Abâḍite scholar mentioned in the *Kitâb al-siar* of Shammâkhî, pp. 561, 562, in a short notice, without any indication as to date.

He translated into Arabic the old *'Aḳîda* of the Abâḍites of the Maghrib, written originally in the Berber tongue. It is still the catechism used by the Abâḍites of the Mzâb and of Djerba. The *'Aḳîda* of Abû Ḥafṣ has given rise to numerous commentaries, amongst which must be mentioned in the first place that of Shammâkhî, the author of the *Kitâb al-siar*, which is extant in manuscript with the Abâḍite communities of the Mzâb, of Djerba and of Djebel Nefûsa. Next in rank come certain commentaries of Shaikh 'Omar b. Ramaḍân al-Thilâtî (18th cent.), and the older one of Abû Sulaimân Dâwûd b. Ibrâhîm al-Thilâtî, which have been autographed or printed as an appendix to the *'Aḳîda* in several collections edited in Algeria or at Cairo.

The *'Aḳîda* of Abû Ḥafṣ has been published and translated with notes taken from the Abâḍite commentators by A. de Motylinski (*L'aqida populaire des Abadhites algériens.* — *Recueil de mémoires et de textes publié par l'École des Lettres et les Médersas, en l'honneur du XIVe Congrès des Orientalistes d'Alger.* — Algiers, 1905).

Following the order in which Shammâkhî gives his biographical articles, we may suppose that 'Omar b. Djamî' lived at the end of the eighth or at the beginning of the ninth century of the Hegira. (A. DE MOTYLINSKI.)

ABU 'L-HAIDJÂ', a Ḥamdânide. [See 'ABD ALLÂH B. ḤAMDÂN.]

ABU 'L-HAIDJÂ' B. MUSAK, a Kurd chief, lord of Irbil [q. v.], who took part in the campaign against the crusaders in 504-505 (1111), and who, besides, played an important part in the wars of the later Seldjûḳides, Maḥmûd and Mas'ûd.

Bibliography: Ibn al-Athîr (ed. Tornb.), x. 292 *et seq.*; *Recueil des historiens des croisades, Hist. or.*, ii. 56; Ibn Khallikân (transl. de Slane), i. 162.

ABÛ ḤAIYÂN 'ALÎ B. MUḤAMMED B. AL-'ABBÂS AL-TAWḤÎDÎ (so called either after an ancestor who sold a sort of date called *tawḥîd*,

or in the sense „upholder of pure monotheism"), jurist, philosopher, Ṣūfī, and compiler of miscellanies, lived in the fourth (10th) century. Little was preserved of his biography, but from documents quoted by Yāḳūt it appears that he was alive in Radjab 400 (Feb. 1010), and that he died at the age of more than eighty. His home was placed by different authorities at Nīshāpūr, Shīrāz, or Wāsiṭ. Much of his life was spent in Bagdad, where he studied grammar under Abū Saʿīd al-Sīrāfī, and ʿAlī b. ʿĪsā al-Rummānī, Shāfiʿite law under Abū Ḥāmid al-Marwarūdhī and Abū Bekr al-Shāshī. At a late period of his life he attended the philosophical courses of Yaḥyā b. ʿAdī, Abū Sulaimān Muḥammed b. Ṭāhir „the Logician", and others, at various times between 361 and 391 (971—1001).

Owing to heretical opinions expressed by him in works now lost, he was banished from Bagdad (where he had apparently supported himself by acting as scribe) by Muhallabī (d. 352 = 963), and at first applied for help to Ibn al-ʿAmīd in Khorāsān, whom he approached with an elaborate epistle, afterwards published by him as a model of eloquence. From 367 to 370 (977—980) he lived at the court of Ibn ʿAbbād at Raiy, where, having refused to act as amanuensis, he failed to receive any gratuities; he afterwards avenged himself on both these viziers by attacking them in a treatise on their faults, as well as by satire in his work entitled *al-Imtāʿ*. He appears to have had more success with the viziers of Ṣamṣām al-Dawla, Ibn Saʿdān (d. 375 = 985-986) and ʿAbd Allāh b. al-ʿAriḍ al-Shīrāzī. The last part of his life was again spent in Bagdad, where he lived in poverty. Towards the end of it he burned his library, for which he alleged in excuse the neglect of the people of Bagdad, among whom he had lived twenty years. In the preface to his Treatise on Friendship he makes a similar complaint of being tabooed by general consent at the capital. The following list of his works is given by Yāḳūt (*Muʿdjam al-udabāʾ*, Constantinople MS.): —

1. On Friends and Friendship (Constantinople, 1301), with an appendix on the sciences.

2. Refutation of Ibn Djinnī's commentary on Mutanabbī.

3. *Al-Imtāʿ wa'l-muʾānasa* (quoted by al-Ḳifṭī, p. 283, a passage to which Flügel, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xii. 20, first called attention; also by Ibn ʿAraīd, *Muḥāḍarāt*, i. 188, and Ghuzūlī, *Maṭāliʿ al-budūr*, ii. 62, and perhaps 117. Yāḳūt, *loc. cit.*, also gives several extracts).

4. *Al-Ishārāt al-ilāhiya* (a compendium of this is preserved in MS., Ahlwardt, *Verz. d. arab. Handschr. d. königl. Bibl. zu Berlin*, Nº. 2818).

5. *Al-Zulfa*.

6. *Al-Muḳābasa* (published, with the title *Muḳābasāt* or *Muḥāḍarāt*, at Bombay, without date; see also *Catal. cod. or. bibl. ac. Lugduno Batavae* (1st ed.), iii. 314-315).

7. *Riyāḍ al-ʿārifīn*.

8. *Taḳrīẓ al-Djāḥiẓ* (of this a large extract is given by Yāḳūt in his life of Aḥmed al-Dīnawarī).

9. *Dhamm al-wazīrain* (an attack on Ibn al-ʿAmīd and Ibn ʿAbbād, preserved, it would appear, at Constantinople, since an edition of it was promised by the *Djawāʾib* press; a considerable extract is given by Yāḳūt in his life of Ibn ʿAbbād).

10. *Al-Ḥadjdj al-ʿaḳlī idhā ḍāḳ al-faḍāʾ ʿan al-ḥadjdj al-sharʿī*.

11. *Risāla fī ḥalāt al-fuḳahāʾ*.

12. *Risāla baghdādiya*.

13. *Risāla fī akhbār al-ṣūfiya*.

14. *Risāla ṣūfiya*.

15. *Risāla fī'l-ḥanīn ila'l-awṭān*.

16. *Kitāb al-baṣāʾir wa'l-dhakhāʾir* (an extract from this is given by Subkī in his life of the author. Copy or copies in Fātiḥ Library, Constantinople, Nos. 3695—3699).

17. *Al-Muḥāḍarāt wa'l-munāẓarāt* (quoted by Yāḳūt in his life of the author, and probably the work whence Ibn ʿAraīd, *loc. cit.*, ii. 77, produces the correspondence between Abū Bekr and ʿAlī, and whence Barhebraeus, ed. Pococke, p. 330, produces the account given by Abū Ḥaiyān of the *Ikhwān al-ṣafā*).

In *Ghurar al-khaṣāʾiṣ*, p. 74 (Cairo, 1284) mention is made of a work *Akhbār al-ḥukamāʾ wa-dhakhāʾir al-ḥukamāʾ* by Abū Ḥaiyān al-Tawḥīdī, and *ibid.*, p. 76 the third volume of *al-Tadhkira al-tawḥīdiya* is cited. It is uncertain whether these works are identical with any of those in the above list.

Abū Ḥaiyān was coupled with Ibn al-Rāwandī and Maʿarrī as one of the Zindīḳs of Islām, and indeed as having expressed his opinions more obscurely, and therefore more insidiously than the others (*Journ. of the Roy. As. Soc.*, 1905, p. 80). But his extant works scarcely justify this assertion, though the title of Nº. 10 is suggestive of the heresy for which Ḥallādj was martyred. His extant Ṣūfī work (Nº. 4) consists of prayers and homilies, with some edifying correspondence, and only occasional allusions to Ṣūfī technicalities. Nº. 6 is a collection of reproductions of conversations on various philosophical subjects at which he professes to have been present; the chief speaker is Abū Sulaimān al-Manṭiḳī, but other persons of note, e. g. Abū Isḥāḳ al-Ṣābī, Abū Bekr al-Khwārizmī, Abu'l-Ḥasan al-Ḥarrānī, Yaḥyā b. ʿAdī, also figure in the book. The questions discussed are mainly logical and metaphysical. In Nº. 1 the author imitates (as indeed he did elsewhere) the simple and unaffected style of Djāḥiẓ, and does little more than string together anecdotes and quotations. Nº. 9 had the reputation of bringing ill-luck: and perhaps the bad name which it attached to Abū Ḥaiyān accounts for the fact that though a philosopher and a Ṣūfī he is included in the lists of neither Ṣūfīs nor philosophers.

Bibliography: Nawawī (ed. Wüstenf.), p. 707; Subkī, *Ṭabaḳāt al-shāfiʿiya* (Cairo), iv. 2, 3; Yāḳūt, *Muʿdjam al-udabāʾ* (Keuprülü-Zāde Library); Ṣafadī (*Journ. of the Roy. As. Soc.*, 1905, p. 80); Ibn Khallikān (ed. Wüstenf.), Nº. 707; Nauwerk, *Notiz über das arab. Buch Tuḥfat ikhwān al-ṣafā* (Berlin, 1837).

(D. S. MARGOLIOUTH.)

ABŪ ḤAIYĀN ATHĪR AL-DĪN MUḤAMMED B. YŪSUF AL-GHARNĀṬĪ, an Arab philologist of Berber origin, born in Granada in 654 (1256). He studied grammar and Ḥadīth in Granada, Velez, Malaga and Almeria, and afterwards wandered through North-Africa and Egypt. Having performed the pilgrimage to Mecca, he lectured in the Manṣūriya at Cairo on the Ḥadīth, attending at the same time the grammatical lectures of Ibn al-Naḥḥās until 698 (1298) when the latter died and he became his successor. He had come to Egypt as a Ẓāhirite [q. v.], and Ibn Ḥadjar declares in Abū Ḥaiyān's biography that the latter was a Ẓāhirite even in grammar, which — ac-

cording to Goldziher, *Die Schule der Ẓâhiriten*, pp. 188 *et seq.* — should mean that even in grammatical questions Abū Ḥaiyān endeavored to maintain the exclusive authority of the old masters, particularly that of Sībawaih. Later on he followed the method of the Shāfi'ite school. His writings comprise not only grammar but also Ḳor'ān commentary and the Ḥadīth; he also wrote poetry and was the author of a History of Spain in 60 volumes which has unfortunately not been preserved. Indeed of the 65 books and treatises which he wrote only about 10 have been handed down to us. He was not only a perfect master of Arabic but also wrote a Persian and a Turkish grammar. This latter — under the title of *al-Idrāk li-lisān al-Atrāk* (Constantinople, 1309; comp. *Journ. As.*, 8th series, xx. 326—335; *Actes du XIVe congrès intern. des Orientalistes*, iii. 45 *et seq.*) — is a considerable work. His treatise on the Ethiopian language was never finished. Abū Ḥaiyān died in Cairo in 745 (1344).

(M. TH. HOUTSMA.)

ABŪ ḤAMMŪ MŪSĀ I B. ABI SA'ĪD 'OTHMĀN B. YAGHMURĀSAN, fourth king of the dynasty of the Banū 'Abd al-Wād [see 'ABDALWĀDIDES], who reigned at Tlemcen and over Central Maghrib; he succeeded his brother Abū Zaiyān (d. April 1308), and was proclaimed king on the 21st Shawwāl 707 (15th April 1308).

In his interior administration he rebuilt the ruins accumulated during the long siege of Tlemcen by the Marīnides, which had lasted from Sha'bān 698 to Dhu 'l-Ḳa'da 706 (May 1299—May 1307); he had the ramparts of the town repaired and a moat dug all round the walls; he accumulated provisions in the silos of the capital. These silos were without doubt in the part of the city mentioned by Ibn Khaldūn under the name of al-Maṭmar, situated inside the rampart not far from Bāb Kashshūt (now the Fez Gate). Mūsā I, it is said, filled the chests of the public treasury. Thus it may be seen that the chief preoccupation of his mind was to defend the capital from outside attack and to organize it in view of another siege by the Marīnides.

As to his foreign policy he undertook numerous warlike expeditions, and was backed up by skillful generals; he extended his authority over the turbulent tribes of Tūdjīn and of the Maghrāwa of the plain of the Chélif and of the mountains on its northern and southern borders; it seems that he established a very strong government over these tribes, which was able to keep them in order and submission. The victorious arms of Mūsā I pushed towards the east even as far as Bougie and Constantine, in the empire of the Ḥafṣides of Tunis. On the west he succeeded in keeping off the Marīnides, who were always ready to attack Tlemcen, and prevented them from passing Wadjda (Ujda).

Beyond a general secretary and his private secretary he had only two ministers: the first acted as chamberlain, and his powers must have been very extensive; the second was specially Minister of Finance.

Abū Ḥammū, thanks to his armies, pacified the country and busied himself principally with the collection of the taxes for the purpose of accumulating the money necessary for the fortifying of Tlemcen and the maintenance of a powerful army. He does not seem to have been much taken up with increasing the well-being of his subjects nor with ameliorating their material and intellectual conditions; he contented himself with a purely military organization for the purpose of maintaining order in the country and of resisting the attacks of the Marīnides.

He was very hard on his son Abū Tāshfīn; he lent too ready an ear to the possibly exaggerated and malevolent stories told by interested councillors and courtiers against the young prince. Abū Tāshfīn, driven to extremities by his injustices, urged on too by his friends and supported by a part of the army, had him assassinated on the 22nd of Djumādā I 718 (22nd July 1318), and was proclaimed king in his place.

[For the bibliography see 'ABD AL-WĀD and 'ABDALWĀDIDES.]

(A. BEL.)

ABŪ ḤAMMŪ MŪSĀ II B. ABI YA'ḲŪB YŪSUF B. 'ABD AL-RAḤMĀN B. YAḤYĀ B. YAGHMURĀSAN, king of Tlemcen of the dynasty of the Banū 'Abd al-Wād, born in Spain in 723 (1323-1324). He was the nephew of the two sovereigns Abū Sa'īd and Abū Thābit, who had reigned together at Tlemcen after having restored the 'Abdalwādide throne.

It was to Spain that the father of Abū Ḥammū was banished, with all the members of his family, by Abū Tāshfīn I [q. v.]. There doubtless he studied hard and acquired a taste for poetry, literature, art and magnificent feasts which he instituted in the court at Tlemcen.

Abū Ḥammū's father had given up the work of royalty to his two younger brothers for the purpose of retiring to Nedroma (Nadrūma) where he lived a devotee. During the reign of his two uncles, Abū Ḥammū had been brought up at the court of Tlemcen. At the time of the defeat of the Banū 'Abd-al-Wād in the plain of Angād by the army of the Marīnide Abū 'Inān in Djumādā I 753 (June 1352), the king Abū Sa'īd perished and his brother Abū Thābit, accompanied by his nephew Abū Ḥammū, fled to the region of Tunis. Abandoned by all their partisans, the two princes were arrested in the province of Bougie and the governor delivered them up to Abū 'Inān. Abū Sa'īd was put to death; as to Abū Ḥammū, the fact of his being a prince of royal blood not having been discovered, he was released and found a shelter at Tunis at the Ḥafṣide court, where he was well received. Some time afterwards the friendly relations which existed between Abū 'Inān and the Ḥafṣide court were destroyed, and the king of Tunis gave his enthusiastic consent to the proposal of certain Arab chiefs of Ifrīḳiya to put the young Abū Ḥammū at their head in order to stir up troubles for the Marīnides in the Maghrib, and to attempt to reinstate this young 'Abdalwādide prince on the throne of Tlemcen. The death of Abū 'Inān, at Fez, took place before the arrival of Abū Ḥammū before the walls of Tlemcen and made the conquest of his capital easier for the latter. It was on the 10th Rabī' I 760 (9th Feb. 1359) that he entered the capital and was proclaimed king. Twice the Marīnides occupied Tlemcen for a short time and Abū

Ḥammū succeeded in getting back again a little later. In 772 (1370) the capital for the third time and the whole 'Abdalwādide kingdom fell into the hands of the king of Fez, who placed his own governor in each town, whilst the unfortunate Abū Ḥammū had to flee to the Maghrib and the desert.

The sultan of Fez, 'Abd al-'Azīz, having died in Rabī' II 774 (October 1372), the Marīnide army evacuated Tlemcen and the kingdom. Abū Ḥammū, having been immediately recalled, left his retreat and to his great surprise recovered the possession of his capital.

Having returned in such an extraordinary manner to the head of his kingdom Abū Ḥammū set himself to the pacification of his states. But hardly had he put down a revolt on one side when a rising against his authority took place elsewhere, and a pretender to the throne appeared somewhere. Ibn Khaldūn gives abundant details about these events, in some of which he was besides directly implicated.

Besides these continual troubles Abū Ḥammū had to put up with many annoyances in his family, with his own children. His eldest son, Abū Tāshfīn, heir presumptive to the throne, made him suffer every kind of vexation. As early as 780 (1378-1379) Abū Tāshfīn showed the sentiments with which he was animated with regard to his father by causing the assassination of Yaḥyā b. Khaldūn, the historian, the secretary and intimate friend of Abū Ḥammū (Ramaḍān 780 = Dec. 1378-Jan. 1379). Towards the end of 788 (Jan. 1387) this same son of the king had all of his brothers who were in Tlemcen arrested together with his father himself, and shut up the latter in a prison at Oran. Abū Ḥammū, however, succeeded in escaping and even in recovering his kingdom; but Abū Tāshfīn took refuge at the court of Fez and returned at the head of a Marīnide army to attack his father in his capital. Abū Ḥammū was killed in a battle against the army under his son's command on the 1st Dhu 'l-Ḥidjdja 791 (21st Nov. 1389).

Being of a highly cultivated mind, he sought for the society of the famous scholars and poets of his time; he was, further, benevolent and readily accessible to the humblest of his subjects which made him popular. If he lacked energy and courage on the field of battle he had as a compensation a very resourceful mind in expedients. He could beguile his enemies and get himself cleverly out of difficulties; thus in spite of all the reverses of fortune he suffered he was able to make his way to power.

Abū Ḥammū wrote for the use of his son a treatise on political ethics, published at Tunis (1279 = 1862) under the title of *Wāsiṭat al-sulūk fī siyāsat al-mulūk*, of which Mariano Gaspar has made a Spanish translation entitled *Al collar de perlas* (Saragossa, 1899, in the *Coleccion de estudios arabes*, iv).

The yearly festival of the birthday of the Prophet gave occasion, in Abū Ḥammū's time, for great rejoicings and literary displays, the importance of which has been noted by the chroniclers. Long poems in praise of the Prophet and of the king of Tlemcen were sung in the royal halls in the presence of a crowd of guests, who were supplied with quantities of savory dishes. On this occasion too the great mechanical clock, which embellished the palace of the king and of which al-Tanasī has given so complete a description, was made to play.

Abū Ḥammū wished to show the interest he bore towards intellectual works by having a new school built; he himself installed there the celebrated professor Sherīf Abū 'Abd Allāh. This establishment, richly endowed, received the name of Madrasa Ya'ḳūbiya from the name of the king's father, Abū Ya'ḳūb, who was buried there.

The epitaph engraved on the marble of the tomb of Abū Ḥammū II has been published by Brosselard.

ABŪ ḤAMZA. [See AL-MUKHTĀR B. 'AWF.]

ABŪ ḤANĪFA [See AL-DĪNAWARĪ.]

ABŪ ḤANĪFA, a Musulman jurist, the founder of the Ḥanafite school which is named after him. He was probably born in the year 80 (699) and died in the year 150 (767) at the age of 70. His grandfather Zūṭā was brought to Kūfa from Persia as a slave by the Muḥammedan conquerors and received his freedom in that town, thus becoming the client (*Mawlā*) of the Arabian tribe of Taim-Allāh, to which his liberator belonged. Thābit, the father of Abū Ḥanīfa, was born a member of this tribe. He probably belonged to the 'Alide party, for it is expressly stated (e. g. Nawawī, ed. Wüstenf., p. 699) that 'Alī blessed him and his descendants.

Abū Ḥanīfa was a prominent scholar and devoted the whole of his long life to the study of the sacred science. His public lectures in Kūfa soon gave him a name as a great scholar and his utterances had great weight with the persons round him. People flocked daily to hear him and to question him on the ritual and on the law. The Ḥanafite school named after him is one of the four orthodox *Madhhabs* (i. e. courses, schools), which have maintained themselves to this day in Islām.

The opinion of many European writers that Abū Ḥanīfa worked on quite new principles and erected a very tolerant system, in which he made the greatest concessions to the speculative method of deduction (the *ḳiyās*) is quite unfounded. It is true that he was open to the reproach made by his opponents that he attached little importance to tradition but rather independently followed his own judgment (*ra'y*). The scholars in „the two holy cities", Mecca and Medina, asserted that he was unacquainted with tradition and gave free play to caprice. But we should not be led astray by these statements, hostile as they are to Abū Ḥanīfa. In any case there is in general no real difference of principle between the different Fiḳh schools in Islām.

Abū Ḥanīfa appears to have confined himself during the whole of his life to imparting his teaching orally to his auditors; many Arabian writers quote his views, and have thus formed the basis of the entire Ḥanafite legal literature from the very beginning of the Ḥanafite school up to the present day. It appears, however, that he himself never wrote anything. The titles of some of Abū Ḥanīfa's small works are indeed mentioned, but

they are said to have been composed by his disciples, and more especially by his grandson Ismā'īl b. Ḥammād. Of these works ascribed to Abū Ḥanīfa the best known is probably a small pamphlet on dogmatics and religious doctrines: *al-Fiḳh al-akbar*. The authenticity of this work has been doubted, because it contains a protest against the Murdjite doctrine, to which Abū Ḥanīfa himself is said to have subscribed (A. v. Kremer, *Gesch. d. herrsch. Ideen*, p. 39, note 2; E. Sachau, *Zur ältesten Gesch. des muhamm. Rechts*, p. 14 = *Sitzungsber. der phil.-hist. Classe der kais. Akademie d. Wissensch.*, lxv. 712; M. Th. Houtsma, *De strijd over het dogma*, p. 116). The so-called *Musnad* of Abū Ḥanīfa is a collection of traditions compiled by his disciples and later Ḥanafites, which the master, no doubt to give them his guarantee, had used in his teaching and worked up. In the seventh century the theologian Muḥammed b. Maḥmūd found fifteen different recensions of this collection, which he worked up into a complete edition arranging it according to the chapters of the Fiḳh (Goldziher, *Muhamm. Stud.*, ii. 230).

Of Abū Ḥanīfa's life we know but little. He was an independent, well-off man, who made his living as a merchant, having a business in cloths. Most of Abū Ḥanīfa's later biographers relate that Yazīd b. 'Omar b. Hubaira, the governor of the Umaiyads in Kūfa, and later on the caliph al-Manṣūr wanted to compell him, by corporal punishment, to accept the office of judge, and that Abū Ḥanīfa died in prison in the year 150 (767) in consequence of the ill-treatment, to which he was subjected on account of his persistent refusal.

Perhaps this is only a legend, invented by later Ḥanafites, who could not understand that the Government had never tried to induce the master to enter its service. In any case Kūfa was in Abū Ḥanīfa's time the seat of the Umaiyad governor, and later on, after the expulsion of the Umaiyads, it was the residence of the first two 'Abbāsides. Abū Ḥanīfa's native town was therefore in that stormy period the centre of the tremendous agitation caused by the dynastic change. Probably Abū Ḥanīfa had, when the 'Abbāsides began to agitate aginst the Umaiyads, joined the movement with which he no doubt sympathized. When then, after the fall of the Umaiyads, the new rulers drove back their cousins and allies the 'Alides, he probably in his disappointment took the part of these latter against the 'Abbāsides. This would explain his being persecuted and punished. Perhaps the Government made attempts to win over this influential man by promises of high office and by threats and punishments. It is well known that many pious, independent men in those days deemed it wrong and refused to enter the service of the Government or to accept an office dependent on it (comp. Goldziher, *loc. cit.*, ii. 39).

According to other less trustworthy accounts Abū Ḥanīfa died later and not in prison.

(TH. W. JUYNBOLL.)

ABU 'L-ḤASAN. [See AL-ASH'ARĪ, AL-SHĀDHILĪ.]

ABU 'L-ḤASAN (or Abu 'l-Ḥusain) MUḤAMMED B. IBRĀHĪM B. SĪMDJŪR, hereditary vassal prince of Kūhistān; under three Sāmānide princes: 'Abd al-Malik I, Manṣūr I and Nūḥ II, he was three times governor of Khorāsān in the years 347—349, 350—371, 376—378 (958—960, 962—982, 986—989). During his second governorship of 20 years' duration he practically enjoyed the esteem of an independent prince and obeyed the Sāmānides „only as far as pleased him." On the accession of Nūḥ II (365 = 976) he was overwhelmed with the highest honours, being recipient of the title of Nāṣir al-Dawla; his daughter was married to the sovereign, but as early as the year 371 (982) he was, at the instigation of the vizier Abu 'l-Ḥusain 'Otbī, ignominiously deposed. After mature reflection he abandoned his first thoughts of asserting himself by armed force and retired to his hereditary estates. After the removal of the vizier and the outbreak of civil war he was restored to the governorship and kept this position till his death; he was succeeded by his son Abū 'Alī [q. v.].

The clergy praises Abu 'l-Ḥasan as a god-fearing and just emir; comp. Sam'ānī, *Kitāb al-ansāb*, s. v. *al-Sīmdjūrī* (quotation from al-Baiyi', *Ta'rīkh Nīsābūr*, made by Barthold in „*Turkistan in the time of the Mongol invasion*", Russian, i. 60); in other authorities he is credited with many violent deeds. In the description of the events at the time of his deposition there are two series of traditions, according as the writers took the vizier's side ('Otbī and the compilers dependent on him, such as Ibn al-Athīr, Mīrkhond, etc.) or the governor's (as Gardīzī, 'Awfī and Ḥamd Allāh Ḳazwīnī); comp. the text of Gardīzī and 'Awfī in Barthold, *Turkistan* etc., i. 11 *et seq.*, 93 *et seq.*

(W. BARTHOLD.)

ABŪ HĀSHIM. [See AL-DJUBBĀ'Ī.]

ABŪ HĀSHIM 'ABD ALLĀH B. MUḤAMMED, an 'Alide Imām of the Shī'ites. Abū Hāshim was the son of the well-known Muḥammed b. al-Ḥanafiya and was venerated by the Shī'ites as their recognized chief. Shortly before his death he is said to have bequeathed his own and his family's claim to the Imamate to the 'Abbāside Muḥammed b. 'Alī, the father of the subsequent caliphs al-Saffāḥ and al-Manṣūr. This statement, though found in the oldest Arabian historians, is strongly doubted by more recent investigators, and is to be ascribed to the invention of the followers of the 'Abbāsides, who desired to prove in this way the claim of the 'Abbāsides to the caliphate. Abū Hāshim died in the reign of Sulaimān b. 'Abd al-Malik in Ḥumaima, a small place south of the Dead Sea, which the 'Abbāside pretenders had chosen as their residence.

Bibliography: Ibn Sa'd, v. 240 *et seq.*; Ṭabarī, iii. 2500; Shahrastānī (ed. Cureton), pp. 15, 112 (Haarbrücker, i. 23, 169); Weil, *Gesch. d. Chalifen*, ii. 29 *et seq.*; A. Müller, *Der Islam im Morgen- und Abendland*, i. 444; Wellhausen, *Das arab. Reich und sein Sturz*, pp. 313 *et seq.*

(K. V. ZETTERSTÉEN.)

ABŪ HĀSHIM Muhammed (455—484 = 1063—1094), a sharif of Mecca. He finally obtained this dignity through that the pious prince of Yemen, al-Ṣulaiḥī, who put with his troops a stop to the brutal struggles of the sherifs for the upper hand and formally installed Abū Hāshim. Most of the sherifs who held supreme power in Mecca before Ḳatāda (598 = 1200) were descendants of Abū Hāshim's and were named after him or after his great-great-grandfather Hawāshim (Hāshimides).

During his long period of office, Abū Hāshim exploited the pilgrims in every way possible, even by plundering them, and trafficked with the rights of supremacy which he sold alternately to the caliph of Bagdad and the Fāṭimide caliph of Egypt.

Bibliography: C. Snouck Hurgronje, *Mekka*, i. 62—65. (C. Snouck Hurgronje.)

ABŪ ḤĀTIM (Sahl b. Muḥammed) al-Sidjistānī (or al-Sidjzī), an Arabian philologist of Baṣra. He was a pupil of al-Aṣma'ī, Abū Zaid al-Anṣārī and Abū 'Ubaida Ma'mar b. al-Muthanna, whose traditions concerning Arabian philology, poetry and antiquities he propagated. He learnt the great grammatical principles of Sībawaih from al-Akhfash, but was not able to make a name for himself in the finesses of grammar. The subjects in which he excelled are poetry and the knowledge of the old poets and their language; he was also esteemed as a Ḳor'ān scholar. Nevertheless the old lists (see Flügel, *Die grammatischen Schulen der Araber*, p. 88) contain besides works on the above mentioned subjects also grammatical pamphlets. On the other hand no mention is made of his *Kitāb al-mu'ammarīn* (*On those who live long*) and the *Kitāb al-waṣāyā* (*Testaments*) belonging to it. Amongst his pupils Ibn Duraid [q. v.] and al-Mubarrad [q. v.] are the best known. The date of his death is given between 248 and 255 (862—869); probably the latter date (255) given by Ibn Duraid is the correct one. Of his works there have been published a *Book on the palm* (first reviewed by S. Cusa in the *Archivio Storico Siciliano*, vol. i. 1873; comp. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxviii. 500 *et seq.*) by Bartolomeo Lagumina, in the *Atti della Reale Accademia dei Lincei*, 1894, 4th ser., viii. and the *Book on the long-lived* by I. Goldziher (*Abh. zur arab. Philologie*, ii.; Leyden, 1899).

(Goldziher.)

ABŪ ḤĀTIM Ya'ḳūb b. Ḥabīb al-Malzūzī (this is according to Abāḍite authors; but according to other historians of Africa, his father was Labīd or Labīb b. Madyan b. Itūweft, of the great Howāra tribe), Abāḍite chief. Arab historians represent him simply as a leader of insurgent Berbers. He, however, had played a more distinct and important part, since after having ruled over Tripoli he was invested by the Abāḍites with the title of Imām of Defence in 156 (773).

He gathered around him a considerable army, which was joined by contingents of Ṣofrites, Abāḍites of Tāhert, and other Berber groups, and besieged in Ṭobna 'Omar b. Hazārmard, the governor of Ifrīḳiya, who had left Ḳairawān, leaving Abū Hāzim Habīb al-Muhallabī in command of this place.

'Omar, having succeeded in escaping from Ṭobna, and being hemmed in by the Berbers, shut himself up in Ḳairawān until reinforcements, which he had asked for from the caliph, should arrive. Blockaded by Abū Ḥātim's army, he withstood the attacks of the besiegers and endured the fearful famine which reigned in the place, until he learned that an 'Abbāside army was coming from the East, commanded by Yazīd b. Ḥātim, whom the caliph had appointed to succeed him. Being in despair he made a daring sortie in Dhu'l-Ḥidjdja 154 (Nov.-Dec. 771), in which he lost his life. Abū Ḥātim, after allowing the enemy to capitulate with the honors of war, went to meet the army commanded by Yazīd. It comprised, besides troops from Khorāsān, Baṣra, Kūfa and Syria, the remains of the garrison soldiers who had been driven out of Ifrīḳiya and some broken bodies of Howāra Berbers.

In an encounter, which, according to the probably erroneous information of the Abāḍite chroniclers, took place at Meghmedas, Abū Ḥātim defeated the van-guard commanded by Salīm b. Sawāda al-Tamīmī; but in a great battle, which, according to Shammākhī, was fought to the west of Djendūba, the Abāḍites were completely defeated. Abū Ḥātim perished with 30000 Berbers. This disaster took place on the 27th Rabī' I 155 (7th March 772).

This was the last of the 375 battles that the Berbers had fought against the caliph's troops since their revolt against 'Omar b. Hazārmard (comp. the very complete bibliographical information given on this subject by R. Basset in *Les sanctuaires du Djebel Nefousa*, Paris, 1899, pp. 79 *et seq.*).

(A. de Motylinski.)

ABU'L-HAWL (Hōl), i. e. „Father of Terror", the Arabic designation for the sphinx of Djīza (Gizeh). Certain authors call it simply *al-Ṣanam* "the idol", but its proper name was already notorious in the Fāṭimide epoch. At that time it was also known under the Coptic name *Belhīt* (*Belhīb*), or, according to Ḳuḍā'ī in Maḳrīzī, *Belhūba* (*Belhawba*). Abu'l-Hawl is probably an Arabic popular etymology deriving from the Coptic name; the initial *B* contains probably the Coptic article, which in Arabic is often transformed into Abū. Ancient tradition understands under Abu'l-Hawl only the head of the sphinx, as its lion-formed body was buried in sand in the Middle Ages, and only in 1817 was laid bare. Modern Arabian authors use the word designating „sphinx" simply, and not only for the one near the pyramids.

The Arabs, who were not acquainted with the ancient Egyptian culture, considered with superstitious awe the majestic head projecting from the sand of the desert. It was considered as a talisman which hindered the progress of the sand of the desert into the Nile valley, a magic power ascribed by others to the pyramids. A colossal statue in the shape of a woman — according to its description it must be Isis with the child Horus, — placed on the other shore of the Nile, in Fusṭāṭ, passed as the beloved one of Abu'l-Hawl. The former turned its back to the water just as Abu'l-Hawl to the desert, and was considered as a talisman against the inundation of Fusṭāṭ by the high water. In 711 (1311-1312), it fell into the hands of treasure-seekers, and its stones were built into a mosque. — Another tradition considers Abu'l-Hawl as the image of the legendary Ushmūm, to whom the Sabeans, it is said, brought offerings of white hens and frankincense.

Arabic reports contribute very little to the history of this monument. According to al-Muḳaddasī, as early as 375 (985) the face, it seems, was

no longer intact, although later reports praise the beauty and harmony of the features, frequently pointing out the reddish color. Towards 780 (1378) a fanatical <u>sh</u>ai<u>kh</u> added some more damages to the statue.

ABU 'L-HUDHAIL MUḤAMMED B. AL-HUDHAIL AL-'ABDĪ AL-'ALLĀF, one of the principal representatives of the Mu'tazilite school, was born in 135 (752-753). He was a native of Baṣra, a freed-man of the tribe of 'Abd al-Ḳais. He went to study at Bagdad, where he was the pupil of a pupil of Wāṣil b. 'Aṭā'. He won great renown as a dialectician. According to Mas'ūdī (*Murūdj*, Paris, viii. 301), after his return to Bagdad in 204, al-Ma'mūn persuaded him to come to his court, as well as Naẓẓām, another celebrated Mu'tazilite, to argue with the partisans or opponents of their opinions. <u>Sh</u>ahrastānī (ed. Cureton, p. 141) tells us of other disputations that he had with Hi<u>sh</u>ām b. al-Ḥakam, who professed certain anthropomorphic opinions with regard to God.

The date of Abu 'l-Hudhail's death is often put at 235 (849-850), which would give him a hundred Musulman years. Abu 'l-Maḥāsin (ed. Juynb. and Matth., i. 711), who gives the above date as that of the death of this doctor according to al-<u>Dh</u>ahabī, declares, however, in another place (*ib.*, p. 671), adding some other details, that Abu 'l-Hudhail died in 226 (840-841). It seems that the latter should be preferred.

The works of Abu 'l-Hudhail have not reached us. We know from <u>Sh</u>ahrastānī and al-Īdjī something of his doctrines. <u>Sh</u>ahrastānī establishes ten points by which his philosophy differs from the ordinary teaching of the Mu'tazilites. These points refer to theodicy, to the question of free will and to ethics.

With regard to theodicy, Abu 'l-Hudhail admits the qualities and attributes of God in opposition to the Mu'tazilite school which denies them, but he identifies them with the divine essence: God is knowing through knowledge and knowledge is his essence, powerful through power and power is his essence, etc. So that qualities would be only fashions of the divine essence. <u>Sh</u>ahrastānī compares them to the divine persons of the Christian theology, a comparison one could scarcely understand unless one recalls the custom the Gnostics had had of personifying the attributes. — On the subject of the will in God, Abu 'l-Hudhail distinguishes volition from the thing willed; further he distinguishes creative will from legislative will. The will to create is creation itself; and this will, distinct from the object created, is not in a place. Abu 'l-Hudhail was the first to express this last opinion which was at once adopted by the Mu'tazilite school. The divine word is distinguished in the same manner as the will: the creative word expressed by the phrase „Let there be" is identical with creation and is not in a place; the legislative word, comprising precepts and prohibitions as well as revelations, is in a place, by way of an accident.

As to the question of fatalism Abu 'l-Hudhail naturally admits free will, like all Mu'tazilites, with this difference that he does not attribute free will to the other life. In eternal life all motions are necessary and created by God, without which there would still be need of the Law. This doctor, moreover, admits that motions in the eternal life will cease and that individuals will reach a state of repose, happy for some, painful for others; this opinion is not founded on theological but on logical grounds, that is to say Abu 'l-Hudhail did not feel able to admit motion without beginning or end. As to the duration of physical life he teaches a mitigated fatalism: he believes that man dies only „at the destined hour", always excepting cases of violent death.

In morals Abu 'l-Hudhail studies the question arising from the subject of the moral responsibility of man, and the knowledge at what moment an act is in existence. He only recognizes an accomplished act; for him „he does" is quite different from „he has done". This is applied to the act of the limbs; but it is the same for the act of the heart: desire, volition do not exist completely, as long as the power of executing it is wanting in the limbs. — Another important moral idea is that which we call the natural law. This doctor points out that men who are able to reflect, having lived before the revelation, must know God and a certain minimum of morals by rational demonstration, and that, if they failed to reach this knowledge, they were liable to eternal punishment. The Mu'tazilites for the greater part shared this opinion.

(CARRA DE VAUX.)

ABŪ HURAIRA, a member of the Sulaim b. Fahm clan of the South-Arabian tribe of Azd, a companion of the Prophet and a zealous propagator of his words and deeds. He is generally known by his *Kunya* Abū Huraira; the most divergent statements concerning his real name in heathendom and in Islām have been handed down. In the most trustworthy accounts his name wavers between 'Abd al-Raḥmān b. Ṣa<u>kh</u>r (see Nawawī, ed. Wüstenf., p. 770) and 'Umair b. 'Āmir (Ibn Duraid, *Kitāb al-i<u>sh</u>tiḳāḳ*, p. 295); the surname of „the father of the little cat" is supposed to have been given him on account of his tenderness to cats. He came to Medina in the year of the battle at <u>Kh</u>aibar (7 = 629), joined Muḥammed and thenceforward lived with him. At first he is said to have earned his sustenance as a laborer. His constant intercourse with the Prophet encouraged him after the latter's death to transmit a greater number of Hadīths in his name than the other companions; the number of those that are supposed to come from him is estimated at 5300, but certainly a great part of them have been foisted on him. Amongst those who handed down the sayings transmitted by him are to be found

the names of the most respected members of the oldest Islāmic community. Legend justifies the air of infallible memory, with which he imparted his numerous traditions, by inventing the tale that the Prophet had with his own hands wrapped him in a cloth spread out in front of them during their conversation and that by this means he assured the faithful remembrance of what he had heard — a fabulous trait which is also to be met with as a symbol of intimate friendship. On account of his great renown as an interpreter of the sayings and deeds of the Prophet ʿOmar was able to appoint him prefect of Baḥrain. After his deposal, he refused the caliph's offer to restore him to the office, and preferred to remain for a length of time in Medina as a private citizen. It is very improbable that Marwān, who favored him in many other ways, appointed him as his lieutenant in the governorship of Medina. Abū Huraira died in the year 57 or 58 (676—678) at the age of 78.

The humorous temperament (*mazāḥ*) of Abū Huraira, which gave rise to numerous anecdotes (Ibn Ḳotaiba, ed. Wüstenf., p. 142), is often reflected in the way he gave his Ḥadīth communications, in which he enveloped the most unimportant things in pathetic language. The inexhaustible stock of information which he always had in hand (the Abū Huraira Ḥadīths take up no less than 213 pages in the *Musnad* of Ibn Ḥanbal, ii. 228—541), appears to have raised suspicion of their trustworthiness in the minds of his immediate auditors, nor did they hesitate to give utterance to their suspicions in ironical form (comp. also Bukhārī, *Faḍāʾil al-aṣḥāb*, Nº. 11). He had several times to defend himself against the charge of idle talk. These facts give our criticism every reason to be prudent and sceptic. Sprenger calls Abū Huraira „Extreme of pious humbug". At the same time we must take into account the fact that most of the sayings of which tradition makes him the originator were probably foisted on him at a later date.

Bibliography: Muslim, *Ṣaḥīḥ*, v. 202 (Bukhārī and Tirmidhī have no special paragraphs on the *Faḍāʾil* of Abū Huraira); Ibn al-Athīr, *Usd al-ghāba*, v. 315; Sprenger, *Das Leben und die Lehre des Mohammad*, iii. pp. lxxxiii; Goldziher, *Abh. zur arab. ABŪ ḤUSAIN (Banū Abī Ḥusain), name of a Kelbite family. To this belonged the Fāṭimide governors, who since 336 (948) ruled over Sicily [q. v.].

ABŪ ISḤĀḲ. [See AL-ṢĀBĪ and AL-SHĪRĀZĪ.]

ABŪ ḲALAMŪN, also BŪ ḲALAMŪN, the usual designation in Persian but more rare in Arabic for the chameleon. Originally Abū Ḳalamūn designated the *pinna* (Greek ὑποκάλαμον), of whose thready byssus (*ṣūf al-baḥr* „sea wool") tissues with a peculiar golden glittering were prepared. The philologists (Ṣiḥāḥ, Azharī, Djawharī) know Abū Ḳalamūn almost only as a kind of cloth of variegated colors brought into commerce by the Byzantines. The original signification of the name was therefore forgotten, some connected it with Mount Ḳalamūn near Damascus, and Ḳazwīnī (ed. Wüstenf., ii. 364), who was acquainted with the production and use of the „sea wool" on the Spanish coast, knows Abū Ḳalamūn only as a cloth woven after the colors of *Abu Ḳurāḳiš* [q. v.].

ABŪ KALB, „father of the dog", Arabic designation for the Dutch ducat, on which the lion was regarded as a dog.

ABŪ KĀLĪDJĀR AL-MARZUBĀN B. SULṬĀN AL-DAWLA, a Būyide, had been appointed by his father as governor of al-Ahwāz in 412 (1021). On the death of the latter (415 = 1024) he was called to Shīrāz to succeed him, but he was forestalled by his paternal uncle Abu ʾl-Fawāris b. Bahāʾ al-Dawla, governor of Kirmān, with the help of the Turkish guard, which preferred him. Abū Kālīdjār gathered some troops, who defeated his uncle's army and he entered Shīrāz, but he could not hold his own there because of the hostility and discontent of the Dailamite garrison. The peace which resulted only left him Khūzistān; a fresh victory gave him Fārs (417 = 1026), although he was defeated by the inhabitants of the capital. The tribe of the Banū Khafādja, who had just pillaged Anbār, acknowledged his suzerainty; on the contrary the inhabitants of the marshes of Lower Babylonia (al-Baṭīḥa) revolted under the command of Abū ʿAbd Allāh al-Ḥusain b. Bakr al-Sharābī, their old leader, on account of the exactions to which they had to submit (418 = 1027). The same year he attacked his uncle Abu ʾl-Fawāris to take Kirmān from him, but torrid heat and sickness stopped the progress of his army and peace was concluded on the terms of the partition of Fārs and Kirmān between the two princes. He took as his minister al-ʿĀdil Bahrām, son of Māfennā of Kāzerūn; taking advantage of the struggles between the Turkish and Dailamite troops, he took possession of Baṣra (419 = 1028), of Kirmān, without striking a blow, at the request of the inhabitants, after the death of Abu ʾl-Fawāris, and of Wāsiṭ (420 = 1029), which he could not keep. He saw al-Ahwāz pillaged and the women of his family taken as prisoners to Bagdad by Djalāl al-Dawla, he attacked him and was routed after three days' fighting; the situation was retrieved with the money of his minister al-ʿĀdil. In 421 (1030) he joined battle with Djalāl al-Dawla at al-Madhār, the capital of Mesene, was defeated and lost that place, which was recovered shortly afterwards on the arrival of reinforcements; he lost Baṣra, then was recalled thither by the inhabitants. In 423 (1032) he put to death the eunuch Ṣandal, who had left him only a nominal power. In 428 (1036-1037), Bārs Toghān tried to get him recognized as master of Bagdad, but without success. He made peace with his uncle Djalāl, who gave his daughter in marriage to Abū Manṣūr, son of Abū Kālīdjār. He retook Baṣra (431 = 1039-1040), tried in vain to seize Iṣpahān, sent troops by sea to reduce ʿOmān then in revolt (433 = 1041-1042) and delivered Djīruft in Kirmān, which was besieged by the Ghuzz of Toghrul-beg the Seldjūḳide (434 = 1042-1043).

On the death of Djalāl al-Dawla (6th Shaʿbān 435 = 9th March 1044) he succeeded him at Bagdad on promising bounties to the Turkish troops, and was enthroned the following year with the title

of Muḥyī 'l-Dīn. He retook two fortresses in Kirmān from Farāmurz, the son of 'Alā' al-Dawla, and was recognized as suzerain by Gershāsp, also surnamed Abū Kālīdjār, another son of the same, who had just seized Hamadhān from Toghrul-beg, but who remained there only one year. He rebuilt the walls of Shīrāz, a work which was finished in four years, and saw himself acknowledged at Iṣpahān, but, having lost 12000 horses in an epizooty (437 = 1045-1046), he acknowledged the suzerainty of Toghrul-beg (438 = 1046-1047). Peace having been concluded, he gave his daughter in marriage to the Seldjūkide sovereign (Rabī' II 439 = Oct. 1047). He took possession of al-Baṭīḥa the same year and imprisoned his minister Dhu 'l-Sa'ādāt, the son of Fasāndjas; the death of this person, which took place the following year, was even attributed to his orders. He died on the 4th Djumādā I 440 (15th Oct. 1048) at Djanāb in Kirmān, from an angina contracted whilst hunting, at the age of 40 lunar years, after a reign of 4 years at Bagdad. His camp was pillaged by the Turkish guard; the Dailamites saved his second son Abū Manṣūr Fūlā Sutūn. His eldest son al-Malik al-Raḥīm (a title which the caliph refused to recognize) Khosru Fīrūz succeeded him at Bagdad.

Bibliography: Ibn al-Athīr (ed. Tornb.), ix. 228—382; Mīrkhond, *Rawḍat al-ṣafā*, iv. 53, 54.

The same name was borne by a son of 'Alā' al-Dawla b. Kākōya, who was in command at Hamadhān in 429 (1037-1038) when that town was attacked by the Ghuzz, and saved it by a treaty of peace, but he could not defend it the following year, after the taking of Rai, and fled to Kinkawar (Ibn al-Athīr, ix. 270-271); — by the head general and minister of Dārā b. Minūčihr b. Kābūs the Ziyāride, Abū Kālīdjār b. Waihān al-Ḳūhī, whose imprisonment by Anōsharwān, the brother of the former, was the cause of the conquest of Djurdjān and of Ṭabaristān by Toghrul-beg in 433 = 1041-1042 (*ib.*, ix. 301, 340); — by Fakhr al-Dawla, b. Rukn al-Dawla (976—997; al-Bīrūnī, p. 133); — by Ṣamṣām al-Dawla al-Marzbān b. 'Aḍud al-Dawla Abū Shudjā' Khosraw, 9th Būyide and Amīr al-Umarā' (982—998; *ib.*, p. 133; Ibn al-Athīr, ix. 15, 16; Abu 'l-Fidā', ii. 354; Mīrkhond, iv. 50); — by al-Marzbān, the son of Shāh Fīrūz, a general of Ṣamṣām al-Dawla (995; Ibn al-Athīr, ix. 79); — by Anūshalīkhā, ispehbed of Ṭabaristān, who was vanquished in 1034 by Mas'ūd the Ghaznawide (*Ṭabaḳāt-i-Akbarī*, in Elliot, *Bibliogr. index to the history of India*, p. 187). — The form Bā-Kālīdjār is employed by Ẓahīr al-Dīn (217, 222) to designate a son of Dja'far Kīlāwīdj who was a general of Shams al-Mulūk Rostem of the Bāwend dynasty, of the 2d line. This name being given by Ẓahīr al-Dīn (199) to the son of Minūčihr arises from a confusion with the general of Dārā mentioned above. — This name was also borne by a fortress in the province of Multān (Defrémery, in the *Journ. As.* 4th series, xi. 422; Raverty, *Minhādj*, pp. 1, 75) and a town to the east of Benares (*Minhādj*, p. 733). — It belongs to the dialect of Gīlān and signifies war, battle (Pehl. *kārīčār*, Pers. *kārzār*; Justi, *Iran. Namenbuch*, p. 153). (Cl. HUART.)

ABU 'L-ḲĀSIM. [See AL-ZAHRĀWĪ.]

ABU 'L-ḲĀSIM, the *Kunya* of the Prophet Muḥammed.

ABU 'L-ḲĀSIM, a fictitious person invented by d'Ohsson, as the one that furnishes information about the Caucasian people (comp. d'Ohsson, *Des peuples du Caucase ou voyage d'Abou 'l-Cassem*, Paris, 1828).

ABU 'L-ḲĀSIM, the name of a cadging parasite, whom Muḥammed b. Aḥmed Abu 'l-Muṭahhar al-Azdī depicts in his *Ḥikāyat Abī 'l-Ḳāsim al-Baghdādī* as a Bagdad type. The book was probably written in the first half of the fifteenth century and purports to relate faithfully a day in the life of its hero. Abu 'l-Ḳāsim by means of his pious language gets a hearing in a society of people at a banquet, rails at the guests and the host and gives vent to his eloquence in a detailed comparison of the advantages of Bagdad and Iṣpahān. The numerous courses of the repast pass by accompanied by his glib remarks. When the wine gets to his head he becomes importunate and vulgar, till finally, being forced to drink still more deeply, he falls asleep; when the intoxication is over he again plays the devout believer. In this picture the author, led on by his philological inclinations, has interwoven so much of his extensive knowledge of the Adab literature and of the terminology of the different trades and also of pornographic poetry — he quotes many verses of Ibn al-Ḥadjdjādj — that the realism of the description as well as the unity of the tale suffer considerably.

Bibliography: Abu 'l-Muṭahhar al-Azdī, *Ḥikāyat Abī 'l-Ḳāsim* (ed. Mez; Heidelberg, 1902); De Goeje, in the *Göttinger Gelehrten Anzeigen*, 1902, pp. 723 *et seq.*; Brockelmann, in the *Litterarisches Centralblatt*, 1902, pp. 1568 *et seq.* (J. HOROVITZ.)

ABU 'L-KHAIR, sovereign of the Özbegs and founder of the power of this nation, a descendant of Shaibān, Djūčī's youngest son, born in the year of the dragon (1412; as the year of the Hegira 816 = 1413-1414 is erroneously given). At first he is said to have been in the service of another descendant of Shaibān, Djumaduḳ Khān. The latter found his death in a revolte; Abu 'l-Khair was taken prisoner, but was released and shortly after proclaimed khān in the territory of Tura (Siberia) at the age of 17 (year of the ape = 1428; as year of the Hegira 833 = 1429-1430 is given). After the victory he had won over another khān of the family of Djūčī the greatest part of Ḳipčaḳ submitted to him. In 834 (1430-1431) he conquered Khwārizm with its capital Urgandj, which was plundered, yet soon afterwards he gave it back. According to his biographers, Abu 'l-Khair later vanquished two more princes, Maḥmūd Khān and Aḥmed Khān, conquered the city of Ordū-Bāzār, and seized (though for a short time only) the „throne of Ṣāyin Khān", that is to say that of Batu. Shortly before the death of Sulṭān Shāhrukh, which took place in 850 (1447), Abu 'l-Khair established himself firmly through the subjugation of the fortresses of Sighnaḳ (at present the ruins of Sunak-Kurghan), Arḳuḳ, Suzaḳ, Aḳ-Ḳurghan and Uzkand by the Sir-Daryā — the event in his reign the richest in consequences for the further history of the Özbegs. Sighnaḳ seems to have been since then his capital. South to this stripe of land no durable conquests were made under Abu 'l-Khair; even the next situated town of Yasi (now Turkistān) remained in the power of the Timurides. Marauding expeditions till into

Bukhārā and Samarkand were frequently undertaken. Abu 'l-Khair appeared with greater forces in 855 (1451-1452) as an ally of the prince Abū Sa'īd against the then sovereign of Samarkand 'Abd Allāh; with his aid 'Abd Allāh was besieged and killed and Abū Sa'īd was installed as sovereign of Samarkand; Rābi'a Sulṭān Begum, daughter of Ulugh-Beg, was given in marriage to Abu 'l-Khair. A second attempt to interfere with the disputes of the Timurides came out less happily; Prince Muḥammed Djūkī, favored by Abu 'l-Khair against Abū Sa'īd, was forced in 865 (1460-1461) after some successes to raise the siege of Samarkand at the approach of his enemy, to quit the country ravaged by Abu 'l-Khair's auxiliary troops (under Burke Sulṭān) and in 868 (1463-1464) — as it seems not having received any assistance from Abu 'l-Khair — to surrender to his adversary. Shortly before, probably about 861 (1456-1457; Abu 'l-Khair's grandson, Maḥmūd, born in 858 = 1454, is said to have been then three years old), Abu 'l-Khair's power received a hard blow from the Kalmucks; beaten in the open field, he had to flee to Sighnak and let the enemy ravage the whole country up to the Sir. About 870 (1465-1466) it is said that there took place among the Özbegs that split, through which the proper inhabitants of the steppes, called since Kazak, separated from the other portion of the nation. The year of the rat (1468; erroneously put as a parallel with 874 = 1469-1470) is given as the year of Abu 'l-Khair's death; the power founded by him was after a short interruption set up again by his grandson Muḥammed Shaibānī, and developed into such a magnitude that was never dreamt of.

Bibliography: Abu 'l-Khair's biography was written towards 950 (1543-1544) by Mas'ūd b. 'Othmān al-Kuhistānī (*Ta'rīkh-i Abu'l-Khair Khānī*; the statements in Howorth, *Hist. of the Mongols*, ii. 687 prove correct only as far as concerns the MS. of the British Museum, but not the work itself: comp. Rieu, *Cat. of Pers. MSS.*, i. 102; the St. Petersburg MSS., among them being also that of the University Library or. 852, used here, have also the beginning of the biography). Mas'ūd was besides able to utilise the oral narratives of Abu 'l-Khair's son Suyunič Khān (d. 931 = 1525), who seems to have drawn his information from written sources, as for example the *Maṭla' al-sa'dain* of 'Abd al-Razzāk al-Samarkandī [q. v.]. Information about Abu 'l-Khair is also to be found in the historical works on his grandson Shaibānī and his successors, especially in the *Tawārīkh-i nuṣrat nāme* (comp. Rieu, *Cat. of Turkish MSS.*, pp. 276 *et seq.*) and the writings dependent on it. (W. BARTHOLD.)

ABU 'L-KHAṢĪB, a canal south of Baṣra (called after a freed-man of Caliph al-Manṣūr), the most important of the canals, which in the Middle Ages, flowing from the west, fell into the main branch of the Tigris, the Didjla al-'Awrā' of the Arabian authors and the present Shaṭṭ al-'Arab. Its bed still exists. It is on the shore of this canal that the Zandj rebels built in the 9th century the large fortress al-Mukhtāra.

Bibliography: G. le Strange, *The lands of the Eastern Caliphate* (Cambridge, 1905), pp. 47-48; Streck, *Babylonien nach den arab. Geogr.* (Leyden, 1900), i. 42. (STRECK.)

ABU 'L-KHAṬṬĀB 'ABD AL-A'LĀ B. AL-SAMAḤ AL-MA'ĀFIRĪ AL-ḤIMYARĪ AL-YEMANĪ, first Imām elected by the Abāḍites of Djebel Nefūsa. He was one of the group of the five missionaries whom the Abāḍites call „the bearers of science". In 140 (757-758) the Abāḍites of Djebel Nefūsa and Tripoli, having rallied in great numbers to the Khāridjite doctrines, decided to appoint a leader. They met under the pretext of settling a matter of interest in a place called Ṣiad, to the west of Tripoli, and proclaimed Abu 'l-Khaṭṭāb as Imām. They entered Tripoli by surprise and forced the 'Abbāside governor to leave the town.

At this period the Warfadjūma who had seized Kairawān gave themselves up to the worst excesses in that town. Wishing to put an end to their abomination, Abu 'l-Khaṭṭāb collected his troops and marched against Kairawān at the head of 6000 warriors. He subdued Gabes in passing and, after having defeated the chief of the Warfadjūma, 'Abd al-Malik b. Abi 'l-Dja'da, who had come out to meet him, he besieged the place. It was during this siege that, according to one version the truth of which is doubtful, his principal lieutenant, 'Āṣim al-Sedrati, died from the effects of a poisoned melon sold by the besieged.

Kairawān was obliged to surrender to the Abāḍite forces and fell into the hands of Abu 'l-Khaṭṭāb (Ṣafar 141 = June-July 758), who caused a fearful slaughter of the Warfadjūma. He entrusted the government of the place to 'Abd al-Raḥmān b. Rostem, and then returned to Tripoli, whence he extended his power over the whole of Ifrīkiya.

In Dhu 'l-Ḥidjdja 141 (April 759) Muḥammed b. al-Ash'ath al-Khuzā'ī, appointed to the government of Egypt by Caliph Abū Dja'far al-Manṣūr, sent, for the purpose of re-establishing order in Ifrīkiya, first an army commanded by al-'Awwām b. 'Abd al-'Azīz al-Bedjelī. Abu 'l-Khaṭṭāb went as far as Werdasa to meet it and sent forward a van-guard under Malik b. Sehran al-Howārī to check the enemy's march. The 'Abbāside army was routed in the neighborhood of Sort.

A second army having Abu 'l-Aḥwaṣ 'Omar b. al-Aḥwaṣ al-'Idjlī as its commander was defeated at Meghmedas by Abu 'l-Khaṭṭāb in person. The Imām returned to Tripoli after this victory believing that he had finished with the Arabs. But in the meanwhile Ibn al-Ash'ath was ordered to go himself to fight the Berbers and to take the government of Ifrīkiya.

As soon as Abu 'l-Khaṭṭāb was informed of his march, he set out with a considerable army. But being deceived by a stratagem of Ibn al-Ash'ath, who pretended he was returning to the East, he allowed his troops to be disbanded. Ibn al-Ash'ath, by means of forced marches, soon reached the territory of Tripoli. The Imām hastily reassembled the nearest tribes to stop him in his march. The encounter took place at Tāwargha in Ṣafar 144 (May-June 761). The battle was terrible: Abu 'l-Khaṭṭāb perished on that day with 12000 or 14000 of his followers. In Djumādā I (August), Ibn al-Ash'ath took possession of Kairawān again. (A. DE MOTYLINSKI.)

ABU 'L-KHAṬṬĀB MUḤAMMED B. ABĪ ZAINAB (al-Makrīzī: THAWR or YAZĪD) AL-ASADĪ, called al-Adjda' („the mutilated"), a Musulman sectarian. At first he was one of the adherents of Dja'far al-Ṣādiḳ [q. v.], but afterwards, as he declared the latter (as the Imāms in general) to be

a prophet, even a divine being, on account of which he was disavowed by him, he claimed for himself what he had asserted as belonging to the ʿAlide, and won over many followers, who, according to al-Maḳrīzī, were classed in not less than 50 sects, and all together united under the name of Khaṭṭābīya [q. v.]. All what is known of his personal situation is that in 143 (760) he was executed at the orders of ʿĪsā b. Mūsā, the ʿAbbāside governor of Kūfa.

Bibliography: Shahrastānī (ed. Cureton), pp. 136 *et seq.* (Haarbrücker, i. 206 *et seq.*); Maḳrīzī, *Khiṭaṭ*, ii. 352; Ibn al-Athīr (ed. Tornb.), viii. 21. (M. TH. HOUTSMA.)

ABŪ ḲUBAIS, a sacred mountain on the east frontier of Mecca. The origin of the name is not known, although Musulman legend occupied itself with it, and amongst others it advances the statement that this mountain was, in pagan time, called al-Amīn, because, legend asserts, the black stone was preserved there. According to another legend, in this mountain was also the Treasure Cave (*Maghārat al-kanz*, q. v.), in which the first progenitors of mankind dwelt, and in which they were temporarily buried after their death.

Bibliography: Yāḳūt, *Muʿdjam*, s. v.; Wüstenfeld, *Die Chroniken der Stadt Mekka*, i. 477.

ABŪ LAHAB („father of the flame", i. e. man of Hell), the surname, by which an uncle and at the same time violent opponent of Muḥammed is designated in the Ḳorʾān (cxi. 1) and called chiefly by the Musulmans. His real name was ʿAbd al-ʿUzzā b. ʿAbd al-Muṭṭalib, the heathen character of which shocked Muḥammed. Until his death he sided with the most resolute adversaries of Muḥammed in Mecca. This fact, otherwise so discordant with the lively family sentiments of the Arabs, may be explained by that his wife, Djamīl bint Ḥarb b. Umaiya, was the sister of Abū Sufyān, the prominent leader of Muḥammed's adversaries in Mecca till the year 8. In any case she showed much hostility to the Prophet and stirred against him her husband's antagonism; for in the above-mentioned Sūra, beside Abū Lahab, also her torments and humiliation in Hell are indicated. — This Sūra reads as follows:

1. „Perish the hands of Abū Lahab and perish [himself]. 2. His fortune and all what he hath acquired profited him not. 3. He will roast in a glowing fire (*dhāta lahab*), 4. And his wife carries the wood. 5. On her neck a rope of bast".

The sequence shows that verse 4 means that in Hell she must gather the wood for the glowing fire (comp. Baiḍāwī, *ad loc.*), and not that in her lifetime she was carrying wood, that is to say, thorns, and strewing them in the way of the Prophet (as some commentators explain it; comp. for example Ṭabarī, *Tafsīr*, xxx. 192, and Baiḍāwī, *ad loc.*), nor that in her lifetime she used to spread insults on Muḥammed's poverty. — As a motive for this hostile prediction the following is given by several Arab traditionists in the name of Ibn ʿAbbās: „After verse 214 of Sūra xxvi. („Warn thy tribe, those that stand near thee") was revealed, Muḥammed addressed from Mount Ṣafā (according to some from Minā) his related families in Mecca in the following terms: ,If I announced to you an approaching enemy would you not believe me?' — ,Yes', they answered. — ,Well', said he, ,I caution you against a great punishment'! At that time Abū Lahab came up towards him and said: ,Perdition on thee (*tabban laka*)! is it for this that thou hast convoked us here?' Therefore Sūra cxi. (*tabbat yadā* etc.) was revealed". Materially not much different is the account of Ibn Isḥāḳ in the name of ʿAbbād. According to another account of Ibn Isḥāḳ, reproduced by Ibn Hishām, however, Abū Lahab expressed himself with scorn against Muḥammed on another occasion, before Hind bint ʿOtba, adding the imprecatory word *tabban*. — There is no doubt that previously a series of hostile acts of Abū Lahab against Muḥammed must have taken place, which called forth such a severe, pitiless execration of the latter against his uncle; so much more that on a previous occasion, in the party quarrel of the Meccans with Abū Ṭālib, Abū Lahab had occasionally stood by his brother, and thus indirectly by Muḥammed (Ibn Hishām, p. 244). — The Sūra is generally considered as a Meccan one (the preterite *tabbat* used for the prediction of the future perdition; comp. Baiḍāwī to Ḳorʾān, xi. 17); Nöldeke counts it amongst the oldest Meccan Sūras. Still the wording of verse 2: *Mā aghnā ʿanhu māluhu* shows, according to the unexceptional way of expression in the Ḳorʾān, something that had already happened (comp. Ḳorʾān, vii. 46; xv. 84; xxvi. 207, *passim*), for in case of future events the imperfect tense (*yughnī*) is always used; neither is there any parallel to the usage of *mā aghnā* as a preterite future. According to such a wording this Sūra contains consequently a triumphant outcry over the already happened death of Abū Lahab (see below), and could be composed only some time after the battle of Bedr. Abū Lahab did not personally take part in that battle, because, according to some, he was sick, according to others, he was afraid of ʿĀtika's bad dream. He sent in his place ʿĀṣī b. Hishām, whose fortune he had won in an arrow game, and whom he had made his slave as his debtor. Abū Lahab's great-grandson, the poet al-Faḍl b. al-ʿAbbās al-Lahabī, boastingly mentions the latter fact in a verse (*Aghānī*, xv. 7). The news of the bad issue of the battle threw him in such an anger that he betook himself to violent acts against the bearer of the news and his wife. Shortly afterwards (7 days according to Ibn Hishām) he died of smallpox. The hatred of the Musulmans was satisfied by that his sons feared to touch his corpse, which they let to become corrupt, and when they were ordered to remove it, it got an unworthy burial (Ibn Isḥāḳ in *Aghānī*, iv. 33 *et seq.*; Baiḍāwī to Ḳorʾān, cxi. 2). According to one isolated source, he died considerably later (about the year 8), as he had promised the last priest of ʿUzzā, before his death, to defend the interests of that goddess. But this statement deserves no credence; for, firstly no mention of him is made any-where after the year 2 (623-624), and secondly Ibn Saʿd tells in a tradition which he traces up to Ibn ʿAbbās that at the conquest of Mecca in the year 8 (629-630) Muḥammed received into Islām Abū Lahab's both sons, ʿOtba and Muʿattib, who fought on the Prophet's side in the battle of Ḥunain. It is quite out of the question that their father should be still alive at that time or shortly before.

Abū Lahab is depicted as a large, corpulent,

„heavy" man, prompt to become angry. He had acquired considerable wealth, in order, so was Muḥammed's opinion, to assure himself against adversity (Ḳor'ān, cxi. 2). His son 'Otba had before Islām married a daughter of Muḥammed's, but when the latter proclaimed himself as prophet, he divorced her, and he himself embraced Christianity. Cursed by Muḥammed, he is said to have been torn by a lion or a hyena while on a journey to Syria. This story, however, is not in accordance with the statement that he went over to Islām in the year 8 (see above), nor with that he died as late as the year 80 (699-700). Possibly there is a confusion with another son of Abū Lahab. The poet al-Faḍl b. al-'Abbās b. 'Otba (see *Aghānī*, xv. 2—11) was a grandson of 'Otba.

Wüstenf.), i. 69, 231 *et seq.*, 244, 430, 461; Ṭabarī, i. 1170, 1204 *et seq.*, 1329; iii. 2343; idem, *Tafsīr*, xxx. 191-192; Wāḳidī, *Kitāb al-maghāzī* (Wellhausen), pp. 42, 351; Baiḍāwī, to Ḳor'ān, cxi; Baghawī (*Tafsīr*), Bukhārī and Wāḥidī quoted by Sprenger, *Das Leben und die Lehre des Mohammad*, i. 526; Nöldeke, *Gesch. d. Qôrans*, p. 72. (J. BARTH.)

ABU 'L-LAITH NAṢR B. MUḤAMMED B. AḤMED B. IBRĀHĪM AL-SAMARḲANDĪ, a Ḥanafite jurist and theologian of the second half of the fourth (10th) century. The year of his death is variously given. He was the author of several theological and juridical works, enumerated by Brockelmann (*Gesch. d. arab. Litter.*, i. 196). It is not quite certain whether the catechism mentioned there is really his, because the author's name and genealogy as they appear in the MSS. do not agree with those of the subject of this article. This little work has been twice edited by A. W. T. Juynboll; comp. *Bijdragen Indische taal-, land- en volkenkunde*, 1881, pp. 215 *et seq.*, 267 *et seq.*

ABU 'L-MA'ĀLĪ 'ABD AL-MALIK AL-DJUWAINĪ. [See IMĀM AL-ḤARAMAIN.]

ABU 'L-MA'ĀLĪ HIBAT ALLĀH B. MUḤAMMED B. AL-MUṬṬALIB. [See HIBAT ALLĀH.]

ABU 'L-MA'ĀLĪ MUḤAMMED B. UBAID ALLĀH, an 'Alide, a descendant of Ḥusain b. 'Alī. He probably lived in the Court of the Ghaznawides, and in 485 (1092) he wrote a history of religion in Persian, entitled *Kitāb bayān al-adyān*, which was published by Schefer in his *Chrest. pers.*, i. 132—171.

ABŪ MADYAN SHU'AIB B. AL-ḤUSAIN AL-ANDALUSĪ, a famous Andalusian mystic, was born at Cantillana (Ḳaṭniyāna), a village near Seville, died in 594 (1197-1198), and was buried at al-'Ubbād near Tlemcen.

His family was obscure and his parents were poor. From childhood Abū Madyan had to learn the Ḳor'ān by heart in his own country according to the custom which still exists; he learned also the weaver's trade. Feeling a natural leaning toward study, he applied himself to it with ardor; and, attracted by the reputation of certain Maghrib professors, he left his country to go to Fez to attend the lectures of the renowned masters of whom he had heard.

The date of Abū Madyan's going to Fez is not known. Seemingly it was at the end of the Almoravide empire or at the beginning of the founding of the Almohade power. If one may judge by the matter then taught in the universities of Fez, amongst which the study of the „Mussulman traditions" (*ḥadīth*) especially figured, one may think that the Maghrib was already under the domination of the Almohades.

Arab biographers describe Abū Madyan as conversant with diverse branches of Mussulman science, both religious and profane. In fact, from what we have just seen, Abū Madyan was residing at Fez at the moment of the growth in the West of Almohade doctrines and of the revival which they brought about in theological and judicial science. But it does not appear that the young Andalusian *ṭālib* ever proclaimed his preference for the new theories. His taste led him especially towards mysticism; he was directed in this path by the <u>sh</u>ai<u>kh</u> Abū Ya'zā, who brought him by fast and prayer and by the continual practice of the strictest asceticism to the title of perfect Ṣūfī. Besides, Abū Madyan, who was very poor, had not much difficulty in detaching himself from the world and its ephemeral pleasures; he passed successively all the degrees of the mystic hierarchy and reached the rank of *Ḳuṭb* and of *Ghauth*.

After remaining some years at Fez, the young Ṣūfī went to Mecca, where, it is said, he met the great Mussulman saint, 'Abd al-Ḳādir al-Djīlī [q. v.]; he bound himself in friendship with him and under his direction completed his mystic studies.

On his return from the East Abū Madyan set himself to teach mysticism in the Maghrib. He settled in the town of Bougie, where he professed the severest asceticism; he soon acquired a reputation for sanctity and knowledge. People came from very far to consult him and to attend his lessons. Before his departure from Fez he had already performed miracles; he performed others during the course of his journey in the East and after his return to Bougie.

The mystic teaching that Abū Madyan professed at Bougie was in opposition to the opinions of the Almohade doctors of that town. The latter were disturbed at the constantly increasing reputation of this professor and of an ever growing number of his adepts; so it was resolved to get rid of him. The Almohade sovereign, Abū Yūsuf Ya'ḳūb al-Manṣūr, having been made aware of the situation, ordered the governor of Bougie to send the ascetic savant to Marrākush, so that he might question him himself. Abū Madyan submitted with good grace to the injunction of the sovereign. After having said farewell to his pupils, he started for the capital of the Almohade empire, followed by a few companions. He died on the way some kilometres from Tlemcen, on the bank of the river Isser, and, according to his last wish, was buried at Ribāṭ al-'Ubbād close to Tlemcen, where to-day his tomb is a point of pilgrimage for Mussulmans of all countries.

All the doctrine professed by Abū Madyan may be summed up in this verse, which, according to Yaḥyā b. Khaldūn, he often repeated:

„Say, Allāh! and abandon all that is matter, or is connected with it, if thou desirest to attain the true goal".

It was by the strict application of this principle that he himself attained the highest degree of mystical perfection, that he reached complete abstraction of his intellectual being and his perfect identification with that God whom he thus defined with his last sigh „Allāh al-Ḥaḳḳ".

The works of Abū Madyan are reduced to a few mystical, religious poems, one *waṣīya* and one *ʿaḳīda* (see the Arab. MSS. of the Bibl. Nat. of Paris, Nos. 1230, 10°; 3410; 4585, ff. 15, and those of the Bibl. Nat. of Algiers, Nos. 376, ff. 89; 599, ff. 3; 938, ff. 1—9; 1859, ff. 73).

The funeral of Abū Madyan took place in the midst of a great concourse of the inhabitants of Tlemcen, and was the occasion of an imposing manifestation of respect and veneration for the saint. Since that time Abū Madyan has been the protector and patron saint of Tlemcen. The city has grown and developed under the beneficent ægis of the great saint, and the town of al-ʿUbbād has grown up round his tomb.

The mausoleum of Abū Madyan was built by the command of the Almohade sovereign, Muḥammed al-Nāṣir, shortly after the death of the saint. Since then many of the princes and kings who succeeded to the throne at Tlemcen wished to contribute to the embellishment of the sacred crypt. Splendid monuments, of which many remain still in a state of good preservation (notably the Mosque of the Madrasa) were built in honor of the saint by the side of his tomb by the Marinide kings, the masters of Tlemcen in the 14th century.

(A. Bel.)

ABU 'L-MAḤĀSIN Djamāl al-Dīn Yūsuf b. Taghrībardī b. ʿAbd Allāh al-Ẓāhirī al-Djuwainī, Arabian historian, born in Shawwāl 813 (February 1411) at Cairo; his mother was a Turkish slave of the sulṭān al-Malik al-Ẓāhir Barḳūḳ. His father died in 815 (1412) as governor of Ḥalab (Aleppo) and Damascus. In Cairo, Abu'l-Maḥāsin was a pupil of al-Maḳrīzī and other celebrated scholars of that time. In 863 (1458) he performed the pilgrimage to Mecca; he died in 874 (1469), or according to others in 870 (1465-1466). Of his still preserved seven historical works his history of Egypt from the Arab conquest till 857 (1453) is the most renowned. This work contains also some facts regarding the neighboring countries, and necrologies of every year; its fair copy was executed in the years 860—862 (1456—1458) under the title of *al-Nudjūm al-zāhira fī mulūk Miṣr wa'l-Ḳāhira*, edited by Juynboll and Matthes: *Abū 'l-Maḥāsin Ibn Tagri Bardii annales*, 2 volumes, Leyden, 1855—1861 (it goes only as far as the year 365 = 976; the remainder is expected). His *Mawrid al-laṭāfa fī man waliya 'l-salṭana wa'l-khilāfa* (*Maured allatafet Jamaleddini Togribardii s. Annales*, ed. J. E. Carlyle, Cambridge, 1792) is only a short history of Muḥammed accompanied by a somewhat dry list of names of some of his companions, of the rulers of Egypt and their vizier till the year 842 (1438). His continuation of Maḳrīzī's *al-Sulūk* for the years 845—860 (1441—1456), under the title of *Ḥawādith al-duhūr fī madā'l-aiyām wa'l-shuhūr* (Ahlwardt, *Verz. d. arab. Handschr.*, N°. 9462; *The Arab. MSS. in the Brit. Mus.*, N°. 1244) and that of al-Ṣafadī's *al-Wāfī*, biographies, arranged in alphabetical order, of distinguished men from the year 650 (1252) till his time, under the title of *al-Manhal al-ṣāfī wa'l-mustawfī baʿd al-wāfī* (the Vienna cat., N°. 1174; the Paris cat., Nos 2068—2073; *Fihrist ... al-kutubkhāne al-khidīwīya*, v. N°. 162), deserve a closer examination. Besides his historical works he left a collection of mystical poems entitled *al-Sukkar al-fāḍiḥ wa'l-ʿiṭr al-fāʾiḥ* (Derenbourg, *Cat. Escur.*, N°. 367).

(Brockelmann.)

ABŪ MANṢŪR. [See al-Thaʿālibī.]

ABŪ MAʿSHAR Djaʿfar b. Muḥammed b. ʿOmar al-Balkhī, one of the Arab astrologers most frequently cited in the Christian Middle Ages (under the name of Albumasar). He was a native of Balkh, in Khorasān, and a contemporary of al-Kindī. At first he devoted himself to the science of tradition, and only at the age of 47 he began to occupy himself with the study of astrology. Arab authors already charged him with plagiary, that which was recently confirmed through the investigations of O. Loth (*al-Kindī als Astrolog*, in the *Morgenl. Forschungen: Festschrift für Prof. Dr. Fleischer*, Leipsic, 1875, pp. 270 *et seq.*). He spent the greatest part of his life in Bagdad, and died in Wāsiṭ, the 28th Ramaḍān 272 (8th March 886), said to have been over 100 years old. — Of his pretty numerous writings the following principal works are extant in manuscript: 1. *Kitāb al-mudkhal al-kabīr* (*The great book of introduction*, i. e. into astrology), in Oxford, Leyden, Constantinople (Ḥamīd.); translated into Latin by Joh. Hispalensis and Hermannus Secundus (or Dalmata); the latter translation was printed in Augsburg, 1489, under the title of *In-*

troductorium in astronomiam Albumasaris Abalachii octo continens libros partiales, then in Venice, 1495 and 1506. — 2. *Kitāb al-ḳirānāt* (*The book of the conjunctions*, i. e. of the stars), in Oxford and Paris. The work published in Augsburg, 1489, and in Venice, 1515, under the title of *Albumasar de magnis conjunctionibus et annorum revolutionibus ac eorum profectionibus, octo continens tractatus*, is not a translation of the *Kitāb al-ḳirānāt*, but of the *Kitāb aḥkām taḥāwīl sinī'l-mawālīd* (*The book of the revolution of the birth years*), Paris, Escurial, and Oxford, and of other treatises, the Arabic title of which can not be given with certainty. — 3. *Kitāb al-ulūf fī buyūt al-ʿibādāt* (*The book of the thousands over the houses of worship*), cited by al-Bīrūnī, in the *Chronology of ancient nations* (ed. Sachau, Arabic text, p. 205, English trans., p. 187). — 4. *Kitāb mawālīd al-ridjāl wa'l-nisā'* (probably that work of his called *The small book of births*), in Berlin, Vienna, Florence, Paris, Cairo, where it was also printed in 1290 (1873) under the title of *al-Kitāb fi'l-tamām wa'l-kamāl*. — 5. The *Flores Albumasaris*, or *Flores astrologiae* (Augsburg, 1488 and 1495) are probably an extract of the *De magnis conjunctionibus* etc.

ABŪ MAʿSHAR NADJĪḤ B. ʿABD AL-RAḤMĀN, a slave, probably of Indian origin, who subsequently purchased his freedom and lived in Medina. He is especially famous as the author of a *Kitāb al-maghāzī*, numerous fragments of which have been preserved by Wāḳidī and Ibn Saʿd. Amongst his authorities he mentions Nāfiʿ, the *Mawlā* of Ibn ʿOmar, Muḥammed b. Kaʿb al-Kuraẓī and other scholars of Medina. In the year 160 (776-777) he left Medina and remained till his death (170 = 786-787; Ramaḍān?) in Bagdad, where he enjoyed the favor of several members of the court of the ʿAbbāside caliphs. Ṭabarī has taken from him information on Biblical history and on Muḥammed's life and especially chronological statements, these latter going down to the very year of his death.

Bibliography: Wāḳidī, *Kitāb al-maghāzī* (Wellhausen), see index; Ṭabarī, see index; Ibn Ḳotaiba (ed. Wüstenf.), p. 253; Yaʿḳūbī (ed. Houtsma), ii. 523; *Fihrist*, i. 93; Yāḳūt, *Muʿdjam*, iii. 166; idem, *Mushtarik*, p. 256; Dhahabī, *Tadhkirat al-ḥuffāẓ* (Haiderābād), i. 212; Sprenger, *Das Leben und die Lehre des Mohammad*, iii. p. lxx.; Wüstenfeld, *Die Geschichtschreiber der Araber*, N°. 33; Sachau, in the introduction to Ibn Saʿd, iii¹. pp. xxv *et seq.*; idem, in the *Westasiatische Studien*, 1904, pp. 3 *et seq.* (J. HOROVITZ.)

ABŪ MIDFAʿ (vulg. Medfaʿ), i. e. „father of the canon", Arabic designation for the Spanish duro, a coin bearing the imprint of a colonade.

ABŪ MIḤDJAN ʿABD ALLĀH (or MĀLIK or ʿAMR) B. ḤABĪB (Ḥabīb), of the Thaḳīf tribe, an Arab poet, one of the *Mukhaḍramūn*. As a pagan he fought with the Thaḳafites against Muhammed, and was one of the defenders of Ṭāʾif when besieged by the latter (8 = 630). At that time he hit with an arrow ʿAbd Allāh, one of Abū Bekr's sons, of which wound he died in the year 11 (632-633). It seems that he had set himself also against Mālik b. ʿAwf al-Naṣrī, who, as leader of the Thumāla, Salama and Fahm, placed by Muhammed under his command, pressed hard the Thaḳafites. At least his fragm. 22 (of Abel's edition) alludes to it. Shortly afterwards Abū Miḥdjan with the men of his tribe went over to Islām (9 = 630-631). Under ʿOmar I he was in the lines of the Muḥammedan conquest troops, and as such he took part in the battle of Ḳādisīya. Not long before that he is said to have been, at ʿOmar's command, banished to Ḥaḍawḍā (comp. Goldziher, *Abh. zur arab. Philologie*, i.), because he indulged in the forbidden enjoyment of wine — according to another version, because he was after Shamūs, the wife of one of the Anṣār (fragm. 16). But when he had to embark in the boat, which was ready to depart, he succeeded in deceiving his guardians and thus escaped (fragm. 10 and 18). He betook himself to Saʿd b. Abī Waḳḳāṣ, who, near Ḳādisīya, held the field against the Persians. Having been informed of his flight, ʿOmar had him seized again through his general.

But it is more probable that Abū Miḥdjan belonged to the malcontents and resisted Khālid b. ʿUrfuṭa, whom the commander-in-chief Saʿd, having fallen sick, had appointed as his substitute. So it came about that in the beginning of the battle of Ḳādisīya (14 = 635) he was kept under lock and key (fragm. 11 and 23). Saʿd's wife, Salmā bint Abī Ḥafṣa, who was in discord with her husband, set him free on his promise to return after the battle. Thus Abū Miḥdjan could take part in the action, the remembrance of which is connected with the name of *Ḳuss al-Nāṭif* (also *Yawm Armāth* and „the day of the Bridge"). The story of his heroic feat, namely that he in this battle rendered harmless a Persian war elephant, who was attacked by Abū ʿUbaid b. Masʿūd at the risk of the latter's life, is often narrated and also mentioned by Abū Miḥdjan himself in his verses (fragm. 17). He must also have fought in the battle of Vologesias (Ullais), whither Muthannā retired after the defeat „by the bridge" (fragm. 17, verse 10).

As Abū Miḥdjan was, in spite of the Ḳorʾān and the frequent corporal punishment, addicted to wine, he was never in favor with the rigorous ʿOmar. In the year 16 (637) he is said to have been banished to Nāṣiʿ just for this delict. People assert to have seen his tomb at the frontiers of Adharbaidjān or Djurdjān: still the fables in connection with this statement deduced from fragm. 15 throw much doubt on it.

A son of Abū Miḥdjan is mentioned in the time of Muʿāwiya's reign. Of his family his mother Kanūd bint ʿAbd Allāh b. ʿAbd Shams and his uncle Salama b. Ghailān are also mentioned (fragm. 12.)

The preserved fragments of Abū Miḥdjan's verses reflect with sufficient accuracy his life, or rather the little of it that we know. As a poet he is just as rarely original as many others —

much more extolled — of his colleagues. The fragments of love-songs 1, 8 (on a Jewess in Ḥidjāz) and 16 do not say much, and the boasting songs 13 (with *laci communes*) and 11 (partly) are in the same strain. Fragment 2 must describe a battle, in which Abū Miḥdjan took part. N°. 9 seems to be a fragment of an elegy (*marthiya*); one may with certainty place in this category N°. 14, interesting on account of its historical allusions to the day of *Ḳaṣr al-Nāṭif* (comp. fragm. 17, verse 5).

His vocation, however, is founded on his wine songs. Famous is fragm. 15, a hymn on wine, beginning with accords of self-complaint (*yarthī nafsahu*) and terminating as a boasting song. A remarkable vacillation goes through the other wine songs. Sometimes he tells that he will renounce the forbidden drink for pious reasons or out of reflection, and because of his advanced age (fragm. 3, 5, 19, 20). But even without laying much stress on the fact that the last reason is purely traditional one may presume without any mistake that more serious than this group of wine songs is that other one, in which Abū Miḥdjan openly and plainly defies the Ḳor'ānic prohibition, and declares that he will not refuse wine (fragments 4, 6, 21): this is put forth in all kind of witty, sometimes blasphemous expressions (fragm. 21). Very amusing is fragm. 6, in which he mockingly and with ironical allusions to the *ḥadd*, the corporal punishment, likewise paraphrases the *wardjaz*-style.

Fragments 7, 10, 11, 17, 22, 23 have a historical background (see above). As Abū Miḥdjan is often confounded with another Thaḳafite poet, Abū Miḥdjan Nuṣaib b. Riyāḥ, it is possible that one or other verse of his namesake has been foisted on him.

(RHODOKANAKIS.)

ABŪ MIKHNAF LUṬ B. YAḤYA'L-AZDĪ, one of the oldest Arabian traditionists and historians, died in 157 (774). He was the author of 32 historical treatises (on various events that took place in the first century of the Hegira), which have, for the greatest part, been preserved for us in the Arabic Chronicle of Ṭabarī. On the other hand, the writings that have come down to us specially under his name are forgeries of a later date.

Bibliography: *Fihrist*, i. 93; al-Kutubī, *Fawāt*, ii. 175; Wüstenfeld, *Der Tod Husains und die Rache* (*Abh. der Götting. Gesellsch. d. Wissensch.*, 1883); Brockelmann, *Gesch. d. arab. Litter.*, i. 65; Barthold, in the *Zapiski vostoč. otd. imper. russk. arkheol. obshč.*, xvii. 147 *et seq.*

ABŪ MŪSĀ. [See AL-ASH'ARĪ.]

ABŪ MUSLIM, properly 'ABD AL-RAḤMAN B. MUSLIM (so also on his coins, but according to other statements he assumed this name much later), general, and powerful chief, leader of the religious and political movement in Khorāsān, through which the Umaiyads were overthrown and the 'Abbāsides attained the throne. Abū Muslim was of Persian origin, probably a native of Iṣfahān (his native place is variously given in different sources), and in Kūfa he had attached himself to the 'Abbāside Ibrāhīm b. Muḥammed. In the year 128 (745-746), being then according to Ibn al-Athīr (ed. Tornb., v. 264) only 19 years old, he was sent by Ibrāhīm to Khorāsān as an emissary (*dā'ī*). The movement, prepared since long, was accelerated through his arrival and the success of his religious propaganda; it is said that in one day he was joined by the inhabitants of 60 villages near Merw, and that the dihḳāns (the Persian land-owners) in Khorāsān were only through him converted to Islām (so according to Ibn Abī Ṭāhir Taifūr, MS. Brit. Mus., add. 7473, f°. 60ᵃ; the MS. quoted by V. Rosen, in the *Zapiski vostoč. otd. imper. russk. arkheol. obshč.*, iii. 155, is to be added in Brockelmann, *Gesch. d. arab. Litter.*, i. 138). In the summer of 129 (747) the insurrection was openly declared; Abū Muslim succeeded in uniting under his flag all the enemies of the dynasty, among whom were also the Yemenites (after the attainment of success the leaders of this party were put aside); in the following winter he victoriously entered Merw and in the autumn that came after he entered Nīshāpūr. The battles in the West till the final overthrow of the Umaiyads were fought without his participation. He remained governor of Khorāsān till 137 (754-755), in which year he was lured to the 'Irāḳ by Caliph al-Manṣūr, and there he was in Sha'bān (Jan.-Feb. 755) treacherously murdered.

Abū Muslim deserved to be praised as much on account of the interior organization of his province as on account of the security of its frontiers. In Merw and Nīshāpūr he erected mosques; further the building of many other edifices in Merw and Samarḳand (among which the large wall around the latter city and its environs) is attributed to him. The battles in Transoxania against the exterior enemies were conducted not by himself but by his subalterns Sibā' b. al-No'mān al-Azdī and Ziyād b. Ṣāliḥ al-Khuzā'ī; especially important was the victory of the latter over a Chinese army at the Talas (in Dhu'l-Ḥidjdja 133 = July 751), through which the political domination of Islām was consolidated in Central Asia (both generals later, stimulated by the 'Abbāsides, revolted against Abū Muslim and were removed by him). In his religious propaganda Abū Muslim seems to have amalgamated the doctrines of Islām with the ancient popular belief, particularly with that of the metempsychosis, and to have pretended to be an incarnation of the divinity; his pupil Hāshim al-Muḳanna' represents him as the last incarnation of the divinity before himself (Narshakhī, *Ta'rīkh-i Bukhārā*, ed. Schefer, pp. 64-65); also later sects, as especially the Bāṭinites (Isma'īlites), traced their doctrines back to Abū Muslim. He must have been greatly beloved by the Persians, as it is shown by the numerous romances on his fate; still a movement in the spirit of the old religion, surely in contradiction to the official Mazdaism (the sect of the Behāfrīdh), was repressed by him with the same bloody severity as the uprising of the Arab Shī'ites in Bukhārā. Abū Muslim shrank from employing no means either against the adversaries of the 'Abbāsides or against his personal enemies and rivals, and removed all that was in his way either by force or by artifice. It is difficult to judge how far his ambition extended and how much the fears of the 'Abbāsides were justified; the challenging letter ascribed to him (Dozy, *Essai sur l'Islamisme*,

trans. of V. Chauvin, p. 240) is hardly authentic.

The Turkish novel *Abū Muslim* is extant in manuscript in Vienna; comp. V. Chauvin, *Bibliographie des ouvrages arabes*, iii. 127. A rimed adaptation from Fardī was printed in Constantinople, 1300 (1883).

Bibliography: Besides Ṭabarī (particularly ii. 1949 *et seq.*, 1960 *et seq.*) and Narshakhī, *Ta'rīkh-i Bukhārā* (ed. Schefer), pp. 7, 8, 64, Gardīzī, *Zain al-akhbār* is to be specially consulted. As to the religious position of Abū Muslim and his attitude towards other sects, comp. besides Shahrastānī (Haarbrücker, i. 173, 393; ii. 408) also the chapters on the Bāṭinites in Niẓām al-Mulk, *Siyāset nāme* (ed. Schefer), pp. 182, 199, 204; Mas'ūdī, *Murūdj* (Paris), vi. 186; G. van Vloten, *Recherches sur la domination arabe* etc. (Amsterdam, 1894 = *Verhandelingen der koninklijke akademie van wetenschappen te Amsterdam, afdeeling letterkunde*, i. N°. 3), and *Opkomst der Abbasiden* (Leyden, 1890); both works are frequently quoted by Wellhausen, *Das arab. Reich und sein Sturz*. (W. Barthold.)

ABŪ NAṢR. [See al-Farābī, Farābī.]

ABŪ NU'AIM Aḥmed b. 'Abd Allāh b. Aḥmed b. Isḥāḳ al-Iṣfahānī, author of an Arabic history of saints, Shāfi'ite theologian and traditionist, born in Radjab 336 (January 948), and died at Iṣpahān, in Muḥarram 430 (October 1038). His very extensive history of saints (*Ḥilyat al-awliyā' wa-ṭabaḳāt al-aṣfiyā'*) became wide-spread through the extract in five volumes made from it by Ibn al-Djawzī under the title of *Ṣifat al-ṣafwa*, which in its turn was again revised several times. Besides some writings on tradition, his *Ta'rīkh Iṣfahān* (*Catalog. cod. or. bibl. ac. Lugduno Batavae*, 2d ed., ii. 109 *et seq.*), a history of the scholars of Iṣpahān, is to be mentioned.

Bibliography: Ibn Khallikān (ed. Wüstenf.), N°. 32; Suyūṭī, *Ṭabaḳāt al-ḥuffāẓ*, xiii. 62; Wüstenfeld, *Die Geschichtschreiber der Araber*, N°. 187; idem, *Schāfi'iten*, p. 346; Brockelmann, *Gesch. d. arab. Litter.*, i. 362. (Brockelmann.)

ABŪ NUMAIY Muḥammed I (652—701 = 1254—1301), Sherīf of Mecca, second successor to his great-grandfather Ḳatāda, the founder of the Sherīf family which rules to the present day and ancestor of all later Sherīfs. He possessed the requisite energy to maintain his ascendancy in the never-ending turmoil of public life in Mecca, and it was of great advantage to his position that the powerful sultan Baibars of Egypt exercised undisputed sway over the sacred city. In his day the custom of sending every year a *Maḥmal* from Egypt on the occasion of the pilgrimage to Mecca is said to have begun.

Bibliography: Snouck Hurgronje, *Mekka*, i. 80-84. (C. Snouck Hurgronje.)

ABŪ NUMAIY Muḥammed II, Sherīf of Mecca, 931—974 (1525—1566), and nominally so until his death in 992 (584), although in these last 18 years his son Ḥasan really ruled. The general fear of the Ottomans, who subjugated Arabia from 1516 onwards, enabled these two Sherīfs to extend their territory more than was ever done before or subsequently. In his time there was added to the *Maḥmals* sent annually with the pilgrims from Syria and Egypt a new one from Yemen. But all these had become merely symbols of the Turkish power. All subsequent Sherīfs who ruled in Mecca are descended from Abū Numaiy.

Bibliography: Snouck Hurgronje, *Mekka*, i. 102—108. (C. Snouck Hurgronje.)

ABŪ NUWĀS al-Ḥasan b. Hānī' al-Ḥakamī, one of the greatest Arabian poets. He was born in al-Ahwāz in the year 130 (747), or according to others, in 145 (762) — his mother Djellebān was a wool washerwoman — and he felt himself more a Persian than an Arab. He spent his youth in Baṣra and Kūfa, where he was a pupil of the philologists Abū Zaid and Abū 'Ubaida and the poetical compiler Khalaf al-Aḥmar. The poet Wāliba b. al-Ḥabāb al-Asadī, with whom Abū Nuwās kept up an ignoble intercourse (a pederastic obscenity of the former: Ibn Rashīḳ, *'Umda*, p. 43; an alternating poem between him and Abū Nuwās: Dīwān, ed. Āṣaf, pp. 31-32), seems to have had a great but unfavorable influence on his moral development. He is said to have completed his linguistic cultivation by sojourning one year in the desert. Having grown up to manhood, Abū Nuwās settled in Bagdad, where he enjoyed the favor of Hārūn and al-Amīn. Under al-Ma'mūn, however, he fell into disgrace, and the caliph, it is said, interdicted him to compose wine songs (*Zahr al-ādāb*, ii. 12-13). Beside wine pederasty played the main part in his life. In his old age he renounced worldly enjoyments and placed his art at the service of asceticism. His satires, which, however, he continued to compose, are said to have at length cost him his life. The Banū Nawbakht, a prominent family, had him out of vengeance for a satire so maltreated that he died in consequence thereof. With regard to the year of his death, the statements fluctuate between 190 (806), 195 (810), 196 (811), 198 (813) and 199 (814).

In the center of his poetical activity were his wine songs, in which he emulated as prototypes Walīd b. Yazīd and therefore indirectly 'Adī b. Zaid. His special model, however, was his contemporary Ḥusain b. al-Ḍaḥḥāk al-Bāhilī [q. v.], whose spiritual property cannot, to be sure, easily be separated from his in a well-defined manner. Abū Nuwās himself is said to have, on the same grounds as once al-Farazdaḳ, appropriated to himself a verse of Ibn Maiyāda (*Zahr al-ādāb*, ii. 16), and later street-players were too much inclined to ascribe to Abū Nuwās every song on wine and boys (*Dīwān*, MS. Vienna, f°. 162r, by Mez to *Abulkasim*, p. xxxiii). Of less poetical worth are the laudatory lines, in which the artisan-like fashion makes itself to be felt strongly, while in the elegies a profound feeling and a touchingly plaintive coloring make us excuse certain defects, namely the artificial language and oriental exaggeration. The love songs contain as much of the tender and genuinly poetical as of the cynical and meanest. The satires are firm, sometimes rough, keenly witty, but often mean; the latter may be said of his jokes and drolleries (*mudjūn*), while his censorious verses (*'itāb*) show again a more serious bearing (A. von Kremer, *Culturgesch. des Orients unter den Chalifen*, ii. 371). Besides the already mentioned ascetical poems (*al-zuhdiyāt*) there must be mentioned the venary ones, which at first sight appear to us as of an original kind, but in which, even without taking into consideration the frequent descriptions of the desert

beasts in the old ḳaṣīdas; he had still unknown predecessors. The apocalyptic prophecies, which he composed together with al-Raḳāshī, the panegyrist of the Barmakides (*Aghānī*, xv. 35), in the style of ʿAḳib al-Laithī, under the name of Abū Yāsīn al-Ḥāsib, a typical blockhead, and which later passed as being of the latter's composition (al-Djāḥiẓ, *Bayān*, ii. 7 *et seq.*), have not been incorporated into the Dīwān. Editions of the latter have been prepared amongst others by al-Ṣūlī (d. 335 = 946), in 10 chapters, and by Ḥamza b. al-Ḥasan al-Iṣfahānī (in *Khizānat al-adab*, i. 168 ʿAlī b. Ḥamza al-Iṣbahānī, probably through confusion with the editor of the Dīwāns of Abū Tammām and al-Buḥturī); the latter edition is more extensive, but more uncritical, and al-Muhalhil b. Yamūt b. Muzarrid (about 332 = 943 he was still alive) wrote against it an epistle on the *Sariḳāt Abī Nuwās* (Derenbourg, *Cat. Escur.*, ii. Nº. 772). — *Diwan des Abu Nowas* ..... ed. W. Ahlwardt, i. (the only one appeared), *Die Weinlieder*, Greifswald, 1861; lithographed in Cairo, 1277; printed in Beyrout, 1301 (is it complete? I have only the first *bāb*, *al-Madāʾiḥ*, n. p., „fī maṭbaʿat djamʿiyat al-funūn", 1301). — Printed at the expenses of Iskender Āṣaf by Maḥmūd Efendi Wāṣif, who added explanatory notes, Cairo, 1898, 1905. — A. von Kremer, *Diwan des Abu Nowas des grössten lyrischen Dichters der Araber* (in German; Vienna, 1855).

(Brockelmann.)

ABŪ RIGHĀL, a legendary person, whose alleged tomb in al-Mughammas, by the frontier of the sacred district of Mecca, is still now lapidated by pious Musulmans during the pilgrims' festival, because legend makes him the ill-famous man, who led Abraha [q. v.] into the sacred territory, but who died in the above-mentioned place. According to one tradition he was king at Ṭāʾif and progenitor of the Thaḳafites, and was put to death by Allāh on account of his cruelty; according to another tradition he was a tax-gatherer sent by the prophet Ṣāliḥ [q. v.], and was killed by the Thaḳafites on account of his bad behavior.

ABŪ SAʿD b. Muḥammed b. al-Ḥusain b. ʿAbd al-Raḥīm, a vizier. Abū Saʿd was appointed vizier by the Būyide emīr Djalāl al-Dawla Abū Ṭāhir b. Bahāʾ al-Dawla shortly after the latter's entry into Bagdad in Ramaḍān 418 (October 1027), but was soon deprived of his office. Nevertheless he shortly afterwards was reinstalled in this office and in the years following the same proceeding was repeated so often that Abū Saʿd is said to have occupied the vizierate no less than six times under the emirate of the weak and little esteemed Djalāl al-Dawla. Abū Saʿd died in the year 439 (1048).

(K. V. Zetterstéen.)

ABU 'L-SĀDJ Dēwdād b. Yūsuf, the founder of the dynasty of the Sādjides, and a Turkish general, a native of Oshrusana, in the service of the caliph al-Mutawakkil, was invested by this prince with the Meccan road, that is to say, with the places situated thereon, in 244 (858; Ibn al-Athīr), 245 (859; Ibn Khaldūn) or 242 (856-857). There he fought against the ʿAlide Muḥammed b. Yūsuf, who had just taken the place of his brother Ismāʿīl at Mecca (251 = 865). He returned to Bagdad in 252 (866), was entrusted with the receipt of the taxes in the region of the Euphrates, and succeeded by a ruse in seizing upon the ʿAlide Abū Aḥmed Muḥammed b. Djaʿfar, who had revolted there. He was afterwards successively governor of Aleppo (254 = 868), then of al-Ahwāz; he was obliged, in the latter position, to fight the Zendjs, was beaten and saw his capital pillaged. At the time of Yaʿḳūb b. Laith the Ṣaffāride's campaign against Muwaffaḳ (262 = 875-876), he joined the former and shared his defeat. Having been recalled to Bagdad, he died at Djundaisābūr in 266 (879-880). — His grandson Dēwdād, son of Muḥammed Afshīn was governor of Tovin in Armenia, a town which had been conquered by his father. Having been chosen by the army to succeed the latter, he was defeated by his uncle Yūsuf and took refuge in Bagdad (288 = 901).

(Cl. Huart.)

ABŪ SAFYĀN is considered in popular legend as a pre-Islamic king of al-Bāra in the Djebel al-Zāwiya, north of Apamea, and west of Maʿarrat al-Noʿmān. The ruins of al-Bāra are still now the most important in the whole surroundings. The city flourished in the fifth, sixth and seventh centuries of the Christian era; the Syrians called it Kafrā de-Bārtā. It still continued to flourish under the domination of Islām; at that time a Jewish colony existed there; it was the object of contest in the time of the crusades. It was probably during that time that a Muhammedan fortress was built to the north of the city, called to-day Ḳalʿat Abū Safyān. — Popular legend, however, pretends that this fortress was built before Islām, and ruled by a Jewish king called Abū Safyān. Legend tells us that ʿAbd al-Raḥmān b. Abī Bekr was in love with Abū Safyān's daughter, Luhaifa, and that he was there in the citadel when his father summoned him to embrace Islām. ʿAbd al-Raḥmān and Luhaifa were both converted to Islām and fled. Abū Safyān pursued them, and it came to a fight. The champions of Islām, especially ʿOmar and Khālid b. al-Walīd, called to help by the angel Gabriel, appeared on the battle-ground. Abū Safyān was killed by ʿOmar, and the whole land fell into the power of the Musulmans.

(Littmann.)

ABŪ SAʿĪD, ninth Mongolian prince (Īlkhān) of Persia (716—736 = 1316—1335), born on the 8th Dhu 'l-Ḳaʿda 704 (2d June 1305), successor to his father Uldjāitū, who died on the

30th Ramaḍān 716 (16th Dec. 1316); his solemn accession to the throne did not take place before Ṣafar 717 (April-May 1317). He had already in 1313 been appointed governor of Khorāsān though of course under a guardian. During the first ten years of his reign, till 1327, the kingdom was powerfully and prudently governed by the mighty amīr Čobān. The long war with Egypt was brought to an end by a treaty of peace in 1323; the invaders from South Russia and Central Asia were repulsed and avenged by victorious advances in both directions, viz. in 1325 through the gate of Derbend to the Terek and in 1326 to Ghazna. In Asia Minor, which was governed by Čobān's son Timūr Tāsh, the strength of the Mongols against the Greeks and the Turks was again established and the welfare of the population raised. The Shīʿite dogma which Ūldjāitū had elevated to a State religion was abandoned and the coinage again bore the names of the four orthodox caliphs. The finances of the kingdom are said to have been entirely ruined after the execution of the vizier Rashīd al-Dīn (718 = 1318) [q. v.] under his uneducated successor ʿAlī Shāh; only after Čobān's fall were they put into order by the new vizier, Ghiyāth al-Dīn, the son of the executed Rashīd al-Dīn. The fall of Čobān and of his sons stirred up the Mongolian armies in the whole kingdom, from Asia Minor to Khorāsān; after many hard-fought battles the insurrection was everywhere suppressed, but after the death of the sovereign, which took place shortly afterwards (13th Rabīʿ II 736 = 30th Nov. 1335), the kingdom could no longer be kept together. Abū Saʿīd had left no heirs, the dynasty was represented only by descendants of parallel lines which could not obtain general recognition.

Bibliography: D'Ohsson, *Hist. des Mongols*, iv. 599 *et seq.*; Hammer-Purgstall, *Gesch. d. Ilchane*, ii. 252 *et seq.*; Howorth, *Hist. of the Mongols*, iii. 585 *et seq.* (W. BARTHOLD.)

ABŪ SAʿĪD FAḌL ALLĀH B. ABI 'L-KHAIR, Persian poet, born on the 1st Muḥarram 357 (7th Dec. 967) at Maihana (Mihna), the chief town of the district of Khāwarān in Khorāsān; died there the 4th of Shaʿbān 440 (12th January 1049). His biography was written by one of his descendants, Muḥammad b. Abī 'l-Munawwar, between 553 and 599 (1158—1202). This valuable and interesting work, entitled *Asrār al-tawḥīd fī maḳāmāt al-shaikh Abī Saʿīd*, edited by V. Zhukowski (St. Petersburg, 1899), forms the basis of the articles devoted to Abū Saʿīd by Farīd al-Dīn ʿAṭṭār in the *Tadhkirat al-awliyā* and by Djāmī in the *Nafaḥāt al-uns*.

Abū Saʿīd, whose father was a druggist by profession, received his early education in his native town. After finishing his grammatical studies, he proceeded to Merw in order to read jurisprudence with Abū ʿAbd Allāh al-Ḥuṣrī, a Shāfiʿite doctor; and on the latter's death he betook himself to Abū Bekr Ḳaffāl. We are told that, having passed ten years in Merw, he then set out for Sarakhs, where he pursued the study of theology under Abū ʿAlī Zāhir b. Aḥmed. Here he was introduced by a crazy derwish, called Luḳmān-i Madjnūn, to the famous Ṣūfī Abu'l-Faḍl b. Ḥasan, a pupil of Abū Naṣr al-Sarrādj, who traced his spiritual descent to Djunaid of Bagdad (d. 297 = 909). Abū Saʿīd eagerly embraced the doctrines of Ṣūfism, acknowledged Abu 'l-Faḍl as his Pīr, and obeying his command went back to Maihana, where he spent seven years in complete seclusion. He then returned to Abu'l-Faḍl, who bade him go to Abū ʿAbd al-Raḥmān al-Sulamī of Nīshāpūr (d. 412 = 1021) and receive the *Khirḳa* (derwish frock) at his hands. After the ceremony of investiture he once more returned to Maihana and renewed his austerities. Disciples now began to gather round him, and such was the veneration which he inspired that his neighbors ceased to drink wine, and a melon-skin which he let fall by chance was sold for a sum of twenty dīnārs. At this time, according to his biographer, he left his home and during the next seven years wandered in the desert, eating no food except leaves and herbs. When Abu'l-Faḍl died, Abū Saʿīd went to Āmul to visit Shaikh Abu'l-ʿAbbās Ḳaṣṣāb, who treated him with the utmost respect and clothed him with his own *Khirḳa*. Shortly afterwards he set out for Nīshāpūr. There he spoke daily in public and gained hosts of friends, but his practices gave great offence to the different theological parties — Karrāmites, Aṣḥāb al-Raʾy, and Shīʿites, — who joined in addressing a letter of complaint to Sulṭān Maḥmūd of Ghazna. They alleged that in the course of his public speeches the shaikh, instead of confining himself to exegesis of the Korʾān and the Traditions of the Prophet, frequently recited poetry; that he was always giving luxurious feasts; and that he and his disciples indulged in singing and dancing. Maḥmūd replied that the leading divines of Nīshāpūr must investigate the matter and, if necessary, inflict the legal penalty. The shaikh, however, exercised his miraculous powers so effectually that his enemies withdrew their opposition, and thenceforward "no one in Nīshāpūr dared to say a word against the Ṣūfīs." Many stories are told concerning the relations which existed between Abū Saʿīd and Abu'l-Ḳāsim al-Ḳushairī (d. 465 = 1072), author of the well-known *risāla* on Ṣūfism. Ḳushairī at first regarded the new-comer with suspicion and dislike, but was finally reconciled to him and became his intimate friend — a result which does not appear to be very probable. At Nīshāpūr Abū Saʿīd also met the famous Ibn Sīnā (Avicenna), who is said to have afterwards remarked, "All that I know, he sees." A Persian quatrain by Abū Saʿīd in answer to one by Avicenna has come down to us (Ethé, in *Sitzungsber. d. kön. bayer. Akad., philos.-philolog. Classe*, 1875, pp. 52 *et seq.*). After staying a year in Nīshāpūr, Abū Saʿīd returned to his native town, where he ended his long life at the age of 83.

Abū Saʿīd is an important figure in the history of Ṣūfism. He represents the extreme pantheistic ideas which were introduced by Bāyazīd of Bisṭām (d. 261 = 874) and which characterise the Persian Ṣūfīs in general. It is perhaps superfluous to add that he held Islām as well as every kind of positive religion in contempt. His original genius manifests itself in the new and striking form which he gave to these ideas. He is the founder of Ṣūfī poetry. Although he wrote only *rubāʿī*, in them we find almost the first examples in verse of that symbolical style and fanciful imagery which the great poets of Persian Ṣūfism, Farīd al-Dīn ʿAṭṭār and Djalāl al-Dīn Rūmī, have made familiar. It was he, moreover, that first impressed on the Persian *rubāʿī* the mystical stamp which it has retained ever since, and which has passed into European

literature through Fitzgerald's version of ʿOmar Khayyām. One may doubt whether he is really the author of all the quatrains ascribed to him, in view of the statement that most of the poetry which he recited in public was composed by one of his teachers, Abu'l-Ḳāsim Bis̲h̲r Yāsīn (see *Ḥālāt u-suk̲h̲unān-i S̲h̲aik̲h̲ Abū Saʿīd*, ed. by Zhukowski, St. Petersburg, 1899, p. 54). Ninety-two *rubāʿīs* have been published by Ethé with a German verse-translation in the *Sitzungsber. d. kön. bayer. Akad. philos.-philolog. Classe*, 1875, pp. 145—168; and 1878, pp. 38—70.

(NICHOLSON.)

ABŪ SAʿĪD AL-ḲARMAṬĪ. [See AL-DJANNĀBĪ.]

ABŪ SAʿĪD SULṬĀN MĪRZĀ B. MUḤAMMED B. MĪRĀN-S̲H̲ĀH B. TĪMŪR BEG, Mongol ruler, born in 830 (1427) and put to death in 873 (1469).

His father when dying confided him to Mīrzā Ulugh Beg S̲h̲āh-rukhī, who had come to visit him, and the boy grew up under the eye of the astronomer prince, and won praise from him by his assiduity and interest in learning and accomplishments. He carried his early lessons into practice later on, for he not only became a great ruler, the most powerful of his day, but showed such character as led Abu'l-faḍl ʿAllāmī to mention that in his prosperity he remained discreet and open-minded and that he was submissive to the teaching of pious persons. It is on record that he was a handsome man and was distinguished from a Moghūl by having a full beard. That he was tactful and resourceful is shown by the methods he used in supplement to his military force both for the capture of Samarḳand in 855 (1451) and in dealing with the Čagatai k̲h̲āns.

[If we may believe ʿAbd al-Razzāḳ al-Samarḳandī, the chief authority on this subject, Abū Saʿīd, while yet sojourning at the court of Ulugh Beg, meditated the seizing of the sultanate for himself. In the year 853 (1449) at the age of 25 he made an attempt, profiting by the war between Ulugh Beg and his son ʿAbd al-Laṭīf, to capture Samarḳand from the hands of ʿAbd al-ʿAzīz, another son of Ulugh Beg, with the aid of the Turkoman tribe of Arghūn, but was forced to retreat as ʿAbd al-ʿAzīz called his father to his aid. In the following year (854) ʿAbd al-Laṭīf, after having slain his father, was murdered himself at Samarḳand, and Abū Saʿīd was proclaimed sultan at Buk̲h̲ārā. Being defeated by his adversary ʿAbd Allāh, he was compelled to flee to the north, occupied Yasī (the present Turkistān), where he was besieged without success by ʿAbd Allāh. In 855 (1451) he succeeded, with the aid of Abu'l-K̲h̲air [q. v.], prince of the Ozbegs, in conquering Transoxania. Later (861, and definitely in 863) he conquered the province of K̲h̲orāsān and made Herāt his capital. — W. BARTHOLD.]

In the year 855, when Ḥaidar Mīrzā Dūg̲h̲lāt describes him as pādis̲h̲āh of Transoxania (*Mā warāʾ al-nahr*), he met with strong opposition from Īsān Bog̲h̲ā K̲h̲ān Čagatai Moghūl, which was renewed after a dispersion of the k̲h̲ān's army and led to an important historical event. For Abū Saʿīd was bent on acting against ʿIrāḳ and was restrained by the attacks of Īsān Bog̲h̲ā K̲h̲ān and bethought himself of a means of warding them from himself. In S̲h̲īrāz dwelt, in obscurity and the enjoyment of the studies he loved, Yūnus, the elder brother of Īsān Bog̲h̲ā. Him Abū Saʿīd sent for and with him made a compact that readjusted the old relations between the Tīmūride mīrzās and the Moghūl k̲h̲āns and gave *in posse*, the headship of the Moghūl Ulūs to Yūnus K̲h̲ān as a vassal of Abū Saʿīd. The whole episode is told with life and vigour by Ḥaidar Mīrzā Dūg̲h̲lāt. From this time friendship and intimacy subsisted between the two men and their bond was strengthened later on by the marriage of three sons of the mīrzā to three daughters of the k̲h̲ān. Now Abū Saʿīd set forth Yūnus K̲h̲ān with money and other aids to subjugate his brother and distract him from himself.

From the beginning made in 855 by the capture of Samarḳand, Abū Saʿīd widened his dominions till they stretched over Transoxania, K̲h̲orāsān, Badak̲h̲s̲h̲ān, Kābul, Ḳandahār and the borders of Hindūstān and ʿIrāḳ. In the early growth of his power, he overcame his cousins of the S̲h̲āh-ruk̲h̲ī house; later his assailant was another Tīmūride Sulṭān Ḥusain Mīrzā Bāy-ḳarā. His death was brought about by intervention in the feuds of the Turkomans.

In 871 (1466-1467) Djahān-s̲h̲āh the head of the Black Sheep Turkomans was killed in battle with Ūzūn Ḥasan of the White Sheep, and his son sought Abū Saʿīd's aid to avenge himself. In 872 Abū Saʿīd marched out and made for Ḳarā-bāg̲h̲, the usual summer quarters of Ūzūn Ḥasan. On his way, he received repeated petitions for peace, but disregarded these and went on till he was in lands so well-known to Ūzūn Ḥasan that his supplies could easily be cut off. Abū Saʿīd's army was reduced to a state of famine; his men deserted to save themselves; he fled with a few followers and was taken prisoner by the sons of Ūzūn Ḥasan and conveyed to the Turkoman camp. Ūzūn Ḥasan himself would willingly have spared the captive's life, but some of his officers opposed this. Three reasons are mentioned as leading to his execution; first desire to remove him from the path of Yādgār Muḥammed S̲h̲āh-ruk̲h̲ī, whose claim to rule in the domains of his ancestor S̲h̲āh-ruk̲h̲ had been recognized by Ūzūn Ḥasan; secondly, there existed a blood feud between him and Yādgār, because in 861 (1457) he had put to death under suspicion of treachery in Herāt, the widow of S̲h̲āh-ruk̲h̲, Gawhar-s̲h̲āh Begam and his death at the hands of her descendant was just before Muḥammedan Law; thirdly, he had disregarded the plea for peace of Ūzūn Ḥasan, a co-religionist and this again was against the Law. Consequently he was made over to the boy Yādgār, then about 16, on the 22[d] Radjab 873 (4[th] Feb. 1469) and three days later, at the age of 43, he was put to death.

The *Bābar nāma* contains many references to Abū Saʿīd, naming several of his emīrs, his learned men and his exploits. It contains too a statement that he expelled Mīr ʿAlī S̲h̲īr Nawāʾī from Herāt. It describes certain pictures which Abū Saʿīd had painted in a palace in Herāt built by Bābar Mīrzā Ḳalandar, which commemorate his own warlike exploits. Here in 912 (1506) Bābar himself was entertained by one of Abū Saʿīd's widows, K̲h̲adīdja Āgha. On one episode of his reign most historians dwell, namely the magnificent festivities that marked the ceremony of the circumcision of his sons. Abū Saʿīd, in dignity of life, in greatness of achievement, in energy and mental capacity, was a worthy forbear of the distinguished men

who carried on his line, Bābar, Akbar, Shāh-Djahān.

Three marriages with women of high rank are recorded for Abū Sa'īd; his first and most respected wife was a daughter of Urdū Boghā Tarkhān, who belonged to the most ancient order of local nobility. Several members of her family are mentioned by Bābar as aping even royal style, and they played a great and ruling part in the early history of his time. This marriage had issue in Aḥmed and Maḥmūd Mīrzās. A second wife was a daughter of Shāh Sulṭān Muḥammed Badakhshī, the refined and cultured king, who, claiming descent from Alexander of Macedon, is commemorated by Ḥaidar Mīrzā Dūghlāt and Khondemīr as the father of six daughters whose marriages these writers record. A third wife was a daughter of his early protector, Mīrzā Ulugh Beg. A wife of lower rank and the mother of one of his daughters was Khadīdja Āgha, who subsequently was married by Sultan Ḥusain Bāy-ḳarā and by him promoted to the rank of Begam. She it was whose intrigues played a ruinous part amongst his sons.

Abū Sa'īd left eleven sons of whom there rose to importance, Aḥmed, Maḥmūd, 'Omar Shaikh, the father of the later emperor Bābar, and Ulugh Beg Kābulī. He had at least nine daughters; six are named by Gul-badan Begam and three others by Bābar whom they visited in Hindūstān. The deference shown to them in act and word by these two of the younger generation casts reflex light on the high esteem in which their father was held by his descendants.

ABŪ SALAMA AL-KHALLĀL ḤAFṢ B. SULAIMĀN, an emissary of the first 'Abbāsides. Abū Salama, who was nothing more than a freed slave, took an active part in the cunning intrigues of the 'Abbāsides, which prepared the final fall of the Umaiyad caliphate. After the 'Abbāsides had allied themselves with the 'Alides, an active propaganda in favor of the „Hāshimides", i. e. the descendants of Hāshim, the ancestor of Muḥammed, was carried on. As a matter of fact this name could be applied according to circumstances as well to the 'Abbāsides as to the 'Alides, and thus gave the former an excellent opportunity of winning many followers amongst the 'Alides also. The province of Khorāsān, whose Persian population treated the ruling Arabs with scorn, was more especially the scene of Hāshimide intrigue. In order to prepare the ground systematically, disguised agitators were sent out and every-where sowed discontent with the Umaiyad rule. The chief assistants of the 'Abbāsides were Abū Salama and Abū Muslim, who unweariedly journeyed to and from Khorāsān and the headquarters of the ringleaders, and with the assistance of subordinate emissaries stirred up the population. Whilst Abū Muslim remained faithful to the 'Abbāside party, Abū Salama gradually took up sides for the 'Alides. The latter, however, did not dare to step forward openly and Abū Salama, the „vizier of the house of Muḥammed", was obliged to do homage to Abu'l-'Abbās. Shortly after in the year 132 (750) he was murdered, being thus rewarded for his valuable services.

ABU 'L-SARĀYĀ. [See NAṢR B. ḤAMDĀN and AL-SARĪ B. MANṢŪR.]

ABŪ SHAHRAIN („father of two months"), a site of ruins in South Babylonia, to the south of al-Muḳaiyar, the ancient Ur, and south-west of the Euphrates. Owing to a misunderstanding it was till now almost always put in our maps on the left instead of the right bank of the Euphrates (comp. concerning this, and chiefly concerning the ruins, Hilprecht, *Explorations in Bible lands during the 19th century*, Philadelphia, 1903, pp. 178 *et seq.*) According to Scheil the journey from al-Muḳaiyar to Abū Shahrain takes four hours on horseback (comp. *Recueil de travaux relatifs à la philol. et à l'archéol. égyptiennes et assyriennes*, xxi. 126). Abū Shahrain designates, as Taylor has already established, the site of the city of Eridu frequently mentioned in the cuneiform inscriptions. In 1855 Taylor organized excavations there (comp. *Journ. of the Roy. As. Soc.*, 1855, xv. 404 *et seq.*) — The center of gravity of Eridu's importance lay in the religious domain. It is met with in the conjuration formulae of the oldest texts; the charm of Eridu plays a great part in the magical literature. Eridu was considered as the chief place of worship of Ea, the god of the celestial and terrestrial oceans. It must also be remarked that in the most ancient time, when the Euphrates and the Tigris separately fell into the Persian Gulf, Eridu lay close by the bank of the Tigris.

(STRECK.)

ABŪ SHĀMA SHIHĀB AL-DĪN ABU'L-ḲĀSIM 'ABD AL-RAḤMĀN B. ISMĀ'ĪL, Arab historian and philologist, born in Damascus on the 23d Rabī' II 599 (10th January 1203). He studied in his native town and then in Alexandria philology and jurisprudence, and after he returned home he obtained a professorship in the Madrasa al-Ruknīya. As he had drawn on himself suspicion of a crime, he was killed by an excited mob on the 19th Ramaḍān 665 (13th June 1268). — His chief work is a history of the sultans Nūr al-Dīn and Ṣalāḥ al-Dīn, entitled *Kitāb al-rawḍatain fi akhbār al-dawlatain*, in which he almost entirely reproduced the biography of Ṣalāḥ al-Dīn by Ibn Abī Ṭaiy', which has been lost (printed in Cairo, 1287-1288, 1292, 2 vol.). — *Abou Chamah, le livre des deux jardins, ou Histoire des deux règnes celui de Nour ed-Din et celui de Salah ed-Din*, Arabic text and French translation by Barbier de Meynard (*Recueil des historiens des croisades, Hist. or.*, Paris, 1898, 1906). — Comp. Fleischer, in the *Sitzungsber. der sächs. Gesellsch. d.*

Wiesmuch, 1859, pp. 11 *et seq.*; E. P. Goergens and R. Röhricht, *Arab. Quellenbeiträge zur Gesch. der Kreuzzüge*, edited and translated vol. i.: *Zur Gesch. Ṣalāḥaddīns*, Berlin, 1879. An appendix to it: *Dhail al-rawḍatain*, on the years 591—665 (1195—1266), is extant in manuscript (comp. Ahlwardt, *Verz. d. arab. Handschr.*, N°s. 9813-9814; catal. of Copenhagen, N°. 156; Paris, Schefer, N°. 5852; C. Rieu, *Supplement*, N°s. 555-556; comp. Wahl, *Neue arab. Anthologie*, p. 208; extracts in Barbier de Meynard's edition, ii). — Abū Shāma also made an extract from Ibn ʿAsākir's „History of Damascus" (Ahlwardt, *loc. cit.*, N°. 9782), and wrote commentaries on seven poems of his teacher ʿAlam al-Dīn al-Sakhāwī (d. 643 = 1245) that are in praise of the Prophet, on the *Burda* and on the *Shāṭibīya* (*Ḥirz al-amānī*).

(BROCKELMANN.)

ABU 'L-SHAWḲ. [See FĀRID B. MUḤAMMED.]

ABU 'L-SHĪṢ MUḤAMMED B. RAZĪN, Arabian poet. He was, according to the *Kitāb al-aghānī*, the uncle, but according to the *Kitāb al-shiʿr* of Ibn Ḳotaiba (who consequently makes Razīn to have been the poet's grandfather), the cousin of the poet Diʿbil. Like the latter he lived at the Court of Hārūn al-Rashīd. *Aghānī* (v. 36) relates an adventure that Abu 'l-Shīṣ had with a female slave of the caliph. Dissatisfied with the appreciation and above all probably with the reward he obtained in Bagdad, he went to al-Raḳḳa, where, according to his own statement, he won through a laudatory poem the favor of the emir of that place, ʿOḳba b. Djaʿfar b. al-Ashʿath. There he remained as the boon companion and court poet of his patron until his death (196 = 811). The fragments of his poetry, which the above-mentioned two compilations contain, however scanty they may be, induce us nevertheless to declare that Abu 'l-Shīṣ could claim no original importance for his wine and venary songs, which, as it seems, were his favorite kind of poetry. Better are the elegies on the infirmities of old age, composed by the poet, who had become blind, towards the end of his life, because they come from an immediate impulse. The touch of self-irony that appears now and then in his verses shows that he was by nature rather more fitted for comical composition; comp. Ibn Ḳotaiba, *loc. cit.*, p. 536 (*mā farraḳa* etc.) To ridicule the imitators of the desert poets — he proposes to substitute the „camel of separation" for the „raven of separation" — he had certainly not much right either.

Tornb.), vi. 135; *Aghānī*, xv. 108 *et seq.*; Ibn Ḳotaiba, *Kitāb al-shiʿr* (ed. de Goeje), pp. 535 *et seq.*; Ibn Khallikān (trans. de Slane), iv. 232, note 22; 359, note 4; al-Kutubī, *Fawāt*, ii. 281-282; Brockelmann, *Gesch. d. arab. Litter.*, i. 83.

(A. SCHAADE.)

ABŪ SHUDJĀʿ AḤMED B. AL-ḤUSAIN (Ḥasan) B. AḤMED AL-IṢFAHĀNĪ, Shāfiʿite jurisconsult, born in 434 (1042-1043), was the author of a much used manual of jurisprudence: *al-Taḳrīb fi 'l-fiḳh*, edited by Keyzer (Leyden, 1859), and, with al-Ghazzī's commentary, by L. W. C. v. d. Berg (*ib.*, 1895). Comp. also Sachau, *Muhamm. Recht nach schafiitischer Lehre* (Berlin, 1897); Brockelmann, *Gesch. d. arab. Litter.*, i. 392.

ABŪ SHUDJĀʿ MUḤAMMED B. AL-ḤUSAIN, a vizier. [See AL-RŪDHRAWĀRĪ.]

ABŪ SIMBEL, a rocky wall on the left bank of the Nile, between the first and second cataracts, 22° 22′ north lat., famous on account of two temples hewn in the live rock from the time of Ramses II. The chief sanctuary was consecrated to Amon Rē of Thebes and Rē Harmachis of Heliopolis, yet Ptah of Memphis and the king himself were also worshiped there. The smaller (northern) temple was sacred to Hathor and Queen Nefret-ere. The large temple in particular, with its matchless façade of four Ramses colosses, each 20 metres high, belongs to the most splendid monuments of ancient Egyptian art. The temple had been exposed to large sand drifts, and was laid bare only in the beginning of the 19th century. Only modern Arabian authors give some particulars about it after French sources. — The name Abū Simbel is a popular arabicization (*Abū* = father, *Sunbul* = ear of corn) of the local Nubian designation. Abū Simbel lies to the south of the Arabic-Nubian language limit, whence the many variants in the spelling of the name (Abū Su(i)nbul, Abusu(i)nbūl, Abū Su(i)nbūl); the French discoverers named it Ipsamboul.

(C. H. BECKER.)

ABŪ SUFYĀN (or Abū Ḥanẓala) ṢAKHR B. ḤARB B. UMAIYA, of the Ḳoraishite family of ʿAbd Manāf, a leader of the aristocratic party in Mecca hostile to Muḥammed. According to the usual statement regarding his death (see below), he was a few years older than Muḥammed, according to others, however, he was ten years older. Abū Sufyān was a rich and respected merchant, who repeatedly led the great Meccan caravan. Like most of the great merchants he took up a hostile attitude to the movement brought about by Muḥammed, which touched him personally in so far that his daughter Umm Ḥabība had married a follower of the Prophet's and emigrated with him to Abyssinia. Against his desire he brought about the fateful battle at Bedr; the army, which had hastened up at his cry of distress, would not return without striking a blow, although he ordered it to do so once he had got his caravan in safety. His eldest son Ḥanẓala fell in the fight; another son ʿAmr was taken prisoner but exchanged subsequently for one of Muḥammed's followers, who as a pilgrim had fallen into Abū Sufyān's hands. After the battle of Bedr, he took over the command of the Meccans. It is not at all clear as to the facts concerning his oath of vengeance after the defeat and the miraculous campaign he undertook to fulfill his vow (the Sawīḳ campaign). The battle of Oḥod afforded great satisfaction both to himself and to the Meccans, but he did not know how to make use of the victory and neglected the opportunity of thoroughly humiliating his dangerous opponent. Equally obscure is the tale of the meeting arranged after the battle of Oḥod for the following year at Bedr and of his non-appearance at the rendezvous. Whether Muḥammed really, as Ibn Hishām relates, sent assassins to Mecca to kill Abū Suf-

yān after the murder of Khubaib and of Zaid, is very doubtful. In the year 5 (627) during the „campaign of the Moat", he led one part of the great army that advanced against Medina; as however after some time he saw the hopelessness of the siege, he ordered his troops to march back and soon the whole army melted away. Abū Sufyān had always unwillingly taken part in military enterprises, but after this fiasco he completely abandoned the idea of continuing the fight with his sturdy and obstinate enemy. During Muḥammed's campaign which was concluded by the treaty of Ḥudaibiya, he kept entirely in the background, as the military party was still a power in Mecca. When the treaty was broken by the quarrel between Bekr and Khuzā'a, he feared the consequences for his town and proceeded to Medina to arrange the matter. According to Ibn Hishām and others he is said to have been very badly treated by his daughter Umm Ḥabība, who had married Muḥammed in the meanwhile, as well as by Muḥammed himself. In reality, however, the Prophet, to whom an understanding with his father-in-law must have been very valuable, doubtlessly received him in a quite other manner and discussed the surrender of Mecca with him. In harmony with this Muḥammed at the beginning of the campaign against Mecca proclaimed that anybody who took refuge in Abū Sufyān's house should enjoy complete immunity. It is true that Abū Sufyān's wife Hind cried shame on her husband's weakness, but her fury was as unsuccessful as the armed resistance attempted by a few irreconcilables. By his respectful treatment of Abū Sufyān, Muḥammed admitted how much he owed to the latter's cunning surrender. Abū Sufyān accompanied him on his campaign against the Hawāzin tribe, and though the dangerous turn that things took during the Ḥunain fight may have inspired him for a moment with the hope of getting rid of the tyrant, he did not let it appear. After the victory he also received „for the winning of his heart" such a generous share of the booty that he had every reason to be satisfied. At the siege of Ṭā'if, behind whose walls another of his daughters was living, he lost an eye (according to Ṭabarī, i. 2101, this accident happened in the Yarmūk battle). Abū Bekr made him governor over Nadjrān and Ḥidjāz (thus Belādhorī, ed. de Goeje, p. 103; comp. Ibn Ḥadjar, *Iṣāba*, ii. 477, where the statement that the Prophet had already placed him over Nadjrān is contested). For the rest, most of the other tales concerning him are of no value as they show too distinctly anti-Umaiyad party interests. Thus it is very doubtful whether, as is related in Ṭabarī, i. 1827 *et seq.*, he opposed Abū Bekr's election and was on this account reprimanded by 'Alī. Certainly the account of Abū Bekr's insulting address to Abū Sufyān and his words to his startled father were invented in an anti-Umaiyad spirit. Still more clearly is this tendency shown in an account, according to which Abū Sufyān is said to have been delighted at every advantage gained by the enemy of the Muslims at the Yarmūk battle. As a matter of fact there exists another tale, according to which he called on Allāh for help during the battle. That he took part in the battle is also mentioned elsewhere (Belādhorī, ed. de Goeje, p. 135: Saif even makes him a *Ḳāṣṣ* on this occasion: Ṭabarī, i. 2095), but it is rather remarkable as he was then some 70 years old. According to the most wide-spread account he died at the age of 88 in the year 31 (651-652); but others give the years 32, 33 or 34 (652—655). He was thoroughly representative of the unprincipled and characterless policy of the Meccans towards Muḥammed — a policy which subsequently knew how to make use of the concessions wrung from the Prophet.

ABU 'L-SU'ŪD B. MUḤAMMED AL-ĀMIDĪ (i. e. a native of Āmid, now, Diyār Bekr), a celebrated Ottoman lawyer of Kurdish descent, who was for thirty years Shaikh al-Islām and one of the principal collaborators of Sultan Sulaimān al-Ḳānūnī, born in 896 (1490-1491). He was first *mudarris* (professor of canonical law) and judge; he was for eight years ḳāḍī 'askar of Roumelia when he was appointed Shaikh al-Islām by the sultan. He wrote a commentary on the Ḳor'ān, borrowed from Baiḍāwī and the *Kashshāf* of Zamakhsharī, the first volume of which brought him an increase in his salary of from 300 aspers a day to 500, and the second raised his emoluments to 600. Salīm II, after his accession to the throne, honored him with a peculiar distinction, laying his hand on his turban and embracing him with effusion; his salary was raised to 700 aspers (1st Sha'bān 974 = 11th Febr. 1567. It was he who by a fetwa justified Salīm's undertakings against Cyprus. His death (982 = 1574) plunged the sultan into profound grief. He was the author of the *Ḳānūn nāme* of Sulaimān, a collection of laws promulgated during the reign of that sultan; he has left Arabic and Turkish poems. His name has been given to one of the principal streets in Constantinople.

ABŪ ṬAIYIB. [See AL-MUTANABBĪ and AL-ṬABARĪ (al-Ṭāhir b. 'Abd Allāh).]

ABŪ ṬĀḲA, i. e. „father of the window" (whence patak, pataca), a coin with the imprint of a colonnade [see ABŪ MIDFA'].

ABŪ ṬĀLIB 'ABD MANĀF B. 'ABD AL-MUṬṬALIB, Muḥammed's uncle. He took charge of his orphaned nephew when the latter's grand-

father [see 'ABD AL-MUṬṬALIB] died. According to tradition Muḥammed accompanied him on his business journeys. As Abū Ṭālib was poor and had a numerous family, Muḥammed is said to have shown his gratitude to him by bringing up his son 'Alī in his own house; but this is perhaps only a later legend, especially as it does not agree with what is elsewhere related of Abū Ṭālib's conduct. Thus when the Meccans began to persecute Muḥammed on account of his attacks on their religion, he, as head of the family, took up his side and in spite of the repeated protests of the Meccans would not abandon the fulfilment of this parental duty. His example was followed by the other Hāshimides with the exception of Abū Lahab, and when the Koraishites made the declaration of ostracism, they all retired to the quarter of the town inhabited by them (the *Shi'b* of Abū Ṭālib), and lived there for a length of time in a very oppressed condition. It was therefore a heavy blow for Muḥammed when his faithful uncle died 3 years before his emigration to Medina, and 10 years after his prophetic mission. It is not astonishing that tradition took possession of this man, who had been so intimately connected with the Prophet and of whom so little was known. In one tradition he has become the Saiyid of the Koraishites. Ḳaṣīdas were composed and put into his mouth. More especially was the question discussed as to whether he was converted before he died or whether he died an infidel. Party interests had their influence in this case; the general and certainly correct theory was that, whilst remaining quite faithful to his nephew, he yet considered his preaching as a reverie. This was very unpalatable to the 'Alide party and they therefore manufactured several traditions which asserted the contrary with more or less decisiveness. The consequence was that the opponents of the 'Alides came forward with other traditions, in which the Prophet himself speaks of the pains, surely moderate, which his pagan uncle had to suffer in Hell.

ABŪ ṬĀLIB KALĪM. [See KALĪM.]

ABŪ ṬĀLIB KHĀN B. ḤĀDJDJĪ MUḤAMMED BEG KHĀN, of Turkish origin, born at Lucknow in the year 1165 (1752), was at first *'Amaldār* of Itāwa and other districts, then held various offices, through which he was of great help to Colonel A. Hannay and Mr. Middleton. In the years 1799—1802 he undertook with Captain D. Richardson a travel through Europe, which he described after his return to Calcutta (1803). He was, however, unable to publish the description of his journey, as he died shortly afterwards (about 1806). The work was edited in Calcutta, 1812, by Mīrzā Ḥusain 'Alī and Mīr Ḳudrat 'Alī under the title of *Masīr-i ṭālibī fī bilād-i Ifrandjī*. Two years later an English translation of it by Stewart appeared in London, and an abridged adaptation from it by D. Macfarlane was printed in Calcutta, 1827. A French translation by Ch. Malo, entitled *Mirza Aboul Taleb Khan, voyages en Asie, en Afrique, en Europe écrits par lui-même*, appeared in Paris, 1819.

ABŪ TAMMĀM ḤABĪB B. AWS, poet and anthologist, born in 180 or 188 (796 or 804), and his birth-place is said to have been Djāsim, a village near Damascus in the direction of Tiberias, died in 228 or 231 (842-843 or 845-846). His father was a Christian named Thādūs (Theodosius?), for which name the son, when he became a Muslim, substituted the Arabic Aws, to which he attached a pedigree in the tribe of Ṭaiy', whence he is often called simply the Ṭaiy'ite. Some of his early life was, it is said, spent in Damascus, where his father kept a wine shop, and he worked as a weaver's assistant. Thence he went to Ḥimṣ (Emessa), where he commenced his career as a poet by lampooning the family of 'Otba b. Abī 'Āṣim in the interest of his patrons the Banū 'Abd al-Karīm. Then he went to Egypt, where he at first earned a living by selling water in the Great Mosque, but where he also found opportunity to study Arabic literature, especially poetry, and the subject therewith connected. He there first eulogized and then lampooned 'Aiyāsh b. Luhai'a al-Ḥaḍramī, and at Damascus again first eulogized and then lampooned Abu'l-Mughīth Mūsā al-Rāfiḳī. After a futile attempt to gain the favor of al-Ma'mūn, he went to Mawṣil (Mosul), where much of his life was spent. He met with more success at the court of Mu'taṣim, who rewarded his encomiums, and even took him as companion on his famous expedition against Amorium (223 = 838); and he also enjoyed the favor of Mu'taṣim's son, Aḥmed, and his son and successor al-Wāthiḳ. He was naturally also employed as encomiast by many of the eminent men at the Court, e. g. Aḥmed b. Abī Du'ād and Muhammed al-Zaiyāt; as well as other generals, ministers and provincial governors, e. g. al-Afshīn, Abū Sa'īd Muḥammed b. Yūsuf, Abū Dulaf al-'Idjlī, Dja'far al-Khaiyāṭ, 'Abd Allāh b. Ṭāhir, Mālik b. Ṭawḳ, al-Ḥasan b. Sahl, al-Ḥasan b. Radjā', al-Ḥasan b. Wahb, Khālid b. Yazīd al-Shaibānī, etc. Various anecdotes are told of his visits to his provincial patrons: when staying with Ibn Radjā' in Fārs, he gave his patron reason to suspect that he neglected the Muslim religious observances, and when questioned on this matter, expressed doubts as to the effectiveness of those observances, a confession which nearly led to his execution. Of these religious doubts there are no traces in the Dīwān (published at Beyrout, 1889 and 1905; indices to the latter in *Journ. of the Roy. As. Soc.*, Oct. 1905), which contains some devotional poems, besides the encomiums on the author's various patrons, laments on the dead, and satires on the poet's enemies; the conquest of Amorium and the defeat and death of Bābek the Khurramite with the execution of al-Afshīn are the chief matters of historical interest with which it deals. It was collected and arranged in alphabetical order by al-Ṣūlī, and afterwards rearranged in order of subjects by 'Alī b. Ḥamza al-Iṣpahānī. Its ideas are said to be mainly derived from the works of older poets, of which Abū Tammām made exhaustive studies, resulting in the composition of six anthologies (*Ikhtiyārāt*), viz. 1. *Ikhtiyār ḳabā'il* the Greater, containing select verses from tribal lays. 2. *Ikhtiyār ḳabā'il*, selections from tribal lays by little known poets.

3. *Ikhtiyār ash'ār al-fuḥūl*, selections of masterpieces by pagan and Islamic poets, ending with Ibn Harma. 4. The *Ḥamāsa*, composed when the author was returning from a visit to 'Abd Allāh b. Ṭāhir, and was delayed by snow at Hamadhān at the house of Abu'l-Wafā' b. Salama; it is in ten sections, dealing with different subjects, and embraces gems of Arabic poetry from pre-Islamic down to 'Abbāside times [see ḤAMĀSA]. 5. *Ikhtiyār al-muḳaṭṭa'āt*, arranged in a similar order to the last, but commencing with love-poems. 6. Selections from modern poets. Of these only Nº. 4 is now accessible, but another was in the hands of the author of *Khizānat al-adab* (d. 1030 = 1601), and all were extant in the time of al-Ḥasan b. Bishr al-Āmidī (d. 340 = 952), from whose work „Comparison between Abū Tammām and Buḥturī" (published at Constantinople, 1287) we learn that like other great poets Abū Tammām had obtrectatores, one of whom, Aḥmed b. 'Ubaid Allāh al-Kuṭrabullī called al-Farīd, wrote a book showing up his various faults of style, etc. Some of these criticisms were answered by Marzūḳī in a work in defence of the poet: and to some of al-Āmidī's objections there are replies in al-Sharīf al-Murtaḍā's *al-Shihāb fi'l-shaib wa'l-shabāb* (Constantinople, 1302). Biographies of the poet were written by Ibrāhīm al-Ṣūlī (d. 243 = 858), who knew him personally, by 'Alī al-Sumaisāṭī, and by the Khālidīs in the fourth century. Of the numerous commentaries on the Dīwān enumerated by Ḥādjdjī Khalīfa that by Tibrīzī exists in the Leyden Library.

Wüstenf.), Nº. 146; Suyūṭī, *Ḥusn al-muḥāḍara* (Cairo, 1321), i. 267; *Khizānat al-adab*, i. 172; *Ḥamāsa* (ed. Freytag), ii. 1 *et seq.*; Brockelmann, *Gesch. d. arab. Litter.*, i. 84.

(D. S. MARGOLIOUTH.)

ABŪ TĀSHFĪN I, fifth sovereign of the dynasty of the Banū 'Abd al-Wād [see 'ABDAL-WĀDIDES] of Tlemcen. He was only 25 when he had his father Abū Ḥammū Mūsā I [q. v.] assassinated and seized the regal power.

Abū Tāshfīn I was solemnly proclaimed king on the 23d Djumādā I 718 (23d July 1318), and at the very commencement of his reign he exiled into Spain all those of his relations who might raise any pretention to the throne. His principal confident and prime minister was one of his freedmen, a renegade Christian, a Catalonian, who had taken the name of Hilāl. This personage seems to have had a great ascendancy over the young king and great influence in the affairs of the kingdom. It was Hilāl who caused Mūsā b. 'Alī, the best of all the generals in the kingdom, to be disgraced, exiled and then thrown into prison.

The chroniclers of the kings of Tlemcen, Yaḥyā b. Khaldūn in particular, who nevertheless shows in his book a great partiality for the princes of the 'Abdalwādide dynasty, his benefactors, were obliged to acknowledge that this prince was addicted to pleasure, liked ephemeral enjoyment and loved the amusements and good things of this world.

In fact Abū Tāshfīn I would appear to have been a king very much detached from religious matters; he took a delight in adorning his capital with splendid buildings, and yet neither the building nor the restoration of a single mosque can be placed to his credit. He built, however, a Madrasa, which in remembrance of its founder was called *Madrasa Tāshfīnīya*. The king, by building this edifice, evidently wished rather to mark the respect he bore towards the scholars and poets, whom he entertained to sing his praise, than to make a school for the teaching of religious sciences.

Except the great reservoir *(al-ṣihrīdj al-a'ẓam)*, which may still be seen, no other trace of the buildings raised at Tlemcen during his reign remains. It is, however, a fact important to note, that the workmen, and probably the architects also, employed by Abū Tāshfīn were Christian prisoners of war confined in Tlemcen.

With regard to external politics, Abū Tāshfīn had in various times to intervene with his troops to settle the quarrels which arose between the Marīnide princes in the West and the Ḥafṣides in the East. It was principally on the side of Ifrīḳiya, where a Ḥafṣide prince with the support of Arab tribes attempted to seize the sway, that the king of Tlemcen hurled his armies. Bougie and Constantine notably were successively besieged by his troops. His commander-in-chief Mūsā b. 'Alī actually founded the town of Tamzizdikt in the valley of the Summam, a day's journey from Bougie, for the purpose of more closely blockading the latter place.

Abū Tāshfīn hoped, by help of the troubles which were shaking the Ḥafṣide empire, to extend his kingdom towards the east, as his father had done before him. He would have liked to carry the frontiers of his kingdom beyond Bougie and Constantine. He was intoxicated by the first easy successes of his generals and was obstinately resolved upon the war with his Ḥafṣide neighbor, which brought about a reconciliation between the latter and the Marīnide king of Fez. An alliance was concluded between these two sovereigns, and the king of Fez intervened to bring about the conclusion of peace between Abū Tāshfīn and the king of Tunis. Abū Tāshfīn would listen to nothing. A second embassy sent with the same object to Tlemcen by the Marīnide sovereign Abu'l-Ḥasan, who had just replaced his father on the throne, was badly received by Abū Tāshfīn. In 732 (1331-1332) the king of Fez marched against Central Maghrib, at the same time warning his ally, the king of Tunis, to attack the 'Abdalwādides on the east of their kingdom.

After having ravaged and subdued the states of Abū Tāshfīn, Abu'l-Ḥasan began the siege of Tlemcen in 735 (1335). Less than two years afterwards (30th Ramaḍān 737 = 2d May 1337), the besiegers entered the 'Abdalwādide capital by assault and King Abū Tāshfīn perished, with his arms in his hand, before the gate of his castle, which he defended heroically. His three sons and many great personages, notably Mūsā b. 'Alī, the famous general, who had been received again into favor and at that time held the position of first minister, fell by the side of their king.

With Abū Tāshfīn the kingdom of the Banū 'Abd al-Wād of Tlemcen disappeared for a time and it became a Marīnide state.

[For bibliography see 'ABD AL-WĀD and 'ABDALWĀDIDES.]

(A. BEL.)

ABŪ TĀSHFĪN II, king of Tlemcen, born at the beginning of Rabī' I 752 (April-May 1351) at Nedroma, where his father Abū Ḥammū Mūsā II was on a holiday with the saintly Abū

Ya'ḳūb, the grandfather of Abū Tāshfīn. The latter passed his youth at Nédroma with his grandfather, whilst his father Abū Ḥammū, fleeing from Tlemcen with the sultan, who had been defeated by the Marīnide Abū Thābit, went to seek refuge in Tunis [see ABŪ ḤAMMŪ II]. The Marīnide Abū 'Inān, who did not hesitate to put the two uncles of Abū Ḥammū II to death, had consideration for the latter's father, Abū Ya'ḳūb, on account of the retired and pious life he led at Nédroma; he sent the old man and his grandson, Abū Tāshfīn II, to live at Fez, where they were well treated. After the restoration of the throne of the Banū 'Abd al-Wād of Tlemcen by Abū Ḥammū II, he succeeded in making his father and son return to his capital where they were received with great pomp on the 17th Radjab 760 (14th June 1359). Whilst Abū Ya'ḳūb went to fight in the east of the kingdom and died at Algiers in Sha'bān 763 (May-June 1362), the young Abū Tāshfīn lived at the court of Tlemcen and enjoyed his father's entire solicitude.

In spite of the attentions with which Abū Ḥammū surrounded this son, whom he destined for the throne, Abū Tāshfīn was impatient to reign. He caused his father to be imprisoned at Oran with the intention of putting him to death, but Abū Ḥammū succeeded in escaping and returned to his capital. On being informed of this sudden reappearance of his father, whom he believed to be dead, Abū Tāshfīn hastily quitted the mountains of Tīhart where he was fighting against his brothers and returned to Tlemcen by forced marches. On his approach, Abū Ḥammū fled precipitately and hid himself in the minaret of the great mosque. Abū Tāshfīn joined him there; he appeared to be moved at the sight of his father, and was reconciled with him for a day. Abū Ḥammū proclaimed his abdication and asked as a supreme favor to be permitted to make the pilgrimage to Mecca. Abū Tāshfīn consented and put at his father's disposition a ship to take him from the port of Oran to Alexandria. On the way Abū Ḥammū bribed with money and promises the people charged with guarding him, and was disembarked at Bougie; from there he returned triumphantly to his capital in Radjab 790 (July 1388) and took the reins of government into his hands again. Meanwhile Abū Tāshfīn, meditating revenge, had taken refuge at the Court of Fez, where his intrigues met with all the success he promised himself from them. At the end of a year he reappeared on the territory of Tlemcen at the head of a Marīnide army, which encountered that of Abū Ḥammū on the 1st Dhu'l-Ḥidjdja 791 (21st November 1389) at al-Ghīrān on land of the Banū Warnīd. The result of this encounter was that the troops of Abū Ḥammū were routed, and Abū Ḥammū himself killed. His head was carried to Abū Tāshfīn who gazed on this horrible trophy unmoved.

When this wicked son had thus usurped the power, he seemed to wish to redeem his crime by imitating the good administration of Abū Ḥammū and by encouraging art and letters. The feasts of the Mawlid were celebrated, as they had been in the reign of his father, with great pomp. But it was above all in warlike expeditions that this king showed his military worth and the qualities of a man of action and energy, things his father lacked.

For the rest he was envious, violent, cruel and debauched, and the Arab chroniclers, al-Tanasī in particular, strew him with too many flowers. He it was, who in the lifetime of his father caused the secretary and confident of the latter, Yaḥyā b. Khaldūn, to be assassinated from jealousy. He was not contented with having caused his father's death, and as soon as he had the power, he caused many of his brothers to be put to death.

He had succeeded in reaching the throne thanks to the support of the Marīnides of Fez and on condition of remaining their vassal. He was faithful to his engagements on this side, but it seems that he would not have delayed long in shaking off the yoke of this troublesome suzerainty if death had not struck him on the 17th Radjab 795 (29th May 1393) after a reign of $3\frac{1}{2}$ years (Nov. 1398 to May 1393). His tomb has been found by Brosselard in the vaults of the old castle at Tlemcen.

Bibliography: Ibn Khaldūn, *'Ibar* (*Hist. des Berb.*), iii. 463 *et seq.*; Brosselard, *Tombeaux des Émirs Beni Zeiyan*, pp. 64 *et seq.* See also the bibliography of the articles 'ABD AL-WĀD and 'ABDALWĀDIDES. (A. BEL.)

ABŪ THAWR IBRĀHĪM B. KHĀLID B. ABI'L-YAMĀNI 'L-KALBĪ, a jurisconsult. Originally he belonged to the 'Irāḳian school, but later he joined al-Shāfi'ī, whose older (Bagdadian) writings he transmitted to posterity. In many respects, however, he deviated from his master's teaching, and became the founder of a school of his own, the teaching of which still in the fourth century of the Hegira was wide-spread in Armenia and Ādharbaidjān. Abū Thawr died in 240 (854) or 246 (860) in Bagdad. Nothing of his works has been preserved.

Bibliography: *Fihrist*, i. 211 (comp. ii. 91); Ibn al-Subkī, i. 227—231; al-Dhahabī, *Tadhkirat al-ḥuffāẓ*, ii. 94 (cl. 8, No. 115); Wüstenfeld, *Schâfiiten*, No. 12. With regard to his teaching comp. the *Ikhtilāf* works (e. g. Ṭabarī). (F. KERN.)

ABŪ ṬUMĒS, a mountain 1551 metres high in the northern part of the Ḥawrān mountain-range (Djebel al-Drūz). Recently it became famous through that a Drusian sanctuary, consecrated to the *Masīḥ* (Messiah), was erected on its top. The Drusian sanctuaries resemble very much the Muhammadan ones in their architecture. A saint is called by the Druses just as by the Mussalmans *Walī* or *Shaikh*. The reason why a sanctuary was erected on Abū Ṭumēs for the Messiah is, because, it is said, the latter appeared in a dream to a Christian of Ḥawrān, telling him that he lived on that mountain and expressing his wish to have there a *Maḳām*. Among other saints, al-Khiḍr is particularly worshiped by the Druses on a high, isolated mountain.

Bibliography: *Revue biblique*, 1904, p. 425; Littmann, in the *Zeitschr. für Assyriologie*, xix. 148 *et seq.* (LITTMANN.)

ABŪ TURĀB („father of dust"), the *Kunya* of the caliph 'Alī b. Abī Ṭālib, which is said to have been given him by Muhammed, and which is considered by the Shī'ites as an honorific surname. Nöldeke (in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lii. 29 *et seq.*), however, thinks this *Kunya* has rather been given 'Alī by his enemies as an injurious nickname; this is also the opinion of Sarasin (*Das Bild Alis bei den Historikern der Sunna*, p. 34). But, as the Shī'i-

ers consider Abū Turāb as an honorific name, it is often met with in the later epoch, e. g. the celebrated Ṣūfī Abū Turāb al-Nakhshabī (d. 245 = 859), about whose supposed tomb Goldziher has given an interesting notice in his *Muhamm. Stud.*, ii. 354. Goldziher also remarks (*loc. cit.*, p. 121) that the followers of 'Alī are sometimes called Turābīya.

ABŪ 'UBAID AL-ḲĀSIM B. SALLĀM AL-HARAWĪ, philologist, jurist and theologian, born at Herāt in 154 (770); his mother was a Greek slave. He studied in Baṣra under al-Aṣma'ī and Ibn al-A'rābī. He, however, did not confine himself like his teachers to linguistic studies, which to be sure, were even for him the center of interest, but he also passed for a man thoroughly versed in law. Thus he began his career as educator in the family of Harthama, who had become in the year 189 (804) governor of Khorāsān, and then at the house of Thābit b. Naṣr b. Mālik, the governor of Ṭarsūs; in the latter town he was afterwards appointed judge, which office he held 18 years. The later governor of Khorāsān, 'Abd Allāh b. Ṭāhir, also was a generous patron of his. Afterwards he lived in Bagdad, and he died in Mecca or in Medina, about 223 (837), after he had performed the pilgrimage.

His principal work is a large dictionary: *Gharīb al-muṣannaf*, in 1000 chapters, on which he is said to have worked 40 years (MSS. in Cairo, *Khidīwīya*, iv. 176, and Constantinople, Aya Sofia, N°. 4706; comp. Goldziher, *Abh. zur arab. Philologie*, i. 78). His *Gharīb al-ḥadīth*, a work on the rare expressions in traditions, is also highly esteemed; comp. de Goeje, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xviii. 781 *et seq.*

His collection of proverbs: *Kitāb al-amthāl*, also called *al-Madjalla*, has been printed in Constantinople as N°. 1 of the collection *al-Tuḥfa al-bahīya*; comp. also E. Bertheau, *Libri proverbiorum Abu Obaid Elqasimi filii Elchamami lectiones duo, octava et septima decima*, ar. ed. lat. vert. annot. instr. diss. Gottingae 1836. This *Kitāb al-amthāl* is not to be confounded with the collection of proverbs of al-Mufaḍḍal b. Salama [q. v.]. Of his other works, more than 20 in number, only the *Kitāb faḍā'il al-Ḳor'ān* has been preserved in a later revision (Ahlwardt, *Verz. d. arab. Handschr.*, N°. 441). Al-Balawī in his *Kitāb alif bā'* (ii. 27) has inserted an extract from Abū 'Ubaid's *Kitāb ādāb al-Islām*, and his *Kitāb mā khālafat fīhi'l-'āmma lughāt al-'Arab* is quoted in *Lisān al-'Arab*, vii. 263.

(BROCKELMANN.)

ABŪ 'UBAID ALLĀH MU'ĀWIYA B. 'UBAID ALLĀH B. YASĀR AL-ASH'ARĪ, a vizier. Abū 'Ubaid Allāh is mentioned as early as the reign of al-Manṣūr. When the latter sent his son Muḥammed against the rebellious governor of Khorāsān, 'Abd al-Djabbār b. 'Abd al-Raḥmān, Abū 'Ubaid Allāh accompanied the expedition. After the accession of Muḥammed al-Mahdī, Abū 'Ubaid Allāh, whose knowledge of the ancient Arab poets was greatly praised, was appointed secretary to the caliph. He soon acquired a great name at the 'Abbāside Court and was promoted vizier. In the long run, however, he could not escape the jealousy of the other officials, and after he had been vizier for several years he fell a victim of the intrigues of the chamberlain, al-Rabī' b. Yūnus. In order to attack the vizier, al-Rabī' accused the latter's son Muḥammed of heresy. The caliph had him summoned and put a Ḳor'ān in front of him, and, as the unfortunate wretch could not read very well, this was taken as a proof of his free-thinking tendency; he was therefore executed. This took place in the year 161 (777-778). Some time later Abū 'Ubaid Allāh was deprived of the vizierate, and in 167 (783-784) was dispossessed also of his office in the chancery. He died in the year 169 or 170.

(K. V. ZETTERSTÉEN.)

ABŪ 'UBAIDA B. AL-DJARRĀḤ, more properly, 'ĀMIR B. 'ABD ALLĀH B. AL-DJARRĀḤ, of the Balḥārith family, one of the ten believers, to whom Muḥammed is said to have promised Paradise. He embraced Islām very early and distinguished himself by his braveness and unselfishness, on account of which the Prophet named him al-Amīn. He hastened to the Prophet's help in the battle of Ohod, accompanied him in all his campaigns, and had the command of the troops in several expeditions. Later on he was sent to Nadjrān, to train there the submitted tribes in Islām; he also played a prominent part in the election of the first caliph. He was sent by the latter, at the head of a number of troops, to Syria, and when 'Omar became caliph, he even received the supreme command over the Syrian army, and conquered Damascus, Ḥimṣ (Emesa), Antioch, Aleppo, etc. He died in the year 18 (639) of the pest at Amwās. His tomb is said to be found in the Djāmi' al-Djerāḥ in Damascus.

Bibliography: Ibn Sa'd, iii¹. 297 *et seq.*; Ibn al-Athīr, *Usd al-ghāba*, iii. 84; v. 249; Sprenger, *Das Leben und die Lehre des Mohammad*, i. 432 *et seq.*

ABŪ 'UBAIDA MA'MAR B. AL-MUTHANNĀ 'L-TAIMĪ, celebrated philologist, born in 110 (728). His enemies asserted that he was of Jewish descent, and it is certain that he was not a member but a client of the tribe of Taim. Therefore he defended the rights of the non-Arabs, and belonged, as Goldziher has shown it, to the Shu'ūbites [q. v.]. He is also said to have been a Khāridjite, which, however, must be understood, that he agreed with the Khāridjites only in what regards certain questions, so that there was some reason to style him a heretic. He made many enemies, who even asserted that he could not faultlessly recite a single Arabic verse. In reality, however, he was — so is Goldziher's opinion — one of those that had the most extensive knowledge of the language and ancient literature of the Arabs. He wrote more than 100 treatises, the titles of which have been handed down to us, and died about the year 210 (825).

Bibliography: *Fihrist*, i. 53; Ibn Khallikān (ed. Wüstenf.), N°. 702; Flügel, *Die grammatischen Schulen*, pp. 68 *et seq.*; Goldziher, *Muhamm. Stud.*, i. 194 *et seq.*; Brockelmann, *Gesch. d. arab. Litter.*, i. 103.

ABU'L-WAFĀ', his full name, MUḤAMMED B. MUḤAMMED B. YAḤYĀ B. ISMĀ'ĪL B. AL-'ABBĀS

al-Būzdjānī, one of the greatest Arab mathematicians, very probably of Persian origin, born in Khorāsān, the 1st Ramaḍān 328 (10th June 940). His first teachers in mathematics were his uncles Abū 'Amr al-Mughāzilī and Abū 'Abd Allāh Muḥammad b. 'Anbasa, the former having in his turn studied geometry under Yaḥya'l-Merwazī (or Māwardī) and Abu'l-'Alā' b. Karnīb. In the year 348 (959), Abu'l-Wafā' emigrated to 'Irāḳ, and then he lived in Bagdad until his death, which took place there in Radjab 388 (July 998; according to Ibn al-Athīr and Ibn Khallikān, who follows him, in 387 = 997). — Of his mathematical and astronomical works the following are extant: 1. An arithmetic-book, entitled *Kitāb fī mā yaḥtādj ilaihi al-kuttāb wa'l-'ummāl min 'ilm al-ḥisāb (A book of what of arithmetic writers and business men need)*, identical with the *Kitāb al-manāzil fi'l-ḥisāb (The book of the stations on arithmetic)*, mentioned by Ibn al-Ḳifṭī, Leyden (not complete) and Cairo(?); Woepke published in the *Journ. As.* (5th series, v. 246 *et seq.*) the titles of the stations and of the chapters of that work. — 2. *Al-Kitāb al-kāmil (The complete book)*, probably identical with the *Almadjest* mentioned by Ibn al-Ḳifṭī (Paris, incomplete); certain parts of it have been translated by Carra de Vaux (*Journ. As.*, 8th series, xix. 408—471). — 3. *Kitāb al-handasa (A book of geometry)*, in Constantinople (Aya Sofia, Arabic and Persian), probably the same as the Persian *Book of the geometrical constructions* of the Paris Library, reviewed by Woepke (*Journ. As.*, 5th ser., v. 218—256, 309—359); the latter is of opinion that this book was not written by Abu'l-Wafā' himself, but by one of his pupils summing up his lectures. — Nothing unfortunately has remained of his commentaries to Euclides, Diophantus and al-Khwārizmī, nor of his astronomical tables called *al-Wāḍiḥ*; still the tables called *al-Zīdj al-shāmil*, in Florence (Laurent.), Paris and Brit. Mus., of an unknown author, are very likely an adaptation from Abu'l-Wafā''s tables.

The chief merit of Abu'l-Wafā' consists in the further development of trigonometry; it is to him that we owe, in spherical trigonometry, the substitution for the right-angled triangle of a perfect quadrilateral with the proposition of Menelaus by means of the so-called „rule of the four magnitudes" (sine a : sine c = sine A : 1) and the tangent theorem (tan. a : tan. A = sine b : 1); of these formulae he infers still: cos. c = cos. a. cos. b. For the oblique-angled spherical triangle he probably first established the sine proposition (comp. Carra de Vaux, *loc. cit.*, pp. 408—440). We are also indebted to him for the method of calculation of the sine of 30', the result of which agrees up to 8 decimals with its real value (Woepke, in *Journ. As.*, 5th ser., xv. 296 *et seq.*). His geometrical constructions, which are partly based on Indian models, are also of great interest (Woepke, *loc. cit.*, 5th ser., v. 218—256). On the other hand, the praise for introducing tangents, cotangents, secants and cosecants into trigonometry does not belong to him, as these functions were already known by Aḥmed b. 'Abd Allāh, called Ḥabash al-Ḥāsib. Neither was he the discoverer of the variation of the moon, which had become a point of dispute between L. A. Sédillot and Chasles on one side and Biot, Munk and Bertrand on the other (Carra de Vaux, *loc. cit.*, pp. 440—471).

(H. Suter.)

ABŪ YAZĪD b. Kaidād, a Khāridjite, who imperilled the Fāṭimide dynasty at its very beginning. His real name was Makhlad b. Kaidād, he belonged to the Banū Wārkū, a subdivision of the Zanāta tribe, and was born at Kawkaw, in the Sudan, where his father was engaged in business. He embraced very early the Khāridjite doctrines of the Nekkārites and propagated them at Taḳyūs, where he lived practicing the profession of schoolmaster. Having become suspected on different occasions, he departed to the East; then he came back and was thrown into prison at Tāza. He was set free by his son and the chief of the Nekkārites, Abū 'Ammār the Blind, and travelled through the country between Wargla and the Awrās, where he met with people favorably inclined to him. The Fāṭimide power had risen thanks to the Zanāta of Kabylia, but it almost succumbed under the blows of the Zanāta of the Awrās. Abū Yazīd, then 60 years old, lame and feeble of body, but endowed with remarkable eloquence, and possessing a certain intellectual culture, stirred up the Berbers and rapidly conquered Southern Ifrīḳiya. He used to ride an ass, whence his surname „the man on the ass", and make a show of austerity in conformity with the irreconcilable doctrines of the Nekkārites, which he professed. Still the religious enthusiasm did not extinguish in him the political man. He cleverly negotiated with the Umaiyads of Spain, the rivals of the Fāṭimides, for the possession of the Maghrib, and received from them a disguised, but effective support. Soon afterwards he seized almost the whole of Ifrīḳiya, and, after having taken Ḳairawān, he came to besiege in Mahdiya the Fāṭimide caliph al-Ḳāsim. The desperate resistance of this town saved the 'Ubaidite dynasty. At the same time, the Nekkārites were not little dissatisfied to see their chief abandon his former democratic habits of simplicity, wear silken garments and mount a thoroughbred horse. The siege, by its prolongation, became more lamentable for the besiegers than for the besieged, and the former were compelled to withdraw in spite of the efforts of Abū Yazīd. The latter took again to his former kind of life and soon the Berbers flocked themselves under his colors. But the impulse had gone; after some success he miscarried before Sūsa, which was defended by the Fāṭimide caliph Ismā'īl, the successor of al-Ḳāsim, the latter having died during the siege. A new defeat before Ḳairawān threw Abū Yazīd back to the West; then the rout began. After some changes of fortune, accompanied only by a few of his men that remained faithful to him, he finally was hunted down in the Djebel Kiyāna, south of Setif. During the assault on the last fortress he was mortally wounded, which hindered his escape, and so he fell into the hands of the Fāṭimide caliph. The latter wished to show him to the public as a trophy, but Abū Yazīd died of his wounds

(27th Muḥarram 336 = 19th August 947). His body stuffed with straw and his head cut off were exposed to the insults of the mob of Mahdiya, which had trembled before him. His sons, however, found a shelter at the Court of the Umaiyads of Cordova.

ABŪ YŪSUF YA'ḲŪB B. IBRĀHĪM B. ḤABĪB AL-KŪFĪ, a Ḥanafite jurisconsult, born in 113 (731), died in 182 (798). His nomination as ḳāḍī of Bagdad shows the high esteem, in which he was held by his contemporaries. He held his office until his death. Of his writings the book on land tax (*kharādj*) with an exhortatory preface towards Hārūn al-Rashīd was printed in Būlāḳ, 1302.

ABŪ ZAID. [See AL-BALKHĪ.]

ABŪ ZAID, hero of the *Maḳāmas* of al-Ḥarīrī [q. v.]

ABŪ ZAID, hero of a romance, or rather of a series of romances, which depict the heroic adventures of the Banū Hilāl [q. v.]. These nomads, through their plundering, laid waste Arabia under the reign of the 'Abbāsides. The Fāṭimides of Egypt, who had vanquished them and their allies, the Karmathians, at first cantoned them in Upper Egypt, then relegated them to Ifrīḳiya, promising them this country if they would succeed in subjugating the Zīrites, who, having been the Fāṭimides' governors of Ifrīḳiya, became real sovereigns. It is mainly the second conquest of Ifrīḳiya in the 11th century that inspired the Hilālite poets with songs and narratives, some of which were preserved by Ibn Khaldūn, and others are still alive in the memory of the African inhabitants. Afterwards certain romancers took these poems as a subject for numerous narratives. Ahlwardt has given an excellent résumé of them in his catalogue of the Arabic MSS. at Berlin (*Verz. d. arab. Handschr. d. königl. Bibl. zu Berlin*, viii. 155—462). Neither the authors of these romances, nor the time in which they were written can be established with certainty. The ancient works enumerated in the *Bibliographie arabe*, iii. 128-129, don't say much, for the scientific examination of that epical cycle was begun only by Basset (*Bull. de corresp. afric.*, iii. 136—148) and Hartmann (*Zeitschr. f. afrik. u. ocean. Spr. d. deutsch. Kolonien*, 1898, pp. 289 *et seq.*). A. Bel has, since, written a valuable work on this subject: *La Djâzya* (see especially *Journ. As.*, 9th ser., xix. 289 *et seq.*).

Bibliography: Besides the works quoted in this article, V. Chauvin, *Bibliographie des ouvrages arabes*, iii. 128 *et seq.* Most of the Oriental editions are enumerated by Ellis, *Cat. of Arabic books in the Brit. Mus.*, i. 638 *et seq.* and by Hartmann, *loc. cit.* (V. CHAUVIN.)

ABŪ ZAID SA'ĪD B. AWS AL-ANṢĀRĪ, Arab grammarian, a member of the Medinian tribe of Khazradj, was a pupil of Abū 'Amr b. al-'Alā' of Baṣra, but attended also the lectures of al-Mufaḍḍal al-Ḍabbī of Kūfa. When al-Mahdī, at the time of his accession to the throne in 158 (774), invited to Bagdad the most prominent scholars, Abū Zaid came also there. He died in 214 or 215 (830). Of his numerous lexical and grammatical works only two have been preserved: his chief work *Kitāb al-nawādir fi 'l-lugha* and his *Kitāb al-maṭar*. The former contains a collection of rare poems, which he had learned from al-Mufaḍḍal al-Ḍabbī, and rare radjaz verses and archaic expressions, which he had heard directly from Bedouins. In its present form this work has been handed down by Abū Ḥātim and Abu'l-Ḥasan al-Akhfash [q. v.], both of whom furnished it with lexical and explanatory notes (comp. *Khizānat al-adab*, iii. 199). 'Alī b. Ḥamza al-Baṣrī wrote a criticism on it entitled *Kitāb al-tanbīh 'alā aghlāṭ Abī Zaid al-Kilābī fi nawādirihi* (*Khizānat al-adab*, iv. 39). It has been edited by Sa'īd al-Khūrī al-Shartūnī, Beyrout, 1894 (comp. Nöldeke, in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xlix. 318 *et seq.*; Fleischer, *Kleinere Schriften*, iii. 471 *et seq.*). The *Kitāb al-maṭar*, a collection of Arabic expressions with regard to rain, has been edited by R. Gottheil (*Journ. of the American Orient. Soc.*, xvi. 282—312) and by L. Cheikho (*Le traité philologique Kitâb al-matar*; *Extrait du Machriḳ*, Beyrout, 1905).

ABŪ ZAIYĀN, the name of four 'Abdalwādide or Zaiyānide kings:

1. ABŪ ZAIYĀN I MUḤAMMED B. ABĪ SA'ĪD 'OTHMĀN B. YAGHMURĀSAN B. ZAIYĀN, the third sovereign of the Zaiyānide dynasty, was proclaimed king at Tlemcen, on the death of his father, the 2nd Dhu'l-Ḳa'da 703 (6th June 1304), during the long siege of that town by the Marīnide sultan Abū Ya'ḳūb al-Manṣūr. The siege was kept on since the 3rd Sha'bān 698 (6th May 1299), and was not to be finished before the 7th Dhu'l-Ḳa'da 706 (10th May 1307) when Abū Ya'ḳūb was assassinated by one of his eunuchs.

The Marīnide sultan had founded, with the object of having Tlemcen entirely blockaded, by the side of the latter town, the famous camp of Manṣūra, a real fortified city, with mosques, a royal palace, public baths, inns, markets, etc., of which some imposing ruins have still remained. But, after the death of that prince, his succession was disputed by three competitors, and Abū Zaiyān, having treated with the principal one of them, Abū Thābit, obtained the raising of the siege of Tlemcen and the enemy's handing over of Manṣūra and the Tlemcen territory.

Abū Zaiyān then went to punish the tribes of the eastern part of his kingdom for having supported the Marīnides: the Tūdjīn Berbers were compelled to submit and to pay taxes; the Arab tribes were used very ill and forced back into the desert. Then the sultan entered Tlemcen. While he was occupied with repairing the damages caused by the siege (fortifications, royal palaces,

plantations of trees, *etc.*), he fell ill and died in a few days later, on the 21st Shawwāl 707 (14th April 1308). He was succeeded by his brother Abū Hammū Mūsā I.

Khaldūn, *Bughyat al-ruwwād* (ed. Bel), text pp. 121 *et seq.*, trans. pp. 165 *et seq.*; al-Salāwī, *Kitāb al-istiḳṣā'* (Cairo, 1304), ii. 41 *et seq.*; Bargès, *Hist. des Beni Zaiyan, rois de Tlemcen*, trans. of al-Tanasī's Chronicle (Paris, 1852), pp. 32 *et seq.*; idem, *Compliment de l'hist. des Beni Zeiyan* (*ib.*, 1887), pp. 39 *et seq.*

2. Abū Zaiyān II Muḥammed b. 'Othmān b. Abī Tāshfīn I b. Abī Hammū Mūsā I b. Abī Sa'īd 'Othmān b. Yaghmurāsan was proclaimed king at Tlemcen, on the 3d Radjab 761 (20th May 1360), by order of the Marīnide sultan Abū Sālim Ibrāhīm, who had just seized that town. But, as Abū Sālim was obliged to leave Tlemcen in order to go to repress some revolts in the Maghrib, the Zaiyānide sultan Abū Hammū Mūsā II profited by that opportunity to drive his cousin Abū Zaiyān from his capital and to seize definitely the power in 762 (1360-1361). After several fruitless attempts to recover Tlemcen Abū Zaiyān was forced to seek shelter in the Tunisian Djerīd, where he disappeared.

3. Abū Zaiyān III Muḥammed b. Abī Hammū Mūsā II (the chief of the younger branch of the Zaiyānide emīrs), who had been governor of Algiers in the lifetime of his father. But, after the latter's death, having fruitlessly tried to struggle with his brother Abū Tāshfīn II, who had seized the sway, he fled to the Court of the Marīnide sultan Abu'l-'Abbās Aḥmed, whom he implored for help (792 = 1390). Abū Tāshfīn II died towards the middle of 795 (May 1393), and he was succeeded by his brother Yūsuf, who refused to recognize the supremacy of the sultans of Fez. Then Abu 'l-'Abbās Aḥmed undertook an expedition against Tlemcen; Yūsuf was overthrown and Abū Zaiyān III installed in his place (Muḥarram 796 = Nov.-Dec. 1393).

Being a faithful vassal of the Marīnides of Fez, Abū Zaiyān patronized letters and poets. He tried to obtain through the scholars, whom he gathered around himself, and the artists, whom he supported, the splendor of his Court, which he failed to obtain through warlike feats. But his reign did not last long: first driven from the throne by his brother Abū Muḥammed 'Abd Allāh, he was assassinated in 801 (1398).

Bibliography: Ibn Khaldūn, *'Ibar*, vii. 148 *et seq.*, 363 *et seq.* (*Hist. des Berb.*, ii. 220 *et seq.*, 460 *et seq.*; iii. 490 *et seq.*; iv. 459); al-Salāwī, *Kitāb al-istiḳṣā'*, ii. 140 *et seq.*; Bargès, *Hist. des Beni Zaiyan*, p. 97; idem, *Compliment de l'hist. des Beni Zeiyan*, p. 257; Cour, *Les derniers Mérinides* (*Bull. soc. géog. d'Alger*, 1st trim. 1905, pp. 105-106).

4. Abū Zaiyān IV Aḥmed b. Abī Muḥammed 'Abd Allāh, the last but one sultan of Tlemcen. On Abū Muḥammed 'Abd Allāh's death, his two sons, Abū 'Abd Allāh Muḥammed and Abū Zaiyān Aḥmed, contended for the throne. Abū Zaiyān was supported by the Turks of Algiers and his brother by the Spaniards of Oran. Abū Zaiyān seized the throne through armed force and had himself proclaimed king in 947 (1540). Abū 'Abd Allāh sought refuge with the governor of Oran, Count Alcaudete, and asked his assistance, engaging himself in return to recognize the suzerainty of Spain. A military expedition, commanded by Don Alfonso de Martinez, was undertaken in favor of the dispossessed prince. But the Spanish troops were made to stop about 12 leagues from Oran and routed by Abū Zaiyān's cavaliers that were much superior in number. Nearly all the Spaniards, among whom the commanding general, perished in that battle, which was so bloody that the place where it was fought received the name of *Shu'bat al-liḥām* (the mountain pass of flesh). This took place in the very beginning of 1543.

The Spaniards, however, avenged this defeat before long. An army, consisting of 9000 footmen and 500 horsemen, seized Tlemcen, drove Abū Zaiyān away, and installed there Abū 'Abd Allāh Muḥammed (30th Dhu'l-Ka'da 949 = 7th March 1543). The town was given over to plundering, while Count Alcaudete pursued till Mulīya Abū Zaiyān and his followers. On their way back, the troops of the Spanish governor were harassed by the Arabs till they arrived at Oran. At the same time, the sovereign protected by the Spaniards was driven away by his own subjects. The latter recalled Abū Zaiyān, who reigned since then till his death (957 = 1550).

Abū Zaiyān had declared himself the vassal of the Turks and had the public prayer of Friday (*khuṭba*) recited in the name of the sultan of Constantinople.

(A. Cour.)

ABŪ ZAIYĀN Muḥammed, the name of five Marīnide kings:

1. Abū Zaiyān Muḥammed, son of the Marīnide sultan Abū 'Inān Fāris. The latter, while seriously ill, had designated Abū Zaiyān for the succession to the throne, indicating him at the same time the vizier Mūsā b. 'Īsa'l-Aḍūlī as his prime minister. The illness of the monarch was growing worse, and the vizier, in order to avoid the competition of pretenders, wanted to hasten his master's accession to the throne. He, accordingly, spoke of it to the principal personages of the Marīnide Court, who recognized Abū Zaiyān as sovereign.

But just the same people feared Abū Zaiyān on account of his severity and harshness towards them. Won over by the vizier Abu 'l-Ḥasan b. 'Omar al-Fadūdī, they, with the complicity of the

militia officers, proclaimed sultan another son of Abū ʿInān, called Muḥammed al-Saiyid, a child of five years. Then, Abu 'l-Ḥasan, escorted by soldiers, went to the royal harem, where Abū Zaiyān had fled for refuge, and compelled the latter to pay homage to the young sovereign. After this, he lured Abū Zaiyān to some deserted room of the palace, where he strangled him. This took place on the 24th Dhu 'l-Ḥidjdja 759 (27th November 1358), or according to others, Wednesday the 25th Dhu 'l-Ḥidjdja of the same year.

2. ABŪ ZAIYĀN MUḤAMMED, the son of Prince Abū ʿAbd al-Raḥmān Yaʿḳūb and grandson of the Marīnide sultan Abu 'l-Ḥasan, took, when ascending the throne, the surname of al-Mutawakkil ʿala'llāh. Since 750 (1349) he sought shelter in Spain, at the Court of the emir of Granada, in order to escape the persecution that his family suffered at the hands of his uncle, Sultan Abū Sālim. The latter, however, through his intrigues compelled him to quit Granada and to flee to the Court of the Christian king of Castile, who received him well and assigned him Seville for his residence. After the assassination of Abū Sālim, the vizier ʿOmar b. ʿAbd Allāh al-Yābānī had at first the Marīnide prince Abū ʿOmar Tāshfīn, a man morally incapable of occupying himself with state affairs, proclaimed king: but soon afterwards, unable to resist any longer the Marīnide chiefs, the same vizier deposed his own creature, and called Abū Zaiyān Muḥammed to the throne.

The latter, having signed a convention with the king of Castile, set sail for Ceuta, whence, escorted by the troops of ʿOmar b. ʿAbd Allāh, he directed his steps towards Fez, the Marīnide capital. His cousins, the sons of the former Marīnide sultan Abū ʿAlī, tried in vain to bar his entrance into the capital. Being thrown back upon Tāza, they were compelled to withdraw from the strife, and one of them, ʿAbd al-Ḥalīm went to found a kingdom at Sidjilmāsa.

Abū Zaiyān, after his arrival at Fez, was proclaimed sultan on Monday the 21st Ṣafar 763 (20th December 1361); but in reality the vizier ʿOmar was the only ruler. In order to be in the good graces of the Marīnide chiefs, ʿOmar married a wife of the family of one of them, namely of Vizier Masʿūd b. Raḥḥū b. Māsāʾi, and made his friend ʿAmr b. Muḥammed, the governor of the city of Morocco, marry a Marīnide princess. But in spite of his intrigues the latter two chiefs revolted shortly afterwards and proclaimed two other sultans, one at Morocco (ʿAbd al-Muʾmin b. ʿAlī), and one at Debdū (ʿAbd al-Raḥmān b. ʿAlī). ʿOmar, however, defeated Ibn Māsāi and negotiated with the governor of Morocco.

The sultan Abū Zaiyān was conscious of his dangerous situation and wished to free himself from ʿOmar. But the latter had surrounded him with spies, who were even among the women of his harem. Thus when ʿOmar b. ʿAbd Allāh became aware of the sultan's intentions, he got rid of him. On the 22d Dhu'l-Ḥidjdja 767 (30th August 1366), in the morning, the sultan was found dead in a well of the garden called Rawḍ al-ghuzlān. ʿOmar spread the rumor that the sultan, having become drunken, fell there by accident and was drowned; but in reality he had him first strangled by one of the soldiers, then thrown into the well. He was succeeded, at ʿOmar's suggestion, by the Marīnide prince ʿAbd al-ʿAzīz, the son of Sultan Abu'l-Ḥasan.

3. ABŪ ZAIYĀN MUḤAMMED AL-SAʿĪD, son of the Marīnide sultan Abū Fāris ʿAbd al-ʿAzīz. The latter, after he had seized Tlemcen, fell ill there and died. The vizier Abū Bekr b. Ghāzī b. al-Kās, informed of the event by the eunuchs of the palace, immediately took upon his shoulders the young Abū Zaiyān, a child of five years, and brought him to the troops, who proclaimed him king on the 22d Rabīʿ II 774 (21st October 1372). Since then the vizier Ibn Ghāzī ruled in the name of the young prince. But this minister was not able to prevent either the ex-sultan of Tlemcen, Abū Ḥammū, from retaking his capital, nor the emir of Granada from fomenting insurrections and rousing on all sides pretenders to the Marīnide throne. The emir of Granada claimed his underhand dealings to be legitimate on account of the shelter and protection that the sultans of Fez had offered his former minister Ibn al-Khaṭīb. Finally, on the 6th Muḥarram 776 (17th June 1374), Abu 'l-ʿAbbās Aḥmed, son of the Marīnide sultan Abū Sālim and one of the pretenders stirred up by the emir of Granada, rendered himself master of Fez, dethroned the young sultan Abū Zaiyān, and had himself proclaimed the only Marīnide ruler.

4. ABŪ ZAIYĀN MUḤAMMED AL-MUNTAṢIR BI-'LLAH, son of the dethroned Marīnide sultan Abu'l-ʿAbbās Aḥmed b. Abī Sālim. The Marīnide sultan Mūsā b. Abī 'l-Faḍl having died suddenly, thought to have been poisoned by the vizier Yaʿīsh b. Raḥḥū b. Māsāi, the latter hastened to have the young Abū Zaiyān, a child of five years, proclaimed sovereign on the 3d Ramaḍān 788 (28th september 1386). But the young prince had scarcely been installed, when a revolt, fomented by three viziers dissatisfied with their colleague Yaʿīsh, brought to power a candidate supported by the emir of Granada. The new sovereign, al-Wāthiḳ bi-'llāh, a brother of the deceased sultan Mūsā b. Abī'l-Faḍl, deposed Abū Zaiyān on the 15th Shawwāl 788 (9th November 1386), after the latter had reigned 43 days.

5. ABŪ ZAIYĀN MUḤAMMED AL-WĀTHIḲ BI-'LLĀH, son of Abu'l-Faḍl and grandson of the Marīnide sultan Abu 'l-Ḥasan. Abū Zaiyān was in Spain, a refugee at the Court of the emir of Granada, when, after the Marīnide sultan Mūsā had been poisoned, the vizier Ibn Māsāi offered him the sovereign power. He accepted the offer, and the fact that in the meantime Abū Zaiyān al-Muntaṣir was proclaimed king did not prevent him from proceeding on his journey to the Marīnide capital. As he was supported by the vizier Masʿūd b. Māsāi and by most of the distinguished personages of Morocco, he could easily overpower his rival. Ibn Māsāi deposed al-Muntaṣir and had Abū Zaiyān Muḥammed al-Wāthiḳ proclaimed sultan in his place (15th Shawwāl 788 = 9th November 1386).

But Ibn Māsāi, who had chosen the latter prince on account of his feeble character, could not for a long time rule over the Marīnide kingdom in peace. Having claimed the restitution of Ceuta from the emir of Granada, who had unjustly seized it, the latter dispatched against the Maghrib the Marīnide ex-sultan Abu'l-ʿAbbās at the head of a numerous army. The emir of Granada endeavored to implant his influence over Northeast

Africa, and willingly encouraged anarchy in the sultanic family of his neighbour. The partisans of both sultans struggled with each other for nearly one year in the whole Marinide kingdom. Finally, Abu'l-'Abbās seized Fez, deposed his rival Abū Zaiyān Muḥammad al-Wāthiḳ (5th Ramaḍān 789 = 19th September 1387), and brought him a prisoner to Tangiers, where he had him executed.

COUR.)

ABŪ ZAKARĪYĀ' YAḤYĀ B. ABĪ BEKR, a native of Wargla, author of the historical work on the Rostemides and the Maghrib Abāḍites, entitled *Kitāb al-sīra wa-akhbār al-a'imma*. This work has been discovered in the Mzāb and translated into French by Masqueray, under the title of *Chronique d'Abou Zakaria* (Algiers, 1878).

The Abāḍite chroniclers Dardjīnī and Shammākhī, who based their historical and biographical works principally on Abū Zakarīyā''s Chronicle, give very little information concerning this author, and indicate neither the date of his birth nor that of his death. All what is known from Dardjīnī's *Kitāb al-ṭabaḳāt* is that one of Abū Zakarīyā''s teachers was Abū Rabī'a Sulaimān b. Yakhluf al-Mzātī (d. 471 = 1078-1079). We may thus suppose that the Chronicle was written either at the end of the 5th or at the beginning of the 6th century of the Hegira.

After Duveyrier, who, on returning from his travel to the Sahara, brought a manuscript of al-Shammākhī's work, the honor for signalizing the importance of the Abāḍite works is due to Masqueray. The Chronicle of Abū Zakarīyā', of which the latter published a French translation, though imperfect, and showing in several places the author's inexperience, furnishes valuable information about the history of the Imāmate, the Rostemide dynasty and the beginning of that of the Fāṭimides. The value of this Chronicle, the publication of which is very desirable, was spread as far as into the East. It is from it that the anonymous author of the *Kashf al-ghumma* (a work which was the basis of the history of the Imāms of 'Omān translated by Badger) drew his information about the Abāḍites of North Africa (R. Basset, *Les sanctuaires du Djebel Nefousa*, Paris, 1869, p. 6).

The Chronicle of Abū Zakarīyā' is the most ancient document regarding the history of the African Abāḍites written by one belonging to that sect. It was almost textually reproduced by Dardjīnī in the first volume of his *Ṭabaḳāt al-mashā'ikh*, which is yet unpublished. Shammākhī used it to a great extent for the articles in his *Kitāb al-siyar* (Cairo, 1301) devoted to the introduction and development of the Abāḍite doctrine in the Maghrib as well as to the history of the Rostemides. (A. DE MOTYLINSKI.)

ABŪ ZAKARĪYĀ' YAḤYĀ B. AL-KHAIR B. ABI 'L-KHAIR AL-DJENĀWUNĪ (a native of Idjināwun, in the Djebel Nefūsa), an Abāḍite doctor, quoted by Shammākhī (*Kitāb al-siyar*, pp. 135 *et seq.*) as one of the lights of his epoch. He studied under the erudite shaikh Abū Rabī'a Sulaimān b. Abī Hārūn in the mosque of Ibnain. He profited so much by the lessons of his teacher that, Shammākhī says, when he came back to his country, he spent six months in answering to questions addressed to him on every branch of science without ever being puzzled at a single point.

He left diverse works on the *furū'*, one of which, on fasting, is to be found in a collection autographed in the Barūnīya printing establishment in Cairo. His principal work is the *Kitāb al-waḍ'*, autographed in the same place, in 1305, with marginal notes of Shaikh Muḥammad Abū Setta al-Ḳaṣbī. It comprises seven books: 1. Tawḥīd; 2. Purification; 3. Prayer; 4. Fasting; 5. Zakāt; 6 Pilgrimage; 7 Oaths. This volume seems to be only the first part of a complete treatise on Abāḍite legislation written by this author, which is quoted in a catalogue of al-Barrādī (A. de Motylinski, *Les livres de la secte abadhite*, p. 12), with an indication of seven parts that it comprises: fasting, marriage and divorce, testaments, judgments, salaries, right of preemption, and pledges (comp. also de Motylinski, *Le Djebel Nefousa*, p. 89, note 1; R. Basset, *Les sanctuaires du Djebel Nefousa*, Paris, 1899, p. 62; *Les manuscrits des Zaouias de 'Aïn Madhi et de Temacin*, Algiers, 1885, p. 36).

It has been said above that the book on fasting has been separately published. The book on marriage and divorce has also been separately autographed with marginal notes of Shaikh Muḥammad Abū Setta. These different treatises were the principal source for the chapters on the same subjects in the *Kitāb al-nīl* of the shaikh 'Abd al-'Azīz. The *Kitāb al-siyar* of Shammākhī furnishes no chronological indication regarding Abū Zakarīyā'. (A. DE MOTYLINSKI.)

ABŪ ZIYA (Arab. Ḍiyā') TEWFĪḲ BEI. [See TEWFĪḲ BEI.]

ABUĀM, capital of Tāfīlālet. Like the other parts of this province, Abuām has been visited only by a very few Europeans: René Caillé, Rohlfs, Schmidt, Harris and Delbrel. It is a very important commercial center. Before the French occupation of Twāt, Abuām had centralized the commerce of Sudan, Sahara and Southern Morocco. Many merchants of Fez have settled there; a market is held there thrice a week and is very animated; dates, salt and skins are the chief native exchange products. The lether of Tāfīlālet is very renowned in North Africa; the dates are the best of the region, but they are inferior to those of Southern Constantine and Southern Tunis. A little to the east of Abuām there is the tomb of Mūlāi 'Alī Sherīf, the great saint of that region and the founder of the present reigning dynasty of Morocco; it is a much venerated place of pilgrimage. At a distance of about an hour from Abuām is the Ḳsar of Rissani, the residence of the authorities. At a little distance to the west are to be seen the ruins of the celebrated Sidjilmāsa [q. v.], now called *al-Medīna al-ḥamrā'* („the red city").

ABUBACER. [See IBN ṬUFAIL.]

ABŪḲĪR (Būḳīr), name of various places in Egypt:

1\. A small Egyptian seaport of 1168 inhabitants on the Mediterranean Sea, after which are called the bay, the island — also called Nelson Island — and the lake (see Nº. 4) near it. It is situated 23 kilometres (15 miles) east of Alexandria on the Rosetta (Rashīd) railroad, and belongs now to the district of the environs of Alexandria, in the government of the latter town; formerly it belonged to the district of Damanhūr in the province of al-Buḥaira. This place, which is perhaps identical with the ancient Bukiris, is not mentioned by the ancient Arabian geographers; still Abu'l-Fidā' and Ḳalḳashandī knew the Lake of Abūḳīr. All what is known of the history of Abūḳīr in the Middle Ages is the invasion of the Franks in 764 (1362-1363). Abūḳīr was much spoken of only after the naval battle, which is called after it, had taken place in the Bay of Abūḳīr on the 1st of August 1798. The English under the command of Nelson destroyed the French fleet that covered Bonaparte's expedition to Egypt. One year later, Bonaparte defeated, also by Abūḳīr, the Turkish troops that had landed there (25th July 1799). Finally on the 8th March 1801, there landed at Abūḳīr the English expedition, which put an end to the French domination in Egypt.

Bibliography: *Diction. géogr. de l'Égypte*, 1898, p. 34; ʿAlī Mubārak, *al-Khiṭaṭ al-djadīda*, x. 13 *et seq.*; Djabartī, *ʿAdjāʾib al-āthār* (Cairo, 1297), iii. 1 *et seq.* (French trans.: *Merveilles biographiques et historiques*, Cairo-Paris, pp. 80 *et seq.*); A. Berthier, *Relations des campagnes du général Bonaparte en Égypte et en Syrie*; Sir R. T. Wilson, *History of the British expedition to Egypt*; see also F. Kircheisen, *Bibliographie Napoléons*, pp. 50 *et seq.*

2\. A small place in Lower Egypt, belonging to Soronbāī in the district of Rosetta, province of al-Buḥaira. Comp. *Diction. etc., loc. cit.*

3\. A spot in Upper Egypt, belonging to the city of Armant, in the district of Luxor (al-Aḳṣur), province Kenā; comp. *ibid.*

4\. A large lake of 30000 acres formerly stretched landward behind the city of Abūkīr (Nº. 1) and now dried up. In the time of the French expedition the lake — also called then al-Maʿdiya — was still connected with the sea. The narrow plain in the east, which separated it from the Sea of Etkū (Edkū), was also perhaps broken through at certain times. In the west it is bounded by the narrow stripe of fertile land, through which passes the *khalīdj* of Alexandria, the present Maḥmūdiya Canal. Then follows, to the west, the Lake of Mareotis, which was dried up in the Middle Ages and which was submerged again by the English only at the time of the siege of Alexandria in 1801. At that time the water of the Lake of Būḳīr was conducted to the fertile land. Later on the connection with the sea was cut off, and from 1888 the whole lake was drained by an English company and dried up. Now it is a specially productive cultivated land.

The lakes of Būḳīr and Etkū were, according to Arabian tradition, fertile tracts of land in the time of the Pharaohs and partly also under the caliphs. Legend relates their origin as follows: The wife of a Pharaoh, to whom these lands belonged, on a sudden required money for the tithes of the vineyards that were to be paid to her; the peasants could not afford it, and she had those lands submerged. But prosaic statements connect the origin of the lakes with the neglectedness of the canals, the removal of the estuary of the Nile and strong spring-tides. Such a strong overflow of the sea is said to have occurred in 720 (1320).

Bibliography: ʿAlī Mubārak, *loc. cit.*; Ḳalḳashandī (trans. Wüstenf.) pp. 20, 99; Abu'l-Maḥāsin (ed. Juynb. et Matth.), i. 50; *Expédition de l'Égypte*: *État moderne*, ii^1^, 192, 483 *et seq.*, ii^2^ 82; W. Willcocks, *Egyptian irrigation* (2^d^ ed.), p. 245, *passim*.

5\. Abūḳīr or Būḳīrān is the name of a legendary mountain (or of a place on a certain mountain) in Egypt, on which all the birds flock once a year. All of them put their heads in a cleft until one remains there suspended dead. According to Yāḳūt and others, the birds that flock on that mountain (commonly called Djebel al-Ṭair) are called Būḳīr. The mountain was supposed to be situated near Anṣinā in Upper Egypt.

ABUKLEA, English misspelling of the Arabic Abū Ṭliḥ, the name of a watering place on the caravan road, which runs from Dongola through Kūrtī (Korti, on the Nile), avoiding the Nile curve of Berber, directly to al-Metamma, on the Upper Nile, and then farther to the Sudan. Abū Ṭliḥ is situated between 17° and 18° north lat., a little north-west of al-Metamma. Its renown is merely due to a brilliant military feat of the English against the troops of the Sudanese Mahdī Muḥammed b. ʿAbd Allāh. In order to rescue Gordon blockaded in Kharṭūm, the expedition of Lord Wolseley to Kharṭūm was undertaken in the autumn of 1884. In Kūrtī Wolseley divided his army into the „river column" and the „desert column". The latter, consisting of 1800 men with 2800 camels, was to push from Kūrtī to al-Metamma through the desert. The Mahdī's men endeavored to prevent it in all possible manner, and so it came to several fights, the most important of which, the one near Abū Ṭliḥ (17th January 1885), is celebrated as a decisive victory of the English arms. The English had 74 dead and 85 wounded; the enemy lost about 1200 men. The effect of the rout on the Mahdī's camp is depicted by Slatin Pasha in his *Fire and sword in the Sudan*, p. 319.

ABUMERON, misspelling of Abū Marwān. [See IBN ZUHR.]

ABŪSHEHR. [See BŪSHEHR.]

ABUSHKA („little father“), an East-Turkish-Osmanli dictionary for Mīr ʿAlī Shīr's works, entitled after its commencing word. There exist two editions of it, the more circumstantial one has been translated into Hungarian by Vámbéry (Budapest, 1862), and edited by Welyaminof-Zernof (St. Petersburg, 1868). Numerous MSS. are extant; comp. Pertsch (Berlin), Nº. 85.

ABUSIR. [See BŪṢĪR.]

ABWĀʾ, a place on the road from Mecca to Medina, 23 miles from al-Djuḥfa. According to some authorities the name really belonged to a mountain situated there. According to general tradition, Muḥammed's mother, Āmina, died there on her return journey from Medina and was buried there. Some Meccans are said to have proposed, before they marched out to the Oḥod battle, to dig up her corpse, in order to have a counter-pledge in hand against Muḥammed, but the others refused to do so. But how uncertain this all is, may be seen from another tradition (Ṭabarī, i. 980), according to which Āmina's grave was in Mecca. Muḥammed's first looting expedition from Medina was called after this spot. Sprenger (*Die alte Geographie Arabiens*, p. 155) seeks Abwāʾ in the present Mastūra; comp. Burckhardt, *Travels in Arabia*, ii. 112 *et seq.*

Bibliography: Ṭabarī, i. 980, 1266 *et seq.*, 1270; Ibn Hishām (ed. Wüstenf.), i. 107, 415; al-Bakrī (ed. Wüstenf.), pp. 62, 679; Yāḳūt, *Muʿdjam*, i. 100; Wāḳidī, *Kitāb al-maghāzī* (Wellhausen), p. 103.

ABWĀB. [See BĀB.]

ABYSSINIA, a country in East Africa, the name of which is a corruption of the Arabic *Ḥabash*. This name, which was thought to designate a mixture of races (root *ḥ b sh*), seems rather to have been that of a South-Arabian people, who probably lived in the western part of Yemen (Tihāma), and who emigrated afterwards to Africa. The coast of Adulis (Zula), the only one in the whole stretch of the African coast of the Red Sea that offers a tolerably safe landing and, in addition, is in the proximity of the Abyssinian plateau, might have attracted these emigrants from South Arabia and facilitated commerce with Mecca, which was pretty flourishing in Muḥammed's time. Owing to this circumstance, and on the advice of Muḥammed himself, certain Meccans converted to Islām, emigrated to Abyssinia in order to avoid being tempted by the Ḳoraishites to abjure their new faith. The Muslim historians, however, allege another reason for it; they declare also that there was a second emigration to Abyssinia and that Muḥammed sent a messenger with a letter to the Abyssinian king, all which is merely a legend. In the year 20 (641), or later according to others, ʿOmar is said to have sent a small naval expedition against the Abyssinian coast, which expedition miscarried.

Since that time for centuries the Mussalmans have as good as not at all penetrated into Abyssinia, and that is the reason why we have almost no information at all about Abyssinia proper from the ancient Arab geographers, such as Ibn Khordādhbeh, Yaʿḳūbī, Ibn Rosteh, Muḳaddasī, etc. In general they know only Djarmī, which is indicated as the capital of the country. This statement has originated in Khwārizmī's *Ṣūrat al-arḍ* (without, however, being borrowed from Ptolemy's γεωγρ. ὑφήγησις), namely the map that Caliph al-Maʾmūn had drawn up between 201 and 210 (816—825); al-Khwārizmī distinguishes between a large Djarmī and a Djarmī of the Abyssinians. Masʿūdī (*Murūdj*, Paris, iii. 34) says that there are many towns in Abyssinia, but he mentions only the capital of the Nadjāshī, Kaʿbar (Ancober? Axum? = Kalghūr?). Yāḳūt (*Muʿdjam*, i. 29) mentions only Djarmī and that only by the way, for he has no special article on Abyssinia. What he says about the Bāḍiʿ Islands (Massawa, already mentioned by Masʿūdī, *Tanbīh*, p. 330, Ṭabarī, i. 2480 *et seq.*) and of Dahlak may hardly be called an exception. Idrīsī speaks of it at greater length, but some of the towns which he enumerates are on the littoral, and the three cities: Djanbaita (Adua? Roha?), Markata and Nadjāgha, situated at a little distance from „the river that crosses Abyssinia to fall afterwards into the Nile“, have not as yet been satisfactorily identified. Ibn Saʿīd (d. 1286) and Abu'l-Fidāʾ (his Geography was finished in 1321) added to the information they had drawn from Idrīsī many, but inexact details; they knew the province of Sahart (Tigrē), the nation of Kurla (Kuolla?) the lake Aḥāwās (Kʷārā? Agau?), Kalghūr, etc. Dimashḳī mentions six Abyssinian races, of which only three can be identified with Abyssinian regions: Amḥarā, Sahart and Dāmūt (the last name may not designate the large region of Godjam). Ibn al-Wardī (15[th] century) and no doubt Ibn Shabīb al-Ḥarrānī (14[th] century), whom he copies, repeat only after Masʿūdī the name of the capital: Kaʿbar (Vatican MS. Nº. 286: Kaʿīr). As to the later Arab authors, one may hardly expect from them information about Abyssinia. That part of the geographical literature produced by them consists mainly of *riḥlas*, or descriptions of travels on the occasion of pilgrimage etc., and contains no geographical work of any importance.

The letters which the Abyssinian kings wrote to the sultans of Egypt (namely asking for the metropolitan, or *abūna*), and the answers of the latter gave ʿUmarī the opportunity of furnishing in his *al-Taʿrīf bi'l-muṣṭalaḥ al-sharīf* some information about Abyssinia, which is only correct as far as regards the Mussalman provinces of Adal. The only Arabian author who gives exact information about these provinces and the history of Abyssinia of his time is Maḳrīzī in his small treatise *al-Ilmām bi-akhbār man bi-arḍ al-Ḥabasha min mulūk al-Islām* written in 839 (1434-1435).

Maḳrīzī speaks of a region (*iḳlīm*) of Abyssinia called Zailaʿ (after its principal town, the present Zeila), which comprised seven principalities: Awfāt, Dawāro, Arababnī (Arsī?), Sharkhā, Bālī, Dāra and the powerful state of Hadyā. Each of these principalities was governed by its own prince, but all together were subject to the sultan (*ḥaṭī*) of Amḥarā. Maḳrīzī evidently has in mind the State of Zailaʿ in the years 1425—1432 when Djamāl al-Dīn II endeavored to subject it to his rule, in which he indeed succeeded for a short time without, however, obtaining political supremacy. The proper empire of Zailaʿ, corresponding to the previous Adal, arose under Ḥaḳḳ al-Dīn II (1365-1366—1374-1375) from the principality of Awfāt (Ifāt), whose first known prince was ʿOmar Walashmaʿ (about 1260). The old empire of Adal as will be seen below disappeared in the wars with ʿĀmda Ṣeyon. — All those countries were under the suzerainty of the king of

Abyssinia, of which, however, they endeavored to rid themselves. In the course of the 13th and 14th centuries a pretty large number of Mussulmans penetrated into Abyssinia (in Shoa and up to Bēgamedr); the first king of the Solomonian dynasty, Yekuno Amlāk (1270—1285), is said to have persecuted the Muslims. This was the cause of a series of wars, chiefly renowned for the victories of ʿĀmda Ṣeyon (1314—1344) over the kings of Adal: Ṣabr al-Dīn, Djamal al-Dīn, etc. These wars were continued by ʿĀmda Ṣeyon's successors: Newāya Krestos (1344—1372), Dāwit (1382—1411), Yesḥaḳ (1414—1429), Zar'a Yāʿeḳob (1434—1468), Baʾeda Māryām (1468—1478), Eskender (1478—1494), etc. Baʾeda Māryām, besides, subjected also the king of the Danākil (Afar), a Mussulman tribe, which up to these days occupies the region between the Red Sea and the Abyssinian plateau. In the beginning of the 16th century Islām in Abyssinia was in complete decadence.

For two centuries the theater of these wars was in general out of Abyssinia proper. In 1521 the sultan of Adal, Abū Bekr b. Muḥammed, removed to Harar the seat of his government, thus putting it in close contact with Shoa and Abyssinia. Shortly afterwards there began the great invasion of the Somali chief, Aḥmed b. Muḥammed Grāñ, who, supported by the artillery and the troops which the Turkish pasha of Zeila had sent him, penetrated into Abyssinia up to its northern frontier, ravaging the country repeatedly, and even burning the famous cathedral of Axum. The history of this conquest by ʿArab Faḳīh (written towards 1543) is the only Arabic work that mentions many places in Abyssinia. In 1544 Grāñ was defeated and killed by King Galāwdēwos (reigned 1540—1559), who in his turn was, in March 1559, vanquished and killed by Nūr al-Dīn, Grāñ's successor. Two years previously, Massāwa was occupied by the Turks, who, thanks to the assistance of the azmāč Yesḥaḳ, the governor of the maritime province, seized the neighboring towns, even Debaroa, the capital of that province. Yesḥaḳ, having revolted against King Sarṣa Dengel (1563—1597), made an alliance with the Turks, but they were beaten in a great battle near Abbā Garimā in 1578. In 1589 Sarṣa Dengel defeated near Arkiko the Turkish pasha Kadāwert, who perished in the battle.

Owing to these victories of Sarṣa Dengel and to that which he won over Muḥammed IV, king of Adal, in 1577, and also to the help of the Portuguese, the Mussulmans, either in the north or in the south, were no longer a serious danger to Abyssinia. The Mussulman kingdom of Sennaar was also conquered by King Susneos (Sisinius, 1607—1632). In 1674, Ṭalḥa, the emir of Adal, was incited by rebels to seize Abyssinia, but he gave them to understand that it was impossible. The Balaw (Bedja), who, towards 1650, had founded the Mussulman State of Samhar, under the nāʾib of Arkiko, frequently annoyed the people of the frontier, but they felt too feeble before the Abyssinian kings. Thus, in 1693, the nāʾib Mūsā (a descendant of Amer Ḳunnu), having retained certain things that were destined for King Iyasu I, went himself to Axum to implore the king's pardon. Shortly after, in 1697, an emir of the Balaw also was vanquished, and in 1769, under Rās Mikāʾel, the nāʾib's velleity of independence was immediately constrained.

Still, there is no doubt that the Muslim invasions, and chiefly that of Grāñ, contributed to Abyssinia being opened to the Mussulmans, that which accounts for the presence of the latter in that country, although the forced conversion imposed by the kings of Adal possibly did not last long. Thus in 1648 the ambassadors of the Imām of Ṣanʿāʾ, Ismāʿīl al-Mutawakkil, found at a short distance from Gondar a town entirely inhabited by Mussulmans, and in the Enderta they met with Shāfiʿite Muslims; at Gondar, too, Mussulman quarters existed already at that time. Unfortunately there are no circumstantial annals for the reign of Fāsiladas (1632—1667), but it is known that in 1668 a council convoked by King Yohannes I interdicted the Mussulmans to live together with the Christians, and that this interdiction was renewed in 1678; this shows that there was a respectable number of Mussulmans in Abyssinia.

In the course of the 18th century the Islāmic faith was spread among the Galla (Boran), southeast of Abyssinia proper and north of Shoa. According to Krapf (*Reisen*, i. 106), the Wollo were converted to Islām by an Arab called Debelo. Rüppel affirms that towards 1830 Islām progressed in Abyssinia, and indeed the tribes of the Tigrē language (Northern Abyssinia) that were still Christians in the beginning of the 19th century are now Mussulmans either entirely as the Habāb, Tamariān, Takles, etc., or in a great part, as the Mensa, etc.

It is to be remarked that Islām in Abyssinia has been indirectly favored by commerce, for in order to enter Abyssinia it was necessary to cross the Mussulman's territory. This circumstance made the Mussulmans almost sole masters of the Abyssinian commerce, that which increased greatly their number in that country and procured them great wealth and influence. Rās ʿAlī of the Edju Galla (Gogsā), who from 1830 to 1855 was very powerful in Bēgamedr, etc., though baptised himself, favored the Mussulmans and displeased the Abyssinians; this brought forth a reaction under King Theodoros (1855—1868), an implacable enemy of the Mussulmans. This reaction attained its highest degree after the wars with the Egyptians, who had occupied (1830—1848) certain provinces in Northern Abyssinia (Hallenga, Algheden, Sabderāt, etc.), spreading there the Islāmic faith. In 1864 they took Massāwa from the Turks; in 1875, after having seized Harar and some provinces in Southern and Western Abyssinia, the khedive sent by the way of Massāwa an expeditionary corps, which was annihilated by King Yohannes in the battle of Gudda-Guddi (17th November 1875); a second Egyptian army, commanded by the khedive's son, Ḥasan Pasha, was also defeated at Gura on the 7th March 1876. King Yohannes, firmly seated on his throne, promulgated an edict (1880), which compelled the Mussulmans either to embrace Christianity or to leave the country. Many Muslims emigrated to Gallabat, and in 1883 the Mussulmans of Serae, Hamasen, and other places obtained the permission to remain in the country, but they were separated and confined to two places; these measures, for the northern part at least, did not last long. It is also to be borne in mind that before the persecutions of Theodoros and Yohannes the Mussulmans were not equally distributed in the different provinces: they were for instance of a

small number in Godjam, but are said to have formed the half of the population of the Wollo and Edjn countries. Now the Mussulmans are very numerous in Kuolla, while the Christians rather live in Dagā. In Shoa there are a great many Mussulmans, they are much less in Dambeā, Godjam, etc. In the Colonia Eritrea there are 200000 Mussulmans; they consequently constitute two thirds of the whole population. They have four ḳāḍis (namely, in the towns of Keren, Agordat, Massāwa and Asmarā) nominated by the Government, which is not the case with the other ḳāḍis (of the Habāb, Assaorta, etc.). By the tribes of Sahel the office of Imām is hereditary in certain families that do not belong to the tribe; so for instance the Imāmate of the Habāb belongs to a Derki family.

The Mussulmans of Eritrea — leaving those of Massāwa out of the question — form four distinct groups, namely: 1. The Soho and their assimilated (to the south of Samhar, in Southeastern Eritrea), partly converted to Islām already in the 14th century. 2. The Mussulmans of Sahel and Central Anseba; their Islāmic faith is generally recent, but strong enough in Sahel: 3. The Mussulmans of Barka; those are Bedja and Abyssinians who have since long professed Islām and even spread it among the Alghedén and the Baryā; the latter, pagans still 50 years ago, are now all Mussulmans. 4. The Mussulmans of the Tigrē provinces of Eritrea.

Abyssinian Islām for the greatest part professed by Cushite nations (Galla, Soho, Bedja, etc.) is not so strict as elsewhere. There exist no theological schools connected with mosques; the few Arabs of Massāwa that devote themselves to religious studies go to Cairo to study there in the Azhar Mosque, and very often happens that they do not return to their native country. The religious brotherhoods, that powerful element of the present Islām, are not known at all in Abyssinia. Owing to this indifference and to the imperfect knowledge of the observances of Islām, the Mussulmans of Eritrea are seen to be present at Christian religious festivals and to keep to practices that are in contradiction to Islām.

ACHIR. [See Ashīr.]

ʿĀD, an ancient tribe frequently mentioned in the Ḳorʾān. Its history may be learned only from sporadic indications; it was a mighty nation that lived immediately after the time of Noah, and which became haughty on account of its great prosperity (Ḳorʾān, vii. 67; xli. 14). The large edifices of the ʿĀdites are spoken of in Ḳorʾān, xxvi. 128 *et seq.*; comp. lxxxix. 5-6 the expression „ʿĀd, Iram of the pillars", where *Iram* may designate either a tribe or a place. According to Ḳorʾān, xlvi. 20, the ʿĀdites inhabited *al-Aḥḳāf* (the sand downs). The prophet sent to them, their „brother" Hūd, was treated by them just as Muḥammed was later treated by the Meccans, and on account of that they were, with the exception of Hūd and a few pious men, swept away by a violent storm (vii. 70; xi. 61; xli 15; liv. 19; lxix. 6). Finally, in Ḳorʾān, xi. 54, is said that they suffered from a drought. These indications gave rise to whole legends narrated by the Prophet. It cannot be said with certainty what more ancient elements are in those legends. The ancient poets knew ʿĀd as an ancient nation that had perished (Tarafa, i. 8; *Mufaḍḍalīyāt*, viii. 40; Ibn Hishām, ed. Wüstenf., i. 468; comp. Zuhair, xx. 12 and the article LOḲMĀN), hence the expression, „since the time of ʿĀd" (*Ḥamāsa*, ed. Freytag, i. 195, 341). Their kings are mentioned in the Dīwān of the Hudhailites (lxxx. 6) and their prudence in that of Nābigha (xxv. 4). The mention of the ʿĀdite Aḥmar by Zuhair (*Muʿallaḳa*, verse 32) and in the Dīwān of the Hudhailites (p. 31) merits consideration, as Mussulman legend puts this (Ḳudār) al-Aḥmar in connection with the Thamūdites [q. v.]. Whether there really existed, and where, a nation called ʿĀd is still an unanswered question. The genealogies of the Arabs with regard to the ʿĀdites naturally are valueless, just as their locating that nation in the large uninhabitable sandy desert between ʿOmān and Ḥaḍramawt. The identification of Iram with Aram adopted by the Arabs and several modern scholars is not sure at all. Among the latter, Loth identified ʿĀd with the well-known tribe of Iyād; on the other hand, Sprenger sought for the ʿĀdites in the Oadites, who, according to Ptolemy, lived in Northwestern Arabia, which reminds of the Iram well in Ḥismā (Hamdānī, p. 126; Sprenger, *Die alte Geogr. Arabiens*, § 207). But Wellhausen remarked that instead of „since the time of ʿĀd", the expression *min al-ʿād* also occurs, and therefore he supposes that originally ʿĀd was a common noun („the ancient time"; adj. ʿādī = very ancient) and that the mythical nation arose from a misinterpretation of that word.

(F. Buhl.)

ʿĀDA, (A.; P., T. and others ʿĀdat, ʿĀdet = habit, custom), a legal term designating a prescriptive right, which is, in Islāmic countries, independently of the canonical law (*sharīʿa*), made

current in those juridical cases which are not closely connected with the religious ordinances. The practical validity of this right, which often is in disagreement with the theologically established law, divided in many countries the jurisdiction into a spiritual and a secular one. We are now in possession of several collections of *'āda* laws. In literature, *'āda* is sometimes substituted by the term *'urf*, or *ḳānūn*.

As. Soc. Bengal*, lxxiii., part 3, 1904, extra number, pp. 1—34); for North Africa: Saïd Boulifa, *Le kanoun d'Adni* (*Recueil de mémoires et de textes*, Algiers, 1905, pp. 151 *et seq.*); Decambroggio, *Kanoun orfia des Berbères du sud-tunisien* (*Revue tunisienne*, ix. 346 *et seq.*). (I. GOLDZIHER.)

ADA (T.), a word meaning „island" or „peninsula", which often occurs in geographical names, e. g. Adaḳale [q. v.], Ada köi, Ada owa, Ada pazar, Adalar deñizi (island sea = archipelago).

ADĀ' (A.), lit. „payment", „accomplishment", a technical term used in the *fiḳh* to designate the accomplishment of a religious duty in the time prescribed by the law, in opposition to *ḳaḍā'*, which designates the belated accomplishment of a religious duty (of course when the delay is permitted). It is also to be distinguished between a perfect and an imperfect accomplishment (*al-adā' al-kāmil* and *al-adā' al-nāḳiṣ*). — In the reading of the Ḳor'ān *adā'* means the traditional pronunciation of the letters, synonymous with *ḳirā'a* [q. v.].

ADAB (A.), a term meaning, in both the heathen and the Islāmic times, the noble and humane tendency of the character and its manifestation in the conduct of life and social intercourse. There is a well-known aphorism, also frequently occurring in the Ḥadīth: *kāda 'l-adab an yakūn thulthayi 'l-dīn* („it can almost be asserted that *adab* equals two thirds of religion"). Parallelly to this practical designation of this word there is also a metaphorical one: the knowledge that leads to an intellectual culture of a higher degree and enables a more refined social intercourse, especially the knowledge of Arabic philology, poetry and its explanation and the ancient history of the Arabs (comp. *Khizānat al-adab*, iv. 124). The latter application of the word *adab* arose from the influence of the culture tendency, after the Persian model, towards a more refined tone and the growth of profane literature since the second and third centuries of the Hidjra. According to this, one may judge of the contents of more special writings, e. g. Ibn Ḳotaiba's *Adab al-kātib*, of the books entitled *Adab al-nudamā'*, etc. — The different branches of *adab*, being profane belles-lettres, are strictly distinguished from *'ilm*, which sums up the religious sciences (Ḳor'ān, Ḥadīth and jurisprudence). Besides the real attainments sometimes also social qualities and skill in sport and in ingenious, mostly imported games, are included in the term *adab*. Persian influence on *adab* is reflected in the following maxim of the vizier al-Ḥasan b. Sahl (d. 236 = 850-851): „The arts (*al-ādāb*, pl.) belonging to fine culture are ten: three Shahradjānic (playing lute, chess, and with the javelin), three Nūshirwānic (medicine, mathematics and equestrian art), three Arabic (poetry, genealogy and knowledge of history); but the tenth excells all: the knowledge of the stories which people put forward in their friendly gatherings" (al-Ḥuṣrī, *Zahr al-ādāb*, i. 142). The sphere of *adab* is naturally not firmly established; sometimes artistic skill and then also industrial ability are counted among the *funūn al-adab*. 'Abd al-Malik b. Idrīs al-Djazarī, vizier of Ibn Abī 'Āmir in Spain (end of 4th = 10th century), composed a didactic poem on six different parts of *adab* (al-Ḍabbī, ed. Codera, p. 362; where, unfortunately, these parts are not enumerated). Besides that, within the Aristotelian gradation of sciences, the propaedeutics (generally called *al-'ulūm al-riyāḍīya*) are sometimes called *al-adab*. In the *Ikhwān al-ṣafā'* (Bombay, treatise 7, book 1, p. 18), besides philology, poetry and mathematics, also magic, fortune-telling, alchemy, etc. are included in this group of sciences. In the course of instruction in the modern École normale arabe (training school for teachers) of Cairo, the following subjects are included under the term *'ulūm adabīya*: grammar (*ṣarf wa-naḥw*), calligraphy, lexicology, poetics (*'arūḍ, ḳawāfī*), rhetoric, theory of style, logic (program of Director Emīn Beg Sāmī, year 1895). The taste for *adab* brought forth a very important branch of Arabic literature, of which al-Djāḥiẓ passes for the founder.

Bibliography: Adam Mez, *Abulkasim, ein bagdader Sittenbild* (Heidelberg, 1902), introduction; Brockelmann, *Gesch. d. arab. Litter.*, i. 92 *et seq.*, 151 *et seq.* (I. GOLDZIHER.)

'ADAD (A.) = number. The Arabs give different definitions of „number". The most comprehensive definition says: „The number is the unit and all what results from it by division, repetition or by the combination of both functions (*al-wāḥid wa-mā yataḳaṣṣal minhu* . . .). According to this theory, the 1 and also the fractions would be included in „number". Still, whether the 1 itself is a number, is a question, to which the most Arab mathematicians answer in the negative. Thus the 1 is to the numerical system what the atom (*al-djawhar al-fard*) is to the substance, and although it is the basis of every number, it is no number itself. Two other definitions, in conformity with this theory, exclude the unit; according to one, every number is the half of the sum of its two adjacent numbers (*niṣf madjmū' ḥāshiyataihi*), e. g. $3 = \frac{2+4}{2}$, $\frac{1}{2} = \frac{\frac{1}{4}+\frac{3}{4}}{2}$, according to the other, it is the quantity composed of units (*al-kammiya al-mutaallifa min al-waḥdāt*). The latter definition, varying in its terms, is the one most frequently advanced. According to another and less frequently given definition, the numerals express the quantity, that is to say, they answer to the question „how much", or „how many", in so far as they are expressed according to the *ḳiyās* (*al-alfāẓ al-dālla 'alā 'l-kammiya bi-ḥasb al-waḍ'*). As, however, in Arabic the question „how much" is not answered either with 1 or with 2, but with the singular or dual of the object in question, these two numerals, according to this definition, are also excluded.

According to al-Zamakhsharī, there are, properly speaking, only 12 numerals which have special names in the Arabic language, namely: the numbers 1—10, 100 and 1000; all the others are, from his point of view, formed of these in a secondary manner by means of composition or other combination.

The main peculiarity of the numerals from 3 to 10 is their masculine and feminine forms; quite in disagreement with the general rule, the *tā' marbūṭa* is affixed to the masculine instead of the feminine form. The different explanations of this phenomenon given by the Arab grammarians (e. g. Ibn Ya'īsh, i. 776 *et seq.*) are not very conclusive. Because the isolated numeral ends with the *tā'*, it is supposed that this primary form (*al-aṣl*) of the numeral has been retained for the masculine, while the feminine, which is considered as a branch (*far'*) of the latter, retained also in the numerals the secondary form. European grammarians (e. g. Wright, i. § 319, note 2) see in this anomaly an effort to give prominence to the independent substantive nature of the cardinal numbers, by which they differ from the dependent adjectives.

The compound numbers 11—19 have a particular formation; generally they are (with the exception of 12) indeclinable, and are so closely connected with one another that they are treated of by al-Zamakhsharī (p. 70, § 220), besides in the chapter on the numerals, also in that on compound names (*al-murakkabāt*). In Aramaic and in the Arabic dialects they are fused into one word. It is quite different with the numbers 21—99; they are formed by placing the units before the tens and connecting these two by *wa*. Both units and tens are declined and in opposition to the numbers 11—19 are also designated only as *ma'ṭūfāt*.

It is known that the numbers 3—10 govern the gen. plur., 11—99 the acc. sing., and from 100 upwards the gen. sing.; the numbers 300—900 have, besides, this anomaly that *mi'a* in them is put not in the plur. but in the gen. sing. In larger composed numbers the different elements are arranged in the ascending or in the descending order connected with one another by *wa*.

Just as in the definition of number, the 1 has a peculiar position also in the description of the numerals (Ibn Ya'īsh, i. 774 *et seq.*, 788 *et seq.*). The proper word for 1 is, according to the Arabs, *wāḥid*, which is, firstly, the nominal designation for the numeral 1 (*ism 'alam 'alā 'l-ḥudhā'l-mikdār*), and secondly, an adjective derived from *waḥda*. It must not, however, be confounded with *aḥad*, which is also of a double nature. The numeral *aḥad* (*aḥad alladhī fi'l-'adad*) occurs as meaning „one" (*ma'na'l-infirād*) only in composed numbers, e. g. *aḥad wa-'ishrūn* = 21, and namely in the place of *wāḥid*, therefore the *hamza* is considered as the substitute (*badal*) for the *wāw*. When *aḥad* stands alone, it is then an indefinite pronoun, „some one", with a general meaning (*ma'na'l-'umūm wa'l-kathra*), and only in negative propositions, e. g. *mā djā'ani aḥad*. This second *aḥad*, in which the *hamza* is supposed to be radical, is therefore called, in opposition to the numeral *aḥad*, the *aḥad* of negation (*aḥad alladhī fi'l-nafy*). The feminine *iḥdā* never occurs alone. — These statements, like all the grammatical remarks of the Arabs, show an enormously great power of observation, but do not hit at the right point. The proper word for 1 is after all *aḥad*, which in Arabic as well as in other languages can be used in an indefinite sense.

The cardinal numbers are also in Arabic considered as the real numerals, and are therefore plainly designated as *asmā' al-'adad*. The other kinds of numerals have no special terms. The ordinal numbers have from 2 to 10 the form *fā'il*, 11—19 are indeclinable and from 20 onwards they resemble their corresponding cardinal numbers.

The multiplicative numbers or numeral adverbs have no special term in Arabic; they are for the greatest part expressed by means of nouns as *marra*, *karra*, *daf'a* and the like, or by the repetition of the numerals.

The distributive numbers have likewise only in rare cases a special form; al-Zamakhsharī counts this form as *mafā'il* in his treating of the diptotes (p. 10, § 18). The form *fu'āl* is properly speaking not considered as an independent grammatical form, but as one derived from the cardinal or ordinal form. Besides, the distributive numbers also occur in the form *maf'al*.

The *nisba* formations of the numerals are treated of in a continuous way only by Ibn Sīda (xvii. 118 *et seq.*), who, besides other details, distinguishes between *thalāthī* (= *min banī thalāthat* or *u'ṭiya thalāthatan*) and *thulāthī* (= *thawb ṭūluhu thalāthat adhru'*). He treats in the most circumstantial way of the *nisbas* of numerals composed of units and tens.

The fractions (*al-ashyā'* *wa'l-kusūr*) have the forms *fu'ul*, *fu'l*, and also *fa'īl* (Ibn Sīda, xvii. 129). As to the more exact grammatical, formal as well as syntactical, treatment of the above mentioned forms of numerals, comp. the European and Arabic works enumerated in the bibliography.

The terminology referring to the numbers is very rich. The whole numerical system is divided into three serieses (*marātib*, sing. *martaba*) of units, tens and hundreds (*āḥād*, *'asharāt*, *mi'āt*), every one of which is divided again into 9 parts (*'ukūd*). The thousands (*ulūf*) are not considered as a special series, but as deriving from the three former serieses as *āḥād al-ulūf*, *'asharāt al-ulūf*, *mi'āt al-ulūf* and *ulūf al-ulūf* (Ibn Ya'īsh, i. 774). The number is either absolute (*muṭlaḳ*) and consequently an entire one (*ṣaḥīḥ*), or relative to any assumed unit (*muḍāf ilā mā yufraḍ wāḥidan*) and consequently a fraction (*kasr*, plur. *kusūr*, *kusūrāt*). The assumed unit is the denominator (*makhradj*). *Musaṭṭaḥ* is the product of a number multiplied by another number, *murabba'* is that of a number multiplied by itself, that is to say its square. If the former multiplication is continued by either of its two factors (e. g. 3 × 4 × 4), the product is called *mudjassam* (tridimensional); if the same process is applied to the square of a number the product will be the cube (*muka''ab*). In the simple product, each factor is termed *ḍil'* (rib), in that of the square, *djidhr* (root), the number itself is therefore called *madjdhūr*.

An even number is called *zawdj*, an odd one *fard*. In case that the division by two (*al-tanṣīf*) of an even number can be continued until the quotient comes to 1 (as for instance in 16), the number is then called *zawdj al-zawdj*, if not, it is called *zawdj al-fard*, no difference whether the division by 2 can be done only once (as in 6), or more than once (as in 12). Still the explana-

tions of the Arabs concerning this are not positive. The prime number is called *al-ʿadad al-awwal* (or also *awwal fard*, because they are all odd), and is defined as a number divisible only by 1 (*al-ʿadad alladhī lā yaʿudduhu ghair al-wāḥid*). 1 and 2 do not come as prime numbers, just as in the definition of their figures and their syntax, these numbers have also in the calculation a peculiar position; the 1 is compared to the point (*nukṭa*), the 2 to the line (*khaṭṭ*), the 3 and the following numerals to the plane (*saṭḥ*). As contrasted with the prime number is the compound number (*al-ʿadad al-murakkab*). The term *murakkab* is also used as in opposition to *mufrad* (simple); in this case it means a number composed of 2 or 3 of the 3 *marātib*, e. g. 13 which consist of a unit and a ten.

The general classification of all the numbers in rational and irrational quantities, as it is done by modern mathematicians is not known to the Arabs, and therefore the explanation of Ibn Khaldūn (*Muḳaddima*, iii. text p. 95, transl. p. 132) does not exactly prove correct. The technical term for rational is *munṭaḳ* (expressible; the mathematician Muḥammed b. Mūsā uses *maʿlūm* in the sense of rational), that for irrational is *aṣamm* (mute). Properly speaking both these terms are used only with fractions and roots. As the Arabic language has special terms only for the 9 fractions $\frac{1}{2}$—$\frac{1}{10}$, these are considered as expressible, that is to say rational (these fractions have the numbers 2—10 as denominators), the other fractions are considered as „mute", because they are expressed only by transliteration (e. g. $\frac{1}{13}$ = 1 part of 13). In the same way roots are termed rational when they may be expressed, that is to say solved by a whole number (e. g. $\sqrt{121}$), and on the other hand irrational when they are insolvable (as $\sqrt{2}$). These latter roots are estimated only approximately, and according to a tradition traced up to ʿĀʾisha, only Allāh knows them. Instead of *munṭaḳ nāṭiḳ* also designates the rational root. Proceeding from this principle the Arabs call inversely a whole number represented by one of the rational fractions $\frac{1}{2}$—$\frac{1}{10}$, *munṭaḳ al-kasr* (expressible through a fraction) and when it is represented by a rational root, they call it *munṭaḳ al-djidhr* (expressible through a root).

When a number is equal to the sum of its divisors it is called *tāmm* (complete), or also *muʿtadil* or *musāwī*, e. g. 6; for 1 + 2 + 3 = 6. If the sum of the divisors is smaller than the number, it is then called *nāḳiṣ* (defective), e. g. 4 > 1 + 2 (= 3); if it is larger, it is called *zāʾid* (exceeding), e. g. 12 < 1 + 2 + 3 + 4 + 6 (= 16). Proceeding from the same principle 2 numbers are called *mutaʿādilān*, when the sum of the divisors of one is equal to that of the divisors of the other, as for instance 39 (the divisors of which are 1 + 3 + 13 = 17) and 55 (of which 1 + 5 + 11 = 17). Two numbers, of which, the sum of the divisors of each one equals the other number itself, are called *mutaḥābbān* (the two that love each other reciprocally), as 220 and 284; for 1 + 2 + 4 + 5 + 10 + 11 + 20 + 22 + 44 + 55 + 110 (the divisors of 220) = 284, and 1 + 2 + 4 + 71 + 142 (the divisors of 284) = 220.

The numbers in their natural sequence 12345 etc. are called by the Arabs natural or successive numbers (*al-aʿdād al-ṭabīʿiya* or *al-mutawāliya*). If the numbers follow one another omitting every second one (*tafāḍul*) they are called, according as they begin with 1 or 2, *afrād mutawāliya* (1. 3. 5), or *azwādj mutawāliya* (2. 4. 6 etc.). If the numbers are arranged in such a way that the intervals between each two successively increase according to fixed principles, they result in particular serieses of numbers (*al-aʿdād al-musaṭṭaḥa* or *al-musaṭṭaḥ*). Thus if the omissions are in the natural sequence of the numerals there results the series of *muthallathāt*: 1. 3...6...10.... 15; If after the 1 the intervals increase in the order of 2. 4. 6, etc. there results the series of *murabbaʿāt* 1... 4....9......16; if the intervals increase in the order of 3. 6. 9 etc., there results the series of *mukhammasāt*: 1... 5...... 12, etc. It seems that these serieses take their names from the figure that immediately follows the 1. From the series of *musaṭṭaḥāt* results that of *mudjassamāt*, when the parts of any series are amplified either by addition or by multiplication (comp. Abū ʿAbd Allāh al-Khwārizmī, pp. 189-90).

(Wzn.)

The most essential characteristic of the Arabic numerals is the remarkable fact that the figures have their absolute value and at the same time the one relative to their place. Thus for instance when we write 25, the figure 2 has its absolute value „two" and at the same time the value relative to its place „two tens", and not „two units". The 5 has its absolute value „five" and its relative one, „five units"; the whole number designates accordingly „twenty-five". — The priority for this system of writing the numbers and the calculation of the figures, however, is in no way due to the Arabs. The latter rather took them from the Hindoos, who in any way were the teachers of the Arabs in arithmetic. Formerly the Arabs liked to express the numerals not in their own signs, but in writing them in full. From these words, through abbreviations, arose the so-called dīwānī-figures, in the use of which the single figures of a number are not arranged in the order of their successive magnitudes, but according to the linguistic use. In the numbers under 100 the ones are written before the tens, just in the same order as the different parts of a series of numbers are pronounced. Besides, the Arabs used to express the numerals by means of the letters of the alphabet of the *abdjad* [q. v.] order. Thus, ʾ = 1, *b* = 2, *dj* = 3, *d* = 4, *h* = 5, *w* = 6, *z* = 7, *ḥ* = 8, *ṭ* = 9, *y* = 10, *k* = 20, *l* = 30, *m* = 40, *n* = 50, *s* = 60, ʿ = 70, *f* = 80, *ṣ* = 90, *ḳ* = 100, *r* = 200, *sh* = 300, *t* = 400. If, for instance, they wanted to express 326, they wrote — naturally, as the other Semites, in the direction from right to left — the corresponding letters of the alphabet: *sh k w*. In order to

express greater hundreds than 400, they composed two or more corresponding letters of the *abdjad*, so *tḳ* = 500, *tr* = 600, *tt* = 800, *tṯḳ* = 1100, etc. This, indeed, answered to a great extent to the need of knowing how to read and write numbers, but the real aim, to which the writing of the numbers tended, namely calculation, could not be attained through the hitherto developed and practiced methods. Here a number — however large may be the number of units it expresses — presented by written characters could not suffice; there precaution was to be taken that the figures expressing the numbers should have such a stamp that they could be taken as the basis for calculation. This was obtained by that the Arabs assigned the 9 figures used by the Hindoos and the zero also the value relative to their place given to them by the Hindoos. They also named the zero, in faithful agreement with the usage of the Hindoo language, „the emptiness" (*al-ṣifr*, whence, through extension to all the figures, the English „cipher", the German „Ziffer", etc.). Still the numeral characters of the Western Arabs must be distinguished from those of the Eastern Arabs. While the former endeavored to imitate the ancient Indian figures, which are now called „Ḏjubār figures", the Eastern Arabs received the Indian figures already in their altered form which they then underwent (8th century, Christian era). The manner in which this happened can hardly be established with historical certainty (see concerning this: Cantor, *Vorlesungen über Gesch. d. Mathem.*, 2d ed., pp. 609 *et seq.*; there also the bibliography).

(MAHLER.)

'AḌAIM ('Aḍīm), an eastern tributary of the Tigris. It is formed of the junction of several rivers, which have their sources in the mountain range east of and parallel to the Ḏjebel Ḥamrīn, and which in their course from N. E. to S. W. break through deeply cut ravines. The most important of these rivers are: the river of Kerkūk — the Kara (Kāsa, Ḵhāsa)-Čai; on our maps it figures also under the name of Ḳara-Ṣu, — which rises from several sources north of Kerkūk, further the river of Ta'ūk, the Ta'ūk-Ṣu (or Čai), the most important of all, which joins the Kasa-Čai southwest of Ta'ūk (comp. concerning the river of Ta'ūk: G. le Strange, *The lands of the eastern caliphate*, Cambridge, 1905, p. 92; about Ta'ūk — Syr. Dāḳōḳa — itself: G. Hoffmann, *Ausz. aus syrischen Akten persischer Märtyrer*, p. 273), and the Aḳ-Ṣu, also called the River of Tūz-Khurmatli. The latter comes from the Seḏjirme-Dagh, and falls below the place Tūz-Khurmatli into the river of Ta'ūk (concerning the latter comp. also G. Hoffmann, *loc. cit.*, p. 273). From this junction onwards, the river is called al-'Aḍaim, or also Shaṭṭ al-'Aḍaim, it forces its way through the Ḏjebel Hamrīn, flows in southern direction across the Babylonian lowland and falls below 34° north lat. and 44° 20' east long. (Greenw.) into the Tigris, animating for a short distance the fall of the latter which is rather weak from its entrance into Babylonia. On the stretch south of Tūza-Khurmatli (below Kerkūk) till the discharge of the Aḳ-Ṣu the northern and then the united northern and middle source rivers meander through extended swamps. When the snow melts, the 'Aḍaim is connected through a dried up riverbed, north-east of Ḏjebel Hamrīn, with the Narīn Čai (on the maps also Narīt-Ṣu), a tributary of the Diyālā; the inhabitants are able to establish such a communication, when necessary, south-west of the Ḏjebel Hamrīn, by utilising the generally dried up Nahr-Radhān, which is connected with a tributary of the Diyālā. When the channel of the Nahr-Radhān is opened, the water flows into the Diyālā and the Lower 'Aḍaim is almost entirely dried up. Towards its estuary the 'Aḍaim is very scantily supplied with water in the hot season; according to travellers' statements, it is often for some months entirely dried up in its lower course. Many particulars are still doubtful. The exact course of the various rivers is in many places not yet established with certainty. Great confusion results also from the unsteady nomenclature in the statements of travellers and partly also on the very spot. Comp. concerning the 'Aḍaim and its basin Ritter, *Erdkunde*, ix. 322 *et seq.*, 537 *et seq.*; Billerbeck, in the *Mitteilungen der Vorderasiat. Gesellsch.*, iii. (1878), pp. 65-66, 83. The name 'Aḍaim occurs for the first time in the 14th century — as *al-'Aẓīm* or al-'Uẓaiyim — by the author of the *Marāṣid*; see, besides, G. Hoffmann, *loc. cit.*, note 2162; comp. also in Mustawfī (c. 1340 A. D.): *Nahr al-A'ẓam* „the powerful river". It is with the 'Aḍaim and not with the Southern Diyālā that we may most probably identify the Turnat of the cuneiform inscriptions and Tornadotus (Thorna) of the classical writers; see about it Hommel, *Grundriss der Geogr. u. Gesch. des alt. Orients* (2d ed., Munich, 1904), pp. 5, 293 *et seq.* The Lower 'Aḍaim appears to have once had also the name Radānu shown from the cuneiform inscriptions; the latter name has been preserved in the above mentioned Nahr Radhān; comp. Streck, in the *Zeitschr. für Assyriologie*, xv. 275; Fr. Hommel, *loc. cit.*, pp. 293-294. It is still questionable whether we may also identify the Gyndes of Herodotus with the 'Aḍaim; comp. Billerbeck, *loc. cit.*, iii. 72 *et seq.* and the author's article *Gyndes* in Pauly-Wissowa's *Realencyk. d. klass. Altert.-Wissensch.*, s. v.

(STRECK.)

ADAḲALE (*Ada ḳal'a*), „island castle", an island in the Danube in the proximity of the Iron Gate (*Demir ḳapu*), = New-Orsova, still now inhabited by Turks. The fortress was repeatedly besieged by the Turks and Austrians and captured, and till 1878 had a Turkish garrison, but since then belongs to Austria.

Bibliography: I. Kunos, in the *Ungar. Revue*, xiv. 88—101, 423—433; idem, *Türkische Volksliteratur aus Adakale*.

ADAL, one of the Musulman States (kingdoms) in East Africa that played an important part in the wars between Islām and Abyssinian Christendom. Maḳrīzī (*Kitāb al-ilmām bi-akhbār man bi-arḍ al-Ḥabasha min mulūk al-Islām*, Cairo, 1895, p. 6) enumerates the following seven Islāmic States in Southern and Eastern Abyssinia, which he designates as *mamālik bilād Zaila'*: Ufāt, Dawāro, Arababni (Arabaini, Arababni), Hadyā, Sharkhā, Bālī, Dāra. From Abyssinian chronicles, other States are known which stood on the same footing as the above, one of them being Adal. — Adal ('Adal) is situated to the farthest east of those States, and is approximately identical with the present „Côte française des Somalis". The inhabitants are partly Somali, partly 'Afar (Danākil). It is mentioned the first time in the wars between the Abyssinian king 'Āmda Ṣeyon (1314—1344) and the Musulmans. In the march of 'Āmda Ṣeyon upon Zaila'

(1332), the king of Adal, who wanted to bar his passage, was vanquished and killed. Under the kings Zar'a Yā'ḳob (1434—1468) and Ba'eda Māryām (1468—1478) negotiations took place between the Abyssinians and Adal; afterwards there was fought with changing fortune. Adal frequently served also as a refuge for the Musulmans that lived farther west from the Abyssinians, who, however, often followed them thither. The Musulman writers (Maḳrīzī and Shihāb al-Dīn, *Futūḥ al-Ḥabasha*) do not mention Adal — unless it is meant by *'Adal al-umarā'* (Maḳrīzī, *loc. cit.*, p. 2), — they rather give information only about the sultanate of Zaila' as being in that region. Further, the king of Adal, Meḥmad, son of Arwē Badlāy (Perruchon, *Chroniques de Zar'a Yā'ḳob et de Ba'eda Māryām*, p. 131), belonged to the sultan family *al Zaila'*; he was a grandson of the celebrated Sa'd al-Dīn, after whom the dynasty and the land were called (*Barr Sa'd al-Dīn*). The latter lived about 1400; he fell in 1402-1403 in the battle with King David I of Abyssinia (1382—1411). „Adal" and „empire of Zaila'" are often synonymous, and their histories are closely connected with each other [comp. ZAILA']. With regard to the 16th century comp. also GRĀÑ AḤMED B. IBRĀHĪM AL-GHĀZĪ, Imām of Harar. In the later history of those countries, the wars with the Musulman Somali and 'Afar are put in the background behind those with the Galla, who since 1540 incessantly warred with the Christian Abyssinians; Adal is still mentioned a few times in the chronicles. Even in the 19th century, before England, France and Italy took possession of the Abyssinian littorals; King Sāhla-Sellāsē of Shoa called himself also „King of Adal".

(LITTMANN.)

'AḌALA (A.) = muscle. Ibn Sīnā (Avicenna), in his Canon (Būlāḳ, 1897), i. 39, defines the muscle as follows:

„The real movements of the limbs can be executed only by means of a power that flows towards them from the brain through the agency of the nerves. The immediate connection of the nerves with the bones, which are the most essential elements of the moving limbs, is impossible, since the bones are hard and the nerves soft. Therefore the Creator by his goodness made a thing to grow upon the bones, which resembles the nerves and which is called sinew or tendon, and united it with the nerves, interweaving them as one thing. This thing, composed of nerves and tendons is in every circumstance delicate, because the nerve by its union with the limbs experiences no increase in volume and thickness in comparison with its origin. Its volume at its origin is such that it corresponds to the substance of the brain and of the marrow of the spinal column, to the volume of the head and its outlets. And if the nerve had the task to put in motion the parts of the body, especially there where it must be divided and ramified in the limbs, and by the increasing removal of its origin becoming always thinner, it would lead to an obvious decay.

For this reason the Creator by his wisdom bestowed on it a certain thickness through pulling to threads the tissue composed of nerves and tendons, at the same time filling the interstices with flesh, wrapping it up with a membrane and establishing in its middle an axiform column of the same matter of which the nerves are composed. Thus this whole becomes a limb, composed of nerves and tendons and their fibres, of flesh that fills up the interstices, and of a membrane which wraps it up. This organ is the muscle.

When it contracts it pulls the sinew, which is composed of tendons and nerves and which stretches from the muscle to the bone. The sinew then contracts and by this pulls the limb. When the muscle extends, the sinew relaxes, and the limb returns to its previous position".

The following anatomy of the muscles begins with those of the face, the number of which corresponds to the number of the mobile parts of the face. They are:

1. The frontal muscles.
2. The muscles of the eyeball.
3. The superior palpebral muscles.
4. The muscles of the cheeks in connection with the lips.
5. The special muscles of the lips.
6. The muscles of the sides of the nose.
7. The mandibular muscle.

Then follow:

8. Anatomy of the muscles of the head.
9. „ „ „ laryngeal muscles.
10. „ „ „ pharyngeal muscles.
11. „ „ „ muscles of the hyoid bone.
12. „ „ „ glossal muscles.
13. „ „ „ cervical muscles.
14. „ „ „ thoracic muscles.
15. „ „ „ brachial muscles.
16. „ „ „ antibrachial muscles.
17. „ „ „ carpal muscles.
18. „ „ „ digital muscles.
19. „ „ „ spinal muscles.
20. „ „ „ abdominal muscles.
21. „ „ „ testicular muscles.
22. „ „ „ penis muscles.
23. „ „ „ anal muscles.
24. „ „ „ femoral muscles.
25. „ „ „ crural and patellar muscles.
26. „ „ „ tarsal muscles.
27. „ „ „ muscles of the toes.

As a sample may serve the anatomy of the muscles of the hyoid (*al-'aẓm al-lāmī*, N°. 11): „The hyoid has muscles, which belong to it alone and others which serve also other organs. The special muscles of the hyoid are three pairs; one pair comes from the sides of the lower jaw and joins the straight line which is found on the hyoid; pulling it towards the lower jaw. Another pair takes its root under the chin and proceeds under the tongue till the highest point of the hyoid. This pair also pulls the hyoid towards the sides of the lower jaw. The third pair rises at the arrow-shaped bone appendages that are found near the ears; it joins the lower end of the straight line upon the hyoid. „The muscles which also serve other limbs are already mentioned and will be yet mentioned" (*ibid.*, p. 45.)

(J. LIPPERT.)

ADALIA (A. Anṭāliya; Eng. Satalia, the ancient Attalia), capital of a sandjaḳ in the province of Konia, a Mediterranian port, on the gulf of the same name, built on a steep rock 50 metres high. The town has the shape of a horseshoe, and is surrounded by a triple wall, the foundations of which are washed by the waters of the Düden. These walls, the origin of which goes back to the Roman epoch, have been aggrandized by the Genoese, who have enchased

there inscriptions and blazons of podestas. They were rebuilt about one century ago by Tekke-Oghlu, a *Dere beyi*, who openly rebelled against Salim III. Population 25000 inhab., of whom 15664 Mussulmans, and 8967 Orthodox Greeks; 62 mosques, of which 3 monumental; 12 Orthodox Greek churches; 1 library. The port, well sheltered, is choked with sand. The sandjak of Adalia corresponds to the ancient province of Tekke; it comprises 5 ḳazas, 9 nahiyes, and 349 villages; 224000 inhabitants, of whom 196887 Mussulmans, and 27000 Orthodox Greeks; about 15000 yürüks (nomads), and Ḳizil-bash who practice the trade of *takhtadji* (board sawers). Vast forests; veins of chrome and manganese yet unexploited; manufacturing of cotton striped tissues (*aladja*). Under the Seldjuḳides it was their maritime arsenal and their preferred winter residence. It had been taken away by Kai-Khosraw I (3ᵈ Shaʿbān 601 = 5ᵗʰ March 1207).

Reclus, *Nouv. géogr. univ.*, ix. 650; Spratt and Forbes, *Travels in Lycia*, i. 211; F. Rougon, *Smyrne*, p. 483. (Cl. Huart.)

ʿADAM or ʿUdm (A.), philosophical term: non-existence; ant. *wudjūd* (q. v.): existence.

ĀDAM, surnamed *Abu'l-Bashar*, „the father of mankind", and *Ṣafī Allāh*, „the one chosen by God", the Biblical Adam. His creation is related in the Ḳor'ān in the following terms: „We created man of dried clay of black mud formed into shape" (xv. 26). According to Muhammedan legend, however, the angels Gabriel, Michael, and Asrāfīl had, each in his turn, received the order of God to take from the seven layers of the earth seven handfuls of sand. The earth had refused to give it; ʿAzrāʾīl then, having received the same order, tore away by force a quantity of earth sufficient to create a man of it. This legend, with some modification, was borrowed from Jewish literature (see Targūm of Jerusalem to Gen., ii. 7; Bab. Tal. *Sanhedrin*, p. 38ᵃ; *Pirḳē R. Eliʿezer*, ch. xi). God caused a rain to descend for several days on that clay in order to make it soft, then, after it had been kneaded by angels, God himself made the mould of it, which He let dry for a long time before animating it. Masʿūdī, referring to the above mentioned passage of the Ḳor'ān, states that Adam's body had remained formless during 80 years, and then 120 years longer without being animated; comp. *Berēshit Rabba* ad Gen., ii. 7, and *Abot de-R. Nātān* (ed. Schechter), p. 22. After Adam had been created, God commanded the angels to prostrate themselves before him; all of them obeyed with the exception of Iblīs (Satan), who by his rebellion brought down his own and Adam's fall (Ḳor'ān, ii. 34; vii. 11; xvii. 62 and elsewhere). As to the legend that God had established Adam as the king of the angels, the Ḳor'ān followed the Christian Syriac Midrāsh (see Bezold, *Schatzhöhle*, pp. 3 *et seq.*; text, p. 14). Adam passes for the first prophet, to whom God has revealed books (alluding to the Book of Adam). God showed Adam all the generations of men with their prophets; having learned that David was to live a very short time, Adam, the duration of whose life should have been 1000 years (equal to one day of God), gave him 40 years of his own life, thus Adam lived 960 years (Ṭabarī, i. 156 *et seq.*; Ibn al-Athīr, i. 37). Comp. *Berēshit Rabba*, ad Gen., iii. 8, and *Bemidbar Rabba* ad Num., vii. 78, where, depending on Gen. v. 5, is said that Adam gave David 70 years of his life. Having been driven from Paradise, Adam alighted upon the island Sarandīb (Ceylon), where he stayed 200 years separated from his wife, spending his time in doing penitence (Ḳor'ān, ii. 37; comp. Bab. Tal. *ʿErūbīn*, p. 18ᵇ). There is on the island a mountain called by the Portuguese Pico de Adam, where, according to legend, are seen on a rock the imprints of Adam's feet 70 cubits long. After Adam had repented, Gabriel brought him to Mount ʿArafāt near Mecca, where he met his wife. According to Ṭabarī (i. 122) and Ibn al-Athīr (i. 29), God ordered Adam to build the Kaʿba temple, and Gabriel taught him the pilgrimage ceremonies. — Adam died Friday the 6ᵗʰ Nīsān, and was buried in the Cave of Treasures (*Maghārat al-kunūz*), at the foot of Mount Abū Ḳubais (Yaʿḳūbī, ed. Houtsma, i. 5). According to other authorities, his corpse was after the flood brought by Melchizedek to Jerusalem. These different statements are reconciled in the above mentioned Syriac Midrāsh, where it is said that Adam, having died Friday, the 14ᵗʰ (?) Nīsān, was temporarily buried in the Cave of Treasures and after the flood brought by Melchizedek to Jerusalem (Bezold, *loc. cit.*, pp. 9-10).

ADAMAUA (Adamawa), a region in Central Sudan, bounded north by Bornu, east by Baghirmi, south by Kamerun, and west by Nigeria. From a political point of view, Adamaua corresponds approximately to the territory of the Yola sultanate and the vassal States that depend upon it. It is comprised between 4° 15′ and 10° 15′ north lat. and 8° and 15° 20′ east long. Its area is estimated at 250000 square kilometres (about 96500 square miles); its population is about 4 million inhab. (8 inhab. to 1 square kilometre). The principal towns: Yola (20000 inhab.), Garua, Banyo, Tibati, Ngaundere (30000 inhab.).

The name Adamaua is not applied to a well specified geographical unit, but designates a totality of countries differing from one another in their situation, outlines and products. The southern part of Adamaua which encloses the plateau that separates the basins of the Niger and the Chad from that of Congo, and from which the waters flow towards the Atlantic Ocean through the Sanaga, towards Congo through the Sangha, belongs to Equatorial Africa. The center and north, on the contrary, belong to Central Sudan, the waters flow in the direction of the Chad or in that of the Benue, a tributary of the Niger, that crosses the country from west to east. The climate of the southern part, with its almost daily rains, and its relatively equal temperature, re-

sembles that of the Congo region, while in the centre and north there are two seasons distinctly different and great variations of temperature. Finally from the gallery-shaped forests one may pass to the herbous savanna almost deprived of large trees. The relief of the surface increases the variety of aspect. From Kamerun to Bornu a rather narrow mountain ridge (7 to 8 kilometres) of a middle height (7 to 800 metres) and overtopped by picks which do not exceed 13 to 1400 metres, crosses Adamaua (the Čebči mountains, a range of mountains of Alantika, south of the Benue, and the Mandara mountains, north of the same river). From the central mountain ridge detach themselves ravinous counterforts, which separate the valleys of the various tributaries of the Benue, and afford a shelter to the tribes chased by the possessors of the plains, here and there rise isolated mountain chains (Sari to the south and Mendif to the north of the Benue).

The population of Adamaua is extremely composite. By side of races particular to this region (Dekka, Durru, Mbum) which belong to the Negro group, there are others which approach the type of the desert tribes, or which come from a crossing of these different races among themselves. One meets indeed in Adamaua Hausa, Kanuri, Fulah. The latter introduced Islām in Adamaua, and succeeded in establishing in this country the political organization which it possesses now.

Toward 1826 Fulah adventurers, settled north of the Benue under the command of a certain chief called Adama, crossed that river, invaded the country of Mfombina, that was occupied by fetichist tribes, and established a camp at Gurin. The success of the first invaders attracted others of them and soon the gangs united at Gurin had to be dispersed. The warriors, led by Adama, settled at Yola, while other chiefs were conquering the neighboring countries, founding there small States, which, though recognizing the suzerainty of the monarch of Yola, were ruled by the descendants of the first conquerors. Thus the Fulah were scattered in the whole of Adamaua, and little by little they occupied the western and southeastern regions. Some of them settled at Garua, others reached the South-African table-land; towards 1845 a chief called Abū subjugated the Ngaumdere country; after 1870 other gangs conquered the country of Gasa. The Fulah mainly owed their successes to their horsemen armed with bows; therefore they were powerless before the mountaineers that were defended by the nature of the soil, as well as before the tribes, which, thanks to their being in the neighborhood of Europeans, had succeeded in obtaining fire-arms. Now the Fulah rule over the whole Benue valley, from Yola to Bebene, in Northern Adamaua till the Mandara mountains, south of the Benue, in the plain between Yola and Konča, and in the Faro valley below Čamba. On the other hand the Fulah possess south of the mountain chain of Sari nothing but dispersed colonies and some posts commanding the road from Yola to Ngaumdere. The pagan tribes of the center (Aladjni, Galiba, Sadji) recognize, nominally at least, their supremacy, and pay tribute to them, while on the table-land, the pagan State of Galim escapes their rule entirely.

The organization established by the Fulah in Adamaua is a feudal one, comparable in certain things, according to Passarge's expression, to the German Holy Empire. The nominal chief of the country is the sultan (balaanlamido) of Yola, chosen among the descendants of Adama, but the sultan himself recognizes in his turn the religious supremacy of the sultan of Sokoto, who has taken the title of *Amīr al-Mu'minīn*. The sultan is assisted by a ḳāḍī, guardian of the Musulman law, and by a council consisting of his ministers and of the „galadima" representatives of diverse Muslim groups which participated in the conquest. The different provinces are administered by „lamidos" chosen in the families of Adama's principal lieutenants. These chiefs receive from the sultan a turban as a token of investiture. Their vassalage, however, is for the most part only nominal. The three provinces Tibati, Ngaumdere and Bubandjidda in reality are entirely independent.

Thus the Fulah form a military and political aristocracy. Still since their settlement in this country, they modified their way of life. From exclusive nomads and shepherds which they were primitively they became in a great part sedentary, and devote themselves to agriculture with the coöperation of slaves obtained in the raids made upon the fetichist tribes. But commercial activity and riches gradually pass into the hands of the Hausa, the „African Parsis" as Passarge calls them.

From a religious point of view the rôle of the Fulah has been considerable. They have imported and spread Islām in Adamaua. Still, Islām is far from having completely conquered this country. The tribes which remained fetichist greatly get the superiority over those that adopted the new faith: — the Fulah, Hausa, Kanuri and the Shoa Arabs form only the tenth part of the entire population. Besides, the practice of Islām is very superficial. The new converts adopted the garments and cultural ceremonies of the believers; they accomplish the five ritual prayers, frequent the mosques, repeat the name of Allāh to excess; but they have at the same time preserved the fetich practices. The Fulah themselves, through their prolonged contact with the pagan tribes, adopted superstitions and rites foreign to Islām. They, for instance, bury their dead in houses, where they must light no fire and which they must not repair. On the family organization the influence of Islām has scarcely made itself to be felt. The women's condition has not been altered; their morals are now as free as before. Intellectual progress is virtually naught. The knowledge of the Arabic language is very little spread. Passarge tells that he had great difficulty in finding at Ngaumdere one capable to read the letters of recommendation written in Arabic which he had with him. In this respect Adamaua is much behind Bornu and the Hausa countries. The difference between them, Passarge says, is as great as between Russia under Peter the Great and Western Europe. As to European influence, it scarcely begins to be noticed in this part of the Sudan. Adamaua, visited by Barth in 1851, was for a longtime interdicted to Europeans. Flegel in both travels could not stay there, Mizon crossed it from north to south in order to reach the Congo basin (1891), but in the course of his second travel (1893), he could not go beyond Yola, which Maistre, arrived from Ubanghi also reached in the

same year. The first German missions that departed from Kamerun were compelled to retreat to Ibi. Still the English missions that departed from Nigeria succeeded in going upwards beyond Yola. The von Uechtritz-Passarge expedition, organised by the Committee of Kamerun, succeeded in the course of the years 1893-1894 in studying minutiously this part of Africa. Adamaua was besides the object of competition of European Powers, established on the coast and on the Lower Niger, which endeavored to include it in their spheres of influence. The treaty of the 15th March 1894 between France and Germany fixed the boundaries of the territories assigned to either of the two Powers. The line of demarcation was drawn in such a way as to leave Bifara, Kunde, Gaza, that is to say, Eastern Adamaua to France. As to England, it has preserved a circular zone around Yola, the radius of which is a line drawn from Yola to a point 5 kilometres distant from the estuary of the Faro, a tributary of the Benue. It may be concluded from what has been said that the greatest part of Adamaua is under German domination and belongs to the colony of Kamerun.

Bibliography: Barth, *Reisen und Entdeckungen in Nord- und Central-Afrika* (Gotha, 1857), ii. 490 *et seq.*; Mizon, in *Tour du monde*, 1892; idem, *Les royaumes foulbé du Soudan central* (*Annales de géographie*, 1895, pp. 346 *et seq.*); Maistre, *A travers l'Afrique centrale du Congo au Niger* (Paris, 1895); Passarge, *Adamaua* (Berlin, 1895). — Besides the exposition of the results of the von Uechtritz mission which it contains, this work recapitulates and coördinates the previous works and observations; comp. Marquardsen, in the *Globus*, xcii. 197 *et seq.* (G. Yver.)

ADANA, capital of the province of the same name in Asia Minor. The town counts 30000 permanent inhabitants (of which 13000 Musulmans, 12575 Gregorian and other Armenians), besides a fluctuating population of 15000 workmen, occupied with the decortication and cleaning of cotton. Adana is situated in the middle of a stretched plain, on the right bank of the Saiḥūn (the ancient Sarus); it is connected by a railway with the port of Mersin. It possesses old bridges built by Justinian. The old Byzantine citadel was entirely destroyed by Muḥammed ʿAlī Pasha in 1836. It contains a large mosque Ulu-Djāmiʿ, built by one of the Ramaḍān-Oghlus, Khalīl Beg, or Pīrī Beg, 18 mosques, 37 medresas, factories for sesame-oil, military cloth and felt; 7 mills for ginning cotton. — The province of Adana is divided into 5 sandjaks (Adana, Mersin, Il-Il, Kozān, Djabal Barakat), 15 Ḳazas, 22 nahiyes; 1644 villages; total population 403430 inhab., of which 158000 Musulmans, 69300 Gregorian Armenians, 46200 Orthodox Greeks; very mixed races: 12000 newly immigrated Circassians, Kurds, Turkomans, Yürüks (nomads), Nuṣairiya, Syrian Arabs, etc. — The sandjak of Adana consists of 3 ḳazas (Adana, Ḥamīdiye, Ḳara-ʿIsālu, 5 nahiyes and 599 villages.

Bibliography: V. Cuinet, *La Turquie d'Asie*, ii. 3—40; Ch. Texier, *Asie Mineure*, p. 731; E. Reclus, *Nouv. géogr. univ.*, ix., 656; *Sālnāme* (1325), pp. 810 *et seq.* (Cl. Huart.)

ADĀR or Āḏār (a.-r.), the sixth of the Syriac months which the Arabs call *shuhūr al-Rūm* „the months of the Romans". (E. Mahler.)

ʿADAS (a.; also ʿAlas, Balas, Bulsun), lentil. Owing to its sensibility to dryness and its predilection for a loose, sandy soil, the lentil is one of the most anciently cultivated plants in the East, especially in Egypt, where up to these days it has been the favorite food of the people. Ibn al-ʿAwwām attests its preparation and rational cultivation in the western part of the Islāmic empire, and Ibn al-Baiṭār, who besides the common lentil mentions also an *ʿadas murr* (bitter lentil, Greek *τριφύλλιον*), an *ʿadas nabaṭī* (Nabathean lentil) and an *ʿadas al-māʾ* (water lentil = *lemna minor*), speaks of its application as a costive, cooling medical drug. Excessive or continual partaking of lentils may engender serious injuries to health, such as jaundice, melancholy, eruption and cancer.

ĀDAT, custom. [See ʿĀda.]

ADĀT (a.; plur. *adawāt*), a word synonymous with *āla*, „instrument", but in the terminology of the grammarians it is identical with *ḥarf* „particle", that is the part of the language opposite to the noun and verb. This tropical meaning results from that the particle is considered as an instrument or auxiliary word in the language. The term *adāt* is not met with very often, and for the most part occurs only in the later grammatical works (it does not occur at all in al-Zamakhsharī), and namely to designate the article (*adāt al-taʿrīf*; comp. Wright, i. § 345), the preposition, the conjunction (*adawāt al-ʿaṭf*, *adawāt al-nafy*; comp. Naṣīf al-Yāzidjī, *Nār al-ḳirā*, pp. 245, 271: *Adāt al-tashbīh*; Mehren, *Rhetorik*, pp. 15-16 of the Arabic text) and the interjection.

ʿADAWĪYA, a designation for the Yazīdīs, after the name of their saint Shaikh ʿAdī [q. v.].

AḌḌĀD (a.; plur. of *ḍidd* = „a word that has two contrary meanings"), words which, according to the definition of Arab philologists, have two meanings that are opposite to each other, e. g. the verb *bāʿa* which may mean „to sell" and also „to buy" (= *ishtarā*); still more the word *ḍidd* itself belongs to the same category of words, for in such an expression as *lā ḍidda lahu* it has not the meaning of „opposite", but that of „equal". The *aḍḍād*, from their point of view, belong as a particular class to the homonyms (*al-mushtarik*), only that the latter means two words that have the same sound but two different meanings (*maʿnayain mukhtalifain*), while with the *aḍḍād* the two meanings are directly opposite to each other. The Arabs treated of this lexical question with the passion and accuracy which they apply to all the other domains of their language; not taking into account the occasional treatises in larger works, 14 more names of grammarians, who have treated of this domain in a special work, have been handed down to us (see Redslob, *Die arabischen Wörter mit entgegengesetzter Bedeutung*, Göttingen, 1873, pp. 7—9, where, however, al-Djāḥiẓ is to be stricken out). The only work edited and at the same time the most important one is that of the Kūfan

philologist Abū Bekr b. al-Anbārī (271—328 = 885—940): *Kitāb al-aḍdād* (ed. Houtsma, Leyden, 1881). Less known, but important are the remarks of Ibn Sīda in his *Kitāb al-mukhaṣṣaṣ*, xiii. 258—266.

The opinion since long upheld that Arabic, contrary to all the other Semitic languages, contains a very great number of such *aḍdād* is no longer tenable. If all what is false and what does not belong here be stricken out from the list, which no doubt is considerable, there remains also in Arabic only a small residue. It is why Durustawaih (quoted by al-Suyūṭī, *Muzhir*, i. 191) has gone so far as to deny entirely in a special work the existence of the *aḍdād* in Arabic. Ibn al-Anbārī enumerates in his book more than 400 such *aḍdād*; but in spite of the richness of the work, there are missing words like *anḥara*, *walā* and others. Redslob has already pointed out that a considerable part of it must be eliminated, as the authors either extend too far the conception of the *aḍdād*, or accumulate by mere play work as much matter as possible: 1. First of all it must be noticed that most of the words quoted were known to or currently used by the Arabs only in one meaning, and the contrary meaning can be evidenced only by scanty and sometimes even contested citations. If it were not so many misunderstandings would arise in every day life, while Ibn al-Anbārī denies in his introduction (p. 1, l. 16) every ambiguity. 2. It is absolutely false to consider the words not only in themselves, but also in their syntactical construction in the sentence, and to establish a *ḍidd* when, through various constructions or interpretations of the sentence two contrary meanings are possible (Ibn al-Anbārī, *loc. cit.*, pp. 167-168). 3. Particles like *in*, *min*, *an*, *am*, *mā*, *hal*, must be stricken out from the list of *aḍdād*. Reasons, as for instance *in* „if“ and „not“, that is to say a word that can indicate a possibility and be also a negative, are feeble. Equally unimportant are the considerations that verbal forms (*kāna* or *yakūnu*) indicate different tenses, or that proper names (*Isḥāḳ*, *Aiyūb*, *Ya'ḳūb*) may also have secondary meanings. 4. Forms which only eventually may have a meaning contrary to their usual one may be enumerated to an infinity. Here belong words as *ka's*, a goblet, and also its contents, *naḥnu*, we, I; further all the *fa'īl* forms which are also passive (e. g. *nāmiḥ*, *khā'if*) and the *fa'īl* forms that are also active (e. g. *amīn*); the elatives which may be formed of participles of the first and all augmented roots; the verbs that sometimes also in the first form have a causative meaning (e. g. *sāla*) etc., but none of these cases represent any real *aḍdād*. 5. Neither belong here words that in certain cases are used ironically (*ihtizā'an* or *tahakkuman*), e. g. *yā 'āḳil* („intelligent one“!), for a fool, or euphemistically (*tafā'ul*), as *yā sālim* („healthy one“!) for a sick person. The use of both tropes is at will of the speaker. 6. The highest point of arbitrariness and artifice was finally attained by the grammarians, who count among the *aḍdād* words like *tal'a* (in the meaning of „waterpipe“ and „hill“, and namely because water flows downwards and the hill rises upwards).

Most of the examples given by Ibn al-Anbārī fall under any of the points just quoted and therefore ought not to be considered as *aḍdād*; only a small residue remains.

The Arabs themselves have sought already for explanations for these phenomena, but only one deserves consideration in so far at least as in the interpretation it leads back to the root, whence both meanings are branched out (Ibn al-Anbārī, *loc. cit.*, p. 5, ll. 20 *et seq.*; *Muzhir*, i. 193, ll. 25 *et seq.*); the other explanations account only for the actually occurring meanings, and either regard all the *aḍdād* as meanings borrowed by the roots from one another (Ibn al-Anbārī, *loc. cit.*, p. 7, ll. 13 *et seq.*; *Muzhir*, i. 194, l. 4) or attempt, often uncleverly, to find a harmony between the meanings; for instance the Arabs explain *ba'ḍ* in its meaning „whole“ by that the whole thing is only a part of something else (Ibn al-Anbārī, *loc. cit.*, p. 6, l. 10). All the recent attempts to explain this linguistic phenomenon from one point of view, such as Abel's (*Über den Gegensinn der Urworte*, Leipsic, 1884), who supposes them to be the remainder of the logically contradictory conception of the first men (see Giese *Untersuchungen über die Aḍdād*, p. 52), or even that of Leguest (*Etudes sur les formations des racines sémitiques*, Paris, 1858), who tried to trace them back by venturesome etymology (see Landau, *Die gegensinnigen Wörter im Alt- und Neuhebräischen*, pp. 21—22), may also be considered now as done away with. Only Giese (see also the notice in the *Journ. of the Roy. As. Soc.*, 1895, pp. 223 *et seq.* and in the *Asiatic Quarterly Review*, new series, ix. 1895, p. 242), who found in the ancient poetry only 22 words with contrary meanings, has, supported by the results of sematology, furnished for the solution of this difficulty different productive methodes, which if applied to all the domains of the Arabic language must certainly be amplified and modified (even he did not succeed in explaining all the *aḍdād*): 1. Metonymy, which is understood as one meaning of a word being a causal or temporal consequence of another meaning; e. g. *nā'a*, to lift a burden with difficulty, to carry it away; *nāhil*, he who goes to the water, the thirsty one; he who returns from the water, one having his thirst quenched. 2. Concatenation of conceptions of various natures; for instance *bain*, „separation“ and „union“ (according to whether one is separated alone from a group or in union with another), or *djalal* „to be rolled“, hence „heavy“, but also „to be rolled and whirled up“, hence „insignificant, light“. 3. Contraction of conception, refinement or making coarser respectively, as for instance *ramma*, „to be marrow-like“, „strong“ and „to be marrowless“, „feeble“. 4. For the words of emotion and odor the neutral original meaning is to be supposed: „to be excited“, no difference whether it is applied in the good or bad sense; thus for instance *rā'a* „to be afraid“ and „to be pleased“; *ṭariba*, „to be sad“ and „to be joyful“; *radjā*, *khāfa*, „to hope“ and „to fear“; *dhafar*, *bamma*, a „good“ and „a bad smell“. To this class belong the words of conjecture in their double meaning of „to know“ and „not to know“, e. g. *ẓanna*, *ḥasiba*, *khāla* (Ibn al-Anbārī, *loc. cit.*, pp. 8 *et seq.*; Landau, *loc. cit.*, pp. 189 *et seq.*). 5. Cultural influence has often caused the later differentiations of words originally meaning the same thing in *bā'a*, *sharā*, „to sell“ and „to buy“, originally „to exchange“. 6. Denominatives, especially in the 2d and 4th forms, originally meant: „to undertake an action with the object in question“,

and therefore may be applied both positively and negatively: e. g. *farra'a*, „to rise", „to sink" (comp. שרש, סקל; see Landau, *loc. cit.*, pp. 71 *et seq.*).

— Besides this the lack of compound prepositions in Arabic makes much ambiguity possible (comp. al-Suyūṭī, *loc. cit.*, p. 189, l. 12: *walā* = *aḳbala*, „to turn oneself to", and = *adbara*, „to turn oneself from"; *sami'a*, „to hear", and „to give ear" in the sense of „to answer"), and many *voces ambiguae* or *communis generis* which admit a double interpretation (Landau, *loc. cit.*, pp. 168 *et seq.*), e. g. *amam*, properly „aim" = a thing of little or great importance; *ma'tam*, „a gathering place of women", either on sad or on joyous occasions; *zawdj*, „husband", „wife". Finally the many dialectical *aḍdād* are of importance. Arab philologists already quoted such examples; *sudfa*, „darkness" in the dialect of the Tamimites, „light" in that of the Kaisites; *wathaba*, „to sit" (= ישב) in the Himyarite dialect, „to spring up" generally in Arabic; further *ṣāmid*, *ḳar'*, etc. This phenomenon of alteration of the original meaning of a word in different cultural spheres and according to different modes of viewing life and the world is to be noticed not only in the Arabic dialects alone but in all Semitic languages (e. g. לחם, „bread": *laḥm* „meat"; originally: „food"; עשיר, „rich", *'usr*, „poverty", originally: „work". Recently Landberg contributed valuable material from modern dialects (*La langue arabe et ses dialectes*, Leyden, 1905, pp. 64 *et seq.*).

The *aḍdād* problem is for the Arab scholars widely different from what it is for us; for them it is a practical problem, for us it is a scientific one. To the Arabs it was of prime importance to give an index as complete as possible of all the words destined for daily use, which have contrary meanings; in this they are often guided simply by exterior consonance; so for instance do they put among the *aḍdād* the word *wāḍī*, 1. = „perishing" root *w d y*, 2. = „vigorous", „strong", „root *'d y*. The origin and explanation are for them a secondary consideration, which, if looked to, is only superficial. With us the practical need is put in the background, we occupy ourselves not only with equally sounding words or forms, but also with roots. We should therefore not be satisfied with the classical language and its quotations from the Ḳor'ān and poetry alone, we should rather bring into the sphere of consideration all the dialects, nay, even the kindred Semitic languages, while many Arabs (e. g. Ibn Duraid), in reality consider as *aḍdād* only those words which have in the same dialect both contrary meanings (al-Suyūṭī, *loc. cit.*, p. 191, ll. 16 *et seq.* s. v. *sh 'b*) and draw the other dialects into the sphere of their consideration simply from practical motives, because misunderstandings or even mishaps might arise from unacquaintance with them (*ibid.*; Ibn al-Anbārī, *loc. cit.*, p. 59, ll. 4 *et seq.* s. v. *w th b*). The lack of understanding the conception of the rise and organic development, which partly arises from religious motives and which extends over all the domains of knowledge, hindered the Arabs, in spite of the great amount of material, from coming to the proper solution of the problem. In addition to this there is a total unacquaintance with the other Semitic languages and West Asiatic history and culture as well as the groundless explanation of the words of religious life (e. g. *muṣallā*, *anṣār*, *mu'ḳ*).

The works on the *aḍdād* have till now been undertaken only on the basis of the material, sometimes misguiding, of Arab philologists that has been handed down to us. A compilation and treatise, independent in its construction, and taking into consideration the dialects and kindred languages would bring an important amount of knowledge of the history of culture. (WEIL.)

'ADEN, a maritime town in South Arabia, on the northeastern coast of the completely arid and vegetationless peninsula of 'Aden; the town owes its importance to maritime trade that flourishes there from ancient times. The present harbor Steamer Point, which is visited every year by 1300 steamers, lies at a certain distance from the proper, strongly fortified town. The population of the latter has at all times been of a mixed origin; this explains why the Arab geographers designate the Arabic spoken there as a very corrupt dialect. Even now the population there does not consist exclusively of Arabs, for many Hindus, Somalis, Jews and Europeans have also settled there. The total number of inhabitants is estimated at 44000. The magnificent cistern constructions in a mountain-gorge, which supply the town with drinkable water — an ancient structure neglected for a long time then restored by the English, — are worth seeing. 'Aden does not possess any special Muhammedan edifices, the principal one is the monument of the saint of the town, Shaikh al-'Aidarūs, erected on his grave. In the vicinity, on the road to Shaikh 'Othmān, there are some salt-pans.

Historical. 'Aden, known already to the Greeks and Romans under the name of Adana or Athana, received its first Mussalman governor, Abū Mūsā al-Ash'arī, from the Prophet himself. Later on 'Aden generally shared in the fate of the province of Yemen, among whose maritime towns it was counted, after the Banū Ziyād had founded there an independent dynasty (304 = 916). About one century later (402 = 1011) the Banū Ma'n [q. v.] attained supremacy in 'Aden, Laḥedj, Abyan, Shiḥr and Ḥaḍramawt. The Ṣulaiḥides of Yemen invested the Banū Karam with the domination over 'Aden; afterwards discord broke out among the Banū Karam, till finally a portion of this family, the Banū Zurai' [q. v.], prevailed and declared itself independent about 519 (1125). The domination of the latter lasted till 569 (1173), when Tūrān Shāh, Ṣalāḥ al-Dīn's brother, conquered Yemen. Then the power was held there successively by the Aiyūbides (till 625 = 1228), the Rasūlides (till 858 = 1454) and the Ṭāhirides (till 923 = 1517). In 1513 the Portuguese under the leadership of Alfonso d'Albuquerque appeared before 'Aden, but could not capture the town anymore than, a few years later, could the Egyptian Mamlūks after they had torn away the city of Labīd from the last Ṭāhiride. More fortunate were the Ottomans in 1538, although they lost it again in 1568 in their war with the Zaidites of Ṣan'ā'. It is true that they reconquered the place once more, but were compelled to renounce it for good in 1630. Since that time the Zaidites ruled there; still in the beginning of the 18th century 'Aden fell into the power of the sultans of Laḥedj [q. v.], under whose rule the town lost its previous importance as a harbor place, so that when in 1838 the

English Captain Haines prevailed upon the then sultan of Lahedj, Muḥsin b. Faḍl, to cede the peninsula to the English, scarcely 600 poor inhabitants earned there a scanty livelihood. The English definitely entered into possession only on the 20th January 1839, and namely by force, because the sultan had in the meantime taken back his word. Even after that year the Arab tribes that dwell around made repeated attempts to seize the town, till the English succeeded after several expeditions in subjugating those tribes also (1867). Since then the development of ʿAden progressed rapidly and is still rising now. In the English system of administration the town is subordinated to the presidency of Bombay.

ADḤĀ (A.), victims (camels, sheep and horned cattle) which are slaughtered in the forenoon (*ḍuḥā*) of the *Yawm al-aḍḥā*, i. e. the 10th Dhu'l-Ḥidjdja. The flesh of the victims is considered as *ṣadaḳa* and is left to the poor, yet he who brings the offering also partakes of it. The characteristics of the victims and the manner in which they are slaughtered are accurately prescribed in the *fiḳh* books [comp. ḤADJDJ and NAḤR]. The custom of doing this on the above-mentioned day in Minā [q. v.] is pre-Islāmic and was established also for Islām through Sūra xxii. 34—37. Of course the law compels nobody to bring sacrifices, unless when one is obliged to do so on account of a vow or of a certain misdeed. The victims destined for this solemnity were consecrated by covering them with old shoes or by making bloody incisions in their skin.

ʿADHĀB (A.), „torment, sufferance, affliction", inflicted by God or a human ruler, and in so far as it expresses not only absolute power but also love for justice, also „punishment, chastisement (*ʿuḳūba*)". The divine judgments, which are also mentioned in the Ḳorʾān, hit the individual as well as whole nations in the life of this world as well as in the life to come. It is mainly unbelief, doubt of the divine mission of the prophets and apostles, rebellion against God that are punished in this manner [see ʿĀD, FIRʿAWN, LŪṬ, NŪḤ, THAMŪD, and others]. With respect to the punishments in the life to come, which begin already in the grave (*ʿadhāb al-ḳabr*), see DJAHANNAM, MUNKAR and NAKĪR.

The punishments established in Mussulman law (*sharīʿa*) are of four kinds:

1. *Ḳiṣāṣ*, i. e. retaliation. The guilty one may, by virtue of the right of retaliation, be killed, wounded or mutilated [see KIṢĀṢ].

2. *Diya*, i. e. blood money, which has to be paid if retaliation is not taken into account, or if the same is either impossible or unpermitted [see DIYA].

3. *Ḥadd*, i. e. the punishment exactly defined by the law, which may neither be reduced nor augmented, e. g. lapidation, a fixed number of lashes, crucifixion, cutting off the hands or the feet and others [see ḤADD].

4. *Taʿzīr*, i. e. the punishment inflicted by the judge according to his estimation. It may for instance consist of imprisonment, exile, corporal punishment, boxing on the ear, a reprimand or any other humiliating proceeding. The judge may for instance blacken the face of the culprit, cut his hair or have him led through the streets, etc. [see TAʿZĪR].

The punishment is considered in Mussulman law either as the right of God (*ḥaḳḳ Allāh*) or as the private right of a man (*ḥaḳḳ ādamī*). In the latter case the punishment is applied only at the desire of the plaintiff (or by the latter's relatives or assign). The punishment, e. g. retaliation, is inflicted upon the culprit as the personal right of the plaintiff.

In the case of a transgression against God, and the punishment consequently being then a *ḥaḳḳ Allāh*, there is, however, a peculiar principle in the law. God, it is supposed, is forbearing and requires no punishment of the transgressor.

Punishment was considered in the beginning of Islām, just as in Arabian paganism, as a purification from sin. So for instance a certain Māʿiz b. Mālik came to the Prophet and said to him: *ṭahhirnī*, „purify me", i. e. punish me! — Comp. I. Goldziher, *Muhamm. Stud.*, i. 47, note 1; idem, *Das Strafrecht im Islam (Fragen zur Rechtsvergleichung, gestellt von Th. Mommsen, beantwortet von H. Brunner, c. s.)*, pp. 101, 104, note 2.

But the Prophet is stated to have said: „God will forgive the sins of every believer except when the sinner makes them known to the public. God loves those of his servants that cover their sins."

On the ground of this tradition, there is a prescription in the Mussulman law books that when the punishment is to be considered as a *ḥaḳḳ Allāh* the transgressor should hide his guilt as much as possible and not confess it, and even when he did confess it to revoke his confession. He is supposed to turn himself much more to God in stillness, for God accepts his conversion when his intention is pure.

The witnesses too are commanded not to testify to the detriment of the accused person, and it is meet that the judge should show the latter all the circumstances extenuating his guilt and the validity of revoking his confession. The judge may even entirely leave out the punishment except when the right of a man is also injured at the same time and the latter demands the punishment of the guilty one.

Only in the case of a punishment established by the law (*ḥadd*) the judge has no choice and must execute the punishment. With regard to the latter punishments even an intercession on behalf of the culprit is not allowed, while otherwise it is even recommended. But in order to establish the guilt of the person accused evidence produced with great difficulty is always required in such cases. Practically the decisions of the canonical law offer everybody the opportunity for escaping such punishments. There is only one practical ground on which the legal evidence and the execution of „determined punishments" may be based, it is the confession of the culprit himself, so that in this respect the „determined punishments" have the character of penitence.

It is hardly necessary to be remarked that eastern despots were never satisfied with these legal punishments. Very often by mere arbitrariness they inflicted quite cruel and barbarous punishments for real or supposed misdeeds. Particularly there was nothing more usual than that

disgraced viziers or other dignitaries were subjected to most unhuman tortures with the object of extorting money from them before their execution. — As to the criminal law now in vigor in Turkey, see MEDJELLE.

ADHAMĪYA, collective name for the pupils of the celebrated Ṣūfī Ibrāhīm b. Adham [q. v.], who, from the point of view of later authors, have formed a Derwish order.

ADHĀN (A.), „announcement", a technical term for the call to the divine service of Friday and the five daily *ṣalāts*.

According to Mussulman tradition, the Prophet, soon after his arrival at Medina (1 or 2 years after the Hidjra), deliberated with his companions on the best manner of announcing to the faithful the hour of prayer. Some proposed that every time a fire should be kindled, a horn should be blown or a *nāḳūs* (i. e. a long piece of wood clapped with another piece of wood; with such a *nāḳūs* the Christians in the East used at that time to announce the hour of prayer) should be used. But one Mussulman, ʿAbd Allāh b. Zaid, told that he saw in a dream somebody who from the roof of the mosque called the Mussulmans to prayer. ʿOmar recommended that manner of announcing the *ṣalāt*, and as all agreed to it this *adhān* was introduced by order of the Prophet. Since then the believers were convoked by Bilāl, and up to our days the *adhān* is used at the time of the *ṣalāt*.

The *adhān* of the orthodox Mussulmans consist of seven formulas, of which the sixth is a repetition of the first:

1. *Allāhu akbar*: „Allāh is most great."
2. *Ashhadu an lā ilāha illa 'llāh*: „I testify that there is no god besides Allāh".
3. *Ashhadu anna Muḥammedan rasūl Allāh*: „I testify that Moḥammed is the apostle of Allāh".
4. *Ḥaiya ʿala 'l-ṣalāt*: „Come to prayer"!
5. *Ḥaiya ʿala 'l-falāḥ*: „Come to salvation"!
6. *Allāhu akbar*: „Allāh is most great".
7. *Lā ilāha illa 'llāh*: „There is no god besides Allāh".

The first formula is repeated four (by the Mālikites two) times one after the other, the other formulas are repeated twice each, except the last words: *lā ilāha illa 'llāh* that are pronounced only once. The 2d and 3d formulas after being pronounced twice are repeated a third time in a louder voice. This repetition (*tardjīʿ*) is recommended by the law; the Ḥanafites forbid it. At the morning prayer (*ṣalāt al-ṣubḥ*) the words *al-ṣalāt khair min al-nawm* („prayer is better than sleep") are added in the *adhān*. This formula, also pronounced two times (*tathwīb*), is inserted between the 5th and 6th formulas, but the Ḥanafites pronounce it at the end.

The *adhān* of the Shīʿites differs from that of the Sunnites in that the former has an eighth formula (inserted between the fifth and the sixth): *Ḥaiya ʿalā khair al-ʿamal*, „come to the best work"! These words have at all times been the Shibboleth of the Shīʿites; when called out from the minarets in an orthodox country, the inhabitants knew that the government had become Shīʿite (comp. Snouck Hurgronje, *Mekka*, i. 63; S. de Sacy, *Chrestomathie arabe*, i. 60, 169). The Shīʿites pronounce also the final formula two times.

The Mussulmans who hear the *adhān*, must repeat its formulas, but instead of the third and fourth, they recite: *lā ḥawla wa-lā ḳūwata illā bi-'llāh*; „there is no strength nor power but in Allāh", and instead of the *tathwīb* formula in the morning *adhān*, they say: *ṣadaḳta wa-bararta*, „thou hast spoken truthfully and rightly".

The *adhān* is followed by glorification which is more accurately determined and recommended by the law. It is omitted only after the call to the *maghrib-ṣalāt* [see ṢALĀT], because the interval between the *adhān* and the prayer is very short.

There is no fixed melody for the *adhān*. Every *adhān* may be modulated at will with any known tune, provided that the right pronunciation of the words is not impaired by it. Comp. Snouck Hurgronje, *Mekka*, ii. 87: „In Mekka one hears different airs at the same time. Like the recitation of the Ḳorʾān, the singing of the *adhān* is in Mekka an art well cared for and highly developed". Only among the Ḥanbalites there are doctors that do not allow any melody for the *adhān*.

Every Mussulman who, whether alone or with his family, recites the above-mentioned *ṣalāts* at home or in the field must have the *adhān* pronounced in a loud voice as it is prescribed by the law (comp. Snouck Hurgronje, *Mekkanische Sprichwörter und Redensarten*, p. 87 = *Bijdragen tot de taal-, land- en volkenk. van Ned.-Indië*, 5th ser., i. 519).

The call to the other common *ṣalāts*, for instance the two holiday *ṣalāts*, those at sun and moon eclipses, etc. has only one formula: *al-ṣalāt djāmiʿatan*, „come to the common prayer"! This formula is said to have been current already in the time of the Prophet. Comp. I. Goldziher, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xlix. 315. Important information respecting the modifications of the *adhān* formulas introduced at various times and in various places from the beginning of Islām is to be found in Maḳrīzī, *Khiṭaṭ*, ii. 269 *et seq.*

Owing to the profession of faith frequently oc-

curring in the *adhān*, the Mussulmans used to pronounce it in the right ear of a child shortly after its birth (comp. Snouck Hurgronje, *Mekka*, ii. 138) as well as in the ear of people supposed to be possessed of *Djinn* (evil spirits).

Bibliography: Bukhārī, *Ṣaḥīḥ*, *Kitāb al-adhān* (French translation of O. Houdas and W. Marçais, i. 200 *et seq.*); A. N. Matthews, *Mishcàt-ul-masàbìh*, i. 141 *et seq.*, and other tradition collections and *fikh* books.

(TH. W. JUYNBOLL.)

ADHAR or ĀDAR, the name of the 9th month in the Persian calendar, and at the same time that of the 9th day of the Persian month. For the sake of distinction the former is designated by Ādhar-māh (Ādhar month) and the latter by Ādhar-rūz (Ādhar day). (E. MAHLER.)

ĀDHARBAIDJĀN, a province in the empire of the caliphs, bounded on the S. E. by al-Djibāl (the ancient Media), on the S. W. by the eastern part of the province of Djazīra (the ancient Assyria), on the W. by Armenia, on the N. by the province of Arrān (the countries of the Caucasus), and on the E. by both shore-lands of the Caspian Sea, Mūghān and Gīlān. Nowadays under Ādharbaidjān is understood the northwestern province of Persia which borders on Turkey and on the Russian Caucasus and which mainly comprises the former 'Abbāside province. In ancient times this district formed at first a part of the great Median province of the Achaemenian empire; it is only since the time of Alexander's successors that it came forth as an independent satrapy under the name of Atropatene, so called after Atropates, a Persian satrap, who had gone over into the service of Alexander the Great and who at the division of the world-embracing empire of Alexander maintained himself as master of Northwestern Media, the so-called Media Minor. His dynasty held the sway at least till the beginning of the Christian era. Atropatene remained further still as an independent Arsakide subordinate state, which must at least have existed still in the second half of the 2d century A. D. (comp. A. v. Gutschmid, *Gesch. Irans*, Tübingen, 1888, pp. 149-150). The boundaries of Atropatene have repeatedly fluctuated in the course of time (comp. concerning this Marquart, *Ērānšahr n. d. Geogr. d. Pseudo Moses-Xorenac'i* = *Abhandl. der Götting. Gesellsch. d. Wissensch.*, new series, iii. Nº. 2, Berlin, 1901, pp. 108 *et seq.*). — The Strabonical derivation of the name of Atropatene from Atropates is in any case to be maintained as the right one; it is wrongly rejected by modern authors; the name is not to be found in the Assyro-Babylonian cuneiform inscriptions (comp. Streck, in the *Zeitschr. f. Assyriologie*, xv. 359). In Armenian works the name Atropatene occurs under the form of Atrpatakan. The exact pronunciation of the name in the 3d century was without any doubt: Ādhurbadhaghān, which surely preserved its official character till the fall of the Sāsānide empire in the 7th century. But already in the course of the 4th century a form of the name characterized by the transposition then the elision of the second *dh* was formed in the popular language. This vulgar form was throughout used by the Syriac authors in the 5th century: Adhorbāighān, whence the Byzantine form Ἀδαρβιγάνων (Ἀδαρβαιγάνων). The Arab geographers write A(Ā)dharbaidjān, here and there also Adhrabaidjān. The modern Persian name is properly speaking Ādharbāidjān, and is pronounced Āzarbāidjān in consequence of the usual Arabicized spelling. For the modern Persians, who could not know of Atropates, it was very natural to connect the name with *ādhar*, „fire", an etymology so much more natural as just in the region of this name there were in the time of the Sāsānides specially considerable fire temples (as for instance a celebrated sanctuary of this kind in Ganzaka). With regard to the name and history of Atropatene, comp. W. Ouseley, *Travels in various countries of the East* (London, 1819—1823), i. 125; Ritter, *Erdkunde*, ix. 768; Kiepert, *Lehrb. der alt. Geogr.* (Berlin, 1878), pp. 70-71 (§ 73); Nöldeke, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxxiv. 692 *et seq.*; Weissbach, in Pauly-Wissowa, *Realencyc. der klass. Altertumswissensch.*, ii. 2149 *et seq.*; further see Streck, in the Supplem., i. to Pauly-Wissowa, Nº. 1 cols. 223 *et seq.* (where indication for more sources); Marquart, *loc. cit.*, pp. 108—114, 273, 277. The name of the province and the phonetico-historical development of the various forms of the name are best and most circumstantially treated of by Andreas, in Pauly-Wissowa, *loc. cit.*, i. 345 *et seq.* (article: *Adarbigana*). — The name Atropatene became the official designation for the northwestern province of Iran probably from the beginning of the Sāsānide rule (227 A. D.). That it was the name of a Nestorian bishopric is for the 6th century shown from Syriac sources; comp. Guidi, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xliii. 407. Under the caliphate of the 'Abbāsides Ādharbaidjān was among the less important provinces; later only, after the Mongol storm, it stood off in more political relief.

Physically Ādharbaidjān appears as a magnificent, rifted Alpine landscape, or more exactly as a high plateau bordered all around by higher mountain crests. The Sahend (ca. 3700 metres high), south of Tibrīz, the extinguished vulcan Sawalan (3820 metres), the Sablan of the Arab geographers, west of Ardabīl and the smaller Ararat (4030 metres) rising in the northwest are to be considered as the highest elevations in the province. The center and at the same time the deepest depression (1300 metres) in it is the Urmiya Lake, the most extensive basin of the present Persia. The most important water courses are: the Aras (Araxes of the classical writers) in the north and the Ḳizil-Uzen („red river"; a Turkish name proved to have been current in the 13th and 14th centuries) in the south. The latter in its lower course is now called Sefīd-rūd („White River"), and the whole river was known under this name to the Arab writers of the Middle Ages; comp. regarding it G. le Strange, *The lands of the eastern Caliphate* (Cambridge, 1905), pp. 169-170. With regard to the Ḳizil-Uzen, the ancient Amardos, its sources, course etc., see the detailed description of Andreas in Pauly-Wissowa, *loc. cit.*, i. 1734 *et seq.* The Aras and Ḳizil-Uzen, both of which fall into the Caspean Sea, act still now, just as in the Middle Ages, in a great part of their course as frontier rivers: the Aras as the boundary between Ādharbaidjān and Caucasia and the Ḳizil-Uzen as such between Ādharbaidjān and al-Djibāl (Media, more exactly Media Major of the classical writers), the present Persian province of 'Irāḳ 'Adjamī.

The capital of Atropatene was Ganzaka (Ga-

zaka), the Kazna (Djanzah, Djanzak) of the medieval Arab geographers, which has probably to be identified with the present Takht-i Sulaimān; comp. Ritter, *Erdkunde*, ix. 770 *et seq.*, Nöldeke, *Gesch. d. Perser u. Araber zur Zeit der Sasaniden* (Leyden, 1879), p. 100; G. Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer* (1880), pp. 250 *et seq.*; Streck, in the *Zeitschr. f. Assyriol.*, xv. 332; Marquart, *loc. cit.*, pp. 108 *et seq.* — Concerning Takht-i Sulaimān see G. le Strange, *loc. cit.*, pp. 223-224. Under the older ʿAbbāsides Ardabīl was considered as the metropolis of Ādharbaidjān; later on it was replaced by Tibrīz. After the Mongol invasion, at first Marāgha, then under the Ilkhāns Tibrīz again was the center; comp. A. Müller, *Der Islam im Morgen- und Abendland*, ii. 240. Under the first Safawides Ardabīl, but later Tibrīz was raised to the rank of capital of the province, and the latter town has retained its position till now. It is counted amongst the most important towns of the whole of Persia. Of the other towns of Ādharbaidjān the most important are: Ardabīl, Urmiya, Marand, Khoi, Dilmān and Miyāna. — The area of Ādharbaidjān amounts to about 104000 square kilometres (about 40000 square miles); the number of its population is estimated at 2000000. The northeastern part is inhabited by Turkomans, the southwestern by Kurds, both nomadic nations; in the east of the province live Persians. Some Armenians are scattered there and in the vicinity of the Urmiya Lake there are various colonies of Christian Syrians.

Bibliography: Concerning medieval Ādharbaidjān see A. v. Kremer, *Culturgesch. d. Orients unter den Chalifen*, i. 340-341, and in particular G. le Strange, *loc. cit.*, pp. 159—171. With regard to the Ādharbaidjān of to-day, comp. Ritter, *Erdkunde*, ix. 763—1048; J. de Morgan, *Mission scientifique en Perse*, i. 290—358: *Études géogr.*; J. Dieulafoy, *La Perse, la Chaldée et la Susiane* (Paris, 1887), pp. 29 *et seq.*; *Map of Aderbaigan* by Khanikoff and Kiepert (Berlin, 1862 = *Zeitschr. f. allgem. Erdk.*, new series, xiv.). The older travel literature has been utilized by Ritter, *loc. cit.*; for the more recent bibliography, see J. de Morgan, *loc. cit.*, i. 290, note 1. (STRECK.)

ADHARGŪN (P. = „flame-colored"; Arabic: ADHRIYŪN), a plant about a cubit high with finger-long elongated leaves, red-yellow and badly smelling blossoms and black kernel. The identification of this plant is not yet well established: in Greek ἀγρία ἄζωρον occurs synonymously with *senecio vulgaris*, the common groundsel (B. Langkavel, *Botanik der spätern Griechen*, 1866, p. 74, l. 22; I. Löw, *Aramäische Pflanzennamen*, 1879, p. 47). The description of the Arabian authors left the choice between the dark yellow *buphthalmon*, for which Clément-Mullet decided, and the *calendula officinalis*, the „gold or dead flower", which indeed unites the characteristic features of shape, hue and smell and which formerly was officinal. In Arab medicine *adhriyūn* passed for a cordial, an antidote, etc. The plant played in popular belief a greater part than in medicine: it was believed that its odor alone was sufficient to cause or to facilitate delivery as well as to drive away flies, rats and lizards.

Bibliography: Ibn al-Baiṭār, *al-Djāmiʿ* (Būlāḳ, 1291), i. 16; Ibn al-ʿAwwām, *Kitāb al-falāḥa* (trans. Clément-Mullet, Paris, 1866), i. 269; Ḳazwīnī (ed. Wüstenf.), i. 271; L. Leclerc, in the *Notices et extraits des manuscrits*, xxiii. 38. (HELL.)

ʿADHRĀʾ (A.) lit. „a virgin", name of a constellation in the zodiac, also called *al-Sunbula*, after its star of the first magnitude (*Spica virginis*). It was also the name of the beloved one of Wāmiḳ [q. v.].

ADHRIʿĀT, the Biblical Edrei, now Derāʿā in the East-Jordanic country. The town, mentioned by Imruʾ al-Ḳais (lii. 19), was in 613 or 614 so thoroughly destroyed by the Persians — who vanquished the Byzantines in the vicinity — that it was never afterwards perfectly reestablished. The Jewish tribe Naḍīr, driven by Muḥammed from Medina, moved to this town. The statement (Belādhorī, p. 68) that the inhabitants of Adhriʿāt submitted to Muhammed when he stayed in Tabūk, is apparently based upon a mistake. But they submitted to the Mussulmans under the caliphate of Abū Bekr and later welcomed ʿOmar during his stay in the East-Jordanic country (*ibid.*, pp. 126, 139). The city, famous for its wine, became under the Arabs the capital of the province of al-Bathanīya. Like the other East-Jordanic towns Adhriʿāt was laid waste in 293 (906) by the Karmathians. Muḳaddasī (p. 162) describes it as a town situated near the desert, the mountain chain of Djarash forming its territory. Yāḳūt (*Muʿdjam*, i. 176-177) mentions some scholars natives of Adhriʿāt. As to the present relatively important locality of Derāʿā, comp. Schumacher, *Across the Jordan*, pp. 121 *et seq.*

ADHROḤ (this is the pronunciation on the very spot; comp. Αδρoα), more rarely UDHROḤ, a place between Maʿān and Petra, a magnificent Roman camp with an overflowing spring, unfortunately discharging its water into a kind of a funnel. This place, situated in the Djudhām country, was later visited by the Koraishite caravans. At the time of its submission to Muḥammed it contained at least one hundred families. Muʿāwiya is said to have received there homage from al-Ḥasan, the son of ʿAlī; it is still mentioned in the 11th century of the Christian era as inhabited then by Hāshimide Mawlās. It is not mentioned any more since the time of the crusaders, who nevertheless possessed in that region Ahamant, the Vaux Moyse (= Wādī Mūsā), etc.

Adhroḥ is chiefly known on account of the conference — called the conference of Adhroḥ — which took place there. At Ṣiffīn it had been agreed upon choosing a place just in the middle between Syria and ʿIrāḳ: Dūmat al-Djandal or Adhroḥ. It was decided for the latter, a well-watered place and chiefly more accessible to the illustrious Medinians invited by Muʿāwiya. If certain annalists state Dūmat al-Djandal to be the place of the conference, it is simply by transmitting the *riwāyāt* without discussing them. In another place they decide for Adhroḥ, and the testimony of contemporary poets removes every doubt (comp. al-Akhṭal, *Dīwān*, lxxix. 3). The

assembly (38 = 658) had to decide between 'Alī and Mu'āwiya; each of the two plenipotentiaries (*ḥakamān*), Abū Mūsa'l-Ash'arī for 'Alī and 'Amr b. al-'Āṣī for Mu'āwiya, was escorted by 400 men. According to the current version, Abū Mūsā was deceived by a coarse disloyalty of 'Amr; the latter, after it had been agreed to depose Mu'āwiya, publicly took back his word and went so far as to proclaim him caliph! But this is inadmissible; such an enormous lie would rather have heightened 'Alī's prestige, and called forth the protests of the 'Irāḳian escort, such impartial witnesses as Sa'd b. Abī Waḳḳāṣ, Ibn 'Omar, etc. Neither would have 'Alī's own partisans — as was the case with Khirrīt b. Rāshid — seceded from him on account of his perjury. 'Alī himself does not mention in his protestations 'Amr's lie; if he names the arbitrators it is to accuse both of them of felony.

The honest, but naïve Abū Mūsā could not struggle with the artful (*al-dāhiya*) 'Amr, and the latter cleverly turned to his advantage the misunderstanding, with which terminated the conference. The object was not clearly determined, still less the points that were to be discussed: the arbitrators had simply confined themselves to declare that the Ḳor'ān would serve them as a basis and a standard. The conference was considered by the 'Irāḳians as a simple formality, in which their candidate should triumph. The Syrians, on the other hand, if the discussion of the pretentions of both 'Alī and Mu'āwiya — the latter had not yet then made them manifest — was to them out of the question, wanted only to examine whether 'Alī's responsibility in the assassination of 'Othmān did not exclude him from the government of Islām. Al-Ash'arī's chief mistake was in allowing his colleague to place on the same footing Mu'āwiya, a simple governor of a province, and 'Alī, recognized as caliph by the majority of the Mussulmans. Before that time the son of Abū Sufyān had passed only for the avenger of 'Othmān's blood, and, as Ibn 'Abd Rabbihi (*'Iḳd*, ii. 291) observes, the Syrians followed him as such and not as a pretender to the caliphate. Because Abū Mūsā did not make any distinction between the two candidates, he thus encouraged the secret designs of Mu'āwiya: he allowed 'Amr to discuss the latter's rights to succeed 'Othmān. After having tired Abū Mūsā by proposing a series of unacceptable candidates, 'Amr induced him to declare that both candidates should be removed from the throne. Mu'āwiya lost nothing by this sentence, but it deprived 'Alī from the supreme dignity. While he became again simply the son of Abū Ṭālib, his rival remained governor of Syria. This brilliant diplomatic victory, constraining 'Alī to perjury, placed the right on the side of Mu'āwiya and habituated the people in general to consider him as the only person capable to restore peace unto the Mussulman world. On Mu'āwiya's return from Adhroḥ, the Syrians began to salute him with the title of caliph.

Lammens, *Etudes sur le règne de Mo'âwia Ier*, pp. 125—140. (H. LAMMENS.)

'ADĪ B. ḤĀTIM, with the *kunya* of Abū Ṭarīf, a partisan of 'Alī. He was the son of the celebrated poet Ḥātim al-Ṭā'ī, of whom he inherited the royal power over his tribe, the Ṭaiyites. Being threatened with the loss of the royalty, 'Adī, who like his father was a Christian, went over to Islām in the year 9 (630). He collected for the Prophet the taxes among the Ṭaiyites and Asadites. He knew how to prevent the threatening apostasy of his tribe after the death of the Prophet. He moved with Khālid to 'Irāḳ, where he took part in the war of conquest as a sub-commander. 'Othmān gave him the village of al-Rawḥā' on the Nahr 'Īsā, near Bagdad, for his usufruct (*ḳiṭ'a*), yet he kept out of the caliph's way, and, as it may be concluded from Ṭabarī (i. 3164), he must have stood in some connection with 'Othmān's murderers. In the battle of the Camel he fought for 'Alī, by whom he was among others sent as an envoy to Mu'āwiya during the four weeks armistice before the battle of Ṣiffīn. When finally it became necessary that the sword should decide, 'Alī honored him by appointing him as standard bearer. — Later on 'Adī lived in Kūfa, where he did not deny his 'Alide sentiments, and took under his protection his tribesmen that were persecuted by the powerful governor of 'Irāḳ Ziyād b. Abī Sufyān. — 'Adī died in 67 (686-687), at the age of 120 years.

(A. SCHAADE.)

'ADĪ B. MUSĀFIR (SHAIKH 'ADĪ), a Mussulman ascet, said to have been born in the village of Bait Fār, near Ba'labakk (Baalbek), where the house of his birth was in Ibn Khallikān's time still the place of pious pilgrimage. 'Adī, who was celebrated on account of his saintly life, founded a religious order called after himself, al-'Adawiya. He had fixed his residence in the mountains of the Hakkārī Kurds in the region north of Mosul, and died at the age of 90, in 557 (1162), or according to others in 555 (1160) in the hermitage which he had built there for himself; his descendants continued to live there and to enjoy the same reputation of a saint. According to an eyewitness, he was of middle stature and much tanned. It is he whom the Yazīdīs adopted as their national saint. His sepulchre is indicated by three conical cupolas in the environs of the village of Baadri, 20 miles to the east of the Nestorian convent of Rabbān-Hormuzd. Nightly processions by torch light, the exhibition of the green colored pall, which covers the tomb, the distribution of large trays with smoking *harīsa* (a ragout with coagulated milk) compose the ceremony which attracts a great number of Yazīdīs and of which H. Layard was in 1849 an eyewitness. The poem of 80 verses, translated into English by Layard and Badger (*Nestorians and their rituals*, i. 113—115), shows that this ascet was a mystic pantheist of the Ṣūfī order, and that his followers believed that he was the incarnation of the divinity.

Bibliography: Ibn Khallikān (trans. de Slane), ii. 197; H. Layard, *Nineveh and its remains*, i. 293 *et seq.*; idem, *Discoveries in the ruins of Nineveh and Babylon*, pp. 79 *et seq.*; Ainsworth, *Travels and researches in Asia Minor*, ii. 187 *et seq.*; Badger, *loc. cit.*, pp. 104—107, gives three sketches of the tomb.

(Cl. Huart.)

'ADĪ b. al-Riḳā' (b. Zaid b. Mālik b. 'Adī b. al-Riḳā'), Arab poet of the 'Āmila tribe, a subdivision of Ḳuḍā'a, of urban and not Bedouin origin, lived in Damascus as encomiast of the Umaiyads, particularly of al-Walīd b. 'Abd al-Malik, and had a poetical contest with Djarīr. Muḥammed b. Sallām placed him in the third class of Islāmic poets. Of his verses a *nasīb* on Umm al-Ḳāsim is mostly quoted (e. g. Mubarrad, *Kāmil*, p. 85, l. 14).

Bibliography: *Aghānī*, viii. 179—183; Ibn Ḳotaiba, *Kitāb al-shi'r* (ed. de Goeje), pp. 391 *et seq.*

(Brockelmann.)

'ADĪ b. Zaid, pre-Islāmic Christian poet, the year of whose birth is unknown. He was of a distinguished family of al-Ḥīra, and his father had sent him to the royal court of Persia for the purpose of receiving there a higher education. 'Adī, even after his return to his native country, stood in close connection with the Persian Court, whose interests he furthered after the death of al-Mundhir IV, by advocating the election of al-No'mān III as his successor. He naturally played a prominent part at the Court of these Lakhmide princes, until his enviers and enemies succeeded in making him powerless. Al-No'mān had him thrown into prison, where he was assassinated (ca. 604). His death is said to have been the cause of the fall of the Lakhmide dynasty. His poems are mainly wine songs and elegies on the transitoriness of earthly power and greatness.

Perser u. Araber zur Zeit der Sasaniden* (Leyden, 1879), pp. 312 *et seq.*; Rothstein, *Die Dynastie der Lakhmiden in al-Ḥīra* (Berlin, 1899), pp. 109 *et seq.*

(A. Haffner.)

al-**'ĀḌID** li-Dīn Allāh, the last Fāṭimide caliph. His real name was Abū Muḥammed 'Abd Allāh, and he was the son of Sulaimān, whom 'Abbās b. Abi'l-Futūḥ [q. v.] killed, and the grandson of the caliph Ḥāfiẓ. He was a cousin of his predecessor al-Fā'iz, who died on the 17th Radjab 555 (23d July 1160) at the age of 11½ years, after having „reigned" 6½ years. Al-'Āḍid was born on the 20th Muḥarram 546 (9th May 1151), thus at the time of his accession to the throne he was 9 years old. From the beginning till his death at the age of 20 (10th Muḥarram 567 = 13th September 1171) he was an unconscious instrument in the hands of the occasional generalissimo; only shortly before his death he seems, by that he called Nūr al-Dīn [q. v.], to have personally meddled with the affairs of the country. He passed for a zealous Shī'ite and persecutor of the Sunnites. There is nothing for the rest to be reported of his acts; but during his reign the greatest changes took place in Egypt, changes which will be indicated here by the way only, as they will be circumstantially treated of in the articles ṬALĀ'I', RUZZĪK, SHĀWAR, ḌIRGHĀM, SHĪRKŪH and ṢALĀḤ AL-DĪN. At the time of his accession to the throne, Ṭalā'i' b. Ruzzīk was the omnipotent minister, but he died in the following year. After the son of the latter, Ruzzīk b. Ṭalā'i', had ruled for a short time, Shāwar took charge of the vizierate in the beginning of 558 (it began the 10th Dec. 1162). Shāwar was 9 months later supplanted by another general called Ḍirghām; he fled to Syria and tried to win the help of Nūr al-Dīn. The new vizier Ḍirghām is described as distrustful if not unfit. Almost all the men of importance fell victims of his exaggerated suspicion, so that Egypt lacked of leading spirits when the Franks invaded the country and at the same time Shāwar marched upon it with a Syrian army. Among the latter were Shīrkūh and his nephew Ṣalāḥ al-Dīn (Saladin). Ḍirghām was repulsed and killed and Shāwar was again invested with the vizierate. Then began the varied play of intrigues that lasted several years and the embittered struggle for domination in Egypt, in which Shāwar, the Syrians and the crusaders took part in manifold combinations. The caliph sided now with one, now with the other without, however, influencing essentially the situation. It ended with the occupation of Egypt by the troops of Nūr al-Dīn under the leadership of Shīrkūh and with the assassination of Shāwar. Shīrkūh succeeded the latter, and after his death (22d Djumādā II 564 = 23d March 1169) Ṣalāḥ al-Dīn took charge of the vizierate. At the insistence of his lord Nūr al-Dīn he had the prayer established in the beginning of 567 (end of 1171) for the 'Abbāside caliphs. This meant the end of the sham domination of al-'Āḍid and of the Fāṭimides in general. The unfortunate last scion of this celebrated race was no longer conscious of his dethronement, as, having since long been sickly, he died a few days after this event.

(C. H. Becker.)

ADIGHE. [See ČERKES.]

'ĀDIL (a.), „equitable" (synonym of *'adl*), frequently entering as an element in the titles of princes, e. g. al-Malik al-'Ādil „the equitable king". Some princes known in history under this name follow below [comp. also BAHRĀM, KITBOGHA, RUZZĪK, SALĀMISH and others].

al-**'ĀDIL**, name of two Aiyūbides:

1. al-Malik al-'Ādil I Abū Bekr Muḥammed b. Aiyūb, with the honorific title Saif al-Dīn („the sword of religion"), the Saphadin of the crusaders, the brother, assistant and spiritual heir of Saladin. He was born in Muḥarram 540 (June-July 1145), or according to others in 538 (1143-1144) in Damascus or in Baalbek, thus

6—8 years younger than his celebrated brother, whose confident and representative he remained till the latter's death. Having always been loyal towards Saladin, he followed after the latter's death his own personal policy, which, however, was to the advantage of the dynasty and Islām. He proved a good soldier on land as well as on water; but his main successes he obtained as politician and diplomate.

After al-ʿĀdil had already distinguished himself under Nūr al-Dīn, he came with Saladin under the command of Shirkūh to Egypt, but only in 570 (1174-1175) he won greater importance, when on Saladin's departure to Syria he replaced him in Egypt. In this position he proved an able man also after 573 (1177-1178) and 578 (1182-1183) on the occasion of interior revolts as well as of Frankish invasions. In 579 (1183-1184) he was removed from Egypt to Aleppo, but came back to Egypt in 582 (1186-1187) as his nephew and successor al-Malik al-Muẓaffar Taḳī al-Dīn ʿOmar did not agree together with his adjunct al-Malik al-Afḍal [q. v.], a son of Saladin. Both were consequently revoked, and al-ʿĀdil was again entrusted with the management of the affairs under the nominal supreme authority of al-Malik al-ʿAzīz [q. v.], another son of Saladin. In the following years al-ʿĀdil energetically supported from Egypt the policy of his brother, and also often came in person with an army or fleet to Syria. In this way he conquered Yāfa and Karak, was present at the conquest of Jerusalem, attempted in 585 (1189-1191) to relieve ʿAkkā and played a particularly important part in the negotiations between Saladin and Richard Coeur-de-Lion. He entered into friendly relation with the latter and one of his sons was created a knight by Richard. In 587 (1191) the adventurous plan was even considered to marry al-ʿĀdil with a sister of the English king and to let both rule jointly over Palestine. In the same year al-ʿĀdil renounced most of his Egyptian and Syrian fiefs and was indemnified with Mesopotamia and Diyār Bekr. In Syria he received among other places the Balḳāʾ and Karak, where he just stayed when the news of Saladin's death (27th Ṣafar 589 = 4th March 1193) reached him.

When now the struggle for the sovereignty was inflamed between Saladin's sons, al-Afḍal of Damascus and al-ʿAzīz of Cairo, al-ʿĀdil at first played the mediator, but only in order to seize for himself the sway at a favorable opportunity. At first al-ʿAzīz marched against al-Afḍal, but peace was reëstablished through the intervention of al-ʿĀdil and other Aiyūbides (590 = 1193-1194). When in the following year al-ʿAzīz renewed his plans of conquest, al-ʿĀdil made common cause with al-Afḍal; they drove al-ʿAzīz back to Egypt, where they came afterwards to an understanding. Al-Afḍal returned to Damascus, and al-ʿĀdil remained as manager of the affairs with al-ʿAzīz (591 = 1194-1195). But shortly afterwards it came again to a war, provoked by the Egyptians, the aim of which was the conquest of Damascus. Al-ʿĀdil, being nominally the vassal of al-ʿAzīz, obtained also the sovereignty over Syria. He thus became again free to act against the crusaders and could put in order his Mesopotamian possessions. The unexpected death of al-ʿAzīz (27th Muḥarram 595 = 29th November 1198) called him back to Syria, where he had to fight for his existence; for in Egypt, on al-ʿAzīz's death, al-Afḍal was in an inconceivable manner chosen as tutor of the latter's minor son, and he hoped to revenge himself on al-ʿĀdil by means of an unexpected attack from Damascus, in which his brother al-Ẓāhir of Aleppo would support him. Yet al-ʿĀdil forstalled them, he cleverly knew how to disunite his antagonists; al-Afḍal was compelled to surrender and al-ʿĀdil became also the ruler over Egypt. He distributed the gigantic empire among his sons: al-Kāmil represented him in Egypt, al-Muʿaẓẓam in Damascus, al-Fāʾiz in Mesopotamia, other sons and relatives ruled over smaller provinces, and the hitherto independent members of the family also recognized the supremacy of al-ʿĀdil. Thus almost the whole of Saladin's empire was reëstablished. Al-ʿĀdil had not much to do with the crusaders; it was then the quiet period between the fourth and the fifth crusades, the period of the children's crusade (1212) and of the expedition of the Hungarian king (1217). Small collisions with the Frankish states were not lacking, but al-ʿĀdil sought everywhere to establish peace quickly. With this policy harmonizes also al-ʿĀdil's efforts to further commerce, efforts shown in the treaty of commerce with Venice. Towards the end of his reign there began the new crusade against Damietta in Egypt; he did not live to see the fall of Damietta; while he was occupied with equipping troops for Egypt he died in ʿĀleḳīn on the 7th Djumādā II 615 (31st August 1218).

2. AL-MALIK AL-ʿĀDIL II ABŪ BEKR SAIF AL-DĪN, a son of al-Malik al-Kāmil [q. v.], a grandson of the preceding and one of the less important Aiyūbides. He was born in Dhu'l-Ḥidjdja 617 (Jan.-Febr. 1221) at al-Manṣūra in Egypt, from which place his father watched the Franks before Damietta. At the age of 12 (629 = 1231-1232) he appeared already as the representative of his father in Egypt. As he held the same office also at al-Kāmil's sudden death (21st Radjab 635 = 8th March 1238), he was recognized by the Syrian and Egyptian emīrs as his father's successor. His elder brother al-Ṣāliḥ Aiyūb (born the 24th Djumādā II 603 = 26th January 1207) was of course not pleased with it; he succeeded indeed in establishing himself in Damascus, but he lost again this city shortly afterwards. He even was taken a prisoner by his cousin al-Nāṣir Dāwūd, who sided with al-ʿĀdil, but who afterwards preferred to make common cause with al-Ṣāliḥ against al-ʿĀdil. The latter marched against them till Bilbīs, but was there dethroned by his own insubordinate emīrs (8th Dhu'l-Ḥidjdja 637 = 31st May 1240), and al-Ṣāliḥ was proclaimed his successor. He died in prison at Cairo on the 12th Shawwāl 645 (9th February 1248).

AL-'ĀDIL B. AL-SALĀR, with his full name al-Malik al-'Ādil Abu'l-Ḥasan 'Alī b. al-Salār, a vizier alleged to have been of Kurdish descent. When the celebrated Fāṭimide general al-Afḍal Shāhinshāh took Jerusalem from the Ortokides in 491 (1097-1098), a part of the mercenaries of the latter entered into the Egyptian service. Amongst these was al-'Ādil's father, who later, like his son, entered the body-guard of the powerful vizier. As al-'Ādil distinguished himself by his intelligence and skill, he soon rose to the rank of emir. Then the caliph al-Ḥāfiẓ entrusted him with the administration of Alexandria and Baḥaira. Al-'Ādil was in this important position one of the most powerful men in the Fāṭimide empire, where the power slipped from the hands of the central administration at that time and went over to the governors of the large provinces. When the caliph now ventured to appoint his favorite Ibn Maṣāl his vizier, al-'Ādil rebelled, killed Ibn Maṣāl and entered himself Cairo as a vizier. His vizierate, however, was not of long duration, for he was assassinated on the 6th Muḥarram 548 (3d April 1153).

'ĀDILE KHĀTŪN, a daughter of Aḥmed Pasha and wife of Sulaimān Pasha, an Ottoman governor of Bagdad. In her husband's lifetime, she took part in the government of the province, had her audience days, in which the petitions of private persons were presented to her through the intermediary of one of her eunuchs. She had a mosque and a caravanserai built and gave them her name. Seeing that the sway was escaping her after the death of Sulaimān, she incited against his successor 'Alī Pasha the Janizary corps, then five of the principal Mamlūks and made 'Omar Pasha, her brother-in-law, to be recognised as governor in the place of 'Alī Pasha (1764). She died in obscurity, the date of her death is unknown.

'ĀDILSHĀHS, designation for the ruling family that reigned in Bīdjāpūr from 895 to 1097 (1489—1686); all the princes of this family added to their names the title of 'Ādilshāh. The founder of that dynasty, Yūsuf 'Ādilshāh, or 'Ādilkhān, attained to higher consideration at the Court of the Bahmanide Muḥammed Shāh II (867—887 = 1462—1482), and when after the latter's death the Bahmanide empire was approaching its end, Yūsuf received the governorship of the province of Bīdjāpūr. As he did not think himself safe in the Court, he removed with his family to the capital of his province. In 1489 he took the title of prince (*Shāh*). The historians, in order to heighten the consideration of the new dynasty, tell that the founder was of princely origin: he was, they pretend, a son of the Turkish sultan Murād II, was obliged to flee with his mother, then sold as a slave and in this way he was received into the body-guard of the Bahmanide. Yūsuf 'Ādilshāh died in 916 (1510) and bequeathed the sovereign power to his descendants. Here are their names and the years of their reign:

Ismā'īl b. Yūsuf . .	916—941	(1510—1534)
Mallū b. Ismā'īl . .	941—941	(1534—1535)
Ibrāhīm I b. Ismā'īl .	941—965	(1535—1557)
'Alī I b. Ibrāhīm . .	965—987	(1557—1579)
Ibrāhīm II b. Ṭahmasp b. Ibrāhīm	987—1035	(1579—1626)
Muḥammed b. Ibrāhīm	1035—1070	(1626—1660)
'Alī II b. Muḥammed	1070—1083	(1660—1672)
Sikandar b. 'Alī . .	1083—1097	(1672—1686)

Under the reign of Muḥammed 'Ādilshāh the 'Ādilshāhs already lost their independance and the right to coin money with their name. The Great Moghul of Delhi Shāh Djahān [q. v.] after he had conquered in 1044 (1634) a large part of the Dekkan, compelled them to pay tribute. Still the dynasty kept on for some time but very soon lost all importance through the rebellion of the Marhatta chief Siwādjī, who put to flight the troops sent against him, killed their general Afḍal Khān and left his previous masters their capital Bīdjāpūr only under paying tribute. This induced the Great Moghul Aurangzīb to march upon Bīdjāpūr, and he succeded in conquering the city (1097 = 1686) after a siege of one year. The last 'Ādilshāh was taken prisoner, and died three years later.

The 'Ādilshāhs deserved well of their capital Bīdjāpūr, which they decorated with their buildings. Some of them are highly praised as promoters of science. [See further BĪDJĀPŪR, there also the bibliography.]

AL-'ĀDIYĀT, "the fleet horses", title of sūra 100.

'ĀDJ (A.) = ivory (also tortoise-shell). The ivory, much spread in the old Egyptian and Babylonian empires, found its way also from India via 'Aden to Arabia. According to the Ḥadīth Muḥammed possessed a comb of *'ādj* and made a present of ivory arm-rings to his favorite wife Fāṭima; the poet of the Umaiyads, al-Farazdaḳ, also makes a female singer to wear such arm-rings. Although the Mussulman theologians partly declared ivory as unclean, yet it won in Arabian small art a continually rising importance, and formed, by side of the slave trade, the most important export article in the commercial towns of the East African coast. It yielded together with ebony, red wood and tin, fine mosaic work (see *Arg. Mus.*, room iv. Nos 57—60). Larger articles were covered with carved work and inscriptions, entire objects were rarely manufactured of ivory. Its use in Muḥammedan incrustation work of the 15th century is very common.

Bibliography: *Lisān al-'Arab*, iii. 158—159; Jacob, *Altarabisches Beduinenleben*, p. 149; A. v. Kremer, *Culturgesch. des Orients unter d. Chalifen*, ii. 279, 302; Prisse d'Avennes, *L'art arabe*, pp. 226-227, pl. 157; Herz, *Catalogue du Musée Arabe*, pp. 101, 107. (HELL.)

ADJA' and SALMA, two parallel mountain ranges in Central Arabia (Nedjd), often called in Arabian tradition the two mountains of Ṭaiyi' [q. v.]. Yāḳūt (*Mu'djam*, i. 122 *et seq.*) makes a detailed statement concerning the immigration of the latter tribe. The same author also mentions the legend connected with these mountains,

namely that Adja' and Salmā were two lovers who met in the house of Salmā's nurse, al-ʿAwdja', and when they were surprised, they fled to the abovesaid mountains and the valley (al-ʿAwdja') lying between them. There they were killed by their furious relatives. More important is what the same author (*loc. cit.*, iii. 912) states in the name of Ibn al-Kalbī, that a red projection of human shape in the middle of the black granite mountain, was called *Fals* and worshiped by the Ṭaiyites. This idol, which had there its own priests, the Banū Bawlān, was destroyed by order of Muḥammed in the 9th year of the Hidjra.

Just as in the ancient times these mountains were called after the tribe of Ṭaiyi' they are now called the mountains of the Shammār, after the Shammār [q. v.].

Bibliography: Besides Yāḳūt, Ḳazwīnī (ed. Wüstenf.), i. 152; ii. 49; Wellhausen, *Reste arab. Heidentums*, pp. 51 *et seq.*; further statements under SHAMMĀR and ṬAYI'.

ADJAL (A.), „term, goal of life", the period decreed by God for individuals as well as for whole classes and totalities, a term which can neither be shortened nor lengthened (Ḳor'ān, vii. 32, x. 50, xvi. 63, xxix. 53, lxxi. 4). „Neither is the life of him who is made to live prolonged nor is anything diminished from his life, but (what is written) in a book (of Allāh's decrees)" (xxxv. 12). The *adjal* is not shortened even through sinning (xxxv. 44, xlii. 13), while on the other hand it may be concluded that Muḥammed presupposed the shortening of the *adjal* as a punishment, but it might be restored to the original length through repentance (xi. 3, xiv. 11). The Ḳor'ān very often emphasizes the expression of *adjal* as the immovable period of life assigned by God with the epithet of *musammā* (xxxix. 43, xl. 69 and elsewhere), „one enounced" (without ambiguity), „through a word which had proceeded from God" (xlii. 13); the same epithet is applied to the course of the unchangeably operating phenomena of nature (xxxi. 28, xxxv. 14, xxxix. 7). The decreed duration of the world is also often designated by this formularistic expression (vi. 2, 61, xxxv. 44). At the end of the time decreed from the beginning for the existence of the world (*adjal musammā*), the period of resurrection enters: neither sooner nor later. One may notice in the commentaries to the Ḳor'ān the tendency to refer the *adjal musammā*, where it is possible, to the period of the end of the world.

The religious conception of the *adjal* resulted for the dogmatic schools of Islām in a series of debated particular questions, about which diverging dogmas have been formed; particularly with respect to the questions: whether violent interruption of life is included in the sphere of the *adjal* decreed by God; whether in the sense of the *adjal* dogma the unnatural manner of making an end to life is identical with the divine decree and included in God's eternal prescience (the death was decreed: the Ash'arites, Abu'l-Hudhail al-ʿAllāf; comp. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xx. 21), or whether the person, for which a longer *adjal* had been decreed and which was killed, could without that violent interruption to its life have continued to live; whether violent death is an entirely free action of the murderer and independent of divine determination (Muʿtazilites; allusion to this difference of opinion concerning the *adjal* by Khwārizmī, *Rasā'il*, Constantinople, 1297, p. 108, l. 4 from the bottom). The advocates of the last view may argue in their favor from the consideration that according to the opposite opinion revenge for homocide and in general punishment for murder would be unjustified and paradoxical. Further the dogmatists discuss in connection with the conception of the *adjal* the question: in how far God lengthens or shortens the *adjal* as a reward for obedience or as a punishment for disobedience respectively, a question to which the answer results in the harmonizing interpretation of the Ḳor'ānic verses quoted above and puts the *adjal* question in the domain of the debates on *ḳadā'* [q. v.]. — There is a modality of the *adjal* question which is applied to the death of great masses by elementary catastrophes, war, persecution, etc.

The treatment of these questions has formed since the beginning of dogmatic literature in Islām a section of dogmatic compendiums, e. g. in al-Ash'arī's *al-Ibāna fī uṣūl al-diyāna* (Ḥaidarābād, 1321), p. 76, al-Īdjī's *Mawāḳif* (Constantinople, 1266), p. 525 and others. A detailed exposition of the school differences with regard to these questions of Islāmic dogmatics is given by Ibn Abi'l-Ḥadīd in his commentary to the *Nahdj al-balāgha*, a work wrongly attributed to ʿAlī; Dildār ʿAlī (a Shī'ite) inserted some quotations from it in an exhaustive chapter of the *'Imād al-Islām fī 'ilm al-kalām* (Lucknow, 1319), ii. 149—153. The Jewish religious philosophy has developed the treatment of the question from the same point of view; see concerning this D. Kaufmann, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xlix. 73—84; S. Poznański, in *Monatsschr. f. Gesch. d. Judent.*, xliv. 142-143. (I. GOLDZIHER.)

'ADJALA (A.) = a wagon, cart. According to Dozy, *Supplément*, it also designates the constellation Ursa Major (*al-Dubb al-akbar*).

'ADJAM (A.; coll.) in opposition to *'Arab* „foreigner", „non-Arab". We find already in pre-Islāmic poetry this designation for non-Arabs (more frequently, however, in the form *A'djam*, pl. *A'ādjim*), and namely not only for Persians; the latter, whose usages and customs are mentioned in pre-Islāmic poetry, are in such cases mostly designated as *Fāris*. Later on the appellation of *'Adjam* was preferably used to designate the Persians, and even now in geographical nomenclature *'Adjam* designates Persia. Although Islām taught the equal worth of Arabs and non-Arabs, yet the Arabs took with them their national pride towards the *'Adjam* also into Islām, and under the Umaiyads asserted it also in the administration [see MAWLĀ]; under the 'Abbāsids the foreign element stepped forth more freely. This competition of the non-Arabian Musulmans with the conceited aspirations of the Arabian element has manifested itself also in literature [see SHU'ŪBIYA].

Bibliography: Goldziher, *Muham. Stud.*, i. 101—176; E. G. Browne, *A history of Persia*, i. 209—270. (I. GOLDZIHER.)

'ADJAMĪ OGHLAN, fourth division of the Janissary corps, composed of 34 *ortas*. They formed the depot of the corps and never left Constantinople, not even in time of war. The recruits received from them their military training before they were admitted to the corps and distributed among the other divisions. According

to the law established by Sulṭān Murād I, the recruits who had been prisoners of war and therefore made slaves or those levied by compulsion among non-Musulmans were obliged to serve at first for seven years as supernumeraries in special barracks. Later on, the admission into the corps having become more and more slow, there arose among them riots, which compelled the authorities to accelerate it (1057 = 1647 and 1059 = 1649). Those that were assigned for the service of the imperial palaces served there as gardeners and guardians and finally formed the Bostandjī corps, others learned the trades of carpenter, calker, farrier, saddler, and barber, or were sent as cultivators into the imperial farms. The 'Adjami-oghlan, who had become Janizaries, received the title of Čikma.

(Cl. Huart.)

'ADJĀRIDA, a Khāridjite sect called after ('Abd al-Karīm) Ibn 'Adjarrad [q. v.], under which al-Shahrastānī (ed. Cureton, p. 96) counts the Ṣaltiya, the Maimūniya, the Ḥamziya, the Khalafiya, the Aṭrafiya, the Shu'aibiya and the Khāzimiya. The Tha'āliba, too, at first belonged to the 'Adjārida, but were no longer considered by the latter as theirs from the time they expressed a milder opinion with regard to the children of the non-Khāridjites, namely that it was allowed to live with them in friendship until they would become guilty of real unbelief or of sins that incur the punishment of death. It may be inferred from this, which is also explicitly stated, that originally the 'Adjārida professed with the Azraḳites the more severe line of thought among the Khāridjites, according to which the children of the non-Khāridjites would enter Hell and that the Khāridjites should renounce them until they would grow up and become believers. Still this was not the opinion of all the 'Adjārida in so far as the Maimūniya and the Khalafiya professed from the beginning a milder opinion. This explains why Maḳrīzī (*Khiṭaṭ*, ii. 355) and others (comp. Haarbrücker, *Religionspartheien und Philosophenschulen*, ii. 406) prefer another classification of the above-mentioned sects.

al-'**ADJDJĀDJ**, more properly 'Abd Allāh b. Ru'ba, a Tamīmite poet, born about 25 (646) and died in 97 (715). Very little is known of his life; he is renowned as the most decided Radjaz poet, and in the first place he composed in the Radjaz metre some longer ḳaṣīdas. Encomium and description form above all the contents of his poetry; the former was chiefly applied to prominent men like 'Abd al-'Azīz b. Marwān, Bishr b. Marwān, al-Ḥadjdjādj b. Yūsuf, Yazīd b. Mu'āwiya, Muṣ'ab b. al-Zubair, Sulaimān b. 'Abd al-Malik, to his tribe and to himself; the latter part was particularly applied to horses, camels, wild asses, wild bulls and weapons. His contention with his son and poetical rival Ru'ba also became decisive for the contents of his poetry.

Bibliography: Brockelmann, *Gesch. d. arab. Litter.*, i. 60; Ahlwardt, *Sammlungen alter arab. Dichter*, ii; Ibn Ḳutaiba, *Kitāb al-shi'r* (ed. de Goeje), pp. 374 *et seq.*

(A. Haffner.)

ADJMĪR (Ajmere, Ajmir), capital of the British enclave Ajmere-Merwara in Radjputana. In 1901 the enclave counted upon 7021, 5 square kilometres (about 2800 square miles) 476912 inhab. (of whom 15⁰/₀ Musulmans), the town 73839 inhab. (the half of them Musulmans). Adjmīr is renowned for its monuments of Musulman architecture, such as Akbar's palace (now a *taḥṣīl* building without Adjmīr proper), the magnificent Arhai-dinka-jhompra mosque built about 1200 by Ḳuṭb al-Dīn Iltutmish and the Dargāh, the sepulchre of the saint Mu'īn al-Dīn Čishtī [q. v.] highly revered in India, with mosques attributable to Akbar and Shāh Djahān. The former used to visit the tomb of the saint every year.

Historical. Adjmīr is said to have been founded in 145 A. D. by Adjaipal, and in 1024 was plundered by Maḥmūd the Ghaznawide. In 588 (1192) the town fell into the power of the Ghūrides and in 1559 it was incorporated by Akbar in the Moghul empire. In 1756 Adjmīr was conquered by the Mahrattas, who held it until 1818 when Dawlat Rāo Sindhia ceded it to the English.

Bibliography: *Imperial gazetteer* (1907); *Rajputana district gazetteer* (1904).

ADJNABĪ (A.), Turkish pronunciation *Edjnebi*, „a stranger", in Turkey particularly: a person of foreign nationality but domiciled in Turkey [for its civil position comp. TURKEY]. — In the Arabic grammar *adjnabī* designates a word in compound propositions, which apparently stands in no grammatical connection with the subject (comp. de Sacy, *Grammaire arabe*, ii. 208).

ADJNĀDAIN (or Adjnādīn), a town in Palestine between Ramla and Bait Djibrīn (comp. Yāḳūt, *Mu'djam*, i. 137, according to Abū Ḥudhaifa: „in the region of Ramla, in the territory of Bait Djibrīn"; al-Bakrī, ed. Wüstenf., i. 72: „in the province of Urdunn, but according to others in that of Filasṭīn, between Ramla and Djibrīn"; Ṭabarī, i. 2125: „a *balad* between Ramla and Bait Djibrīn"; Nawawī, ed. Wüstenf., p. 430). From Ṭabarī's mode of expression (i. 2408) Adjnādain seems to have been a fortress. In Djumādā I 13 (July 634, according to others, in Djumādā II) a large battle took place there between the Arabs and the Greeks, in which battle the imperial troops were so seriously beaten that their general Arṭabūn (Aretion; comp. Butler, *The Arab conquest of Egypt*, p. 215) had to seek a refuge in Jerusalem. Saif (in Ṭabarī i. 2398 *et seq.*) wrongly places the battle in the year 15 of the Hidjra. — The name cannot be authenticated in the more ancient times and appears to have been forgotten also in a later epoch. De Goeje supposes that Adjnādain is to be looked for in the neighborhood of Yarmūk, the Biblical Jarmuth (Josh., x. 3 and elsewhere), that which explains the confusion of the battle of Adjnādain with that of the Yarmūk [q. v.].

Bibliography: Ibn Isḥāḳ (according to 'Urwa), in Ṭabarī, i. 2126; al-Madā'inī, *ib.*, p. 2127; Beládhorī (ed. de Goeje), p. 114; al-Ya'ḳūbī (ed. Houtsma), ii. 151; de Goeje, *Mémoire sur la conquête de la Syrie*, 1864, pp. 33 *et seq.*; A. Müller, *Der Islam im Morgen- und Abendland*, i. 251—252; Wellhausen, *Skizzen*, pp. 6, 57-58, 66.

(F. Buhl.)

ADJRŪMĪYA, better Ādjurrūmiya, title of a much used grammatical sketch, called after the author Ibn Ādjurrūm [q. v.].

'ADJŪZ (A.), „old woman". The „days of the old woman" (*aiyām al-'adjūz*) are the last winter days in Syria and elsewhere, generally seven in number, namely the last three days of Shubāṭ (February) and the first four days of Ādhār (March), which are decried as rainy, stormy and cold. Each of these days has its own name. Sometimes their number is given only as five and their names are also differently stated. A similar designation for certain days, but in a different season of the year, exists with various nations around the Mediterranean Sea.

Bibliography: Ḳazwīnī (ed. Wüstenf.), i. 77; further sources in Lane, *Lexicon*, i. 1961.

ADJWAF (A.), „concave" (derived from *djawf*, „cavity", „belly"), a term used in the terminology of the grammarians to designate the *verba mediae infirmae* (*mu'tall al-'ain* = ע״ו, ע״י), which are occasionally designated as „concave roots" also by Europeans, because the feeble second radical, which eventually may entirely disappear (as قُلْتُ from قَوَلَ), is enclosed between two strong ones, so that the entire root is considered as concave. These verbs are called according to whether the second radical is originally a و or a ي: *al-adjwaf al-wāwī* or *al-adjwaf al-yā'ī*. Such verbs, e.g. *ḳāla yaḳūlu*, *bā'a yabī'u*, are considered as irregular (more details about them in Zamakhsharī, *Mufaṣṣal*, p. 178, l. 21 — p. 184, l. 17), with the exception of those that designate colors or bodily defects, like *ḥawira*, *'awira*; in these verbs the و is considered as a strong radical. For the *verba mediae infirmae* in Arabic as compared with the other Semitic languages comp. Wright, *Comparative grammar*, pp. 242—255; Zimmern, *Vergl. Gramm.*, § 31.

Bibliography: Sprenger, *Dict. of techn. terms*, p. 241; *Tādj al-'Arūs*, vi. 63.

(WEIL.)

'ADL (A.), „equitableness", also concrete (= *'adīl*), „equitable", „blameless", therefore *'adl* designates in the *fiḳh* a person whose testimony is valid; antithesis *fāsiḳ*; comp. Juynboll, *Handleiding tot de kennis van de Moh. wet*, pp. 293 *et seq.*; Dozy, *Supplément*, ii. 103. In numismatics *'adl* means „of full weight", and therefore is this word (often abridged in ع) stamped on coins to show that they have the just weight and are current (*'adlī*).

'ADLĪ, poet's name of Meḥmed III, and Maḥmūd II, further of Bayezīd II. It is true that the latter's poet's name is supposed by Gibb (*History of the Ottoman poetry*, ii. 32 *et seq.*) to have been 'Adnī, but the MS. of Upsala bears 'Adlī.

'ADN (A.), a word occurring in the expression *djannāt 'adn* (Kor'ān, ix. 73) which designates the Garden of Eden, a designation taken from Biblical tradition [see DJANNA].

'ADNĀN, according to Arabian genealogists the ancestor of the last immigrated „tertiary" Arabs (Ismā'īlites); comp. Wüstenfeld, *Register zu den geneal. Tabellen der arab. Stämme*, p. 47; Ibn Hishām (ed. Wüstenf.), i. 5-6; Ṭabarī, i. 1112 *et seq.*; Caussin de Perceval, *Essai sur l'histoire des Arabes*, i. 8 *et seq.*, 175 *et seq.*

ADRAMĪT (EDREMID, the ancient ADRAMYTTIUM), a town in Asia Minor, capital of a ḳaẓa in the province of Khudāwendigiār (Brusa), four kilometres (about $2^1/_2$ miles) distant from the sea; 6200 inhab., of whom 4960 Mussulmans and 1240 Orthodox Greeks; preparation of olive oil and wine; thermal sulpho-ferruginous springs in the village of Frenk. Commerce is carried on through the harbor of Akčai, 10 kilometres (a little more than 6 miles) distant from the town, with which it is connected by an alley of gigantic olive trees. — The ḳaẓa of Adramīt counts 50614 inhab., of whom 42933 Mussulmans and 7482 Orthodox Greeks; it is divided into two nahiyes (in which the capital) and 102 villages.

Bibliography: V. Cuinet, *La Turquie d'Asie*, iv. 273 *et seq.*; Ch. Texier, *Asie Mineure*, p. 205; E. Reclus, *Nouv. géogr. univ.*, ix. 596; *Sālnāme* (1325), p. 773.

(CL. HUART.)

ADRĀR (in Berber „mountain range"), name of two African regions: Adrār of the Awellimmiden [see TUAREG], situated north of the Middle Niger, and Adrār Tmarr, or West Adrār, to the north of Senegal between the newly organized French territory of Mauritania and Southern Morocco. The pronunciation of the natives is, according to Barth, for the former Aderār, for the latter Aderēr.

West Adrār is one of the least known parts of the Sahara. Perhaps in the beginning of the 16th century it was visited by the Portuguese settled in Arguin, who came there now and then to trafic and exploit the mines. Since then only a few Europeans traveled through the country: the Frenchmen Panet (1850) and Vincent (1860), the Spaniards Cervera and Quiroga (1886) and finally the members of the Blanchet expedition (1900), who could not go beyond Atar.

Adrār has the shape of a triangular plateau inclined to the east and southeast. To the west it is bordered by a reef of moderate elevation (about 175 metres), but so steep that it offers only one practicable passage for beasts of burden, the Tiderer neck, and to the east by an unleveled surface partly masked by sand downs. The interior of the plateau is furrowed by oblong depressions, similar to crevices, in which alluvium is accumulated and in which some humidity is always left. The rains that fall there from August till November are indeed abundant enough to supply with water some Wādīs that flow from northeast to southwest, and yet Adrār is after all a rather miserable region. Cultivation (barley and millet) is rudimentary; irrigation, indeed, is not practiced even for the date tree, which, however, forms the principal resource of the country. Industry scarcely exists, the commerce is confined to transactions carried on at the passage of the caravans.

The population is rather scanty (7000 souls according to Barth). The sedentary people are grouped in the oases, of which the main ones are, from west to east: Atar (200 houses and 2000 settled people according to the Blanchet mission); Shingeṭī, the most important place in the time of Captain Vincent, and whence still now depart the caravans to Saint Louis and Nioro in the Sudan; Wadan, now entirely in decay; and Ujeft.

Adrār seems to have been very early occupied by Berbers. It is the cradle of the Lamtūna, who, with other tribes of the same race, took part in the Almoravide invasions [see ALMORAVIDES, ṢANHĀDJA]. Some Berber tribes of the Atlas, thrown back into the desert, took refuge there at a later

date as well as Arab tribes. Towards the middle of the 17th century, the Kehlāma, who had settled in Adrār, were driven from there by the Ulād Billah; the latter founded there a powerful confederation. It was destroyed in 1680 by a nephew of Mūlāi Ismāʿīl, whose army advanced till Tagant. The authority of the sherifs, however, could not maintain itself in these remote regions, and at present Moroccan influence over Adrār is disputed by the ceaseless advance of the French north of Senegal.

The tribes of Adrār fall into two categories: marabouts and warrior tribes. The warriors or „Hassan" live only by plunder; the principal warrior tribes are the Ulād Ghailān, Ulād Bū Sba and Ulād Yaḥyā b. ʿOthmān, who claim pure Arabic blood. Each of these tribes is ruled by a shaikh, who is assisted by a *djamāʿa*. The marabout tribes feed the warriors. The former generally are nomads, going up with their herds towards the north during the winter and going down towards the south in the dry season. Some of them are sedentary, e. g. the Smacid that settled at Atar; they are administered by *djamāʿas*. As to the confederation of the Kunta, which extends over Tagant and Adrār, it comprises both marabouts and warrior tribes. Finally warriors and marabouts have sometimes tributaries or „harratin", which are unanimously considered as the survivors of the autochthonal nations. All these nations embraced Islām at the time when this religion was introduced into the Sahara from North Africa. The religious brotherhoods, particularly those of the Ḳādiriya and Fāḍiliya count there many followers, and the religious chiefs such as Saʿd Bū enjoy considerable prestige and influence.

ADRIANOPLE. [See edirne.]

ʿAḌUD al-DAWLA Fennā Khosraw Abū Shudjāʿ b. Rukn al-Dawla, a Būyide sultan, born at Iṣpahān on the 5th Dhu'l-Ḳaʿda 324 (24th September 936). At the age of 13 (337 = 948-949) he was appointed by his uncle ʿImād al-Dawla his successor to the throne, and when the latter died in the following year, ʿAḍud al-Dawla succeeded him under the guidance of his father in the domination over the province of Fārs. His warlike activity, however, began only in 357 (968) when he seized on Kirmān; later on (Rabīʿ I 363 = December 973) he conquered ʿOmān. In the following year (14th Djumādā I 364 = 30th January 975) ʿAḍud al-Dawla, in a battle near Wāsiṭ, inflicted on the Turks under the leadership of Alftegin a terrible defeat, after which he triumphingly entered Bagdad. He won by presents the caliph al-Ṭāʾiʿ li-'llāh, who had fled with the Turks to Takrīt, and had him come back to Bagdad. He had for a long time coveted Persian ʿIrāḳ, the territory of his cousin Bakhtiyār, and only fear for his father had kept him off from seizing it. Nevertheless after the defeat of the Turks he obtained through intrigues the abdication of Bakhtiyār, whom he threw into prison the 26th Djumādā II (13th March) of the above-said year, and only on the intervention of Rukn al-Dawla he was compelled to release him and return him his kingdom. After Rukn al-Dawla's death (Muḥarram 366 = September 976) ʿAḍud al-Dawla marched at the head of a strong army to ʿIrāḳ, and after a bloody battle with Bakhtiyār's troops he seized Baṣra; in the following year he subjugated the whole of ʿIrāḳ. Since then he conquered one province after the other: in 369 (979-980) he took away the kingdom of his brother Fakhr al-Dawla; in 371 (981-982) he rendered himself master of Djurdjān and Ṭabaristān, so that he united under his scepter the kingdoms of all the other Būyides. Already in 367 the caliph had conferred upon him the title of Sulṭān and in the following year he ordered to mention in the Friday prayer after himself ʿAḍud al-Dawla with the title of „king of kings" (*shāhinshāh malik al-mulūk*) and to beat the drum in front of his door in the hours of prayer. Thus ʿAḍud al-Dawla was the first in Islam who took the title of „king". The ties between him and the caliph were strengthened still more by that the latter married his daughter (370 = 980-981). In 371 (981-982) ʿAḍud al-Dawla sent the ḳāḍī Ibn al-Bāḳillānī on an embassy to Constantinople, about which the Eastern authors relate many fables.

In 369 (979-980) ʿAḍud al-Dawla had been stricken with epilepsy, which grew more and more violent, till he died of it on the 8th Shawwāl 372 (26th March 983). He was temporarily buried in Bagdad, where he died, his death having been kept secret; in the following year his death was made public and his body was transported to Kūfa for definite burial.

ʿAḍud al-Dawla is considered not only as the greatest Būyide prince, but also as the most illustrious ruler of his time. In spite of his manifest ambition for the sovereign power the Musulman historians describe him as a man highly endowed and as one of great love for justice and truth. With regard to the latter trait it is told that he placed in his audience hall various kinds of wild animals for the purpose of intimidating those who would tell a lie. All what is certain is that he distinguished himself by his charitable deeds and by the favors he lavished on poets and literary men. Of his numerous buildings there may be mentioned: the celebrated hospital at Bagdad which bore his name, finished in 368 (978-979), the mashhad on the presumed tomb of ʿAlī, the weir of the Kur near Shīrāz known under the name of Bend Emīr, and others. For these works he found valuable aid in his Christian vizier Naṣr b. Hārūn. Many poets, among whom Mutanabbī, sang his glory, many writers dedicated to him their works, as for instance Abū ʿAlī al-Fārisī, who wrote for him his *Kitāb al-īḍāḥ*. ʿAḍud al-Dawla himself wrote verses, several of which al-Thaʿālibī reproduced in the *Yatīmat al-dahr*.

Erpenius), pp. 221 *et seq.*; Wilken, *Mirkhond's Gesch. d. Sultane aus dem Geschlechte Bujeh*, ch. v-vi; Weil, *Gesch. d. Chalifen*, iii. 23 *et seq.* (M. Seligsohn.)

ʿAḌUD al-DĪN. [See al-īdjī.]

ʿAḌUD al-DĪN Abu'l-Faradj Muḥammed b. ʿAbd Allāh, of the family of Ibn Muslima [q. v.],

held the office of *Ustād Dār* under al-Mustandjid until he had the latter assassinated in the bath and homage paid to al-Mustaḍī' (566 = 1170). He was appointed vizier by the latter, but one year later he was dismissed and shortly afterwards reestablished in his office. When 'Aḍud al-Dīn prepared himself for the pilgrimage to Mecca in 573 (1178) he was killed by the Ismā'īlītes. — Ibn al-Ta'āwīdhī [q. v.] was one of the poets who glorified him.

Bibliography: Ibn al-Athīr (ed. Tornb.), xi. 219 *et seq.*; *al-Fakhrī* (ed. Ahlwardt), pp. 367 *et seq.*

ADWIYA (A.) pl. of *dawā'*, „medicinal drug". The Arabs divided the medicinal drugs into simples (*mufrada*) and compounds (*murakkaba*), the latter being comprised also under the term of *aḳrābādhīn*, „pharmacopoeia").

The simples again were divided according to their properties into warm and cold, dry and moist, and namely according to the temperature of the human body.

The simples are also distinguished as primary and secondary, according to whether their natural mixture consists of one or more elements. Thus for instance milk is considered as a secondary simple, since it is composed of water, cheese and fat. The effects of the mixture must be learned by practice or analogy, as for instance the same medicament may act when warm on the human body and when cold on that of a lion or of a horse.

The following terms were used to designate the effects of the medicines:

1. *mulaṭṭif* (rarifying); 2. *muḥallil* (loosening); 3. *djālī* (polishing); 4. *mukhashshin* (making rough); 5. *mufattiḥ* (opening); 6. *murkhī* (relaxing); 7. *munḍidj* (digestive); 8. *hādim* (purgative); 9. *kāsir al-riyāḥ* (wind breaking); 10. *muḳaṭṭi'* (cutting off); 11. *djādhib* (pulling); 12. *lādhi'* (biting); 13. *muḥammir* (epispastic, a vesicant); 14. *mudaghdigh* (a stimulent); 15. *muḳarriḥ* (ulcerating); 16. *muḥriḳ* (caustic); 17. *akkāl* (consuming); 18. *mufattit* (wiping off, removing roughness); 19. *mu'affin* (putrefying); 20. *kāwī* (burning); 21. *ḳāshir* (wiping off hard); 22. *mubarrid* (cooling); 23. *muḳawwī* (fortifying); 24. *rādi'* (repellent); 25. *mughalliẓ* (incrassative, the opposite of N°. 1); 26. *mufdjidj* (repellent); 27. *mukhaddir* (narcotic); 28. *murattib* (moistening); 29. *munaffikh* (making odurous); 30. *ghassāl* (washer, polisher); 31. *muwassikh li'l-ḳurūḥ* (making the ulcers filthy); 32. *mumazzik* (tearing); 33. *mumallis* (emollient); 34. *mudjaffif* (desiccative); 35. *ḳābiḍ* (astringent); 36. *'āṣir* (compressing); 37. *musaddid* (constipating); 38. *mughrī* (agglutinant); 39. *mudmil* (cicatrizing); 40. *munbit li'l-laḥm* (making flesh grow); 41. *khātim* (covering).

Some examples may show how these terms are defined. The definitions invariably begin with the formula: „This is the medicament, the intrinsic property of which is to" . . . Thus for N°. 7 (*munḍidj*): „This is a medicament of which the intrinsic property is to help the process of mixing at the time of digestion by uniform warming; it also has an astringent power which holds together the mixture and forcibly does not let it be dissolved, for that would be a disruption." — For N°. 26 (*mufdjidj*): „This is the opposite of *hādim* (N°. 8) and of *munḍidj* (N°. 7), and it is a medicament the property of which is to remove by its coolness the effect of natural and foreign warmth; likewise at the time of nourishment and mixing, until it remains indigested and not ripened."

Now and then medicines are joined to the definitions as examples, e. g. at N°. 1 (*mulaṭṭif*): hyssop, thyme and camomile; at N°. 2 (*muḥallil*): castoreum; at N°. 4 (*mukhashshin*): melilot, etc.

Sometimes behind the function only the predicate *ma'rūf* (known) stands instead of the usual definition, as is the case with N°. 28 (*murattib*).

These participial definitions of medicaments are followed by three substantival ones:

1. *al-Dawā' al-ḳātil* (the killing medicine), it alters the mixture to a pernicious excess, such as euphorbium and opium.

2. *al-Samm* (poison), it corrupts the mixture only by its special reaction, as for instance the foxglove.

3. Theriac and bezoar-stone, both are preservative medicines for the strength and health of the soul.

In Ibn Sīnā there follow twelve tables in which are briefly enumerated the medical cases of coloring, adorning, swellings, pustules, wounds and ulcers, of the organs of the limbs, head, eyes breathing and chest, of the organs of digestion, and secretion, of fever and of poisons. An index in the Abdjad order of the simple medicaments forms the close.

The Arabs possess an old literature on this part of medicine; it arose simultaneously with the Arabic translation of the Greek medical works. The meritorious Isḥāḳ b. Hunain composed a *Kitāb al-adwiya al-mufrada* (Ibn al-Ḳifṭī, ed. Lippert, p. 80, l. 8), and thanks to the celebrated Harrānian Thābit b. Ḳurra we possess two monographs on this subject: 1. *Kitāb fī udjmās mā tomḳasimu ilaihā'l-adwiya*, (*ibid.*, p. 119); 2. *Kitāb fī udjmās mā tūzanu bihi al-adwiya* (*ibid.*). The valuable work of Ibn al-Baiṭār (d. 646 = 1248): *Djāmi' mufradāt al-adwiya wa'l-aghdhiya*, was first made known through a German translation of inferior value by J. v. Sontheimer under the title of *Grosse Zusammenstellung über die Kräfte der bekannten einfachen Heil- u. Nahrungsmittel* (Stuttgart, 1870—1872), then through the publication of the Arabic text (Būlāḳ, 1875) and finally it was translated into French by the military physician L. Leclerc under the title of *Traité des simples* (Paris, 1883) and furnished with notes and an index. It is to be considered as the most important Arabic work in this domain as it unites both practical knowledge and nomenclature and contains more than 3000 names.

The work of M. Steinschneider: *Heilmittelnamen der Araber* (*Wiener Zeitschr. f. d. Kunde des Morgenl.*, xi), which contains 2043 numbers, is also based on profound original researches.

(J. LIPPERT.)

AF'Ā (A.), the female viper, a black spotted, venimous snake, of various sizes, with a broad head, narrow neck and short tail, sometimes with two horny scales over the eyes (the horned viper). The viper, which lives mostly hidden under the sand, was considered by the Arabs as „the greatest enemy of man" (Damīrī), and as „one of the ugliest beasts" (Ḳazwīnī); many fabulous accounts, of which very little is true, are in circulation about it: e. g. that it lives to an age of 1000 years, that it becomes blind and recovers its sight

at the *rāsyānij* tree etc. In ancient poetry the viper is represented as the emblem of the mortal enemy, namely of him who seeks revenge for murder, and in proverb the viper is „violent“, for it needs only to appear in a house and it will scare away all the inhabitants. Another proverb reads: „He who has been stung by a viper is afraid to take hold of a rope“. — The vipers of Sidjistān are considered as the most dangerous. Like the Greeks the Arabs considered the flesh of the viper as a remedy for elephantiasis and other skin diseases. Viper's blood was supposed to fortify the eyes and the dried heart of a viper to act as a talisman against a charm.

Bibliography: Damīrī, i. 34-35; Ḳazwīnī (ed. Wüstenf.), i. 428-429; Ibn al-Baiṭār, *al-Djāmiʿ* (Būlāḳ, 1291), i. 46. (HELL.)

AFʿĀL (A.). [See FIʿL.]

AFĀMIYA or FĀMIYA, the ancient Apamea, situated near great swamps in the Orontes valley. The city, important in the time of the Seleucides, was conquered and devastated in 540 by the Persian king Khosraw. After the capture of Ḥimṣ (Emesa) Afāmiya surrendered to Abū ʿUbaida and since then played no special part. A terrible earthquake in 1152 changed it in a heap of ruins, which show still now the site of the former city and above which towers only the old Ḳalʿat al-Muḍīḳ.

Bibliography: Belādhorī (ed. de Goeje), p. 131; Yāḳūt, *Muʿdjam*, i. 322-323; iii. 846-847; E. Sachau, *Reise in Syrien und Mesopotamien*, pp. 71—82. (F. BUHL.)

AFĀR. [See DANĀKIL.]

AL-**AFḌAL**, his full name, ABU'L-ḤASAN ʿALĪ AL-MALIK AL-AFḌAL NŪR AL-DĪN, an Aiyūbide, the eldest son of Saladin, shared in the sad fate of most of the sons of that great man. He was born in 565 (1169-1170) and was initiated into Islāmic science by the best teachers in Cairo and Alexandria. In 579 (1183-1184), when he was only 14 years old, he was entrusted with the representation of Saladin in Egypt. Taḳī al-Dīn ʿOmar was appointed his mentor. As they did not agree together, Saladin recalled both of them in 582 (1186-1187) and enfeoffed al-Afḍal with Damascus. From there the young lord of less than twenty was under the control of his father, with whom he took part in the battle of Ḥiṭṭīn (25th Rabīʿ II 583 = 4th July 1187). His own account of this first battle of his has been preserved. Shortly afterwards he conquered ʿAkkā, which he received as a fief. Then he took part under the command of his father in the battles against the crusaders and in 588 (1192) in the negotiations with Richard Cœur-de-Lion. On Saladin's death (27th Ṣafar 589 = 4th March 1193) he inherited Damascus and Syria as well as the suzerainty over the other Aiyūbides. But evidently he was not yet mature for such an important position, for just at that time this man, otherwise so pious and depicted almost as an ascet, is said to have indulged in various kinds of debauchery and to have entrusted his minister Ḍiyāʾ al-Dīn b. al-Athīr al-Djazarī, the brother of the celebrated historian, with the management of the State affairs. The disastrous influence of his minister is supposed to have induced him to neglect the old and meritorious emīrs of his father. The latter having been disappointed, abandoned him and went over to his brother al-ʿAzīz in Egypt. Thereupon al-ʿAzīz declared himself independent and set out in 590 (1193) for the purpose of conquering Damascus. The two disunited brothers were once more reconciled by the old and well-tried Saif al-Dīn or Saphadin (al-ʿĀdil I, q. v.) and other mediators, but in the following year a new expedition against Damascus came about again. This time al-ʿAzīz was abandoned by his troops before the gates of Damascus, was obliged to flee and was pursued till Egypt by al-Afḍal, who was joined by al-ʿĀdil. Al-Ḳāḍī'l-Fāḍil, the aged minister of their father, reconciled on Egyptian soil the contending brothers; al-Afḍal returned to Damascus while al-ʿĀdil remained with al-ʿAzīz in Egypt. In the year 592 (1195-1196) the Egyptian allies returned again to Syria with a hostile intention; al-Afḍal was removed from Damascus and was indemnified with the small fortress of Ṣarkhad, which he received as a fief. When al-ʿAzīz died in 595 (1198-1199), the Egyptian emīrs, leaving out the powerful al-ʿĀdil, called al-Afḍal to Cairo as atābeg of the minor al-Manṣūr. He wanted directly to reconquer Damascus, but al-ʿĀdil prevented him, sowed discord between him and his helpers and followed in his footsteps to Egypt; there al-Afḍal was forced to capitulate in Rabīʿ II 596 (Jan.-Febr. 1200). The promises made to him were not fulfilled and he had to return again to Ṣarkhad. Thereupon he allied himself in the following year with his brother al-Ẓāhir of Aleppo, who promised him to conquer for him Damascus. The city was already on the point of falling when the two brothers became disunited and the siege was raised. Al-Afḍal withdrew to Ḥimṣ, where his family was found, as he had previously given up Ṣarkhad. In the negotiations of the following year he received from al-ʿĀdil the three fortresses: Ḳalʿat Nadjm, Sarūdj and Sumaisāṭ, but in 599 (1202-1203) they were taken again from him. His mother tried in vain to intercede for him with al-ʿĀdil. Still al-Afḍal established himself firmly in Sumaisāṭ and declared himself the vassal of the Seldjūḳide of Asia Minor, Rukn al-Dīn Sulaimān II. With the aid of the latter's third successor Kai-Kāwūs he attempted once more, and namely soon after the death of his brother al-Ẓāhir of Aleppo, to found an empire. The enterprise, however, entirely miscarried on account of discord in the camp of the allies, and the interference of al-Ashraf, the son of al-ʿĀdil (615 = 1218-1219). Al-Afḍal renounced all further attempts of conquest and returned to Sumaisāṭ, where he ended his life full of disappointment.

AL-**AFḌAL** (al-Malik al-Afḍal) ʿABBĀS B. ʿALĪ, of the Rasūlide dynasty [q. v.], reigned in Yemen from 1363 to 1376. He also occupied himself with genealogy, and among other works he wrote: *Bughyat dhawi'l-himam fī maʿrifat ansāb al-ʿArab wa'l-ʿAdjam*.

al-**AFḌAL** b. Badr al-Djamālī, a Fāṭimide general and vizier, Abu'l-Ḳāsim Shāhinshāh, surnamed al-Malik al-Afḍal, was the son of the minister for many years of the Fāṭimide caliph al-Mustanṣir, the Armenian Badr al-Djamālī, who, shortly before it was too late, brought the Fāṭimide empire once more to a flourishing state. Badr al-Djamālī, simply known under the title of Emīr al-Djuyūsh, knew how to make for himself such an independent position beside the throne that the caliph, in spite of his aversion, had to yield and after Badr's death confirmed his son Shāhinshāh in all the offices of his father. Badr and al-Afḍal are the first examples of omnipotent generals, in whose hands the caliphs were reduced to insignificant puppets, a fact which characterizes the entire later history of the Fāṭimides. Under both Armenians Egypt enjoyed a well-organized administration and the tranquility of peace. We do not know all the details about their interior policy, but it is praised by all historians. — Al-Afḍal had scarcely taken charge of the affairs — his father had died in Dhu'l-Ḳa'da or Dhu'l-Ḥidjdja 487 (Nov. 1094- Jan. 1095) — when, in the last days of the year, the caliph al-Mustanṣir followed his great minister into the grave. Al-Afḍal then placed on the throne not the eldest son of the caliph, Nizār, but the youngest son, Aḥmed, under the name of al-Musta'lī, upon whom he hoped to maintain his influence more easily. Nizār fled with his loyal partisans unto Alexandria, where he was proclaimed caliph. Al-Afḍal marched against him, suffered at first adversity, but at last became master of the revolt and had Nizār and his followers executed. With this Nizār was connected the Shī'ite sect of the Nizārites, whose specially renowned champions were the lords of Alamūt. After Nizār's death al-Afḍal ruled without opposition over Egypt. The death of the caliph al-Musta'lī (14th Ṣafar 495 = 8th December 1101) did not affect the situation either. Al-Afḍal had the son of the deceased, al-Manṣūr, a child of five years, proclaimed caliph and gave him the honorific title of al-Āmir. For twenty years al-Afḍal succeeded in wielding this caliph also entirely at his will. But when al-Āmir grew older and other influences prevailed upon him he could not tolerate any longer the tutelage of his minister. He decided to get rid of him; at his instigation al-Afḍal was suddenly attacked in the open street (end of Ramaḍān 515 = beginning of December 1121). The vizier succumbed to his wounds shortly afterwards; the caliph affected much grief, but immediately after the death of al-Afḍal he ordered to clear the latter's house and appropriated the fabulous riches which al-Afḍal had hoarded during his long rule.

The historians, occupied as they were with narrating al-Afḍal's campaigns and the military events in Syria, told very little of his interior political activity; and yet al-Afḍal's rule coincided with the first crusades. This man, otherwise so far-sighted, seems to have at first completely misunderstood the character of that tremendous movement. He considered the knights of the first crusades as welcomed helpers against the Seldjūḳs that settled in Syria, who in the lifetime of his father had almost torn away the whole of Syria from the Fāṭimides. The Franks had already taken Antiochia when al-Afḍal set out (491 = 1098) to wrest Jerusalem from the Ortoḳides; he succeeded in doing it after a short siege. But this victory was nothing else than a preparatory work for the crusaders, who afterwards had a more easy task, and who a few months later were masters of Jerusalem. Al-Afḍal experienced that the crusaders still refused at that time to enter into negotiations only too late in 492 (1098-1099), when, after he had tried in vain to come to friendly terms, he was grievously beaten near Askalon. In 494 (1100-1101) he sought to revenge himself, but only in 496 (1102-1103) his general won a victory over Baldwin. During all this time al-Afḍal carried on war with much zeal, he sent to the field his best generals, even his own sons, but he obtained no lasting success; one city of Palestine after the other fell into the hands of the crusaders: 'Akkā in 497 (1103-1104), Tripoli in 503 (1109-1110); in 511 (1117-1118) Baldwin even ventured to push forward unto Egypt and reached Tinnīs, but he died on his retreat. In the year of al-Afḍal's death only a few forlorn places of Syria were still in Musulman possession, first of all Tyre and Askalon. And still al-Afḍal had left nothing unattempted, he had even managed a cooperation with the atābeg of Damascus. The domination of the Fāṭimides in Syria came to an end. In spite of these failures abroad and his arbitrary policy at home, al-Afḍal's rule on the whole was a blessing for Egypt.

ĀFERĪN (P.; = Pazend *Āfrīn*), lit. „blessing" (from *āfrī* + suffix *na*), in opposition to *nafrīn*, „curse" (*na* + *āfrīn*); *āfrīn* is generally used in the sense of „bravo"! The dictionaries give *farī* (Zend *frīnaiti*, Vedic *prīṇāti*) as the abridged form. Borrowed by the vulgar Arabic: *'afārim* (Egypt), *afaram* (Algeria). The astronomers of Djalāl al-Dīn Malik Shāh gave the name of Āferīn to the first of the five intercalary days at the reform of the Persian calendar.

AFGHĀNISTĀN, country in Southern Asia.

a. Geographical outline.

The country now known as Afghānistān has borne that name only since the middle of the eighteenth century, when the supremacy of the Afghān race became assured: previously various districts bore distinct appellations, but the country was not a definite political unit, and its component parts were not bound together by any identity of race or language. The earlier meaning of the word was simply „the land of the Afghāns", a limited territory which did not include many parts of the present state but did comprise large districts now either independent or within the boundary of British India. As at present con-

stituted, under the rule of the Bārakzai emirs, Afghānistān consists of a territory of irregular shape lying between 29° 30′ and 38° 30′ N. lat. and between 61° and 75° (or, if the long strip of Wakhān is omitted, 71° 30′) E. long.

Geological formation. This country forms the northeastern portion of the great Iranian plateau, which is bounded to the north by the Central Asian depression, and to the east by the plain of North India, while to the south and west it slopes away into the depressed tract which occupies the central portion of the plateau, and on the southeast is connected with the mountain system of Balōčistān. The northern barrier of the highlands is the mountain range extending westwards from the Pamir, with its outlying ridge, the Band-i-Turkistān, beyond which the plain of sand and loess extends to the Oxus. On the east there is a sudden drop into the Indus valley. It will be seen therefore that, with the exception of the loess plain of Turkistān, the whole country belongs to the plateau, which is itself a late geological formation of the tertiary period, mainly sandstones and limestones. The northeastern part of the plateau previously formed part of a great ocean connecting the Caspian depression with the North Indian plain. The process of upheaval which has raised it still continues, and Holdich considers that the extraordinarily deep river gorges are due to the fact that the erosive action of the rivers is too slow to keep pace with the upward movement.

Orography. The most prominent feature of the mountain system is the northern range running east and west above alluded to as forming the northern boundary of the plateau. It divides the Turkistān districts on the north (the ancient Bactria) from the provinces of Kābul, Herāt and Ḳandahār (the ancient Ariana and Arachosia) on the south. This main range is known by various names such as Hindū-kush on the E. where it branches from the Pamir, Kōh-i Bābā further west, and Kōh-i Safīd and Siyāh-Bubuk near Herāt; the latter is generally known as Paropamisus, although the true Paropamisus (or Paropanisus of Ptolemy) included the Hindū-kush. The greater part of the country south of this range is occupied by a number of subsidiary chains or long spurs which run from east to west or more generally from northeast to southwest. These ranges and the intervening valleys form the greater part of the Herāt and Ḳandahār provinces, while the tangled mass of mountains lying to the south of the eastern Hindū-kush comprises the valleys of the Kābul and Kuram rivers and forms the provinces of Kābul and Kāfiristān. The highest elevation in the northern range is the Shāh Fulādī peak (16870 ft. = 5158 metres) in the Kōh-i Bābā, and the long spur running to the southwest contains several peaks of about 11000 ft. (3353 m.). The ridges dividing the Helmand, Tarnak, Arghandāb and Arghasān are outliers of this system, and it may be traced further southeast into British Balōčistān. The Sulaimān Range (highest peak the Takht-i Sulaimān 11200 ft. = 3415 m.), which drops finally into the Indus valley and is the eastern edge of the plateau, is beyond the political limits of Afghānistān. The mountains further north on this eastern flank of the plateau between the Kuram and Gomal rivers are a more irregular mass with peaks over 11000 ft. (3353 m.), while further north still between the valleys of the Kābul and the Kuram is the Safīd Kōh, the highest range in Afghānistān after the Hindū-kush and Kōh-i Bābā (highest peak Sīkārām 15600 ft. = 4545 m.)

River system. Northward from the Hindū-kush the level of the country falls rapidly towards the Oxus valley, while southward the valleys fall more gradually towards the Sīstān depression containing the Helmand Hāmūn (= H. Lake) and its extension the Gōd-i Zirah, into which flow, with the exception of those belonging to the Indus system, all the rivers south of the Hindū-kush. Thus the rivers fall naturally into three groups, which may be called the Indus group and the Oxus group.

The Indus group comprises the Kābul river and its affluents, of which the most important are the Tagāo and Kunar flowing from the Hindū-kush on the north and the Lōghar flowing from the Gul-Kōh on the south. South of this the Kuram rising in the Paiwar, and its tributary the Tōčī, called in its lower course the Gambila, which joins it in British territory below the mountains. Still further south separating the Wazīristān mountains from the Takht-i Sulaimān is the Gomal formed by the junction of the Kundar and Zhōb. These rivers though of small volume drain extensive tracts and mark important military and trade routes through the mountains between India and the plateau. Other small streams such as the Wahoā, Lūnī, Kahā and Nārī further south serve a similar purpose. It may be noted that many of these streams flow not along the natural valleys formed by the mountain range but transversely across the sandstone and limestone ridges of the Sulaimān Mountains, through which they cut deep precipitous gorges.

The second or Helmand group consists of the Helmand and its tributaries, and of the other rivers running towards the southwest into the Sīstān depression. The Helmand or Hirmand (the Haetumat of the Avesta, the Etymandros of classical writers) is the principal of these. It rises near Kābul and flows through narrow mountain valleys into the more open country of Zamīn-dāwar, where it is joined on the left bank by the Arghandāb (Harahwaiti, Arachotis). The latter in its turn is formed by the junction of the Upper Arghandāb, the Tarnak, and the Arghasān (or Arghastān), which drain a series of nearly parallel northeasterly and southwesterly valleys. Another member of the same system is the stream flowing southward from Ghazna which never joins the Helmand system but is absorbed by the Ābistāda Salt Lake. Other rivers west of the Helmand with the same general southwesterly flow, which also discharge into the Hāmūn, are the Khash-rūd, the Farāh-rūd and the Harūt-rūd.

The Hāmūn, a basin sometimes of small extent, expands enormously to the south in seasons of high flood, when the hill fort of Kōh-i Khwādja becomes an island. It then discharges itself through a channel called the Shēlagh into a still lower depression known as the Gōd-i-Zirah. Part of the Hāmūn is in Afghān territory and part in Persian according to modern demarcations which have divided Sīstān. The Hāmūn is only 1580 ft. above sea-level, and the Gōd-i-Zirah is still lower. — The Hāmūn on the average overflows once in ten years into the Gōd-i Zirah. Its water is only slightly

brackish, and can be drunk, a circumstance due no doubt to its occasional overflow. The level of Sīstān does not appear to have risen since ancient times in spite of the enormous volumes of silt discharged by the rivers which have no other outlet. The cause of this is probably the prevalence of violent northwest winds through a great part of the year, which remove the light surface soil.

The third or Oxus group of rivers comprises the Oxus and its southern tributaries, as well as the Murghāb and Hari-rūd which also flow northward into the plain but never reach the Oxus. All of these rise on the northern flank of the great mountain barrier, with the exception of the Hari-rūd, which rises on the south of the Kōh-i Bābā and flows westwards through a narrow valley between the Kōh-i Safīd and Kōh-i Siyāh into the Herāt plain where it turns to the north and after passing through a depression in the mountains loses itself in the plains of Russian Turkistān beyond Dhu'l-Fikār.

General formation. The mountain ranges generally become less lofty towards the south and west and the difficulties of communication that exist further north disappear. Hence the easy route for trade or military expeditions from Herāt to Kandahār has in all ages been circuitous via Sabzawār, Farāh und Girishk, while from Kandahār to Kābul and Ghaznīn the direct line of the Tarnak valley is followed. From Herāt where the Paropamisus drops to an insignificant elevation the Turkistān province is easily accessible, and the same country can also be reached from Kābul directly by difficult passes, the Khawāk, Bāmiān and others, through the Hindū-kush.

Thus the three towns Herāt, Kandahār and Kābul are marked out by natural position as the most important points in the country. Each of them lies in a fertile valley and is self-supporting, and each of them commands important routes to the others as well as to India, Persia and Central Asia. If therefore Afghānistān is to be an independent political whole the possession of these three points is essential to its rulers. There can be no stability if they are in separate hands. In this political sense Ghaznīn and Djalālābād must be classed with Kābul, the old capitals Bust and Girishk with Kandahār, and Sabzawār with Herāt. Sīstān lying on the easy route from Herāt to Kandahār has always been a debatable land.

Kābul is in every way the strongest position, and has generally in consequence been more independent than other districts. Herāt on the contrary is much exposed to attack from the west and north, and when Herāt has been conquered by a foreign invader Kandahār is immediately threatened. As long as Herāt is held Kandahār is safe from an attack on the western side, and it has also a strong position towards the Indian side, though not so strong as that of Kābul.

The district of Sīstān adjoining the Hāmūn is fertile and suited for irrigation. Occupying a commanding position on the route leading eastward to Kandahār and westward to Herāt, it is of great importance to the rulers of Afghānistān, and its present division between that country and Persia is unfortunate. As an ancient seat of Iranian culture and connected with Persian legend the Government of Persia holds to it tenaciously and it seems that it is destined long to continue divided as at present.

Climate. The whole country is liable to great extremes of temperature ranging from the intense summer heat of Sīstān, the Garmsīr district and the Oxus valley to the great winter cold of the high exposed regions, where violent snowstorms are not uncommon. Instances of armies suffering from such cold are well known in history. The march of the emperor Bābar from the neighborhood of Herāt through the Hazāra Mountains to Kābul is a case in point, and the Hindū-kush (lit. Hindū-slayer) is popularly supposed to derive its name from the death of the Indian troops of the emperor Shāh-Djahān. More recent instances are the sufferings of 'Abd al-Raḥmān's army in 1868 and of the British Boundary Commission in Bādghīs in 1885. The daily range of temperature is everywhere very great, the difference between maximum and minimum varying from 17 to 30 degrees of Fahrenheit. In the spring and autumn the upland valleys have a temperate and pleasant climate, which is very favorable to the growth of fruit, especially grapes, melons, peaches, plums, apricots, walnuts and pistachio-nuts. Modern travellers have found the neighborhood of Kābul to be not unworthy of the praises lavished on it by the emperor Bābar.

In the more lofty part of the Hindū-kush inhabited by the Kāfir tribes a truly Alpine climate is found resembling that of parts of the Himalayas.

The vegetation generally speaking is that of the Persian plateau, and is quite distinct from that of the Indian plains. In the plains few trees are found except those cultivated in gardens, fruit-trees, planes and poplars, while on the higher mountains many varieties of pines and evergreen oaks are found with wild vines, ivy and roses. On the lower and dryer ranges the wild pistachio (*Pistacia khinjuk*), wild olive (*Olea europea*), juniper (*J. excelsa*) and the reodān (*Tecoma undulata*) are the most characteristic trees. The angūza or hing (*Ferula assafoetida*) is very abundant in many parts. Wild flowers also abound in the spring, especially the iris, tulip and poppy.

Political Divisions. The divisions of the country follow its physical formation.

Kābul. The province of Kābul contains the fertile high-lying valleys round the upper waters of the Kābul, Lōghar and Tagāo rivers and Ghaznīn, also the lower part of the Kābul valley near Djalālābād. Ghaznīn was the most important town in this tract formerly, but Kābul has taken its place during the past four hundred years. Kābul was recognized as the centre of government under Moghul emperors, and was adopted by the Durrānī kings as their capital taking the place of Kandahār. Its old rival Peshāwar is the natural centre of the tribes in the lowlands near the Indus, but has been cut off from Afghānistān since it was taken by the Sikhs in 1834, and since 1849 has formed part of British India. Kābul is now a thriving town. Its population is variously stated. A late resident (F. Martin) places it as high as 150000, but this is beyond all other estimates. Under the firm rule of the late emirs it has no doubt grown rapidly.

Kandahār. Kandahār includes the old province of Zamīndāwar, and comprises the lower valleys of the Helmand, Tarnak, Arghandāb and Arghasān, the principal home of the Durrānīs. The modern town of Kandahār on the Arghandāb

has been the capital of the province since the 15th century, and has taken the place of older towns such as Girishk and Bust.

Sīstān. Sīstān is the hot and fertile irrigated district lying around the Hāmūn. A large share of it, however, belongs to Persia. It contains no large town.

Herāt. The Herāt province includes the fertile valley of the Harī-rūd and the open country lying between the Hazāra Mountains and the Persian border; also a considerable part of these mountains which are inhabited by the Hazāra and Čahār Aimāk tribes. The town of Herāt, one of the most famous in eastern history, is its capital; although fallen from its ancient glory it is still and must remain a place of importance and will no doubt develop greatly with peace and improved communications. Sabzawār is also a thriving town in the south of the province.

Hazāristān. The country of the Hazāra and Čahār Aimāk tribes is the mountainous mass bounded to the north by the Kōh-i Bābā, to the west by the open country of Herāt, to the east and south by the Helmand valley. It is the country anciently known as Ghōr, and the ruins of the town of Ghōr lately explored probably mark the site of the old capital of Fērōz-Kōh, where the Ghōrī kings reigned in the 12th century. It now contains no town of importance.

Turkistān. The country north of the Kōh-i Bābā as far as the Oxus is known as Turkistān. Its old capital Balkh has lost its former importance, and the present centres of administration are Mazār-i Sherīf, Tāshkurgān and Maimana.

Badakhshān. The region lying north of the Hindū-kush and east of Turkistān along the left bank of the Oxus is known as Badakhshān. It is watered by the Kundūz-River and its affluents.

Wakhān. Still further to the east and extending as far as the Pamir is the long mountain valley called Wakhān.

Kāfiristān. The recently conquered mountain mass of the Hindū-kush lying north of the Kābul valley and west of the Kunar, inhabited by the Kāfirs, is known as Kāfiristān.

b. Ethnology.

The races which inhabit Afghānistān may be classed under the following heads: 1. Afghān; 2. Persian; 3. Turkish and Mongolian; 4. Aryans of the Hindū-kush. — But considerable intermixture has taken place, and it is not easy to determine the elements which enter into the composition of every tribe.

The Afghāns. Physically the Afghān race belongs in the main to the Turko-Iranian type with a considerable admixture of Indian blood among the eastern tribes. There is great variation of type, and the absence of anthropometrical observations over the greater part of Afghānistān renders certainty unattainable at present. It may be considered as established, however, that the proportion of brachycephalic heads is larger than among the Indo-Aryans of the Pandjāb, and probably larger than among the pure Persians. Among the southern tribes such as the Kākars of Zhōb and the Tarīns and Atakzais of Pishīn and Čaman the type resembles that of the Balōčes with broad heads while among the tribes of the Indus valley heads are narrower. Figures are wanting for the great central body of Durrānīs and Ghalzais. Noses are generally long and often curved and this is perhaps the origin of the idea which some have entertained that the Afghāns are of Hebrew origin. Ujfalvy has noted that this peculiarity is very marked in the portraits of the Kushān kings on the coins of the 1st cent. (A. D.), and it is certainly not confined to the Afghāns but widely spread among other races of the country as well as among the Balōčes and in the Northwestern Pandjāb and Kashmir. The Afghāns are a tall and well-built race, often fair in complexion in comparison with their neighbors, brown beards and even blue eyes being occasionally seen, but in these points there is great variation even in neighboring tribes. Some modern writers have attempted to draw a distinction between Afghāns and Paṭhāns. They maintain that only the Durrānīs and kindred tribes are entitled to the name Afghān, while the title Paṭhān (an Indian corruption of the native form Pakhtāna or Pashtāna, pl. of Pakhtūn, Pashtūn) includes all tribes of whatever origin who speak the Pashto language. This distinction, however, appears to be unreal and of modern origin. The name Pashtūn or Pakhtūn is undoubtedly the true national name and it is universally used, while the word Afghān seems to be of literary origin and like many other national appellations was first applied to this people by foreigners, and in modern times it has been adopted as a polite designation by educated persons and those who are proud of their descent. The theory restricting it to the Durrānīs and to the other tribes who claim by their genealogies a similar descent appears first in the works of Bellew and has been adopted by others without sufficient reason. According to this theory great tribes like the Ghalzai are allowed to be called Paṭhān but not Afghān, and this is applied also to the Afrīdī, Bangash, Khaṭak, Wazīrī, Kākar, Gandāpūr, Sherānī, Ustarānī and many others without any sufficient justification. Bellew accepts the story of the Hebrew origin of the true Afghāns and supposes them to have come into the Kandahār province from the west, and there to have met the Indian colony from Gandhāra (the present district of Peshāwar), which had been driven thither by Scythian invaders in the 5th or 6th cent. (A. D.). From these Indians they are supposed to have acquired the Pashto language, regardless of the fact that Gandhāra was purely Indian and the language spoken there a form of Prakrit and not an Iranian idiom from which Pashto could be derived. The Afghān settlement of the Yūsufzais dates only from the 15th cent. Bellew supposes without a particle of evidence that they were only returning to their original home. The name Kandahār he supposes to be identical with Gandhāra, and to have been carried to the Arghandāb valley by these colonists. It may be noted here that Kandahār is historically a modern place and we hear nothing of it before the 14th cent. The Ghalzais are identified by Bellew and others with the Turkish tribe which he calls the Khiljī, i. e. the Khalj. Darmesteter (*Chants des Afghans*, p. clxiii) supports this view, and it may be admitted that the Ghalzais have probably absorbed a good deal of Turkish blood although the actual identification of names is doubtful. The tribes of the Sulaimān Range are supposed by Bellew to be aboriginal Indians and he follows Lassen in identifying them with the Πάκτυες, who are stated by

Herodotus to have occupied Πακτυϊκή on the Indus. Among the other identifications made are those of the Afrīdī (or Aprīdai) with the Ἀπαρύται of Herodotus, and the Khaṭak with the Σατταγύδαι. Of these the first is *prima facie* correct although it is by no means certain that the Ἀπαρύται occupied the country of the modern Afrīdīs. That of the Khaṭak with the Σατταγύδαι cannot be accepted. The name given by Herodotus appears as Thatagush in the Achaemenian inscription of Behistūn, and the initial Σ of the Greek form evidently corresponds to this *Th*, and could not represent a guttural as in Khaṭak. The identity of Πάκτυες, Πακτυϊκή with Pashtūn, Pakhtūn mentioned above as first advocated by Lassen has been more recently supported by Trumpp and Grierson but is considered very doubtful by Spiegel and Geiger. Grierson considers the connection between the Persian *pusht*, *pukhta* (back, mountain), Vedic *pakthā*, the Πάκτυες of Herodotus and the Παρσυῆται of Ptolemy very probable. Darmesteter considers the latter form the most likely to be near the original, and thinks that the Πάκτυες of Herodotus may stand for some form like Parshtyes. It must be remembered that in the modern language the form with *sh* is older than that with *kh*. It seems improbable therefore that a form like Πακτυϊκή (which we know only through the Greek) could give rise to a modern Pasht or Pakht. Raverty thought that Πακτυϊκή might be represented by the town of Pakhlī on the Upper Indus, and this is not impossible considering how frequently an ancient dental passes into *l* in Pashto.

The combination *rs*, *rš*, in Avesta or Sanskrit frequently becomes *sh* in modern Iranian languages. Thus the Pers. *pusht*, Pashto *pushtī* represents Avesta *paršti*, Sanskrit *pṛṣṭhā*; Pashto *ghal* = Av. *kərəš*; Pashto *push-tedal*, Pers. *purs-īdan* = Av. *pərəs*, etc. Παρσυῆται or Parshtyus therefore may well be represented by Pasht-Pukht. The Παρσυῆται are mentioned by Ptolemy among the five tribes comprised under the head of Παροπανισάδαι (the others being the Βωλῖται, Ἀριστόφυλοι, Πάρσιοι and Ἀμβαῦται), who occupied the southern and eastern slopes of the Hindū-kush. A native tradition derives the name from *pushta*, a mountain, and very possibly the original form from which Παρσυῆται was taken may have borne the meaning of „highlander".

The form Paṭhān certainly came into use in India, though it is now used to some extent in Afghānistān, and in Balōčistān it takes the form Paṭān, with the accent on the first syllable. Grierson finds a form Paiṭhān in use in the East Gangetic valley to denote a Muḥammedan Rādjpūt, not an Afghān. This name Paiṭhān (from the Sanskrit *pratiṣṭhāna*) is also the name of two well-known towns. It seems possible that some such vernacular term may have influenced the form taken by the Indian adaptation of Pashtāna as Paṭhān.

The name Paṭhān first appears among the writers of the 16th century and Niʿmat Allāh finds an imaginary derivation for it in the name Patan said to have been bestowed by the Prophet upon Ḳais ʿAbd al-Rashīd. The word is said to mean the keel of a ship, in what language is not specified, as it is not Arabic.

The name Afghān was used much earlier, and is the only name applied to the race by the older chroniclers from the 5th to the 10th centuries of the Hidjra (11th to 15th A. D.). It was originally suggested by Lassen, and again by Crooke that the origin of the name may be looked for in the Ἀσσακηνοί or Ἀσσακανοί of Arrian (Ἀσσακανοί of Strabo), and the Ἀσπάσιοι of the same writer (the Ἱππάσιοι of Strabo), and that these names are identical with the Aśwaka of the Mahābhārata, who are associated with the Gandhāra (vi. 9 351). It seems that the identification of Aśwaka with Ἀσσακηνοί may be justified as a Prākrit form and Ἀσπάσιοι might be the Iranian equivalent and Ἱππάσιοι a Greek version (as Skr. *aśwa* = Av. *aspa* = Gr. ἵππος), but the modern name Afghān cannot be deduced from it, as the combination *sw*, *sp*, *ss* never gives rise to a modern *p* or *f*, but rather to *s*, *ss* or *sp* in North India and Afghānistān (see Grierson, *Piśāca languages*, pp. 293, 319). This origin is on these grounds rejected by Grierson, also by Darmesteter (*Chants des Afghans*, pp. clxiv, clvi). Bellew's suggestion of an Armenian origin (aghwān) has met with no support. It may therefore be stated that no satisfactory origin of the name Afghān (often pronounced Awghān or Aoghān) has yet been found.

The theory of Hebrew descent of the Afghāns, especially of the Durrānīs, who as stated above are assumed to be the only true Afghāns, which many modern writers such as Bellew, Yule, Holdich and to some extent Raverty have advocated, is of purely literary origin and may be traced back to the *Makhzan-i Afghānī* compiled for Khān Djahān Lōdī in the reign of the emperor Djahān-gīr, and does not seem to have been recorded before the end of the 16th cent. It is an example of the widely spread practice among the Musulman races of Persia, India and Afghānistān of putting forward a genealogy claiming connection with the family of the Prophet or descent from some personage mentioned in the Ḳorʾān or other sacred books. Thus the Balōčes claim descent from Mīr Ḥamza, the Dāwūdpotras and Kalhoras from ʿAbbās etc., and the chroniclers, anxious to glorify the Afghāns who had risen in the world and become a ruling race under the Lōdīs and Sūrs, found an ancestor in Malik Ṭālūt or King Saul. — This legend is paralleled by another which Firishta (p. 17, Lucknow text) quotes from the *Maṭlaʿ al-anwār*, to the effect that the Afghāns were descended from certain nobles of the Court of Firʿawn (Pharaoh), who refused to accept Islām when preached to them by Moses, and emigrated to the Sulaimān Mountains. — There is absolutely no historical evidence in support of either form of the tradition; both forms were unknown to the early chroniclers.

The first mention of the Afghāns in written history is in the chronicle of al-ʿUtbī known as the *Taʾrīkh-i Yamīnī* (the author was secretary to Maḥmūd of Ghaznīn), and an almost contemporary mention by al-Bīrūnī; al-Idrīsī in his account of Kābul and Ḳandahār (end of 11th and beginning of 12th centuries) does not even mention them. Al-ʿUtbī records that Sebuk-tegīn enrolled Afghāns in his army, and that Maḥmūd in his invasion of Tokhāristān led an army consisting of Indians, Khaldj, Afghāns and Ghaznawīs, and that on another occasion he attacked and punished the Afghāns. Baihaḳī's Chronicle only a little later in date confirms this. Maḥmūd's attacks on the Afghāns took place in 411 (1020-1021) and 414

(1023-1024). Al-Bīrūnī mentions the Afghāns once (ed. Sachau, i. 208), saying that in the western mountains of India live various tribes of Afghāns who extend to the neighborhood of the Sind (i. e. Indus) valley. Thus in the 11th cent. when the Afghāns are first mentioned they are found occupying the Sulaimān Mountains now occupied by their descendants, the very tribes which the advocates of the exclusive claims of the Durrānīs will not admit to be Afghāns. Al-Bīrūnī no doubt also alludes to them in the passage (*loc. cit.*, p. 199) where he says that rebellious, savage races, tribes of Hindūs, or akin to them, inhabit the mountains which form the frontier of India towards the west. There is no record that at this time any Afghāns were found west of Ghaznīn nor in the Kābul valley and Gandhāra which was occupied by a Hindū kingdom. Confusion has arisen through the error of modern historians who have, as Raverty has pointed out, mistaken Tādjīk Ghōrīs and Turkish Khaldj for Afghāns. Raverty considers with good ground that the Afghāns were at this time found only in the mountains south of the Kuram and east of Ghaznīn. The most persistent mistake is that regarding the Ghōrīs. Thus Malleson (*Hist. of Afghanistan*, p. 93) speaks of Kutb al-Dīn Ghōrī Afghān, where Ferishta, who is his authority, does not use the word Afghān at all, but calls him Ghōrī Sūrī, i. e. a descendant of Sūrī, and not a member of the Sūr tribe of Afghāns. Even so accurate a writer as E. J. Browne (*Lit. hist. of Persia*, ii. 305) speaks of the „kings of Ghūr, those fierce and hardy Afghāns of Fīrūz-kūh". It is evident that throughout the Ghaznawī period the Afghāns continued to be an obscure mountain race. We occasionally hear of them, but as adventurers and hill rebels only. In 431 (1039-1040). Mas'ūd sent his son Amīr into the hill country near Ghaznīn to subdue the rebel Afghāns (Malleson, *loc. cit.*, p. 86, turns this into Afghāns, Abdālīs and Ghalzais, the two latter names being absolutely unknown at that time). In 512 (1118-1119) an army composed of Arabs, 'Adjam, Afghāns and Khaldj, was assembled by Arslān Shāh. In 547 (1152-1153), Alfī says, Bahrām Shāh assembled an army of Afghāns and Khaldj. With the rise of the Ghōrī power the same state of things continues. In 588 (1192) according to *Ferishta* the army assembled by Mu'izz al-Dīn Muhammed b. Sām consisted of Turks, Tādjīks and Afghāns, and his Indian opponent Pithorai (Prithvī Rādj) assembled a force of Rādjpūt and Afghān horsemen. Thus in this great war between Musalmans and Hindūs Afghāns are represented as fighting on both sides, which probably indicates that they were not yet completely converted to Islām, although the manufactured legends represent them as having been converted from the days of Khālid. It is not clear whence Ferishta obtained this statement. It does not appear in the account of his war given by Minhādj-i Sirādj in the *Ṭabakāt-i Nāṣirī*. This author does not mention the Afghāns throughout his account of the Ghaznawī and Ghōrī kings. His first and only mention of them is in his own time in the year 658 (1260) in the reign of Nāṣir al-Dīn Maḥmūd of Dehlī. He there says that Ulugh Khān employed 3000 brave Afghāns in subduing the hill-tribes of Mēwāt in Rādjpūtāna. During the next two centuries we find occasional mention of Afghāns in Indian history. For instance in the reign of Muḥammed b. Tughlak, Baranī says in the *Ta'rīkh-i Fīrūz-Shāhī* that there was a rebellion at Multān of a body of Afghāns headed by Multān Mall (this name means in the Multānī dialect „the champion of Multān", and is probably not the proper name of an Afghān). Again Makh Afghān was one of the foreign emirs who rebelled at Dēogīr. In 778 (1376-1377) the fief of Bihār was given to Malik Bīr Afghān (*Ta'rīkh-i Mubārak-Shāhī*). The emir Timūr found them still hill robbers, and in the *Malfūẓāt-i Tīmūrī*, the *Ẓafar nāme* and the *Maṭla' al-sa'dain* it is related that he ravaged the country of the Awghānī (or Aghānī) who inhabited the Sulaimān Mountains. Thus except as occasional soldiers of fortune they remained a fierce race of mountain robbers until the rise to power in India of one of these adventurers made them famous. There can be no doubt that the collapse of the Dehlī monarchy after Tīmūr's invasion gave them their opportunity. This leader was Dawlat Khān Lōdī who was *fawdjdār* of the Doāb in 808 (1405) and many other Lōdīs are alluded to as holding important posts. He rose to be one of the most important persons in the empire, and held Dehlī for some time against Khiẓr Khān, and is by some classed as one of the kings, but never took the title of Sulṭān. He surrendered to Khiẓr Khān in 817 (1416) and died in confinement soon after. Under the succeeding kings another Lōdī Sulṭān Shāh, alias Islām Khān, rose to power and his nephew Bahlōl first became governor of the Pandjāb, and in 855 (1450) he dethroned the last of the feeble Saiyid kings and became sultan of Dehlī. He was succeeded by his son Sikandar who was followed by Ibrāhīm, but the Lōdī rule, at first vigorous, had failed to revive the moribund sultanate of Dehlī which fell before Bābar in 932 (1525). The Afghāns, who had become numerous and powerful in India, succeeded, however, in driving out the Moghuls for a few years, and founded another Afghān dynasty under the brilliant leadership of Shēr Shāh Sūr. The Sūr clan were near connections of the Lōdīs, both being branches of the Ghalzai stock. Many families of the Prāngī and Sūr class settled in India at this period, indeed they seem to have migrated bodily, and at the same time the related Niyāzī and Lōhānī clans moved down from the mountains into the Indus valley. In the preceding century the Yūsufzais, a branch of the great Sarbanī family of Afghāns (to which the Durrānīs belong) had moved from the neighborhood of Kābul, where they had been settled some time, into the Peshāwar valley and the mountain tract of Badjawr, Swāt and Bunēr. They gave the valley the name of Yūsufzai which it still bears, and many of them are believed to have accompanied Bābar into India. Their descendants are found scattered over Hindustān. The names of the Prāngīs and Sūrs are not now found, and they have probably merged in the Lōdīs. These settlers were generally known in the Ganges valley by the name of Rohēlā or Rohilla (from the West Pandjābī word *roh*, a mountain, *rohēlā*, mountaineer), and have given their name to the province of Rohilkhand. At the present day the Afrīdī, Orakzai, Bangash, Tarīn and Bārakzai are strongly represented there. A population of over 100000 in the United Provinces of Hindustān is classed as Ghōrīs, and this probably includes the descendants of the miscellaneous followers of

the Ghōrī kings, whether Tādjīk, Turk or Afghān. There are many Kākars also, both in the United Provinces and the Pandjāb. The Zamand tribe settled in Multān and Kaṣūr in the Pandjāb and a large number of Abdālīs driven from Kandahār by the Ghalzais in the early part of the 18th century joined them at Multān. From these sources spring the Multānī and Kasūriya Paṭhāns. The Afghāns thus colonized northern India largely, and their descendants there are still distinguishable although greatly assimilated by the surrounding population. They have lost their language and tribal organization.

In their own country the Afghāns never succeeded in establishing an independent rule until the 18th century. They remained, like the rest of the country, nominally subject to the powerful rulers of the day: the Moghuls, the Tīmūrīs, the Moghul emperors of India, or the Safawī kings of Persia, until the rise of the Ghalzais to power under Mīr Wais, and afterwards of the Abdālīs (Durrānīs) under Aḥmed Shāh. It was at this period, when the Afghāns became the ruling race over a large population, that the name Afghānistān was extended to the whole country, including a large part of what had till then been known as Khorāsān, a name still in popular use for the plateau country above the Sulaimān Mountains.

The genealogies recorded in the *Makhzan-i Afghānī* are the foundation of those found in more modern works such as the *Ḥayāt-i Afghānī*. In their later parts they are historical, in the earlier they are valuable only as a guide to beliefs entertained three hundred years ago as to the relationship between the tribes. According to these almost all Afghāns are descended from Kais 'Abd al-Rashīd, who was converted to Islām through the intervention of the victorious Khālid, and who was himself descended from Afghāna son of Irmiya son of Malik Ṭālūt or Sārūl (Saul). He is supposed to have derived his name from Kais (Kish) the father of Saul. From Kais 'Abd al-Rashīd the alleged descent is as follows:

- Kais 'Abd al-Rashīd
  - Sarban
  - Batan
  - Ghurghusht

These three sons are the eponymic founders of the three main branches of the Afghān race, the Sarbanīs, Batanīs, and Ghurghushtīs. Sarban had two sons Sharkhbūn and Kharshbūn, and from them we find that a large number of the most important tribes claim descent. Thus from Sharkhbūn we have:

- Sharkhbūn
  - Sherānī (by a Kākar wife) ancestor of the Sherānī, Djalwānī, Haripāl, Bābar, Ustarāna tribes.
  - Tarīn
    - Tōr (black) ancestor of the Tōr Tarīns
    - Spīn (white) ancestor of the Spīn Tarīns and Zaimukht
    - Awdāl ancestor of the Abdālīs or Durrānīs
  - Miyāna ancestor of the Miyāna tribe
  - Barēč ancestor of the Barēč of Shōrāwak
  - Urmar (an adopted son) ancestor of the Urmarīs of Kānīguram and Lōghar

From Kharshbūn we have:

- Kharshbūn
  - Kand
    - Ghōrī or Ghūra ancestor of the Ghūriya-Khēl including the Mahmand, Khalīl, Dāwūdzai, Čamkanī tribes.
    - Khakhai or Khashai ancestor of the Tarklānī, Gugiyānī, Mandān, Yūsufzai tribes.
  - Djamand or Zamand ancestor of the Muḥammedzai-Kasūriya of Kasūr.
  - Kāsī ancestor of the Shinwārī tribe.

Returning to the second main branch, the Batanīs, we have:

- Batan
  - Ismā'īl (no descendants)
  - Warspūn
  - Kadjīn
    (Warspūn and Kadjīn: The two branches of the Batanīs).
  - Mato, daughter = Shāh Ḥusain Ghōrī
    - Matī-tribe
      - Ghalzai tribe
        - Kharotīs, Nāṣirs: doubtful
      - Lōdī
        - Sūr
        - Lōhānī
      - Sarwānī (now broken up)

From the Lōhānī stock the present Dawlat-Khēl, Miyān-Khēl, Niyāzī, Marwat, Khasōr and Tatōr tribes are derived. It will be seen that the only tribe claiming to belong to the Batanī section in the male line is the small Batanī tribe, while the great Ghalzai tribe, almost a nation in itself, and the numerous Lōdīs and Lōhānīs are believed to descend only from Batan's daughter, by her marriage with Shāh Husain, a descendant of the Ghōrī kings. This probably means that a large Tādjīk or Ghōrī element is to be found in these tribes. The legend of the illicit connection between Shāh Husain and Bībī Mato, afterwards sanctioned by her father, and the birth of a son named Ghalzoe („thief's son"), no doubt conceals the adoption of some such element as Afghān. It has been thought by some that the Khaldjī Turks are the tribe thus absorbed and that the name Ghalzai is simply Khaldjī. This is very doubtful, but it is probable that there is a Turkish as well as a Tādjīk element in the tribe.

The Ghurghushtī branch is also not very widespread. The pedigree is:

Ghurghusht
- Dānai
  - Kākaṛ — The Kākaṛ tribe
    - The Gadūn tribe of the upper Indus are by some connected with the Kākaṛs, but this seems improbable.
  - Nāghar tribe
  - Panī — The Panī tribe containing the Panīs of Sībī, Mūsā-Khēl Isōt, Zmaṛai or Mzaṛai, Dephēl and others.
  - Dāwai mixed with the Kākaṛ.
- Bābai mixed with Durrānī
- Mandū
  - Māndū-Khēl of Zhōb

There remains a group of tribes which are jointly known as Kaṛṛānī or Karlānī supposed to be descended from Kaṛṛan or Karlan, whose origin is disputed:

Kaṛṛān
- Kōdai
  - Wardak, Dilāzāk, Ōrakzai, Mangal, tribes.
- Kakhai
  - Afrīdī, Khaṭak, Djadrān, Utmān-Khēl, Khugiyānī, tribes.
  - Djādjī, Tūrī; and probably the Shīṭak which includes the Dawrīs and Bannūčīs, and the Khōstwāls.

In addition to these the great Wazīrī tribe divided into Maḥsūd and Darwēsh-Khēl, and the tribes of Dawr are separate, and are not included in any of the genealogies.

Certain sections of tribes claim to be Saiyids by origin. They are found among the Sherānīs, Kākaṛs, Kaṛṛānī, Dāwai, Tarīn, Miyāna and Batanī. The Gandāpūr and Ustarāna tribes also claim this descent; they were originally sections of the Sherānīs but are now separate tribes. The Bangash claim to be Ḳuraish by origin.

All these tribes were recognized as Afghāns in the *Makhzan-i Afghānī* with the exception of the Bangash and Wazīrīs and the Karlānīs of the Kakhai branch including the Afrīdīs and Khaṭaks, and the tribes of the Kurram valley and Khōst, the Utmān-Khēl with the Djādjīs and Tūrīs, and the Djadrāns, as well as the tribes of Dawr and Bannū. These were probably unknown to the author as they lived in obscure and inaccessible mountains. He mentions other tribes such as the Farmūlīs only to reject the idea of their being Afghāns, and his omission of these tribes must have been due to ignorance.

1. Distribution of Afghān tribes.

The Durrānīs occupy the lower valleys of the Helmand, Tarnak, Arghandāb and Arghasān, Zamīndāwar, the country south of Ḳandahār up to the Balōčistān border.

The Ghalzais are spread over the upper valleys of these rivers and the whole country of Zurmat east of Ghaznīn up to Khōst and Wazīristān, and the northern tributaries of the Gomal. They go down in large numbers every year by the Gomal and Tōčī passes to the plains of the Indus and are largely engaged in mercantile pursuits in India during the winter. At the beginning of the hot weather they make up their caravans in the plains of the Dēradjāt and go up to their upland pastures. This class of Ghalzais is known as Powindahs and belongs mainly to the powerful Sulaimān-Khēl clan. The smaller tribes known as Nāṣir and Kharotī are of a similar type and are also migratory. They resemble the Ghalzais but are considered to be distinct from them. South of the Ghalzais is the widely spread Kākaṛ tribe, now mainly located in Zhōb and Peshīn, provinces of British Balōčistān. The same remark applies to the Tarīns, a tribe akin to the Durrānīs, who are now confined to British territory, and border on the Balōč and Brahoī tribes. The Panīs and their offshoots also inhabit Sībī and the hill country bordering on the Balōčes.

North of the Ghalzais in the lower Kābul valley we find the Gugiānīs and Dāwūdzais. In the hill country from the Kunar to the Khaibar Pass the Mohmands who are divided between Afghānistān and India. East of these lie the Yūsufzais

in the Peshāwar valley and the hills north of it, where the Utmānzai clan is best known, and in Bunēr bordering on the Indus the Dawlatzais. North of the Khaibar Pass are the Shinwārīs and south of it, owing a slight allegiance to the government of India, are the Afrīdīs, Orakzais and Zaimukht. In the Kuram country the Bangash, the Djādjīs and Tūrīs. In the mountains between the Kuram and the Gomal are the Darwēsh-Khēl and Mahsūd Wazīrīs, with the Dawrīs in the adjoining valley of the Tōčī. In the plains of Kōhāt are the Khattaks, and in Bannū on the lower Kuram and Gambīla are the Bannūčīs, a mixed race, and the Marwats. The Batanīs occupy the outer hills bordering on the Mahsūd country. South of the Gomal the Sherānīs, Ustarānīs and some smaller tribes are found; and in the adjacent plains of the Dēradjāt the Gandāpur, Miyān-Khēl and some minor tribes. These extend southwards both in the mountains and plains till they meet the Balōč tribes. The whole of the last mentioned tribes from the Khaibar southwards although Afghāns are not under the government of Afghānistān but are wholly or partly under the control of the government of India.

2. Population of Persian origin.

The name Tādjīk (or Tāzhīk) is generally used not only in Afghānistān but in the neighboring parts of Persia and Turkistān to denote the settled Iranian population, which is probably the earliest established of all the races now inhabiting the country. Some have supposed the name to represent the Dadikai of Herodotus, and even the Paskai of Ptolemy has been thought to be the same word, the initial being properly *T* instead of *P*. These guesses do not require serious consideration. The word Tādjīk as now used properly means Arab, and it was applied to those communities where Arabs settled at the time of the first Arab conquest. It was soon applied to all the settled communities, and the traces of Arab blood now remaining are but slight. The Tādjīks are almost entirely a settled agricultural community, and doubtless occupied all the more fertile parts of the country before the Afghāns spread from the eastern mountains. They are organized as a rule in village communities and not on the tribal system. They also supply the bulk of the trading classes and artisans of the towns. The trading instincts of certain sections of the Ghalzais may perhaps be attributed to their partly Tādjīk blood. Wherever the Afghāns are in possession the Tādjīks are their tenants or dependants, although they often own the land. Where they have villages of their own they are presided over by their own headmen or *kad-khudāī*. Although Persian in race and language they agree in religion with the Afghāns and are devout Sunnites. The tribal system maintains itself among certain independent branches of the race which exist in mountain tracts. Such are the Kōhistānīs of the Kābul province, the Khindjānīs, the Barbakīs of Lōghar and Butkhāk, and the Farmūlīs who occupy the country west of Kābul. The population of Kābul itself is mainly Tādjīk and the language Persian. The people of Sīstān are also mainly of this stock mixed with Balōčes, and the traditions preserved in the *Shāh nāma* point to this locality as one of the earliest Iranian centres. A few Kayānī families which claim to be descendants of the ancient Kayānī or Achaemenian kings are still found in Sīstān. The province of Zarańka or Drangiana, afterwards Sakastēnē, Sidjistān, Sīstān, included the lower basin of the Helmand River, perhaps as far as Zamindāwar, and it was here and in the adjoining mountains of Ghōr that the powerful Tādjīk kingdom of the Ghōrīs arose in the 5th and 6th centuries of the Hidjra, which overthrew the decaying Ghaznawī monarchy and supplied conquerors to Northern India. Tādjīks formed an important element in all armies, and the desperate resistance which the Ghōrī mountaineers offered to the Mongols is evidence of their warlike qualities. The Kart dynasty which ruled Afghānistān under the Persian Mongols were also Tādjīks.

In the south, spreading into Balōčistān the population of Tādjīk origin goes by the name of Dehwār or Dehkān, i. e. villager, and north of the Hindū-kush as in Turkistān generally they are known as Sarts.

The Pashai race which occupies the skirts of the mountains N. of the Kābul River in the Djalālābād province may perhaps be classed with Tādjīks, although they speak a non-Iranian language akin to that of the adjoining Siyāh-pōsh Kāfirs. The Urmurīs of Lōghar and Kānigurām in the Mahsūd Wazīrī country, who speak an Iranian dialect called Bargastā, must also be placed among Tādjīks.

The Ghalča races of Wakhān and Badakhshān, which occupy the northern slopes of the Hindū-kush, and speak Iranian languages differing from Persian, are generally classed as belonging to the Highland Tādjīk type, which has kept apart from the Lowland Tādjīks of Badakhshān who speak Persian. They are a broad-headed race and are considered by Ujfalvy and others to belong to the Alpine race. They are found in Sarikol, Wakhān, Shighnān, Mundjān, Sanglīč and Ishkashim, and comprise also the Yidgāh on the south side of the mountains. The name Ghalča applied to the group simply means in Persian „peasant".

3. Turkish and Mongolian races.

South of the Hindū-kush. The mountains which lie between the Hindū-kush and Kōh-i Bābā on the north and the Helmand valley on the east and south that is the country formerly known as Ghōr are now inhabited by tribes shown by their features to be mainly or partly of Mongolian origin, although they are no doubt mixed with the original Tādjīk population. Those nearest Herāt on the west side of the mountains are known as the Čahār Aimāķ, and still make use of the Turkī language to some extent. The Hazāras, who occupy the greater part of the mountains, speak Persian and are Shīʿites by creed. It is generally asserted that they are the remains of the army of Mengū, grandson of Čingiz Khān, but their actual origin is by no means clear. It may be taken as most probable that they gradually occupied deserted parts of the country after the devastations of the Moghul invasions, during the time of the Karts of Herāt, who, though themselves of Ghōrī origin were under the suzerainty of the Moghul Ilkhāns of Persia, and depended a good deal on Moghul support. They are a hardy, brave and industrious race and are on the whole of a peaceful disposition. Their Shīʿa creed is a cause of offence to their Afghān neighbors on the east,

and to their kindred tribes, the Čahār Aimāķ, on the west, and they are seldom on good terms with either of these.

The Čahār Aimāķ are Sunnites, and consist of the four tribes (or Aimāķ) of Hazārī, Djamshīdī, Taimanī and Fērōz-kōhī. They occupy the western valleys spreading down towards the open country of Herāt and Sabzawār. Some Afghāns state that the Taimanī tribe is an offshoot of the Afghān Kākars, but if there is any foundation for this statement they have lost all resemblance to their ancestors.

North of the Hindū-kush. In the territory of Afghān Turkistān the principal part of the inhabitants are Turkī speaking Özbegs with a substratum of Tādjīks or Sarts, and in the desert tract to the west bordering on the country under Russian rule a few wandering Ersārī Turkomans still live inside the Afghān border.

4. Non Iranian Aryans of the Hindū-kush.

The races grouped together as Siyāh-pōsh Kāfirs inhabiting the mountain country known as Kāfiristān are undoubtedly Aryan, and perhaps, as their language indicates hold an intermediate position between the Indian and Iranian stocks. They have all professed some form of paganism till lately, but since their conquest by ʿAbd al-Raḥmān they have outwardly at least accepted Islām. Sir G. Robertson divides all Kāfirs into (1) Siyāh-pōsh, (2) Wai-gulis, (3) Presun-gulis or Wiron, and mentions also a race probably allied to the Wai-gulis, the Ashkun of whom little is known. The Presun-gulis, Wai-gulis and Ashkun are classed together as Safīd-pōsh, or white-clothed, but differ one from the other in dress, appearance and language, while the Siyāh-pōsh, or black-clothed tribes have a strong resemblance one to the other both in speech and appearance.

The tribes classed as Siyāh-pōsh are the Katir, Mādugāl, Kashtān, Kām, and Istrat or Gaurdesh; and of these the Katir is by far the most important.

Indians. The more distinctly Indians known as Hindkī are found to some extent in the east of Afghānistān, but mainly in the districts now under British rule. They are mainly cultivators, generally Djat by race.

Hindū traders belonging to Khatri or Arora families having their centre at Shikārpūr in Sind are found in towns everywhere, and even in Turkistān.

7. Language, Literature, Religion and Political Institutions.

Language. The languages spoken in Afghānistān with the exception of the Turkī of the Oxus province and of the Čahār-Aimāķ, and the Kāfir group of Kāfiristān, belong to the Iranian family.

Of these Persian is spoken by the Tādjīks everywhere, in the provinces of Kābul and Herāt including their chief towns, and in Badakhshān and the Kōhistān; also by the Mongoloid people of Hazāra, and by the Ķizil-bāsh of Kābul and Herāt who are eighteenth century immigrants belonging to the Turkish tribes of North Persia.

The Persian spoken is generally archaic, and everywhere preserves the old distinction of *madjhūl* and *maʿrūf*, between *ū* and *ō*, *ī* and *ē*, which is lost in modern Persian. The Persian of the Hazāras is thought by some to resemble the ancient Zābulī. The Tādjīkī of Badakhshān, Darwāz, Kulāb and Ķarātegīn is a distinct dialect of Persian. There is no distinctive literature apart from the general Persian literature.

The other Iranian languages belong to the East Iranian group, and comprise Pashto, the Ghalča group, and the Bargastā spoken by the Urmaṛs.

Pashto. Pashto or Afghānī is the language of the Afghāns and extends throughout their territory whether within or without the existing Afghān state. On the north it is bounded by the Kāfir and Dard languages, on the east by West Pandjābī or Lahndā, on the south by Balōčī and on the west by Persian. The total numbers of speakers of Pashto may perhaps be 3500000 of which 2000000 may be in Afghānistān proper and 1500000 in British and independent territory. The East Iranian character of the language is clearly established although it has undergone many alterations and corruptions, and has been so strongly affected by Indian influence as to lead Trumpp to believe that it should be classed as an Indian language. Geiger gives the following distinctive points as indicating its origin clearly:

1. Original Aryan dental *r* (except before *t*) becomes *ḷ*; often lost altogether in modern pronunciation.

2. The Aryan aspirates become spirants, as in Old Iranian.

3. The Aryan surds *k*, *t*, *p*, before consonants become spirants, and often disappear in later forms.

4. Before *t* Aryan dentals become *s*, as is usual in Iranian.

5. Aryan *l* becomes *r*, as in Iranian; the group *šw* becomes *rp*.

6. Aryan *ž*, *žh*, answering to Indian *j* and *h* appear as *z*.

A change which is peculiar to Pashto is the general change of *d* and often of *t* to *l*.

The Indian aspirates do not exist and Pashto speakers are unable to pronounce them. *H* is frequently dropped in conversation. Indian cerebrals *ṭ*, *ḍ*, *ṛ* and *ṇ* exist, but in Indian words only.

The borrowed element is large. Indian loans affect not only the vocabulary but the grammar; even the infinitive termination in *al* is of Indian origin. Loans from modern Persian are numerous, and through the medium of Persian a large number of Arabic words have come in, and even a few Turkish.

There are two principal dialects, which may be called (1) the northeastern (with its centre at Peshāwar) and (2) the southwestern (with its centre at Kandahār). They are distinguished from each other by the pronunciation of certain consonants which are gutturals in (1) and sibilants in (2).

These are: ښ *ṣ̌īn* or *ḳhīn*, pronounced *kh* in (1) and *sh* in (2); ږ *ẓ̌* in (1) and *g* in (2); also sometimes ځ *dz* in (2) becomes *z* in (1) but this is not uniform. Thus

(1) *khadza* or *khaza*, „woman“, becomes (2) *shadza*
(1) *ghwag*, „the ear“, becomes (2) *ghwazh*.

As the same character is used in writing whatever the pronunciation these spoken variations do not affect the written language, and they are nowhere sufficient to make one dialect unintelligible to the speakers of the other. A very distinct dialect however is that spoken in Banū, Dawr and Wazīristān, a branch of (2). In this a complete system of vowel change is found, according to

which: ā becomes ō
ō » ū or ī
ū » ī
e » i

as in *plōrūna* for *plārūna*, pl. of *plār*, „father“; *mīr* for *mōr*, „mother“; *mūž* for *mūẓ*, „we“. — Among the Afrīdīs also ā is often pronounced ō.

The language in its more cultivated forms may be studied in the works of Dorn, Raverty, Vaughan, Bellew, Trumpp and Darmesteter.

Literature. — The existing literature of Pas̲h̲to commences from the 16th century, and is mainly poetical, but there are also a few important works in prose, especially histories such as Ak̲h̲ūn Darwēza's *Mak̲h̲zan-i Pas̲h̲to* and *Mak̲h̲zan-i Islām*, and Afḍal K̲h̲ān K̲h̲aṭak's *Ta'rīk̲h̲-i Muraṣṣa'*. The principal poets are K̲h̲ush̲ḥāl K̲h̲ān the K̲h̲aṭak chief who was for some time a prisoner at the Court of the emperor Awrangzēb, and wrote a Dīwān after the Persian model, Mīrzā K̲h̲ān Anṣārī, a poet of the Ṣūfī school, and the popular poets 'Abd al-Raḥmān and 'Abd al-Ḥamīd who have both left Dīwāns of a mystical character, also 'Abd al-Ḳādir K̲h̲aṭak and Aḥmed S̲h̲āh the great Durrānī king. 'Abd al-Raḥmān is considered by Afg̲h̲āns to be their best poet, but European opinion probably will give the highest place to the more simple and energetic verse of K̲h̲ush̲ḥāl K̲h̲ān. On the whole the literature must be considered as artificial and imitative, and cannot claim to be more than a reproduction of Persian models.

Popular poetry. — But side by side with it there is the genuine popular poetry which has till lately attracted little attention. Darmesteter's collection of these poems has rescued them from oblivion; they are the genuine expression of popular feeling in war, politics or love. Thorburn has also recorded some ballads, riddles and proverbs and some spirited ballads in the Wazīrī dialect have lately been published by E. B. Howell. None of the popular poetry is of ancient date, there are no heroic ballads relating to the great migrations and conquests of the Afg̲h̲ān race except one relating to Aḥmed S̲h̲āh. Most are of the 19th century. There is nothing to compare with the fine heroic ballads found in Balōčī.

Religious literature. — Religious writings both in prose and verse abound in Pas̲h̲to; a great number of works of this type are lithographed at the presses of Pes̲h̲āwar and Lahore. Most of these have no great merit as works of literature. *Mīr Ḥamza*, a long poem by Miyān Muḥammed Ṣaḥḥāf, may be mentioned.

Alphabet. — Pas̲h̲to makes use of the Arabic characters in the *nask̲h̲* form, and has adopted certain modifications to express the peculiar sounds of the language.

Some of these such as پ = *p*, ح = *ḥ*, and ژ = *ž*, are already used in Persian. The peculiar sounds of Pas̲h̲to are distinguished in an original way by the addition of a loop in the line instead of an alteration in diacritical points; thus:

ګ = *g*, ټ = *ṭ*, ډ = *ḍ*, ڼ = *ṇ*, ړ = *ṛ*.

The guttural or sibilant *s̲h̲*—*k̲h̲* is written ښ, and the peculiar palatals *c* (*ts*) and *j* (*dz*) are both expressed by ځ; Trumpp employs ڂ for the latter, but this is unknown in actual use.

THE G̲HALČA LANGUAGES.

This group of languages, often known as the Pamir dialects, is found in Wak̲h̲ān and the eastern part of Badak̲h̲s̲h̲ān. The whole of them are spoken north of the Hindū-kus̲h̲ with the exception of the Yidg̲h̲āh which has found its way across the range and is spoken in proximity to the K̲h̲owār or Čitrālī. Of the remainder three, viz. the S̲h̲ig̲h̲nī, Sarīkōlī and Yag̲h̲nōbī are spoken in the part of the Pamir under Russian rule, while four, viz. the Wak̲h̲ī, Is̲h̲kās̲h̲imī, Sanglīčī and Mindjānī lie within the political limits of Afg̲h̲ānistān. Wak̲h̲ī is spoken in Wak̲h̲ān on the Upper Pandj River, Is̲h̲kās̲h̲imī on the Lower Pandj; Sanglīčī is the language of the upper Warōdj valley, which is the northern approach to the passes leading into Čitrāl, and the Mindjānī is spoken in the upper valley of the Āb-i Djarm which flows into the Warōdj. Yidg̲h̲āh is the speech of the Yidak̲h̲s who live to the south of the Dōrāh pass in the British sphere. These languages are closely related to one another; they belong clearly to the Eastern Iranian family and have also been to some extent influenced by the proximity of the languages of Dardistān, called by Grierson the Pis̲h̲āča group. They also have some points of resemblance to Pas̲h̲to, as for instance the use of *l* for an original *d* in Mindjānī and Yidg̲h̲āh.

Another language belonging to the Eastern Iranian family is the Bargasta spoken by the Urmaṛs of Kānīguram, and entirely surrounded by the Pas̲h̲to speaking Maḥsūd Wazīrs.

ARYAN LANGUAGES OF KĀFIRISTĀN.

These languages spoken by the Kāfir tribes and in Lag̲h̲mān together with those in the adjoining countries of the Indus, Kōhistān, Čitrāl and Gilgit have been studied by Kuhn and Grierson, and are placed by the latter in a group by themselves separate from both the Indian and Iranian families, as they share certain phonetic characteristics with each family, and have others peculiar to themselves. Grierson divides them into three groups.

1. The Kāfir or western, including Bas̲h̲galī, Wai-alā, Weron, Pas̲h̲aī, Gawar-batī, Kalās̲h̲ā, As̲h̲kund.
2. K̲h̲owār or Čitrālī.
3. Dard or western.

Of the Kāfir languages Bas̲h̲galī, Wai-alā and Weron are the purest and are spoken in the central parts of Kāfiristān. Pas̲h̲aī is spoken on the southern slope of the Hindū-kus̲h̲ and in Lag̲h̲mān almost to the banks of the Kābul river, from the Kunar on the east to the Lag̲h̲mān on the west by a comparatively civilized Musalman population. It has been much influenced by Pas̲h̲to, and is also called Dehgānī, as Dehgān is the name borne by the tribes that speak it. The Kalās̲h̲ā and Gawar-bātī are related languages, and the Tīrāhī of Nangnahār (formerly spoken in Tīrāh) and the Dīrī of Dīr are also connected with Pas̲h̲aī.

RELIGION.

Since the conversion of the Kāfirs of Kāfiristān after their conquest by 'Abd al-Raḥmān the whole population of Afg̲h̲ānistān belongs to the Muhammedan religion. The orthodox Sunnī creed is professed by the great majority including Afg̲h̲āns of all tribes with one or two insignificant exceptions. The Tād̲j̲iks, the Özbegs and Turkomans of Tur-

kistān and the Čahār Aimāk are also Sunnites. The Persian speaking Hazāras are Shī'ites, and this creed is also professed by the Ḳizil-bāsh of Kābul and Herāt, the Kayānis of Sīstān and Herāt and the Ghalča tribes. Among the Afghāns a few Shī'ites are found among the tribes on the Indian border, viz. the Ōrakzais and Saiyids of Tīrāh, the Tōris of Kuram and the Samilzai Bangash of Kōhāt. These are in reality followers of Pīr Rōshan („the old man of light"; nicknamed Pīr Tārīk „the old man of darkness"). This heretical sect was formerly much more widely spread than it is at present. The celebrated Ākhūn Darwēza was its great opponent, and it led to bitter wars in Akbar's time. It has fallen into disrepute, and its followers are now generally classed as Shī'ites.

Although mostly orthodox by profession the tribesmen are in general very ignorant of their religion. The Afghāns and Tādjīks are particular as to the observation of fasts and prayer times but the adoration of Pīrs or local saints is universal and practically constitutes the religion of the masses. With their ignorance of the true doctrines of their religion they combine an intense hatred of all non-Muslims, and the belief that the slaying of a Christian, a Sikh, or a Hindū is a meritorious act in itself is very widely spread. The preaching of a *djihād* („Holy War") by an influential Mullā is generally the signal for an outbreak of violence.

Religious mendicants abound, and many of them are believed to possess miraculous or magical powers. Similar powers of healing diseases by charms or breathing on the patient or on the water he drinks are believed to be inherent in members of certain clans and families. Mullās are often popular leaders and sometimes take the lead in important political movements. Want of orthodoxy is severely dealt with, heretics being sometimes killed by stoning, and in Kābul persons of every class are strictly examined as to their knowledge of the prescribed prayers, and are exposed to public obloquy if they prove to be ignorant.

The influence of the followers of Saiyid Aḥmed, a native of Rohilkhand who preached the Wahhābī creed and fought against the Sikhs in the early years of the 19th century, is still strong among the border tribes, and that of his orthodox rival 'Abd al-Ghaffār better known as the Ākhūn of Swāt, who was universally believed to have the power of working miracles, is also powerful up to the present day.

In the war of 1880-1881 a very prominent part was played by a Ghaznīn Mullā named Mushk-i 'Ālam, and in the more recent border wars of Swāt and Tīrāh Mullās have been the leaders.

POLITICAL INSTITUTIONS.

The modern Afghān kingdom begins with the rise to supremacy first of the Ghalzais and shortly afterwards of the Durrānīs under Aḥmad Shāh. His rule was based on the supremacy of the Durrānī tribe and especially of the Sadōzai family of the Popalzai clan of that tribe. Within the tribe the great rivals of the Sadōzais were the Bārakzais, headed by the family which displaced the Sadozais in the early part of the 19th century and still rules. At first the Durrānī monarchy was a loose association of tribes. Aḥmad Shāh was contented to reign without interfering with the internal affairs of the more powerful tribes, but such a loose aggregation of elements had not the strength to endure as a powerful kingdom although the personal influence of Aḥmed Shāh was strong enough to preserve it for a generation after his death. The Bārakzais under strong and unscrupulous leaders like Dōst Muḥammed and 'Abd al-Raḥmān have aimed at consolidating their power and destroying all rivals, and their efforts, especially those of 'Abd al-Raḥmān have proved successful. At his death he left his successor the present king Ḥabīb Allāh a solid kingdom in which his word was law and there was no longer anything resembling an *imperium in imperio*. Any chiefs who were too powerful were executed or exiled, and any tribe that opposed him was broken up or scattered. The emirs are no longer dependent on tribal musters; they have a strong centralized force with artillery and modern arms entirely under their own command. Whether in the case of a war with England or Russia such a force would prove reliable is at present doubtful, and it is also possible that the old effective power of the tribes, which has hitherto been greater against invaders than that of the organized army, has been weakened by the suppression of all able leaders.

The country is divided politically into five provinces and two territories which are not as yet constituted into regular provinces as follows:

Provinces:
Kābul.
Herāt.
Ḳandahār.
Turkistān.
Badakhshān.

Territories:
Kāfiristān.
Wakhān.

The tribes, which are outside the emir's border and which are within the political boundary of the Indian empire but not within its regularly organized district, retain their internal independence absolutely, while those which are settled in organized Indian districts are subject to the ordinary laws but retain their tribal organization. They are to a great extent governed through their leading men and in accordance with local customs where these do not conflict with the criminal law. The organization of the Afghān tribe is very democratic. Although every large tribe has a nominal chief, who is the head of a certain family (the Khān-Khēl) to which the hereditary right of providing the chief is attached, yet in practice he has but little power, and the headman of every small section of the tribe has to be consulted in all business of importance. Towards the south among the tribes bordering on Balōčistān this rule is modified, and the tribe tends rather to follow the Balōč model in which the chief of a tribe, though not free from criticism, is the actual ruler of his tribe, which is framed on the patriarchal principle and believed to be *of* one blood with the chief. In this system it is not uncommon for strong clans to shift from one tribe to another and to become affiliated as members of some powerful tribe to which they did not originally belong. Such clans are not subject to the fiction of a common origin, and are more apt than others to assert their independance of the chief.

In some cases the clans admitted as members of a tribe to which they do not belong by blood are regarded as inferiors, and in such cases membership was probably granted as a reward for service.

The non-Afghān population is everywhere sub-

ject to the Afghāns, but the degree of subordination depends upon the extent to which they are mixed with Afghān tribes. The mass of cultivating Tādjiks living in villages are under their own Kad-khudās, and the Hazāras are also under their village headmen or Hākīs. There are some mountain communities of Tādjiks still under their own chiefs, and the large tribes of the Hazāras and Čahār Aimāk are also presided over by chiefs who possess great power. The Tādjiks who remained in the Ghūr mountains after the Moghul immigration are probably absorbed into these tribes, as there are no separate Tādjik communities now resident among them. All the Hazāras who had become very independent and always hated the Afghāns were subdued and put down with great severity by the emīr ʿAbd al-Raḥmān.

The population of Kāfiristān consists of a few large tribes each consisting of several smaller clans, occupying separate valleys, and very loosely connected one with the other. The emīr's authority is now recognized by all.

d. History.

At the dawn of history the countries now comprised under the name of Afghānistān were found in the possession of the Iranian race. They were well known to the authors of the Avesta, and we can still recognize several names of provinces or rivers which have persisted till modern times. The colossal earthworks found at Bost, Ulān Robāt and elsewhere in the Helmand valley may perhaps be attributed to this period, but Afghānistān is as yet closed to the researches of archaeology, and no information from this source is accessible as to its early inhabitants.

Of the names in the Avesta we can recognize the following:

Avesta and Old-Persian	Classical	Modern
Bakhdhi (Achaem.) Bakhtrish	Bactria	Balkh
Harōiwa (Achaem.) Haraiwa	Ariana (Areia)	Herāt (Balōčī Harēw) Hari-Rūd R.
Mōuru (Achaem.) Margu	Margiana	Merw; Murghāb R.
Waitigaēsa		Bādghīs
Zraya or lake (of Kāsawa)		Zirah of Sīstān (Gōd-i Zirah)
Zarañka (achaem.)	Drangiana	Zarandj (mediaeval town, now a ruin)
Hwaren-ahhaiti (Achaem.)		
Farnahwati	Pharnacotis	Harūt-Rūd R.
Fradatha	Ophadus	Farāh-Rūd R.
Phrā	Prophthasia	Farāh
Hwaspa	Khoaspes	Khuspās R.
Hwastra	Cossta	Khāsh-Rūd R.
Haētumant	Etymandros	Helmand
Harahwaiti (Achaem.) Harauwati	Arachotis	Arghandāb R.
Pisanah		Pishīn
Urwa		Urghūn (in Farmūl)
Paraparaisama (stands for Gandāra in the Babylonian version of the Achaem. inscriptions).	Paropanisus.	

It is clear therefore that the Helmand valley, Sīstān and Herāt were among the countries best known to the early Iranians, and they were also comprised within the Achaemenian empire, our first information as to the composition of which is derived from the cuneiform inscriptions of the kings and the lists given by Herodotus. Among the twenty-three provinces of which the empire was composed we find the following six:

Zarañka	in Herodotus Sarangai, in Arrian Zarangoi (later Drangiana, showing that the Avestic form in *Z* had been superseded by the Old Pers. form in *D*).	now Sīstān
Haraiwa	Areia of Herodotus	now Herāt
Bakhtrish	Bactria	now Turkistān of which Balkh is the old capital.
Gandāra	Gandaritis	Indian Gandhāra, i. e. the Kābul valley.
Thataguš	Sattagydai	now the Hazāra country
Harauwati	Arachosia	now the Kandahār province;

which are practically identical with modern Afghānistān. Four of these six have been identified above with countries named in the Avesta. Gandhāra was an Indian, not an Iranian country, and this perhaps applies to Thataguš as well. It may be noted that Darius Hystaspes about 500 B. C. added to the empire an Indian satrapy extending to the Indus, which is not included in the inscriptions. Zarañka was, like Persis, free from tribute, and it seems probable therefore that it was regarded as an ancient home of the Iranians, and not a foreign conquest. Traditions which may be traced to the Avesta were still alive there in Firdawsī's time and were embodied by him in the *Shāh-nāma* about 1000 A. D.

When the Achaemenian monarchy fell before Alexander this part of the empire was frequently traversed by the Macedonian armies, and after Alexander's death it fell, with the other oriental provinces, to the share of Seleucus. But the rival kingdom of India was at the same time pressing on the eastern side, and Čandragupta in his revival of Indian power not only recovered Alexander's Indian conquests but obtained possession also of the provinces south of the Hindū-kush. It is probable that they continued to form part of the Mauryan empire up to the death of Asoka, (ca. B. C. 231) when it began to decline. A hundred years after the cession to Čandragupta the Seleucidae attempted without much success to extend their way to the Indus again. The expedition of Antiochus the Great (206 B. C.) in which he conquered an Indian king named Sophagasenes (i. e. Subhāga-sēna) does not seem to have had any permanent result. Throughout this period we have no information as to the people of the country.

We may suppose that the Indian kings would find no support among the Iranian population but they would perhaps be welcomed in Gandhāra. On the other hand there would be little sympathy with the Macedonian invaders. Fresh energy was shown by the latter after the independent kingdom of Bactria was erected. Only ten years after the expedition of Antiochus just mentioned Demetrius son of Euthydemus made his way over the passes from Bactria to the Kābul valley, and conquered a large territory in the Pandjāb. The head of an elephant worn as a headdress which appears on his coins is a symbol of his Indian conquests. The successful rebellion of Eukratides seems to have deprived Demetrius of his conquests south of the Hindū-kush, and at one time he held at least some part of Bactria for he founded there the city of Eukratidia. Demetrius on the other hand founded Demetrias in Arachosia and Euthydemia in India, but there seems no doubt that Eukratides reigned for a long time in India and the Kābul valley. Demetrius never (with one exception) uses any language but Greek on his coins, while the extensive coinage of Eukratides is mainly bilingual, the Greek inscriptions being translated in Prakrit in the Kharoshṭhī characters. Eukratides was murdered by his son Apollodotus, who succeeded him in India, while another son Heliokles ruled in Bactria and probably south of the Hindū-kush as well. In his time, about 140 B. C., the Greek monarchy of Bactria fell before barbarian invaders, but south of the mountains Greek kings continued to rule. The most important of these was Menander king of Kābul, who invaded India and penetrated as far as Mathurā and Oudh. He is probably the king Milinda of Buddhist tradition. His invasion of India may be placed about 155 B. C., and the extent of his invasions is shown by the abundance and numerous find-spots of his coins. From this time on the territory held by the Greeks seems to have been split into several principalities, and Hermaeus the last Greek king was subdued by the Kushān Kudjulakara Kadphises about 45 A. D. Coins are in existence bearing jointly the names of the two kings, and resembling strongly the later coins of Augustus, from which they seem to have been imitated. Meanwhile for two hundred years a large part of Afghānistān had been occupied from 140 B. C. onwards by barbarian chiefs ruling side by side with Greek kings.

The most important of these barbarians were the Sākas, probably a nomadic Iranian race, who had formerly occupied an extensive territory in Scythia, north of the Oxus. It has been conjectured that the Ghalča tribes of the Pamir and the Baltis of Baltistān (who, though Tibetan in speech, are not Mongolian in features) are their modern representatives. It is possible too that the Balōčes, who are first heard of historically in the time of Nūshirwān, are an offshoot of the same stock. The Sākas were attacked about 160 B. C. by the tribes known to the Chinese as Yueh-či, probably of Turkish origin, who had themselves been driven west from their original home in Kiang-sū by the Hiung-nū. The Sākas were gradually pushed southwards, and the Bactrian kingdom north of the Paropamisus fell before them. The Sāka kings Mianz (or Heraus) and Hyrcodes, whose coins were certainly struck north of these mountains, probably belong to this period. They further broke up and seem to have made their way into India via Bāltistān, and into Persia and Aria by Herāt, and obtained complete possession of the satrapy of Drangiana, which henceforth was known as Sakastene or Sākastānē (whence the mediaeval Sigistān, Sidjistān and the modern Sīstān). This has been the accepted theory of most writers on the subject, but recently F. W. Thomas has brought forward strong arguments to show that the Sākas were already established in Drangiana perhaps from the time of the Achaemenians, that they held the whole mountain country now known as Hazāristān, and that any invasions they may have made into India were made from this centre into the Indus valley, and not from the north by the Hindū-kush. In any case the Sākas were found in Sīstān at this period.

The kingdom of Parthia had arisen in North Persia about the same time as that of Bactria, but it had a more solid foundation, and was not shaken by Sākas or Kushāns. Indeed, if we may believe Orosius, Mithridates I of Parthia invaded India about 138 B. C. and annexed the country comprised in the kingdom of Taxila up to the Djehlam. But here they had to give way to the Sākas, and a king of that race named Maues or Moa is found ruling at Taxila ca. 120 B. C. In Sākastāna the Sākas are shown by their coins to have been under strong Parthian influence. Vonones was probably contemporary with Maues and held not only Sākastāna but Arachosia, up to the Indian frontier. His brother Spalirises succeeded him and Azes held the province of Arachosia. The Parthians under Mithridates II reconquered Sākastāna ca. 90 B. C., and Azes seems to have lost Arachosia but succeeded Maues in Taxila. His son Azilises succeeded, followed by Azes II and the Parthian Gondophares who conquered Sākastāna, Arachosia and the lower Indus valley. He was a powerful monarch, and is the king associated with the legend of St. Thomas's visit to India. On his death the kingdom broke up, Orthagnes obtaining Arachosia. About 90 A. D. the whole country came under the rule of the Kushāns.

The Yueh-či of the Chinese, of whom the Kushāns were a branch, are believed to have been of Turkish origin, but it is probable that they were partly of Iranian blood and culture, which would have rendered easier their assimilation by the pre-existing Iranian population (including the Sākas). The portraits on their coins show them as sturdy bearded men with long noses, in fact of the type still prevailing among Afghāns and Tādjīks; their language seems to have been (or to have rapidly become) Iranian, and the Gods they worshipped were mainly Persian. Their home before they were attacked by the Hiung-nū was in Chinese Turkistān where recent discoveries show the early civilization to have been mainly Iranian and the language identical with that of Sogdiana. They probably assimilated other Iranian elements during their residence in the Oxus country, and learnt something also from the Greek princes whose coins they imitated, although their knowledge of Greek was much less perfect than that of the Sākas, and they often used Persian words written with Greek letters.

Certain dates have been derived from inscriptions of these kings, and it has been generally held that these must be referred to the Sāka era

which commences in 78 A. D. According to the generally accepted view the succession of kings was as follows:

Kadphises I (Kudjula)	A. D.	45—50
Kadphises II (Hēma)	"	50—85
Kanishka	"	85—120
Huwishka	"	120—150
Wāsudēwa	"	150—180

It seems probable, however, that it is not necessary to assume that Sākas and Kushāns used the same era, and Fleet has argued in favor of the adoption of the Samwat era, commencing 58 B. C. as that followed by the Kushāns, and identifies the commencement of this era with the date of Kanishka's accession. Following this era the Parthian king Gondophares is found to have been reigning at Taxila (in the 26th year of his reign) in 47 A. D. In accordance with this theory the succession of kings is tentatively arranged thus:

1st Kushān dynasty.	Kanishka	58—30 B. C.
	Wasushka (?)	30—22 "
	Huwishka	22 B. C.—16 A. D.
	Wāsudēwa	16—40 "
2d dynasty.	Kadphises I	50 "
	Kadphises II	

It seems clear that the Kushān kingdom, whether first established by Kanishka or by Kudjula Kadphises, swallowed up all competitors in Afghānistān during the century from 50 B. C. to 50 A. D. The Kushāns were still mainly to the north of the Hindū-kush when visited by the Chinese Čang-ki-'en about 125 B. C. Some time after this the Yueh-či were divided into five principalities of which the Kwei-čwang or Kushāns were one. About a hundred years later the Kushān king subdued all the other principalities, attacked the Parthians, conquered Kābul and founded a wide-spread empire. The Chinese version of his name is Kieou-tsiou-k'io, who was succeeded by his son Yen-kao-čin, who invaded India. The first is generally identified with Kudjula Kadphises who finally supplanted Hermaeus, the last Greek king of Kābul, if the coins are rightly interpreted, and his son with Hēma or Wēma Kadphises, whose coins are abundant both in Afghānistān and North India. His empire extended from the frontier of Parthia to the Ganges and northwards into Sogdiana. The whole of Afghānistān seems to have been included. With his coins are associated those of a chief known only as Sōtēr Megas, perhaps his general or viceroy. The coins of Kadphises I bear a strong resemblance to those of Augustus and Tiberius, and seem to have been copied from them, and the Roman standard of weight was also adopted for the gold coinage. Kadphises II is believed to have reigned for about forty years. Kanishka's reign, according to the generally accepted account began about 125 A. D. His coins show the extent of his dominions, and he is celebrated in Buddhist tradition as the king who called the great council which established the Mahāyāna system. The figure of Buddha with his name in Greek letters appears on one of his coins. Fleet has, however, pointed out that Buddhist tradition fixes the accession of this king at four hundred years after Buddha's death, and that this is inconsistent with such a late date as 125 A. D. subsequent to the two Kadphises kings. S. Lévi also to some extent accepts this view though he has not adopted the theory of the Samwat era. Fleet considers that Kanishka and his successors precede the Kadphises kings instead of following them, and reigned from 58 B. C., the commencement of the Samwat era, until nearly the time when the last Greek king Hermaeus was displaced by Kadphises I. The reign of the latest Greek kings was no doubt confined to a very limited area.

It may be noted that the Kanishka kings employ only Greek or Persian in Greek letters on their coins, and until the last king of the series Bāzdēo or Wāsudēwa, who is shown by his name to have been indianized, the deities which appear on their coins are mainly Persian. The Kadphises kings, like the Greeks, employ both Greek and Prakrit, and the type on the reverse of their coins is Siva and his bull, which had only been used by Bāzdēo among the Kanishka kings. From this it may be argued that the centre of the dominions of Kanishka and his followers was in an Iranian district, and that of the Kadphises kings in an Indian district such as the lower Kābul valley or Taxila. After this period Siva and his bull continued to be used for centuries, and there was no reversion to the Persian deities even under Sāsānian influence. These facts seem to be in favor of the theory of succession advocated by Fleet. We know very little of the Kushān kings except from coins and a few inscriptions. The inscription on the Wardak vase shows that Kābul was included in Huwishka's dominions. The power of the Kushāns declined rapidly in India after the time of the kings we have been considering, but in Afghānistān it was maintained for some centuries; in fact till the invasion of the Ephthalites or White Huns. During this period we again find Afghānistān as the battlefield of Indian and Persian influence. The Parthian power disappeared and its place was taken by the Sāsānian monarchy of Persia, while in North India the great dynasty of the Guptas rose to power. In some of the later Kushān coins, struck probably in Sīstān in the 4th and 5th centuries, there is a distinct Sāsānian influence. This probably began with the conquest of Sākastāna by Warahrān II (died 294 A. D.), who gave his son Warahrān III the title of Sakān-shāh. Hormuzd II soon after in the early part of the 4th century married the daughter of the Kushān king of Kābul, and described himself on his coins as of the royal family of the Great Kushāns, and at the siege of Amida Shāpūr had the support of the people of Sīstān (Segestāni) and of the kings of India, i. e. the Kushāns. Some of the Kushān kings bear such distinctively Sāsānian names as Hormuzd, Warahrān and Pērōz. On the other hand the great Gupta conqueror Čandragupta is shown by his inscriptions to have had intimate relations with a Kushān king.

The rule of the Kushāns in Afghānistān seems to have been extinguished by the invasion of the White Huns or Ephthalites, in the latter part of the 5th cent., which was the period of the wars of this race against the Sāsānides, in which Pērōz met his death in 480 A. D. Kābul and Gandhāra fell into their hands about 500 A. D., and their king Toramāna established a rule which extended far into India. His capital was at Sākala, i. e. Siyālkot in the Panjāb. These barbarians roughly imitated Sāsānian types in their coins. It is not certain whether a king of Kābul named Napki who struck coins of Sāsānian type at this period, was a Kushān or an Ephthalite. The rule of the

Ephthalites was evanescent, and disappeared before another invasion from the north made in alliance with the great Persian king Khosraw Anūsharwān. Kushān chiefs with the title of Shāhi continued to rule at Kābul from this time till 880 A. D. when the Musulmans had appeared on the scene, and the so-called Brahman kings began to reign in the lower Kābul valley. Al-Bīrūnī mentions one of these kings called Kanik who was a celebrated Buddhist, and built a stupa at Peshāwar. This is evidently a reminiscence of Kanishka, but Buddhism was undoubtedly strong throughout the Kushān period. The Chinese pilgrims Hiouen Tsang who traversed the country in 630 A. D. and Wang-hiouen-tse in 657 A. D. testify to this, and Hiouen Tsang found the provinces of Gandhāra, Lampā (Lamghān) and Nagarhār under the rule of the kings of Kapiśa or Kābul. A usual title of these later Kushāns was Kidāra, the Kito-lo of the Chinese. Al-Bīrūnī gives the form Lagatormān (for Katormān) and a similar title has survived in the Kāfir mountains till modern times. The final supersession of these Shāhi kings by their Brahman viziers may be a phrase in the suppression of Buddhism by Brahmanism, then in progress all over North India. The Hindū kingdom now established had its headquarters at the town of Udabhānda or Ohind on the Upper Indus above Attock, and included the valley of the Kābul river up to Djalālābād, but not Kābul itself which was already in the power of the Musulmans. Al-Bīrūnī speaks very highly of the character of these Hindū kings. Their names as far as can be ascertained were as follows:

Al-Bīrūnī's list	List from *Radjatarangini* and coins
Kallar	Lalliya
Sāmand	Sāmanta-dēwa
Kamalū	(Kamara?)
Bhīm	Bhīma dēwa
Djaipāl	Djayapāla
Anandpāl	Ānandapāla
Tarodjanpāl	Trilocanapāla
wanting	Spālapati
	Padama
	Khuduwayaka
	Wanka-dēwa

The last four are known only from coins. Those of Spālapati are extremely common. The name is apparently Iranian, meaning „general of an army" (as in the modern Persian *sipāh-bād*), but his coins are found commonly in the Northwestern Pandjāb as well as in Afghānistān. The dynasty was finally extinguished by Maḥmūd Ghaznawī, who won a great victory at Ohind (Waihand of the chroniclers) in 1009 A. D. It lasted till 412 (1021).

Introduction of Islām. The first attempt to extend Islām into Afghānistān was made as early as the time of the caliph ʿOthmān, when the governor of Baṣra sent ʿAbd al-Raḥmān b. Samura to invade Sidjistān. He besieged and took Zarandj (the modern Zāhidān, where its ruins may still be seen), and also reduced the country between Zarandj and Kish, and from al-Rukhadj (probably Arachosia) to Dāwar (Zamindāwar) and the mountains of Zūr (for which Ghōr should probably be read), where he destroyed an idol of gold with ruby eyes. The town of Bust, the capital of Zamindāwar, was taken, and he advanced through Zābul (that is by the Tarnak valley and Ghazna) to Kābul, where he took the shāh prisoner, no doubt one of the little Kushān Shāhi kings. This final advance was made in the time of the caliph Muʿāwiya. These conquests led to no permanent occupation, though the shāh is said to have accepted Islām and repeated the *Kalima*; but Sīstān proper, which was easily accessible and close to the province of Karmān, was thoroughly subdued; and from this base further attempts were made to subdue the kingdom of Kābul. An expedition headed by ʿUbaid Allāh b. Abī Bakra 79 (698) failed and he was obliged to ransom himself and his army for 700000 dirhams. In 81 (700) al-Ḥadjdjādj despatched another expedition, but the commander ʿAbd al-Raḥmān b. al-Ashʿath was disgraced. He then in revenge allied himself with the shāh, but was afterwards betrayed to al-Ḥadjdjādj and committed suicide. The king's name is given as Ranbal or Zanbal or Rutbīl, but the form is not certain. Under Hārūn al-Rashīd another expedition against Kābul is stated by Yaʿḳūbī to have been directed, and it was again taken, but not held, and when al-Maʾmūn had himself succeeded to the caliphate and the Ṭāhirides had risen to power, we hear of a rebellion of the Khāridjite heretics in Sidjistān.

The rise of the Ṣaffārīs headed by Yaʿḳūb b. Laith about 860 was undoubtedly due to a movement of the indigenous population against their Arab conquerors. After Yaʿḳūb had put an end to the Ṭāhirides and established his power in Sidjistān he extended it through Djarūm (i. e. the Garmsīr of the Lower Helmand) and Zābulistān, conquered al-Rukhadj, Ghazna and Kābul, and took the shāh prisoner. His occupation lasted longer than any of the previous invasions, and we find a coin of his struck at Pandj-hīr in the Kābul Kōhistān in 260 (873-874) and one of al-Laith b. ʿAlī struck at Bust in 298 (911). Kābul seems to have been permanently occupied about 257 (871), a date which corresponds closely with the commencement of the so-called Brahman kingdom of Kābul as shown above. The last Shāhi kings evidently collapsed under the combined influence of Musulman attacks from the south and the rebellion of their Hindū subjects in the east. This Hindū kingdom formed a barrier against the advance of Islām into India till its conquest by Maḥmūd, for although the faith had been long established in Sind its eastward extension from that side was checked by the desert. The possession of the fertile belt of country below the Himalayas was indispensable as a preliminary to a further advance, and this was inaccessible until the Ohind kingdom had been destroyed.

The Ṣaffārīs were, as has been already noted, of Persian stock. The ruling family claimed descent from Khusraw Anūsharwān. Yaʿḳūb b. Laith never made peace with the caliphate, but his brother ʿAmr made a nominal submission, and was confirmed in the possession of Fārs, Djurdjān, Sidjistān and Khorāsān; but the fallen Ṭāhirides recovered part of their power, and war between the rival families continued till both fell before the rising power of the Sāmānides, another family of Iranian blood. ʿAmr was defeated by Ismāʿīl Sāmānī at Balkh in 287 (900) and died in captivity. The Ṣaffārīs thus lost all their dominions in Persia and Khorāsān, but retained Sidjistān which extended into Arachosia, and perhaps even to Kābul. They remained under the suzerainty of the Sāmānides,

and members of the same family ruled Sidjistān as governors throughout the time of the Ghaznawī and Ghōrī kings. How far the Sāmānide power extended in Afghānistān is doubtful. Ismā'īl Sāmānī is stated in the *Mudjmal-i faṣīḥī* to have ruled some parts of India. Raverty considers that this refers to the Kābul territory. It may perhaps imply some admission of suzerainty by the Hindū kings of Ohind. Zamindāwar was probably governed through the Ṣaffārīs, who did not however make any admission of Sāmānide suzerainty on their coins. After 300 (912) the Ṣaffārī power was confined to Sīstān proper, and the greater part of Afghānistān must have been independent under its local chiefs, no doubt some of them still Zoroastrian, Buddhist or heathen in their beliefs.

About 350 (961) a Turkish slave named Alp-tegīn who had been Ḥādjib or Chamberlain under the Sāmānide king 'Abd al-Malik rebelled against his successor Manṣūr, and took possession of the town of Ghaznīn. He displaced its local chief Lawīk who is called *ṣāḥib* or *pādshāh*, perhaps one of the later Kushān chiefs, and also subdued the province of Zābulistān, and thus began to build up an independent kingdom. He had an army of Turkish troops under his command, and was able to hand over his power to his son Isḥāḳ who ruled from 352 (963) to 355 (965). Balkā-tegīn a Turkish slave of Alp-tegīn succeeded him, and struck coins in his own name, which his predecessors as far as we know had not done. When he died another slave of Alp-tegīn named Subuk-tegīn rose to power and became the actual founder of the Ghaznawī dynasty. He issued coins from the mountain fort of Farwān north of Kābul admitting the overlordship of the Sāmānides, but became a powerful ruler throughout Zābulistān, Zamindāwar and Ghōr, and attacked Djaipāl the Hindū king of Ohind. He was also invested by his Sāmānide overlord, the emīr Nūḥ with the government of Khorāsān. The Sāmānide kingdom was now weakening to its end, and the power of the rulers of Ghaznīn rose as it declined. On Subuk-tegīn's death in 387 (997) his son Ismā'īl succeeded, but was dethroned by his brother the celebrated Maḥmūd, then (389 = 999) in his twenty-eighth year. The Sāmānide king Manṣūr was soon afterwards dethroned by rebels, and his brother 'Abd al-Malik also fell shortly after. Maḥmūd espoused the cause of his fallen suzerain, punished the rebels and kept the kingdom. Possibly he was implicated in the revolt, as Faṣīḥī says that he himself attacked 'Abd al-Malik. Maḥmūd then fixed his capital at Balkh, and received investiture from the caliph al-Ḳādir, with the titles of Yamīn al-Dawla and Amīn al-Milla, and dropped the name of the Sāmānide king. The title of Sulṭān by which Maḥmūd is generally known to the chroniclers does not appear on his coins nor on those of his immediate successors, and does not appear to have been recognized in his time. Its first official use is by Toghrul Beg Seldjūḳ in 439 (1047), after Maḥmūd's death, and among the Ghaznawī kings it makes its first appearance on the coins of Ibrāhīm who succeeded in 451 (1059). The statement in Elliott and Dowson, *History of India*, ii. 482, that Mas'ūd I bore the title of Sulṭān al-Mu'aẓẓam is not borne out by the coins. Maḥmūd used the titles of Niẓām al-Dīn, Malik al-Mamālik and Malik al-Mulūk. Firdawsī in his well-known satire addressed him as Shāh. Al-'Otbī however sometimes speaks of him as Sulṭān, and the title was doubtless in popular use before it was officially recognized.

Maḥmūd's conquests in India and Persia do not form part of the history of Afghānistān. He was there a foreign ruler, a Turk, and Ghaznīn was a convenient centre for his empire, but his dynasty was in no way national, and the chiefs of Sidjistān, Ghōr and of the Afghān tribes in the Sulaimān Mountains continued to rule locally under Ghaznawī supremacy. Probably the later kings of the race were to some extent assimilated to their Tādjīk subjects, and names like Farrukh-zād, Bahrām Shāh and Khosraw imply Persian influence. Maḥmūd's armies were recruited wherever he could find suitable material, the nucleus being Turks of his own race. The Khaldj, another race of Turkish origin, were also an important element. When Maḥmūd marched to Balkh to meet Īlek Khān, his army according to al-'Otbī contained Indians, Khaldj, Afghāns and Ghaznawīs. Of these the Indians no doubt belonged to the lately conquered kingdom of Ohind, and his successor Mas'ūd employed, Baihaḳī tells us, Hindūs with success even against the Turkish rebel Aḥmed Niyāl-tegīn. In the battle of Karmān the cavalry consisted of 2000 Hindūs and 1000 Arabs and Kurds. The Ghaznawīs were no doubt the Tādjīks of the Ghaznīn province or Zābulistān. The Afghāns begin at this time to appear as component parts of the armies. Their first recorded employment was by Subuk-tegīn. The Khaldj were very widely spread at this time over Khorāsān and Sīstān, and Yāḳūt (*Mu'djam*, s. v. *Kābul*) quotes Iṣṭakhrī as saying that they conquered Kābul. In these mixed armies the Turkish element undoubtedly was predominant.

Maḥmūd's first important expedition was against the Hindū kingdom of Ohind or Waihand, with which Subuk-tegīn had already been at war. The first campaign was shortly followed by another which ended in the total defeat and capture of Djaipāl in 392 (1001) near Peshāwar, and the fall of his capital Waihind. After Maḥmūd's first invasion of India, when he was confronted by a confederation of the warlike Hindūs of North India headed by Ānandpāl assisted by the Ghakhars, Djaipāl seems to have remained faithful to him, and soon afterwards offered him a contingent of 2000 Indians to serve in his army. In the intervals of his numerous Indian expeditions and other foreign conquests Maḥmūd found time to consolidate his dominions in Afghānistān. The Tādjīk principality of Ghōr first attracted his attention. Its princes though destined ultimately to overthrow the Ghaznawī monarchy were still obscure mountain chiefs.

Subuk-tegīn had conquered Zamindāwar and Ghūr, and Bust the capital on the Helmand, but the mountain country was evidently unsubdued, and Maḥmūd found it necessary to attack it. He was engaged in operations there from 401 (1010) to 405 (1014). The hillmen were evidently as yet unconverted to Islām, Baihaḳī speaks of them as cursed unbelievers. The war ended with the capture of the Malik, Muḥammed son of Sūrī.

In 414 (1023) Maḥmūd attacked the mountain Afghāns of the Sulaimāns who had been giving him trouble, and plundered their country.

At the close of his reign Maḥmūd ruled over

a vast empire including on the west Khorāsān with parts of 'Irāḳ and Ṭabaristān; on the north Turkistān south of the Oxus, with some influence beyond that river; on the east the whole of the Pandjāb; and all modern Afghānistān in the centre. His mint towns illustrate its extent. In Afghānistān he struck coins at Ghaznīn and Farwān, in Khorāsān at Nīshāpūr and Herāt, at Djurdjān near the Caspian, in Turkistān at Balkh and Walwālīz, and in the Pandjāb at Lahore, also called Maḥmūdpūr. His Court at Ghaznīn was the resort of many celebrated men of letters, among them Firdawsī and al-Bīrūnī, but he was not a patron of learning in any true sense, and was bitterly satirised by Firdawsī whom he treated unworthily. Al-Bīrūnī too reserves his encomiums mainly for Mas'ūd, and says but little of Maḥmūd. It was the dramatic nature of his Indian exploits which struck the imagination of his contemporaries, and has since made him a hero of folklore, and his name a household word. In the course of ages Maḥmūd, whose only actual connection with the Afghāns was to attack and plunder them, has become a national hero in the country which he ruled as a foreign conqueror.

Maḥmūd was succeeded in 421 (1030) by his son Muḥammed, who was soon deposed by his brother Mas'ūd. The latter had taken part in many of his father's campaigns, and was a brave warrior, but given to drinking. In his time the first great blow against the Ghaznawī power was struck by the rise of the Seldjūḳs under Ṭoghrul Beg. Mas'ūd was defeated by him in a desperate battle, in which he showed great heroism, at Dandānaḳān between Merw and Sarakhs in 431 (1036). From this time Khorāsān and the whole of the western dominions were lost. The change is marked in the Nīshāpūr coinage. The last recorded coin of Mas'ūd's at that mint is dated 431 (1039-1040) and the first of Ṭoghrul Beg's 433 (1041-1042). The Karmathian heresy was very widely spread at this period especially in Khorāsān, and Mas'ūd's powerful minister Hasnak was executed for having joined this sect and for being in correspondence with the Egyptian caliphs. On the side of India the dangerous rebellion of a Turkish general Aḥmed Niyāl-tegīn was put down with difficulty with the aid of Indian troops. Mas'ūd wished to rival his father's Indian conquests, and actually took the fort of Hānsī, but the Seldjūḳ invasion put an end to all such projects. He had also to deal with a rising of the Maliks of Ghōr. After his defeat by the Seldjūḳs he again left Ghaznīn for India, but was treacherously seized at the Mārgala Pass near Ḥasan Abdāl by his Turkish and Indian servants who put his deposed brother Muḥammed on the throne. Mas'ūd was murdered in prison in 433 (1041). His son Mawdūd who was governor of Ghaznīn defeated Muḥammed at Nangrahār, and put to death all his father's murderers „both Turk and Tādjīk". The town of Fatḥābād near Djalālābād was founded by him to commemorate this victory. Mawdūd reigned till 441 (1048) and was succeeded by his son 'Abd al-Rashīd after a short interregnum. The increasing power of the Seldjūḳs made the Ghaznawī kings rely more and more on their Indian dominions, and the change is marked (first in Mawdūd's reign) by the adoption of Siva's bull on their coins, with the inscription *Srī Samanta Dēva* borrowed from the coins of the kings of Ohind.

In 'Abd al-Rashīd's reign the Seldjūḳ invasion was renewed under Dāwūd and his son Alp-Arslān, who invaded the Ghaznīn territory by way of Tokhāristān, and Zamīndāwar by way of Sīstān. They were defeated at Khumār and Bust by an army under the command of a Turkish slave named Ṭoghrul, who after his victory turned upon the king, murdered him and usurped the throne of Ghaznīn. He was himself killed by another Turkish slave, and Farrukhzād son of Mas'ūd was brought out of prison and set on the throne (444 = 1052). He reigned till 451 (1059) and won popularity by lightening the heavy taxation of Zābulistān. Probably the rising strength of the Ghōr Maliks had something to do with this leniency. His brother Ibrāhīm succeeded him, and his long reign of over forty years was on the whole peaceful and prosperous. He made peace with the Seldjūḳs and married afterwards his son Mas'ūd III to the daughter of Malik Shāh the Seldjūḳ king. He made some conquests in India, but is more celebrated for his peaceful exploits, the erection of mosques, serais and schools. Mas'ūd III succeeded in 492 (1099) and reigned till 508 (1115). His reign was prosperous and his alliance with the Seldjūḳs preserved him from molestation on the north and west. He was able to organize further expeditions into India, one of which penetrated to the Ganges. After his death a rivalry between his sons Shērzād and Arslān ended in the deposition of Shērzād. Arslān reigned only two years, and his misconduct brought the long peace with the Seldjūḳs to an end. He insulted his stepmother, sister of the great Sandjar now the Seldjūḳ king, and drove out her son Bahrām, his own half-brother. Sandjar made war on him and he was defeated and retired on Lahore, but recovered Ghaznīn for a short time. Bahrām with the aid of the Seldjūḳs defeated him a second time and he died in India in 511 (1117). With Bahrām's accession the independent Ghaznawī monarchy may be said to have ceased to exist. Though he still called himself Sulṭān al-A'ẓam, yet he became a vassal of Sandjar and put his name on his coins as suzerain. Bahrām Shāh reigned till 547 (1152) but his rule was restricted, and there was no longer strength nor energy in the administration to deal with enemies internal or external. The Turkoman hordes of the Ghuzz, originally akin to the Seldjūḳs, but now their most dangerous enemies, threatened from the north, while the mountain chiefs of Ghōr now began to challenge Ghaznawī supremacy in the south. They had been gradually growing in strength, and, unlike the other rulers of the time, were truly indigenous, sprung from the Tādjīk stock. Mas'ūd III had already in 493 (1090) bestowed the government of Ghōr on 'Izz al-Dīn Ḥusain son of Sām, and the Maliks were supported also by Seldjūḳ influence. 'Izz al-Dīn Ḥusain was succeeded by his son Saif al-Dīn Sūrī, whose brother Ḳuṭb al-Dīn Moḥammed, known as Malik al-Djibāl or King of the Mountains, was poisoned in Ghaznīn through jealousy by Bahrām Shāh. In revenge for his brother's death Sūrī invaded Ghaznīn. Bahrām Shāh fled to Kurmān (i. e. the Kuram valley), and Sūrī, with his brother 'Alā' al-Dīn Ḥusain who commanded his army, took possession of Ghaznīn. 'Alā' al-Dīn then returned to Ghōr, and in his absence Bahrām Shāh, having assembled a force of Afghāns and Khaldjī, regained possession of Ghaznīn,

and captured and slew Sūrī. Bahā' al-Dīn Sām the eldest surviving brother had meanwhile been building up the Ghōr power in his own mountains, and founded the hill fort of Fērōz-kōh. After some years he marched towards Ghaznīn accompanied by 'Alā' al-Dīn, but died on the way. 'Alā' al-Dīn succeeded, and carried out his brother's intention. He defeated Bahrām Shāh in Zamīndāwar and after two more battles took Ghaznīn. He wreaked his vengeance in such a savage manner that the town never recovered from the wholesale massacre and conflagration. From this 'Alā' al-Dīn obtained the name of Djahān-sōz or world-burner. He also destroyed the town of Bust, which seems to have been the Ghaznawī capital of Zamīndāwar as opposed to the Ghōrī town of Fērōz-kōh, the mountain capital. Ghaznīn never recovered its importance, and Bust has remained a ruin till the present day. In later times Ḳandahār took its place as the capital of Arachosia. Bahrām Shāh seems to have reoccupied Ghaznīn after the departure of 'Alā' al-Dīn Djahān-sōz: he died soon after (547=1152) and was succeeded by his son Khosraw Shāh. He was quickly driven out of Ghaznīn by the advance of the Ghuzz hordes, and retained nothing but his dominions in the Pandjāb. At Lahore he was succeeded after seven years by his son Khosraw Malik who reigned there for nearly thirty years until the Ghaznawī dynasty was finally extinguished by the Ghōrīs in 583 (1187-1188).

A long period of power in Afghānistān might now have been anticipated for the Ghōrī kings, but its progress was suddenly checked by the rising forces of Central Asian barbarism. The Ghuzz, the Shāhs of Khwārizm and the Moghuls under Čingiz Khān burst upon the country in rapid succession, with the result that the Ghōrīs lost all power in their own country, although they conquered an extensive empire in India and were able to hand it on to a long line of successors, — not indeed their own descendants but those of their Turkish slaves. At the time when 'Alā' al-Dīn Djahān-sōz took Ghaznīn the most powerful monarch reigning was Sulṭān Sandjar Seldjūḳ, who claimed to be suzerain both of Ghaznīn and Ghōr. Towards the end of his reign he began to have trouble with the northern hordes, both Khiṭā'īs and Ghuzz. In 536 (1141) he suffered a defeat at the hands of the Khiṭā'īs, and was threatened by the Ghuzz. These events seem to have encouraged 'Alā' al-Dīn Djahān-sōz to throw off the Seldjūḳ yoke. He enlisted a large number of Turks, Ghuzz and Khaldj in his army and marched into the valley of the Harī-rūd, where he was encountered by Sandjar. His wild allies deserted him, and gave the victory to Sandjar. 'Alā' al-Dīn was taken prisoner, and chained with golden fetters which he had himself prepared for Sandjar. He soon however obtained Sandjar's favor, and Ghōr was restored to him. Next year Sandjar himself fell a victim to the Ghuzz, and was captured by them. Khorāsān was laid waste in a savage way, a foretaste of what was to happen in the time of Čingiz Khān, who was born the year succeeding the defeat of Sandjar. The king's imprisonment lasted four years; he died in 552 (1157) and the rule of the great Seldjūḳs perished with him. The Ghuzz were now in great force along the northern frontier of Ghōr. 'Alā' al-Dīn had extended his dominions into eastern Khorāsān and the Murghāb valley, and died at Herāt in 551 (1156). Saif al-Dīn Muḥammed who succeeded was defeated and slain by the Ghuzz of Balkh in 558 (1162), but his successor Ghiyāth al-Dīn Sām inflicted a severe defeat on them the same year. Meanwhile the Ghuzz had seized on Ghaznīn after Bahrām Shāh's death and held it for twelve years until they were driven out by the Ghōrī king and his celebrated brother Mu'izz al-Dīn Muḥammed b. Sām (often alluded to by his earlier name Shihāb al-Dīn). A short respite from barbarian invasions was thus obtained, and Mu'izz al-Dīn became ruler of Ghaznīn under the suzerainty of his brother who reigned at Ghōr. He immediately began to organize expeditions into India, not only against the Hindūs and the Karmathian heretics of Multān, but also against the still existing remnant of the Ghaznawī empire. He seized and imprisoned the last king Khosraw Malik and annexed his dominions in 583 (1187). Thus he obtained possession of the Pandjāb as a base for his further Indian conquests. Ghiyāth al-Dīn was himself occupied on the western frontier of his dominions. He asserted his supremacy over Sīstān, which remained under its own Maliks as governors under Ghaznawīs, Seldjūḳs and Ghōrīs. Tādj al-Dīn Ḥarb admitted his supremacy, but continued to strike his own coins. In 571 (1175) Ghiyāth al-Dīn occupied Herāt. In 588 (1192) his northern dominions were attacked by Sulṭān Shāh, brother of Takash the Shāh of Khwārizm. Mu'izz al-Dīn joined his brother from Ghaznīn and they defeated Sulṭān Shāh on the Murghāb R., but the Khwārizm-Shāhs did not give up their plans of conquest. As long as Ghiyāth al-Dīn and Mu'izz al-Dīn lived they were able to guard their dominions, but Ghiyāth al-Dīn died in 598 (1201) and his brother who succeeded him was assassinated by a fanatic at Damyak between the Indus and the Djehlam rivers on his return from a campaign against the Khōkhars near Lahore in 602 (1205). He had made his cousin 'Alā' al-Dīn ruler of Ghōr in supersession of Ghiyāth al-Dīn Maḥmūd (son of the late king Ghiyāth al-Dīn Muḥammed b. Sām), but after the death of Mu'izz al-Dīn Ghiyāth al-Dīn recovered his throne but was murdered in 607 (1210-1211) by some prisoners he had kept at the desire of the Khwārizm-Shāh in his fort at Fērōz-kōh. He was not able to hold his own at Ghaznīn, where the power fell into the hands of the Turkish generals, formerly slaves, of Mu'izz al-Dīn Muḥammed b. Sām, who had left no son. The principal of these were Tādj al-Dīn Yaldūz, Ḳuṭb al-Dīn Aibak, Nāṣir al-Dīn Ḳubāča and Shams al-Dīn Iltutmish. Of these four Yaldūz was the favorite of the deceased king, and he held possession of Ghaznīn for nine years during which he continued to put the deceased sovereign's name on his coins as suzerain, calling himself „his servant" (*'abduhu*). Ḳuṭb al-Dīn's activity was confined mainly to India, but he once took Ghaznīn and held it for forty days. Ḳubāča made a kingdom for himself in Sind and Multān and disputed the possession of the Pandjāb with Yaldūz, but finally succumbed to Iltutmish, who established a dynasty in India. Yaldūz was a strong ruler and kept the impending invasions at bay for a time, and spread his authority over Ghōr and Herāt. He also invaded Sīstān, but ended in making peace with Tādj al-Dīn Ḥarb who remained in possession. But the rivalry between Yaldūz and Iltutmish was fatal to the stability of the kingdom. They met in battle at Tirāorī near Karnāl in 612 (1215) and Yaldūz was defeated and put to death,

but Iltutmish though strong in India had no hold on the Ghaznin territories, and was unable to hold them. The Ghōrī Maliks had lost their power and there was no one left to withstand the conquering 'Alā' al-Dīn Muḥammed b. Takash of Khwārizm. He took the defenceless town of Ghaznīn in 612 (1215) and obtained possession of the whole dominions of Ghōr and Ghaznīn. He left his son Djalāl al-Dīn Mangubartī as sultan and himself went north to meet a yet more mighty foe, the irresistible Čingiz Khān. After his defeat and death in 617 (1220) Djalāl al-Dīn made a brave but hopeless struggle against the Moghul advance. He had lost his hereditary dominions of Khwārizm, and made Ghaznīn the centre of his resistance. The Ghōrī Maliks supported him. He defeated the Moghuls at Farwān, but had to fall back before Čingiz who crossed the Hindū-kush at Bāmiān. Djalāl al-Dīn retired on the Indus but was overwhelmed near the Nilāb ferry, and only escaped by swimming his horse across the river where Čingiz Khān did not follow him. His further wanderings are not connected with Afghānistān. The Moghul invaders, „the accursed pagans", were now in complete possession of the country. Herāt was taken by Tūlī son of Čingiz in 619 (1222), and a frightful massacre of the Musulman population followed. Sīstān also fell before him, and its line of independent Maliks finally disappeared. Ghaznīn was taken by Ogotai after the defeat of Djalāl al-Dīn on the Indus. Čingiz himself returned by Bāmiān to Turkistān. Ogotai then advanced into Ghōr, and using this territory as his centre of operations he dominated the mountains of Fērōz-kōh and Ghardjistān as well as the plains of the Garmsīr and Sīstān. The last Ghōrī Maliks went down before the flood, and Fērōz-kōh was destroyed so thoroughly that even its site is now doubtful (619 = 1222). Tūlak, another strong mountain fort, made a successful resistance at this time but fell soon afterwards. Possibly the Moghul colonization of the Hazāra hills began at this time, as we learn that the population of Tūlak was transferred to Sīstān. Other mountain towns made a stubborn resistance, but their tenacity only led to more thorough destruction. A leader of the people of Ghōr was Emir Muḥammed of Ghardjistān, who was descended from the Ghōrī Maliks on his mother's side. He was killed in the fort of Ashyar during its siege by the Moghuls in 620 (1223). The founders of the Kurt dynasty were his descendants. The greater part of Afghānistān was now incorporated in the Moghul empire, but on the eastern side a Turkish chief Saif al-Dīn Ḥasan Ḳarlugh who had perhaps been associated with Djalāl al-Dīn Mangubartī obtained possession of Bāmiān, Ghaznīn and Ghōr for a time. He certainly was in power as early as 622 (1225) as a coin was struck by him in the name of the caliph al-Ẓāhir, and continued till 636 (1238) when he submitted to Ogotai and received a Moghul *Shiḥna* or intendant. Notwithstanding this he was driven into India by the Kurram valley. He and his son Nāṣir al-Dīn ruled in Sind for twenty years longer. Ghaznīn and the Kurram were now used by the Moghuls as a base for their further invasion of India. We hear nothing of Afghāns in connection with these movements, and it is possible they had not spread as far north as the Kurram valley. After Ogotai's death the Moghul empire was divided, and Afghānistān fell to the share of the Persian Īlkhāns descended from Tūlī. Under their suzerainty a Tādjīk dynasty known as the Kurts or Kerts rose to power and held a great part of the country for nearly two hundred years. The founder was Rukn al-Dīn Muḥammed Marghanī who obtained the favor of Čingiz Khān and was left in possession of Herāt. His son Shams al-Dīn accompanied Mengū Khān in some of his expeditions, and was confirmed in the possession of Ghardjistān, Ghōr, Farāh and Sīstān. He submitted to Hūlāgū in 654 (1256), and was afterwards engaged in wars in Sīstān, not, as Howorth says, against Afghāns, but against the indigenous Tādjīks. He is said to have taken a fort in an island in a lake called Bakar. Raverty places this in Sīstān, and it may be represented by the ruins of Kakhaha on the island of Shahr-i Khwādja in the Hāmūn, but the name Bakar seems never to have been used in Sīstān. Howorth puts it in Lake Abistāda, which seems impossible. The name Bakar may possibly be due to confusion with the island fortress of Bhakhar on the Indus.

Sīstān (now also called Nīmrōz) was probably the centre of Shams al-Dīn's province, as under Abāḳā we find Nīmrōz included in a list of provinces on the border of the empire of the Īlkhāns, which were left under their own princes. Apparently the boundaries of this province were extensive including Herāt on one side, and on the other Ghōr, Zamīndāwar and Zābulistān. Shams al-Dīn as a true Ghōrī made his capital in the mountains at Khaisār, east of Herāt. In the war between Abāḳā and Boraḳ Shams al-Dīn at first sided with the latter, and after Abāḳā's victory at Herāt he fell into disgrace and was invited or commanded to leave his „eagle's nest", and to make Herāt his headquarters (673 = 1275) shortly after he was summoned to 'Irāḳ and there poisoned (676 = 1278). His son, known as Shams al-Dīn II, who succeeded is said by Khondamīr to have besieged Ḳandahār. If this is correct and does not refer to an older capital such as Bust or Girishk it is the first mention of Kandahār.

This prince like his father retired to Khaisār leaving Herāt to his son, 'Alā' al-Dīn, and afterwards to another son, Fakhr al-Dīn.

He himself remained at Khaisār till his death in 705 (1305). Fakhr al-Dīn after many vicissitudes due to civil wars and rebellions among the Moghul leaders, during which Herāt was besieged by Čaghatai Moghuls under Nikōdar, remained in possession of that town for many years and erected many public buildings and fortifications. Ultimately he fell into disgrace with the Īlkhān Uldjaitū, and took to the mountains. The emir Dānishmand was sent against Herāt. He was admitted to the citadel by the governor left there by Fakhr al-Dīn, and there he and his followers were treacherously murdered. Fakhr al-Dīn professed great sorrow, but remained in the mountains till he died in 706 (1307) soon after his father. His son Ghiyāth al-Dīn succeeded him. Herāt was soon taken by the Moghuls. Ghiyāth al-Dīn then went to the Court of Uldjaitū to ask for investiture; he was imprisoned, but after some time was allowed to return and was invested with the government. In his later years he accompanied Yasāul into Mā warā' al-nahr and took part in the war against Yasāur who invaded Khorāsān in 717 (1317). In these wars he was able to strengthen his position as the power of the Īlkhāns declined. After the accession of Abū Sa'īd he won

further favor by the successful resistance he offered to another invasion of Yasāur (719 = 1319). He also decorated Herāt with many fine buildings. The final defeat and death of Yasāur still further increased the power of the Kurts, and after consolidating his power and capturing the famous hill fort of Tūlak, Ghiyāth al-Dīn was able to go on a pilgrimage to Mecca (726 = 1325) and died soon after his return (729 = 1329). After the short reigns of two of his sons the third, Mu'izz al-Dīn, succeeded in 732 (1332), and reigned for thirty-eight years. He was a strong ruler, and perhaps in the break up of the empire which followed Abū Sa'īd's death he might have succeeded in making his kingdom really independent had it not been for Tīmūr's invasion. There is no doubt that his position as a Tādjīk prince excited great jealousy among the leaders of the Moghuls, and they combined against him under the emir Kazghān of Mā warā' al-nahr. He was driven into Herāt but succeeded in defending it, and Kazghān ultimately withdrew after exacting a treaty to the effect that Mu'izz al-Dīn should attend on him in his own dominions. This promise he faithfully kept, and thereby obtained the support of Kazghān against his domestic enemies. Tīmūr in his early days served under Kazghān against Mu'izz al-Dīn and relates in his memoirs that even then he had determined to make Khorāsān his own. Mu'izz al-Dīn died in 771 (1370), while negotiating a treaty with Tīmūr. His son Ghiyāth al-Dīn Pīr 'Alī rashly refused to admit Tīmūr's supremacy, and in 782 (1380). Tīmūr laid siege to Herāt. The Kurt prince submitted, and was well received. Herāt was spared, but the fortifications were levelled and the treasure carried off. Three years later, however, there was an outbreak of the Ghōrī troops headed by some members of the Kurt family, and the garrison was slaughtered. Tīmūr retook the town, and this time there was a massacre of the inhabitants and it was destroyed. Ghiyāth al-Dīn was killed during this rising, and with him the Kurt dynasty came to an end. It represented the last attempt of the brave and civilised Tādjīks of Ghōr and Herāt to maintain an independent kingdom in their own land. From this time till the rise of the Afghāns to power in the 18th century there was no indigenous dynasty; the country was under the rule of *foreigners*.

In the course of Tīmūr's invasion Sīstān was frightfully ravaged and has never since enjoyed its old prosperity. Irrigation works were neglected and towns deserted. The ruins of Sarōtār, Zarandj, Tarakun and Ramrōd still remain to attest its former greatness. Kābul and Kandahār (now rising into importance) were rapidly subdued, and the whole country became part of Tīmūr's empire. In 800 (1397) Tīmūr turned to the east. His grandson Pīr Muḥammed was made governor of Kābul, Ghaznīn and Kandahār, while his son Shāhrukh was invested with the kingdom of Khorāsān with his capital at Herāt. Pīr Muḥammed made a raid on the Afghāns of the Sulaimān Mountains and then marched into India. Tīmūr himself hearing that he had been checked at Multān crossed the Hindū-kush from Andarāb, and turned aside in Laghmān to attack the Siyāh-pōsh and Katōr Kāfirs. — It may be noted that a principal section of the Kāfirs still bears the name of Katīr; and it is possible in this name to see a continuation of the title Kidāra borne by the later Kushāns. — After this expedition he again attacked the turbulent Afghāns, and crossed the Indus at the spot where Djalāl al-Dīn Mangubartī had swum across. He passed through Banū both going to and returning from India, so he probably followed the Tōčī route which leads through the country of the Ghalzais and Wazīrīs. We do not hear of any Afghāns being enlisted in his armies, although Tādjīks served under him. When Tīmūr died in 807 (1405) Pīr Muḥammed was ruling at Kābul, but wasted his time in debauchery while Khalīl seized on the central power. The war which followed ended with the murder of Pīr Muḥammed. Khalīl was dethroned soon after, and Shāhrukh, who had been governing well at Herāt, became supreme monarch (812 = 1409). His reign of nearly forty years was a period of peace and prosperity, during which the land had time to recover from the devastations of recent years. Herāt, the capital, profited by his patronage, and many fine buildings were erected, some of which still exist. His son Ulugh Beg, a student and philosopher, reigned as supreme king only three years when he was murdered by his son 'Abd al-Laṭīf who reigned for a few months only. 'Abd Allāh followed and then Bābar Mīrzā ruled locally for several years, but never became emperor (Gūrgān). In 861 (1456) Abū Sa'īd obtained this title, but the possession of Khorāsān and Afghānistān was disputed by Ḥusain Baiḳarā. He conquered this prince in 870 (1465) but only reigned two years, and his successor Sulṭān Aḥmed never held Khorāsān. Ḥusain Baiḳarā now exercised undisputed sway from his capital Herāt over Khorāsān, Sīstān, Ghōr and Zamīndāwar till 911 (1506). Herāt during the long reigns of Shāhrukh and Ḥusain Baiḳarā was at the height of its fame, one of the most celebrated centres of poetry, philosophy and art. Towards the end of Sulṭān Ḥusain's reign the growing power of Shaibānī and his Özbegs overshadowed it from the north, and a tendency appeared in other parts of Afghānistān to break up into separate principalities, though not under native rulers. Bābar afterwards the conqueror of India who had been expelled from his hereditary kingdom in Farghāna and Mā warā' al-nahr established himself in Kābul and took the title of Pādishāh (or Bādshāh, as it is pronounced in Afghānistān and India). Kābul had been more or less independent under various princes of the house of Tīmūr, and had just been seized by Muḳīm Arghūn when Bābar suddenly appeared before it and took possession of it (910 = 1505). Kābul remained under Bābar and his successors the emperors of India for over two hundred years, until the invasion of Nādir Shāh.

The rise to power of the Arghūns was more dangerous to the Khorāsān kingdom. Dhu'l-Nūn Beg Arghūn, a descendant of the Īlkhāns of Persia distinguished himself in war and was invested with the government of Ghōr and Sīstān. After a successful campaign against the Hazāra and Nikōdarī tribes he received in addition Zamīndāwar and the Garmsīr, and fixed his capital at the growing centre Kandahār. There he became practically independent, and extended his power southwards, with the assistance of his son Shāh Beg, to the Bolān Pass and Siwistān. He is still known in Balōč legend as Zunū commander of Shāh Ḥusain's armies. In 902 (1497) he espoused the

cause of Badī' al-Zamān, the rebel son of Ḥusain, and gave him his daughter in marriage. In 904 (1498-1499) Ḥusain invaded Zamindāwar but was obliged to retire, and Dhu'l-Nūn Beg himself now openly invaded Herāt drawing his army from the warlike population of Ghūr, Zamindāwar and Kandahār, probably Tādjīks and Afghāns. This war left him stronger than ever, as Badī' al-Zamān received the province of Balkh, and Sīstān was given to Dhu'l-Nūn Beg. The successful raid of his son Maḳīm on Kābul for a time added to his reputation. Sultan Ḥusain died in 911 (1506), and during Badī' al-Zamān's short reign Dhu'l-Nūn Beg was at the height of his power, but Shaibānī's invasion was fatal to him. He was defeated and killed in the first battle against the Özbegs, and Shaibānī took Herāt in 913 (1507). His sons Shāh Beg and Muḳīm were now between Bābar and Shaibānī. Bābar with some right claimed to be heir to Tīmūr's empire and advanced against Kandahār, while the Arghūn princes allied themselves with his old enemy Shaibānī. Bābar defeated them and took Kandahār. He left his son Nāṣir Mīrzā in charge there, and he was immediately attacked by Shaibānī. Bābar himself had been on his way to Herāt to concert measures of defence against the Özbegs with Sultan Ḥusain when he heard of the latter's death. He joined the sultan's sons in their campaign on the Murghāb, and then after visiting Herāt returned in winter by the mountain road to Kābul, a journey during which he and his troops underwent great hardships. He returned to Kābul in 912 (beginning of 1507) just in time to suppress a dangerous plot among his own relations. Then he followed his expedition to Kandahār in the summer, and was back in Kābul by Djumādā I 913 (Sept. 1507), arranging an Indian expedition, and had already started when he was recalled by the news that Kandahār had fallen and that the Arghūns had been restored by Shaibānī. When the news reached him he was actually engaged in war with the Afghān tribes of Ḏjagdalak and Nangrahār, tribes recently established in the Kābul valley. He had great difficulty in holding even Kābul, where his authority was threatened by rebellion and mutiny. Shaibānī was now possessor of Khorāsān and overlord of Kandahār, but his power began to decline. His armies suffered severely during an expedition into the mountains of Ghōr, and another warrior king, Shāh Ismā'īl, founder of the Ṣafawī kingdom of Persia, threatened him from the west. In 916 (1510) Ismā'īl invaded Khorāsān and Shaibānī was defeated and slain near Merw. Herāt passed into Ismā'īl's possession, and the Shī'ite doctrines were enforced there by a severe persecution. Bābar now allied himself with Ismā'īl and recovered for a time possession of his hereditary dominions in Central Asia, leaving the kingdom of Kābul to his brother Nāṣir Mīrzā. The alliance with the Ṣafawī king however was unpopular, and the Özbegs rallied. In the end Bābar, after the severe defeat at Ghazhdawān near Bukhārā (918 = 1512) from which he barely escaped with his life, had to fall back upon Kābul, which he found in great disorder, and he had to suppress outbreaks among his own Moghul troops and among the Afghān tribes. The Yūsufzais had moved down from the mountains into the Peshāwar valley, and expelled their predecessors the Dilazāks from the mountains of Badjawr and Swāt. Bābar put them down severely and took Badjawr with great slaughter. He also had to put down risings among the Hazāras. He then turned his attention to Kandahār where Shāh Beg Arghūn was still established. He had tried in vain to make terms with Shāh Ismā'īl, had been imprisoned at Herāt, but escaped, and had since been endeavoring to establish a kingdom for himself in Sind, which he invaded with the assistance of some Balōč tribes in 917 (1511). Bābar made two attempts to take Kandahār before he finally succeeded in 928 (1522). Shāh Beg then removed his headquarters to Shāl (Quetta) in summer and Sībī in winter, and pursued his schemes in Sind, while the whole Kandahār province remained in Bābar's possession. Bābar now felt himself strong enough to embark on the series of enterprises which ended in the overthrow of the kingdom of the Lōdī Afghāns in India. He always preferred Kābul to the plains of India, and was buried at Ghaznīn where his tomb is marked by a column.

This period was marked by four simultaneous invasions of the plains of India from the mountains to the west of the Indus valley. Two of these were invasions by armies led by ambitious kings anxious to carve out kingdoms for themselves, i. e. that of Bābar which founded the Moghul empire, and that of the Arghūns which founded a short-lived kingdom in Sind. The other two were of the nature of national migrations, the movement of whole tribes seeking for fertile lands on which to settle. Of these the first was the movement of the Yūsufzais, the Lōhānīs and other Afghān tribes into the valleys of Peshāwar, Kōhāt and Bannū, and the second the movement of a great mass of Balōč tribes into the Indus basin, whose descendants are still very numerous in North Sind and the South Pandjāb.

Afghānistān itself entered upon a more settled period under the influence of the two great empires of India and Persia between which it was divided. Herāt and Sīstān remained with Persia though still for a time troubled by Özbeg raids. Kābul remained part of the Moghul empire while Kandahār sometimes belonged to one and sometimes to the other. The power of the Moghul emperors was gradually restricted to the south of the Hindū-kush. North of it Sulaimān Mīrzā, established by Bābar as governor of Badakhshān, founded something like an independent dynasty, and the rest of the country remained under the Shaibānides. Ismā'īl died in 930 (1524), and Bābar in 937 (1530). Bābar's son Humāyūn succeeded him and his brothers Kāmrān, Hindāl and 'Askarī held various governments. Kābul and Kandahār were united with the Pandjāb under Kāmrān. On the Persian side Tahmāsp the successor of Ismā'īl had made his brother Sām Mīrzā governor of Herāt. The Ṣafawīs regarded Kandahār as an appanage of the kingdom of Khorāsān now in their possession, and considered its occupation by the Moghul emperors to be a usurpation. In 941 (1535) Sām Mīrzā made a sudden attack on it, but it resisted him successfully, and after eight months Kāmrān arrived and raised the siege. During Sām's absence the Özbegs under 'Ubaid Allāh invaded Khorāsān, and the unfortunate town of Herāt was again taken and sacked. Tahmāsp recovered it, deposed Sām and himself attacked Kandahār which he took; but it was recovered by Kāmrān. Meanwhile Humāyūn lost his throne in India through the rising of the Sūr Afghāns under Shēr Shāh, and in 950 (1543)

he made his way from Sind through the desert south of Ḳandahār to Sīstān and Persia, where he was treated hospitably by Shāh Tahmāsp. In 952 (1545) with the assistance of a Persian army he laid siege to Ḳandahār which was held against him by his brother ʿAskarī on behalf of Kāmrān; and took it after a prolonged resistance. In accordance with his engagement with Tahmāsp he made the town over to the Persians, but this excited great discontent among his own followers, and Humāyūn at last retook Ḳandahār from the Persians, and treated the province as part of his own dominions greatly to the anger of Tahmāsp. Shortly afterwards Humāyūn took Kābul and with it obtained possession of his young son Akbar now three years old. During the next few years the war between the brothers went on with varying fortunes. Kāmrān twice regained possession of Kābul but could not hold it long; on one occasion he is said to have exposed the young prince Akbar on the battlements. He then spent some time among the Mahmand and Khalīl tribes of Afghāns, whom he incited to plunder the Kābul valley. At last in 961 (1553) he surrendered to Humāyūn and was deprived of his sight. Humāyūn now held the kingdom of Kābul and Ḳandahār and found himself strong enough to attempt the reconquest of India. This resulted in his victory over the Sūr kings, but shortly afterwards in 963 (1556) he died from the effect of an accident. While the young king Akbar was occupied in completing the reconquest of India Tahmāsp took the opportunity (965 = 1558) of seizing on Ḳandahār, and it remained under Persian rule until the prince Muẓaffar Ḥusain surrendered it to Akbar thirty-eight years later in 1003 (1594) during the first years of the reign of the Persian king ʿAbbās the Great. The future history of Ḳandahār may be given here. In the reign of the emperor Djahān-gīr in 1031 (1621) Shāh ʿAbbās recovered it, but it was lost again by his successor Shāh Ṣafī I in whose time the governor ʿAlī Mardān Khān surrendered it to Shāh Djahān (1047 = 1637). Girishk was also taken after a siege, and Zamindāwar occupied. In 1058 (1648) the young Persian king ʿAbbās II, then only sixteen years of age, led an army to Ḳandahār and took it, and it never again formed part of dominions of the Moghul empire. Shāh Djahān's armies in vain attempted the reconquest. The rival princes Awrangzēb and Dārā-shikōh both conducted expeditions against it, but were equally unsuccessful, and after the failure of the last (1062 = 1652) no further attempts were made.

With the exception of the vicissitudes of Ḳandahār there is little to record in the history of Afghānistān during the time it was divided between the Moghul and Ṣafawī empires. The Afghān tribes were steadily increasing in numbers and influence, and it was probably at this period that the ʿAbdālīs and Ghalzais spread from their mountains over the more fertile lands of Ḳandahār and Zamindāwar and the Tarnak and Arghandāb valleys. The decline in the position and influence of the Tādjīk races which had borne the brunt of the Mongolian invasions, and the occupation of their mountain fortresses of Ghōr by a semi-Mongolian population, gave the Afghān race the opportunity of rising into prominence. In their eastern mountains they had been but little affected by invaders eager chiefly to press on through the passes to the plunder of India, and the same need of an outlet for their increasing population which led them to spread into the plains of India on the east also led the pastoral tribes to spread westwards. The mountain tribes continued to maintain practical independence of all rule. The Moghul government at Kābul ruled nominally, but its actual power was confined to the open valleys. In 994 (1586) for instance Akbar's army met with a disastrous defeat at the hands of the Yūsufzais of Swāt and Badjawr, and the general Rādjā Bīrbal was slain. Rādjā Mān Singh afterwards defeated the mountaineers but they were never really conquered; they often raided the plains and sometimes took sides in dynastic quarrels, as when the Yūsufzais took up the cause of the pretended prince Shodjāʿ against Awrangzēb. When Shāh ʿĀlam I before his accession was governor of Kābul under Awrangzēb in 1114 (1702) one of his commanders Purdil Khān, himself an Afghān, was killed with all his troops when trying to pass from Khōst to Kābul, and he had to bribe the tribes to keep open the road between Kābul and Peshāwar.

In the Ḳandahār province the frequent changes of government between India and Persia fomented dissensions and intrigue, and enabled the powerful tribes to play off one against the other. The Abdālīs near Ḳandahār succeeded in this manner in obtaining concessions from Shāh ʿAbbās the Great. Sadō was recognized as chief, and his descendants the Sadōzais became the ruling family. Nevertheless their misconduct led to part of the tribe being removed to the Herāt province. This removal led to an extension of the influence of the Ghalzai tribe near Ḳandahār, and their power continued to increase until the accession of the emperor Shāh ʿĀlam I, when the Ghalzais of the Ḳandahār province began to intrigue with him against the Persian government. The plot was discovered and Gurgīn Khān, a Georgian chief, was sent to Ḳandahār at the head of an army, and arrested Mīr Wais the Ghalzai chief. During his imprisonment however Mīr Wais succeeded in gaining the confidence of Shāh Husain the Persian king, and was allowed to return to his tribe. Shortly afterwards he treacherously murdered Gurgīn Khān whom he had invited to a banquet, seized upon Ḳandahār and defeated all attempts to subdue him. He died soon after, and his brother ʿAbd al-ʿAzīz, who showed an inclination to submit to Persia, was murdered by Maḥmūd son of Mīr Wais, who established himself as ruler.

At the same period the section of the Abdālī tribe in the Herāt province became practically masters of that province, and defeated a strong force sent against them under Ṣafī Ḳulī Khān, and held their own till the time of Nādir Shāh, even taking Farāh from the Ghalzais after the latter had conquered Persia. But the Ghalzais were the most formidable tribe at this period, and Maḥmūd, perceiving the weakness into which the Ṣafawī monarchy had fallen, boldly invaded Persia. He marched by way of Sīstān and Karmān, but was defeated by Luṭf ʿAlī Khān and fell back on Ḳandahār. At the same time the Abdālīs spread over Khorāsān and laid siege to Meshhed. Maḥmūd soon strengthened himself by the alliance of a large body of Balōčes and renewed his attack. On this occasion he took Karmān a second time, and leaving Yezd untouched, marched straight to

Iṣpahān. Shāh Ḥusain tried in vain to bribe him, and after an unexpected victory Iṣpahān fell into his hands through the folly and cowardice of its rulers. Ḥusain abdicated and crowned Maḥmūd with his own hands, and the Ghalzai chief became Shāh of Persia. The reigns of Maḥmūd and his successor Ashraf belong to Persian history. They were in no way fitted to reign over a country like Persia, and had not sufficient force behind them to oppose any truly national movement. Even the support of the Ḳandahār province was lost when Ashraf succeeded his cousin Maḥmūd, whose brother was able to retain Ḳandahār. The Abdālis too remained independent in Herāt. Thus when Nādir Ḳulī Khān put himself at the head of a national movement, even though he was an Afshārī Turk and a Sunnī, Ashraf's government collapsed rapidly, and few of the Ghalzais survived to reach their native country. Ashraf was killed while wandering in Balūčistān in 1142 (1729). Nādir now turned his arms against the Abdālis under Malik Maḥmūd Khān who held Meshhed (1142 = 1728). He thoroughly defeated them and took many prisoners. Nevertheless he perceived their value as fighting men and secured their support by restoring them to their old home near Ḳandahār, from which he removed the Ghalzais when he had the opportunity. He banished them to the Herāt province, but very few if any seem to have really settled there, and there are none there at the present day. When Nādir Shāh had made himself king of Persia he laid siege to Ḳandahār which resisted him for a year, but at last fell. During the siege he had built up a new town outside the old walls which he called Nādirābād. The Ghalzai power was thoroughly broken up, but towards the Afghān tribes in general and especially the Abdālis he pursued a policy of conciliation, and enlisted large numbers in his army. Many Ghalzais took refuge in the Kābul province of the Indian empire, and Nādir Shāh, asserting that his remonstrances had received no reply, advanced on Kābul which fell at once. Thus it was finally severed from the Moghul empire. The last known date of any coin of the emperor Muḥammed Shāh struck there is 1138 (1725). Nādir Shāh apparently did not use the Kābul mint, but struck coins at Ḳandahār in 1150 (1737), the year of his conquest, and others struck at Nādirābād no doubt refer to the period of the siege. The whole of Afghānistān was now in his hands and afforded him the necessary base for his invasion of India in 1152 (1739). As a result of his victory over Muḥammed Shāh the whole Moghul territory west of the Indus including Peshāwar and the Dēradjāt with the suzerainty over the Kalhōrā or 'Abbāsī rulers of Sind was ceded to him as well as the province of Kābul. On his return from Delhi (1152 = 1740) he first crossed the Indus at Attock and attacked the Yūsufzais who had been giving trouble, and then went to Kābul. Thence he descended via the Kuram valley and the Bangash country, and went through the Dēradjāt to Sind, returning by the Bolān to Ḳandahār and thence to Herāt. During the remainder of his life he relied to a great extent on his Afghān troops and but little on the Persians from whom he was alienated by his Sunnī creed. The Abdālis were especially favored and their young chief Aḥmed Khān rose to a high position in his army. Tradition says that Nādir himself prophesied that Aḥmed would be king after him. When Nādir Shāh was assassinated by Persians and Ḳizil-bāsh, Aḥmed Shāh who was near by with a strong body of Abdālis seized on a treasure convoy and made his way to Ḳandahār, where he made himself king, and obtained possession of all the eastern portion of Nādir's empire up to the Indus. Herāt soon followed, and in the general break up of the Persian monarchy Aḥmed Shāh acted as the protector of Shāhrukh, grandson of Nādir Shāh, who was blinded by his enemies, and maintained a principality for him in Khorāsān. This province in reality formed part of the dominions of Aḥmed Shāh and his son Timūr Shāh, both of whom occasionally struck coins at Meshhed, but Shāhrukh continued to rule in name until he was seized and killed by Agha Muḥammed Ḳādjār after Timūr Shāh's death. Herāt was however treated as an integral part of the Durrānī monarchy, and the ancient kingdom of Khorāsān has remained divided between Persia and Afghānistān. In popular parlance the name is still employed to denote the Ḳandahār province and the tableland west of the Indus valley.

Aḥmed Shāh made Ḳandahār his capital and gave it the name of Aḥmedshāhī which appears on his coins and those of his successors. He took the title of Durr-i Durrān, and his tribe, the Abdālis, have since then been known as Durrānī. His family had long been looked up to, and this fact, combined with his tact and energy, enabled him to hold his own. The tribes were treated mildly, and he relied upon foreign war rather than taxation to provide him with a revenue. The Durrānis were proud of him and followed him willingly, but they were not an easy race to govern, and his son Timūr Shāh on this account moved his capital to Kābul where the population is mainly Tādjīk. In his Indian conquests Aḥmed Shāh not only rivalled but excelled Nādir Shāh, and extended his dominions far beyond the Indus. He added the provinces of Kashmīr, of Lahore and Multān, that is the greater part of the Pandjāb and the suzerainty over the Dāwadpotras of Bahāwalpūr to his dominions.

He invaded India several times, and occupied Dehlī more than once. His defeat of the Mahrattās at Pānīpat in 1174 (1761) was a turning point in Indian history, but he did not add any provinces beyond the Pandjāb to his own dominions. His wars with the Sikhs were perpetual and led to the eventual loss of the province. The khān of Kalāt too the Brahoi Naṣīr Khān who had become feudatory to Nādir Shāh declared his independence in 1172 (1758). Aḥmed Shāh besieged Kalāt without success, and being called away to India accepted a purely nominal submission. Naṣīr Khān, however, supported Aḥmed Shāh in his wars in Khorāsān, and contributed greatly to his victory over Karīm Khān Zend in 1182 (1768). On this occasion the blind Afshārī prince took the side of Karīm Khān and sheltered him in Meshhed which Aḥmed Shāh reduced by blockade.

Aḥmed Shāh died at Murghāb in the hills near Ḳandahār in 1187 (1773), leaving his successor a very extensive but insecure empire.

During the first half of the eighteenth century the break up of the Moghul empire together with the invasions first of Nādir Shāh and then of Aḥmed Shāh gave a fresh impulse to Afghān settlement in the Ganges valley, some of the ad-

venturers rose to great power such as the Rohēla Ḥāfiẓ Raḥmat Khān and the Bangash Nawābs of Farrukhābād.

Tīmūr Shāh had held important posts under his father, such as the Niẓāmship of Lahore and Multān, which is marked by a distinct series of coins. At the time of Aḥmed Shāh's death he was at Herāt, and only obtained possession of Kandahār after seizing and executing his brother Sulaimān, who had been set up as his rival. He soon moved his capital to Kābul, and reigned uneventfully for twenty years, during which the monarchy declined steadily in strength and stability, although externally it remained unimpaired. The authority of the central government over the outer provinces was precarious. The Sikhs grew in power and took Multān in 1196 (1781), but Tīmūr Shāh retook it the same year. In Sind the feudatory Kalhōrās were overthrown and replaced by Balōč emīrs of the Tālbur tribe (commonly called Tālpurs), who waged successful war against Tīmūr Shāh's generals from 1197 (1782) to 1201 (1786), and remained independent, although they accepted a nominal suzerainty. The Mangit emīr of Bukhārā Ma'ṣūm, who had been encroaching on the Turkistān province, especially Merw, also made a nominal submission when attacked by Tīmūr Shāh, but retained all his conquests. In Kashmīr also there was a revolt which was suppressed. Internally the power of the Bārakzai clan of Durrānīs became gradually greater. Tīmūr Shāh died in 1207 (1793) and was succeeded by his son Zamān Shāh, who reigned till he was dethroned by his brother Maḥmūd Shāh in 1215 (1800). Short as his reign was he was able to concentrate in it crimes and follies enough to wreck the Durrānī monarchy. Although weakened at home by the rivalry of his brothers Maḥmūd and Shudjā' al-Mulk, threatened in Khorāsān by the Ḳādjārs and in the north by Shāh Murād Mangit, and in the south defied by the khān of Kalāt and the emīrs of Sind, yet he could not refrain from wasting his strength in foolish attempts to rival Aḥmed Shāh's conquests in India, and to pose as the champion of Islām against Sikhs and Mahrāttās. This brought him into collision with the English now rapidly becoming the ruling power in North India. His first invasion, 1209 (1795) was cut short at Ḥasan Abdāl by the news that Agha Muḥammed Ḳādjār had captured Meshhed and murdered the blind old Shāhrukh. Having been appeased by an embassy from the Persian king he began a second invasion of India, which was interrupted by the rebellion of Maḥmūd at Herāt. Having defeated this rising he invaded the Pandjāb, and this time reached Lahore and received the nominal submission of the Sikhs, now headed by Randjīt Singh, but the Ḳādjār encroachments in Khorāsān again called him back. Maḥmūd meanwhile led a wandering life intriguing with discontented persons in Herāt and Kandahār. Among these was the powerful leader of the Bārakzai clan, Pāinda Khān, known by the title of Sarfarāz Khān, who was jealous of the authority wielded by the vizier Wafā'dār Khān. The conspiracy was detected and Pāinda Khān was executed. His son Fatḥ Khān fled to Maḥmūd in Khorāsān and induced him to throw himself on the sympathy of the Durrānī tribe with whom Zamān Shāh was unpopular (Zamān Shāh's mother was a Yūsufzai while Maḥmūd's was a Popalzai Durrānī). This advice was justified by the result. Maḥmūd obtained possession of Kandahār while the infatuated Zamān Shāh was preparing for another invasion of India. Maḥmūd advanced on Kābul and Zamān fled, but was soon captured and blinded (1215 = 1800). Simultaneously with Maḥmūd's accession at Kābul Shudjā' al-Mulk proclaimed himself king at Peshāwar. He was assisted by a Ghalzai rising against Maḥmūd and in 1218 (1803) he took Kābul, imprisoned Maḥmūd and released the blind Zamān Shāh, his own whole brother. For a time Kandahār was held by Maḥmūd's son Kāmrān supported by Fatḥ Khān, but the latter made terms for himself and submitted, but discontented with his position almost immediately set up a rival king Kaisar Shāh son of Zamān. The next few years were occupied by constant intrigues. Fatḥ Khān changed rapidly from one pretender to another, sometimes supporting Maḥmūd and Kāmrān, sometimes Kaisar while Shudjā' al-Mulk dissipated his strength in expeditions to Sind and Kashmīr. Finally Fatḥ Khān, who was now supporting Maḥmūd, defeated Shudjā' al-Mulk at Nimla (1224 = 1809). He fled into India, and Maḥmūd's second reign began. He was however absolutely dependent on Fatḥ Khān, whose power became very great. His brother Dōst Muḥammed held high office, another brother Muḥammed A'ẓam became governor of Kashmīr, and another Kōhandil governor of Kandahār. Herāt which had become independent under another prince was reconquered by Fatḥ Khān and Dōst Muḥammed in 1232 (1816). Soon afterwards Dōst Muḥammed incurred the enmity of Kāmrān, who had become governor, by entering his harem and insulting his sister. He fled to Kashmīr and Kāmrān took his vengeance on Fatḥ Khān whom he blinded and afterwards killed with the consent of Maḥmūd. Although perfidious and unscrupulous Fatḥ Khān was greatly admired by the Afghāns, and his brother Dōst Muḥammed had no difficulty in raising a large force and defeating Maḥmūd in 1235 (1818) near Kābul. Maḥmūd lost Kābul which he never recovered. He held Herāt till his death in 1245 (1829), and Kāmrān continued to rule there till he was murdered in 1258 (1842). The Bārakzai chiefs held the rest of the country, but ruled in the name of various puppet kings of the Sadōzai family, such as Aiyūb and Sulṭān 'Alī (who took the name of Sulṭān Maḥmūd on his coins). But the outer provinces of the empire were rapidly lost. The Sikhs took Multān in 1233 (1818), Kashmīr in 1235 (1819), Dera Ghāzī Khān in the same year and Dera Ismā'īl Khān in 1236 (1821). Peshāwar long resisted them under Sardār Sulṭān Muḥammed, but it too fell in 1250 (1834). The emīrs of Sind threw off the last sign of Afghān rule by taking Shikārpūr, and Balkh north of the Hindū-kush was lost also. Dōst Muḥammed therefore became the ruler of a compact Afghān kingdom; the loss of the outlying provinces, which had always been a source of weakness to the Sadōzai kings, tended to consolidate his power. Although without scruples of any sort in attaining his ends, he yet had the reputation of a just man and was popular among the Afghāns who will forgive any defect in a strong ruler. His rule no doubt contrasted favorably with that of all the kings since Aḥmed Shāh. His progress was checked by the inevitable rivalries of his brothers. He made Kābul his capital, while Kōhandil Khān held Kandahār. In 1250 (1834) Shudjā' al-Mulk vainly attempted

to recover Ḳandahār, and after his failure Dōst Muḥammed took the title of emīr, but neither he nor any of his successors before Ḥabīb Allāh took the title of Shāh or king. Herāt was taken by the Persians after the murder of Kāmrān by his vizier Yār Muḥammed Khān and was only recovered by Dōst Muḥammed in 1283 (1863) just before his death.

Shudjā' al-Mulk after his failure at Ḳandahār endeavored to obtain British assistance, and political events led to his ultimately obtaining it. Attempts to negotiate a treaty with Dōst Muḥammed by Burnes had broken down, and the growth of Russian influence led the Indian government to look favorably on his claims. The Persians had at this time (1253 = 1837) laid siege to Herāt. It was believed that their operations were directed by Russians and an English officer conducted the defence. This brought matters to a climax. An Anglo-Indian army advanced through Sind and the Bolān Pass on Ḳandahār and thence to Kābul. Dōst Muḥammed fled to Bukhārā and Shāh Shudjā' was placed on the throne of Kābul in 1255 (1839). Dōst Muḥammed soon surrendered and was sent to Calcutta. Shudjā' al-Mulk's reign was a troubled one. Kābul was abandoned by the British Indian army in 1841, and on its retreat the army was almost annihilated at the Khurd Kābul Pass. These operations were conducted by Akbar Khān son of Dōst Muḥammed. The British army continued to hold Djalālābād and Ḳandahār and reoccupied Kābul in the autumn of 1842. Just before this event Shudjā' al-Mulk was murdered (1258 = 1842). His son Fatḥ Djang was recognized as king by the Popalzais but opposed by the Bārakzais. The British soon afterwards left Afghānistān, and Fatḥ Djang, knowing he could not hold his own, went with them, accompanied by the blind old Zamān Shāh who was still living. Dōst Muḥammed was sent back to Afghānistān, as he was the only man who could establish a firm government. His son Akbar Khān, however, did not accept a subordinate position easily, and was on bad terms with his father till he died in 1266 (1849). Dōst Muḥammed maintained friendly relations with England except at the time of the Sikh war of 1849 when the Afghān contingent covered itself with ridicule by its rapid flight after the battle of Gudjarāt. During the troubles of 1857, when the Indian army mutinied, Dōst Muḥammed gave them no support. He occupied himself in strengthening his own country, and from 1267 to 1272 (1850—1855) he reconquered Balkh, Khulm, Kunduz and Badakhshān. In 1280 (1863) he succeeded in driving the Persians from Herāt, and he died there immediately after its recovery, having been a good ruler on the whole in spite of obvious faults.

Shēr 'Alī his fifth son who had been nominated by him as his successor succeeded, but was immediately engaged in civil war with his elder brothers Muḥammed A'ẓam and Muḥammed Afḍal, and with 'Abd al-Raḥmān the able and determined son of the latter. [For an account of these wars see 'ABD AL-RAḤMĀN KHĀN]. Shēr 'Alī was defeated in 1283 (1866), and lost first Kābul and then Ḳandahār. Afḍal and A'ẓam reigned in succession till 1285 (1868), but never held possession of Herāt, whence Ya'ḳūb, Shēr 'Alī's son, advanced in the latter year and recovered Ḳandahār and Kābul for his father. Shēr 'Alī now held the whole of Afghānistān, he was recognized by the Indian government, and met the viceroy Lord Mayo at Ambāla in 1286 (1869). He was not however satisfied with his treatment, as he could obtain no definite promise of support against other powers. At this period he imprisoned his enterprising son Ya'ḳūb and resented the viceroy's attempt to intercede for him. He agreed to an arbitration by British officers as to the Sīstān border, regarding which there was a dispute with Persia. According to this arbitration (1290 = 1873) a considerable part of the most fertile lands was awarded to Persia, and this was another cause of resentment. Finally he began to negotiate with Russia, and refused to receive a British embassy. These causes led to the war of 1878—1880. The British army took Kābul, and Shēr 'Alī fled to Mazār-i Sherīf in Turkistān, where he died in 1297 (1879). His army, organized on the European model, was defeated without difficulty by Lord Roberts at the Paiwār Pass. Ya'ḳūb was released from prison and became emīr, and concluded the peace of Gandamak, ceding to British India certain territories near the Bolān Pass and the Kuram valley, and agreeing to receive a mission at Kābul. A few months later a rising in Kābul resulted in the massacre of the members of the mission headed by Cavagnari. This led to a fresh outbreak of war. Roberts took Kābul a second time but was besieged there by a tribal army headed by Muḥammed Djān and the Mullā Mushk-i 'Ālam. After this was suppressed Ya'ḳūb was deposed and removed to India where he has since lived, and the government was offered to 'Abd al-Raḥmān, a separate State being constituted at Ḳandahār. Part of the army at Ḳandahār under Stewart marched to Kābul, as a preliminary to evacuating the country, and in passing through the Ghalzai country was attacked at Aḥmed Khail by a large force of men of that tribe, who were only defeated after a most desperate conflict. Scarcely had 'Abd al-Raḥmān been proclaimed when Aiyūb, a son of Shēr 'Alī, who had been collecting an army at Herāt, marched on Ḳandahār, defeated a small Anglo-Indian force at Maiwand, and laid siege to Ḳandahār. Roberts marched rapidly from Kābul and defeated Aiyūb. After this the English army withdrew and the whole country including Ḳandahār was made over to 'Abd al-Raḥmān [q. v.]. The latter died in 1319 (1901), and his son Ḥabīb Allāh succeeded him, and has ruled successfully since. He appears to be a firm and enlightened ruler and has maintained good relations with the neighboring states. Another boundary arbitration has resulted in a better definition of the Sīstān border. The emīr Ḥabīb Allāh has this year (1907) paid a long and friendly visit to India, and his right to bear the title of king has been recognized.

Although Afghānistān is now to some extent under the influence of the British government in India and is debarred by treaty from direct relations with other powers, it is in all other respects absolutely independent, and there seems no reason that it should not remain so. Its condition at the present day probably compares favorably with that at any previous stage in its history. The government of its emīrs though arbitrary is strong and is animated by the intention of justice. Freedom from the influence of India it has not, and this review of its history shows that it has

never been free from such influence of its neighbors either to the east, west or north, and has frequently been divided between them.

Persia exercised such an influence under the Achaemenians, the Seleucidae, the Parthians, the Sāsānians, the Seldjūks, the Mongolian Ilkhāns, the Ṣafawīs and Nādir Shāh. Central Asia exercised it under the Kushāns, the Sāmānīs, the Mongols, the Tīmūrides and the Özbegs; and India exercised it in the time of the Maurya kings, the Guptas, the Moghul emperors, and exercises it now under British rule. Such a condition is inherent in the geographical position of Afghānistān, but it seems to be compatible with complete independence in the management of its internal affairs.

AFLAḤ B. YASĀR. [See ABŪ 'AṬĀ'.]

AFLĀK. [See FALAK.]

AFLĀṬŪN, Arabic spelling for Plato, the name of the celebrated Greek philosopher. Plato exercised considerable, but indirect influence on the mind of Mussulman thinkers. He is less known to them than Aristotle. The list of his works that have been translated into Arabic, that of diverse entirely or partly apocryphal works that have been ascribed to him and that of the works which Mussulman scholars and philosophers devoted to him may be arranged as follows:

I. The *Republic* (*Kitāb al-siyāsa*), translated by Ḥunain b. Isḥāḳ. — The *Laws* (*al-Nawāmis*), translated by Ḥunain b. Isḥāḳ and Yaḥyā b. 'Adī. *Nawāmis* with the meaning of „laws" must not be confounded with the same word meaning „artifices, secrets, recipes". The Mussulmans know of a book with such a title ascribed to Plato and treating of superstitions and prophecies: it is a work of Greek origin, which has possibly been translated by Ḥunain b. Isḥāḳ. No manuscript of the translation of the *Laws* is extant. — A translation of the *Timaeus* has been corrected by Yaḥyā b. 'Adī (according to the *Fihrist* and Ibn al-Ḳifṭī); in another place (in the works just mentioned) there is said that the *Timaeus* was translated by Ibn al-Biṭrīḳ and Ḥunain b. Isḥāḳ. Mas'ūdī (*Kitāb al-tanbīh*, ed. de Goeje, p. 163) ascribes to Plato also a *Medical Timaeus* (*Timāwus ṭibbī*), devoted, he says, to the study of physical nature, while the *Timaeus* proper was devoted to metaphysics. We know that Ḥunain b. Isḥāḳ translated Galen's commentaries to the *Timaeus* of Plato; it is very likely that *Medical Timaeus*, or *Physician's Timaeus* is a suitable title for that translation. A MS. of Constantinople (Aya Sofiya, N⁰. 2410) bears the title of *The book of Plato called Timaeus on philosophy*. The *Timaeus* is many times quoted in the Arabic literature, in *Aristotle's theology*, by al-Rāzī, Mas'ūdī, not speaking of the bibliographers. — The *Sophist*, translated by Isḥāḳ b. Ḥunain, with the commentary of Olympiodorus: this dialogue has been quoted by Avicenna (V. Mehren, *Philosophie d'Avicenne*, p. 33). — The *Phædo* is quoted by al-Bīrūnī (*India*, ii. 280, 284, 395) and by Mas'ūdī (*loc. cit.*, p. 185). — Particular reference to the *Apology of Socrates* is made by Ibn Abī Uṣaibi'a.

Besides these works, the following dialogues are quoted by Arab bibliographers to whom they are known at least by name, leaving out some titles very badly transliterated: *Gorgias*, *Protagoras*, *Cratylus*, *Phædrus*, *Theages*, *Laches*, *Charmides*, *Euthydemus*, *Eutyphro*, *Crito*, *Politicus*, *Parmenides*, *Meno*, *Menexenus*, *Clitophon*; to *Alcibiades* they added the sub-title of *the Beautiful*, which in reality belongs to *Hippias*. Besides, two other dialogues figure in this list: *Hipparchus* and *Minos*, the authenticity of which has been rejected by the critics.

II. The writings or fragments ascribed to Plato in the Arabic literature are: Plato's testament (*waṣiyya*) to Aristotle; a treatise on the education of children (*adab al-ṣibyān*); tetralogies (*rawābī'*) quoted by Ibn al-Ḳifṭī and Ibn Abī Uṣaibi'a — there exists under the latter title a work of mystical philosophy and alchemy ascribed to Plato; — further diverse writings, among which a book on „the causes of the forces included in the superior essences", that is to say in the celestial spheres: this book is quoted by al-Kindī, who also composed one on the same subject; it is also quoted by the illuminate Abulafia (Abu'l-'Āfiya); it is besides possible that in this supposed authorship a confusion has been made between Plato and Plotinus. There are besides mentioned writings on alchemy, oneirocritics, the magical force of numeric signs, physiognomy, the secrets of astronomical figures, the elements, the proportions, a book on human seed, the principles of geometry translated by Ḳosṭā b. Lūḳā. Ḥunain b. Isḥāḳ's *Apophthegms of the philosophers* contain sayings ascribed to Plato and

Aristotle and the legends of their seals; a Hebrew MS. of Munich (Nº. 32) entitled *Iggeret ha-teshūba*, contains some proverbs of Plato which are not found in Ḥunain's anthology; some sayings of Plato are also found in Abu'l-Wafā' al-Mubashshir's *Mukhtār al-ḥikam* (written in 445 = 1053-1054). Finally an ethical treatise of unknown origin entitled *Mu'ātabat al-nafs* (edited by Bardenhewer under the title: *De castigatione animae libellum*, Bonn, 1873) is ascribed by Ibn Abī Uṣaibi'a to Socrates and Plato.

III. Many of the most celebrated eastern thinkers have devoted writings to Plato. The Christian Ḥunain b. Isḥāḳ wrote an introduction to Plato's philosophy under this title: „That which ought to be read before Plato's works". The Sabaean Thābit b. Ḳurra and his son Sinān have studied the great philosopher's politics, the former in an „epistle for the explanation of the allegories in the book of the *Republic*" and the latter in a work praised by Mas'ūdī, *Murūdj*, Paris, i. 19) but which has not reached us.

Some great authors of the philosophers' school, as al-Kindī, al-Fārābī, al-Rāzī, Averroes, have written diverse works on Plato: al-Kindī wrote an „epistle on the numbers, which are spoken of in the *Republic*"; he also wrote a small work on intelligence, *de intellectu et intellecto*, in which he says, when beginning, that he is going to treat of intelligence according to the views of Plato and Aristotle (ed. Albino Nagy, *Beiträge zur Gesch. der Philosophie des Mittelalters*, Münster, 1897). To al-Fārābī we owe several treatises on „the philosophy of Plato and Aristotle", „the concordance of Plato's and Aristotle's views", „the intentions (*aghrāḍ*) of Plato and Aristotle", and a brief compendium (*djawāmi'*) of the *Laws* in nine parts. The Hebrew text of a small work of the Spanish Jew Shem Ṭōb Ibn Palaquera on Plato's philosophy (written towards 1240) has been edited by Steinschneider (*al-Farabi*, pp. 176, 224); the editor thinks that it is nothing else than a translation of a fragment of al-Fārābī's treatise on Plato's and Aristotle's philosophy; the epistle on „the concordance of views" of the two Greek philosophers has been edited by Dieterici (*Alfārābī's philosoph. Abh.*, Leyden, 1890). Abū Bakr al-Rāzī (Razes) commented the *Timaeus* and wrote a work on metaphysics according to the views of Plato. Averroes commented the *Republic*; this paraphrase was translated into Hebrew by Samuel b. Judah of Marseilles, and printed in the Latin translation of Jacobus Mantinus, in Rome, 1539, and in Venice, 1552, 1562. A less illustrious author, 'Alī b. Riḍwān (d. 1061 or 1068 A. D.) wrote on „the immortality of the soul according to the views of Plato and Aristotle"; another of his writings seems to contain extracts from Plato's work „on the nature of man".

IV. The acquaintance which the Arabs may have had with Plato's life is of less importance to us than that which they had with his writings. The most celebrated Arab biographers, Ibn Abī Uṣaibi'a, Ibn al-Ḳifṭī, al-Nadīm, Barhebraeus, Ḥādjdjī Khalīfa, have spoken of Plato; Ḥunain's *Apophthegms* also contain some particulars of his life. The most important of these writings is that of Ibn al-Ḳifṭī; it approaches by means of unknown intermediaries the ancient biographies of Diogenes of Laerte and of Olympiodorus: the genealogy of the philosopher is given there just as in the biography of Diogenes of Laerte; the histories of Melanthos and of Kodros are to be found there; Plato is shown there as devoting himself to poetry in his youth, writing on music, then going through the philosophy of Heraclitus and coming to Pythagorism and to Socrates; the three journeys of the philosopher in Sicily are narrated there. Afterwards Plato, having returned to Athens, at first occupies himself with politics, then he devotes himself to teaching; he attracts a great number of disciples, marries two wives and dies at the age of eighty-two. The eastern biographers retained the tradition, according to which Plato called the young Aristotle, when he came to study under his direction, „the understanding". Isaac b. Solomon Israeli (Abū Ya'ḳūb Isḥāḳ b. Sulaimān al-Isrā'īlī) reproduces in the *Liber elementorum* an anecdote, according to which Plato on his deathbed required of his disciples that they should prefer the teacher above the book. On the whole Plato's personality remained vivid enough before the eyes of the Orientals, they saw in him the sage, the master, the orator and the man of action and not only the writer. They gave him the title of „Shaikh of the Greeks", an appelation not very precise to be sure, but which expresses this feeling of dignity and mastery of the man, and which is applied to the person rather than to the work.

V. Plato's philosophy was not known to the Mussulmans precisely enough so that they should have been able to establish a truly Platonic school. The Greek philosopher's system, in the way Shahrastānī expounds it, does not represent the doctrine of a Mussulman school, but only what the Arab author believed to be Plato's idea; this idea seems throughout this exposition to be systematical like that of the scholastics and in some points subtile like that of the Mu'tazilites. Plato's influence in Islām was really vivid and efficacious only in so far as it was exercised indirectly: the Platonic spirit acts only behind Neoplatonism; but under this cover it is easily recognizable; the seduction of this spirit made itself to be felt by daring and free thinkers; they understood the beauty of the Platonic conceptions; they underwent their charm. The historian Mas'ūdī, for instance, very willingly speaks of Plato and evidently with more pleasure and sympathy than of Aristotle. Plato's merit as a theologian, his lofty conception of a moral god were recognized by the Mussulmans, namely by Shahrastānī; still the latter misses a little the theory of the Supreme Good; it is more clear in the mystic works of Avicenna, connected with the theory of Providence and with that of optimism; according to this thesis the evil attains only what is transient and perishable. The question of the one and multiple and that of the procession of multiplicity occupied the Mussulman thinkers; they were in general more systematic on these points than Plato; one must recall to mind the very methodical constructions of Avicenna's metaphysics, the lofty, though it is true, somewhat mysterious reflections of Djalāl al-Dīn Rūmī, the proceedings of Ibn Ṭufail to reduce to the unit the individuals then the species and genera. The Ikhwān al-Ṣafā' (the Brethern of Purity) intended to be Platonicians by making to correspond to the first four numbers the four terms which, as they think, compose the world of ideas: God to the unit, the

intellect to the dual number, the soul to the number 3, and the form of the matter to the number 4. The Musulmans kept very clear the idea of the two worlds: the world of intelligence and that of the senses; the mystics gave these worlds different names, and particularly al-Fārābī called them the world of creation and the world of command. The Platonic ideas appear in Arabic philosophy under the names of „form" (*ṣūra*), „intelligible" (*ma'ḳūl*) or „example" (*mathāl*). The problem of realism and nominalism which agitated the schools of the Occident was put less clearly before the spirit of the Orientals. It may be said, however, that in a general way theologians, *mutakallimūn* and orthodox doctors like al-Ghazālī were nominalists, while the school of the philosophers was realistic. The world of ideas was placed by the philosophers in the series of the pure intelligences which preside over the celestial spheres, or was made up of the ensemble of these intelligences. The habit of considering our world as a reflex or as an imitation of a superior world was general with the mystics. The conception of the soul of the world and of the animation of the spheres was dear to the School of the Philosophers; the Brethern of Purity have vulgarized it. The question whether man's soul was born before the body, whether it was a part detached from the Universal Soul was discussed by Avicenna, Ghazālī, Averroes and others. Musulman orthodoxy was with regard to this point just as to the question of the animation of the world in disagreement with the Platonic sentiment. Mas'ūdī remarks that a problem studied by Plato was to know whether the soul is in the body or the body is in the soul (*Murūdj*, Paris, iv. 65); this indication of the Arab historian is exact; the same author reminds of Plato's definition that the soul is a substance which sets the body in motion. The doctrine of the metempsychosis was also known to the eastern authors; that of reminiscence was the object of ingenious interpretation by al-Fārābī (Carra de Vaux, *Avicenne*, p. 115). Plato liked to treat of the numbers; this taste was shared by several philosophers of the East and particularly by the Ikhwān al-Ṣafā'; considerations of a Platonic kind on the difference and the resembling, on the same and the contrary are met with in al-Fārābī, Djalāl al-Dīn Rūmī and Ibn Ṭufail. The Platonic physics were a little known to the Musulmans; Plato is often quoted as a physicist; we have seen that he was not unknown as a geometrician. The Platonic politics had influence on many thinkers, from al-Fārābī to Ibn Khaldūn. The nature of love which occupied Plato's mind was the subject of many dissertations of Musulman authors, whether mystics or not; the Ikhwān al-Ṣafā' for example have a chapter on love; Mas'ūdī (*loc. cit.*, viii. 181) knows Plato's sentiment defining love to be „a divine folly". The Greek philosopher surely had considerable influence on Islāmic mysticism. The mystics found that he had a certain esteem for ascetic practices; they based on it the idea which they had about the imitation of the superior beings; the solitary hero in Ibn Ṭufail's romance tries by the postures and movements of his body to imitate the harmony of the stars (*Hayy ben Yaqdhân*, ed. Léon Gauthier, p. 87). Above all the theory of the two worlds was essential to mysticism; al-Ghazālī teaches that, as there are organs to comprehend the world of the senses, there must be certain faculties of the soul fit for comprehending directly the world of the intelligible things. Al-Fārābī thinks in an analogous way. In the considerations of this order, Plato's influence, his doctrine and even his name are found to be closely enough associated with those of Plotinus. Plato, being regarded in all schools as a sage, was considered as a veritable prophet by several of them, non-Musulman or heterodox, Sabaeans of Ḥarrān, by the Ikhwān al-Ṣafā', by the mystics of Sidjistānī's group (see Tj. de Boer, *History of philosophy in Islam*, p. 127), by the illuminates of Suhrawardī Maḳtūl's school and by the Ismā'īlians.

(CARRA DE VAUX.)

AFRĀSIYĀB (Frangrasyan), mythical king of the Turanians according to Iranian tradition in the *Shāh nāme* and other works. Later historians in their genealogical constructions made him the ancestor of Turkish dynasties.

AFRĪDIS, an Afghān or Paṭhān tribe occupying the mountain country at the eastern end of the Safīd Kōh, which extends to the gorge of the Kābul river on the north, and on the south is bounded by the mountain country of the Orakzais. The hills occupied by the Djawākī section of the tribe lie to the east of this position, like a peninsula extending from the main mass of mountains, and are surrounded on three sides by the open country of Peshāwar and Kōhāt. The neck of the peninsula is crossed by the Kōhāt Pass, which leads from Peshāwar to Kōhāt. Through the north of the Afrīdī hills, just south of the Kābul river, runs the Khaibar Pass, through which the main road from Peshāwar to Kābul runs. The centre of the mountain mass is the upland country called Tīrāh, which consists of several valleys separated, from each other by hills, and is from 6000 to 7000 ft. above sea level. This country is divided between the Afrīdis and their southern neighbors the Orakzais. The principal valley of the Afrīdī portion is called Maidān, a fairly open plain. North of this their principal seat is the

valley of the Bāṛa river, which flows eastward into the Peshāwar plains.

The Afrīdīs are a race of mountaineers. Tall, strong and wiry but slender, with high cheek bones and strongly marked features and eyebrows sloping upwards, they differ considerably from the general Afghān type, and may perhaps be considered an aboriginal mountain race absorbed by the Afghāns in their northward advance. Their identity with the Ἀπαρύται of Herodotus has been assumed by many writers, but mere similarity of name is not alone sufficient proof of identity after the lapse of 2400 years when there is no intermediate evidence. The name does not occur in the Achaemenian inscriptions, and it is doubtful whether Herodotus intended to describe the Ἀπαρύται as dwelling where the Afrīdīs now are. The country of Tīrāh was undoubtedly at one time occupied by a race speaking a language still known as Tīrāhī, now only spoken in Nangrahār, north of the Safīd Kōh. This language, as Grierson has shown, is akin to the Aryan languages of the Hindū-kush. It seems probable that when Tīrāh was occupied by a Pashto speaking race some part of the old inhabitants may have been absorbed. The name of Afrīdīs does not appear in any of the mediaeval historians, even Bābar who was brought into close contact with the Afghāns of these mountains does not give the name, and they are not mentioned by Ni'mat Allāh, who lived three hundred years ago. According to more modern genealogies, they are a branch of the Karlānī tribe. Kakhai son of Karrān or Karlān, the eponymic ancestor, is represented as having had four sons Burhān, Khugiyānī, Sulaimān and Shētak, and 'Othmān, afterwards called *Afrīdai*, is said to have been the son of Burhān. But in the *Makhzan-i Afghānī* none of Kakhai's descendants are given, and in *Khulāṣat al-ansāb*, a later work, we find that Kakhai (Gught in Dorn's translation) had only two sons Sulaimān and Shētak, and the Afrīdīs are there derived from Kōdai the founder of the other branch of the Karlānī tribe. Kōdai is said to have had seven sons, of whom one was Ōrakzai and another Mānī ancestor of the Afrīdīs, and the author adds that the Ōrakzais and Afrīdīs live together in Tīrāh. It is evident from these discrepancies that no useful deductions as to the Afrīdīs can be made from the genealogies. The story of the origin of the name Afrīdī given in the *Ḥayāt-i Afghānī* is also evidently a modern fabrication. It is stated that on entering a house and being asked who he was, 'Othmān replied „I too am a creature (*āfrīda*) of God", and that from this Persian participle the name Afrīdī was derived. Such stories denote that the true origin of the tribe is unknown, and that in all probability the Afrīdīs (or Aprīdīs as they themselves pronounce the name) are of mixed origin.

The present division of the Afrīdīs is into clans, of which the following are the principal:

The Ādam-khēl, including the Djawākīs, near the Kōhāt Pass, and bordering on the Khaṭak tribe. The Akā-khēl from Akor to the Bāṛa river. These two clans are not so warlike as the rest of the Afrīdīs and are largely engaged in the carrying trade, especially in conveying salt from the Kōhāt mines.

Of the other tribes the Kūkī-khēl, Kambar-khēl Zakka-khēl Malikdīn-khēl, Kamar-khēl and Sipāh (often classed together as the Khaibarī Afrīdīs) occupy Maidān in Tīrāh and the upper Bāṛa river in summer and in cold weather move down to the plains, many of them to the Kaḥjūrī plain, north of the Bāṛa river where it issues from the mountains. The Zakka-khēl move to the Bāzār valley and the Kūkī-khēl to the eastern end of the Khaibar. These Khaibarī clans are among the wildest and most unruly, and are much given to raiding in the plains. The Zakka-khēl have the worst reputation. In Maidān most of the clans have villages and cultivation.

They have a very democratic constitution, and in all negotiations a great number of individuals has to be dealt with. They are, though deceitful and cruel, a brave and hardy race, and were till 1897 extremely proud of the fact that no foreign conqueror had ever penetrated there mountains. In that year however every part of the country was traversed by the British Indian force under Gen. Lockhart.

In the time of the emperor Akbar the Afrīdīs adopted the heresy of Pīr Rōshan (otherwise Pīr Tārīk), and soon afterwards they were found in possession of Tīrāh whence they drove out the Utmān-khēls northwards. They were also at war with the Ōrakzais to the south, and finally divided Tīrāh with them. At the present time of the two principal valleys one, Mastūra, belongs to the Ōrakzais and one, Maidān, to the Afrīdīs. Djahān-gīr himself made war on them, and deported large numbers to Hindustān and the Dekhan, where their descendants are still found. When the Durrānī kingdom arose they submitted nominally to Aḥmed Shāh, and were included in the enumeration of fighting men made by him. He reckoned the tribe at 19000 men, and it probably could not produce more than the same number at present. In early days the Afrīdīs began the practice of enlisting freely in the armies of the emperors and kings, which they still maintain, but their reputation for fidelity was not great. In 1801 they betrayed Shudjā' al-Mulk and caused his defeat by Maḥmūd Shāh. During Nādir Shāh's invasion in 1737 we read of the Khaibarīs being ordered to dispute his passage, but they seem to have offered but little resistance. Their only concern was to make what profit they could out of the passage of armies or the traffic through the Khaibar Pass, and they were left as a rule unmolested in their own hills. The same condition of things continued during the Sikh rule, and after the annexation of the Peshāwar country to the British empire in India their independence was still respected and they enlisted freely in the frontier regiments. Allowances were made to them to keep open the passes, which led through their country. Troubles arose in connection with the Kōhāt Pass which was often closed by internal feuds in spite of the allowances received. The clan principally involved was the Ādam-khēl, and in 1877-78 a military expedition was undertaken against the Djawākīs east of the pass. Even this led to no permanent settlement, and twenty years after a much more serious war broke out. Religious excitement spread rapidly among the Afghān tribes along the British border in 1897 and *djihād* was preached by a Mullā of Hada in the Shinwārī country. The Afrīdīs were not at first infected, and it was only after an outbreak among their northern neighbors the Mahmands that a warlike feeling grew among the tribes near the Khaibar Pass, especially the tur-

bulent Zakka-khēl, and an attack was made on the fort of Landi Kotal in the pass, itself garrisoned by Afrīdī militia. They made a good defence but ultimately surrendered. The rest of the Afrīdīs were drawn into the quarrel, and the Ōrakzais joined them, with the result that the military posts on the Samana ridge in the south of the Ōrakzai country, held by small bodies of Sikh troops, were attacked and taken after a heroic resistance. This led to a regular invasion of the Afrīdī mountains by a small army under Sir W. Lockhart, in which there was a good deal of hard fighting. The army suffered severely, but every part of the country was traversed and surveyed, and punishment dealt out to all the disaffected sections. The Ōrakzais had the first of the fighting and soon submitted, and the central sections of the Afrīdīs followed the Zakka-khēl and Kūki-khēl standing out to the last. The country was entered from the south, Kōhāt being the base. Actions took place at Dargai, the Sampagha Pass in the Ōrakzai country, and the Arhanga Pass leading from Mastūra to Maidān, and after a considerable halt in Maidān, the force returned to the plains down the long Bāṛā valley. Another part of the force under Gen. Hart followed the Mastūra and Warān valleys to the junction with the Bāṛā. A further expedition to the Khaibar and the Bazār valley brought the remainder of the Afrīdīs to terms. The country was thoroughly explored and surveyed by Holdich during these operations. The Afrīdīs have been on the whole quiet during the past ten years, and enlisted in the frontier regiments with enthusiasm immediately after the war. Of late, however, signs of unrest have again appeared especially among the Zakka-khēl, and there have been some raids on the plains.

In the early part of 1908 these raids led to an expedition being sent by the government of India into the Bazār and Bāṛā valleys to attack the Zakka-khēl who submitted after a fortnigh's operations. The other sections of the Afrīdīs took no part in the fighting, and themselves induced the Zakka-khēl to submit.

By the Durand treaty of 1893 between the government of India and the emir ʿAbd al-Raḥmān the Afrīdīs were left entirely within the Indian boundary. In 1897 the Afrīdīs sent deputations to Kābul, and endeavoured, but without success, to obtain assistance from the emir. It seems probable that these hardy mountaineers will eventually settle down to a more peaceful life under the British government, which does not attempt to interfere in the internal affairs of the tribes.

AFRĪDŪN. [See FERĪDŪN.]

ʿAFRĪT. [See ʿIFRĪT.]

ʿAFṢ (A.), the gallnut as well as the oak tree (*quercus lusitanica orientalis infectoria*) that yields it. The Arabs, who did not yet know of the production of the gall-nut by the gall-fly, considered it as the fruit of the oak tree, produced either at the same time as or alternately with the acorn. In mediaeval Arabic medicine, the gall-nut was officinal, and was used either in powdered form or boiled in vinegar as a remedy for skin diseases, and also internally as a remedy for diarrhoea; mixed with honey it was considered as a remedy for the illness of bees. It was also used for the preparation of ink.

Bibliography: Ḳazwīnī (ed. Wüstenf.), i. 259; Ibn al-Baiṭār, *al-Djāmiʿ* (Būlāḳ, 1291), iii. 127; Ibn al-ʿAwwām, *Kitāb al-falāḥa* (trans. Clément-Mullet), ii[b]. 265. (HELL.)

AFSANTĪN (also ASHINTĪN, ἀψίνθιον), the common wormwood (*artemisia absinthium*), distinguished from *absinthium ponticum*, Arabic *shīḥ*. Like Dioscorides the Arabs distinguish four kinds of *afsantīn*, which, surely, do not correspond with those of Dioscorides: the Greek (*rūmī*), the Nabathean, the Khorāsānian and the Tarsusian (*Ṭarsūsī*) *afsantīn*, of which the last was considered as the most bitter and best kind. The curative effect of the wormwood as a stomachic, tonic and vermifuge was generally known; it was also not seldom used externally in plasters, oils etc.

Bibliography: Ibn al-ʿAwwām, *Kitāb al-falāḥa* (trans. Clément-Mullet), ii[a]. 302-303; Ḳazwīnī (ed. Wüstenf.), i. 272. (HELL.)

AFSHĀR, a Turkish tribe emigrated to Persia, where it formed two great divisions, Ḳāsimlū and Erekhlū according to Ritter (*Asien*, viii. 400—405), or Shāmlū and Ḳirḳlū according to Morier. It consists of 88000 families scattered in Ādharbaidjān, Khamse (Zengān and Ḳizil-Ōzen), Ḳazwīn, Hamadhān, Teherān, Khūzistān, Kermān, Khorāsān Fārsistān and Māzanderān. It is called after Awshār (*Ferheng-i Nāṣirī*), or Awghār (Rashīd al-Dīn, ed. Berezine, p. 32), the eldest son of Yoldūz, third son of Oghūz (Abu'l-Ghāzī, p. 27); the meaning of the name is: „he who is prompt in his affairs" (*ib.*, p. 28). Nādir Shāh was of the Ḳirḳlū tribe, who came to Ādharbaidjān with the Mongols and settled under Shāh Ismāʿīl to the north of Meshhed and in the region of Merw (Mahdī Khān, *Histoire de Nader-chah*, trans. Jones, i. 2-3).

(CL. HUART.)

AFSHĪN, title of the native princes (in pre-Islāmic times) of the country of Usrūshana in Asia Minor (about the stretch from Djīzak to Khodjend and to the south of it the territory on the upper course of the Zarafshān). The last Afshīn, Ḥaidar b. Kāwus (in the sources he is generally called not by his proper name but by his title al-Afshīn), the general of Caliph al-Muʿtaṣim, was loaded with reward and honour for his repressing the dangerous rising of the Khurramī under Bābek and for his victories over the Greeks in Asia Minor. But in 226 (840-841) he was overthrown, accused of apostasy, and in Shaʿbān of the same year (May-June 841) he was made to die of hunger in prison. — The title Afshīn occurs also in Asia Minor; in Yaʿḳūbī (ed. Houtsma, ii. 344), Ghūrak, the subjugator of Sogdiana, calls himself „Ikhshīd of Soghd, Afshīn of Samarḳand" in the deed of his treaty with Ḳutaiba b. Muslim.

AFSŌS, poetical name of Mīr Shēr ʿAlī, the son of Saiyid ʿAlī Muẓaffar Khān, and descendant of the Prophet through Imām Djaʿfar Ṣādiḳ. His ancestors dwelt at Khawāf in Persia. One of them, Saiyid Badr al-Dīn, the brother of Saiyid ʿĀlam Ḥādjī Khānī, came to India and settled at Narnaul. Saiyid Ghulām Muṣṭafā, the grandfather of Afsōs, came to Dehlī during the reign of Muhammed Shāh (1719—1748), and was an associate of Nawāb Ṣamṣām al-Dawla Khān, and his father and uncle, Saiyid Ghulām ʿAlī Khān, were companions of ʿUmdat al-Mulk Amīr Khān. Afsōs was born at Dehlī, and received a liberal education. On the assassination of the Nawāb (1747), when Afsōs was 11 years of age, his father took him to Patna, and obtained service under Nawāb Djaʿfar ʿAlī Khān, commonly known as Mīr Djaʿfar; he remained at Patna until the deposition of the Nawāb in 1760. He then went to Lucknow, and thence to Ḥaidarābād, where he died. Afsōs settled at Lucknow 2 years before his father went there, and was supported by Nawāb Sālār Djang, the son of Isḥāḳ Khān, and became an associate of Mīrzā Djawān-Bakht (Djahān-dār Shāh), the eldest son of the emperor Shāh ʿĀlam, who had come to Lucknow from Dehlī.

After living some years at Lucknow, Mīrzā Ḥasan Riḍā Khān, the Nāʾib of Nawāb Āṣaf al-Dawla, introduced him to the notice of the Resident, Colonel W. Scott, at whose recommendation he went to Calcutta in 1215 (1800-1801), and was appointed Head Munshī in the Hindustānī department of the College at Fort William.

Afsōs wrote a Hindustānī Dīwān during his residence at Lucknow. He also made there a translation of the *Gulistān* of Saʿdī, which was completed in 1214 (1799-1800), under the title of *Bāgh-i Urdū*. Whilst at Calcutta he revised the *Kulliyāt* of Sawdā, and Hindustānī translations of Persian works which had been prepared by Munshīs of the college. He also made a translation of the first part of the *Khulāṣat al-tawārīkh*, or a Persian history of Hindustān written by Munshī Sudjān Rāʾe of Patiāla in 1107 (1695-1696). This work was completed in 1220 (1805) under the title *Ārāʾish-i maḥfil*. It was first printed at Calcutta in 1808. An English translation was made by M. J. Court, and published at Allāhābād, 1871 (2d ed. Calcutta, 1882). According to Garcin de Tassy (*Litt. Hind.*), and Sprenger (*Oudh Cat.*, p. 198), Afsōs died in 1809.

Bibliography: Blumhardt, *Catalogue of Hindi, Panjabi and Hindustani MSS. in the British Museum*, No. 72; Garcin de Tassy, *L'Islamisme d'après le Coran* (3d ed.), pp 291 *et seq.* and the works cited in the article. (BLUMHARDT.)

AFSŪN (P.), charm, incantation; secondary form of *afsūn*, derived from *afsāyīdan* (comp. *fasā*, *fasūī*, *fasāyīdan* etc.), root *sū* (Salemann, in *Grundr. d. iran. Philol.*, i. 1, 304). This word designates especially now, in Persia, a charm against the biting of poisonous animals; certain derwīshes who pretend to have the power to charm serpents, scorpions etc., will, for some gratuity, communicate their invulnerability to other persons. Often it is one part of the body which is so protected, as for instance the right or the left hand, and it is with this that the animals of this kind must be seized (Polak, *Persien*, i. 348). (CL. HUART.)

AFṬASIDES, Berber dynasty of Badajoz (418—487 = 1027—1094). Muḥammed b. al-Afṭas, the father of the founder of this dynasty — which is for this reason called Afṭasides [see ʿABD ALLĀH B. AL-AFṬAS], — belonged to the Berber tribe of Miknāsa and had come to Spain probably with al-Manṣūr's Berber troops. But as soon as the Afṭasides attained to power they attributed to themselves an Arabic origin and claimed descent from the noble Yemenite tribe of Tudjīb. It must be said, however, that ʿAbd Allāh, the first Afṭaside king, was born in Spain, in a place called by Arab authors, Faḥṣ al-Ballūṭ, which Dozy identified with the Campo Calatrava of to-day (*Recherches sur l'hist. et la littér. de l'Espagne*, 1st ed., i. 204). As early as 401 (1010), Badajoz, of which the governor was a certain Sābūr, had seceded from the Caliphate of Cordova, and Sābūr had made of it an independent principality. He appointed his counsellor ʿAbd Allāh b. al-Afṭas, whom he held in great esteem, his successor. Thus ʿAbd Allāh's accession to the throne took place after 413 (1022), the year of Sābūr's death. From the very beginning his reign was characterised by disastrous wars and by the defeat which he suffered at the hands of Ibn ʿAbbād, prince of Seville, and of Muḥammed al-Birzālī, prince of Carmona. Al-Muẓaffar, son of ʿAbd Allāh, who was in command of his father's troops, was taken prisoner by al-Birzālī and did not recover his freedom before the month of Rabīʿ I 421 (March 1030). Four years later ʿAbd Allāh revenged himself upon Ibn ʿAbbād in a perfidious manner. He had granted the latter free passage through his territory for his army commanded by his son Ismāʿīl, then he unexpectedly fell upon the latter and massacred the greatest part of his soldiers; Ismāʿīl and a handful of men succeeded in escaping.

ʿAbd Allāh died on the 17th Djumādā II 437 (30th December 1045) and was succeeded by his son Abū Bekr Muḥammed al-Muẓaffar. The latter, besides that he had to fear Ibn ʿAbbād, the implacable enemy of the Afṭasides, was also threatened by Ibn Dhiʾl-Nūn, king of Toledo. Upon the advice of Muḥammed b. Djahwar, Lord of Cordova, al-Muẓaffar and Ibn ʿAbbād allied themselves with him in order to offer a united resistance to Ibn Dhiʾl-Nūn; thus the two enemies were reconciled for the moment. But soon a war broke out between Ibn ʿAbbād and al-Muẓaffar and the latter was beaten twice. Then there took place the expedition of Ferdinand I (beginning of 447 = spring of 1055), who deprived al-Muẓaffar of several fortified places and imposed upon him a tribute. Al-Muẓaffar died in 460 (1068). This prince distinguished himself by his great love for Arabic literature, which compensated for his want of success in his wars. He even wrote a rather voluminous work on *adab*, entitled *Muẓaffarī* (comp. ʿAbd al-Wāḥid, ed. Dozy, p. 52).

After al-Muẓaffar's death, his son Yaḥyā, who later took the surname of al-Manṣūr, ought to have succeeded him; but his other son ʿOmar, then governor of Evora, declared himself independent. Thus the two brothers reigned together

for several years, ʿOmar over the western and Yaḥyā over the eastern provinces. According to certain authors some wars took place between the two brothers as well as between their allies, but this can not be established with certainty. Yaḥyā died in 473 (1081), and as he left no son, ʿOmar, who took the name of al-Mutawakkil, became sole ruler of the kingdom. The latter like his father was more prominent on account of his literary taste than of his military exploits; his name was chiefly immortalized by his secretary, the poet Ibn ʿAbdūn [q. v.], who later mourned over the fall of the Afṭasides in his celebrated elegy. This fall, for the rest, did not come unexpectedly; Alphonse VI of Castile incessantly invaded the Musulman territory, and in 478 (1085) he even seized Toledo. The Musulman kings al-Muʿtaḍid of Sevilla, ʿOmar the Afṭaside of Badajoz and ʿAbd Allāh of Malaga decided then to call the Almoravide Yūsuf b. Tāshfīn to their aid. The latter indeed was not slow in responding to their call; he defeated the Christians in the battle of Zallāḳa (12th Radjab 479 = 23d October 1086) and then returned to Africa. But his success stimulated his eagerness for conquest, and in 486 (1093) he gave his general Sīr b. Abī Bekr the order for subjugating the Afṭaside kingdom. Badajoz fell into the hands of the Almoravide general in 487 (1094); ʿOmar and his two sons al-Faḍl and al-ʿAbbās were taken prisoners and afterwards put to death.

(M. Seligsohn.)

ʿAFŪW = „very forgiving". — al-ʿAfūw, one of the 99 names of God [see allāh].

AFYŪN (*A.*, from the Greek *ὄπιον*, dim. of *ὀπός*), opium, i. e. the inspissated juice of unripe poppy capsules (*papaver somniferum L.*, Arabic *khashkhāsh*). From the first to the twelfth century of the Christian era Asia Minor seems to have been the only source of supply of opium for trade. From there the Musulmans spread it by means of their warlike expeditions over the whole Islāmic empire, so that opium is now cultivated in East India, Persia, Asiatic Turkey, Egypt and China. The production of opium was already described by Dioscorides almost in the same manner as it is still produced in Asia Minor: superficial incisions were made in the defoliated capsule, and on the following day the juice, which had oozed through them and become thick, was removed and kneaded into small cakes. The effects of opium as a medicinal drug, and chiefly its being an article of enjoyment, were from ancient times accurately diagnosed and tested.

(Hell.)

al-**AFZĀRĪ**, the *nisba* of the minister and poet ʿAmīd al-Dīn Asʿad b. Naṣr, according to Ḥādjdjī Mīrzā Ḥasan Fasāʾī (*Fārs nāme-i nāṣirī*, Shīrāz, 1313, i. 33; ii. 179, 332). Afzār or Abzar is a small town of Fārs, south of Shīrāz (*Bibl. geogr. arab.*, ed. de Goeje, iii. 447, note *f*). [See al-abazzī.]

AGA. [See aghā.]

AGADIR, a Berber word, the equivalent of the Arabic *sūr* (= wall, masoned wall enclosing a town, fortress, town), apparently of Phoenician origin. Agadir is the name of several Berber villages, especially in Southern Morocco. When occurring alone it generally designates Agadir Ighir, a small town situated in Moroccan Sūs, on the sea-shore, on the top of a hill. It is little known (a small plan of it is to be found in Erckmann, *Maroc moderne*, p. 50); being situated on a declivity the access to it is difficult. Near the place, on the sea-shore, there is a rather miserable village called Fonti. The roadstead of Agadir is the best anchorage of the whole Atlantic coast of Morocco, because it is sheltered from all the winds. Agadir was founded towards 1500 by the Portuguese; originally it was a simple fishing establishment, the construction of which seems to have been due to private initiative. It was generally designated by the name of Santa Cruz; the natives called it *Tigemmi Rūmi* or *Dār Rūmiya*, i. e. „the European house". Later it got the name of Santa Cruz of Cape Ager (Berber Ighir, whence Ghir, Gher, Ager). It must not be confounded with Santa Cruz de Mar Pequeña, a Spanish post established later, the exact site of which is not known now. Leo Africanus calls Agadir Guarguessem. Santa Cruz of Ager, having become an important Portuguese place in Morocco, was attacked in 1536 by the sherīf Mūlāi Muḥammed. The place was then commanded by Dom Guttierez de Monroi; the siege was long and eventful; finally, in spite of the help of Portugal, Santa Cruz was taken by storm and dom Guttierez surrendered. The latter's son-in-law Dom Ian de Corval had been killed and his wife Doña Mencia de Monroi was taken prisoner. The sherīf fell in love with her so much that he married her; he let her for a long time practice the Christian religion and live in the European manner; but finally she abjured her faith or at least she made a show of being converted to Islām. It is also said that she was the cause of a war between Mūlāi Muḥammed and Mūlāi Aḥmed, the two sherīfs who contended for her with arms; the former had the upper hand and the two brothers came to an understanding. It seems that she died from poison administered to her by the other wives of the sherīf, who were jealous of her. The sherīf set free his father-in-law and sent him back to Portugal loaded with presents. In order to shelter the port of Agadir and a spring which supplied water to the town, Mūlāi ʿAbd Allāh had in 1572 built a battery, around which some houses were clustered; this agglommeration acquired the name of Fonti from the Portuguese *fonte*. Agadir remained an important commercial point of the coast. In 1670 the only French commercial house of Morocco was established there; in 1755 the Danes tried to build there a fort. In 1773 Mūlāi ʿAbd Allāh founded Mogador and compelled all the Europeans to leave Agadir and to settle in the new town. Since that time Agadir has been closed to European trade; its inhabitants are very fanatical; still towards 1882 the corn trade was permitted there on account of the famine, but the traders were obliged to encamp on the strand and were besides badly received

(Erckmann, *loc. cit.*). The Portuguese fortress is well preserved and it seems to present inscriptions.

ʿAGEL, modern Arabic pronunciation for ʿ*aḳail* [q. v.].

AGHA, East-Turkish = „elder brother"; comp. Yakut *aga*, „father" (V. Thomsen, *Inscriptions de l'Orkhon déchiffrées*, p. 98, ll. 17-18, *aga*), Koibalkaraghasi, „grandfather", „uncle", Tchuvash, „elder sister". In Osmanli-Turkish *agha* means „chief, master, lord". This title is nowadays borne by inferior officers up to the grade of captain; it is also that of the eunuchs of the imperial palace. Formerly it was conferred upon officers of a rather high rank. The *rikāb aghalari*, officers of the imperial stirrup, were six in number: the chief of the *bostāndji*, the equerries, the chief of the ushers, etc. The agha ḳarakulak was a guard officer in service of the agha of the Janissaries; he overlooked from a high tower the different quarters of Constantinople; in case of a fire he took quickly information and hastened to report it to the sultan. The eunuchs of the palace were divided into black eunuchs (*ḳara-aghalar*) and white eunuchs (*ak-aghalar*), only the former exist now; their chief is called *ḳizlar aghasi*, „the agha of the girls". He has the title of Highness, and his rank is next to the grand vizier and to the Shaikh al-Islām. The chief of the white eunuchs was formerly called *Kapu Agha*. — The agha of the Janissaries (*yeñi-čeri aghasi*) was the commander-in-chief of that militia and had the precedence of all the other officers as well as of the Ministers of the State. — Under the Mongols this title was likewise given to the princesses of the royal family (Quatremère, *Hist. des Mongols*, pp. xxxix, xl). The Persians write this word āḳā, and commonly pronounce ā (A. L. M. Nicolas, *Seyyèd Ali Mohammed dit le Bâb*, Paris, 1905, p. 161, note 125), just as, for the rest, do the Osmanli-Turks.

AGHA KHĀN, title of the head of the Indian Ismāʿīlites or Khodjas [q. v.]. The present Agha Khān Muḥammed Shāh, born in 1877, resides at Bombay and writes articles for English periodicals (*The Nineteenth Century*; *East and West*). He is the third Agha Khān, for his father and grandfather also bore that title. The latter, called Agha Khān Maḥallātī (after Maḥallāt in Persia, to the west of Ḳum), was governor of Ḳum and Maḥallāt under Fatḥ ʿAlī Shāh. Having miscarried in his revolt in 1838 against the grand vizier, he was obliged to flee to India. Maḥallātī's father Shāh Khalīl Allāh Saiyid Kehkī, assassinated in Yezd in 1817, was son of Abu'l-Ḥasan, the governor of Kermān. The Agha Khāns claim descent from Ḥasan Ṣabbāḥ [q. v.].

Bibliography: St. Guyard, *Un grand maître des assassins* (*Journ. As.*, 7th ser., ix. 337 *et seq.*); *Revue du monde musulman*, i. 48 *et seq.*

AGHA MUḤAMMED KHĀN, founder of the Ḳādjār dynasty in Persia, son of Muḥammed Ḥasan, son of Fatḥ ʿAlī Khān; born in 1155 (1742). When still a child he was made a eunuch by order of ʿĀdil Shāh. On the death of the *wakīl* Karīm Khān Zend, he retired to Asterābād; turning to his advantage the disturbances of Persia at that time, he made Teherān his capital and declared himself a king there in the beginning of 1201 (1786). He struggled for eight years with the last prince of the Zend dynasty, Luṭf ʿAlī Khān, who fell into his hands through treachery, and perished under fearful tortures in 1209 (1794). A successful expedition against the Turkomans (1210 = 1795) re-established peace on the north-eastern frontier, another expedition to Georgia tore away the latter country from Russia; Agha Muḥammed escaped a conflict with the latter power only thanks to the death of Cathrine II. He seized the prince Shāhrukh, grandson of Nādir Shāh, who, though blind, continued to reign in Meshhed, and by torture extorted from him the diamonds which the conqueror had brought from India, then he annexed Khorāsān to his States. At the age of 55 he was assassinated (1211 = 1797) by two slaves whom he had condemned to death, and was buried at Nadjaf (Meshhed ʿAlī). His nephew Bābā Khān, who took the title of Fatḥ ʿAlī Shāh, succeeded him to the throne. Agha Muḥammed founded by violence and force a dynasty, whose chief merit consists in its restoring to Persia a peace which has remained till now.

Nadjaf Ḳulī, *Maʾāthir-i sulṭānīya*, pp. 14 *et seq.*; Riḍā Ḳulī Khān, *Rawḍat al-ṣafā-i nāṣirī*, ix. fos. 50 *et seq.* (Cl. Huart.)

AGHĀČ (Turkish: „tree, wood", a secondary form in East-Turkish *yighāč*), a land measure designating the triple distance at which a man placed between two others can make himself heard by them, thus something like a parasang or a mile. A verse of Mīr ʿAlī Shīr Nawāy rates it at 12000 *ḳārī* (double cubit, the length of the arm from the shoulder to the end of the middle finger); another verse of Makhdūm Ḳulī estimates the dimension of the earth at 146000 *aghāč*. Pietro della Valle (*Voyages*, iii. 141) thinks the *aghāč* to be equivalent to a Spanish league, or four Italian miles, and according to E. Flandin and P. Coste (*Voyages en Perse*, i. 111.), it is equivalent to six kilometres (a little less than four English miles).

Bibliography: Pavet de Courteille, *Diction. turk oriental*, pp. 554-555; Sulaimān Efendi, *Lughat-i ḍjaghatāʾī wa-turkī ʿothmānī*, p. 15 (trans. Kúnos, pp. 6, 105); Vámbéry, *Cagataische Sprachstudien*, p. 357. (Cl. Huart.)

AGHĀČ-ERI („man of the woods, of the forest"), name of a people which Priscus quotes under the designation of Ἀκατζίροι; it is perhaps the same as the Mordwins (Russian *Mordwa*, Arabic *Burdās*, Burṭās) and other Finnish tribes (Marquart, *Streifzüge*, pp. xxiv, 41). The explanation of the Greek name by the Turkish is found already in Hammer-Purgstall, *Gesch. der gold. Horde*, p. 16; Quatremère, *Hist. des Mongols*, (1836), p. 53, note; M. Th. Houtsma, *Ein türk.-arab. Glossar* pp. 45, 49. (Cl. Huart.)

AGHĀNĪ (A.), pl. of *ughniya* [q. v.], „a song"; for the Arabic „Book of Songs" (*Kitāb al-aghānī*) see ABU 'L-FARADJ 'ALĪ.

AGHDHIYA (A.), pl. of *ghidhā'* [q. v.].

AGHLABIDES, a dynasty which ruled over Ifrīkiya during the whole of the 9th century of the Christian era, founded by Ibrāhīm b. al-Aghlab al-Tamīmī. Ibrāhīm, then governor of Zāb, seized the power after he had rescued the 'Abbāside emir Ibn Mukātil, and was invested by Caliph Hārūn al-Rashīd. It is in no way certain that further feudal treaties fixed more precisely the relations between the Caliphate and Ibrāhīm's successors. At any rate they contented themselves with the title of emir; the wording on their coins was extraordinarily simple. The relations between Bagdad and Kairawān were shown by mere civilities; Ziyādat Allāh informed Caliph al-Ma'mūn of the Sicilian expedition which threatened the Byzantine empire, and sent him shortly afterwards *mithkāls* coined in his honour. But when the same caliph asked the same emir to extol 'Abd Allāh b. Ṭāhir in the *khuṭba*, the emir answered insolently. Al-Nuwairī says with reason that the ruler of Bagdad would have met with ill success if he had tried to interfere with the affairs of the succession of the dynasty, and it seems doubtful that a message of al-Mu'taḍid should have influenced the abdication of Ibrāhīm b. Aḥmed.

Thus the rule of the emirs was hereditarily supreme over a territory, the boundaries of which cannot exactly be defined and which is conventionally called Ifrīkiya. To the west it surely extended to Bona and comprised the whole country of the Kotāma. These Berbers, who seem to have formed a great confederation whose influence reached the present Kabylia, were kept under the Aghlabide suzerainty through the Arab colony of Bilizma, and as soon as the latter was destroyed by the last Ziyādat Allāh, they became the first and firmest support of 'Abd Allāh al-Shī'ī; they were Khāridjites, perhaps Nakkārite Ṣofrites. To the southwest Ifrīkiya extended to the Zāb and the boundaries of the Abāḍite kingdom of the Banū Rostem of Tāhert: Baghāya and Ṭobna were under Aghlabide rule, but with continual Khāridjite revolts. Towards the south-east Tripoli formed an isolated post, exposed to the raids of the Berber Khāridjites of Djebel Nefūsa. Ifrīkiya proper, partly occupied by Arab and Arabicized Sunnites, furnished the contingents of the army, the *djund*; though frequently divided by tribal quarrels and personal ambitions, they yet formed a religious and linguistic unit in front of the heterodox Berbers who surrounded and penetrated them.

In this Sunnite community, religious life was vigorous enough for differences of theory to enter there upon the scene. It is under the Aghlabides that the Ḥanafite and Mālikite doctrines are believed to have simultaneously been introduced into Ifrīkiya, doctrines which Fāṭimism seems to have supplanted during two centuries. For a certain time they were represented by the same person, Asad b. al-Furāt, who was first kāḍī of Ifrīkiya, then of Sicily and at the same time imām and emir. This scholar, who successively attended the lessons of Mālik at Medina, of Abū Ḥanīfa's disciples in 'Irāk and of Ibn Kāsim, Mālik's best pupil, in Cairo, taught the two doctrines at Kairawān; but his rivalry with the Mālikite Saḥnūn accentuated his Ḥanafite tendencies. After his death Saḥnūn remained sole master of the place, and from 232 to 240 (857—865) he seems to have exercised over Ifrīkiya an absolute religious magistracy. He was liberal when he had near him his rival's Ḥanafite pupils like Sulaimān b. 'Imrān, but he displayed real ferocity towards his unfortunate predecessor Ibn Abī Djawwād, whom he made to perish under the rod for the crime of professing the doctrine of the creation of the Ḳor'ān. His *mudawwana* of Ibn Kāsim's doctrines eclipsed the *Asadiya* and became the canonical book of Maghrib Mālikism. After him, the Mālikite school remained supreme, yet the Ḥanafite doctrines had their adherents; even the doctrine of the creation of the Ḳor'ān had not disappeared: al-Farrā' was threatened with death for this crime. But under the emir Abu 'l-'Abbās Muḥammed, al-Sadīnī, the kāḍī and governor of Kairawān, an avowed partisan of this heresy, was nevertheless entrusted with the task of restoring order to the administration. It is possible that the emirs employed the *fuḳahā'* as intermediaries with the people against the free tendencies of the Arab families, unable to remain grouped in a compact state in front of the dangers that threatened them on the frontiers. The appreciations of the Arab historians, though vague and divergent, induce us to believe that the emirs possessed courage and skill, knew how to maintain such a fragile political community and keep it in real prosperity, in spite of some financial trouble like the dirhem sedition.

The Sicilian expedition, begun by Ziyādat Allāh I (212 = 827) and continued by his successors and the Fāṭimides, was nothing else than the regulation of former piracy, the large island having exerted on the pirates the same attraction which Spain had upon the Berber dynasties of Morocco. The produce of the pillage, carried on for a pious purpose, the *djihād*, furnished the emirs with the means to build palaces and procured them other pleasures without taxing too heavily their subjects. Al-Ḳaṣr al-Ḳadīm, built under Ibrāhīm b. al-Aghlab, the great mosque of Kairawān and the *ribāṭ* of Sūs, built under Ziyādat Allāh b. Ibrāhīm, the cisterns of Kairawān, the mosque of Sūs, Raḳḳāda and Ḳaṣr al-Fatḥ form an artistic group associated with Sicilian architecture.

After a line of rulers, who though not without faults were full of energy, the Aghlabide dynasty could oppose to the storm raised by al-Shī'ī none else than emirs whose predominant feature was the cowardly and refined ferocity of lords of harems and eunuchs. The last Ziyādat Allāh took to flight before the Fāṭimides, without fighting, in 296 (909).

The following is a list of the Aghlabide rulers, eleven in number:

Ibrāhīm b. al-Aghlab b. Sālim b. 'Iḳāl al-Tamīmī	184 = 800.
Abu 'l-'Abbās 'Abd Allāh b. Ibrāhīm.	196 = 812.
Abū Muḥammed Ziyādat Allāh b. Ibrāhīm	201 = 817.
Abū 'Iḳāl b. al-Aghlab Ibrāhīm . .	223 = 838.
Abu 'l-'Abbās Muḥammed b. al-Aghlab	226 = 841.
Abū Ibrāhīm Aḥmed b. Muḥammed	242 = 856.
Ziyādat Allāh b. Muḥammed . .	249 = 863.
Abu 'l-Gharānīḳ Muḥammed b. Aḥmed al-Maiyit	250 = 864.

Ibrāhīm b. Aḥmed . . . . 261 = 875.
Abu 'l-ʿAbbās ʿAbd Allāh Muḥammed b. Ibrāhīm . . . . 289 = 902.
Abū Muḍar Ziyādat Allāh b. Abi 'l-ʿAbbās. . . . . . . 290 = 903 to 296 = 909.

(G. DEMOMBYNES.)

AGHMĀT, a place to the south of Marrākush. Aghmāt is now a vast agglomeration of fields, gardens and earth houses, abundantly watered and shaded by trees of various kinds. It is one of the prettiest spots of that region. It belongs to the ḳāʾidate of Masfiwa. At a distance of two or three kilometres from it is Warīka, a large village with an important *mellāḥ* (Jewish quarter), which constitutes a separate ḳāʾidate. Both countries are irrigated by the Wādī Aghmāt which comes forth from the Atlas at Warīka: the latter is indeed situated hard by the foot of the mountain and even on its first slopes. The Wādī Aghmāt furnishes numerous *regia*, one of which goes as far as Marrākush and contributes to furnishing the town with drinkable water.

Before the foundation of Marrākush, Aghmāt was, besides Nafīs, the chief town of the region; it is mentioned as having formed a part of the Idrīside empire. Later, before the Almoravide invasion, it is found to be occupied by the Maghrāwa, whose last emir was called Laghūt or Laḳūt b. Yūsuf, the husband of the celebrated Zainab, who later married Abū Bekr al-Lamtūnī and afterwards Yūsuf b. Tāshfīn, the founder of the Almoravide dynasty. Aghmāt was taken in 449 (1057-1058) by the terrible *murābiṭūn*, and Laghūt sought shelter with the Tādla. After Marrākush was founded in 454 (1062), Aghmāt lost its importance and since then has not ceased to decline. Al-Bakrī, who wrote before the foundation of Marrākush, distinguishes between two Aghmāts: Aghmāt-Ailān and Aghmāt-Warīka. Perhaps Aghmāt-Ailān is identical with the Aghmāt of to-day while Aghmāt-Warīka would correspond to the present Warīka; unless Aghmāt-Ailān be Ighīl or Ailān which is 7 or 8 km. off. At any rate the historical Aghmāt seems to answer to the place which is still called Aghmāt. There is still an old madrasa, large enough, and numerous tombs are found there. Perhaps it is there where we must look for the tomb of the unfortunate al-Muʿtamid, the last emir of Seville and of Cordova, whom Yūsuf b. Tashfīn exiled to Aghmāt and whom he kept there a prisoner. Al-Marrākushī made a touching account of his captivity. This tomb existed still in the 14th century, but we do not know what has become of it now, the access to this madrasa being strictly forbidden to Christians and Jews. Around the madrasa there are found vestiges of old brick buildings, of a stone bridge and of old earth circumvallations. In the time of Leo Africanus, Aghmāt was already in utter decay; still pilgrimages are yet made to the saints of Aghmāt. The region remained celebrated on account of its fresh water, its shady trees and various fruits which supply the market of Marrākush.

AGHRIDAGH or EGHRIDAGH. [See ARARAT.]

AGRA, capital of the district of the same name in British India, situated on the right bank of the Djamna River. In 1901 the city counted 188000 inhab. (about a quarter of whom Musulmans); the district (1845 square miles) 1060546 inhab. — Agra is renowned for its many magnificent buildings from the time of the Moghul dynasty. Several of them, as the Motī-Masdjid (erected in 1654 by Shāh Djahān), the Nagīna-Masdjid and the Mīna-Masdjid, the public and private audience halls (*dīwān-i ʿāmm* and *dīwān-i khāṣṣ*), the palaces known under the names of Shīsh-Maḥall, Khāṣṣ-Maḥall, and Djahāngīr-Maḥall are within the spacious citadel (2½ km = 1½ miles in circumference, built by Akbar) surrounded by a moat and a wall 70 ft. high; access to that citadel may be gained by two gates, while a third gate on the side of the river is closed. On the opposite bank of the river is the tomb of Iʿtimād al-Dawla [q. v.]. The most far-famed monument of Agra is the Tādj-Maḥall [q. v.] For the rest the area of the present city is only about the half of what it was in the flourishing time of the Moghul dynasty.

History. — Agra has been known since the Lōdī [q. v.] dynasty ruled there, and yet Akbar only made it his residence, in which he also died (1605); his tomb ornamented by a monument, however, is not in Agra but in Sikandra [q. v.], which is at a distance of 8 km. (about 5 miles). The name Akbarābād given to the city in his honour fell later into oblivion. His successors resided only now and then in Agra, and Awrangzīb removed his residence to Dehlī. In 1770 the city was taken by the Mahrattas, who occupied it with a short interruption till 1803, when Lord Lake subjected the city to the English rule (battle of the 17th October 1803).

Bibliography: *Distr. Gaz. Agra-Oudh*, viii (Allāhābād, 1905); Smith, *The Moghul colour decoration of Agra* (1901); *Archaeological survey of India*, iv.

ĀḤĀD (A.), pl. of *aḥad* [see next art.], meaning units in arithmetic. In the science of tradition it is used as an abridged plur. of *khabar al-wāḥid*, which are, as contrasted with *mutawātir* [q. v.], ḥadīth communications which come not from a larger number of trustworthy companions (*aṣḥāb*), but from a single person. By means of *istifāḍa*, i. e. further extension by different *isnād* ways, the *āḥād* tradition was raised to the rank of *mutawātir*. The discussion of the question: to what extent the *āḥād* contain positive science and may serve as a criterion for the practice, forms one of the most conspicuous chapters of the *uṣūl* science.

Bibliography: W. Marçais, *Le taqrîb de en-Nawawi* (Paris, 1902), p. 201; a detailed discussion of the *uṣūl* questions: *Le livre de Mohammed ibn Toumert* (Algiers, 1903), text, pp. 51 *et seq.*; Ṣadr al-Sharīʿa (Taftazānī), *al-Tawḍīḥ waʾl-talwīḥ* (Kazan, 1883), p. 361.

From a Shī'ite point of view: Djamāl al-Dīn al-'Āmilī, *Ma'ālim al-uṣūl* (Lucknow, n. d.), p. 107. (GOLDZIHER.)

AḤAD (A.), a numeral „one"; also surname of God [see WĀḤID]. *Yawm al-aḥad*, the first day of the week, Sunday.

AḤADĪ, the cavalry guard corps in the army of the Great Moghul.

Bibliography: Horn, *Das Heer und Kriegswesen der Grossmoghuls*; W. Irvine, *The army of the Indian Moghuls*.

AḤĀDĪTH (A.), traditions. [See ḤADĪTH.]

AḤADIYA (A.) = unity, technical term in philosophy denoting simply the indivisibility of God's entity, which in the teaching of the Ṣūfīs constitutes the highest degree (*martaba*) of the divine Being. Comp. the definitions in the *Dictionary of the technical terms* (ed. Lees), p. 1463.

'AHD (A.), pl. of *'uhūd*, command, covenant, alliance; hence *walī al-'ahd* = successor to the throne by virtue of a decree of the reigning prince; *ahl al-'ahd*, „the people of the covenant", i. e. those who have made a covenant with the Musulmans, namely the Christians and the Jews [see DHIMMA.]. Further *'ahd* means the document itself which contains the regulations of the alliance; hence *al-'Ahd al-'Atīḳ*, „the Old Testament" and *al-'Ahd al-Djadīd*, „the New Testament".

AL-**AHDAL** AL-ḤUSAIN B. 'ABD AL-RAḤMĀN B. MUḤAMMED AL-ḤASANĪ BEDR AL-DĪN, Arab historian, born in 779 (1377), and died in 885 (1480). One of his works is a compendium of al-Djanadī's history of Yemen, entitled: *Tuḥfat al-zaman fī a'yān ahl al-Yaman*.

Bibliography: Brockelmann, *Gesch. d. arab. Litter.*, ii. 185; Kay, *Yaman, its early mediaeval history*, pp. xviii *et seq.*

AḤDĀTH (A.), pl. of *ḥadath* [q. v.].

ĀHĪ, Turkish poet, whose real name seems to have been Benli Ḥasan („Ḥasan with the mole"). His father Sīdī Khodja was a merchant in Trstenik (not far from Nicopolis). After the latter's death Āhī went to Constantinople and chose for himself the career of a scholar, but he did not for a long time advance any further than the degree of a candidate (*mulāzim*), because he declined the position of Muderris in Bāyazīd Pasha's Medrese in Brusa. Finally he obtained a similar though less important position in Ḳara-Ferya (Berrhoea), where he died in 923 (1517). He left two unfinished poetical works, of which the titles are: *Khusrew u-Shīrīn* and *Ḥusn u-dil*. The latter work is an allegorical poem written in prose interspersed with verses, and is an imitation of Fattāhī's [q. v] work of the same title. Gibb has epitomized its contents in *A history of Ottoman poetry*, ii. 296, *et seq.*

Bibliography: Besides Gibb, *loc. cit.*, Laṭīfī (Chabert), p. 105; Hammer-Purgstall, *Gesch. d. osman. Dichtk.*, i. 209.

AL-**AḤḲĀF** (A.) = „the sand downs". The Arabs particularly apply this appellation to the large sandy desert south of the Arabian Peninsula, an entirely unknown region, visited by no traveller. — It is also the title of the 46th Sūra.

AḤKĀM (A.), pl. of *ḥukm* [q. v.].

AHL (A.), originally meaning „those who occupy with one the same tent (Hebrew *ōhel*)", thus „family, inmates". Therefore *ahl al-bait* means „the household of the Prophet, his descendants". When the *ahl* (pl. *ahālī*) of a town or a country is spoken of it denotes its inhabitants, sometimes, as in Medina (according to Burton), specially those who were born there and own houses. But this word is often connected with other notions, and then its meaning is still more subtle, so that it may mean so much as „sharing in a thing, belonging to it", or „owner of the same", etc. Some of the compounds with *ahl* most in use follow here:

AHL AL-**AHWĀ'** (A., sing. *hawā*, „predilection, inclination of the soul"; comp. Ḳor'ān vi. 151) is according to the view of the orthodox theologians the appellation of the followers of Islām, whose religious tenets in certain details deviate from the general ordinances of the Sunnite confession (comp. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lii. 159). As examples there are mentioned: Djabariya, Ḳadariya, Rawāfiḍ, Khawāridj, anthropomorphists, Mu'aṭṭila. From the above definition it may be inferred that in the sense of Musulman theology it is not proper either to designate these tendencies as sects. (GOLDZIHER.)

AHL AL-**BAIT** (A.) = „the people of the house, of the family". With reference to Ḳor'ān, xxxiii. 33, the Shī'ites (and in general the Muḥammedans friendly to 'Alī) attribute to 'Alī, Fāṭima, their sons and their descendants to whom alone they restrict this appellation, the greatest moral and spiritual merits as well as the greatest influence on the political rule and religious guidance of Islām. These ideas come to the surface in a more or less exaggerated form with regard to the 'Alīdes according to the views of those spheres [see SHĪ'A]. In a notice by Ibn Sa'd (iv². 59,₁₂) the appellation Ahl al-Bait is contrasted with Muhādjirūn and Anṣār and referred to the Prophet's family. In Sunnite exegesis, the notion of Ahl al-bait is in several ways extended to the branches of the Banū Hāshim including their *Mawālī* [see MAWLĀ], who in the sense of the law must not be admitted to the partaking of the *ṣadaḳa*; see the codes, e. g. Ḳudūrī, *Mukhtaṣar* (Kazan, 1880), p. 23; Nawawī, *Nihāya* (ed. van den Berg), ii. 305; Ibn Ḳāsim al-Ghazzī, *Fatḥ al-ḳarīb* (ed. Van den Berg), p. 252. The Sunnite interpretation accepted for the most part does not restrict the acceptation of the term to Hāshimite descent in a narrower or wider sense, but counts among the Ahl al-Bait all the wives and children of the Prophet, and also 'Alī, his son-in-law: this prevents the specially 'Alīde interpretation [comp. also ĀL]. See the commentaries to Ḳor'ān, xxxiii 33 and to al-Bukhārī, *Faḍā'il al-aṣḥāb*, N°. 30 (al-Ḳasṭallānī, vi. 151). An exhaustive treatise in anti-Shī'ite spirit on the compass of the idea of Ahl al-Bait is to be found in Ibn Ḥadjar al-Haitamī, *al-Ṣawā'iḳ al-muḥriḳa* (Cairo, 1312), pp. 87 *et seq.* (GOLDZIHER.)

AHL AL-**BIDA'** (A.) = „the people of innovation", i. e. sectarians.

AHL AL-**BUYŪTĀT** (A.), originally denoted those that belong to Persian families of the highest nobility (Nöldeke, *Gesch. d. Perser u. Araber zur Zeit der Sassaniden*, p. 71), then, the nobles in general. Other meanings are given by Dozy, *Supplément*, i. 131ᵇ.

AHL AL-**DĀR** (A.) = „the people of the house". In the Almohad hierarchy the 6th order.

AHL AL-**DHIMMA** (A.), the Jews and Christians, between whom and the faithful there is according to Musulman law a certain legal relation [see DHIMMA].

AHL al-DJEBEL (A.) = „mountaineers", particularly in Palestine the Bedouins of Hawrān.

AHL al-FARḌ (A.), the legal heirs of the first degree according to Muḥammedan right of succession [see FARḌ].

AHL al-ḤADĪTH, also AṢḤĀB AL-ḤADĪTH (A.) = „the people of official tradition" [see ḤADĪTH], as contrasted with „the people of their own judgment (*ra'y*)" and with the sectarians in general. In India the Wahhābīs [q. v.] call themselves so.

AHL-i ḤAḲḲ (P.) = „the people of the truth". [See ʿALĪ ILĀHĪ.]

AHL al-HAWĀ (A.) = „libertines".

AHL al-ḲABĀLA (A.), a synonym of *ahl al-dhimma* [see ḲABĀLA].

AHL al-ḲIBLA (A.) = „the people of the *Ḳibla*" [q. v.], appellation of the Mussulmans.

AHL al-KISĀ' (A.) = „the people of the garment", appellation of the family of the Prophet (Muḥammed himself, ʿAlī, Fāṭima, Ḥasan and Ḥusain). For the origin of the appellation see the traditions quoted above under AHL AL-BAIT.

AHL al-KITĀB (A.) = „the people of the Book". Muḥammed calls so the Jews and Christians, in distinction from the heathens, on account of their possessing divine books of revelation (*Tawrāt* = Torah; *Zabūr* = Psalter; *Indjīl* = Gospel), which, it is true, they transmit in a falsified form, but the recognition of which secures for them a privileged position for the heterodox. In contradistinction to the heathens Muḥammed granted them (Kor'ān, ix. 29) after their submission free public worship against payment of a poll-tax (*djizya*, q. v.). The punctual observance of the special conditions laid upon them ensures them implicitly the protection of the Mussulman authorities (as *muʿāhadūn* or *ahl al-dhimma* = protégés in accordance with an agreement). Violation of this defensive alliance with the Ahl al-Kitāb is considered as a heinous perfidy. Of course the proceedings of the Prophet with regard to the Banū Naḍīr and Banū Ḳuraiẓa cannot be taken as a model. In spite of all fanatical sentiment expressed in odious terms the following principle in the form of Muḥammed's saying has been set up: „He who wrongs a Jew or a Christian will have myself (the Prophet) as his indicter on the day of judgment" (Belādhorī, p. 162). Likewise in the ancient instructions for the generals setting out on expeditions of conquest as well as for administrators of the provinces stress is always laid upon the clause that the subjected Ahl al-Kitāb must not be disturbed in their public worship and must be treated with humanity. To be sure after the death of the Prophet, who had begun himself with the expulsion of the Jews, permanent stay in Arabia itself was interdicted to them. The Mussulmans based themselves on a saying supposedly uttered by the Prophet in his last hour, the purport of which is „two religions may not dwell together on the Arabian Peninsula" (*Muwaṭṭa'*, iv. 71; comp. Zarḳānī's commentary as to the geographical limits), a principle which is pretended to have been applied already by Abū Bekr in his message to the Christian inhabitants of Nadjrān (Ṭabarī, i. 1987,₁₅). The restrictive, special conditions, which became always more oppressive in proportion to the increasing spirit of intoleration, are codified in their oldest form in a document which passes for the *ʿAhd ʿOmar* „the treaty of ʿOmar" (with the Christians of Jerusalem), but which is certainly a production of a later epoch (de Goeje, *Mémoire sur la conquête de la Syrie*, 2ᵈ ed., pp. 140 *et seq.*). This document is the basis of the interconfessional legislation in Islām, and it has been further developed in the codifications according to the ruling opinions of their respective authors. Within the right of free public worship the following question remained as the leading one: To what extent may the Ahl al-Kitāb erect new prayer houses or restore old ones? It always gave rise to renewed negotiations. One may conceive that in different law schools in spite of the maintenance of the principles differences with regard to the treatment of the Ahl al-Kitāb from the point of view of religious right became manifest. The principal differences appear in the questions of the *Dhabāʾiḥ Ahl al-Kitāb* (if the Mussulman may partake of what they slaughter) and of the *Munākaḥāt Ahl al-Kitāb* (to what extent a Mussulman is allowed to marry a wife of them). The assumption that the books which the Ahl al-Kitāb possess are falsified and that they concealed their true contents (Ḳor'ān, ii. 70; iii. 64; v. 15; vi. 91), as well as the belief that Muḥammed, his mission and the victory of the Arabs and Islām are foretold in the Holy Scriptures of the Jews and Christians and that the Ahl al-Kitāb rendered obscure these prophecies by false interpretation called forth an extensive polemical literature, the materials for which the Mussulman theologians received in the first place from converts. With regard to the Jews a particular subject of polemics took rise form the assertion of the *naskh al-sharīʿa*, i. e. the abrogation of the divine laws affirmed by the Muḥammedans and denied by the Jews.

Islām extended very early the sphere of the Ahl al-Kitāb beyond its original limits. Supported by the statement that Muḥammed adopted the *djizya* from the Parsis in Hadjar (Baḥrain), the Mussulmans included the Madjūs too in that class. In the time of Caliph Ma'mūn (215 = 830) the heathens of Ḥarrān succeeded in suggesting to the Mussulmans that they were the Ṣābi'ūn mentioned frequently enough in the Ḳor'ān among the believing nations, and that they possessed books of revelation brought to them by ancient prophets (Chwolsohn, *Die Ssabier*, i. 141). In the 14ᵗʰ century a Muḥammedan prince in India allowed the Chinese, against payment of a *djizya*, to keep up a pagoda on Mussulman territory (Ibn Baṭṭūṭa, iv. 2). The state of interior affairs in India brought it so far that veritable idolaters were considered as Ahl al-Dhimma (*ibid.*, pp. 29, 223). Such extensions could be made, however, only by concession of religious toleration. The two questions alluded to above (the laws of food and marriage) were never taken into consideration beyond the sphere of the original Ahl al-Kitāb.

AHL AL-ĶIYĀS (A.), those who consider the conclusion by analogy (ķiyās) justified in inferring the legal decisions.

AHL AL-NAẒAR (A.), the philosophers.

AHL AL-ṢUFFA, more rarely: AṢḤĀB AL-ṢUFFA, isolated form: AṢḤĀB AL-ẒULLA (A.) = „the people (or owners) of the (mosque-) vestibule". Among the believing Mekkans, who had accompanied the Prophet in his flight to Medina and among those who emigrated to Medina from other places there were some without means from home, others having left their sphere of action in their native country became poor and suffered from want of food, clothes and a home. Even the far extending charity of the Medinian co-religionists was unable to remove entirely the misery that prevailed in those districts. In the meantime a vessel with parched barley, bought with the money of the community, was set up for the hungry people in the evening in the yard of Muḥammed's house. The homeless persons encamped under the *ṣuffa*, i. e. the northern part of the mosque covered only with a roof but with open sides. They were on account of this also called „the guests of Islām". Still on the other hand even very poor immigrants are said to have never entered there. Their number is differently rated (10, 30, 70, 92, 93, 400 persons), as in fact it has fluctuated and for instance in the earlier time it was certainly greater than later. *Ṣuffa* people, who were with regard to their tribe strangers in Medina, were for instance the Ghifārite Abū Dharr, the Yemenite Abū Saʿīd, the ʿAbsite Hudhaifa, the Laithite Wāila etc., further the slaves Abū Muwaihiba, ʿAmmār, Bilāl (an Abyssinian), Khabbāb, Salmān (a Persian), Ṣuhaib (a Greek). Among the persons that were connected with the Prophet Abū Huraira is at best to be mentioned; but it is supposed that even Saʿd b. Abī Waķķāṣ, one of the „ten" (namely the ten most intimate friends of Muḥammed), was there once.

The construction put by many Muhammedan theologians on Ķorʾān, ii. 273, 274; vi. 52; xviii. 27; xlii. 26, as referring to the Ahl al-Ṣuffa gives way for many reasons, one of which is the fact that those passages were partly revealed in Mecca. In later times the Ahl al-Ṣuffa were very highly respected, and placed even above the „ten" (see above), perhaps because, owing to a foolish etymology, they were considered as the founders of Ṣūfism, whereas others emphasized and substantiated by Ķorʾānic passages the tenet that all are equal in Islām and that it depends simply on the degree of piety. Legend tells of them among other things that they heard the conversation which Allāh had with Muḥammed during the „nightly travel" (which, however, as everybody knows is supposed to have occurred in Mecca). — Abū Nuʿaim al-Iṣpahānī (d. in 430 = 1038) treated of them in his *Kitāb ḥilyat al-anbiyāʾ*. Taķī al-Dīn al-Subkī (d. in 756 = 1355) wrote a book entitled *Tuḥfa fi'l-kalām ʿalā ahl al-ṣuffa*. Abū ʿAbd al-Raḥmān al-Sulamī wrote *Taʾrīkh ahl al-ṣuffa*. — Later on *ahl al-ṣuffa* became the designation for (homeless) jugglers. (RECKENDORF.)

AHL AL-SUNNA (A.) = „the Sunnites", the orthodox people [see SUNNA].

AḤLĀF (A.), pl. of *ḥilf* [q. v.].

AL-**AḤMAR** (A.) = „the red one"; also a person's name; the Musulman princes of Granada were called Banu'l-Aḥmar. [See NASRIDES.]

AḤMED, one of Muḥammed's names according to Ķorʾān, lxi. 6. Comp. Sprenger, *Das Leben und die Lehre des Mohammad*, i. 156 *et seq.*

AḤMED I, fourteenth Ottoman sultan, eldest son of Muḥammed III, born in 998 (1589), succeeded his father at the age of 14. Derogating the custom established by Bāyazīd I Yildirim he had not assassinated his brother Muṣṭafā when ascending the throne. He removed his grandmother, Sultana Ṣafiya (the Venetian Baffa), who had ruled over the empire under Murād III and Muḥammed III, as well as her confidants. He entrusted the Kapūdān-pasha Cicala with the chief command over the troops led against the Persians, who had just conquered Eriwān, Akče Ķalʿa and Ķars, but the renegade suffered a defeat at the hands of Shāh ʿAbbās I, and died of grief (1014 = 1605). The grand vizier Lālā Muṣṭafā Pasha received his order to relieve Buda, in which he succeeded, but on the other hand was forced by bad weather and by the cowardice of the Agha of the Janizaries to abandon the siege of Pest and Gran. A little later he conquered the latter city after which he concluded with Austria the Peace of Sitvatorok (11th November 1606) and renewed the agreements with France, England and Venice. — About that time the passion for tobacco was spread in Turkey. — Aḥmed's grand vizier Murād Pasha, surnamed Kodja Ķuyūdju („the old well digger"), defeated at Urudj-Owasi the Kurd ʿAlī Djānbulād (3d Radjab 1016 = 24th October 1607), who had rebelled in Aleppo, routed Ķalender Oghlu and Ķara Saʿīd at Göksün-Yaila (8th July 1608), made away with the other insurgent chiefs by assassination and treachery and in this way he re-established peace in Asia Minor. At sea Khalīl of Ķaiṣariya defeated ten Maltese galleys in the waters of Cyprus in the so-called „Ķara Djahannam Battle" (after the name which the Turks gave the red galleon commanded by Fressinet, and which they seized); but his fleet suffered great loss then, especially in a battle against Ottavio of Aragon near Cape Corvo, not far from Chio (1613), while the Ottoman admiral ravaged the country of Malta and chastised the dey of Tripoli of Berberia and the rebellious Mainots; Sinope was devastated by an incursion of Cossacks. He made peace with Persia, on the renunciation of the tribute of 200 bales of silk paid by the Ṣafawides and of the countries conquered since Salīm I and later lost again. Iskandar Pasha reconquered the rebellious Moldavia and on the 26th Ramaḍān 1026 (27th September 1617) concluded with the Cossacks the Peace of Busza. Aḥmed I died in the same year (23d Dhu'l-Ķaʿda = 22d November) at the age of 28 after a reign of 14 years.

In spite of the energy he had shown in the beginning of his reign he was weak and undecided and cruel besides; his grand vizier Naṣūḥ Pasha, whose arrogance had put him out of humour, was strangled by his order (1023 = 1614). He had the regulations of the empire arranged anew and codified them under the title *Ķānūn nāme*. The erection of the Aḥmediya Mosque on the

At Maidān (1018 = 1609) and the large fountain of Top Khāne are due to him; he had also then made for the first time in Constantinople, the Ka'ba cover which had hitherto come from Cairo.

(Cl. Huart.)

AḤMED II, Ottoman sultan, born on the 5th Djumādā I 1052 (1st August 1642), brother of Sultan Sulaimān II, whom he succeeded on his death at Adrianople (26th Ramaḍān 1102 = 23d June 1691) and was enthroned in the old mosque of that town. He confirmed Muṣṭafā Köprülü in the office of grand vizier; the latter lost the battle of Slankamen (19th August 1691) against the Imperials and perished on the battle-field. Ḥādjdjī 'Alī of Merzifūn, who took his place, succeeded in having the siege of Belgrade raised (18th Muḥarram 1104 = 29th Sept. 1692); but a third minister, Surmeli 'Alī of Dimetoḳa, was compelled to abandon the siege of Peterwardein (1106 = 1694). The Ottoman arms were no more lucky in Dalmatia than in Poland; Chio, besieged by the Venetians, capitulated. Aḥmed II died from dropsy (23d Djumādā II 1106 = 8th February 1695). He was of a melancholic disposition and very irascible; he was fond of hunting, but was addicted to drinking.

Bibliography: Hammer-Purgstall, *Gesch. des osman. Reiches*, see index; Rāshid, *Ta'rīkh*, ii. 156—292; *Gulshen-i ma'ārif*, ii. 993—1014; Muṣṭafā Efendi, *Natā'idj al-wuḳū'āt*, iii. 8—11.
(Cl. Huart.)

AḤMED III, Ottoman sultan, succeeded his deposed brother Muṣṭafā II and was enthroned on the 10th Rabī' II 1115 (23d August 1703) at Adrianople. He immolated the persons the revolted Janizaries demanded, but as soon as he entered Constantinople he dismissed the Bostāndji corps and replaced it by a levy (the last of that kind) of 1000 Christian boys. He had several Janizary chiefs executed or sent them into exile, and deposed the incapable Baltadji Muḥammed, whom he replaced by 'Alī Pasha of Čorlū (19th Muḥarram 1118 = 3d May 1706). The Muntafiḳ ravaged the country around Baṣra and defeated the Turkish troops. In 1121 (1709), Charles XII of Sweden, who took to flight after the battle of Poltawa, sought shelter on Turkish soil; that king, called by the Turks *demir bāsh* („iron head"), seems to have undertaken his last campaign on the vain assurances of the grand vizier that the khān of Crimea would send his Tartars to his aid. The return of the Baltadji to the affairs of the State was the signal for war with Russia (1123 = 1711). At the very beginning of the campaign Peter I, hemmed in his retrenchments of Horieste near Kush between the Pruth and the swamps, would have been compelled to surrender had not Catherine I been ingenious enough to sacrifice all the jewelry she could procure, sending it as a present to the grand vizier, by which means she obtained peace against the return of Azow and the dismantling of several towns. Still the treaty was not carried out in its totality, modifications having been introduced into it the following year. War broke out with Venice on account of the Montenegro refugees im Cattaro; the sultan himself took the command of the troops; Tinos and Corinth capitulated; Argos, Nauplia (Napoli di Romania) were taken as well as the rest of Morea and the last Venetian possessions in the Archipelago. In the war with Austria, the Turks were defeated under the walls of Peterwardein (5th August 1716) by Prince Eugene: Dāmād 'Alī Pasha perished there, a bullet having perforated his forehead. Temesvar surrendered to the Imperials as also Belgrade in consequence of an unsuccessful battle lost under its walls (16th August 1717). Dāmād Ibrāhīm Pasha brought the war to an end by the treaty of Passarowicz (21st July 1718). The Turks, turning to their advantage the advance of the Afghāns into Persia and that of the Russians into Shirwān, occupied Georgia, including Tiflis (1135 = 1723), and seized Khōi in Persia (1136 = 1724). A partition-treaty with Russia (24th June 1724) was brought about, but in order that the clauses favourable to Turkey should be observed it was necessary to continue the war with Persia: Ḥasan Pasha seized Hamadhān (Huart, *Hist. de Bagdad*, p. 145). Eriwān capitulated; Tibrīz was besieged without success, but was taken the following year (1137 = 1725); the campaign ended with the defeat of the Turkish army, commanded by Aḥmed Pasha, in the plain of Andjedan (1139 = 1726), which brought about an honourable peace. Under the reign of Aḥmed III, the first three-decker, built in Turkey, was launched at the Golden Horn; a porcelain factory was established in the ruins of Hebdomon (Takfūr Serāi); five new *bends* or reservoirs were constructed to supply the capital with water; the Hungarian renegade Ibrāhīm founded the first Turkish printing house. The first successes won by Tahmāsp Ḳulī Khān (Nādir Shāh), general of Shāh Tahmāsp, induced the Janizaries to rebel, and the execution of the grand vizier and two other persons of note (18th Rabī' I 1143 = 1st October 1730) did not satisfy them. — Aḥmed III abdicated and his nephew Maḥmūd I was put on the throne; he died, as supposed, by poison, on the 20th Ṣafar 1149 (30th June 1736). He was of a frivolous character, very fond of birds and tulips, and spent his time in diverting his wives by festivals and illuminations. He nevertheless was clever enough in choosing remarkable ministers who rendered his reign illustrious.

(Cl. Huart.)

AḤMED (Abū 'Alī) b. Abī Bekr Muḥammed b. al-Muẓaffar b. Muḥtādj, of the dynasty of the Ṣaghāniyān princes, was sent in 327 (939) to Khorāsān as governor in the place of his father, fought successfully with the Būyides and Ziyārides and conquered Rai (conclusion of peace in Djumādā II 331 = Febr.-March 943). Having been deposed by the Sāmānide Nūḥ b. Naṣr in consequence of the complaint of the population (333 = 945), he undertook in the beginning of 335 (August 946) a rising in the name of Prince Ibrāhīm b. Aḥmed (uncle of the ruler), dislodged the new governor Ibrāhīm b. Sīmdjūr from Khorāsān, crossed the Āmū, caused Nūḥ to flee to Samarḳand and had the prayer recited in Bukhārā in the name of Ibrāhīm (Djumādā II 335 = December 946-January 947). Shortly afterwards he

had to leave the town on account of the hostile attitude of the people towards him, and retired to his mother-country, Ṣaghāniyān (Shaʿbān 335 = Febr.-March 947); the princes (two other brothers of Nūḥ besides Ibrāhīm are mentioned) allied themselves with Nūḥ; complete amnesty was ensured them. After his entry into Bukhārā (Ramaḍān 335 = March-April 947). Nūḥ broke his promise and had all the three princes blinded. Aḥmed gathered on the upper course of the Āmū against Nūḥ a coalition of all the vassal princes; beaten in the open field, he successfully held his own in his mountains. Peace was concluded in Djumādā II 337 (December 948); Aḥmed remained prince of Ṣaghāniyān; his son Abu'l-Muẓaffar was sent as a hostage to Bukhārā, where he was received with great honours. Towards the end of 340 (May 952) he was again appointed governor of Khorāsān; he then brought order in his province and renewed the war with the Būyides, which, however, was soon afterwards brought to an end by a treaty of peace. This treaty was rejected by Nūḥ and Aḥmed was deposed; supported by the Būyides Aḥmed rebelled again, made the prayer to be recited in his own name and that of Caliph al-Muṭīʿ (hitherto not acknowledged in Khorāsān), but already under ʿAbd al-Malik I [q. v.], on the advance of his successor Bekr b. Malik, he was compelled to leave his province; he died in the end of Radjab 344 (November 955), shortly after the conclusion of peace between the Sāmānides and the Būyides; his remains were brought to Ṣaghāniyān.

The accounts of Aḥmed by Ibn al-Athīr and Gardīzī (*Zain al-akhbār*; extracts by Barthold, *Turkistān in the time of the Mongol invasion*, i. 8—10) seem to be borrowed from a common source, probably from the *Taʾrīkh wulāt Khorāsān* of al-Sallāmī (comp. about this work, Barthold, *loc. cit.*, ii. 11 and *Orient. Stud. Th. Nöldeke gewidmet*, i. 174), a contemporary of Aḥmed. Comp. also Ibn Ḥawkal (ed. de Goeje, p. 350) for Aḥmed's great qualities as governor.

(W. Barthold.)

AḤMED b. Abī Duʾād, Muʿtazilite ḳāḍī, a native of Baṣra, born according to some statements in 160 (776-777). Owing to his scholarship and merits he acquired influence over Caliph al-Maʾmūn, and became soon one of the latter's most intimate friends. Al-Maʾmūn also advised his brother and successor al-Muʿtaṣim to place Aḥmed, who was a fervent adherent of the Muʿtazilite teaching among his counsellors and never to leave him. After his accession in 218 (833) al-Muʿtaṣim consequently appointed Aḥmed chief ḳāḍī. The Muʿtazilite doctrine was already under the reign of al-Maʾmūn raised to the rank of a State religion and a formal inquisitorial tribunal was established. The office of the latter was to convert by suitable means the opponents of the officially recognized religious opinions. Aḥmed presided at the discussions of the inquisitorial court in his capacity of chief ḳāḍī of the capital, but he manifested a toleration and humanity quite rare at that time. He exerted very great influence over al-Maʾmūn and he was on friendly terms with Caliph al-Wāthiḳ. After the latter's death some of the highest officials and officers wanted to swear allegiance to his minor son, but upon the advice of Waṣīf, commanding-officer of the Turkish guard, Djaʿfar, the brother of the deceased, was proclaimed caliph, whereupon he received from Aḥmed the surname al-Mutawakkil. As, however, the new caliph gradually began to assume a hostile attitude towards the Muʿtazilite teaching and to come nearer to the orthodox party, the powerful ḳāḍī, the chief advocate of the Muʿtazilites, could not for long maintain his influential position. Some time after al-Mutawakkil's accession he was stricken with apoplexy, and the office of ḳāḍī was transferred to his son Muhammed. But the caliph deposed the latter as early as 237 (851-852), threw him into prison together with his brothers and confiscated all Aḥmed's property. It is true that the prisoners recovered their freedom but were obliged to sacrifice for it a great part of their fortune. Aḥmed and Muḥammed did not survive long their fall. According to the usual statement Muḥammed died towards the end of 239 (May-June 854) and three weeks later (Muḥarram 240 = June 854) died his father.

Bibliography: Ibn Khallikān (ed. Wüstenf.), Nº. 31; Ṭabarī, iii. 1139 *et seq.*; Ibn al-Athīr (ed. Tornb.); Yaʿḳūbī (ed. Houtsma), ii. 569 *et seq.*; Weil, *Gesch. d. Chalifen*, ii. 261 *et seq.*; A. Müller, *Der Islam im Morgen und Abendland*, i. 515, 524. (K. V. Zetterstéen.)

AḤMED b. Abī Khālid al-Aḥwal, a vizier. He began his political career as a secretary and shortly after the accession of al-Maʾmūn was made vizier. He exerted soon great influence over the caliph; it was he that urged to confer the governorship of Khorāsān in 205 (821) upon Ṭāhir b. al-Ḥusain, then governor of Bagdad. Al-Maʾmūn had already appointed Ghassān b. ʿAbbād governor of that province, but when Aḥmed pointed out to him that Ghassān was unequal to such a difficult task and stood security for Ṭāhir's loyalty, the caliph let himself to be persuaded to put Ṭāhir in place of Ghassān. In the meantime the shrewd Aḥmed is said to have made Ṭāhir a present of a eunuch, whom he ordered to poison his master in case he would manifest rebellious leanings. Thus when Ṭāhir omitted the caliph's name in the *khuṭba* in 207 (822), and by that actually refused obedience to the ʿAbbāside government, al-Maʾmūn ordered his vizier to depart immediately to Khorāsān and call the rebel to account. Aḥmed could with great difficulty obtain a delay of twenty-four hours, but still before the expiration of this delay, the welcome news of the sudden death of the rebellious governor arrived at the capital. Just as Aḥmed had interceded in favour of Ṭāhir, he recommended now his son Ṭalḥa. The latter was thus entrusted with the administration of the province in question, but at the same time al-Maʾmūn sent Aḥmed to Khorāsān, to support Ṭalḥa or rather to keep his eye upon him. The vizier pushed forward till Transoxania and conquered Usḥrūsana. — The pardon obtained by al-Maʾmūn's uncle, Ibrāhīm b. al-Mahdī, who had come forth as a pretender to the throne and gone around disguised till he fell into the hands of the caliph's police, is also ascribed to Aḥmed's influence. — Aḥmed is said to have died in 210 (825-826).

(K. V. Zetterstéen.)

AḤMED b. Abī Ṭāhir Ṭaifūr. [See ibn abī ṭāhir.]

AHMED b. 'Ali b. Thābit. [See al-Khatīb al-Baghdādī.]

AHMED b. Fadlān. [See ibn fadlān.]

AHMED b. Hābit (Hā'it), Mu'tazilite theologian, a pupil of al-Nazzām; he taught the metempsychosis (*tanāsukh*) and also in other points advocated theories conflicting with Islām, e. g. the divine nature of the Messiah, for which he argued from Kor'ān, ii. 206; v. 110; vi. 159; lxxxix. 23. He also asserted that every species of animal forms a community of its own and has its apostles and prophets, for which he referred to Kor'ān, vi. 38 and xxxv. 22. He blamed the Prophet Muhammed for his many wives and was of opinion that Abū Dharr al-Ghifārī was more virtuous and more abstinent than Muhammed. Therefore some Musulman theologians call him an unbeliever and there is some ground for it so far as the soil in which his doctrine takes root is not that of Islām.

AHMED b. al-Khasīb. [See ibn al-khasīb.]

AHMED b. Muhammed b. 'Abd al-Samad Abū Nasr, vizier of the Ghaznawide Mas'ūd b. Mahmūd (after the death of his celebrated predecessor al-Maimandī (423 = 1032). He began his career as steward (*kethkhodā*) of Khwārizm Shāh Altūntāsh, and having become the vizier of Mas'ūd he managed to retain this office during the latter's reign. After the defeat at Dandānakān, Mas'ūd, who retired himself to India, sent him as attendant of his son Mawdūd to Balkh in order to defend this city against the Seldjūks. Also after the accession of Mawdūd (432 = 1041) he officiated for some time as vizier until al-Maimandī's son received that office. The year of his death is unknown.

Bibliography: Baihakī (ed. Morley); Ibn al-Athīr (ed. Tornb.), ix; De Biberstein-Kazimirski, *Diwan Menoutchehri*, preface.

AHMED b. Muhammed b. Hanbal, known by the name of Ibn Hanbal, celebrated Islāmic theologian, a member of the Arab family of Shaibān, born at Bagdad in Rabī' I 164 (November 780). During his studies in his native town (till 183 = 799) and on very extensive student travels, which brought him over 'Irāk, Syria and Hidjāz to Yemen, he aimed chiefly at adapting himself to the study of *hadīth* [q. v.]. After he had returned home, he took lessons from al-Shāfi'ī in *fikh* and in his *usūl* (195—197 = 810—813). His religious turn of mind was in creed and law unalterably determined by the old traditional views. He had the opportunity to exemplify them, when under the caliphs al-Ma'mūn, al-Mu'tasim and al-Wāthik (218—234 = 833—849) the Mu'tazilite definition of the dogma was raised to a *confessio fidei* prescribed by the State and painful proceedings were introduced against acknowledged theologians who would not without reserve profess the doctrine of the creation of the Kor'ān. Ibn Hanbal too was submitted to the Inquisition (*mihna*). Being led to Tarsūs in chains to al-Ma'mūn, he received on his way the news of the caliph's death. Under the latter's successor he patiently submitted to corporal punishment and imprisonment, without, even showing any moderation in the stubborn traditional form of confession. Only when under al-Mutawakkil return to orthodoxy was required by the State, Ibn Hanbal's trials ceased; he was on several occasions distinguished by the caliph and invited to the Court, even a pension was without his knowledge allowed his family. The renown of his learning, piety and unswerving faithfulness to tradition gathered a host of disciples and admirers around him. He died at Bagdad on the 12th Rabī' I 241 (31st July 855). His burial is the subject of fabulous description by biographers. His tomb, around which marvelous stories are woven (comp. Goldziher, *Muhamm. Stud.*, i. 257), in the Bagdadian cemetery of martyrs (*makābir al-shuhadā'*) in the Harbīya quarter, was for a long time venerated as that of a saint. After it had been destroyed towards the end of the 7th (13th) century by the inundations of the Tigris, the veneration was transferred to the tomb of his son 'Abd Allāh in the Koraish cemetery near the Straw Gate, which Timūr had restored in 695 (1295-1296). After that time the tomb of the son was confounded with that of the father, and the cult of the latter was transferred to the former (G. le Strange, *Baghdad during the Abbaside Caliphate*, p. 166).

Among Ibn Hanbal's works, the great encyclopedia of traditions, *Musnad* [q. v.], compiled by his son 'Abd Allāh from his lectures and amplified by supplements (*zawā'id*), containing 28000—29000 traditions, acquired great renown (printed in Cairo, 1311, 6 vol.). Comp. Goldziher, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, l. 465—506; M. Hartmann, *Die Tradenten erster Schicht im Musnad des Ahmad ibn Hanbal* (in the *Mittheil. des Seminars für orient. Sprachen zu Berlin*, year 9, part 2, Berlin, 1906). The son also supplemented his *Kitāb al-zuhd* („the book of asceticism"). The *Musnad*, around which a respectable series of secondary works and adaptations was grouped, has continually been the subject of pious reading. From the 12th (18th) century we have the statement that a pious society read this work to the end in 56 sittings at the Prophet's tomb in Medina (Murādī, *Silk al-durar*, iv. 60). Besides the *Musnad* there has been published Ibn Hanbal's *Kitāb al-salāt wa-mā yalzam fīhā*, on the discipline at prayer (lithographed in Bombay, n. d.; printed in Cairo, Hindīl, 1223). A polemical treatise by Ibn Hanbal, written in prison, is frequently quoted in works of Hanbalite dogmatists: *al-Radd 'alā'l-Zanādika wa'l-Djahmīya fī mā shakkat fīhi min mutashābih al-Kor'ān*, in which he refutes the *ta'wīl* [q. v.] explanation introduced by the Mu'tazilites. — Likewise a book of his entitled *Kitāb tā'at al-rasūl* is quoted; in it he discusses the line one must follow in those cases where the *hadīth* seems to be in contradiction with the text of certain Kor'ānic passages. He formulated his dogmatic confession in his *Kitāb al-sunna*.

As Ibn Hanbal occupied himself more with the sources of the *hadīth* than with the derivation of the law, some representatives of jurisprudence, so for instance Tabarī, do not consider him as a decisive *fikh* authority; hence the great animosity of Ibn Hanbal's followers towards Tabarī (Kern, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lv. 67; his edition of the *Ikhtilāf*, pp. 13 *et seq.*). To be sure Ibn Hanbal has established no *fikh* system of his own; but in his answers to his pupils' questions he has expressed himself about points of specially legal questions. There are cited for instance: *Masā'il Sālih* (ques-

tions put to him by his son Ṣāliḥ and his decisions with regard to them) and answers to the questions of his pupil Harb (Ibn Ḳaiyim al-Djawziya, *al-Ṭuruḳ al-ḥikmiya fi'l siyāsa al-shar'iya*, Cairo, 1317, pp. 251, 293 *et seq.*). His *Fatāwī*, accessible still to the author just mentioned, amounted to about 20 books (*sifr*; comp. *Hidāyat al-ḥayārā*, Cairo, 1323, p. 121). Still in his lifetime some of his disciples systematized his legal teaching, namely Abū Ya'ḳūb Isḥāḳ al-Kawsadj, who in doubtful cases applied to Ibn Hanbal for oral instruction (Dhahabī, *Tadhkirat al-ḥuffāẓ*, ii. 105), and a little later Abū Bekr al-Khallāl, who died in Bagdad in 311 = 923-924 („Mu'allif 'ilm Aḥmed b. Ḥanbal wa-djāmi'uhu wa-murattibuhu"; *ibid.*, iii. 7). The latter's work is still quoted by Ibn Ḳaiyim al-Djawziya (d. 751 = 1350), in his *A'lām al-muwaḳḳiʿīn* (see the appendix to al-Ṭabarānī's *al-Mu'djam al-ṣaghīr*, p. 271), but certainly not from autopsy. The course of teaching developed under the guidance of Ibn Hanbal's ideas was recognized by the *idjmā'* of the orthodox Sunnites as one of the four authoritative *madhhabs* [q. v.]: it is that of the Ḥanbalites. Ibn Ḥanbal, as an adherent of the Ahl al-Ḥadīth (see FIḲH) makes the *ra'y* only those concessions that are urged by sheer necessity and where possible derives every law from traditional sources. This compels him to be very indulgent to the *ḥadīth* and sometimes to admit very feeble traditions as the basis of his decisions. In none of the recognized rites has the prohibition of the *bida'* [q. v.] been pushed to such extremes as in the *madhhab* named after Ibn Ḥanbal. Thence a far extending rigorousness resulted in all ritual and social connections and a more fanatical intoleration than in the general orthodoxy. In dogmatic theology his school clings to the old pre-Ash'aritic orthodoxy; even al-Ash'arī himself was compelled, in order to gain a footing in the general conception of the Musulmans, to make several concessions in the definite formulation of his dogmatics, nay even to declare expressly that he was in full harmony with the teaching of Ibn Ḥanbal and that he avoided everything that was in contradiction to it (Ibn 'Asākir; Spitta, *Zur Gesch. al-Aš'arī's*, p. 133. The totality of Ibn Ḥanbal's dogmatics may be found in the most concise manner in 'Abd al-Ḳādir al-Djīlī's *al-Ghunya li-ṭālibī ṭarīḳ al-ḥaḳḳ* (Mecca, 1314), i. 48—66.

The Ḥanbalites, who represent now the most spare Islāmic *madhhab*, were till the 8th (14th) century much more widely spread in the countries of Islām. Muḳaddasī finds them in Persia: in Iṣpahān, Rai, Shahrazūr and other places, where their religious course seems to have been characterized by extravagancies of various kinds. First of all they displayed in those places a particular predilection for the memory of Caliph Mu'āwiya (ed. de Goeje, pp. 365, 13, 384, 14, 399, 6, 407, 13). This attachment to the memory of the Umaiyad may of course not be intended for his merit as a pious man, but for the caliph recognized by the orthodox Sunna. The favourable feeling for Yazīd, just spread among the Ḥanbalites, is to be interpreted from the same point of view (illustrations for which in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, liii. 646, note). In Syria and Palestine, where the Ḥanbalite *madhhab* was introduced in the 5th (12th) century by 'Abd al-Wāḥid al-Shīrāzī (*Kitāb al-ins al-djalīl*, p. 263), it was represented till into the 9th (16th) century (comp. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, viii, 364). Mudjīr al-Dīn (d. in 927 = 1521), a Ḥanbalite himself, enumerates in his just mentioned *Kitāb al-ins al-djalīl* (pp. 592 *et seq.*) the most renowned representatives of Ḥanbalism in Palestine from the 6th to the 9th (13th—16th) centuries. It was also in this space of time that the appearance of Taḳī al-Dīn b. Taimiya (661—728 = 1263—1328) in Syria caused great sensation. He took up anew the fight for the Ḥanbalite theology (refutation of the rationalistic explanation of the Ḳor'ān and traditions — *ta'wīl*, — rejection of all innovations, as for instance visiting the tombs, venerating the saints etc.; comp. Schreiner, in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lii. 540—563; liii. 51—67) against the dogmatics that had dominated for a long time. But as he offended in this way the requisitions of the orthodox *idjmā'* he was persecuted. By his fall the prestige of Ḥanbalism suffered considerable loss. Until the establishment of Turkish predominance in Islām all the four schools, thus also the Ḥanbalite one, were represented officially by ḳāḍīs in all Islāmic centres. The predominance of the Ottomans has dealt Ḥanbalism a very severe blow; since then it has always been more and more dwindling away, although in its isolated apparitions it has retained the recognition as the element of Sunnite orthodoxy. In the Azhar Mosque it is, of course in a relatively small number, represented by teachers and students (*riwāḳ al-Ḥanbala*); in 1906 there were 3 Ḥanbalite teachers and 28 pupils (out of a total of 312 teachers and 9069 students). On the other hand in the 18th century, it appeared in a new, vigorous form, namely in the mouvement of the Wahhābites [q. v.], in which the after-effect of Ibn Taimiya's exertions has been pointed out.

The following are the eminent Ḥanbalite teachers in successive epochs: Abu'l-Ḳāsim 'Omar al-Kharaḳī (d. in 334 = 945-946), whose compendium of Ḥanbalite *fiḳh* is extant; 'Abd al-'Azīz b. Dja'far (282—363 = 895-896—973-974), whose *Muḳni'* has been for centuries the groundwork for compendiums and commentaries (printed: *al-Rawḍ al-murbi' fī sharḥ zād al-mustaḳni'*, Damascus, 1303; comp. *Mashriḳ*, iv. 879); Abu'l-Wafā' 'Alī b. 'Aḳīl (d. in 515 = 1121-1122), who was celebrated as head of a productive school; 'Abd al-Ḳādir al-Djīlī (471—561 = 1078—1166), who united central consideration as Ṣūfī with faithful adherence to Ibn Ḥanbal; Abu'l-Faradj b. al-Djawzī (508—597 = 1114-1115—1200); 'Abd al-Ghanī al-Djammā'īlī (d. in 600 = 1203-1204); Muwaffaḳ al-Dīn b. Ḳudāma (d. in 620 = 1223), who appended his much studied *Mughnī* as a commentary to Kharaḳī's compendium; the celebrated controversialists Taḳī al-Dīn b. Taimiya (see above) and his faithful pupil Muḥammed b. Ḳaiyim al-Djawziya (see above), both known for the harshness of their dogmatic course and their intolerant controversy against those who believe and think otherwise. From the works of the latter two Ḥanbalite teachers numerous writings were recently published in the printing houses of Cairo; they may serve as a manual of the scientific system of the Ḥanbalite school. Still in the 11th (17th) century some eminent Ḥanbalite scholars came from the little place Bahūt (district of Maḥallat al-Kubrā): 'Abd al-Raḥmān al-Bahūtī

(d. 1051 = 1641-1642) and his pupil Muḥammed al-Buhūtī (d. 1088 = 1677-1678); both lived and taught in Cairo. In the Azhar Mosque the *Nail al-ma'ārib* (a commentary on the *Dalīl al-ṭālib* of Mar'ī b. Yūsuf, otherwise known as epistolographer, d. in 1030 = 1621) of 'Abd al-Ḳādir b. 'Omar al-Dimishḳī (d. in 1135 = 1625-1626) — printed in Būlāḳ, 1288 — is taken as basis of Ḥanbalite instruction.

Abu'l-Faradj 'Abd al-Raḥmān b. Radjab (d. in 795 = 1392-1393) wrote *Ṭabaḳāt al-Ḥanābila*, which is extant in manuscript (see Vollers, *Kat. Leipzig*, Nº. 708). The literature of Ḥanbalite law is most copiously registered in the catalogue of the Cairo manuscripts, iii. 293—301. Comp. further W. M. Patton, *Aḥmed ibn Ḥanbal and the Miḥna* (Leyden, 1897) and in connection with it: Goldziher, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, lii. 155 *et seq.*; idem, *Zur Gesch. der ḥanbalit. Bewegungen* (*ibid.*, lxii); Brockelmann, *Gesch. d. arab. Litter.*, i. 181 *et seq.*

(GOLDZIHER.)

AḤMED B. MUḤAMMED ṬAIYĀN, the 36th direct descendant of Ḥasan, the son of 'Alī, was born at Bareilly on the 1st Muḥarram 1201 (24th October 1786). He was first educated at Lucknow, then he went to Dehlī, where he became in 1222 (1807) a disciple of the famous devotee Shāh 'Abd al-'Azīz, the eldest son of Shāh Walī Allāh. The latter is said to have inspired him with the peculiar religious views for which he became celebrated. After some years of instruction he started on a missionary tour as a religious teacher and reformer. His tenets were somewhat identical with those of the Arabian Wahhābīs in the adoption of a pure and simple form of worship, free from all superstitious innovations, or veneration for prophets and apostles. His chief disciples, and constant companions in his chequered career, were two relations of 'Abd al-'Azīz: Mawlawī Muḥammed Ismā'īl, his nephew (author of the *Ṣirāṭ al-mustaḳīm*, an important Hindustānī work on the tenets held by the followers of Saiyid Aḥmed), and Mawlawī 'Abd al-Ḥaiy, his son-in-law. His reputation spread far and wide, thousands of Muslims adopted his religious views, and he was everywhere hailed as the true Khalīfa, or al-Mahdī. One of his biographers, Mawlawī 'Abd al-Aḥad, asserts that more than 40000 Hindus and infidels became converts to Islām through his preaching.

In 1232 (1821) Saiyid Aḥmed set out from his native city on a pilgrimage to Mecca and Madina, staying a few months at Calcutta on the way. On his return to India two years afterwards in 1823 he made active preparations for a *djihād*, or religious war, in the Pandjāb, in order to rescue the Muḥammedans of that province from the alleged tyranny of the Sikhs. Having enlisted the sympathy and promised aid of his co-religionists at Kābul and Ḳandahār, he started on his expedition in 1241 (1826) with an army of ten or twelve thousand enthusiastic adherents, and attacked the Peshāwar frontier. After several years of constant warfare, with varied successes, a decisive battle was fought at Balakot in 1246 (1831), in which he was killed, and the remnant of his army took to flight.

(BLUMHARDT.)

AḤMED B. SAHL B. HĀSHIM, of the aristocratic Dihḳān family Kāmkāriyān (who had settled near Merw), which boasted of Sāsānian descent, governor of Khorāsān. In order to avenge the death of his brother, fallen in a fight between Persians and Arabs (in Merw), he had under 'Amr b. al-Laith stirred up a rising of the people. He was taken prisoner and brought to Sīstān, whence he escaped by means of an adventurous flight, and after a new attempt of a rising in Merw he fled for refuge to the Sāmānide Ismā'īl b. Aḥmed in Bukhārā. Aḥmed took an active part in the battles of Khorāsān and Rai under Ismā'īl, and in the conquest of Sīstān under Aḥmed b. Ismā'īl. Having been sent under the command of Naṣr b. Aḥmed against the rebellious governor of Khorāsān, Ḥusain b. 'Alī al-Merwrūdī, he defeated his antagonist in Rabī' I 306 (Aug.-Sept. 918). But shortly afterwards he rebelled himself against the Sāmānides, was vanquished on the Murghāb by the commander-in-chief Ḥamūya b. 'Alī and sent to Bukhārā, where he died in prison in Dhu'l-Ḥidjdja 307 (May-June 919).

Comp. Ibn al-Athīr (ed. Tornb., viii. 86 *et seq.*) and the same information in a somewhat more circumstantial wording in Gardīzī, *Zain al-akhbār* (extracts in Barthold, *Turkistān in the time of the Mongol invasion*, i. 6-7); evidently there is a common source, probably al-Sallāmī's *Ta'rīkh wulāt Khorāsān*.

(W. BARTHOLD.)

AḤMED B. SA'ĪD, founder of the dynasty which is still reigning in Maskat, died in 1775, or according to others in 1783. Aḥmed descended from an Azdite family which had a long time lived in 'Omān (Āl Bū Sa'īd), and during the occupation of that country by the then sultan Saif b. Sulṭān he was governor of Ṣoḥār. There he managed to stand his ground against the Persians, and afterwards he made with them a treaty, which entitled them to Maskat alone, and which obliged them to evacuate the country. Finally he took away from them that town also, whereupon he was elected Imām by the Ibāḍite population, but he had his residence in Rastāḳ. In 1756 he undertook a military expedition against Baṣra and put the Persians to flight: after that the Ottoman sultan paid him a fixed sum annually. He is said to have also made a treaty with the Great Moghul of Dehlī.

AḤMED B. ṬŪLŪN, founder of the dynasty of the Ṭūlūnides [q. v.], the first governor of Egypt and Syria who was only nominally dependent upon the caliph. The career of this Turk is typical — the founders of all the small states on the ruins of the Caliphate, crumbled to pieces, acted in the same way. — His father Ṭūlūn was brought in 200 (815-816) as a slave to the Court of Bagdad, but rose soon to an important position. Aḥmed is supposed to have been born on the 23d Ramaḍān 220 (20th September 835), but perhaps a little later, and he received a thorough military and theological education — theology he partly studied in Ṭarsūs. He had early the opportunity to distinguish himself, and acquired the favour of Caliph al-Musta'īn, over whom he had later to watch as a prisoner. He did not share in the caliph's assassination, on the contrary he gave him a pious burial and then

he returned to his Turkish countrymen in Samarrā. Shortly afterwards his stepfather Bāyakbāk, having been invested with the governorship of Egypt, appointed him his lieutenant, and Aḥmed entered Fusṭāṭ on the 23d Ramaḍān 254 (13th September 868).

Aḥmed's first endeavour there was to take into his hands the administration of the finances in addition to the military command. But Ibn Mudabbir, a clever and skilled financial director, notorious for his introduction of new imposts, endeavoured to thwart him. Both struggled for years for the administration, in Egypt personally and in Samarrā through their rear-rank men. Aḥmed showed himself the man as well as the stronger through his connections, and yet he had to struggle for four years before he succeeded in removing Ibn Mudabbir from Egypt. Thereupon he obtained the administration of the finances and with it the entire disposal of the Budget by introducing a regulated payment of tribute. Before that already a favourable hazard had enabled him to constitute an army in good fighting trim. In order to subdue a Syrian rebel — later another person was entrusted with it — the caliph had authorized him to make a gigantic purchase of slaves. These troops laid the foundation of his power. He managed to bring their number up to 100000. Thanks to his elaborate spying system he discovered in due time the intrigues plotted against him in Egypt and in the Court, and made them ineffectual by means of unscrupulous bribery and violent intervention. Thus when Alexandria, Barka and the districts on the Syrian-Egyptian frontier were also transferred to him, his power became towards the end of 258 (871-872) a factor, which had to be taken into account in Samarrā.

About the same time the central government became strong again, when Caliph al-Muʿtamid named his brother al-Muwaffaḳ vice-regent of the empire. It is true that al-Muwaffaḳ officially had only the eastern half of the empire under his control, while the western half, in which was Egypt, was under the rule of the caliph's son al-Mufawwaḍ, but when hard pressed by the Zindj war al-Muwaffaḳ endeavoured to mobilize also the finances of Egypt for his purpose. Aḥmed refused to pay, and an attempt to compel him to it failed on account of the pecuniary exhaustion of the central government. When the governor of Syria died in 264 (877-878), Aḥmed occupied the latter country without that the people dared to oppose him. Ramla, Damascus, Ḥimṣ (Emessa), Ḥamāt, Haleb (Aleppo), opened their gates before him, only Antioch rendered a siege necessary. The victor's joy was troubled by the news of the revolt of his son ʿAbbās, whom he had left in Egypt as his lieutenant. Aḥmed hastily returned to the Nile valley, where he soon became master of the revolt. Thus he became ruler of Syria and Egypt, and he appears as such on the coins from the year 266 (879-880).

The latent conflict with the vice-regent al-Muwaffaḳ was brought to a critical point by the defection of Luʾluʾ, a general of the Ṭūlūnides, who, having been left in Syria, went over to al-Muwaffaḳ. In order to counteract this Aḥmed insisted upon the caliph Muʿtamid, who was kept like a prisoner by his brother al-Muwaffaḳ, to flee for refuge to him in Egypt. He himself hurried to Syria, where, however, his union with the caliph was at the last moment hindered by the vice-regent. Aḥmed then assumed the rôle of defender of the captive caliph, and solemnly brought about in Damascus the deposition of al-Muwaffaḳ. This he carried out by a collective *fatwā* obtained from the jurisconsults who adhered to him. Yet he did not think of freeing the caliph by force of arms, he rather availed himself of the occurrence to remove the last remainder of submission to the central government. Al-Muwaffaḳ in his turn appointed a new governor of Syria and Egypt, who remained only „in partibus". Neither did al-Muwaffaḳ dare to apply to arms for a decision. Both joint rulers contented themselves with cursing each other from the pulpit in their respective countries. A few years later al-Muwaffaḳ made overtures of peace by officially recognizing the *status quo*. The negotiations were still in their beginning when Aḥmed, who had fallen sick in an expedition to North Syria, suddenly died (Dhu'l-Ḳaʿda 270 = May 884).

Aḥmed owed his career to his ability, his luck and his connections. In order to maintain his personal authority, the only thing he had in the beginning, he gave his State a rigid military organization. Turks and Negroes were his main support. To keep these troops in permanence was possible only by the increase of financial sources; therefore he chiefly cared for the administration and economy. The withdrawal of the money to Bagdad having ceased, he could freely spend the surplus of the imposts on his own country, and particularly on buildings and, what was very natural, he was able to make a display of splendour in his Court. Fusṭāṭ became a large and magnificent town, a new quarter, al-Ḳaṭāʾiʿ, grew up, the Ṭūlūnide Mosque and other splendid public buildings were erected. It is in this way that Aḥmed prepared the soil upon which the dynasty of the Ṭūlūnides flourished despite the enmity of the central government. This dynasty shows in all its expressions a manifest imitation of the forms that grew up in Bagdad and in Samarrā under Persian influence. With it a new period of culture began in Egypt [see EGYPT and ṬŪLŪNIDES].

AḤMED b. ZAINĪ DAḤLĀN. [See DAḤLĀN.]

AḤMED BĀBĀ'l-TIMBUKTĪ, Arab biographer belonging to a family of scholars that produced many ḳāḍīs. Abu'l-ʿAbbās Aḥmed Bābā b. Aḥmed b. Aḥmed b. Aḥmed b. ʿOmar b. Muḥammed Aḳīt b. ʿOmar b. ʿAlī b. Yaḥya'l-Takrūrī al-Ṣenhādjī al-Massūfī of Timbuktu was born in the village of Arawān in the night between Saturday and Sunday the 21st

Dhu'l-Ḥidjdja 960 (28th November 1553), or according to Muḥibbī and Wafrānī, 963 (26th October 1556) — but the former date was a Tuesday and the latter a Monday. — He studied Musulman science under his father, grandfather and several other members of his family, and his co-religionists considered him a great Mālikite jurisconsult.

Having refused to recognize the occupation of Timbuktu by the Moroccans, he was by order of General Maḥmūd Zarkūn put with his family in chains and conveyed to Marrākush, where he arrived on the 1st Ramaḍān 1002 (21st May 1594). He lost on that occasion more than 1600 volumes, and on the way he fell down from his camel and broke his leg. Sunday the 21st Ramaḍān 1004 (19th May 1596) he was set free on the condition that he would henceforth live in the capital of Morocco. There he devoted himself to teaching in the Djāmiʿ al-Shurafāʾ and his lessons were attended by a great number of people, among whom were al-Radjrādjī, the Muftī of Fez, the ḳāḍī Abu'l-Ḳāsim b. Abī'l-Nuʿaim al-Ghassānī, Abu'l-ʿAbbās Aḥmed b. al-Ḳāḍī, the author of the *Djadhwat al-iḳtibās*, etc. He was several times charged with the *fatwā*, which he held in abhorrence.

On the accession of Mūlāi Zaidān, he received in 1014 (1605-1606) for himself and his relatives that were still alive the permission to return to Timbuktu. He stayed there for the rest of his life devoting himself entirely to teaching law particularly.

„He was strictly just even towards the most humble men, and never was afraid to speak out what was right not even before emirs and sultans".

He died Thursday the 6th Shaʿbān 1036 (22d April 1627), or according to Muḥibbī, 1032 (6th June 1623), a date which seems to be erroneous.

He was the author of more than forty works, of which only the following are known: 1. *Nail al-ibtihādj bi-taṭrīz al-dībādj* (Fez, 1317). 2. *Kifāyat al-muḥtādj li-maʿrifat man laisa fi'l-dībādj*, a recast and abridged edition of the preceding work. 3. Two commentaries on Khalīl b. Isḥāḳ's *Mukhtaṣar* from the chapter on the *zakāt* till the middle of the chapter on marriage. 4. Glosses upon several passages of the above-mentioned *Mukhtaṣar*. 5. *Ḥāshiyat minan al-rabb al-djalīl fī muhimmāt taḥrīr Khalīl*. 6. *Fawāʾid al-nikāḥ ʿalā mukhtaṣar kitāb al-wiḳāya li'l-Suyūṭī*. 7. *Tanbīh al-wāḳif ʿalā taḥrīr wa-ḥuṣūl niyat al-ḥālif* (*Mukhtaṣar* of Khalīl, chapter on oaths, p. 69, l. 5 of the Paris edition of 1883). 8. *Tartīb djāmiʿ al-miʿyār li'l-Wansharīshī* (unfinished). 9. *al-Nukat al-wafiya bi-sharḥ al-alfiya li'bn Mālik* (unfinished). 10. *al-Nukat al-zakiya bi-sharḥ al-alfiya* (unfinished). 11. *Ghāyat al-idjāda fī musāwāt al-fāʿil li'l-mubtadaʾ fī sharṭ al-ifāda*. 12. *al-Nukat al-mustadjāda fī musāwātihimā fī sharṭ al-ifāda*, a new edition of the preceding work. 13. *Nail al-amal fī tafḍīl al-niya ʿala'l-ʿamal*. 14. *Sharḥ al-ṣughrā li'l-Sanūsī*. 15. *Mukhtaṣar tardjamat al-Sanūsī*, an abridgment of Muḥammed al-Mallālī al-Tilimsānī's *al-Mawāhib al-ḳuddūsiya fi 'l-manāḳib al-sanūsiya*. 16. *al-Maṭlab wa'l-maʾrab fī aʿẓam asmāʾ al-rabb*. 17. *al-Taḥadduth wa 'l-taʿallul fi 'l-ibtidāʾ li-'bn Idrīs*. 18. *Djalb al-niʿma wa-dafʿ al-niḳma bi-mudjānabat al-wulāt al-ẓalama*. 19. *Miʿrādj al-ṣuʿūd*, a treatise against slavery, written in Marrākush. 20. *al-Durr al-naḍīr*; 21. *Hamāʾil al-zahr*; 22. *Nashr al-ʿabīr*; the latter three works are collections of prayers for the Prophet. 23. A great number of questions about different subjects, three of which are found in the Bibliothèque Nationale d'Alger (Fagnan, *Catalogue*, N°. 532, 9°, 10°, 11°).

(MOHAMMED BEN CHENEB.)

AḤMED AL-BADAWĪ Ṣūfī, one who has for centuries been considered the greatest saint in Egypt, said to have been a descendant of ʿAlī. His forefathers are said to have emigrated to Fez about the year 73 (692) in consequence of the troubles in Arabia. Aḥmed was born at Fez in the *Zuḳāḳ al-Ḥadjar*, probably in the year 596 (1199-1200), and he seems to have been the youngest of seven or eight children. His mother was called Fāṭima; the position of his father is not mentioned. His full name was Aḥmed b. ʿAlī b. Ibrāhīm and his genealogy was traced up to ʿAlī, nay even to Maʿadd and ʿAdnān. He bore several surnames, of which some are explained in the sources and some are not. He was called al-Badawī because like the African Bedouins he wore the face-veil (*lithām*; for the double *lithām* see s. v.). Further in Mecca he was called al-ʿAṭṭāb „the intrepid horseman" (some sources did not understand this Maghrib expression); the same meaning underlies as it seems his name Abu'l-Fityān, although the sources do not say it. In Mecca he was also called al-Ghaḍbān, „the furious, raging one"; further Abu'l-ʿAbbās, which might come from Abu'l-Fityān by the *taṣḥīf* (miswriting). In his position as a Ṣūfī he was called al-Kudsī, al-Ḳuṭb („the pole") and the Silent, and in more recent times Abū Farrādj („liberator", namely of prisoners).

When still a child he set out with his family on a pilgrimage to Mecca, where they arrived after four years travelling. This is placed in the years 603—607 (1206—1211). Even his imposing reception by the Bedouins is spoken of, but Egypt is not mentioned. In Mecca his father died and was buried near the Bāb al-Maʿlāt. Having grown up a youth Aḥmed is said to have distinguished himself in Mecca as a daring horseman and a merry wild fellow, whence his above surnames al-ʿAṭṭāb and Abu'l-Fityān. Then about 627 (1230) he must have undergone an internal transformation. He read the Ḳorʾān according to all the seven *aḥruf* (readings) and studied a little Shāfiʿite law. He gave himself up to devotion (*al-ʿibāda*) and declined the offer of a marriage. In the Berlin MS. N°. 10104 (f° 19b) there is said about it as follows: „I have resolved not to marry any other woman than one of the maids of Paradise" (*min al-ḥūr al-ʿīn*; Ḳorʾān, lvi. 22). He retired from men, became taciturn, made himself

understood by signs only, and often fell into trances (*walah*). According to some authorities the journey to Mecca was undertaken after a vision, but others mention here three consecutive visions, which summoned Aḥmed (Shawwāl 633 = June-July 1236) to visit 'Irāḳ, where Aḥmed al-Rifā'ī (d. 570 = 1174-1175) and 'Abd al-Ḳādir al-Gīlānī (d. 561 = 1165-1166) had been worshipped as the greatest saints for two generations. Aḥmed emigrated thither in the company of his eldest brother Ḥasan. From that time onward the reports become very fabulous and vague. The brothers visited, besides the tombs of the two "poles" mentioned above, a great many other saints, amongst them being al-Ḥallādj (d. 309 = 921-922) and 'Adī b. Musāfir al-Hekkārī Abu 'l-Faḍā'il (d. 558 = 1162-1163). Under the impression of these visits Aḥmed's religious conscience enters on a new phase. Al-Rifā'ī and al-Gīlānī, the "owners of the keys of the countries" offer him a partnership in this possession. But Aḥmed refused the offer saying that he would accept the "keys of the countries" from none but God. In 'Irāḳ he subdued afterwards the indomitable Fāṭima bint Barrī, who had never yet surrendered to any man, and refused her offer to marry him. In the *Djawāhir* and elsewhere this incident has been turned into a highly romantic story. A year later (634 = 1236-1237) Aḥmed had another vision which induced him to visit Ṭandītā (Ṭanṭā, Ṭanṭā) in Egypt, where he stayed till his death. His brother Ḥasan returned from 'Irāḳ to Mecca. In Ṭandītā Aḥmed entered on the last and most important period of his life. His mode of life is described in the following way: "He climbed in Ṭandītā on to the roof of a private house, stood there motionless and looked up into the sun so that his eyes went red and sore and looked like two fiery cinders. Sometimes he would maintain a prolongued silence, at other times he would indulge in continuous screaming. He went without food or drink for about forty days". Traits of this and similar nature have evidently been borrowed from the lives of Indian ascetics (*yogī*). In Ṭandītā and its neighbourhood he met both with friends and adversaries. In his search of a cure for his sore eyes he came across 'Abd al-'Āl, who at that time was still a boy and afterwards became his confidant and *Khalīfa* (successor). He worked miracles and tokens (*karāmāt wa-khawāriḳ*), many of which are described at some length in the authorities. Those saints, who were still worshipped at the time of his arrival in Ṭandītā, found themselves eclipsed. Ḥasan al-Ikhnā'ī refuses to acknowledge him and leaves the place: Sālim al-Maghribī submits to him and is for that reason allowed to remain in Ṭandītā. Wadjh al-Ḳamar is cursed by Aḥmed and his abode is deserted and falls to ruin. His contemporary al-Malik al-Ẓāhir Baibars is said to have worshipped him and to have kissed his feet. His disciples were called *Saṭūḥiyya* or *Aṣḥāb al-Saṭḥ* from the habit of living on the roof. His appearance at this period is described as follows: He was tall, strong, and bony, his complexion *ḳamḥī* (the usual colour of the Northern Egyptian, whereas the Moroccan is of a darker hue as a rule); he had an aquiline nose (*aḳnā*), three pock-holes in his face, two moles on his nose and the scar of a knife-cut between the eyes. He wore a mantle (*ḥizām*) of red wool, which, along with his turban (*'imāma*), worn to rags without once having been washed, was handed on to his *Khalīfa* as the insignia of his succession. His oath was: *wa-'izzat Rabbī* = "by the Majesty of my Lord". He already seems to have felt conscious at the end of his life that he had subjected Egypt. That way I explain his words (Sha'rāwī i. 247, 24 *et seq.*): "My paddle-wheels revolve on the wide ocean; if the water of all the paddle-wheels in the world became used up, mine would still not be used up". In the night he used to read the Ḳor'ān; in his prayers he was joined by two imāms. Concerning his state of mind it is said: *ḥuḍūru-hu akthar min ghiyābihi*, "he was oftener in his senses than in a trance". After he had lived and worked in this way at Ṭanṭā during nearly 41 years, he died on the 12th of Rabī' I 675 (24 Aug. 1276), that is on the anniversary of the Prophet's death.

Judged by his conduct Aḥmed al-Badawī is a representative of the inferior, yogi-like type of the dervishes, and his intellectual and moral personality is of equally small importance. The following have been handed down to us as the productions of his mind:

1. A prayer (*ḥizb*), *Berlin Cat.* iii. 411, 3581.

2. *Ṣalawāt*, on which a commentary was written by the celebrated Ṣūfī of the 12th (= 18th) century 'Abd al-Raḥmān b. Muṣṭafā 'Aidarūs (1135—1192 = 1722—1778) under the title of *Fatḥ al-Raḥmān* (*Cairo Cat.* vii. 88).

3. His spiritual testament (*waṣāyā*), addressed principally to his first *Khalīfa* 'Abd al-'Āl. The sayings and admonitions it contains are of such a general nature, are so little individual and so exactly identical with the fundamental ideas of the Islamic asceticism of all times, and part of them even similar to those of the non-islamic asceticism and mysticism, that it is doubtful whether they can be considered as the spiritual production of Aḥmed al-Badawī, and whether they may be ascribed to his moral personality. First comes the admonition to adhere to the Ḳor'ān and the Sunna. Nightly devotion is highly praised. Every single *rak'a* by night is worth a thousand by day. The merit of the *dhikr* is very strongly commended; the heart must take part in it, else the *dhikr* would be nothing but mere bawling (*shaḳshaḳa*). The ultimate fruit of the *dhikr* is the *wadjd*, the love of God, which, a beam of divine light, enters the heart of the devotee while at his meditations on the unity of God, making him shudder all over. Then the longing for the Loved one (God) is born in him, and he clings to him firmly. Faith is of the highest value; he whose belief is strongest (firmest) is the most excellent (pious). His ethics or that of his followers may be gathered from the ensuing tenets: "Our way (*ṭarīḳa*) is built upon the Ḳor'ān and the Sunna, on veracity, purity, truth, patient endurance of injury and faithful observance of engagements once made". At another passage: "Do not indulge in cruel enjoyment, do not slander, do not inflict any harm on your neighbour, return him good for evil". The following words sound quite evangelical: "have compassion upon the orphans, clothe the naked, feed the hungry, pay due honour to the stranger and the guest, and perhaps God will have delight in thee". Also: "love of the world spoils a pious conduct, like vinegar spoils honey". The following words contain an allusion to the hierarchy of the

Ṣūfīs: „the superior (*s̲h̲aik̲h̲*) is amongst his people what the Prophet is amongst his community". The simple Ṣūfīs are here called *ḳawm*, whereas the people of the world are called *k̲h̲alḳ*. The usual name for the Ṣūfīs is *fuḳarā'* (the poor). The following remark, which is ascribed to Aḥmed, is not perfectly clear: "The poor are like olives, some are small and some are big; he in whom there is no oil, that one's oil am I". Different therefore from John 15.2.

After his death ʿAbd al-ʿĀl, who had known him since his boyhood and had lived with him for forty years, became his *K̲h̲alīfa* and the possessor of the Master's insignia: the red cowl, the veil and the red banner. He ordered a chapel to be built on Aḥmed's tomb, which in course of time developed into a large mosque. He seems to have kept his adherents under strict rule, arranged the ceremonies (*as̲h̲āʾir*) and died in 733 (1332-1333).

The celebration of Aḥmed's *mawlid* and the veneration of the saint abroad seems to have increased rapidly, though not without opposition, strife and reaction. The opponents were partly scholars, who were averse to all Ṣūfism, partly politicians who objected to the Ṣūfīs as rulers of the people. This may account for the fact that twice a *K̲h̲alīfa* of al-Badawī was murdered (Ibn Iyās ii. 61, 15 *et seq.*, iii. 78, 14). Amongst the scholars, who were at first hostile to Aḥmed, but afterwards believed in him, are mentioned Ibn Daḳīḳ al-ʿĪd (d. 702 = 1302-1303) and Ibn al-Labbān (d. 739 = 1338-1339). Already under the first *K̲h̲alīfas* one hears of quarrels between the followers of al-Badawī. In 850 (1446-1447) mention is made of the restoration of the *mawlid* which had sunk into neglect (Ibn Iyās ii. 30, 5). An ardent worshipper of Aḥmed was Sultan Ḳāʾit Bey, who visited his tomb in 888 (1483) and ordered the sanctuary to be enlarged (*ibidem* ii. 217, 7, 301, 24). In the processions of the Mameluke Sultans the *K̲h̲alīfa* of al-Badawī appeared at the side of the principal ecclesiastic dignitaries of the realm. Under the Ottoman rule the outward splendour of his cult seems to have diminished, because it annoyed the powerful orders of the Turks. But this political attitude could not prejudice his veneration amongst the Egyptians. He has been for a long time the greatest saint of Egypt and a deliverer from all troubles. The deliverance of moslem captives out of the hands of the Christians is supposed to have been one of his earliest achievements, to which he owes his name of *Mudjīb al-asārā min bilād al-naṣārā* (cp. above Abū Farrādj). No less than three *mawlids* are celebrated every year in Egypt in honour of him, the dates of which are noteworthy from the point of view of the history of religion. As a matter of fact the festivals have been arranged according to Coptic dates or (generally speaking) according to the solar year, to wit: the principal *mawlid* is in Misra (August); the middle one, also called *mawlid* of S̲h̲urunbulālī, is in Barmūde (March-April); and the least important one, also called *mawlid al-radjabī* or *laff al-ʿimāma* is in Amshīr (February). It is evidently a coincidence that the date of Aḥmed's death in 675 fell both on the *mawlid* of the Prophet, and in August of the solar year. It may of course be questioned whether the date of al-Badawī's death was not arrived at by deduction. Moreover other observations make it probable that the dates of the *mawālid* are founded on those on which the old Arabian vernal and autumnal feasts were celebrated. It is hardly possible to confute this supposition by arguing that the appellation *mawlid al-radjabī* must be explained as a derivation from the name of an obscure shaikh Radjab, and that the name of the middle *mawlid* originates in a definite historical occurrence (ʿAlī Mubārak 50, 15 *et seq.*). The small and the middle *mawlid* are essentially big fairs, whereas the principal *mawlid*, apart from its commercial importance, is a politico-religious celebration in the grandest style with offerings, prayers, vows, *d̲h̲ikrs* and sermons; it ends with the *rakbat* (or the *rukūb*) *al-k̲h̲alīfa*, i. e. the solemn procession of the *K̲h̲alīfa* with his retinue through the town of Ṭanṭā.

The followers of al-Badawī are called Aḥmedīya and are found all over Egypt and beyond. Their badge is the red turban. The Baiyūmīya, the S̲h̲innāwīya, the Awlād Nūḥ and the S̲h̲uʿaibīya are looked upon as branches (*furūʿ*) of this order.

For a long time Aḥmed has ranked as a *ḳuṭb*, in Egypt together with ʿAbd al-Ḳādir al-Gīlānī, Aḥmed al-Rifāʿī and Ibrāhīm al-Dasūḳī, in what is called the *ḳiṭāba*.

One of his greatest worshippers is ʿAbd al-Wahhāb al-S̲h̲aʿrāwī (d. 973 = 1565), whose family, like Aḥmed al-Badawī, came from the Maghrib, but had settled down in Egypt. Al-S̲h̲aʿrāwī called himself al-Aḥmedī after him (Vollers *Cat. Leipzig* N°. 353); he often went on a pilgrimage to his tomb, counted him amongst the greatest Ṣūfīs and conversed with him in visions. In the course of one of these apparitions al-S̲h̲aʿrāwī was called by Aḥmed the only light (of the Ṣūfīs), which was not yet extinct, designating him thereby as the most genuine holder of his doctrines; cp. *Revue Africaine* xiv. (1870), 229. It is one of those mysteries of religious life that a man like al-S̲h̲aʿrāwī could be caught in the spell of al-Badawī, who was both intellectually and morally everyway his inferior [cp. below.]

It is altogether impossible to account for the historical importance of Aḥmed al-Badawī by his individuality; it can only be explained by supposing that, both as a Ṣūfī and as a saint, he had become the point of crystallisation of many wants and tendencies of his own time and of those which came before and after him. In more than one point he has been transferred into mythical regions. I have already mentioned the probability of the dates of Aḥmed's *mawālid* being a remnant of the old Arabian festivals. For the present I feel inclined to believe that the abovementioned combat of Aḥmed with Fāṭima bint Barrī, which has not yet been explained, signifies something more than the mere taming of a Bedouin Amazone. It has already been noticed by Maspero, Ebers and Goldziher, that old Egyptian elements have got mixed with the cult of Aḥmed. In addition to the immoral features of his cult, which have been narrated by Goldziher, may be mentioned what al-S̲h̲aʿrāwī relates of his pilgrimage to the tomb of al-Badawī. Being one day at the tomb of the saint in the company of his newly married wife Fāṭima, whom he had not yet approached, he was summoned by the (dead) Aḥmed to deflower her before him at his tomb. The summons to this act and its ensuing execution are just as much in keeping with the cult

and the spirit of Aḥmed, as they are opposed to the character of al-Sha'rāwī, whose feelings were very delicate in matters of sex. I feel inclined to recognize a mythical trait of a solar nature in the tale of Aḥmed's double veil, which is related by al-Sha'rāwī and others. Being one day asked by 'Abd al-Madjīd, the disciple and afterwards the *Khalīfa* of Aḥmed, to lift his veil and show his face to him, Aḥmed warned him saying "*kull naẓra bi-radjul!*" = "each look costs a man's life". As 'Abd al-Madjīd insisted, the upper veil only was pulled aside by Aḥmed and the other sank immediately to the ground as if struck by lightning. Compare herewith what is told about Ibn Djalā of which form and meaning were already obscure to the old Arabs: Ṭabarī ii. 864, 866; *Kāmil* (ed. Wright) i. 128, 215; Ibn Ya'īsh p. 73; Baiḍāwī i. 399; *Archiv. f. Religionswissensch.* ix. (1906), p. 177, 183.

All over Egypt prayers are addressed to Aḥmed, and not only in Ṭanṭā feasts are celebrated to honour him, often in Cairo for instance by the Aḥmediya, and even in small villages, e. g. Berumbal ('Alī Mubārak ix. 37). It is more difficult to ascertain, whether the tombs and chapels which bear the name of al-Badawī have anything to do with him. Near Aswān amongst the *Turab al-ṣaḥāba* for instance I discovered a Saiyid al-Badawī. J. L. Burckhardt (*Syria* p. 166) mentions a saint of this name near Tripoli (Syria); there is another one near Ghazza (Goldziher, *Muh. Studien* ii. 328; *Zeitschr. d. Deutschen Palästina-Vereins* xi. 152, 158). The traditions concerning Aḥmed are quite reliable, though tinged with a legendary colouring. All the oldest authorities refer to an account of Aḥmed's brother Ḥasan, who still lived with him in Mecca and parted from him after the journey in 'Irāḳ. Aḥmed's importance in the 9th (15th) century can be concluded from the fact, that al-Maḳrīzī and Ibn Ḥadjar al-'Asḳalānī devoted biographical articles to him (cp. *Berlin Cat.* iii. 218, 3350; ix. 483, 10101)); also al-Suyūṭī (*Ḥusn al-muḥāḍara*, Cairo 1299, i. 299 *et seq.*). The account which al-Sha'rāwī gave of him in his *Ṭabaḳāt* was written with fervent piety (lithogr. Cairo 1299: i. 245—251).

In 1028 (1619) a certain 'Abd al-Ṣamad Zain al-Dīn, employed at the *maḳām* of the saint, wrote his *al-Djawāhir al-sunnīya* (*saniya*?) *fi 'l-karāmāt wa'l-nisba al-aḥmedīya*, in which he brought together everything on the subject which was worth knowing (Mss. in Gotha, Leipzig, Berlin, Paris etc.; printed and lithographed at Cairo 1305 etc.). He drew not only from the above mentioned sources, but from unknown authorities besides, e. g. Abu 'l-Su'ūd al-Wāsiṭī, Sirādj al-Dīn al-Ḥanbalī, Muḥammed al-Ḥanafī and the "genealogy" (*nisba*) of Yūnus (elsewhere Yūsuf) b. 'Abd Allāh, called Ezbek al-Ṣūfī. The anonymous *Nasab* of al-Badawī (127 fol.), mentioned in the *Cairo Catalogue* v. 167, may be the work of this Ezbek. 'Abd al-Ṣamad gives an account of Aḥmed's life and states his authorities; next comes a description of the homage of the novices and of the Khalīfas; at the mention of Aḥmed's death the elegies of his brothers and sisters are given; then he writes of the *mawlid*, his miracles, his *waṣīya*, and adds numerous *ḳaṣīdes* on him, arranged alphabetically, by Shihāb al-Alḳamī, Shams al-Bakrī, 'Abd al-'Azīz al-Dīrīnī (d. c. 690 = 1291), 'Abd al-Ḳādir al-Danūshārī and others; finally he treats of his followers and of the eight words of his first years after which he became *ṣammāt* (taciturn). Much less important is the work of 'Alī al-Ḥalabī (d. 1044 = 1634-1635) *al-Naṣīḥa al-'alawīya fi bayān ḥusn ṭarīḳat al-sāda al-aḥmedīya* (*Berlin Cat.* ix. 484, 10104). The author's principal aim is to praise asceticism and the *fuḳarā'* of Aḥmed. A London MS. (*Brit. Mus. Suppl.*, N°. 639) contains anonymous *manāḳib* of Aḥmed (27 fol.); cp. also *Berlin Cat.* ix. 466, 10064 (3 fol.).

The latest publication concerning Aḥmed is the one by Ḥasan Rāshid al-Mashhadī al-Khafādjī: *al-Nafaḥāt al-aḥmedīya wa'l-djawāhir al-ṣamadānīya* (Cairo 1321; 4to, 316 p.). Aḥmed is often treated of along with the other *aḳṭāb*, for instance by Muḥammed b. Ḥasan al-'Adjlūnī (c. 899 = 1494), cp. *Berlin Cat.* i. 60, 163; and by Aḥmed b. 'Othmān al-Sharnūbī (c. 950 = 1543), cp. *ibidem* iii. 226, 3371. A short poem on Aḥmed is found *ibidem* v. 29, 5432; vii. 197, 8115, 3 (of the year 1175). Later accounts, such as 'Alī Mubārak xiii. 48—51, borrow mostly from al-Sha'rāwī and 'Abd al-Ṣamad. Cp. also E. W. Lane, *Modern Egyptians*; Brockelmann, *Gesch. d. arab. Litter.* i. 450.

(K. VOLLERS.)

AḤMED BEY, bey of Tunis (1837—1855), succeeded his father Muṣṭafā, the ninth sovereign of the dynasty of the Ḥusainides. His government was notable for a persistent effort to endow Tunis with western institutions and to bring about the permeation of the country by the modern spirit. He therefore in 1841 prohibited the exportation of negroes and set free the slaves belonging to his own household. In 1846, at the instigation of France and England, he formally abolished slavery in the Regency and closed the Sūḳ al-Barka where slaves were offered for sale. He showed his tolerance by repealing the exceptional laws for the Jews. He also did his best to aid the development of education by allowing French nuns to open a school for girls at Tunis (1843) and by permitting a priest of the same nationality to start an educational institution for boys. French engineers were commissioned from 1841 till 1848 to make a map of the Regency.

But Aḥmed Bey was especially concerned about the organisation of military forces after the European fashion. At the very outset of his reign he decided on the formation of a regular army. Barracks were built, ten regiments of infantry, one of cavalry and four of artillery were recruited and drilled by French instructors. A polytechnical school was founded for the training of officers. But these attempts were not very successful. The soldiers, recruited from amongst the populace of the towns or the settled peasantry lacked military spirit and deserted; the officers were almost entirely ignorant; the equipment was so much neglected that during the Crimean war the Tunesian contingent had to be prevented from using their arms lest accidents should constantly be happening. Aḥmed also wanted a navy. An arsenal was built, a harbour dug at Porto Farina and a fleet of twelve ships was bought abroad; they even undertook to build a frigate in 1840. The tools however were so deficient, that this unique specimen of Tunesian naval architecture was not launched until 1853 and proved incapable of putting to sea. As for the harbour, it became un-

navigable with the alluvium of the Medjerda before it could be utilised.

Aḥmed's endeavours to have at his disposal an army and a navy of some importance can be accounted for by his desire to act in all circumstances as an independant sovereign. He was afraid of the covetousness of Turkey, which after having reestablished its dominion over Tripolis, aimed at bringing the Regency of Tunis again under its authority, with the more or less openly confessed support of England. In his policy against Turkey the bey was backed by France, which, having taken possession of Algiers, could not allow the Porte to regain its influence in Africa. When, therefore, a Turkish squadron appeared in the Tunesian sea in 1837 rear-admiral Gallois conducted a demonstration before Goletta, forcing the Ḳapūdān-Pas̲h̲a to retire. The Porte however made fresh attempts to establish its suzerainty over Tunis. In 1842 a representative of the Turkish government came to claim the payment of an annual tribute, but had to return without it. In 1846 the consul-general of Austria having presented himself with an "exequatur", granted by the Porte, was not received by the bey. And the latter finally succeeded in having his claims recognized. A *k̲h̲aṭṭ-i s̲h̲erīf* acknowledged the independence of Tunis. This act however referred to Aḥmed Bey only, and did not apply to his successors; it was none the less an official statement of a condition of things which had lasted really for more than a century.

Under all circumstances the bey had every reason to be pleased with the attitude of France. Hence the influence of that power remained preponderant in Tunis, in spite of the efforts of England, which, according to the very words of one of its diplomats, saw "more danger in the absorption of Tunis by the French than by the Turks". The duke of Montpensier, who came to Tunis in 1845, was received with great pomp. In the following year Aḥmed visited France. He crossed on a French ship, disembarked at Toulon on Nov. 8th 1846 and went to Paris. Wherever he passed he left a lasting impression of his courtesy and generosity, the press praised him as a liberal sovereign, and the public and the royal family gave him a hearty welcome. At the Tuileries he was treated as an independent sovereign. He had also intended to visit London, but he gave up the plan, because the British government insisted on his being presented to the Queen by the Turkish ambassador.

The Porte and Tunis however arrived at a better understanding after 1848, owing to the good services of the British consul-general, Sir Strafford Canning. In 1849 the governor of Sahel, Sīdī Muḥammed, was commissioned by the bey to take some presents to the sultan. In 1854, during the Crimean war, a Tunesian contingent of 8500 men went to join the Turkish troops. Aḥmed however had taken care to specify that his sole motive for sending them had been deference to the head of the faithful, and his personal friendship for ʿAbd al-Madjīd. The Tunesian soldiers however did not take part in the military operations. They were despatched to Batum, cheated out of their pay by the Ottoman authorities, and their ranks decimated by the cholera.

Aḥmed Bey died on May 30th 1855, leaving Tunis in an awkward position. His indisputable good qualities were joined with the worst faults of Oriental despots. His generosity bordered upon prodigality, his taste for pomp and ostentation drove him into expenses out of all proportion to the resources of the country. For instance he had sacrificed millions to the building of the Muḥammediya palace, a conglomeration of gigantic structures, at a distance of eleven miles from Tunis on the banks of the Sebk̲h̲a Sedjūmī, which were never completed and now are left in a dilapidated state. No less disastrous to the finances was his bounty to his favourites, Count Raffo, an adventurer from Genoa who had become his minister of foreign affairs, and especially Muṣṭafā K̲h̲aznadār, formerly a slave, who from 1837 till 1873 was the actual sovereign of Tunis. The exactions of the government were such that the people revolted several times. An insurrection, which broke out in the Ḳaṣba of Tunis in 1840, was only quelled with great difficulty. Another rebellion took place in 1842 in Goletta. The full weight of the fiscal charges was laid upon the populace of the towns and on the settled tribes, for it was not considered safe to exact either taxes or conscription from the mountain tribes. In fine, underneath a brilliant show the symptoms of a decadence were already visible, which became still more prominent under the successors of Aḥmed Bey. In many ways this prince is responsible for the fall of the Regency.

AḤMED BĪDJĀN. [See BĪDJĀN AḤMED.]

AḤMED DJALĀIR, the fourth sovereign of the dynasty of the Djalāirides (784—813 = 1382—1410) was the fourth son of Sultan Uwais. During the reign of his elder brother Ḥusain he became governor of Baṣra in 776 (1374-1375). In 784 (1382) he raised the banner of insurrection, took possession of the capital, Tibrīz, and had his brother executed. He was not however recognised as sovereign in all parts of the realm until after severe combats with his other brothers (786 = 1384). During the course of the following years he lost a considerable part of his territory to his enemies abroad; his capital, Tibrīz, was ravaged cruelly in Dhu'l-ḳaʿda 787 (Dec. 1385-January 1386) by Toḳtamish, and again by Tīmūr in the following year. After Tīmūr's departure it was occupied by the Turcomans under Ḳarā Muḥammed in 789 (1387). In 795 (1393) the next important town, Baghdād, was also taken by Tīmūr. His wives and his son ʿAlā' al-Dawla remained in the power of the conqueror; Aḥmed himself had to fly to Egypt, where he met with a friendly reception from Sultan Barḳūḳ (Ṣafar 796 = Dec. 1393-Jan. 1394). With Egyptian help he succeeded in that same year in returning to Baghdād, where he stood his ground for some years against both Tīmūr's generals and his own rebellious subjects, partly with the support of Ḳarā Yūsuf, prince of the Turcomans. Not until the end of 803 (July 1401) was Baghdād conquered again by Tīmūr. Aḥmed had already left the town and gone first to Syria, afterwards to Asia Minor, accompanied by Ḳarā Yūsuf. During the war between Tīmūr

and Bāyazīd he took his chance and reconquered Baghdād; but he had soon to give way to his former ally Ḳarā Yūsuf and seek refuge in Syria, whither the latter also fled after the capture of Baghdād by Tīmūr's grandson Abū Bekr. Both were imprisoned in Syria and not until 807 (1405), after Tīmūr's death, were they set free. Aḥmed succeeded in a short time (807-808 = 1405) in recovering his entire dominion; but in the course of the following years he was dislodged from Ādharbaidjān by Abū Bekr, who in his turn was supplanted by Ḳarā Yūsuf. On the 28th of Rabī' II 813 (30 Aug. 1410) Aḥmed was beaten by the latter and murdered on the following day. The authorities describe Aḥmed as a cruel, covetous and faithless despot, but at the same time as a brave warrior and a patron of scholars and poets. He himself is said to have written Arabic and Persian poetry and several works on music (cp. conc. these Dawlatshāh, ed. Browne, p. 300).

(W. BARTHOLD.)

AḤMED DJĀMĪ, Persian poet. Abū Naṣr Aḥmed b. Abū 'l-Ḥasan Nāmaḳī, surnamed Zhanda-pīl, Shaikh al-Islām, was born in the village of Nāmaḳ in Khorāsān in 441 (1049) and died in the month of Radjab 536 (March 1142). He adopted the religious life in his 22d year and is said to have converted 60000 persons to Islām. He was illiterate but composed various writings: four Ṣūfī tracts are named by Ethé; one *dīwān* is preserved in the British Museum and lithographed at Lucknow. Both the mother of the emperor Humāyūn, Māham Begam, and the mother of the emperor Akbar, Ḥamīda Bānū Begam, traced descent to him. So too did Bānū Āgha, the wife of Saiyid Shihāb al-Dīn Aḥmed Khān Nīshāpūrī, a kinswoman of Ḥamīda Bānū and in the intimate entourage of Akbar in his early days of sovereignty.

Aḥmed Djāmī was buried at Turbat-i Djām which stands half-way between Meshhed and Herāt. In 1544 Humāyūn circumambulated his tomb.

AḤMED DJAZZĀR. [See DJAZZĀR AḤMED.]

AḤMED DJEWDET PASHA, an eminent Turkish scholar and politician, was descended from a family known by the name of Halter-breakers, which, though originally from Ḳirḳ Ḳilise, had been settled in Loveč (south of Plevna) since the beginning of the 18th century. One of his ancestors fought against Peter the Great by the river Pruth, another one was Muftī. His father and grandfather had made a pilgrimage to Mecca. He was born in 1238 (1822-1823), and acquired the rudiments of the Islamic sciences in his native home. But soon he was attracted towards the intellectual centre of his nation, Constantinople (1255 = 1839-1840). With continuous application he became absorbed in the various branches of theology, philosophy, Arabian literature, mathematics, geology and astronomy, and obtained a thorough knowledge of Persian from the dervishes and the poet Fehmī. After an amazingly short study of only four years he passed the usual examination splendidly. He at once got a stipend and a post, and a short time afterwards he also obtained the certificate which enabled him to take a professorship in one of the mosques of the capital. The completion of the commentary to Sā'ib's *Dīwān* procured him an appointment as a member of the school-board at the Education Department and the post of director of the seminary for public middle schools.

Along with his patron Fu'ād he took part in the famous mission to Bucarest (1848) and after his return he wrote at Brussa, in collaboration with Fu'ād, the *Ottoman Rules*, the fundamental grammar of the Turkish language (German translation by Kellgren, Helsingfors 1855). After that he went, in the company of Fu'ād, for a short time to Egypt. In 1270 (1853-54), at the time of the Crimean war, he got a commission from Sultan 'Abd al-Madjīd to write a popular history of Turkey from the peace of Küčük Ḳainardje till the destruction of the Janizaries (1774—1826), and already in the following year he was able to present to his sovereign the three first volumes, brilliant with youthful freshness. He was rewarded by being appointed Historian to the Empire. As a result of his work on the practice of the Mohammedan law (*Mu'āmalāt*), which two years later appeared under the title of *The fixed text* and was received with loud approbation, the government appointed him a member of the learned council, which at that time was engaged in codifying the civil law, and also made him president of the committee for the state-domains. In the course of his splendid career he quickly attained by degrees to higher posts, amongst which may be especially mentioned the office of Vizier, for which he gave up his title of Historian to the Empire (1281 = 1864-1865), and in 1284 the presidency of the committee for the redaction of the civil law code, which committee set to work with great energy, as soon became evident. He was consecutively Wālī of Aleppo, Brussa, Mar'ash and Janina, and afterwards twice Wālī of Syria. Three times he was Minister of Education, twice Minister of Justice, once Minister of the Interior and of Trade, and also Vice-president of the Privy Council. He was at his best as Minister of Education; he instilled a more modern spirit into the public schools.

After his retirement from office he spent his long evening of life in the full possession of physical vigour, devoting his time with unabated passion to his reading. His modesty never forsook him. He is shown to have been a devoted father by the literary productions of his sons and daughters. He passed away, after a short illness, in the night between the 24th and 25th of May 1895, at his country-seat at Bebek on the Bosphorus.

Besides his *Ottoman Rules* which continue to be published in constantly improved editions, both in their original form and epitomized, are two other philological works of his deserving of praise: *Mi'yār-i sadād* and *Adāb-i sadād*, introductions to literary style. He read and spoke Arabic and Persian like his mother tongue; he had also mastered French and Bulgarian. Not many of his poems are extant. They are simple and, though without faults, are more a display of skill than an outpouring of poetical inspiration.

The great juridical work of his epoch: the civil law code of Turkey, was completed during his second term of office of Minister of Justice (1293-1294 = 1876-1877) and appeared in print.

Aḥmed Djewdet was greatest as an historian.

At the time, when his praise was in everybody's mouth, about the close of ʿAbd al-ʿAzīz' reign, he delighted the Turkish nation with one of the most valuable ornaments of Oriental literature, the *Prophet's Tales and Caliph-stories*, which continue as far as the assassination of ʿOthmān, Muhammed's son-in-law. Anyone who nowadays, even in the remotest districts, ventures into the dominion of national literature, is sure to start from this book. But the work, which ensures to his name a lasting place in the literature of the world, is the Turkish History (*Waḳāʾiʿ-i dawlat-i ʿalīya*, from 1188 till 1241 = 1774—1825), in twelve volumes. The first edition was printed in Constantinople 1271—1301; which was followed by several others, the latest of which appeared in a politically revised form.

Aḥmed Djewdet did not draw his material exclusively from the archives, but often also from his predecessors in the office of Historian to the Empire: first of all Wāṣif, next such as Enwerī, Edīb, Nūrī, Pertew, ʿĀṣim, Shānīzāde and Esʿad; he also fell back sometimes on the great Arabian historian Djabartī and others. It is an astonishing fact that he, though writing of an epoch, in which France ruled over half Europe, never once consulted any of the famous French authorities, with the sole exception of Napoleon's reminiscences written at St-Helena. He has remodelled the works of his predecessors in such an independent spirit, that the narrative, which bears the stamp of genius, is the entire production of his mind. During the life of ʿAbd al-Madjīd and ʿAbd al-ʿAzīz he also descended into the vaults of the state-archives, but evidently not for the three last volumes. The concatenation of the events is chronological as a rule, though wars and domestic occurrences are with proper tact not thrown into a pell-mell for the sake of chronological order. His style, though not florid, resembles in the first five volumes the manner of the ancient historians with its splendour of rhetorical expression; but at the beginning of his sixth volume he suddenly abandons it and passes on to the simpler mode of speech which meantime had come into fashion. On the whole he is certainly reliable. In a rapid survey over the past centuries mention is made of unimportant events as though they were brilliant conquests and decisive victories, whereas the crushing defeats which brought about the loss of the whole of Hungary are passed by in silence; but such cases of veiling are rare and may moreover be excused with a reference to the example of Tacitus.

Aḥmed Djewdet was fully convinced of the educational value of historical study. He warns his countrymen continually against the gangrene of Oriental administration; he gives his attention to every slightest semblance of progress and in splendid apostrophes summons all to collaborate towards the renaissance of their native country. Especially the first five volumes abound in grand reflections. Nothing annoys him more than the sudden stoppage from sheer laziness to the working of a mine, which had been conducted successfully for centuries. Victories of science cannot be praised with greater enthusiasm than they are by him. With patriotic pathos he commends conquests of civilisation, made by his own country, such as the separation of civil and military authority, which was carried through in the 19th century, centralisation of administration, and the regulation of the coinage by the state. In foreign politics nothing affected him so deeply as an alliance with Austria against Russia. Turkey and Austria (both half-Slavonic countries) would only be able to oppose the torrent of the pan-Slavic idea, which came from Russia, if they were allies and not rivals.

Besides the above-mentioned works of Djewdet Pasha are also noteworthy: *Bayān al-ʿunwān*, *Maʿlūmāt-i nāfiʿa*, *Taḳwīm al-adwār* and the conclusion of the Turkish translation of Ibn Khaldūn's History.

Bibliography: Djamāl al-Dīn and Aḥmed Djewdet, *ʿOthmānli taʾrīkh we-muʾerrikhleri* (Constantinople 1314); Ismāʿīl Ḥaḳḳī, *Turkish authors of the 14th century* (Constantinople 1308) 3rd number; Djurdjī Zaidān, *Mashāhīr al-sharḳ* ii. 153 *et seq.* (K. SÜSSHEIM.)

AḤMED FĀRIS AL-SHIDYĀḲ. [See FĀRIS AL-SHIDYĀḲ.]

AḤMED ḤIKMET is one of the modern Turkish novelists. He is also called Muftīzāde after his grandfather who was Muftī in Tripolitza at the time when that city was the capital of the Peloponnesus. He was born in 1870. After he had left the Lyceum of Galata Serāi in Constantinople, he started on a journalistic career, became later Vice-consul in the Piraeus and in the Caucasus, and is at present Professor of Literature at the above mentioned Lyceum and the head of the Consulate department at the Foreign Office. A collection of his best sketches and novels, which originally appeared in periodicals, especially in the *Iḳdām* and the *Therwet-i funūn*, was published under the title of *Khāristān we-gulistān* (Thorn-garden and Rose-garden) Stambul 1317 (1899-1900). Three of those tales have been translated into German by Fr. Schrader, and published under the title of "Türkische Frauen" in the *Türkische Bibliothek* edited by Prof. Jacob (vol. vii Berlin 1907). Aḥmed Ḥikmet is one of the most important representatives of the modern movement, which advocates the idea, that the regeneration of Turkey is only possible on a national basis and cannot be attained by a blind imitation of Western civilisation. His writings, which are often seasoned with a fine humour, prove him to be an excellent observer and a skilful stylist.

Bibliography: *Türkische Bibliothek* edited by G. Jacob vol. vii (Berlin 1907), *Introduction* (by Fr. Schrader). (F. GIESE.)

AḤMED IḤSĀN, an Ottoman author, is one of the few standard-bearers of the present literary movement in Turkey. He is the son of a subordinate employé at the Finance-Department, and was born in Constantinople on the 24th of Dhu'l-Ḥidjdja 1285 (7 April 1869). He was only seventeen when he passed his final examination at the school of administration. Shortly after his appointment as Interpreter to the Commander-in-Chief of the artillery, he was seized with an irresistible longing for an independent position and entered on a journalistic career, not without fierce opposition from his own family. Like every one else, belonging to the literary world of young Turkey, he got his schooling from Aḥmed Midḥat. At the age of eighteen he founded the fortnightly paper *ʿUmrān*, which was but shortlived (1303-1304 = 1885—1887). At the same time he began his principal work: the translation of great French novelists such as Jules Verne, Alphonse Daudet, Bourget, Octave Feuillet and others, making there-

by the most refined works of fiction of West-European literature accessible to Oriental circles, which had been hitherto scarcely accustomed either to any kind of reading or to the Western conception of life. The translations made by Aḥmed Iḥsān number at present about fifty, amongst them 24 works by Jules Verne alone.

With the intention of giving his countrymen a modern and illustrated magazine instead of the old-fashioned periodicals which had appeared until then, he founded in 1307 (1891) the *Therwet-i Funūn* and immediately afterwards went on a tour through Europe, for which he had been longing since his childhood, in order to become better acquainted with the management of European reviews and their printing-offices. In three months, crammed with work, he travelled through the whole of continental Europe, with the exception of Spain, Scandinavia and Russia. His experiences were described in an exceptionally charming manner in a big illustrated volume, which went through a second edition in the same year 1891, and was very soon out of print.

The young review profited indeed by his travels; its first year may be favourably compared with any European family-magazine. Striking pictures of the great men of the day such as Gladstone, Renan, Crispi appear on its pages. The Ottoman affairs occupy only a modest, almost too modest place; one feels in the midst of universal activity. The magazine became a centre of the Turkish intellectual movement and is indispensable for the study of the somewhat peculiar development of modern Turkish literature. All the younger talents appear amongst his collaborators: Ekrem Bey (*Passion in the Carriage*), Khālid Ḍiyā' (*Forbidden Love*, *Blue and Black*), Aḥmed Ḳāsim and particularly Nābī-Zāde Nāẓim (d. 1896), who made the most brilliant hit with his *Sin of neglect*. The Chicago international exhibition of 1893 brought Aḥmed Iḥsān's civilising activity into prominence, and the Turkish Government followed this praiseworthy example. But soon afterwards another tendency gained the upper hand in Constantinople, which caused a fatal change of collaborators. Tawfīḳ Fikret however joined the staff, a genius possessing a noble flight of thought, which seemed capable of attaining the highest summits; and also Ijanāb Shihāb al-Dīn, a poet with a graceful and bright imagination, such as any nation could be proud of. But in 1900 the police interfered, because of an alleged revolutionary article. After the case had been on trial for seven weeks, the prosecution was withdrawn; the existence of the review was safe, but the staff resigned, and Aḥmed had to trust to his own powers. This is the third stage in the existence of the periodical.

Iḥsān's original literary production is less important than might be expected of his talent. He complains repeatedly of certain national circumstances. They form the main topic of two short but well sustained novels: *Khāṭmar* (*Therwet-i Funūn* 1308) and *Ulfat* (1309). The rest of his writings are mostly sketches: *Tragedy* and *Criminals* (1308, both originally written for the stage), *Women and Secrets* (1308), *Postman* (1308), and a European subject: *The Wager* (1308). Outside the dominion of literature lie his *New System of Photography* (1306) and his clear and able *National Economy* (1309). (K. SUSSHEIM.)

AḤMED KHĀN, the son of Saiyid Muḥammed Muttaḳī Khān, was born at Dehli, the 17th October, 1817. His ancestors came from Arabia to Herāt, and thence to India during the reign of Akbar Shāh. When Saiyid Aḥmed was 19 years of age, his father died, and the year following (1837) he entered the service of the British Government as record-keeper in the Criminal Department at Dehli. In 1841 he was appointed *Munṣif*, or Subordinate Judge, at Fatehpur Sīkrī in the District of Āgra. During the mutiny of 1857 he was *Munṣif* at Bijnaur, and saved the lives of the European residents by sending them safely to Meerut. For his unswerving loyalty to the British Government, and his conspicuous courage, he was rewarded by the grant of a pension, and subsequently by the title of a Companion of the Star of India. When 52 years of age (1869) he visited England, taking his two sons with him in order to give them the advantages of a Western education. He took the greatest interest in the welfare and education of his co-religionists, and, on his return to India, he founded a college at Ghāzīpur. Subsequently, on his transfer to Aligarh, he founded a Literary and Scientific Society, and finally succeeded in inaugurating the Muḥammedan Anglo-Oriental College at Aligarh, despite much opposition from many who regarded the introduction of a system of Western education as being subversive of the orthodox faith of Islām. The college was opened in May 1875, and the foundation-stone of the present college building was laid by Lord Lytton in January 1877. An account of this institution is given by the late Theodore Beck, formerly principal of the college, in an appendix to Lieut.-Colonel G. Graham's *Life and work of Syed Aḥmed Khan* (London, 1885). He retired from service in 1876, became a Member of the Legislative Council from 1878 to 1882, and was made a Knight Commander of the Star of India in 1888. The rest of his life, till his death in 1898, was devoted to literary pursuits, and to the advancement of the interests of the college.

Saiyid Aḥmed's most important work is the *Āthār al-ṣanādīd*, an archaeological history of Dehli, written in 1847 (2d ed. 1854), which has been translated into French by Garcin de Tassy (Paris, 1861). He has also written a Hindustānī treatise on the causes of the Indian revolt, which was translated into English in 1873; also commentaries on the Bible, and on the Ḳor'ān, and a great many essays and lectures on social, religious, educational, and political topics, including a series of essays on the life of Muḥammed. His letters written during his journey to Europe were published in the *Aligarh Institute Gazette*, a translation from which is given in Graham's biography of this notable Muḥammedan reformer. (BLUMHARDT.)

AḤMED KÖPRÜLÜ. [See KÖPRÜLÜ.]

AḤMED MIDḤAT is the most important author of modern Turkey. He was born in 1841 of humble origin. He received a good education, but as a young man he came in touch with the young Turks and, at about the same time as Nāmiḳ Kemāl Bey, who was his elder by four years, he was banished, a rather common punishment under the reign of ʿAbd al-ʿAzīz. His travelling-years in Europe became a very important time of apprenticeship for Aḥmed; he learns to discern that the

young Turkish party was completely wrong in mingling literary and political tendencies; and that the emancipation of Turkey would only be possible, if the national education was raised and the present Government was left intact. After 'Abd al-Ḥamīd's accession to the throne he was pardoned, allowed to return and admitted into the civil service. Owing to his good knowledge of French and his untiring activity he was quickly promoted. His literary merits brought him into personal contact with the sultan, who soon learnt to appreciate this loyal and energetic rouser of the Ottoman national spirit. Aḥmed Midḥat became an enthusiastic champion for the policy of 'Abd al-Ḥamīd, which he supported in the papers *Ittiḥād* (Union) and *Terdjumān-i ḥaḳīḳat* (Interpreter of Truth), both founded by him; and the sultan was not deficient in acknowledging his merits as a journalist and an author. In 1905 he was appointed President of the international Board of Health, and honoured with the title of Excellency and with the Grand Cross of the 'Othmānīya order, besides other high distinctions. In addition to his state-salary the sultan has awarded him an exceptional poet's pension. Aḥmed lives in domestic happiness, and he is the idol of the younger Turkish writers, whom he befriends and advises like a father. One of the most important amongst them, Mu'allim Aḥmed Nādjī, who died in 1893, was his son-in-law.

Aḥmed Midḥat's literary programme is twofold. First of all he advocates the preservation of the pure Ottoman character of the written language, like Shināsī had done before him; but in the second place it is his aim, remote though it may be, to secure for his countrymen the means of acquiring a general education. That is the reason why, besides his purely literary work, Aḥmed Midḥat has written on any subject which seemed worth knowing in every branch of knowledge, history, science etc. These treatises, extracts and compilations were mostly taken from French sources, but always with great skill and in a clear and popular manner. As a journalist he has treated of social, philosophical and economic problems, often with surprising ingenuity, and always in a considerate and conscientious way. All along he has been striving for the adaptation of European knowledge to the Islamic frame of mind, withholding every element which is incompatible with pure Mohammedan feelings. If at the present day one can speak of an Ottoman civilisation, Aḥmed Midḥat's Herculean task must be preeminently thanked for it.

His main importance however is founded on his work in the dominion of literature. Here also he has developed the same immense fertility, the same astonishing ease of production; he invents and shapes with equal rapidity. Amongst European authors Honoré de Balzac is the only one who in this respect can be compared to him. Aḥmed Midḥat has hit on the extremely fortunate idea of introducing the colloquial speech of the *Meddāḥs* (the public narrators) into higher literature by using it in his novels. The apostrophe to the audience in the form of questions for instance, which is so common with them, as a means of enhancing the attention, is also very often found in Aḥmed Midḥat's works. Many of the younger writers have tried to imitate this attractive chatty style, but with little success.

A list of his novels and tales alone would fill a good-sized catalogue. Only a few of the most important need be mentioned here: *Ḥasan-i mallāḥ* (The sailor Ḥasan), an imitation of Dumas' *Comte de Monte Cristo*, which was followed by its companion-subject *Ḥusain-i fallāḥ* (The peasant Ḥusain); *Yer yüzünde melek* (An angel on earth), a book which at first gave offence by its unusually free ideas.

Aḥmed Midḥat's charming gifts as a narrator show to still better advantage in his short tales. He has collected them in a considerable row of volumes under the general title of *Leṭā'if-i riwāyāt* (Entertaining stories). Horn in his *Geschichte der türkischen Moderne* has given an extract of the contents of the 25 first volumes, and E. S(eidel) has published an excellent translation of three of them (*The Glutton; Marriage; Youth*) under the title of *Türkisches High Life* (Leipzig 1898).

Aḥmed Midḥat's activity has also extended to the drama, but here he has little to show compared with the mass of his other works. He has written both tragedies and comedies, and especially the latter, amongst them *Aiyḳ-başh* (Bare-head) and *Čengi* (The dancer), met with great success. He himself has also written the music to *Čengi* and a few others.

As a teacher and guide of the younger Turkish generation Aḥmed Midḥat is partly responsible for the fact, that the intellectual life of modern Turkey, with its tendencies towards European civilisation, has sought its nourishment exclusively in France and French literature. But the simple and straightforward Ottoman has nothing whatever in common with the character of the French nation, and one day this unnatural mingling of the Ottoman and French spirit will avenge itself. Only by adhering to what is national can the Ottoman literature be endowed with lasting life, and it remains the principal merit of Aḥmed Midḥat that he has pointed out that right and only way.

Bibliography: Charles d'Agostino, *La littérature turque contemporaine*, in the *Revue encyclopédique Larousse* (Paris, September 1895); Paul Horn, *Geschichte der türkischen Moderne* (Leipzig 1902). (J. OESTRUP.)

AḤMED PASHA, son of the ḳāḍī 'askar Walī al-Dīn, Ottoman poet of the time of Sulṭān Muḥammed II, was at first professor at the madrasa of Sulṭān Murād II in Brussa, ḳāḍī of Adrianople, afterwards tutor of the princes, and Vizier. He composed 33 ghazals, imitated from those of Mīr 'Alī Shēr Newāyī. He died in 902 (1496) and was buried at Brussa, near the mosque which he had founded and whence he had been banished because of an immoral adventure. Sulṭān Bāyazīd II had commissioned him with the administration of that sandjaḳ. He was the first Ottoman lyrical poet; his works introduce the period of the elegant style of compositions; he is the veritable creator of the poetical language of Ottoman Turkish.

AḤMED PASHA, Ottoman general of Sulṭān Sulaimān's time, took part in the wars against Hungary as Beilerbei of Rumelia. He took the town of Sabacz by storm (2 Sha'bān 927 =

8 July 1521), commanded a division of the army which was charged with the siege of Rhodos, was afterwards appointed commander-in-chief, reduced the besieged to ultimate extremity and obliged them to capitulate (2 Ṣafar 929 = 21 Dec. 1522). Being of a violent and ambitious character he had hoped to be appointed Grand Vizier; but when he did not get this post he asked for the Government of Egypt, which was granted to him. He aspired to becoming an independent monarch, gained the Mamelukes for his cause, subdued the Janizaries garrisoned in the citadel of Cairo, usurped the title of Sultan, and caused the *khuṭba* to be said and money coined in his name (January 1524). But he was betrayed by his confidant Muḥammed Beg, who in the Sultan's name caused the Shaikh Kharidj of the Banū Bekr to give Aḥmed Pasha up to him. His head was sent to Constantinople.

Bibliography: Hammer-Purgstall, *Gesch. des Osman. Reiches*, cp. Index; v. Pečewī i. 71—79; Jouannin and van Gaver, *Turquie*, pp. 123—126. (CL. HUART.)

AḤMED PASHA, second Vizier of Sultan Sulaimān, of Albanese origin, was appointed in 959 (1552) commander-in-chief of the expedition into Hungary, instead of Muḥammed Sokolli. He forced Temesvar to surrender, took Szolnok, and besieged Erlau (Eger), but without success. He was appointed Grand Vizier during the Persian campaign; but during the Sultan's audience on 12 Dhu'l-Ḳa'da 962 (= 28 Sept. 1555) his head was cut off, on the pretext of his intrigues in connection with the administration of Egypt; but really because the favourite Sultana wished to see her son-in-law Rostem Pasha called to the post that Aḥmed Pasha occupied. He left several charitable institutions, amongst them a mosque near Ṭop Ḳapū.

Bibliography: Hammer-Purgstall, *Gesch. des Osman. Reiches*, cp. Index; Jouannin and van Gaver, *Turquie* pp. 145—148; *Gulshen-i ma'ārif* i. 556; Pečewī i. 24, 274, 291, 334. (CL. HUART.)

AḤMED PASHA, nicknamed Gedik, Gedik (Gap-tooth), Ottoman politician and general, rose from a common Janizary to the posts of Beilerbei and Vizier. He was commissioned by Sultan Muḥammed II to subject 'Alāyā, which was still ruled by the last surviving descendant of the Seldjūḳides of Rūm, called Ḳizil Arslān. He obtained the surrender of the place (875 = 1470); after the defeat of Uzūn Ḥasan at Terdjān (16 Rabī' I 877 = 21 August 1472) he subjected Karamania and Cilicia; after a fruitless attempt to make Pīr Aḥmed his captive by treason, he drove him to committing suicide. After the death of prince Muṣṭafā and the execution of the Grand Vizier Maḥmūd Pasha, he became the latter's successor, and in that quality conducted the Crimean war, which caused to the Genoese the loss of Kaffa (4 June 1475) and Azow. Because he opposed the Albanesian campaign, he was dismissed and imprisoned at Rūmili Ḥiṣār; but the intervention of Mīr 'Ālam Hersek-zāde brought him again into favour, and he was entrusted with the command of the fleet of 29 galleys, which occupied Ste Maure and Zante. He landed on the Italian coast and ravaged Otrante (11 August 1480). After the accession of Bāyazīd II he went to join him shortly before the battle of Yeni-Shehir (25 Rabī' II 886 = 23 June 1481). He was commanded to persecute the fugitive prince Djem, got out of favour and was only saved by the Grand Vizier Isḥāḳ Pasha, who procured him the order to persecute Ḳāsim Beg in Karamania. He was assassinated at the command of the Sultan, who had not forgotten the reproaches which, it is said, he had been obliged to endure in the midst of a grand festivity (6 Shawwāl 887 = 18 Nov. 1482) on account of the bad conduct of his troops. Being of a proud and inflexible character, Aḥmed Pasha had openly disapproved of various political measures which Bāyazīd had taken, such as the peace with Venice and the negotiations with the knights of Rhodos concerning Prince Djem.

AḤMED PASHA. [See BONNEVAL.]

AḤMED PASHA B. ḤASAN PASHA, surnamed the conqueror of Hamadhān, succeeded his father in the government of the provinces of Bagdad, Baṣra and Mārdīn; he recaptured Kirmānshāhān and Ardelān (1144 = 1731) from the Persians. Taking advantage of the Turkish victory at Ḳoridjān, he concluded a treaty, according to which the Araxes should be the frontier between the two realms, but Tibrīz was restored to the Persians. He defended Bagdad against the attempts of Nādir Shāh (1145 = 1733), was commissioned to continue the negotiations of peace with the conqueror, not without incurring the suspicion of tampering with Nādir, and was appointed Ser'askier (1157 = 1744). He died in 1160 (1747) during a campaign against the Curds, after he had twice governed Bagdad, first for a period of eleven and the second time for twelve years.

AḤMED RĀSIM. [See RĀSIM.]

AḤMED RESMĪ. [See RESMĪ.]

AḤMED SHĀH is the name of various Muḥammedan monarchs in India. The most notable are:

1. AḤMED SHĀH BAHĀDUR MUDJĀHID AL-DĪN ABŪ NAṢR, son and successor of Muḥammed Shāh, Grand Mogul of Delhi. He was born in 1138 (1725) and came to the throne in 1161 (1748). The actual ruler during his reign was Ṣafdar Djang, Nawāb of Oudh, who also was appointed Vizier of the new Emperor. In order to check the Rohīlas he called upon the Mahrattas for help, which resulted in their plundering the provinces of his realm, while the Afghāns devastated the Pandjāb. Aḥmed Shāh himself was quite an incapable ruler and lived for pleasure. So after the dismissal of the Vizier Ṣafdar Djang his reign soon came to an end, another Vizier, 'Imād al-Mulk Ghāzī 'l-Dīn Khān caused him to be declared unworthy to govern, had him put into prison and his eyes put out (1167 = 1754). Aḥmed Shāh died in 1189 (1775).

2. AḤMED SHĀH I B. DĀWŪD SHĀH, a Bahmanide,

reigned from 825 till 838 (1422—1435) in Dekhan and removed his residence to Bīdār (q. v., cp. BAHMANIDES].

3. AḤMED SHĀH II, son and successor of the preceding, reigned from 836 till 862 (1435—1457). In the list of the Bahmanides he is often mentioned by his surname 'Alā' al-Dīn. He subjected the Konkan and conducted successful wars against the Princes of Khāndēsh and Gudjarāt [cp. BAHMANIDES].

4. AḤMED SHĀH III B. MAḤMŪD SHĀH II, who reigned in name only from 924 till 927 (1518—1521). [cp. BAHMANIDES.]

5. AḤMED SHĀH B. MUḤAMMED SHĀH SHAMS AL-DĪN, Prince of Bengal (835—846 = 1431—1442) [cp. KĀLIKĀ KANS].

6. AḤMED SHĀH I B. TĀTĀR KHĀN, succeeded his grandfather Muẓaffar Shāh 814 (1411) on the the throne of Gudjarāt, and reigned till 846 (1443). He removed his residence to the town of Aḥmedābād, which he had founded.

7. AḤMED SHĀH II, also Prince of Gudjarāt, reigned from 961 till 969 (1553—1561).

8. AḤMED SHĀH, or, as he is generally called, Aḥmed Niẓām-Shāh, founded the dynasty of the Niẓām-Shāhs. He was the son of Niẓām al-Mulk Baḥrī, the Vizier of the Bahmanide Maḥmūd Shāh. After the assassination of his father he usurped his title and dignity, put to flight the troops, which the Bahmanide had despatched against him (895 = 1490) and founded an independent reign in the new-built town of Aḥmednagar. Aḥmed Niẓām-Shāh died in 914 (1508) [cp. NIẒĀM-SHĀHS].

AḤMED SHĀH DURRĀNĪ, founder of an Afghān dynasty. Aḥmed Khān (he was so called previously, the title Shāh he took later only) was son of Muḥammed Zamān Khān, Sadōzai, a chief of the Abdālīs who had settled in the neighborhood of Herāt in the time of Shāh 'Abbās I. The family was recognized as the leading one in the Pōpalzai clan of the Abdālī tribe, and had been banished to Multān. About 1716 they were found at Herāt, and a feud broke out between two branches of the family, which ended in the deposition and perhaps the murder of 'Abd Allāh Khān, the Chief, by Zamān Khān, who became the leading man in the tribe and increased their power greatly. They spread over Khorāsān and in 1722 went so far as to besiege Meshhed. Aḥmed Khān was born about this time. Allāhyār Khān son of 'Abd Allāh Khān returned from banishment to Herāt, and succeeded in turning out Zamān Khān. When Nādir Shāh invaded Khorāsān in 1728, Allāhyār submitted, but the sons of Zamān Khān, Dhu'l-Fikār Khān and Aḥmed Khān broke out again. In 1731 Nādir Shāh took Herāt and broke up the Abdālī power. Many of the leading men were banished to Multān. Dhu'l-Fikār Khān and Aḥmed Khān fell into the hands of the Ghalzais of Kandahār, and when Nādir Shāh took that town in 1737, he released them and took them into favor. He enlisted the Abdālīs in large numbers in his army and settled them on their ancient territory near Kandahār which had been seized by the Ghalzais.

Aḥmed Khān was appointed Governor of Māzandarān and became a principal officer in Nādir Shāh's army. After Nādir Shāh's invasion of India he gradually became suspicious of the Shī'a elements in his army, the Persian and Ḳizilbāsh, and showed favor to the Özbegs and Afghāns, especially the Abdālīs. This led to the conspiracy in which he was killed (1160 = 1747). Aḥmed Khān who was near by with a body of Abdālīs attacked a Persian convoy, and seized upon a large treasure, and then went off with his followers towards Afghānistān.

Ḳandahār fell into his possession without difficulty, and he was elected king by all the principal Abdālī Maliks on the advice of a derwish named Ṣābar Shāh. Besides the Abdālīs the chiefs of the Balōčes, the Hazāras and the Ḳizil-bāsh took part in his election, but the Ghalzais seem to have been treated as conquered enemies. Aḥmed Khān, now about twenty five years of age, took the title of Shāh, and called himself Durr-i Durrān, "Pearl of Pearls" (not Durr-i Dawrān, "Pearl of the Age" as is sometimes stated), and the Abdālī tribe also from this time on were known as Durrānīs. After his coronation he marched to Kābul, but Ḳandahār remained the capital during his reign. He built a new town to replace the Nādirābād founded by Nādir Shāh, and gave it the title of *Ashraf al-bilād* ("most illustrious of cities"). Kābul was occupied with but slight resistance, he reduced Ghaznīn, subdued the Ghalzais and appointed Durrānī governors over them, and then immediately proceeded towards India. It must be remembered that he regarded himself as heir to all Nādir Shāh's Eastern dominions which included all the country west of the Indus ceded by Muḥammed Shāh. But Aḥmed Shāh aimed at rivalling his predecessor's exploits, and was by no means satisfied with this limited Indian province. The empire of Delhi was no longer formidable. Nādir Shāh's invasion had shaken it to the core, the Sikhs were rising to power in the Pandjāb, the Mahrāṭṭhās in central India, and there was every prospect of success for a bold invader. But Aḥmed Shāh's first invasion (1161 = 1748) failed. He took Lahore but was defeated at Sirhind (March 1748) by the vizier Ḳamar al-Dīn, and his brave son Mīr Mannū, but the vizier was killed in the action. The Emperor Muḥammed Shāh died soon after, which led Aḥmed Shāh to renew the attack (1162 = 1749), and Mīr Mannū, now governor of the Pandjāb, receiving no support from Dehli, submitted to Aḥmed Shāh, and placed the provinces of Lahore and Multān under him. Aḥmed Shāh returned to Kābul, passing on the way through the Dēradjāt, Multān, Shikārpur and the Bolān Pass.

During the next four years he was occupied with the affairs of Khorāsān. He took Herāt and advanced on Meshhed, which he occupied. Shāhrukh, the grandson of Nādir Shāh, was left by him in possession there, and he succeeded in 1163 (1750) in taking Nishāpūr which till then had defied him. The next year Shāhrukh was seized and blinded by Mīr 'Ālam Khān of Kāïn, but Aḥmed Shāh restored him to his throne and defeated and slew Mīr 'Ālam Khān. The same year he came into collision with the rising Ḳadjār power, but was repulsed at Astarābād, and never advanced further to the west. A coin of Aḥmed Shāh struck at Meshhed in the fifth year of his reign may be referred to this period.

In 1169 (1755) Mīr Mannū died, and his widow Mughalānī Begam usurped the power in the Pandjāb, and ruled with her favorite Adīna Beg. The vizier Ghāzī'l-Dīn, who was in possession of Dehli, seized on the opportunity of recovering

the province for the empire. He married the daughter of Mughalānī Begam, and carried her and her mother to Dehlī, and seized upon Lahore.

Aḥmed Shāh immediately marched to Lahore (1170 = 1756) and expelled Ādīna Beg, who had been left in charge there. He then advanced to Dehlī. Ghāzī 'l-Dīn and the helpless Emperor 'Ālamgīr II could offer no real resistance. Nadjīb al-Dawla Rohīla joined Aḥmed Shāh, and he entered Dehlī victoriously with the Emperor and the vizier in his train. He spent only forty days in Dehlī and it was thorougly plundered by his followers. Gold and silver coins dated 1170 H. were struck in memory of this occupation. Mathurā was also plundered, and Aḥmed Shāh, before he returned to Afghānistān, placed Nadjīb al-Dawla in power. He had already made his son Tīmūr *Nāẓim* of Lahore and Multān, and arranged a marriage for him with the daughter of 'Ālamgīr II. He himself married a daughter of the late emperor Muḥammed Shāh. Tīmūr was left to deal with the dispossessed Governor Ādīna Beg, who was in revolt and had stirred up the Sikhs, now numerous and powerful. He was also assisted by the Mahrāṭhās, who began to spread over the Pandjāb: Ādīna Beg took Lahore in 1173 (1759), the Sikhs took Amritsar and sacked Sarhind, and the Mahrāṭhās reached Multān and the banks of the Indus at Aṭak. These events brought Aḥmed Shāh into India a fourth time (1174 = 1760). The emperor 'Ālamgīr II was murdered by Ghāzī'l-Dīn on his approach, and the young prince 'Alī Djawhar, afterwards Shāh 'Ālam II, fled to the English for protection. Aḥmed Shāh came by the Bolān Pass and marched northwards through the Dēradjāt to Peshāwar, and thence followed the ordinary route to Dehlī through Lahore. The Mahrāṭhās fell back before him, and he occupied Dehlī, but a great Mahrāṭhā army approaching from the south forced him to collect his forces and retire upon Pānīpat. This great force included all the leading Mahrāṭhā chiefs under the command of Sadāshēw Bhāo, and a body of Djāṭs under Sūradj Mal. This combination of the most warlike races among the Hindūs, while the Musulmans rallied under Aḥmed Shāh's banner, gave the war the aspect of a religious struggle. The Mahrāṭhā army had a nucleus of troops drilled in the European fashion, with a numerous cavalry and powerful artillery. The strength of Aḥmed Shāh's army was in his Afghān horse. The battle which followed had been preceded by numerous smaller engagements. It ended in the complete defeat of the Mahrāṭhās, and with it ended their hopes of an empire in Northern India. Aḥmed Shāh, however, probably wisely, did not attempt to take their place. Lahore and Multān were difficult to retain, and he recognized the impossibility of holding a more extended empire. This campaign is illustrated numismatically by coins struck at Dehlī, Barēlī, Murādābād Ānōla and Sahrind (for Sarhind). He returned to Kābul, and the Sikhs broke out almost immediately. They laid siege to Djandiāla near Amritsar.

It was against these Sikhs that Aḥmed Shāh's fifth expedition (1175 = 1762) was directed. It is related in the *Wāḳi'āt-i Durrānī* that he rose one night suddenly, picked a body of horsemen, and rode off into India, and that when he reached Djandiāla he had but ten or twelve followers, yet such was the terror inspired by his name that the Sikh army fled. He collected his army and pursued them and defeated them near Gūdjarwāl south of Ludhiāna with enormous slaughter. This fight is known to the Sikhs as the „Ghalūghārā" or „great overthrow".

Aḥmed Shāh returned through Lahore, and left a governor in Sarhind, who was shortly afterwards defeated by the Sikhs. The town of Sarhind was destroyed (1176 = 1763) and is still a ruin. These events brought Aḥmed Shāh into India a sixth time (1177 = 1764). He traversed the Pandjāb and marched back again without effecting much; and three years later he entered the country again (1180 = 1767; his last invasion of India) and now tried to conciliate the Sikhs and to form a party among them. Sarhind was made over to the Phūlkian founder of the Patiāla State, and the Mahārādjas of that State still bear Aḥmed Shāh's name on their coins. Aḥmed Shāh's troops were, however, discontented, and a large body deserted him; his own energy was now failing, and he was harassed by the Sikhs in his retreat. The Sikhs soon after took the powerful fort of Rohtās near Djehlam which had been built by Shēr Shāh.

During the intervals of his Indian campaigns Aḥmed Shāh had occasional outbreaks to deal with in his country. The Ghalzais rebelled about 1167 (1744), but they were easily subdued. Naṣīr Khān the Brahoi chief of Kilāt who had been feudatory to Aḥmed Shāh declared himself independent in 1171 (1758) and Aḥmed Shāh laid siege to Kilāt, but his army suffered greatly, and he at last accepted the terms offered by Naṣīr Khān. The khāns of Kilāt were from this time on independent in all but name. Many Balōčes, however, continued to serve in Aḥmed Shāh's armies, and he also employed many Özbegs, as well as his own Durrānīs and other Afghāns. His mixed army suffered much from the heat on his return from his fifth invasion of India in 1176 (1763), when he had to march rapidly to repress a rising among the Aimāḳ near Herāt. After his last invasion of India he also had to return suddenly in a similar manner, to deal with the affairs of Khorāsān. Naṣīr Allāh, son of Shāhrukh rose in rebellion, and a large combined Persian force opposed Aḥmed Shāh's army which was commanded by his son Tīmūr assisted by Naṣīr Khān the Brahoi chief. The Persians were defeated but were sheltered by Shāhrukh himself in the sacred city of Meshhed. It was finally taken after a long blockade. Shāhrukh was still treated with consideration by Aḥmed Shāh, who never forgot his obligations to Nādir Shāh. He was left in possession of Meshhed, but promised Aḥmed Shāh the services of a body of troops and gave his daughter in marriage to Tīmūr. Aḥmed Shāh's health had been very bad for some time, and he appears to have suffered from cancer. He retired to Murghāb in the Toba hills in the Ačakzai country and died there in 1184 (1773) in the fiftieth year of his age after a reign of twenty-three years.

Aḥmed Shāh was by nature a bold soldier and leader of men, but he failed to found an enduring empire beyond the limits of Afghānistān. He was very popular with his own tribe, the Durrānīs, even with the rival Bārakzai clan, whose enmity proved fatal to his successors. He was able also to establish Durrānī control firmly over

the other Afghān tribes, and the Tādjīks, Hazāras and Aimāks of Afghānistān, and that control remains firmly established till the present day. His success was due to his personal qualities, force and conciliation being both brought into play; and the revenues derived from his Indian expeditions enabled him to dispense with heavy taxation. He knew his own limitations, and did not attempt to extend his Indian rule beyond Lahore and Multān. He undoubtedly perceived the impossibility of maintaining distant conquests with the uncertain means at his disposal, and his later dealings with the Sikhs show that he contemplated the rise of a dependant Sikh power. He could hardly foresee how that power would grow at the expense of his weak and divided descendants and of the moribund empire of Dehli. Lahore indeed was practically a Sikh possession at the time of his death, but Peshāwar, Multān, the Dēradjāt and Kashmīr remained attached to the Durrānī kingdom for nearly forty years longer. He had already recognized the practical independence of Balōčistān, and Khorāsān was evidently destined soon to become a Kādjār possession with the exception of Herāt which is essential to the independence of Afghānistān. It is clear then that Aḥmed Shāh, though he did not found a great empire is entitled to the credit of founding the State of Afghānistān much as it exists at present. As a military commander he takes a high rank. His overthrow of the Mahrāṭhās at Pānīpat was a victory of the first order, one of those battles which affect the whole course of history; although its importance did not affect his own dominions except in so far as it strengthened the Sikhs by removing the Mahrāṭhā menace. Aḥmed Shāh must be considered as the most important man that the Afghān race has produced. His only rival was Shēr Shāh Sūr, but his exploits were confined to India while those of Aḥmed Shāh were intimately bound up with the fortunes of his own race and country.

AḤMED TĀʾIB ʿOTHMĀNZĀDE. [See ʿOTHMĀNZĀDE.]

AḤMED TEKUDER. [See TEKUDER.]

AḤMED WĀṢIF. [See WĀṢIF.]

AḤMED WEFĪḲ PASHA, Turkish statesman and famous man-of-letters, was born at Constantinople in 1235 (1819-1820) and began his diplomatic career as first secretary of the Turkish Embassy in Paris under the reign of Louis Philippe. He next fulfilled the same office at St. Petersburgh and after that lived a long time in Teheran as plenipotentiary, whence he was sent to Paris as Ambassador. Later on he was appointed *Awḳāf*-Minister in Constantinople. Here he occupied successively various high posts, became Grand Vizier and Walī of Hudāwendkiār (Brussa), was for a time out of favour with the Sulṭan, and spent the rest of his life in studious leisure at his country-seat in Rumili Hiṣār on the Bosphorus, where in March 1307 (1890) he died and was buried.

As an historian, a philologist and a translator he has made good use of his pen in promoting modern ideas, and in many ways has done good service in improving the modern written language. The most important of his works is the *Lahdje-i ʿothmānī*, first ed. 1293, second ed. 1306, a lexicon in two volumes. The first volume contains the Turkish, the second the Arabic and Persian elements of the Ottoman-Turkish vocabulary. The second volume was first published as an addition to the second, edition (cp. the review by Barbier de Meynard in the *Journal Asiatique* 7e série, viii. 275; 8e série, xix. 570). He also deserves to be mentioned as the first translator of Molière. He seems to have rendered the whole of Molière, and according to the *Grande Encyclopédie* "les principales oeuvres de Schiller et Shakespeare" as well. But nothing has appeared in print of the last mentioned works, and but very little of his translations of Molière. I only know *Yer ghāhi dāndini* and *Zorakī ṭabīb, Zor nikāḥi*, which appeared in 1286 and are both in my possession. Belin also mentions only these two. They are not literal translations, but independent adaptations, skilfully arranged to suit Turkish conditions. He had these plays performed by Armenians in his own theatre at Brussa. He also translated Fénélon's *Télémaque* (*Télemaḳin terdjemesi* 1298) and Voltaire's *Micromégas* (published in 1298 as an appendix to a collection of Ottoman proverbs *Atalar sözü*). Other works of his are: 1. *Fedhleke-i taʾrīkh-i ʿothmānī*, an epitome of the Ottoman history until the reign of Sulṭan ʿAbd al-ʿAzīz, especially intended for schools, which has passed through several editions (1st ed. 1285). 2. An edition of *Gulistān* (1286). 3. An edition of a translation of Lucianus' *Parasites*, which had been prepared by Wasilaki Efendi (1286), and 4. an edition of the *Maḥbūb al-ḳulūb* by Mīr ʿAlī Shēr Nawāʾī, in collaboration with Belin (1289). He had planned the publication of an extensive Čagatai dictionary, but neither this nor any other of his East-Turkish collections has ever been printed.

Bibliography: The necrologue of Aḥmed Wefīḳ Pasha in the *Thurwat-i Funūn*, 1st year n°. 5, p. 38, which was partly founded on the article in the *Grande Encyclopédie*, and *Journ. Asiat.*, 6e série, xx. 268, 7e série, xx. 284, and 8e série, xx. 344.

(F. GIESE.)

AḤMED YESEWĪ, one of the oldest and most famous East-Turkish Shaikhs and mystics, was born in Yasī (the present town of Turkistan) and died there in 562 (1166). The year of his birth is not known, but in his Dīwān it is stated that he was 63 years old when he died. When he was seven he became a disciple of a certain Baba Arslan, concerning whom no further information has been found. After his death Aḥmed went to Bukhārā, where he became an adherent of the celebrated Shaikh Yūsuf Hamadhānī. Afterwards he returned to Yasī, where he remained until his death. In 800 (1397) Tīmūr caused a mausoleum to be erected on his tomb in Turkistan, which is at present being examined by Prof. Veselovskij by order of the Russian committee

for the exploration of Central and Eastern Asia. The Nogai legend represents the popular Turkish hero Idige-bi as a descendant of Aḥmed Yesewī. Aḥmed is considered to be the chief of Turkish Central Asiatic mysticism and the founder of a whole school of mystics, and is as such highly revered. Ḥakīm Ata belongs amongst others to the fourth generation of this School. Aḥmed's mystic poems (*ḥikmat* or *munādjāt*) are much read. His Dīwān has often been published in Kazan under the title of *Dīwān-i ḥikmat-i ḥaḍrat sulṭān al-ʿārifīn khwādja Aḥmed* etc. This Dīwān has not yet been examined in detail. But it is sufficiently evident from its contents, that not all the poems can be the work of Aḥmed himself. Unfortunately not a single old manuscript of the Dīwān has been found. Four later ones are in the Asiatic Museum at St. Petersburgh: nos. 293b, 293c, 293d and 293e. Aḥmed's language in the manuscripts that are extant and in the printed edition has doubtless to a great extent been modernised by later scribes.

Bibliography: The Legend concerning Ḥakīm Ata by C. Salemann (Russian), in the *Izwiestiya Imperat. Akademii Nauk*, 1898, IX. No. 2, and the above mentioned Kazan edition of Aḥmed Yesewī's *Ḥikmats*.

(P. Melioransky.)

AḤMEDĀBĀD is the capital of the district of that same name in India (Presidency of Bombay), on the river Sābarmatī. In 1901 the town numbered 185 899 inhabitants, of which about 1/4 were Mohammedans, the district (3816 square miles = 9883 square kilometres) containing 795 967 inhabitants. Aḥmedābād is one of the most beautiful towns of India and is famous for the manufacture of gold and silver brocade, of silk, cotton and satin (*kamkhāb*) materials. It is equally noted for its brass and bronze works, and for the manufacture of mother of pearl ornaments, of japanned goods and woodcarving (betel-boxes i. e., *pāndān*). There are also a great many monuments of ancient Moslem art, amongst others mosques and mausoleums of the XVth and XVIth centuries.

Aḥmedābād was founded in 1411 by Aḥmed Shāh I [q. v.], sultan of Gudjarāt (the same who made the old Hindu town of Asawal his capital), and he enriched it with countless buildings. In the first century of the Gudjarāt dynasty it rapidly attained prosperity. But after that it fell into decline, enjoyed another period of prosperity under the reign of the Mogul emperors, until in the XVIIIth century it again deteriorated. In 1818 the English took possession of the town.

AḤMEDĪ, with his full name Tādj al-Dīn Aḥmed b. Ibrāhīm al-Aḥmedī, was one of the most celebrated West-Turkish Ottoman poets of the 8th (14th) century. If we may believe Tāshköprü Zāde he was born before 735 (1334-1335) in Germiān, at that time an independent principality, but now part of the wilāyet of Brussa. According to Laṭīfī and the historian ʿĀlī (from Gallipoli) however, he was born in Sīwās. He equalled his brother the poet Mawlānā Ḥamzawī in remarkable talents and ambition. After he had studied the sciences at home he went to Cairo, where he came into close contact with his countryman Ḥādjdjī Pasha, who afterwards became a famous physician, and Mawlānā Shams al-Dīn Muḥammed al-Fanārī. After his return home he entered the service of the ruler of Germiān as khodja. There he seems to have devoted his leisure hours to composing his *Iskender nāme*. His master however, Mīr Sulmān, to whom the work, according to statement before 792 (1390), was dedicated, is said to have been but little edified by it. After that we find him at his new seat Amasia in the company of Tīmūr. Their meeting evidently took place after the battle of Angora and the death of Bāyazīd I, about the time when the powerful conqueror, with a view of peopling Catta again, the native country of the tribes of the Kara-Tatars, caused these tribes to be removed thither from the country of Tokat, Amasia and Ḳaisariya, where they had peacefully lived for 150 *years* (1403). The proud monarch, who had subjected the whole of central and anterior Asia, is said to have honoured Aḥmedī with his conversation on that occasion. Be that as it may, after the reappearance of the petty monarchs and the revival of their continuous feuds, Aḥmedī in order to escape from the utter unsafety which prevailed in Anatolia, fled to Bāyazīd's eldest son Sulaimān, who beyond the Bosphorus kept a splendid court in Adrianople (1402—1410), at which he gathered men of culture and talent from all the Ottoman provinces. The poet wrote a great number of ḳaṣīdas and ghazals for the prince, which he afterwards collected into a Dīwān (*Turk. Cat. Cairo* p. 113; Pertsch, *Verzeichn. d. türk. Hss. . . . . . zu Berlin* No. 366). But Sulaimān's fortune began to waver — in 1410 he was killed on his flight to the Greek Emperor in Constantinople — so Aḥmedī left Rumelia and returned to Amasia, his adopted country. There he died in 1413.

The poet's merit consists in having first introduced profane subjects into West-Turkish literature. But his *Iskender nāme* is also the first Turkish example of an epic describing the exploits of Alexander the Great, which shook the whole of the East. The campaigns of the great king (eastward as far as Japan, west as far as Morocco) are described in 8250 couplets, and at the same time a mass of encyclopedic knowledge is, in didactic fashion, put into the mouth of a brilliant staff of philosophers, amongst whom Aristotle and Plato are prominent. Psychology, medicine and astronomy are expounded, and finally Aristotle is represented as giving an account of universal history, in which he speaks prophetically of the events succeeding the time of Alexander. The arrangement of the subject-matter was for the greater part founded on the history of Alexander as it is given in Firdawsī's *Shāh nāme*. In contrast to the classical metre which soon after came into vogue Aḥmedī still adhered to the prosodic style of expression (*pārmāḳ ḥisābi*), which was used by the oldest West-Turkish poets. But he handled it with such freedom, as to rouse the bitter resentment of the leading Ottoman literary critics of the 16th century. According to a statement found in the poem, the work was finished on the first of Rabīʿ II (and not, as was erroneously read by Gibb, on the last of Rabīʿ) of the year 792

(13 March 1390). But some copies continue the thread of the narrative till the death of Bāyazīd I, and mention Sulaimān as the sultan reigning by right. In other copies Sultan Aḥmed's defeat of Tibrīz (813 = 1410-1411) is the concluding episode. To the list of manuscripts given by Rieu (*Cat. of the Turk. Mss. in the Brit. Mus.*, 1888, p. 763) must be added *Handschriftlicher Kat. der Kgl. Biblioth. zu Berlin, türkischer Teil*, N°. 965.

Aḥmedī's first biographer Sehī (d. 1548-1549) also ascribes to him a romantic poem *Djamshīd we-Khorshīd*. He is also said to have translated most of the ḳaṣīdas of the Persian poet Salmān of Sāwah into Turkish verse.

(K. Süssheim.)

AḤMEDĪ is a gold dīnār called after Aḥmed b. Ṭūlūn [q. v.].

AḤMEDIYA is the name of the adherents of Mīrzā Ghulām Aḥmed Ḳādiānī (of Ḳādiān, district of Gurdaspur in the Pandjāb. In 1900 they were with their own approval entered under that name on the official census lists of the Indian Government, as a separate modern Mohammedan sect. The Aḥmedīs are especially numerous in the Pandjāb, but also in other provinces of the Presidency of Bombay and elsewhere in India. They are found besides in other Mohammedan countries such as Afghānistān, Persia, Arabia, Egypt etc. Their number is gradually increasing in consequence of zealous propagandism. Their principal organ is the *Review of Religions*, written in English, which since 1902 has been published regularly once a month at Ḳādiān. But they also make use of various other papers in Indian languages, weeklies, monthlies and quarterlies. They have also separate extensive writings, amongst which *Barāhīn-i Aḥmedīya (The Arguments of the Aḥmediya)*, written by the founder Mīrzā Aḥmed, is the most important. The first volume of this work appeared in 1880, and in it the author claimed the dignity of a Mahdī, though not until March 4th 1889 did he demand the homage of his adherents.

The doctrines of the Aḥmedīya agree on the whole with those generally taught by the Islām. The most striking differences concern only the Christology, the vocation of the Mahdī and the *djihād* (the holy war). As to the first mentioned doctrine, they assume that Jesus did not die on the cross, but after his apparent death and resurrection migrated to India, strictly speaking to Kashmīr, in order to preach the gospel in that country. There he is said to have died at the age of 120 years; his tomb at Srinagar is still known, but is mistaken for that of a prophet called Yuz Asaf (which according to the Aḥmedīs must not be explained as a corruption of Bodhisatwa!). At the instigation of a certain Mawlā Muḥammed Ḥusain a *fetwā* against Mīrzā Aḥmed was published in India, purporting that this doctrine disagreed with the Ḳor'ān and therefore had to be looked upon as heresy. Regarding the vocation of the Mahdī and the *djihād* the Aḥmedīya teach, that the task of the former is one of peace, and that the *djihād* against the unfaithful must be conducted with peaceful means instead of instruments of war. Under all circumstances sincere obedience must be given to the British Government. The Mahdī himself must be considered an incarnation both of Jesus and Muḥammed. To believe in him is an article of faith, because first of all his coming early in the 14th century of the Hidjra was predicted by Muḥammed, and secondly because he proved his divine vocation by his prophetic gift. On various occasions this gift has manifested itself: not only the terrible destructions caused by pestilence and earthquake during the last decades, but also the death of certain people are said to have been prophesied by him. When one of his last mentioned predictions came true through the murder of an inhabitant of Lahore, Mīrzā Aḥmed was accused of the crime by three Christian missionaries, but acquitted in court.

Since the Mahdī (who died in 1908) resigned his leadership because of old age, the affairs of the Aḥmediya have been conducted by the Ṣadr Andjuman-i Aḥmedīya.

(M. Th. Houtsma.)

AḤMEDNAGAR is the capital of the district of that name in India (Presidency of Bombay) on the river Sīva. In 1901 the town numbered 42 000 inhabitants, the district (6586 square miles = 17 058 square kilometres) 837 695 inhabitants. The town was built in 1494 by Aḥmed Niẓām-Shāh, the founder of the dynasty of the Niẓām-Shāhs [q. v.], who reigned for about a century in Aḥmednagar, until, after a brave defence by Čānd Bībī, the place was taken by Akbar's troops and annexed to the Mogul empire. After the death of Awrangzīb, Aḥmednagar became subject to the Mahrāṭhas, and in 1803 Dawlat Rao Sindhiya was obliged to surrender the town to the Duke of Wellington.

Bibliography: *Bombay Gazetteer* xvii. B (1904).

AḤMEDU Shaikhū b. al-Ḥādjdj 'Omar, the founder of the Tidjānī empire in Western Soudan, was in 1862 left in charge of Segu by his father, before the latter had effected the conquest of the Macina, and he maintained his authority there, in spite of the opposition of his brothers, after the death of al-Ḥādjdj 'Omar in 1865. In 1877 he took the title of *Amīr al-Mu'minīn*, and while keeping the district of Segu under his immediate authority, divided the provinces of Upper-Senegal, Kaarta, Dinguiray etc. amongst his brothers, who became practically independent rulers. But while the French troops were on the march to occupy the country, Aḥmedū succeeded in reestablishing the empire of his father for a short time, by poisoning Tidjānī, emir of Bandjagara. Vanquished by Colonel Archinard, who took Segu in 1890 and Nioro in 1891, Aḥmedū made friends with Samory. But Archinard took Djenne and Bandjagara (1893), and Aḥmedū on his flight eastward crossed the Niger and sought refuge in Sokoto. Cp. Le Chatelier, *L'Islam dans l'Afrique occidentale* (Paris, 1899).

(G. Demombynes.)

AL-**AḤNAF** is the nickname of Ṣakhr b. Ḳais (his pedigree is given f. i. by Ibn Ḳutaiba, *Kitāb al-Ma'ārif* p. 216, 8; Ṭabarī ii¹, 438, 17). Sometimes he is also referred to by the name of

al-Ḍaḥḥāk, but it is not actually used and might moreover easily be confused with the name of the famous al-Ḍaḥḥāk b. Kais. His kunya is Abū Baḥr. He belonged to the Tamimite race of the Murra b. 'Ubaid, whose distinctive mark is often said to consist in the fact, that al-Aḥnaf had belonged to them, for he was looked upon by the Tamimites of Baṣra as one of their greatest men. On the mother's side he was descended from the Bāhilitic Awd b. Ma'n. He was born in the time of heathenism. He was a delicate child and had crippled feet, for which he had to undergo an operation, and remained bandy-legged for the rest of his life ("Aḥnaf" = bandy-legged). His father was killed by Māzinites in heathen times. The Tamimites are supposed to have embraced the Islām at the insistance of al-Aḥnaf; but the reliable documents do not contain any reference to it. During Muḥammed's life-time he did not attain especial prominence, but afterwards he took a leading part in the conquest of Iran: first he was under the chief command of Abū Mūsā, for whom in the years 23 and 29 (644 and 649-650) he conquered both Ḳāshān and Iṣpahān, starting from Ḳumm; and later from the year 29 (649-650) he fought under 'Abd Allāh b. 'Āmir, to whom in 30 (650-651) the supreme conduct of the conquest of Khorāsān had been entrusted. Especially under the latter's command was al-Aḥnaf, at the head of the van-guard, one of the most active and energetic generals. He conquered the country of Kōhistan, the towns of Herāt, Merw, Merwerūd and Balkh and other important places. Long afterwards a castle near Merwerūd was still called by the name of Ḳaṣr al-Aḥnaf in honour of him, and a place in that same neighbourhood Rustāḳ al-Aḥnaf. He even led his troops into the dangerous country of Ṭokhāristān. He did not succeed, it is true, in preventing the escape of the Persian King Yezdegerd III, who retreated gradually towards Central Asia; neither was he successful in his campaign from Balkh against Khwārizm. Nevertheless it was preeminently his doing, which hindered the Persian king from getting a firm footing anywhere; he also baffled the latter's endeavours to incite the Persian tribes against the Mohammedans, and he prevented the outbreak of serious difficulties with the Transoxanian Turks in the far East. He had moreover to guard a long and constantly endangered military route. He was also for some time deputy-governor of part of Khorāsān. In the conflict between caliph 'Alī and the party of 'Ā'isha he was personally a declared partisan of 'Alī's; but he was not able, it seems, to guarantee any actual interference on 'Alī's behalf by the Tamimites. Still in so far did al-Aḥnaf contribute to 'Alī's success as to induce the Tamimite contingent of the population of Baṣra (which numbered 4000 men) to remain neutral during the "battle of the camel" (36 = 656). After the battle had been decided in 'Alī's favour, al-Aḥnaf is said to have been the first of the Baṣra people to do him homage. Also in the battle of Ṣiffīn (37 = 657) we find him on 'Alī's side. He is said at that time to have advised against Abū Mūsā being appointed arbiter. The Umaiyad government afterwards considered him a man of great influence with his tribe, as was evident from the fact, that he was one of the leading men, whom Mu'āwiya summoned to Damascus in 56 (675-676) in order to get their consent to the designation of his notorious son Yazīd to the succession. Al-Aḥnaf on that occasion spoke the well-known sentence: "I fear God if I lie, and you if I speak the truth". But he expressed his aversion to the plan in unmistakable though respectful words, which however remained without effect. — In Baṣra he exerted his influence over his Tamimites to persuade them to remain for the present reserved towards the Azdites, who especially at that period migrated to Baṣra in large numbers. The Azdites consequently accepted the help which was offered them by the Rabī'ites. So al-Aḥnaf lived to see, that in the fatal antagonism between the Muḍar (to which the Tamīm belonged), and the Rabī'a, the Azdites adhered to the Rabī'a, in consequence of his own policy. During the disorders after the death of caliph Yazīd I, the governor of 'Irāḳ, 'Ubaid Allāh b. Ziyād wanted to usurp the dignity of caliph. Part of the Tamimites, who had done him homage, went over to his opponent 'Abd Allāh b. al-Zubair, and al-Aḥnaf tried in vain to bring them to reason, which he had assured the governor that he would be able to do. The consequence was that 'Ubaid Allāh sought an alliance with the Azdites, and they were supported by him in a battle with the Tamimites, which, occasioned by a row, broke out in the streets of Baṣra. In an angry mood al-Aḥnaf at first kept away from the battle, and not until the danger was at its height could he be prevailed upon to organize the defence against the united powers of the Azdites, Bakrites and 'Abdḳaisites. But his principal concern was to reconcile the various tribes, settled in Baṣra, to mutual forbearance, and to combine their forces, if possible, against their common foe the Khāridjites. An energetic action against this sect was what he desired most. For that reason he began to negotiate for peace, before a regular battle (for which the troops of both parties had already selected their positions) could be fought in the large market place of Baṣra. Although the conditions stipulated by the enemies were exceedingly humiliating (the Tamimites would have to pay for all the damage caused by the preceding fights), al-Aḥnaf consented to them and payed part of the amount out of his own pocket. To his great satisfaction his Tamimites fulfilled the conditions of peace and apparent quiet returned to Baṣra. — In 65 (684-685) the people of Baṣra wanted him to march against the Azraḳites, but he referred them to al-Muhallab as a man better qualified for that undertaking. In 67 (686-687) he opposed Mukhtār energetically, and commanded the Tamimite contingent in Muṣ'ab's campaign against Kūfa, the residence of Mukhtār. Shortly afterwards he died at an advanced age, without a descendant, and was buried in Kūfa.

(RECKENDORF.)

AL-**AḤSĀ'**, also called LAḤSĀ or AL-ḤASĀ, was originally a fortress in al-Baḥrain [q. v.], not far from al-Hadjar, the ancient capital of this district. The Ḳarmaṭ chieftain Abū Ṭāhir al-Djannābī founded it in 314 (926). He called the place al-Mu'minīya, but both town and district remained known by the old name of al-Aḥsā'. The Persian poet Nāṣir-i Khosraw, who visited the place in 443 (1051) has left us a description of al-Aḥsā' and of the Ḳarmaṭ government there. Nowadays the capital is usually called Hofūf [q. v.], though the name of al-Ḥasā is not quite unknown. But

the latter is usually understood to designate the entire district, which since 1870 has been a subdivision of the wilāyet Baṣra, under the misleading name of Nedjd.

Bibliography: *Bibl. geogr. arab.* (ed. de Goeje); Yāḳūt, *Mu'djam*, s. v.; Ch. Schefer, *Sefer-Nameh* (Paris, 1881), p. 225 *et seq.* Further references will be found s. v. HOFŪF.

AḤSĀ'Ī, whose real name was Aḥmed, was a well-known Shī'itic theologian and the founder of the sect of the Shaikhīs. His father was the Shaikh Zain al-Dīn of al-Aḥsā' in the Arabian province of Baḥrain. Aḥmed was born in 1157 (1744). At an early age he left his native country, and went to Persia, where he stayed in Yezd and in Kirmānshāhān. Afterwards he seems to have lived in Kerbelā' and in Ḳazwīn. He died in 1242 (1827-1828) on a pilgrimage to Mecca. Aḥsā'ī was looked upon as a saint and a scholar, and was the author of various writings. The titles of his works are enumerated by Browne (*A traveller's narrative*, p. 234 *et seq.*), who derived his information from Mīrzā Muḥammed b. Sulaimān-i Tanakābunī, *Ḳiṣaṣ al-'ulamā'* (Teheran, 1304 = 1886). The doctrine, expounded in these writings, is not sufficiently known. To judge from what Browne says he belonged to the pantheistic Shī'ites and worshippers of 'Alī, and his philosophical arguments were based on the opinions of the famous philosopher Mullā Ṣadrā [q. v.]. Aḥsā'ī's disciple Ḥādjdjī Saiyid Kāẓim of Resht (d. 1259 = 1843-1844) continued in the spirit of his Master; but after his death the opinions of the Shaikhīs diverged. Part of them went over to the Bābīs [q. v.], others on the contrary opposed the claims of the Bāb. The literature on the subject is given by Browne, *ibid.*, p. 242.

AL-**AHWĀZ** is the name of a province of the realm of the 'Abbāsides. It was bounded by the 'Irāḳ on the West side, by the province of Fārs (Fāris), the ancient Persis, on the East and South, and on the North by that part of the province of Djibāl which is nowadays called Luristān. Ahwāz covers, generally speaking, about the same extent of ground as the country of Susiana or Elymais mentioned by the Greeks; as the country of Elam known from the Old Testament; as Elamtu found in the cuneiform inscriptions; and as Khūzistān of the present day. The name Ahwāz is the Arabic plural of the singular Hūz (for Khūz) and corresponds with Syriac Hūzāyē and the classic Greek Οὔξιοι which originally designated one separate tribe of that country. But the Persians coined it, in the form Susiana, as a name for the old country of Elam. Cp. conc. the name: Nöldeke in the *Nachr. d. Kgl. Gesellsch. d. Wissensch. zu Göttingen*, 1874, p. 185 *et seq.*; Kiepert, *Lehrb. d. alt. Geogr.* p. 139; Marquart, *Ērānšahr n. d. Geogr. d. Pseudo Moses-Xorenac'i* (Berlin, 1901) = *Abhandl. der Kgl. Gesellsch. d. Wissensch. zu Göttingen*, N. F., vol. iii. nº. 2, p. 27; conc. the province of Ahwāz cp. especially A. v. Kremer, *Culturgesch. des Orients unter d. Chalifen* i. 291—295; G. le Strange, *The lands of the eastern Caliphate* (Cambridge, 1905) p. 232—247; Barbier de Meynard, *Diction. géogr., hist. et littér. de la Perse* (Paris, 1861) p. 57—61; Wüstenfeld, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xviii. 425; K. Ritter, *Erdkunde* ix. 228 *et seq.*

The capital of the province of Ahwāz was called Sūḳ al-Ahwāz (market of Ahwāz), and hence often simply al-Ahwāz. It is situated on Lat. 31° 19' N. and Long 48° 46' E. (Greenwich) on the river Kārūn, below its confluence with the Dizful, after which the lower part of the Kārūn is also called Āb-i Ahwāz (river of Ahwāz). Near the town of Ahwāz the river ceases to be navigable in consequence of rapids. In spite of this Sūḳ al-Ahwāz possesses strategically and commercially an important situation, that predestined it to be the capital, which it was even before the period of the Sāsānides. Reference has been made to it as the residence of King Nīdūšār (?), a successor of the ancient Kings of Elam, who was afterwards robbed of his dominion by Ardeshīr I. The latter took Sūḳ al-Ahwāz and built a new town beside it, which he called after himself Hurmizd-Ardeshīr (afterwards through contraction Hurmushīr). The Arabs called it also Sūḳ al-Ahwāz, cp. Nöldeke, *Gesch. d. Perser u. Araber zur Zeit der Sasaniden* (Leiden, 1879) p. 13, 19; A. v. Gutschmid, *Gesch. Irans* (Tübingen, 1888) p. 160 *et seq.* The official appellation Hurmizd-Ardeshīr of the Sāsānide period is also found in the Talmud and in Syriac writings; cp. Nöldeke, *ibid.*, p. 19, note 5. At one time Hormizd-Ardeshīr also served as the residence of a Nestorian bishop; cp. Guidi in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xliii. 410. Sūḳ al-Ahwāz retained its importance in the Arabian period, especially as an emporium of commerce. Both its industry and trade were principally concerned with sugar. The province of Ahwāz at the time of the caliphate of the 'Abbāsides had attained worldwide renown for its sugarcane plantations and its sugar manufacture. In the Xth (XVIth) century the place began to decline. Ahwāz of the present day is a poor little place of about 2000 inhabitants, which occupies but a small area of the old town. Extensive ruins are still visible. Concerning Ahwāz in the middle ages, cp. Wüstenfeld, *ibid.* xviii. 424 *et seq.*; G. le Strange, *ibid.*, p. 233 *et seq.* Concerning Ahwāz of the present day cp. K. Ritter, *Erdkunde* ix. 219—230; Reclus, *Nouv. géogr. univers.* ix. 297 *et seq.* (with a map); J. Dieulafoy, *La Perse, la Chaldée et la Susiane* (Paris, 1887) p. 694 *et seq.*; J. de Morgan, *Mission scientifique en Perse* ii. (*Études géograph.*) p. 275 *et seq.* — Sūḳ al-Ahwāz is often believed to be identical with Ἄγινις mentioned by Strabo, but this is almost certainly a mistake; cp. Andreas in Pauly-Wissowa's *Realencyklop. der klass. Altertumswiss.* i. col. 812. — The second capital of the province of al-Ahwāz was Tustar, nowadays Shuster [q. v.]. — Particulars concerning the geographical conditions of the province of Ahwāz will be given s. v. KHŪZISTĀN. Special reference must here be made to K. Ritter, *Erdkunde* ix. 152 *et seq.*; de Morgan, *ibid.* ii. 249—282; Billerbeck, *Susa* (Leipsig, 1893) p. 2—23. The best cartographic material concerning Khūzistān is given by Haussknecht, *Routen im Orient in den Jahren 1865—1869*, revised by H. Kiepert (Berlin, 1882), and by J. de Morgan, *ibid.* ii. (with maps) and the *Atlas des cartes* belonging to it. (STRECK.)

AL-**AḤZĀB** (A.), Plur. of *al-Ḥizb* [q. v.], is the title of the 33rd Sūra.

AĪ (T.), Moon, Month; often used in compound proper names (cp. Radloff, *Versuch eines Wörterb.*, i. 5).

AIBEG (Arab. pron. Aibak), properly called 'Izz al-Dīn Abu 'l-Manṣūr Aibeg al-Mu'aẓẓamī,

was a mameluke of the Aiyūbide al-Malik al-Muʿaẓẓam Sharaf al-Dīn ʿĪsā, who was governor of Damascus from 597 till 615 (1200—1218), and afterwards, from 615 till 624 (1218—1227) sultan of the realm of Damascus after the death of his father al-Malik al-ʿĀdil. In 608 (1211-1212) the town of Ṣalkhad in the Ḥawrān and the surrounding district were given to him in fee. He was also appointed Majordomo (Ustādh-Dār). In the year 624 (1227), when al-Malik al-Nāṣir Dāwūd had succeeded his father ʿĪsā to the throne of Damascus, Aibeg was even raised to the dignity of regent of Damascus and as such held the entire political authority in his hands. After a short time however Damascus was conquered by Dāwūd's uncle al-Malik al-Ashraf. Aibeg was dismissed from the Regency, but he was allowed to keep his freeholds in the Ḥawrān. In 636 (1238) he is still called "Lord of Ṣalkhad and Zurʿa". But after that he became suspected of treacherous designs and lost his political position. He died in 646 (1248-1249) at Cairo. His remains were removed to Damascus, and interred in a mausoleum specially built for him. — Aibeg has done considerable service to the countries which he governed by the erection of various works of architecture. In Damascus he founded three Ḥanafitic academies, and a fourth one in Jerusalem. As Majordomo he had to be especially concerned about the building of Khāns. As Governor of Ṣalkhad he tried to promote the traffic along the commercial route from Northern Arabia and Babylonia to Damascus, as far as it ran through his dominion. He erected the desert castle of Ḳalʿat al-Azraḳ, had the large water-reservoir *(Maṭkh*, otherwise *Birka)* in ʿInāk repaired, and built a large Khān in Sāla. His rage for building communicated itself to his subalterns, especially to his mameluke ʿAlam al-Dīn Ḳaiṣar. The following amongst his buildings in his fief deserve special mention: a Khān in Ṣalkhad (611 = 1214-1215); a tower in the fortress of Ṣalkhad (617 = 1220-1221); arcades and a tower (minaret) in the mosque of Ṣalkhad (630 = 1232-1233); a castle in Ḳalʿat al-Azraḳ (634 = 1236-1237); a Khān in Zurʿa (636 = 1238); a reservoir in ʿInāk (636-637 = 1238—1240); and a mosque in al-ʿAyin (638 = 1240-1241). About the year 630 (1232-1233) the mosque and Khān in Sāla were also founded. The exact date is not known, the inscriptions having been preserved in a fragmentary state. — Both Sharaf al-Dīn ʿĪsā and his mameluke Aibeg are well known from the time of the crusades.

AIBEG KUṬB AL-DĪN was the first ruler of the so-called slave dynasty, which after the death of the Ghōride Shihāb al-Dīn (Muʿizz al-Dīn) Muḥammed [q. v.] came into power in Delhi. Aibeg was a native of Turkistān and had come to Nīshāpūr as a slave of the Ḳāḍī Fakhr al-Dīn ʿAbd al-ʿAzīz. Afterwards he arrived in Ghazni as a slave of the above-mentioned Muḥammed Ghōrī. The latter soon noticed the eminent talents of his slave. After Aibeg had vanquished the Rādjpūts in a great battle near Narain, and had conquered Adjmīr and other places in India, Muḥammed Ghōrī appointed him his commander-in-chief (Sipah Sālār) in India, and entrusted to him the complete submission of the country. After that Aibeg conquered Mīrat and Delhi, took a prominent part in the conquest of Benares 590 (1194) and in the war of the Ghōride against the Rādjā of Gwāliōr, gained a big battle against the prince of Anhalwāra, took the fortress of Kālindjar (599 = 1202), in short, the whole of Hindustan north of the Wendhya mountains was annexed to the dominion of the Ghōride mainly by his strategy. Meantime Aibeg had chosen Delhi for his residence, and after Muḥammed's death (602 = 1206) he was recognized by his successor Ghiyāth al-Dīn Maḥmūd as an independent sultan. Then Aibeg began a war against another former slave of the Ghōride, called Yoldüz, who had risen to princely dignity in the same way as he had done. For forty days he occupied Ghazni, the capital of Yoldüz. Not long after his return to India he died in 607 (1210), in consequence of a fall which had been incurred while playing the Persian polo game. His son Ārām Shāh being unable to assert his authority, Aibeg's dominion passed into the hands of his slave Iltutmish [q. v.] who had served him in the same way as Aibeg in his time had served Muḥammed Ghōrī.

Aibeg was not only an eminent warrior, he also gained great fame by his liberality, his justice and his love of art. The Ḳuṭb Minār, which can still be seen at the principal mosque not far from Delhi, has been called after him. The inscriptions which it contains have been published by Thomas in his work *The Pathan Kings of Delhi*. Cp. also *Archaeol. Reports* i. and iv.

AL-**ʿAIDARŪSĪ** ʿABD AL-RAḤMĀN B. MUṢṬAFĀ, born in 1135 (1722), was a mystic, belonging to a South Arabian family of dervishes, which had been famous for ages. In his youth he accompanied his father to India. But a couple of years later he returned to his native country and after a few more journeys he settled down in al-Ṭāʾif. In 1174 (1760) he removed to Cairo, which he had already visited three times. Thence he undertook several journeys through Syria. He also went to Stambul. A year after his visit there he died in 1192 (1778).

He wrote various works on mystical doctrines according to the ideas of the Naḳshbandiya order. He was also the author of a collection of poetry *Tanmīḳ al-asfār*, which was printed in Cairo (1887) along with two supplements: *Tanmīḳ al-safar* (concerning his experiences in Egypt), and *Dhail al-tanmīḳ* (containing letters from Egypt).

'AIDHĀB is a port on the African coast of the Red Sea. In the Middle Ages 'Aidhāb was a well-known harbour for the Mecca pilgrims, and an import-market for goods from Central Africa and for those from India which were shipped via 'Aden. The Arabian geographists describe its situation as having been just opposite Djidda, at a distance of 15 days' march by caravan from Assuan and 17 from Ḳūṣ. It must not be identified with one of the well-known Ptolemaic ports, but almost certainly with the borough of Aidip, which is found on modern maps further down south, a little below Lat. 21° N. — Between 450 and 770 (1058—1368) 'Aidhāb-Aidip was at the height of its prosperity, though in the earlier centuries of the Islām the place was already much frequented by pilgrims and merchants. The caravan-route between 'Aidhāb and the Nile ran to three different termini: Assuan, Edfū and Ḳūṣ. Assuan was the oldest station of these three, but afterwards Ḳūṣ attracted most of the traffic. 'Aidhāb was an unpretending town of about 500 cottages made of rushes. The inhabitants were Bodja, with whom Arabian tribes had intermixed. They had an administration of their own, under the supervision of the Egyptian Government. All means of subsistence, even water, had to be imported. The populace earned a livelihood by fishing and pearl-diving, and especially by conveying goods and pilgrims by sea and land. When at the close of the VIIIth (XIVth) century the Indian trade reverted to the north of the Red Sea, 'Aidhāb began to decline and sank into oblivion.

AIDIN GÜZEL ḤIṢĀR (the beautiful fortress of Aidin), the ancient Tralles, is a town of Asia Minor, on the river Deliḅagh (Ṭabak)-Čai (the ancient Eudon), a tributary river of the Meander. It has 36 250 inhabitants, amongst whom there are 26 000 Mussulmen, 8500 orthodox Greeks and 1406 Israelites. It is situated on the slope of the Djumʿa-dagh (the ancient Messogis), below the plateau which supports the ruins of Tralles, and surrounded by green fields and gardens. It contains two stone bridges, fourteen mosques, four churches, one synagogue; extensive and much frequented bazaars, tanneries, factories of leathern belts for the Zeibeks to carry their weapons in; a promenade called Bunarakis, and a railway-station on the line from Smyrna to Dinair (Geikler). It was occupied by the Seldjuḳ Turks in the Middle Ages, and became afterwards the capital of the principality founded by Emir Aidin, who gave his name to the place. His grandson Emir 'Īsā surrendered it to Sultan Bayazid I, and after the death of Emir Djunaid it was finally conquered by Sultan Murād II (830 = 1426). The family of the Ḳara-Othmān-Oghlu possessed the hereditary government of the province for several centuries, until sultan Maḥmūd at last deprived them of it (1249 = 1833). After that the town became the capital of the province (*eyālet, wilāyet*) of Smyrna. At the present day however it is only the capital of a sandjaḳ of that province, officially known as Aidin. This sandjaḳ embraces six ḳazās (Aidin, Sewke, Čina, Bozdoghān, Nazilei, Ḳaradja-Ṣū), eight nāḥiyes and 440 villages.

AILA is a seaport town in the north-east corner of the bay of 'Aḳaba (Lat. 29° 30' N., Long. 35° E. [Greenwich]). It is situated north of a rather steep lateral spur of the Djebel Umm Nṣēle. The Arabic name Aila (Waila) corresponds with Hebrew El-Pā'rān, Elim, Elat, Elōt, Aram. Elōn, Elōnā, Greek Αἰλάθ, Αἰλὰμ, Αἰλεΐμ, Ἠλαθούς, Αἰλὰμ, Ἐλάνα, Αἴλανα, Αἰλάνα, Αἰλάς, Αἴλα, Ἤλα, Latin Ailath, Aelath, Aelana, Leena, Helim, Aila. In antiquity and partly also in the Middle Ages Aila was of the greatest importance both for the shipping and caravan trades, for there, at the northernmost bay of the Red Sea, the caravan routes from Egypt to Central Arabia and from the Phoenician-Philistine harbours to South Arabia crossed each other. Therefore to possess it became the final aim of the Israelites, when striving after the expansion of their dominion; and David, who subjected the whole of Edom, succeeded in conquering it. Though Solomon lost the eastern part of Edom to Hadad, the western part remained in his power as a province of Judaea. With Phoenician help he built a mercantile marine at Aila (I Kings 9, 26; II Chron. 8, 17), of which however no further mention is made after his death. Aila remained for some time in the power of Judah. Uzzia had it fortified (II Kings 14, 22; II Chron. 26, 2), but soon afterwards it fell into the hands of the Edomites and still later was captured by the Nabataeans. In 105 A. D. it was annexed to the Roman province of Arabia, and early in the 4th century it is referred to as a part of the province of Palestina Tertia, and as the seat of the Legio Decima; which accounts for its being connected with Syria and Palestine by military roads. Christianity took root here at an early period: amongst the signatures on the acts of the council of Nicaea there is one of a Bishop Peter of Aila. The decline of the Byzantine power in the border districts proved disastrous to the commerce in Aila, which, together with the surrounding country, was subject to the sphere of influence of the Ghassānide princes. In Tabūk 9 (630) Yuḥannā b. Ru'ba, Lord (acc. to Masʿūdī: Bishop) of Aila, offered to pay a yearly tribute of 300 dīnār to Muḥammed. In exchange for that no harm was done to the town by the Moslem armies, and it revived to new prosperity. As the harbour became unnavigable, it was removed further down south, and the town was laid out towards that side. The ancient Aila was abandoned as early as the 9th century and the new town of Waila (diminutive of Aila) was at the period of the Caliphate a small centre of intellectual and material culture. Aḥmed b. Ṭūlūn 254—270 (868—883) caused a new road to be laid over the ridge of the Djebel Umm Nṣēle, instead of the old caravan route which was so closely pressed between the lateral spur of that mountain and the sea as to be often

flooded by its waves. This steep passage (*'aḳaba*) was called 'Aḳabat Aila after the neighbouring town. The crusaders, desiring to extend their power also over the Red Sea, appeared in Aila in 1116, and annexed it to the principality of Crac don Montreal. They fortified a little island opposite Aila and built a small castle in the town itself, blocking thereby the connexion between Egypt and Arabia (Syria). This made it necessary for Ṣalāḥ al-Dīn (Saladin) to recapture both island and town. He had a fleet carried to the bay of Aila (the ships having been taken to pieces and loaded on the backs of camels), laid siege to both Aila and the islet and took them in 1171. A similar episode took place in 1181, when Reginald, prince of al-Kerak, also caused ships to be transported thither and surrounded the Moslem garrison until they were hard pressed. During the latter siege the stronghold on the island was levelled to the ground, and part of the town destroyed. But the latter soon revived, and maintained its importance under the sway of the Aiyūbide and Mameluke rulers of al-Kerak. The disorders of the 15th and 16th century paralysed the commerce of Aila almost completely and caused the destruction of the town. The citadel on the continent alone was spared, that it might protect the steep passage (*'aḳaba*) of the Egyptian pilgrim road. It was called afterwards by the abbreviated name al-'Aḳaba, the word Aila having been dropped. At the present day al-'Aḳaba is part of the Turkish province of Ḥidjāz (not of Syria = al-Shām). It has been lately connected with Ma'ān-Damascus by telegraph. It is the residence of a Muḥāfiẓ (sheriff) who is subject to the Wālī (governor) of Djidda. In 1898 al-'Aḳaba numbered about 50 miserable cottages, built on a calcareous plain between the steep Djebel Umm Nṣēla and the sea. About the middle of the south end of the village the square citadel stands, flanked by semicircular pavilions. It contains a garrison of 220 men. Twice or three times a year Ottoman ships touch the place in order to relieve and provision the troops. The climate is very unhealthy and the water which springs up from innumerable sources close by the sea is salty and spreads fever. The inhabitants earn a livelihood mostly by trade, and in a few cases by agriculture; they also cultivate palms. About 3500 date-palms in the neighbourhood of al-'Aḳaba are the property of the chieftains of various Bedouin tribes, who pay about one half, two thirds or three quarters of their profit to the villagers for cultivating them. There is no fishing. In 1898 not one boat could be found in the whole village. Little is left of the ruins of Aila (Ila according to the modern pronunciation), which are to be found at a distance of 1¼ mile towards the north. But at the present day, south-east of these ruins a seyāl-tree (seyāle-djirmi) is still worshipped because of its sanctity (it is inhabited by a spirit), a circumstance deserving of notice, as the ancient town of Elath (= "holy" tree) seems to have owed its name to it. — Bibliography conc. the history of Aila-Aḳaba is given by Musil, *Arabia Petraea* ii.(*Edom*)[1] p. 305 *et seq.*; the same work contains a detailed account of its topography (ii[1], 256 *et seq.*; ii[2], 187 *et seq.*) and ethnology (iii. 47).

(A. MUSIL.)

AILŪL. (See SAFAR.)

AIMĀḲ is an East-Turkish and Mongolic word, almost synonymous with the more usual *Il* of Turkish dialects. The original sense of both words is "tribe", but they are also used to denote larger tribal unions as political unities. Northern Mongolia (Khalkha) is divided into four aimāḳ on the basis of the four khāns (Tushetu-khān, Tsetsen-Khān, Sain-Noyon and Tsasaktu-Khān). In Afghānistān four nomadic tribes (Djamshīdī, Hazāra, Fīrūzkōhī and Taimanī) are called by the comprehensive appellation of Čār (Čahār) Aimāḳ (four aimāḳ).

(W. BARTHOLD.)

ĀĪN (P.) = Law, institution. Famous are the "institutions" of Emperor Akbar, collected by his Vizier Abu'l-Faḍl [q. v.] in the third volume of *Akbar Nāme*, under the title of *Ā'īn-i Akbar*.

'AIN (A.) = Eye, also spring, substance etc. In the sense of "eye" the word is sometimes respectfully used in compound proper names (*Laḳab*), such as 'Ain al-Dawla (Eye of the government), and 'Ain al-Mulk (Eye of the realm). In the sense of "spring" it occurs in various geographical names, the best-known of which will be given below. — Concerning 'Ain as the name of an Arabic letter see the next article.

'AIN is the name of the 18th letter of the Arabic alphabet, used as a numeral to denote 70. The original symbol in the North-Semitic inscriptions was a little circle like our o, whence, as it resembled an eye, the name was derived. It is the voiced (*madjhūra*) glottal continuant, the throat-sound with the deepest possible articulation (f. i. *Lisān* ix. 349, 4: *wa-aḳṣa 'l-ḥurūf kulliha 'l-'ain*ᵘ); the nearest sound is *ḥ*, to which it is consequently assimilated (Zamakhsharī, *al-Mufaṣṣal* p. 192, 13 *et seq.*); it shifts its articulation place towards that of the *ḥ* where it is followed by a pause (*Muf.* p. 190, 4 *et seq.*). Al-Khalīl has also considered the 'ain to be the deepest throat-sound, and for that reason he started his lexicon with that letter. Later writers on the contrary (amongst others al-Zamakhsharī, who follows Sībawaihi: *Muf.* p. 188, 13) are mistaken in giving precedence to the ' and *h*. The Arab considers it, along with the *ḳ*, the purest and most pleasing sound of his language, because of its deep guttural articulation (*Lisān*, ibid.: *anṣa'*ᵘ *'l-ḥurūfi djarsan wa-aladhdhuhā samā'an*). In many Semitic languages, amongst others in Assyrian, but especially in modern Aramaic and Arabic dialects, 'ain has shifted into alif. In grammar 'ain denotes the second radical letter of a root, e. g. *'ain al-fi'l*.

Bibliography: Lane, *Lexicon* p. 1931, col. 1. *Tādj al-'arūs* v. 267 last line but one *et seq.*; Wright, *Comp. Grammar* p. 42 *et seq.*, 48 *et seq.* Zimmern, *Vergl. Gramm.* § 61; Lindberg, *Vergl. Grammatik* pp. 19—23.

(WEIL.)

'AIN DILFE is a spring in the north of Syria which is of some importance on account of its situation on the road between Antioch and Aleppo, somewhat west of the large ruins of the monastery of Ḳaṣr al-Banāt. Its source is on the northern slope of the Djebel Bārīshā and it runs through a narrow channel cut out in the rock into a pump-room (*sabīl*). According to a yet unpublished inscription, this pump-room was built in 877 (1472-1473) by an inhabitant of the neighbouring village, of the name of Maḥmūd b. Aḥmad. It is highly probable that on account of the

spring a settlement already occupied the spot in ancient times. A few remains of buildings from the Christian era, still more from Islamic times, can yet be seen. There are also a few Muḥammedan tombstones. The place is nowadays uninhabited; it belongs to the people of Sermeda. From time to time nomadic Turcomans or Kurds encamp there in their tents. The spring is primarily important for the use of the caravans between Antioch and Aleppo, which often rest there. (LITTMANN.)

ʿAIN DJĀLŪT, "spring of Goliath", owes its name to the tradition that by it David slew Goliath. It is situated close by the bank of the small river Djālūt, east of Zerʿīn. The crusaders called it Tubanés. At this place the Mongols were beaten by the Egyptians under Ḳuṭuz on 26. Ramaḍān 658 (3 Sept. 1260). Cp. Weil, *Gesch. d. Chalifen*, IV 16.

ʿAIN DRAHAM is a locality in the north of Tunis, at an elevation of 2641 feet, on the very pass between the Djebel Fersig (2998 feet) and the Djebel Bir (3343 feet), through which the road runs, which leads from the valley of the Medjerda (Soukh el-Arba) to the Mediterranean (Tabarka). Consequently ʿAin Draham is the most important strategical point of Khāmiria, commanding the whole of that mountainous region. During the French expedition of 1881 it was occupied by the troops of General Delebecque. Since then a permanent camp has been established there. A European market-place has developed itself round about the military station, numbering at present 500 inhabitants, who find their principal livelihood in exploiting the cork-tree forests.

Bibliography: A. Winkler, *Les principaux points stratégiques de la Khoumirie* (*Revue Tunisienne* 1899); E. Violard; *La Tunisie du Nord* (Tunis 1906). (G. YVER.)

ʿAIN MŪSĀ (Moses' spring) is situated east of Petra in Edom. Islamic tradition connects it with Sūra 2, 57; cp. Brünnow and Domaszewski, *Die Provincia Arabia* i. 431; Musil, *Arabia Petraea* ii (*Edom*, 1907) 42, and the article WĀDĪ MŪSĀ. — Other Moses' springs are: 1. Those at the foot of the Nebo mountain in Moab (cp. *Survey of Eastern Palestine* p. 89); 2. the spring near al-Kafr on the western side of the Ḥawrān mountains (see the map of the Djebel Ḥawrān in the *Zeitschr. des Deutsch. Pal.-Vereins* xii, D 3); 3. those on the east coast of the bay of Suez, south-east of Suez. The socalled ʿAin Mūsā near Cairo is not actually a spring. (F. BUHL.)

ʿAIN SHAMS is a town in Egypt. ʿAin Shams is the Arabic name of the ancient Egyptian town of On, which the Greeks called Heliopolis because of its famous sun-temple. A recollection of this cult is contained in the Arabic name (sun-spring,-eye), which seems to owe its form to popular etymology of an old name. In the early Arabian era ʿAin Shams was, according to some authorities, an important town, and the capital of a separate district (*kūra*); but others assert that at that period the place had already fallen to decay and was used as a public quarry. The Fāṭimide ʿAzīz built a few castles on the spot; but afterwards the destruction became complete. The extensive ruins, especially the two obelisks (*misallatān*) of the temple, stirred the imagination of the Arabs. One of them has been preserved until the present day; the other collapsed in 656 (1258). It is said to have contained over 200 *ḳinṭār* of ore. Still at the time of the Arabs a statue of a beast of burden with a man on its back stood between the two.

The other curiosity of ʿAin Shams was its balsam-garden, which was cultivated under the supervision of the government. During the Middle Ages the balsam-tree is said to have grown only here, though formerly it had also been a native plant in Syria. According to a Coptic tradition accepted by the Moslems, the Mother of Jesus had washed the clothes of the child in the spring there on her way back to Palestine after her flight to Egypt. Since that time the water had been salubrious, and only on those fields, which were watered by it, the balsam-tree was able to yield its product, which the Middle Ages held in such high esteem.

Bibliography: Maḳrīzī, *Khiṭaṭ* i. 228 *et seq.*; de Sacy, *Relation de l'Egypte* p. 20 *et seq.*, 86 *et seq.*; Idrīsī p. 145; *Bibl. Geogr. Arab.* (ed. de Goeje) i. 54; VIII 22; Ḳalḳashandī (transl. by Wüstenf.) p. 13, 96; Yāḳūt, *Muʿdjam* iii. 763; iv. 564; Ibn Duḳmāḳ v. 44; Bädeker, *Egypt*; Casanova *Les Noms Coptes du Caire et Localités voisines* p. 40 *et seq.*, Heyd, *Levantehandel* ii. 566 *et seq.* (C. H. BECKER.)

ʿAIN al-TAMR (date-spring) was a locality west of the Euphrates, not far from Anbār, probably north-west of the latter place. As it was situated on the very border of the Syrian-Arabian desert, ʿAin al-Tamr was primarily important as a provision-market for caravans.

Bibliography: Weil, *Gesch. d. Chalifen* i. 35; Nöldeke, *Gesch. d. Perser u. Araber zur Zeit der Sasaniden* (Leiden 1879) p. 39; G. Rothstein, *Die Dynastie der Lakhmiden in al-Ḥīra* (Berlin 1899) p. 119 and especially Blau, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xxvii. 339. (STRECK.)

ʿAIN TEMUSHENT (Aïn Temouchent according to the official French spelling) is a town in Algiers (district of Oran), situated at the confluence of the Wād Temushent and the Wād Senan, at a distance of 45 miles south-east from Oran, and 36 miles northnorth-east from Tlemcen. There are 7000 inhabitants, 4000 of whom are Europeans. ʿAin Temushent occupies the situation of the Roman town of Albula. At the time of al-Bekrī there was in that neighbourhood a locality called Ḳaṣr Ibn Sinān. It was found at a distance of a day's march east from the Berber town of Aslen, and also at a day's march west from Djerāwa Lazizū, a marketplace established by ʿUbaidān b. Sinan al-Azdadjī, the ruins of which can still be seen at the spot called Medinat Arūn on the left bank of the Rio Salado. The French occupied ʿAin Temushent and fortified it with a redoubt, in which, in 1845, 79 men withstood the attack of 1500 soldiers of ʿAbd al-Ḳādir. In 1851 the place was raised to the rank of a commune. At the present day it is a flourishing centre of colonisation.

Bibliography: Al-Bekrī, *Description de l'Afrique septentrionale* (transl. by de Slane) p. 168, 184. (G. YVER.)

ʿAIN al-WARDA is a locality, which according to Yāḳūt is identical with Raʾs ʿAin [q. v.]. It owes its fame to the big battle of 24 Djumādā I 65 (6 Jan. 685), in which the Shīʿites

of Kūfa were slaughtered by the Syrians. Cp. Weil, *Gesch. d. Chalifen* i. 360 *et seq.*; Müller, *Der Islam im Morgen- und Abendland* i. 374.

'AIN ZARBA is a town in Asia Minor, in south-east Cilicia, north of Maṣṣīṣa (the ancient Mopsuestia); to be more exact: situated in the angle formed by the Djaiḥān, the Pyramus of the ancients, and its tributary the Sombaz. The town existed already in antiquity and was then called Anazarba; cp. Hirschfeld in Pauly-Wissowa, *Real-encyklop. der klass. Altertumswiss.* i. col. 2101. The Arabs connected the first element of the name, *Ana*, with *'ain* = spring; cp. Sachau in the *Zeitschr. f. Assyriologie* viii. 98. Caliph Hārūn al-Rashīd caused 'Ain Zarba to be strongly fortified in 180 (796). The town was especially flourishing in the 10th century, when it was supplied with new fortifications by the Ḥamdānide prince Saif al-Dawla. It was nevertheless captured several times by the Byzantines, notably in 962 (cp. Freytag in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xi. 98; Weil, *Gesch. d. Caliphen* iii. 17). The crusaders took the town, which they called Anazarbus, and destroyed it. Afterwards 'Ain Zarba belonged to the little-Armenian realm which was founded in Cilicia in the 11th century. The name of the town was corrupted to Nāwarzā in the 14th century. At the present day the place is a complete ruin known by the name of Anawarza. — Cp. especially G. le Strange, *The lands of the eastern Caliphate* (Cambridge 1905) p. 129; K. Ritter, *Erdkunde* xix. 56. For further authorities cp. Hirschfeld in Pauly-Wissowa, *ibid.* (STRECK.)

'AINĪ (ḤASAN), surnamed Mumaiyiz-i Shu'arā' (corrector of the poets), was born at 'Aintāb (1170 = 1756), studied with a view of entering the civil service, but afterwards abandoned the idea and got an appointment as professor of Arabic and Persian at the Chancery of the Sublime Porte. He died in Ṣafar 1254 (May 1838) and was buried in the monastery of the Mewlewī dervishes of Galata to whom he belonged. The best of his poetical works is the *Sāḳī-nāme*, a summary of his philosophical reflections on human life. A posthumous work is a collection of *ghazals* and *ta'rīkhs* (chronograms). His panegyrics of the Prophet were collected under the title of *Naẓm-i Djawāhir*.

AL-'**AINĪ** (Abū Muḥammed Maḥmūd b. Aḥmed b. Mūsā Badr al-Dīn), historian and faḳīh, was born on 17 Ramaḍān 762 (22 July 1360) at 'Aintāb, a locality between Aleppo and Antioch. He belonged to a cultured family (his father was ḳāḍī) and commenced his studies at an early age, first in his native town, afterwards in Aleppo. At the age of twenty-nine he visited Damascus, Jerusalem and Cairo. Having been initiated at Cairo into the mystical doctrines of Ṣūfism, he entered for some time the Barḳūḳiya monastery of dervishes, which had been newly founded. After several journeys to Damascus and his native town, he settled finally at Cairo and was there appointed *muḥtasib* in 801 (1398-1399), under the reign of Sultan al-Malik al-Ẓāhir. He was repeatedly dismissed and re-appointed, and finally succeeded in 803 in obtaining the enviable post of inspector of the pious institutions (*nāẓir al-aḥbās*). At the accession of Sultan al-Malik al-Mu'aiyad Shaikh (815 = 1412) he fell into disgrace; but soon after was received again into great favour and re-endowed with the post of *muḥtasib*. His knowledge of the Turkish language was of assistance in ingratiating him with the sultans Mu'aiyad, Malik Ẓāhir Ṭaṭar and Malik Ashraf Barsbāi. For Ṭaṭar he translated the treatise on law by al-Ḳudūrī into Turkish. In the course of his long and frequent conversations with Sultan al-Malik al-Ashraf he read aloud to him his Arabian chronicle, translating it at sight into Turkish. The former ṣūfī of the Barḳūḳiya had become a perfect courtier, and composed, besides his other works, panegyrics in honour of his masters (a *Life of Mu'aiyad*, a *Eulogy of al-Malik al-Ashraf*). Having obtained the post of supreme ḳāḍī of the Ḥanafites in 829 (1425-1426), he occupied it for twelve consecutive years. In 846 (1442-1443), at the age of eighty-three, he even succeeded in combining the charges of *muḥtasib*, inspector of the pious institutions, and supreme ḳāḍī of the Ḥanafites, a unique case according to his biographers. He was also professor at the Madrasa Mu'aiyadiya. In 853 (1449-1450) he was disgraced, and two years later he died (4 Dhu'l-Ḥidjdja 855 = 28 December 1451). He was buried in the Madrasa 'Ainīya, which he had founded, and where, at a later period, another commentator of al-Bukhārī, al-Kastallānī, was also to find a sepulchre.

The life of al-'Ainī affords highly interesting information concerning the connexions of the literary set with the Mameluke sultans. He took an active part in the intellectual movement of his century, and had connexions, — bad though they were —, with two of the most eminent Moslem scholars of that epoch, al-Maḳrīzī and the Shaikh al-Islām Ibn Ḥadjar al-'Asḳalānī. He supplanted the former in the office of *muḥtasib*, and consequently incurred his hatred; against the latter he conducted a very animated controversy à propos of his commentary on the Ṣaḥīḥ of al-Bukhārī.

Al-'Ainī's works are very numerous. Some were written in Turkish; the majority in Arabic. The three which are best known are the following: 1. His General History entitled *'Iḳd al-djumān fī ta'rīkh ahl al-zamān* (an extract in *Recueil des historiens des croisades*, *Hist. or.*, ii.a, 183—254); 2. his commentary on the poetical examples quoted in four commentaries of the *Alfiya* of Ibn Mālik, with the title *al-Maḳāṣid al-naḥwiya fī sharḥ shawāhid shurūḥ al-alfiya* (printed in the margin of the *Khizānat al-adab* of al-Baghdādī, Būlāḳ 1299, 4 volumes); 3. his extensive commentary on the *Ṣaḥīḥ* of al-Bukhārī, called *'Umdat al-ḳārī fī sharḥ al-Bukhārī* (published at Cairo in 1308, at Constantinople in 1309-1310, in eleven volumes). In this last work al-'Ainī evinces a certain method, which contrasts with the usual pell-mell of the Moslem expounders. In studying the separate ḥadīths he observes the following order: the connexion between the ḥadīth and the superscription of the chapter; an examination of the *isnād*, of its peculiarities and of its authorities; an enumeration of the other works or of the other chapters of the *Ṣaḥīḥ* where the ḥadīth occurs again; an examination of the literal meaning, and finally of the juridical or ethical rules which can be derived from the ḥadīth.

'AINTĀB (Armenian Antaph) is a town in the wilāyet Ḥalab (Aleppo), capital of the ḳaza (ḳaḍā') 'Aintāb north of Ḥalab, numbering about 45 000 inhabitants, two thirds of whom are Moslems; the rest are mostly Armenians. The town is the centre of the American mission which has founded here the central Turkey College. Both commerce and industry are fairly important; especially the manufacture of cotton materials, pekmez and brandy. An old aqueduct supplies the town with water. Amongst other ancient buildings the castle deserves to be mentioned. According to Yāḳūt 'Aintāb was also called Dulūk, the name which was properly due to the district. Actually Dulūk (the ancient Doliche) is situated two hours north-west of 'Aintāb, which is probably identical with the Δάβα mentioned by Ptolemaeus. As a matter of fact the name 'Aintāb is never mentioned by the ancient Arabian geographers.

AIR (or ASBEN) is a mountainous district of the Sahara between Lat. 20° and 16° N. Air is 280 miles in length from north to south, and 60 in breadth from east to west in its central part. Its area may be estimated at 5800 square miles, the population at a number varying between 60 000 and 100 000 inhabitants. This country is at present one of the least known regions of Africa. Barth explored it in 1850, and it was afterwards visited by E. de Bary, who was prevented by the hostility of the natives from advancing beyond Adjiro. In 1899 the Sahara mission Foureau-Lamy went as far as Iferwān and Agades, from whence they reached Damerghu. The latest traveller was the French geologist Chudeau (1905-1906). The information gathered by the Sahara mission rectifies and completes the statements of Barth concerning the geology, the climatology and the topography of Air. But still, the work of the German explorer remains the principal authority upon everything that concerns the ethnography and the history of the country, as a long sojourn had enabled him to collect a great deal of information amongst the natives.

Air is divided into three distinct regions (Foureau):

1. Northern Air, being the transition from the Sahara-Hamada to Air proper. Plateaux and plains constitute its general aspect, the rising of the ground nowhere exceeding 2300 ft.

2. Central Air, stretching from the massif of the Taghāzi in the north to that of the Awderas in the south. It is 186 miles in length and forms a compact and homogenous whole over a surface of about 110 miles. Prominent are the massifs of the Taghāzi (3600 ft.) the Igherghaten, the Timge, the Bundai, the Seren, the Agellan, the Baghsen, the Aghaten (the Agata of Barth; 5900 ft.), the Digellan (4250 ft.) — the latter two separated by the pass of Keibabi (2600 ft.) the Bila — (4600 ft.) and the Awderas, all of them rising above a foundation of granite and sandstone. All these elevations, with their abrupt flanks resembling inaccessible walls, end in sharp peaks or in serrated and indented crests. The decomposition resulting from the erosions has formed a flight of two terraces, surmounted by a pell-mell of accumulated blocks. Deep, indented ravines penetrate into the very heart of the mountains. In spite of this distorted relief Air does not deserve the name of "Alpenland" which Barth assigned to it. Indeed, not one single summit seems to have an absolute height of more than 5250 ft., nor to rise above the level of the valleys any higher than 2300 a 2600 ft.

3. Southern Air, being a succession of rocky plateaux, sloping down towards the Soudan. A single summit, the Tillidek, attains a height of 3300 ft.

Though Air belongs to the area of the Sahara, it is much more watered than the desert proper. There is a moist season from the end of June till the end of August. But the rains are not so regular in Air as in the tropical zone. They only strike certain parts of the massif, and come down precipitously in violent but short-lasting showers, turning the desiccated beds of the "ufian" *(widyān)* into impetuous but intermittent torrents. They are principally useful in supplying the *ghadir* and in sustaining the subterranean water reservoirs. Their frequency and abundance moreover vary from year to year. So for instance the year, in which Barth visited Air, seems to have been exceptionally moist, but the year of the Sahara mission unusually dry. Foureau insists that currents are very rare. The rivers, according to his statement, are not "living", except at rare and short intervals. As for the hydrographical system, it is still very little known. On emerging from the mountains the valleys expand and the "weds" become lost in the desert. But in all probability the waters descending from the northern massifs flow towards the west, those of central Air towards the west and north-west, and those of southern Air towards the south and south-west, though no exact information concerning the principal basins in which they are received has yet been gained.

The comparatively moist climate of Air supplies it with a vegetation much richer than that of the Sahara, though less variegated than that of the Soudan. Most of the plants are of the gumtree order. The fauna is represented by the lion, the wild boar, the jackal, the gazelle, the zeba etc. In spite of the fertility of some of its valleys Air does not deserve the name of "Sahara paradise". Agriculture is but little developed. Damerghū and the Soudan supply the millet which constitutes the chief food of the population of Air. If they were reduced to relying on their own resources, they would run the risk of starving, as was stated by Foureau, de Bary and Barth. Air owes its place of importance in the economical life of the Sahara first of all to the situation it occupies at the meeting of the caravan routes between Sokoto and the Niger regions on the one side and Tuat, Ghat, Ghadāmes and the salines of Bilma on the other. Consequently various African tribes have disputed the possession of Air amongst themselves, though it lends itself but little to the establishment of a powerful state.

The name of Air is mentioned for the first time in the 14th century by Leo Africanus (i. 6). The original appellation however seems to have

been Asben, which Air is still called amongst the black population. The earliest occupants of Asben were the Göberawa, a branch of the Hausa tribe. According to Muḥammad Bello they had come from the north-east and were perhaps related to the Copts. Towards the close of the 10th century of the Christian era the Berbers in their turn settled down in that country. On the road which at the present day connects Awderas with Agades, at about 20 miles north of the latter, they built the town of Tin-Shaman (or Assaman), which became the capital of a flourishing state and attained a certain degree of intellectual culture. It is now a ruin. But the political aspect of the country was thoroughly changed by the arrival and subsequent settlement of fresh Berber conquerors, the Kēl-Öwī, about the year 1740 according to Barth. From the information supplied to him it appears that the Kēl-Öwī came from the north-west, and that their most powerful families belonged to the confederacy of the Awrāghen, whose language is still spoken by their descendants. The Kēl-Öwī, on the contrary, are said to have come from the Alakkos country, between Zinder and Kuka, a statement which was gathered by de Bary but does not seem very well founded. Be that as it may, the Kēl-Öwī slaughtered part of the population of Air and enslaved the rest, with this restriction however, that neither these captives nor their children could be sold out of the country. They themselves took possession of the land, but however careful they were to preserve some of their customs (e. g. their peculiar rules regarding succession to power), they could not long escape the influence of the Hausa element. Consequently the chieftains acquired the habit of marrying negresses instead of Berber women. That accounts for the Kēl-Öwī being much more a mixed race than the Touaregs in the north. Few individuals amongst them have a fair complexion (except in the Marabout tribe of the Ighdalen). For that reason the northern Berbers despise them as "Ikelān" or slaves. Their language became pervaded by a great number of Hausa expressions. Still worse, this language, the Awraghie, soon ceased to be used in daily intercourse, and was reserved for the palavers and diplomacy. To the number of these tribes the Songhai of the Niger must finally be added, who as early as the Middle Ages had founded a few settlements in the region of Agades. They immigrated in great numbers during the 16th century, subsequent to the conquests of Muḥammed Askia. Hence round about Agades and in the town itself the Songhai language is still spoken at the present day by the Ighdalen, a race sprung from the union of Berbers and Songhai.

The population of Air can accordingly be divided into two principal elements: the black and the Touaregs. The Touaregs of Air constitute two groups: the Kēl-Öwī in the north, the Kēl-Gerēs and the Itisan in the south. The Kēl-Öwī comprise a great many subdivisions, the most important (according to Barth) being the Ighsilang, the Kēl-Ferwān (Tintellust), the Kēl-Azanēres (on the Bilma road), the Ikaskezan, the Kēl-Tafidet, the Kēl-Fares, the Kēl-Fadē etc. They can muster 10 000 men (Barth).

The Kēl-Gerēs and the Itisan have probably been established for a long time round about the massif of the Baghzen; but they were expelled by the Kēl-Öwī and settled south and west of Agades. They seem to have preserved the physical characteristics of the Berbers much better than the Kēl-Öwī. Their number of warriors amounts to about 5000. They are excellent riders, whereas the Kēl-Öwī make exclusive use of the camel.

These Touaregs of Air differ in several respects from those in the north. They are half-settled and only move if compelled by the change of pasture-grounds. The groups into which they are divided are more important than those of the northern Touaregs, but still too insignificant and disconnected to constitute veritable peoples. Their political organisation is rudimentary. Being excessively fond of their independence, they are incapable of putting a stop to their quarrels and have perpetual feuds amongst themselves. The chieftains or "amenokal" of the various confederacies have but a mock authority. The most important amongst them, the amenokal or sultan of Agades, who is often regarded as the sovereign of Air, has only a semblance of power. Isolated from the rest of the country, he is at the mercy of the Kēl-Ferwān. His resources are limited to the tribute, which he levies on travellers who come from the north. Most of the localities of Air are only villages of hovels, or even simple encampments. Their names are Ferwan, Tintellust, Tafidet and Asōdi. The last one numbered formerly 1000 houses and seven mosques, but only 80 dwellings have remained. The only conglomeration deserving to be called a town is Agades (or Egedesh). Barth asserts that it was founded in the middle of the 15th century by the five large Berber tribes that had divided Air between themselves. It became the capital of a prosperous realm, and a commercial centre for the merchants from the north and the Soudanese tribes. It attained the height of its prosperity towards 1510, when it was captured by Ḥādjdj Muḥammed Askia, sultan of the Songhai. Part of the Berber populace emigrated, the rest submitted and became mixed in course of time with their conquerors. Agades retained some importance until the close of the 18th century, though it never recovered its former prosperity. But the decline was accelerated by the decay of Gogo on the Niger, the starting-point for the caravans, which stopped at Agades before entering the Sahara, and by the emigration of the populace at the establishment of the Fulbe realms. In 1850 the town contained only 6 à 7000 houses, whereas in the 16th century, according to Barth, it could hold 50 000 inhabitants. Foureau estimates the present population at 5000 inhabitants, wretched people exposed almost to starvation during the rainy season.

The population of Air are Mussulmans. Near every cemetery stands a mosque consisting as a rule of a roof supported by poles or small stone walls. Agades alone possesses a mosque to which a minaret in the shape of a pyramid lends an almost monumental aspect. At various spots one finds in addition certain places of prayer (*msallie*), rectangular enclosures of varying size, bounded by walls running from north-east to south-west, and having a semicircular projection facing south-east. The most celebrated of these places of prayer is the one which is called Maḳām al-Shaikh Sī

ʿAbd al-Karim (Makam Cheikh-el-Bagdadi, according to Foureau), at the end of the narrow passes that lead towards Awderas. It was erected in commemoration of a Musulman missionary, who converted the Hausa to Islām. In their dealings with foreigners, whom they like to treat as *kuffār*, the people of Air affect great religious rigour. But de Bary and Foureau agree in stating that their religion has been adulterated by the admixture of superstitions and fetishistic practices. Islām has none the less energetic and indefatigable propagandists in these regions. The most devoted auxiliaries of the marabouts of the north, and the most fervid adepts of the fraternities amongst the natives are the smiths, who in Air, just as in the Soudan, enjoy very special consideration. The Tidjāniya have indeed a good number of *ikhwān*; but they can not compare in importance with the Senūsiya, whose doctrines and influence are propagated by secret or avowed emissaries from Tripolis or Tuat. Although Islām has conquered the country, the Arabic language has spread but little. It is taught in the Korʾān schools (the one in Agades numbered 300 pupils at the time of Barth's visit), but it is only understood by the learned.

AIRĀN (T.) is a beverage made of fermented cow's milk. According to Vambéry (*Das Türkenvolk* p. 208) it is sometimes or even usually prepared from the milk of sheep and camels. The Altai people and other Turkish tribes concoct a kind of milk-brandy of airān and kumiss. Cp. Radloff, *Aus Sibirien* i. 297 *et seq.*

ʿĀʾISHA bint Abī Bekr, the favourite wife of the Prophet, was born at Mecca 8 or 9 years before the Hidjra (613-614). Her mother was called Umm Rūmān bint ʿUmair b. ʿĀmir, and her own *kunya* was Umm ʿAbd Allāh, after the name of her nephew ʿAbd Allāh b. al-Zubair. After the death of Khadīdja Muḥammed was inconsolable. One day Khawla bint Ḥakīm, the wife of ʿOthmān b. Maẓʿūn, suggested to him the idea of marrying either ʿĀʾisha, who was still a child, or Sawda bint Zamʿa, a widow of mature age. Muḥammed proposed for ʿĀʾisha to Abū Bekr. At first the latter made some objections but finally complied with his wishes. Muḥammed however had to wait until ʿĀʾisha was disengaged from her betrothal to Djubair b. Muṭʿim, after which he married her, two or three years before the Hidjra, when she was only six or seven years old. But the marriage was not consummated until six or seven months after Muḥammed's departure to Medina (April-June 623). Muḥammed's morning-gift amounted to 50, or according to Ibn Hishām (ed. Wüstenf., i. 1001) 400 dirhem. She brought her toys with her to the home of her elderly husband, and soon succeeded in winning the affection of Muḥammed, who sometimes joined in her games. But an unfortunate accident afterward endangered ʿĀʾisha's power over her husband. It happened when Muḥammed was on his way back from his expedition against the Banū Muṣṭaliḳ in the year 6 (628). The historians do not agree in regard to certain details, although all found their accounts on ʿĀʾisha's own statement. The majority of them assert that ʿĀʾisha was her husband's sole companion in that campaign, she having been appointed by drawing of lots according to the custom of Muḥammed (cp. however Müller, *Der Islam im Morgen- und Abendland* i. 133, and Muir *The life of Mahomet* iii. 238, 244). She travelled in a litter carried by a camel. As long as she was inside the chair, the curtains remained drawn but when there was a halt she dismounted and left them open. During one of these stops, not far from Medina, ʿĀʾisha withdrew from the camp in order to perform her ablutions. When she came back to her litter she discovered that she had forgotten her necklace of Yemen shells, and went back to fetch it, leaving the curtains of the chair closed. In her absence Muḥammed gave the signal for the departure, and ʿĀʾisha's retinue, seeing the curtains closed, concluded that she was in the chair. They loaded the litter on the camel and started on their journey. (She herself declares that her weight was next to nothing, as the food supplied to the women had been very scanty). ʿĀʾisha finding on her return that she had been left behind, sat down on the ground and waited until some one should come to fetch her. Then Ṣafwān b. al-Muʿaṭṭal happened to find her there. He mounted her on his camel and led the animal by the rein. The sight of ʿĀʾisha arriving alone in the company of a young man gave rise to grave accusations. The principal accuser was ʿAbd Allāh b. Ubaiy [q. v.], to whom the following remark is ascribed: "Ṣafwān being handsome and young, it is no wonder that ʿĀʾisha prefers him to Muḥammed". Other persons of note were equally vehement in their charges, amongst others the poet Ḥassān b. Thābit, Misṭaḥ b. Uthātha and Ḥamna bint Djaḥsh — the last one having a grudge against ʿĀʾisha because the latter had opposed the marriage of Muḥammed with her sister Zainab. — Ḥamna gave evidence that she had often seen ʿĀʾisha in the company of Ṣafwān. ʿĀʾisha became ill with vexation (or perhaps feigned some malady), and the Prophet consulted ʿAlī and Usāma b. Zaid as to what he should do. ʿAlī advised him to repudiate ʿĀʾisha (hence the hatred of the latter against ʿAlī); but Usāma did his utmost to prove the innocence of the young wife to Muḥammed. Finally the Prophet exculpated her by means of a revelation (Korʾān xxiv. 11 *et seq.*), saying that no charge of adultery is valid, unless it is supported by four witnesses, and adding that those who accuse but cannot bring forward four witnesses must be punished with thrashing. In spite of that the suspicion does not seem to have lost its hold on Muḥammed's heart, and on his later expeditions he preferred the company of Umm Salama. According to Sprenger however (*Das Leben und die Lehre des Mohammad* iii. 73), who quotes from Bokhārī and Ibn Saʿd, ʿĀʾisha accompanied him once more and again lost her necklace. But on this occasion she sent some Moslems to fetch it. The time of prayer overtook them when they were far away from the camp and without water for their ablutions. This circumstance induced the

Prophet to prescribe that where water was lacking fine sand might be used.

At the time of the Prophet's death 'Â'isha was 18 years old. She has always remained a sacred personage to the majority of the Moslems. She often interposed in politics, and almost every intrigue was inspired by her. She opposed 'Othmân and declared that he had to do penance or resign, and she doubtless had a hand in the insurrection against that Caliph. But when 'Othmân was besieged in his palace ("the day of the house"), 'Â'isha was not at Medîna but had prudently gone "on a pilgrimage to Mecca". When afterwards 'Alî, her mortal enemy, was elected Caliph, she did her utmost to raise the Musulmans against him, under the pretext of wanting only to avenge the murder of 'Othmân. She joined Ṭalḥa and al-Zubair, who assembled a great army and provisions and started for Baṣra. The Tamîmite Ya'lâ b. Munya, who contributed largely to this expedition, bought 'Â'isha a thorough-bred camel, called 'Askar, for which he gave 200 dinârs. The armies of 'Alî and of Ṭalḥa and al-Zubair met in battle on 10 Djumâdâ II 36 (4 Dec. 656). Victory was on the side of 'Alî. 'Â'isha on her camel was in the thick of the fight; seventy men of the Banû Ḍabba, wanting to defend her, fell one after the other, until the camel was killed (hence the name of "Battle of the camel" originated). 'Alî gave order to conduct 'Â'isha to the home of Ṣafiya bint al-Ḥârith b. Ṭalḥa al-'Abdî, and supplied her subsequently with everything she wanted for her return to Medina. Seeing how much stronger 'Alî's party was, 'Â'isha suggested to him that she should stay with him and be his companion on subsequent expeditions against his enemies. But 'Alî declined this offer and intimated that she had to depart. Once again she appeared on the scene at the death of al-Ḥasan b. 'Alî. It was suggested that he should be buried at the side of the Prophet, but 'Â'isha opposed this plan, arguing that the tomb was her property. That day she was again mounted on a camel; the people of Medina began to murmur against her, but finally gave way to her wishes. The date of her death is generally assumed to be 17 Ramaḍân (or 19 Ramaḍân) 58, but the years 56 and 57 are also given. But as the day of the week is stated to have been Tuesday, only the first mentioned date (17 Ramaḍân 58 = 13 July 678) is proved to be exact. Her last wish was to be buried that same night, and she was interred in al-Baḳî' (the cemetery of Medina).

'Â'isha occupies a prominent place amongst the most distinguished traditionists. 1210 traditions are recorded as having been reported by her direct from the mouth of the Prophet. She was often consulted on theological and juridical subjects. She is praised for her genius. She had learnt to read, and knew several poems by heart. Some writers assert, that she possessed a special copy of the Ḳor'ân.

'Â'ISHA bint Ṭalḥa b. 'Ubaid Allâh was a celebrated Arabian woman. She possessed to a high degree all those qualities, which amongst the Arabs were valued most in the sex. She combined a rare beauty with noble descent and a lofty, proud spirit, such as the Arabs liked in their wives. Her father was one of the most distinguished companions of Muḥammed, her mother Umm Kulthûm was a daughter of Caliph Abû Bekr, and the Prophet's favourite wife 'Â'isha was her aunt. No wonder that the beautiful Arabian became one of the most celebrated women of her time. A governor is even said to have lost his post for her sake. Once staying in the holy city for the performance of her religious duties, she sent a message to the governor of the place, al-Ḥârith b. Khâlid, who was appointed master of ceremonies of the pilgrimage, asking him to defer the general service until she had completed the last of the seven prescribed processions round the Ka'ba. The governor indulged her in this request; his ill-timed gallantry aroused such indignation, that Caliph 'Abd al-Malik b. Marwân felt obliged to dismiss him. 'Â'isha was married three times, first to her cousin 'Abd Allâh b. 'Abd al-Raḥmân b. Abî Bekr, next to Muṣ'ab b. al-Zubair and finally to 'Omar b. 'Ubaid Allâh b. Ma'mar.

Bibliography: Ibn Sa'd viii. 342; *Anonyme Arab. Chronik* (ed. Ahlwardt) p. 16, 204 *et seq.*, 222; *Aghânî*, passim; A. v. Kremer, *Culturgesch. des Orients unter den Chalifen* i. 29; ii. 99. (K. V. Zetterstéen.)

'Â'ISHA bint Yûsuf b. Aḥmed b. Nâṣir b. Khalîfa al-Bâ'ûniya was a younger sister of Muḥammed b. Yûsuf al-Bâ'ûnî [q. v.]. She lived in 922 (1516) in Aleppo, but afterwards from 929 (1523) in Cairo, and died in Damascus. Her poetical talent appears from a few ḳaṣîdes (Ahlwardt, *Verz. d. arab. Hss. d. Kgl. Bibl. zu Berlin* nº. 7933, 1—3) and a *badî'iya*, a poem containing model examples of the figures of rhetoric, entitled *al-Fatḥ al-mubîn li-madḥ al-amîn* (*ibid.* nº. 7378; Rieu, *Supplement to the Catal. of Arab. Mss. in the Brit. Mus.* nº. 985 vi; Houtsma, *Catal. . . . Brill*, nº. 64). The manuscript of the *Adhkâr* of Nawawî in the university library at Leipzig, nº. 194 (Vollers, *Leipzig Catal.* ii. p. 51) is in her handwriting. Her biography is found in the anonymous *Safîna*, *ibid.* nº. 684. (Brockelmann.)

AISSAOUA is the French spelling of 'Isâwîya [q. v.].

AIT (other forms: *Aith*, *Ath*, *At*) is a Berber word signifying "sons of", used exclusively in compound proper names, like *Banû* and *Awlâd* in Arabic. It is only used however by three groups of Berber tribes: in Algiers by the Kabyles of the Djurdjura (e. g. Aith Yenni, Aith Iraten); in Morocco by the Berbers of the Central Atlas (Aït Atta, Aït 'Ayâsh), and by those of the Sûs and the Wâd Dra'a (Aït Bû 'Amran). Elsewhere (in the western Sahara) the words *Ida* (Ida Ou Akil), or *Kil* (Touareg), or also the Arabic words *Beni* (= *Banû*) or *Oulad* (= *Awlâd*) are in use.

(R. Basset.)

AIWALIḲ ("quince country"), in Greek Kydônia, is a town of Asia Minor in the province

of Khudāwendigâr (Brussa). It has 20 974 inhabitants, for the greater part Greek Orthodox. The place was razed to the ground in the Greek war of independence (1236 = 1821), but has since recovered its prosperity, which is continually on the increase. There are 24 Greek schools, amongst which is a grammarschool recognised by the university of Athens. The people of Aiwalik cultivate the vine, olive and mastic; they export olive-oil, soap, leather and tanned skins, raisins, wines and brandy, and common glass ware. — The ḳaza has no nāḥiya's and comprises besides the town of Aiwalik only one village called Kütük.

Bibliography: V. Cuinet, *La Turquie d'Asie* iv. 268—271; Ch. Texier, *Asie Mineure* p. 207; E. Reclus, *Nouv. géogr. Univ.* ix. 596; Djewdet Pasha, *Ta'rīkh* xi, 283—285 (containing details concerning the motives for the destruction of the town, and a severe criticism of the policy of the statesmen of that epoch); 'Alī Djawād, *Memālik-i 'othmānīyenin ta'rīkh u-djoghrāfiyā lughāti* p. 47. (Cl. Huart.)

AIWĀN, or to be more exact *īwān*, plural *īwānāt*, *awāwīn*, is an Arabic loanword from Persian *īwān* (connected by Salemann with phlv. pers. *bān* = house, cp. *Grundr. d. iran. Philol.* i.² 272). The latter signified a presence-chamber of the Sāsānide kings, being an immense, rectangular hall enclosed by walls on three sides and open on the fourth. Part of the *aiwān* belonging to the palace of Ctesiphon is still standing on a desolate spot south of Bagdad, and is known by the name of *Aiwān-Kisrā* = "Hall of Chosroes". From the definite form *al-īwān* was derived the modern form *līwān*, plur. *lawāwīn*, an appellation applied to a room in Arabian houses in Egypt and Syria, which is of similar character, open on one side (Lane, *Modern Egyptians* i. 18—20; Cuche, *Dict. arabe* p. 614; A. von Kremer, *Topographie von Damascus* p. 19). This word already occurs in the Arabian Nights' Entertainments (Dozy, *Supplém.* ii. 563.) (Cl. Huart.)

AIWAZ ('Aiwaḍ) is the name of the servant (usually an Armenian) in a konak, who carries the food from the kitchen into the dining-room. (Jacob.)

AIYĀM (A.) = days, plur. of *yawm* [q. v.]

AIYĀM AL-'ARAB = "Days of the Arabs" is the name which in the Arabian legend is applied to those combats (cp. *Lisān*, s. v. *yawm* xvi. 139, according to Ibn al-Sikkit), which the Arabian tribes have fought amongst themselves in the pre-Islamic (sometimes also early Islamic) era. The particular days are called for example *Yawm Bu'āth* = "Day of Bu'āth", or *Yawm Dhū Ḳār* = "Day of Dhū Ḳār". Their number is considerable. Many of them however are not commemorative of proper battles like the "Day of Dhū Ḳār", but only of insignificant skirmishes or frays, in which instead of the whole tribes, only a few families or individuals opposed one another. The Arabs themselves have sometimes noticed this fact. Al-Zubair b. Bakkār for example, when speaking of the combats between the Aws and Khazradj tribes, observes that only on the day of Bu'āth a proper battle had been fought, and that on the remaining days the fight had been limited to throwing of stones and beating with sticks (*Aghānī* ii. 162, 11; this passage was evidently derived from Zubair's account of the combats between the Aws and Khazradj, which is mentioned in the *Fihrist* i. 110). The number of these combats, handed down by tradition, has moreover increased by the fact, that a great many were called by different names after the settlements, well-springs, hills etc., near which they took place. Consequently one and the same occurrence has been recorded in various places under different names.

The course of events on each individual day is somewhat after the same pattern. What in this respect is said by Wellhausen (*Skizzen und Vorarbeiten* iv. 28 *et seq.*) of the particular combats between the Aws and Khazradj, applies to the Aiyām in general. At first only a few men come to blows with one another, perhaps in consequence of a border dispute, or some insult offered to the protégés of a man of influence. Then the quarrel of a few grows into the hostility of whole races or even of entire tribes. They meet in battle. Bloodshed is generally followed by the intervention of some neutral family. Peace is soon restored. The tribe, which has lost fewer men, pays to the adversary the price of blood for the surplus of dead bodies.

The accounts of the Aiyām, written in good old prose, together with the ancient poems supply excellent information concerning conditions previous to Islām: They especially afford us an insight into the chivalrous spirit, by which the old Arabian warriors were inspired. Popular memory kept the recollection of these heroes alive for centuries. So similar subject-matter to that found in the Aiyām often recurs in later popular romances, drawn out, it is true, in legendary fashion. One example may suffice: Zīr, a hero of the *Siyar Banī Hilāl* is none other than Muhalhil, brother to Kulaib Wā'il, who acts a leading part in the Basūs war between the Bekr and Taghlib tribes (Muhalhil is already called al-Zīr = "the visitor of women" in *Aghānī* iv. 143, 11).

Tradition affirms (cp. Ibn 'Abd Rabbihi, *'Iḳd*, Cairo 1302, iii. 61 towards the end), that Muḥammed's companions already discussed the events of the *Djāhilīya* in their assemblies (*madjālis*). Consequently the Aiyām al-'Arab afforded at an early period a favourite subject of study to the *Akhbārīyūn*, i. e. traditionists, who were engaged on the *Akhbār al-'Arab*, the old Arabian tales, amongst which the Aiyām are included. In the *Fihrist* (*maḳāla* iii., *fann* i.) several of these authors are mentioned as having written narratives of particular battle-days or of all of them. The original of such a work on the Aiyām has not come down to us; but considerable extracts by subsequent writers are extant. Most of these have borrowed from Abū 'Ubaida (d. 210 = 825). Of his work on our subject only the title is mentioned in the *Fihrist* (i. 53 *et seq.*). Something more concerning him is reported by Ibn Khallikān (ed. Wüstenf. nº. 741, who is followed by Ḥādjdjī Khalīfa i. 499 nº. 1513 s. v. *'Ilm 'aiyām al-'Arab*). According to these authorities Abū 'Ubaida wrote two books on the Aiyām, a shorter one describing 75 days, and a more extensive one, in which he treats of 1200.

The information concerning the Aiyām which later writers have preserved, is partly given in scattered bits, and partly in entire chapters in proper connection. Instances of the former are found in al-Tibrīzī's *Ḥamāsa* commentary, in the *Kitāb al-aghānī*, where they are inserted by way

of explanation of events alluded to in the ancient verses, in the collections of proverbs, and in the works on geography (al-Bakrī, Yāḳūt). Examples of the latter are contained in the *ʿIḳd al-farīd* of Ibn ʿAbd Rabbihi (iii. 61 *et seq.*), in al-Nuwairī's encyclopaedia *Nihāyat al-arab fī funūn al-adab* (*fann* v., *ḳism* iv., *kitāb* v.) and in Ibn al-Athīr's historical work *al-Kāmil fi 'l-taʾrīkh* (i. 367—517).

The account in the *ʿIḳd* was probably based on the minor work of Abū ʿUbaida. It is very concise, often to such an extent, as to obscure the meaning, so that it can only be ascertained by comparison with more detailed accounts by other writers. Al-Nuwairī has — apart from details — copied the whole chapter on the Aiyām from the *ʿIḳd*. Ibn al-Athīr has tried to arrange the separate "Days" in chronological order, in accordance with the character of his history. His account goes much more into details than that of the *ʿIḳd*. A great deal of it must doubtless be traced back, either directly or indirectly, to the larger version of Abū ʿUbaida's work, much also to other sources all of which cannot be retraced.

It must finally be observed, that also al-Maidānī treats of the Aiyām al-ʿArab in the 29th chapter of his *Madjmaʿ al-amthāl*. His narratives are extremely short, but very useful for quick orientation. He restricts himself as a rule to giving the pronunciation of the name, explaining its meaning and enumerating the tribes which engaged in the battle. In this way 132 pre-Islamic days are dealt with by al-Maidānī. In addition to those, 88 Islamic days are moreover enumerated in a second section of that chapter. For further *bibliography* cp. E. Mittwoch, *Proelia Arabum paganorum* (*Ajjâm al-ʿArab*) *quomodo litteris tradita sint* (Diss.) Berlin 1899; C. I. AIYĀR. [See IYĀR.]

AL-ʿAIYĀSHĪ ABŪ SĀLIM ʿABD ALLĀH B. MUḤAMMED ABĪ BEKR, a Maghrib man of letters, lawyer and learned ṣūfī, was born on one of the last days of Shaʿbān 1037 (April-May 1628) amongst the Berber tribe of the Ait ʿAiyāsh between the high and middle Atlas, not far from the sources of the Mulūya. He studied first under the guidance of his father, and at Darʿa under the tutorship of Abū ʿAbd Allāh Muḥammed b. Nāṣir al-Darʿī, and subsequently visited the principal towns of Morocco. His teachers during that period were al-Abbār, Maiyāra, Abū Zaid, Ibn al-Ḳāḍī and especially Abū Muḥammed ʿAbd al-Ḳādir al-Fāsī who gave him an *idjāza*.

He twice made the pilgrimage, in 1059 (1649) and 1064 (1653-1654). He made a sojourn of some duration at Mecca and Medina, where he delivered a course of lectures on the *Mukhtaṣar* of Sīdī Khalīl, the *Shamāʾil* of Tirmidhī, the *Muḳaddima* of Sanūsī, the *Nuḳāya* of Suyūṭī, the *Ḳurṭubīya fī fiḳh al-mālikīya* and the *Alfīya* of Ibn Mālik. After that he went to Jerusalem, where he only stayed a few days.

In coming through Cairo he attended the lectures of ʿAlī al-Udjhūrī, Shihāb al-Dīn Maḥmūd al-Khafādjī, and ʿAbd al-Ḳādir al-Maḥallī. His principal teachers in Mecca and Medina were Abū Mahdī ʿIsā 'l-Thaʿālibī from Algiers, and the great ṣūfī Abū Isḥāḳ Mullā Ibrāhīm b. Ḥasan al-Kūrānī al-Shahrazūrī.

He died of the plague on the morning of Friday 10 Dhu 'l-Ḳaʿda 1090 (13 Dec. 1679).

Al-ʿAiyāshī wrote the following works: 1. A treatise in verse on "sale", on which he afterwards wrote a commentary; 2. A study on the conditional particle *law*; 3. *Tanbīh al-himam al-ʿāliya ʿalā 'l-zuhd fi 'l-dunya 'l-fāniya*, being a ṣūfic discourse; 4. *al-Ḥukm bi 'l-ʿadl wa 'l-inṣāf al-dāfiʿ li 'l-khilāf fī mā waḳaʿa baina fuḳahāʾ Sidjilmāsa min al-ikhtilāf*, a treatise on the question whether al-Sanūsī is right in saying that one cannot be a good Moslem without a proper understanding of the confession of faith, or rather if one has not become pervaded by its meaning; 5. a collection of poetry, arranged by his son Ḥamza and entitled *al-Nūr al-bāsim fī kalām al-shaikh Abī Sālim*; 6. *Itḥāf al-akhillāʾ bi-ʿl dhahāb ahl al-athar*, a collection of biographies; 7. *Tuḥfat al-akhillāʾ bi-asānīd al-adjillāʾ*, containing biographies of his teachers (to judge from the titles evidently one and the same work with 6; 8. *Māʾ al-mawāʾid*, known by the title of *Riḥla* or "Narrative of a journey", two large volumes printed at Fez 1306. It is an important work of information upon the way followed by the caravans travelling from the Maghrib to Mecca. Though his special concern is to give detailed information about the various stages, he manages to sketch with a single stroke the manners of the inhabitants of the countries through which he travels, to write the biographies of the scholars he meets, etc. The style of the Riḥla is quite simple, except where he speaks of Ṣūfism.

(MOHAMMED BEN CHENEB.)

AIYIL (A.; cp. Hebr. *aiyal*) is an antlered mammal, described by Damīrī (Cairo 1274-1275 i. 165—167) as follows: Its horns are massive, and begin to grow when it has passed its second year. During the third year they shoot into branches, and this ramification continues until they form a tree-like antler. This is afterwards thrown off every year, but always grows again. The number of the "nodes" (antlers) corresponds with the number of the animal's years. The aiyil is a good leaper; when chased it precipitates itself from the summit of a mountain (?). The hunter has first its attention diverted by whistling and singing, and then suddenly catches it unawares.

An exact determination on the ground of Damīrī's statements is not possible. But the description of the antlers as being like a tree gives reason to suppose, that some animal related to our common stag is meant, rather than the fallow-deer.

Damīrī also knows fabulous tales concerning the aiyil's mode of living: it is fond of eating snakes, is on friendly terms with fishes etc. The antler, burnt, pulverised and mixed with honey,

was prescribed to relieve women in labour, to expel intestinal worms etc. The blood was supposed to cure gravel. The thick secretion in the tearpits of the animal was considered an antidote against serpent's venom and poisons in general. — Cp. also Ḳazwīnī (ed. Wüstenf.) i. 386 *et seq.*

(A. SCHAADE.)

AIYŪB, the Job of the Bible, is mentioned in the Ḳor'ān amongst the other just men. He is called there "the servant of God", and represented as the patient man. It is told briefly in the Ḳor'ān that God had put Job to the test, that the latter afterwards had addressed prayers to God, that he was restored to his former state and that God returned to him all his family and possessions (Ḳor'ān xxi. 83-84; xxxviii. 40 *et seq.*). The Moslem writers however have made a great many stories about Job, which they derived mainly from the Book of Job and the Jewish haggadah. Job is generally represented as a Rūmī, a descendant of Esau (see *Testament of Job*, ed. James, i). He was the son of Amos (Amūṣ; the spelling, however, is not quite fixed), and of a daughter of Lot. But according to one author, quoted by Ṭabarī, he was the son of "him who believed in Abraham". The majority of the Musulman writers call the wife of Job Raḥma, daughter of Ephraim, son of Joseph. But one isolated authority states her name to have been Machir (Mākhīr), daughter of Manasseh (Mīshā), whose son was mistaken for a daughter. Finally his wife is also referred to by the name of Leah (Līyā), daughter of Jacob (cp. Baiḍāwī on the Ḳor'ān, *l. c.*). This last statement was evidently occasioned by a confusion of the names of Leah, the wife of Jacob, and of Dina, his daughter, who in the haggadah is said to be the wife of Job (*Baba Batra*, p. 15b; *Berēshīt Rabba*, lvii; *Targum of Jerusalem* on Job ii. 9), and also in the *Testament of Job* (*l. c.*). The traditionists, amongst others Ka'b al-Aḥbār, have even described Job's appearance: a tall man with a big head, crisp hair, beautiful eyes, short neck and long limbs. His riches are described according to the Book of Job, with some exaggeration of course. A certain author ascribes to him twelve sons and twelve daughters. Job was very pious and very generous; he was a kind guardian to orphans and a protector of widows. He was a prophet and God had sent him to preach monotheism to the people of his country, which, according to some, was the Ḥawrān, and according to others Bathaniya. Every evening all those who believed in his word assembled in his mosque and recited with him the same prayers (cp. *Baba Batra*, *l. c.*; *Sēder 'Ōlam Rabba* xxi.; *Berēshīt Rabba* xxi. 9; *Abōt R. Natan*, ed. Schechter, pp. 33-34, 164). The Moslem traditionists have reproduced almost literally that part of the Book of Job (i. 6—ii. 7), where it is narrated how Job was put to the test, and they add that Iblis was driven by envy to strike Job. When finally God had given him full power over the body of Job (except over his tongue, his heart and his intellect), Iblis blew into the nostrils of the latter, causing thereby an inflammation of the body and filling it with vermin. His body began to smell so horribly that he was forced to leave the town and make his lair on a dunghill (cp. *Abōt R. Natan* p. 164; *Testament of Job* v.). The wife of Job had to seek work wherewith to earn food for herself and her unfortunate husband. Although Iblis saw that in striking Job he had missed his aim, he never ceased to contrive new and artful means of torturing him still more. He appeared under different forms, one day to the inhabitants of the place, advising them not to give any work to the wife of Job, another time to the latter herself, trying to persuade her to believe in him, who could make an end of her husband's sufferings. All these means having failed, Iblis declared himself vanquished. The majority of the Moslem authors are of opinion that Job was 70 years old when he was stricken by Iblis (see *Berēshīt Rabba* lviii. 3; lxi. 4; *Testament of Job* xii.; cp. however Baiḍāwī on the Ḳor'ān xxi. 83). The duration of his affliction is differently estimated by various authors: by some at 7 years (cp. *Testament of Job* v.), or at 7 years, 7 months and 7 hours, also at 3, 13 or 18 years. The Ḳor'ān (xxxviii. 41) contains a short account of Job making a well spring up from the ground by stamping on it at God's command, after which he bathed himself and drank from the water. The Musulman legend however connects the angel Gabriel with this incident in the following manner: After Job had addressed to God the prayer which is mentioned in the Ḳor'ān (*l. c.*), he was enveloped in a cloud, through which lightning flashed and thunder rolled, and whence several voices issued announcing to him the pardon of God. On the following day, which was a Friday, before sunset, the angel Gabriel appeared to Job, lifted him up and commanded him to beat the ground with his foot. Gabriel gave him also two sheets, a pair of golden shoes encrusted with precious stones, and a quince gathered in paradise. According to a certain author (see Robles, *Leyendas moriscas* i. 225 *et seq.*) the well-spring was very far from the place where Job was, and as he was too weak to walk, Gabriel carried him on his wings. After his bath Job became again fresh and vigorous; the worms which had eaten his body were changed into silk-worms and honey-flies. The obscure passage in the Ḳor'ān (xxxviii. 43): "Take a birch, beat with it, and do not forswear thyself", is explained by the commentators as referring to Job's wife, whom he was commanded by God to beat, because he had sworn to give her a hundred blows. The reason for this oath has not been sufficiently ascertained; some are inclined to think that she incurred his anger by having been one day absent for too long a time, others assert that she had deserved it by suggesting to Job that he should pray to Iblis. The same expounders add that it must have been a birch consisting of a hundred twigs, or perhaps a branch with a hundred leaves, so that he could acquit himself of his oath by a single blow. The narrators do not agree in their statements regarding the children which were born to Job after his re-establishment. According to some they were the same children which had perished and had been called back to life, but others assert that his wife had become young again and borne him other children, their number varying up to 26. God let it rain golden locusts on him, and he began to gather them. Then he heard a voice saying to him: "Hast thou not enough?" and he answered: "Who can say "enough" to thy mercy?" He had two threshing-floors, one for corn, the other for barley. God made two clouds descend,

which filled the latter floor with gold, the other with silver. Some authors fix the age of Job at 93 years, asserting that he lived 20 years after his recovery; but others affirm that he lived the same length of time after as before his affliction. Mas'ūdī testifies that the mosque of Job, together with the spring in which he bathed himself, were still celebrated in his time, and that they were to be found at a short distance from Nawā in the province of Urdunn (cp. Yāḳūt, *Mu'djam* ii. 645 s. v. *Dair Aiyūb*). Still at the present day one is shown there the *ḥammām Aiyūb* ("bath of Job") and in its neighbourhood the *maḳām Shaikh Sa'd*, formerly called *maḳām Aiyūb*. The famous stone of Job (*ṣakhrat Aiyūb*) must also be mentioned. It is actually an Egyptian monument of Ramses II, as is sufficiently well known. It is interesting to know that En-rogel, mentioned in the Bible (Joshua xvii. 7 *et al.*) is now called *Bīr Aiyūb* ("the well of Job"); cp. Mudjīr al-Dīn, *Hist. de Jérusalem*, publ. in the *Fundgruben des Orients* ii. 130).

SELIGSOHN.)

AIYŪB KHĀN is the fourth son of the Emīr Shēr 'Alī of Afghānistān. He was whole brother of the Emīr Ya'ḳūb who succeeded Shēr 'Alī in 1879, their mother being a daughter of the Khān of Lālpura. Aiyūb Khān was intimately associated with his brother in the principal events of his life, and when Ya'ḳūb was disgraced and imprisoned by his father he took refuge at Meshhed in Persia 1291 (1874), and was there for the next five years. When Ya'ḳūb became Emīr he appointed Aiyūb Governor of Herāt, and on Ya'ḳūb's fall he began to gather troops and strengthen himself in his government until the recognition of 'Abd al-Raḥmān as Emīr by the Indian Government. On this Aiyūb Khān, who was a popular favourite throughout Afghānistān, advanced on Ḳandahār. He was met at Maiwand by a small British Indian force under Gen. Burrows which he overwhelmed in July 1880. He then unwisely laid siege to Ḳandahār, instead of advancing and raising the country from Ḳandahār to Kābul, where he had many supporters and 'Abd al-Raḥmān was not in great favour. His attack on the British army and the siege of Ḳandahār rendered his failure inevitable. Gen. Roberts with a force of 10 000 men marched rapidly from Kābul to Ḳandahār while Gen. Stewart after making over charge of Kābul to 'Abd al-Raḥmān retired to India by Djalālābād and the Khaibar Pass. Aiyūb was attacked and defeated by Roberts in Sept. 1880. Ḳandahār was relieved, and the scheme of a separate Government there having been abandoned, was made over by the English to 'Abd al-Raḥmān. Aiyūb who had fallen back on Herāt renewed his attack the next year. In 1299 (1881) he defeated 'Abd al-Raḥmān's troops at Girishk and took Ḳandahār. 'Abd al-Raḥmān assembled his forces and also had recourse to bribery to detach Aiyūb's supporters, and finally defeated him in September. From this time Aiyūb lost all hold on Afghānistān, and fled again into Persia. During the Ghalzai outbreak in 1305 (1887) he intrigued with the mutinous Ghalzai troops at Herāt, and attempted to make his way into Afghānistān, but without success, as 'Abd al-Raḥmān was now too strong. Aiyūb now saw that his cause was helpless and made up his mind to accept the terms offered him by the Indian Government. He surrendered to Gen. Maclean the Consul General at Meshhed, and went to India. He has since lived at Rāwalpindi and Marrī, and receives a pension from the Indian Government; which has accepted the responsibility of preventing him from entering Afghānistān. Aiyūb Khān was a brave and popular prince, but fate has been against him. The murder of Lieut. Maclaine who was a prisoner in his camp at the battle of Ḳandahār in Sept. 1880 would if committed with his knowledge be a blot on his character, but his connivance has never been proved, and such an act is contrary to his previous reputation.

Bibliography: see under 'ABD AL-RAḤMĀN. (M. LONGWORTH DAMES.)

AIYŪBIDES is the name of a dynasty in Egypt, Syria and Yemen, one of the most powerful of the mediaeval east, so called after Aiyūb b. Shādī, the father of Saladin (Ṣalāḥ al-Dīn). The latter was its actual founder, but after his death the realm was divided into various isolated principalities, which were only temporarily reunited into a vast dominion. The separate branches of the race flourished in Egypt till 650 (1252), in Damascus and Ḥalab (Aleppo) till 658 (1260), in Mesopotamia till 643 (1245), in Ḥamāt till 742 (1341) and in south Arabia till 625-626 (1228). The descendants of Shīrkūh, a brother of the eponym Aiyūb, who from 574 (1178) till 661 (1262) were in power in Ḥimṣ (Emesa) are usually reckoned amongst their number.

Shādī (or Shādhī), Aiyūb's father, was a Kurd and a native of Duwīn (Tovin), a town of Armenia. Nothing is known about his ancestors; the court genealogists of the later Aiyūbides have nevertheless devised for him a descent from a noble Arabian stock. Shādī, together with both his sons Nadjm al-Dīn Aiyūb and Asad al-Dīn Shīrkūh, migrated to Baghdād, and was appointed commander of the fortress of Tikrīt on the Tigris, owing to the influence of a friend at the Seldjūḳ court. Shādī died in Tikrīt, and Aiyūb became his successor; according to other authorities he, and not his father, had all along actually held that post. When in 526 (1132) the Atabeg Zengī of Mawṣil (Mosul) was defeated in the neighbourhood of Tikrīt by the troops of the Seldjūḳs of Bagdad, he was aided in his escape by Aiyūb, the vassal of Zengī's enemy. This conduct was of course resented at Bagdad; and when, on the top of that, a few years later Shīrkūh, the brother of Aiyūb, slew a distinguished officer in a sudden outbreak of chivalrous passion, it had become impossible for them to stay any longer. In the night preceding their departure or shortly before, at any rate still at Tikrīt and in the year 532 (1137-1138), Saladin was born. Aiyūb and Shīrkūh went to Zengī, who had not forgotten his rescuers and gladly welcomed the brave warriors. They remained for some time at his court in Mosul, and took part in Zengī's campaigns. They aided him for example in capturing Ba'lbekk, and Aiyūb was entrusted with the command of that place (early in 534 = towards the end of 1139). After Zengī's death the Būrides at

tempted to reconquer Ba'albekk, and Aiyūb, not being able to hold the town, went over to them of his own free will (541 = 1146-1147). He became a distinguished general, and finally even commander-in-chief. Shīrkūh in the meantime had remained in the service of Nūr al-Dīn Maḥmūd b. Zengi, who had inherited Aleppo from his father. Nūr al-Dīn aspired after the possession of Damascus, and Shīrkūh was commissioned to capture it from his own brother. But the two brothers made an agreement together, and Shīrkūh entered Damascus without a blow (549 = 1154). Aiyūb received great honours from Nūr al-Dīn and was appointed commander of Damascus, whereas Shīrkūh obtained Ḥimṣ, which afterwards became the hereditary possession of his descendants.

When afterwards Nūr al-Dīn decided to interfere in the political affairs of Egypt, Shīrkūh was sent thither as his representative, and Saladin was ordered to accompany him. After difficult combats, both military and diplomatic, with the Egyptians and the king of Jerusalem, Shīrkūh finally succeeded in mastering the situation and was appointed Vizier by the last Fāṭimid Caliph 'Āḍid. At his sudden death Saladin was called to the post. No sooner had the latter secured his position, than, at the instance of Nūr al-Dīn, he declared the dying Caliph deposed and commanded the re-insertion in the *khuṭba* of the name of the 'Abbāsidish Caliph. Previous to that he had summoned his father and family to Egypt. Aiyūb served him as a friend and counsellor, until 568 (1173), when he died in consequence of a fall from his horse. In the meantime the relations between Saladin and Nūr al-Dīn had deteriorated, owing to an evident aspiration after independance on Saladin's part. At the very moment when hostilities seemed no longer avoidable Nūr al-Dīn died. Saladin had previously made himself sure of a place of refuge to fall back upon in case of emergency, for instance in Nubia and also in Yemen, which had been taken for him by his brother Tūrānshāh. But after Nūr al-Dīn's death he had nothing more to fear. He occupied Syria without much difficulty and extended his dominion also over Mesopotamia as far as the Euphrates. Then the time arrived for him to attack the crusaders with his whole power. The battle of Ḥiṭṭīn destroyed the forces of the Christians of Jerusalem (583 = 1187), and a few months later the holy city itself surrendered. Its fall became the signal for the third crusade, which did not bring about much change in the mutual relation of the two opposing powers. Soon afterwards Saladin died (589 = 1193). Before his death he had divided his dominion amongst his sons and his brother al-'Ādil. The latter obtained the Mesopotamian possession, al-Afḍal Damascus, al-'Azīz Egypt, al-Ẓāhir Aleppo. Yemen remained in the power of Saladin's brother Ṭughtakīn, who had already during Saladin's life-time succeeded Tūrānshāh there.

No sooner had Saladin closed his eyes, than his sons began to quarrel. Al-'Ādil took advantage of these disorders and gradually supplanted Saladin's sons, until he had united almost the entire realm of his brother under his sway. But he repeated Saladin's proceeding, dividing his dominion amongst his sons during his life-time. Al-Kāmil became his representative in Egypt, al-Mu'aẓẓam in Damascus, and in Mesopotamia al-Fā'iz, who was succeeded by al-Awḥad until 607 (1210), when he was in his turn followed by al-Ashraf. Aleppo alone remained in the power of Saladin's descendants. Al-Ẓāhir was succeeded there by his son al-'Azīz in the year 613 (1216). Less important lateral branches ruled in smaller districts, but were all of them subject to the suzerainty of al-'Ādil. The latter died just about the time when the expedition against Damiette was started, which intervened between the fourth and fifth crusades (615 = 1218). His son and successor in Egypt, al-Kāmil, was compelled to retreat in consequence of insubordination in his camp. Damiette was taken, but the united efforts of all the Aiyūbides prevented the crusaders from further conquests and retook from them later on the only one they had made. Al-Kāmil, fearing the intrigues of his brother al-Mu'aẓẓam of Damascus, began to negotiate with Emperor Frederick II. But the latter had not yet started on his crusade (the fifth), when al-Mu'aẓẓam died. Al-Kāmil decided that his son al-Nāṣir should be supplanted by al-Kāmil's brother al-Ashraf, as the latter also governed the possessions in Mesopotamia, and was believed by al-Kāmil to be reliable. Frederick succeeded nevertheless, thanks to his diplomatic skill, in persuading al-Kāmil to yield Jerusalem to him, along with a narrow stretch of land connecting it with the sea. In return for that he promised al-Kāmil to aid him against all enemies, and to prevent the reinforcement of the states of northern Syria. This famous treaty, equally condemned by both Christians and Moslems, was concluded in 626 (1229).

Al-Kāmil showed great skill in putting a stop to the constant little jealousies of the minor Aiyūbides by leading them to battle against a common enemy abroad. But his successes, gained over the Seldjūks of Iconium, aroused their envy again. An alliance was formed against him, which was joined by al-Ashraf of Damascus. But the latter was no longer alive at the time when al-Kāmil appeared before Damascus, and his brother al-Ṣāliḥ Ismā'īl had to surrender the town. Immediately afterwards al-Kāmil also died. That was the beginning of the end, for then began a fight of all against all. Al-'Ādil b. al-Kāmil, who had been proclaimed al-Kāmil's successor in Egypt, was soon supplanted by his elder brother al-Ṣāliḥ Aiyūb. In Syria Damascus was recovered by al-Ṣāliḥ Ismā'īl, who concluded an alliance with other minor states against the Egyptians. Once more the Mameluke troops of the Egyptian ruler succeeded by dint of a barbarous warfare, in restoring the bulk of the former dominion of the Aiyūbides, but it was only an outward show of power; the dynasty had lost its inherent strength. When al-Ṣāliḥ Aiyūb was lying on his death-bed, St. Louis with the chevaliers of the sixth crusade appeared before Damiette. The town surrendered, but in an attempt to penetrate still farther the entire French army was destroyed. In the meantime al-Ṣāliḥ had died. His wife Shadjar al-Durr, an energetic, daring woman, kept his death secret, until Tūrānshāh, his successor to the throne, had returned from his absence. But the latter failed to make himself agreeable to the Mamelukes of his father, and was murdered in 648 (1250). Shadjar al-Durr was proclaimed Sul-

tan in his stead, and after her the Mameluke Aibeg. The latter was the actual ruler, although the minor great-grandson of al-Kāmil, al-Ashraf Mūsā, was mentioned in the *khuṭba* until 652 (1254). Aibeg was the first of the dynasty of the Bahritic Mameluke sultans.

In Aleppo, al-Nāṣir Yūsuf had succeeded his father al-ʿAzīz in the year 634 (1236). He conquered the city of Damascus after the death of al-Ṣāliḥ of Egypt. His claims to the possession of Syria led to hostilities with the Egyptian Mamelukes, which lasted uninterruptedly, until the Mongol invasion put a stop to them. The Mesopotamian realm, where al-Muẓaffar Ghāzī had been the latest ruler, succumbed in 643 (1245). Aleppo and Damascus were taken in 658 (1260). The Aiyūbides of Ḥamāt, an insignificant lateral branch, descended from Saladin's brother Shāhānshāh and founded by the latter's son al-Muẓaffar, submitted opportunely to the Mongols. Like the descendants of Shīrkūh in Ḥimṣ they were deprived of their independance by the Mamelukes. They retained only a semblance of power as governors under the rule of Egyptian Mamelukes until 742 (1341), except for one long interruption, whereas the Aiyūbides in Ḥimṣ already died out in 661 (1262). More than 100 years before, in 625 or 626 (1228) the Aiyūbides in Yemen had also been supplanted by the Rasūlides.

The many feuds within the dynasty and its separate families must not blind us to the fact, that the Aiyūbides as a whole were an important phenomenon. They reunited the scattered remains of the Fāṭimid realm and the states of the Syrian Atabegs into a concentrated power which was able to oppose the crusaders. The dynasty has also produced such a number of powerful characters as is seldom seen; not only Saladin, also al-ʿĀdil and al-Kāmil were excellent rulers. They equalled, if not surpassed, the crusaders in chivalrous virtues, and many an Aiyūbide prince was even dubbed a knight. Literary functionaries of that period have left us interesting information about their administrative activity. They were personally concerned about agriculture and the irrigation system, which is so closely connected with it. They also showed a lively interest in commerce. Several commercial treaties with European countries were concluded during their time, some of which have been preserved. The military power of the realm was based upon the slave-guards and the feudal system, which, in contrast to that of Europe, consisted in an investiture with state revenues. The growing preponderance of the slaves, which were bought for military purposes, the so-called Mamelukes, in the long run made the weaker princes especially the sport of their Praetorians.

The epoch of the Aiyūbides is also remarkable for a new phase of culture. In Egypt they were the representatives of the religious reaction, brought about by the Seldjūḳs, and of the constantly increasing Persification of the anterior East, which manifested itself in a new artistic style (madrasa architecture), in an alteration of court manners and titles, and in the development of the specifically Turkish form of the feudal system. This culture is of such great importance, as it has exerted its influence on western Europe through the intermedium of the crusaders. Many a rule and custom of European chivalry can be traced back to Aiyūbidish practices, e. g. the heraldic system. The Mamelukes, who as a rule deliberately followed the traditions of the Aiyūbides (even in their titles), also continued at first the culture of their predecessors without any modification.

AK (T.) = white. This word often occurs in Turkish proper names; the following instances are the best known.

AK DEÑIZ (= White Sea) is the Turkish appellation for the Mediterranean (in Persian as a rule *Baḥr-i safīd* or *Daryā-i safīd*). The name can certainly not be traced back to ancient Greek, in which it was simply called θάλασσα, nor to the idiom of the Byzantines, from whom the Turks might have borrowed it along with so many other words. For in spite of some modern Greeks, who adhere to the latter explanation, not a single passage can be quoted to support it. There is more reason to believe that the phrase ἡ ἄσπρη θάλασσα (ἡ Μεσόγειος is less colloquial and restricted to the written language), which was brought into currency by the Hellenic populace of Turkey, was borrowed from the official Turkish language; which is the more easily accountable, as formerly a great many Ottoman sailors were recruited from among the Greeks. Since the diminution of the Ottoman power the name Aḳ Deñiz on the coasts of Roumelia and Anatolia has been restricted to the Aegaean Sea. Even the papers in Constantinople, when referring to the Mediterranean, resort to circumlocution, mentioning the coast to indicate which sea is meant, as for example "the sea opposite Italy" etc.

Pīrī Raʾīs b. al-Ḥādjdj Meḥmed (his own name being Meḥmed, according to Ḥādjdjī Khalīfa, d. 962 = 1554-1555) presented about 930 (1523-1524) to Sulṭān Sulaimān an atlas (of which several copies are extant in Europe), containing 30 maps of the coasts of the Black Sea, the Aegaean Sea and the Mediterranean as far as Ceuta and Tetuan. The work belongs to the most important productions of cartography (Further particulars are given by Pertsch, *Verzeichn. d. Türk. Hss. zu Berlin* n°. 184). — Ewliyā Čelebi (d. about 1090 = 1679-1680), who assisted at the siege of Crete (1054 = 1645), wrote an ample description of his voyage thither across the archipelago, which is included in the second of the ten volumes of his extensive book of travels. — In modern times, apart from insignificant compendiums, only one book has been published: Sulaimān Nuẓḳī Efendi's

illustrated *Asfār-i baḥrîye-i ʿothmānîye*, which can contribute but very little to our knowledge.

The „province of the islands of the White Sea" (*Djazāʾir-i Baḥr-i safîd Wilāyeti*), which, with the exception of Crete and Samos, comprises those parts of the archipelago, which have remained in the possession of the Turks, is divided into the four sandjaks of Rhodos, Chios, Mytilene and Lemnos, with an aggregate population in 1890 of 325 000 souls, of which 73 000 belonged to Rhodos, 100 000 to Chios, 107 000 to Mytilene and 45 000 to Lemnos. Only 27 000 profess Islām, whereas there are over ten times as many Greek orthodox. But the former manifest much more zeal to extend their education. About 50 of the 284 schools belong to them.

In spite of the rocky character of the entirely disafforested soil, and the competition of the western powers with their large capitals invading on all sides, the populace in the 19th century has since the Greek rising made gradual progress, which remained uninterrupted by military complications. The principal products of the soil are grapes, olives and figs, which are also primarily important for the export trade. An agrarian bank, which was founded several decades ago, is especially credited with promoting the general wellfare. In 1890 little Tenedos alone had an export of two millions, Mytilene of 19 millions of kilograms. The navigation in that year amounted to 27 000 vessels with an aggregate tonnage of 1 900 000. The revenues drawn from the islands by the Turkish goverment were estimated at 200.000 Turkish pounds, whereas the administration of the national debt raised an additional 60 000 by its own officials. Cp. Cuinet, *La Turquie d'Asie* i. 349 *et seq.*

(K. Süssheim).

AK HIṢĀR (T. = White Castle). There are four places of this name:

1. The one best known is the town in the Anatolian province of Aidin, situated in a large plain near the left bank of the river Gördük. In Antiquity and in the Byzantine era it was called Thyateira; it owes its Turkish name to a fortress on a neighbouring hill. Three quarters of the 12 000 inhabitants are Moslems. With the exception of the six mosques, the churches, the Government school and the bazaar, all the buildings are of wood, making the place look more like a big, prosperous village than a town. Aḳ Ḥiṣār is connected by railway with Soma (the ancient Sardes) in the north, and with Magnesia and Smyrna in the south, and owing to these modern means of communication has grown into a considerable market place. It is the centre of a ḳaza (ḳaḍāʾ) of 32 000 inhabitants, which produces an excellent white poppy and a large quantity of cotton (cp. V. Cuinet, *La Turquie d'Asie* iii. 548 *et seq.*). Aḳ Ḥiṣār is said to have been annexed to the Ottoman realm for the first time in 1382. During the disorders, following Tîmūr's invasion, it was lost again by the Turks. The perturber Djunaid, who had conquered that district, was defeated by Khalîl Yakhshî Bey in 829 (1425-1426) and taken prisoner at the surrender of the fortress (cp. Ḥādjdjî Khalîfa, *Taḳwîm al-tawārîkh*). According to a statement of Cuinet, which however is not supported by any authority, the Prince of Karamania penetrated in 1444 as far as Aḳ Ḥiṣār and plundered the town. As the Ottoman rule brought peace to the province, the fortress lost its importance as a strategical centre.

Three men from Aḳ Ḥiṣār, who lived in the most flourishing epoch of the Turkish realm, are well known:

a. Ibn ʿIzz b. Madjd al-Dîn. When the Ottomans had reached the summit of their power (965 = 1557-1558) he ventured to write a book of prophecies (*Kashf-i rumūz-i kunūz*), which foretells the duration of the Ottoman realm, without hardly any calamitous interruptions, until the end of the world, and from the numerical value of the letters of proper names predicts the circumstances of the nation up to the year 2035 of the Hidjra (Pertsch, *Verzeichn. d. türk. Hss. . . . zu Berlin*, n°. 45, 9; Krafft, *Vienna Acad. Catal.* n°. 301; Flügel, *Vienna Catal.* ii. p. 581).

b. al-Mawlā Muḥammed b. Badr al-Dîn, the best known of the three. Amongst the Turks nowadays he is usually called Munshîʾ-i Aḳḥiṣārî, formerly also sometimes by his surname Muḥyîʾl-Dîn or, after the government-district, al-Ṣārūkhānî, still more rarely al-Rūmî and al-Mufassir. It was he, who persuaded Sūdî to write his famous Ḥāfiẓ commentary. In 981 (1573-1574) he began his esteemed and useful commentary on the Korʾān (*Nazīl al-tanzîl*) which he dedicated to the sultan. He was rewarded by his appointment as *Shaikh al-ḥaram* of Medîna. Afterwards (998 = 1589-1590) in Damascus he wrote an Arabic commentary on the *Burda* of Shams al-Dîn Muḥammed al-Abūṣîrî (Ahlwardt, *Berlin Cat.* n°. 7798). He died in Mecca towards the close of the year 1000 (1592 according to ʿAṭāʾî's supplement to Ṭashköprizāde's *al-Shaḳāʾiḳ al-nuʿmānîya*; Ḥādjdjî Khalîfa ii. p. 380; *Taʾrîkh-i naʿîmā*, printed in 1047, p. 40. In the face of these authorities no trust can be put in Ḥādjdjî Khalîfa vi. p. 339 and *Khulāṣat al-athar*, where 1001 is given as the year of his death).

c. Mawlā Naṣūḥ Nawālî (d. 1003 = 1594-1595), the translator of Ghazālî's famous *Kîmiyā al-saʿāda*. In 990 (1582) he was appointed tutor of the future Sultan Meḥmed III. In this capacity he wrote a *Ferrukhnāme*, in which the duties of a ruler are displayed in the example of Alexander the Great (Rieu, *Cat. of Turk. Mss. in the Brit. Mus.* p. 117).

2. The capital of a ḳaza of the same name in the government district of Izmîd, situated on the left bank of the Saḳāria. It is a station on the Anatolian railway and numbers 1500 inhabitants. The fortress, ungarrisoned at the present day, commands the vast plain. Already before its early conquest by the Ottomans in 708 (1308-1309) it must have been a flourishing place, as is shown by the remains of a great many ancient columns and other buildings, both in the town itself and its neighbourhood. Its ancient name however is not known. The ḳaza Aḳ Ḥiṣār, famous for its agriculture, numbers 12 000 inhabitants. Cp. Cuinet, *ibid.* iv. 397.

3. Aḳ Ḥiṣār in Albania, at the present day called Aḳčehisār (Albanian: Krūya, Croja = well-spring), a town in the sandjaḳ Shkodra, which has revived to new prosperity in the course of the last decades. It has a wealth of gardens, and covers a large surface, inhabited by almost 10 000 people, all of them confessors of Islām. The place is mentioned in the chronicle of Akropolites (13th cent.) by the name of Kroas. In 1343 it was a

possession, and in 1395 passed into the of Constantine Kastriota. Aḳ Ḥiṣār is ...lly known as the residence of Iskender ...t withstood hard sieges in 1450, 1466 and but finally in 1478 it had to surrender to ...ercy of sulṭān Meḥmed II. At the present ...t is the centre of the Bektāshī order ...ervishes [cp. ARNAUTES]. The citadel, though ...olished, still affords an imposing aspect. Cp. ...mmer, *Rumili und Bosna* (after Ḥādjdjī Khal...a) p. 141; Hyacinthe Hecquard, *Hist. et Descr. ...e la Haute Albanie* (Paris 1859) and especially ... Degrand, *Souvenirs de la Haute Albanie* (Paris 1901).

4. Aḳ Ḥiṣār was formerly also the name of the present Dolnji-(i. e. lower-)Waḳūf, a small locality in Bosnia west of Serajewo, at the outlet of the Fruseksta in the Semeskilitza. In 907 (1501-1502) it was conquered by Muṣṭafā Pasha (Hammer, *Rumili und Bosna* p. 166; Ch. Pertusier, *La Bosnie*, Paris 1822, p. 272). This was the birthplace of Ḥasan Efendi, also called Kāfī by his poet's surname, the author of a remarkable, concise discourse on the necessity of reforms in the Ottoman administration (*Uṣūl al-ḥikam fī niẓām al-ʿālam*). It was originally written in Arabic (1004 = 1595-1596), but as the reform movement at that time had seized the whole nation, he translated it into Turkish at the request of high court-officials, towards the end of the year of the glorious campaign of Erlau, in which he took part (Transl. into French by Garcin de Tassy, *Journ. Asiat.* iv.; Rieu gives a list of manuscripts in *Cat. of Turk. Mss. in the Brit. Mus.* p. 237). We also owe to his pen a commentary on al-Ḳudūrī and some other treatises. He died in 1025 (1616), after he had fulfilled the office of ḳāḍī in his native town for a period of twenty years. Aḳ Ḥiṣār was also the birthplace of Ḥadjdjī Nasim Oghlu Aḥmed b. Ḥasan, who in 1186 (1772-1773) described the Russian campaign and the subsequent events of 1148—1156 (1735—1744; Paris, Bibl. Nat., fonds turc, n°. 168).

(K. SÜSSHEIM.)

AḲ KERMĀN (usually written Akkerman, Akjerman) is the capital of a district in the Government of Bessarabia. The name signifies "white castle". In the Middle Ages the place was called Mon Castro, in Polish and Russian authorities Byelgorod ("white city"). It was first in the possession of the Venetians, afterwards of the Genoese. In 1484 it was captured by the Turks. The cossacks took it several times after that, and in 1595 it was destroyed by German troops. By the peace of Bucarest Akkerman along with the rest of Bessarabia was yielded to Russia.

(W. BARTHOLD.)

AḲ ḲOYUNLU ("the white sheep tribe") is a Turcoman dynasty of Anterior Asia, also called Bāyindiriya, because it traces its origin back to Bāyindir ("full of prosperity"), eldest son of Gökkhān, fourth son of Oghūz (Abu 'l-Ghāzī, 27). Diyār Bekr (Amid), afterwards Tibrīz, was the capital of the dynasty. Its princes had to fight against the Ḳara-Ḳoyūnlu, the Kurds, the Aiyūbides, the Georgians and the Ottomans. Its founder was Bahāʾ al-Dīn Ḳara ʿOthmān, surnamed Ḳara Yuluk (d. 838 = 1434-1435), who after having conquered the states of the ḳāḍī Burhān al-Dīn, sovereign of Siwās, received the government of Diyār Bekr from Tīmūr. His successors were: 1. ʿAlī Beg and 2. Ḥamza Beg (d. 848 = 1444), who disputed the power between themselves; 3. Djihāngīr, the son of ʿAlī Beg; 4. Uzūn Ḥasan, the brother of the former (857—882 = 1453—1477), who chose Tibrīz for his capital after the conquest of Ādharbaidjān (876 = 1471); 5. Khalīl Allāh, the son of Uzūn Ḥasan (d. 883 = 1478); 6. his brother Yaʿḳūb (d. 896 = 1491); 7. the former's son Bai-Sonḳor (d. 898 = 1493); 8. Rostem, the son of Maḳṣūd, who was a son of Uzūn Ḥasan (d. 902 = 1496-1497); 9. Aḥmed, surnamed Gewde (manikin), son of Oghurlū Muḥammed (d. 903 = 1497-1498). After Aḥmed's death Murād (d. 914 = 1508) reigned in Ādharbaidjān, Muḥammed at Iṣpahān, and Elwend (d. 910 = 1504-1505) in the ʿIrāḳ ʿAdjamī. In 920 (1514) their states were united with those of the Ṣafawīs.

(CL. HUART.)

AḲ MASDJID (T. = "white mosque") is:

1. The name of a town in the Crimea (1800 dwellings). It was destroyed by the Russians in 1736, but in 1784 rebuilt under the name of Simferopol (at present the capital of the government of Tauris, in 1897 numbering 48 821 inh.).

2. The name of a fortress on the Sir-Daryā, which on August 9th (28 July) 1853 was stormed by the Russians and rebuilt in the same year under the name of Fort-Perovskij. It is now the district-town Perovsk in the province of Sir-Daryā, with about 5000 inh. The other fortresses which the ruler of Khōḳand had ordered to be erected on the lower Sir were also subject to the commander of Aḳ Masdjid. The tributes (*zakāt*) of the nomads and the toll revenues of the caravan road between Orenburg and Bukhārā were collected from Aḳ Masdjid. The troops of Khōḳand, under the command of Yaʿḳūb-Beg [q. v.], the future ruler of Kāshghar, undertook in March 1852 a raid against the Karak, who were Russian subjects, and pillaged up to 100 auls (villages). In July of the same year an attack attempted by the Russian colonel Blaramberg was repelled by Yaʿḳūb's successor Batir-Basi. General (afterwards Count) Perovskij, who conducted the campaign of the following year, proceeded with exaggerated prudence and precaution, which caused the unnecessary loss of many victims. The garrison of Aḳ Masdjid consisted only of 500 men with three guns. Its commander Muḥammed ʿAlī (acc. to the *Taʾrīkh-i Shāhrukhī* p. 98; acc. to Russian authorities his name was Muḥammed Walī or Abdu-Walī) and the greater part of the garrison fell in the defense of the fortress, and the Russians only made 74 captives, most of whom were wounded. An army under the Mīn Bashī Ḳāsim-Beg, which was despatched from Khōḳand to recapture Aḳ Masdjid, was repelled with heavy losses. The conquest of Aḳ Masdjid by the Russians was an event of decisive importance for the history of Central Asia, as it was their first acquisition on the lower Sir; in military history it is chronicled as an example of tactics which is quite unserviceable in Central Asia.

(W. BARTHOLD.)

AK SARÂI (T. = "white palace") is a frequent appellation in Turkish of towns, palaces and castles. The best known are the following:

1. Ak Sarâi (Akserâ at the time of the Seldjûks; in Antiquity Archelais), the capital of a kaza of the Sandjak Nigde (prov. of Konia), comprising 160 villages. Of its 2500 inhabitants one fifth are Armenians. Its principal buildings are the mosque of Karamân Oghlu (14th century), a madrasa of Ibrâhîm Bey, which has fallen to ruins, and the mosque Nakkashli-djâmi'. After Sultan Muhammed II had conquered Constantinople, the inhabitants of Ak Sarâi, along with those of Trebizond and Sinope, were summoned to repeople the almost uninhabited capital, where they established themselves in a quarter, which is still called Ak Sarâi. It was formerly known for its manufacture of rugs of sheep's wool, which were exported as far as India and China (Ibn Batûta ii. 286). This industry is still in operation.

Bibliography: Fr. Sarre, *Reise in Kleinasien* pp. 93—95; Ch. Texier, *Asie Mineure* pp. 509, a; 566, 1; Ainsworth, *Travels and Researches in Asia Minor* i. 197; E. Reclus, *Nouv. géogr. univ.* ix. 571; Hamilton, *Researches* ii. 222; *Gulshen-i ma'ârif* i. 521, 20; 524, 24; 'Alî Djawâd, *Memâlik-i 'othmâniyenin ta'rîkh we-djughrâfiyâ lughâti* p. 21. (Cl. Huart.)

2. Ak Sarâi in the town of Shahr-i Sabz, in 781 (1379-1380) erected for Tîmûr by architects whom he had carried away from Khwârizm. The remains of this palace, one of the most beautiful buildings of that period, have been preserved up to the present day. The name was possibly taken from a similar one in Khwârizm.

3. Ak Sarâi near Urgenč, which is still mentioned in the "Shaibaniade" (ed. Vambéry p. 392). (W. Barthold.)

AK SHAMS AL-DÎN Muhammed b. Hamza, a shaikh, who accompanied Sultan Muhammed II on his expeditions, was born in 792 (1390) at Damascus. He was a pupil of the Shaikh Bairami of Osmandjik and the Shaikh Zain al-Dîn Hâfî. Seven times he performed the pilgrimage to Mecca; and was interred at Göinik. He made himself known by his discovery of the tomb of Abû Aiyûb [q. v.] during the siege of Constantinople, and by his interpretation of the Sultan's dream before the battle of Terdjan (878 = 1473), in which Uzûn Hasan was defeated. He is the author of a treatise on the processions and dances of the Sûfîs, entitled *Risâla fî dawarân al-sûfiya wa-raksihim* (Hâdjdjî Khalîfa, ed. Flügel, iii. 397). He descended from Muhammed b. Shihâb al-Dîn al-Suhrawardî and was the father of the poet Hamdî.

Huart.)

AK SHEHR (Ak Shehir, "the white town"; the ancient Philomelium) is the capital of a kaza of the province and sandjak of Konya, which comprises 2 nâhiyes (Doghân Hisâr, Ilgîn Beyli) and 90 villages with an aggregate population of 39 811 inhabitants. This little town (8500 inhabitants) extends itself at the foot of the Sultân-dagh; its most interesting sights are a mosque of Sultan Bâyazîd I; relics of the … of the Seldjûkides: Tâsh-Medrese which w… during the reign of 'Izz al-Dîn Kai-Kâwûs I (… 1210); an inscription on an ancient mon… of derwishes, built during the reign of 'Izz al-… Kai Kâwûs II (659 = 1261) and the tom… Saiyid Mahmûd Khairânî, surmounted by … octangular pyramid (621 = 1224). The ceme… contains a modern tomb of Nasr al-Dîn Kho… (with the falsified date 386 = 996).

Huart.)

AK SONKOR al-Ahmedîlî, a Kurdish Emîr, who after the death of his father Ahmedîl (510 = 1116) succeeded him as lord of Marâgha [q. v.]. Ahmedîl's grandfather Wahsûdân b. Muhammed al-Rawwâdî, Lord of Âdharbaidjân, had submitted himself in 446 (1054) to the Seldjûk prince Toghrulbeg. Ak Sonkor played an important part during the reign of sultan Mahmûd (511—525 = 1118—1131) who appointed him atabeg to his son Dâwûd. As Mahmûd appointed Dâwûd his successor, Ak Sonkor occupied later on the most important place in the realm of the Seldjûks. The oldest and mightiest Seldjûk prince Sandjar, however, declared himself in favour of Toghrul, and when the latter in the year 526 (1132) encountered the troops of his opponent, in the neighbourhood of Hamadhân, Dâwûd, whose troops had mutinied, took flight with his atabeg Ak Sonkor. Afterwards, however, when Dâwûd met Mas'ûd in Bagdad, these two Seldjûk princes became allies and, supported by the Caliph, marched to Marâgha, where Ak Sonkor guaranteed them further aid, so that they could soon clear the province of Âdharbaidjân of enemies, and march against Toghrul, who had drawn up his troops at Hamadhân. This time Toghrul was no match for them and was obliged to withdraw to Rai. But when Mas'ûd had the town of Hamadhân in his power, Ak Sonkor was murdered by some Bâtinîs (527 = 1133) as his father had been before. — About his son, whom Weil and others erroneously also call Ak Sonkor, compare the article khâss-bek.

Bibliography: Ibn al-Athîr (ed. Tornb.) x. 421, 461 *et seq.*; *Recueil de textes relat. à l'hist. des Seldjoucides* (ed. Houtsma) ii. 160 *et seq.*

AK SONKOR al-Bursukî (with his full name Abû Sa'îd Saif al-Dîn Kasim al-Dawla Ak Sonkor al-Bursukî), general and governor of the Seldjûk sultans Muhammed I and Mahmûd. He was a mameluke of the Seldjûk Emîr Bursuk [q. v.] and therefore by the Western historians of the crusades he is always called by his nisba, under one of the corrupted forms Burgoldus, Borsequinus, Borsequin or Borsses. He was a faithful companion of the Seldjûk prince Muhammed I (1105—1118), who therefore appointed him police-prefect of Bagdad and of the whole of 'Irâk. While he held this office he fought several battles with the Arabic chief of Hilla, Sadaka b. Dubais, with the

Emir Cawli, who was then reigning over al-Mawṣil, etc. and after the death of Mawdūd [q. v.] 508 (1114) even obtained the prefectship of al-Mawṣil. At the same time he was charged with the conduct of the wars against the crusaders. He marched up to al-Ruhā' (Edessa) and besieged it for more than two months, without success however. He had better luck in Marʿash, where the widow of the Armenian prince Kogh Wasil, who had recently died, submitted to him. After an unfortunate battle with the Ortoḳid Ilghāzī, however, the prefectship of al-Mawṣil was taken from him, already in the year 509 (1115), and until Muḥammed's death he lived retired in al-Raḥaba. Muḥammed's successor Maḥmūd instantly appointed him prefect of Bagdad again. During the wars about the succession between this prince and his brother Masʿūd, he again lost his office, but in 515 (1121) he got back the prefectship of al-Mawṣil, to which after a year the prefectship of Bagdād was added, as also the dominion of the town of Wāsiṭ. This led to a new war with Dubais, the son and successor of Ṣadaḳa. When after this the latter allied himself with the crusaders and supported Baldwin at the siege of Ḥalab (Aleppo), Aḳ Sonḳor marched up to relieve the town (518 = 1125). After he had succeeded in this he left Ḥalab to his son Masʿūd. The next year (519 = 1125) he took Kafarṭāb, but at the siege of ʿAzāz he suffered a heavy defeat, which compelled him to return to al-Mawṣil. There he was soon after (8 Dhu 'l-Kaʿda 520 = November 26th 1126) murdered in the mosque by some assassins, who according to the *Recueil de textes relat. à l'hist. des Seldjoucides* (ed. Houtsma) ii. 144 *et seq.* were paid for that by the sultan's Vezir al-Dergezīnī.

Wüstenf.) nº. 99; Wilken, *Gesch. der Kreuzzüge* ii. 382 *et seq.*; 521 *et seq.*; Weil, *Gesch. der Chalifen* iii. 155 *et seq.*

AḲ SONḲOR (the father of Zengī, q. v.) a Turkish Emir in the time of Malikshāh. The latter, whose nurse he had married, gave him in 480 (1087) the government of Ḥalab (Aleppo) and the title of honour Ḳasīm al-Dawla. In 485 (1092), shortly before his death, the sultan contemplated great plans; among other things the Fāṭimide of Egypt was to be brought to subjection, and Aḳ Sonḳor and also Būzān, the governor of al-Ruhā' (Edessa) received the command to join Tutush, to whom the conduct of this war was to be entrusted, with their troops. However, when the three generals got to Tripoli, they fell out, it is said because the governor of this town, Ibn ʿAmmār [q. v.], had bribed Aḳ Sonḳor and his vizier Zerrās Kamar. However Aḳ Sonḳor withdrew, and that compelled Tutush also to abandon the expedition. A short time after this Malikshāh died, Tutush made use of the occasion to claim the sultanship for himself, and with this end in view he at once marched up to Ḥalab. Aḳ Sonḳor, notwithstanding his hatred against Tutush did not think it advisible to oppose him, and followed against his will, which Būzān did also. When, however, the troops had marched on so far, that a battle with Barkiyāruḳ, the rightful heir of Malikshāh, must soon take place, they both deserted Tutush and joined the side of Barkiyāruḳ. Tutush was forced to withdraw to Syria but did not give up his ambitious plans and in 487 (1094) he once more appeared with his troops before Ḥalab. Near the village of Rayān a battle ensued. Aḳ Sonḳor's men took flight and he himself was led before Tutush, who killed him on the spot.

Bibliography: Ibn al-Athīr (ed. Tornb.) x. 107 *et seq.*; *Recueil de textes relat. à l'hist. des Seldjoucides* (ed. Houtsma) ii. 70, 84; Ibn Khallikān (ed. Wüstenf.) nº. 98.

AḲ ṢU (T.), "white water", is very often used as the name of a river in the countries where Turkish is spoken. When a canal is made to branch off from a river, that part of the water which flows on along the original bed is as a rule called Aḳ Ṣu or Aḳ Daryā, and the artificial canal is called Ḳarā Ṣu or Ḳarā Daryā (black stream); but still many single streams and brooks bear the name of Aḳ Ṣu. The name has often been extended from rivers to towns and villages; specially well-known is Aḳ Ṣu in East-Turkistān on the river Aḳ Ṣu, a tributary of the river Yārkand-Daryā or Tarim. The Turkish name is not found until the 8th (14th) century; therefore the identification with the town of Auzakia in Ptolemy, pretty generally accepted since Deguignes will have to be rejected. In Chinese sources the town (already mentioned in the *History of the elder Han*, 1st cent. after Christ.) is called Wen-su (still to the present day), Ta-shi or Yü-ču, written by the Persians Banfūl (spelling and pronunciation uncertain) in the anonymous *Ḥudūd al-ʿālam*, 4th (10th) century), and by Gardīzī, 5th (11th) cent., the text in Barthold's *Otčet o poyezdke w Srednyuyu Aziyu* p. 91; comp. J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, preface p. 20. — In Tīmūr's time Chinese merchants are already spoken of in Aḳ Ṣu (in the *Ẓafar nāmе*) from which the importance of the town may be concluded. In the *Taʾrīkh-i rashīdī* Aḳ Ṣu is described as one of the chief towns of East-Turkistān. Later on Aḳ Ṣu, compared to Yārkand, Kāshghar and Ṭurfān seems to have been of only secondary importance; by modern travellers Aḳ Ṣu, is described as a small town (about 2 kilometers in circumference). From 1867 until 1877 the town was in the hands of Yaʿḳūb-Beg [q. v.] after whose death the Chinese have re-established their power in Aḳ Ṣu as also in the whole of East-Turkistān. No buildings belonging to past ages have been preserved in Aḳ Ṣu.

(W. BARTHOLD.)

ʿAḲABA (A.) = a long, steep promontory, with a path leading to the top. There are numerous places bearing this name, the best-known of which are the following:

1. By AL-ʿAḲABA, without any further indication, is meant the hill between Minā and Mecca. This bleak and weird spot was certainly already consecrated before Muḥammed, especially the spot where the Djamrat al-ʿAḳaba now stands. This is a stone-column, at which stones are thrown by the faithful at the Ḥadjdj. In accordance with this, tradition has it that in olden times a Shaiṭān lived here. Except this, all memory of the meaning of the place in pagan times is lost. But the part which it has played in the biographies of the prophet and in the history of the origin

of Islām is all the better-known. For it was here that Muḥammed had some secret meetings with some men from Medina after his teaching had failed with the people of Mecca. After six of them had first embraced the Islām there, twelve more did homage to him, without however binding themselves to give real protection to the prophet. The biographers call this "the homage of the women" (*bai'at al-nisā'*) or "the first 'Aḳaba" to distinguish it from "the second 'Aḳaba" in the next year, where 70 men from Medina promised to protect Muḥammed, if necessary with the sword (*bai'at al-ḥarb*). Afterwards a mosque was built in the neighbourhood of the above mentioned stone-column, which in memory of the world-historical event which took place here, is called the „mosque of the homage". Comp. the art. DJAMRA.

Bibliography: Yāḳūt, *Mu'djam* (ed. Wüstenf.) iii. 692 *et seq.*; Ibn Djubair (ed. de Goeje) p. 209; Ibn Hishām (ed. Wüstenf.) i. 288, 294 *et seq.*; Tabarī i. 1209, 1211, 1217 *et seq.*; Burckhardt, *Travels*; Burton, *Personal narrative of a pilgrimage*; Snouck Hurgronje, *Het Mekkaansche feest* p. 125 (EDITORS.)

2. 'AḲABAT AILA or Egyptian 'Aḳaba; see the art. AILA.

3. Syrian 'AḲABA to the east of 2., on the Ḥadjdj-road from Syria to Mecca. Comp. Sprenger, *Alte Geographie Arabiens* § 214.

4. 'AḲABA of the women, a spot in the neighbourhood of Baghrās in Syria, where one of the wives of Maslama b. 'Abd al-Malik was killed in an accident. Comp. Belādhorī (ed. de Goeje) p. 167; Yāḳūt, *Mu'djam* iii. 692. (FR. BUHL.)

'AḲĀ'ID [See 'AḲĪDA].

'AḲ'AḲ (or 'Iḳ'AḲ, ḲA'ḲA': an onomatopoetic word) = magpie. — As this bird inhabits copses, gardens and the margins of woods and spreads over Europe and Northern Asia, the Arabs probably got more intimately acquainted with it in the civilized countries which they conquered. It is hardly mentioned in pre-islamitic literature; but in the middle ages its characteristics are very well known; it is known to be fond of building its nest in the foliage of a doleb-palm and of stealing glittering objects, and to exchange its nest and its young for those of other birds, i. e. that it enters other birds' nests; that is why it was proverbially called thievish, faithless and stupid. Its cry was considered a sign of ill omen to travellers; to its body was ascribed vulnerary power, also in Europe; (German: Diakonissenpulver) —; swallowing the blood and brains of a magpie was supposed to make one eloquent; the same substances were also supposed to extract alien bodies from the flesh; and the yolk of a magpie-egg was used as a cure for inflammation of the cornea (*? bayāḍ*).

Bibliography: Damīrī i. 176; Ḳazwīnī (ed. Wüstenf.) i. 419; Jacob, *Studien in arabischen Geographen* iii. 109-110. (HELL.)

'AḲĀL or 'AGĀL (A.), a band made of goat's hair, generally black, which, going twice round the head, fastens the *keffiye* (*kūfiya*, q. v.) and is generally worn by the Bedouins. According to Dozy, *Supplément* ii. 154 the classical spelling is *'iḳāl*, but the modern pronunciation is as indicated above.

Bibliography: Dozy, *l. c.*; Oppenheim, *Vom Mittelmeer zum persischen Golf* ii. 122.

AḲĀRIB (Sing. 'Aḳrabī; according to Sprenger, *Die alte Geographie Arabiens* p. 80, identical with the Agraei of Pliny), a South-Arabian tribe in the neighbourhood of 'Aden. Their territory, which is very small (only about 2—3 square miles), is crossed by the lower part of the river of Laḥdj [q. v.], which here is nearly always dry. As rain is also lacking, the soil is barren and yields but little fruit. The chief town is Bi'r Aḥmed, with some hundred inhabitants and the castle of the Sulṭan, who resides there. The sulṭan receives yearly subsidies from the English, to whom in the year 1868 the 'Aḳārib sold their coasts, together with the volcanic Djebel Ḥasan (with the "donkey's ears", two rocky peaks). The English now also protect the 'Aḳārib against their Arch-enemies the 'Abādil of Lahedj, with whom they fought for the last time in the year 1855. Comp. especially Maltzan, *Reise nach Südarabien* (Braunschweig, 1873) p. 314—323.

(J. SCHLEIFER.)

'AḲARḲŪF (sometimes pronounced and written 'Aḳraḳūf) is the name of a not unimportant group of ruins which lies $2^1/_3$ hours to the West of Bagdad. The spot is often mentioned by Arabian geographers. References to it may be found in: G. le Strange, *The lands of the eastern Caliphate* (Cambridge, 1905) p. 67; comp. further: Weil, *Gesch. d. Chalifen* ii. 197; Chwolson, *Die Ssabier* i. 176; ii. 643; Blau, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xxvii. 333. According to a Mussulman legend already found in Arabian writings of the Middle Ages the stove into which the tyrant Nimrod threw Abraham is said to have been at 'Aḳarḳūf. That is why 'Aḳarḳūf has also been called Tell-Nimrod (Nimrod's Hill) until the present day. However, the legend of Nimrod's stove was also connected with other places, f. i. with kūthā rabbā or Tell-Ibrāhīm (to the south of Bagdad). The hills covered with ruins of 'Aḳarḳūf have already been mentioned by European travellers since the 16th and 17th centuries; comp. the reports of older travellers in Ritter, *Erdkunde* xi. 847—852 and Tuch, *De Nino urbe* (Leipzig 1845) p. note. 4. H. Rawlinson found in 'Aḳarḳūf bricks with the stamp of the town of Dūr-Kurigalzu ("wall of Kurigalzu") on them. Hence 'Aḳarḳūf has, probably rightly, been identified with that town, often mentioned in the cuneiform inscriptions, which was called after its founder (or reconstructor), one of the two Kassite kings of Babylonia who were called Kurigalzu (between 1500 and 1000 before Christ). About Dūr-Kurigalzu comp. Fr. Delitzsch, *Wo lag d. Paradies?* (Leipzig 1881) p. 207 *et seq.*; the same, *Die Sprache der Kossäer* (Leipzig, 1884) p. 9 and Fr. Hommel, *Grundriss der Geogr. und Gesch. des alt. Orients* (2d edition; Munich, 1904) p. 344. (STRECK.)

AKBAR ABU'L-FATḤ DJALĀL AL-DĪN MUḤAMMED, third Tīmūride Emperor of Hindūstān, was born at Umarkot in Sind on the 15th October 1542, was crowned at Kalānūr in the Pandjāb, on the 14th Febr. 1556 and died in Āgra on the 16th October 1605 leaving his throne to his son Salīm (Djahāngīr). He traced his descent to Amīr Tīmūr Barlās (1336—1405); he was Bābar's grandson and the son of Humāyūn and Ḥamīda Bānū, a daughter of a Persian scholar in the service of Hindāl, Bābar's youngest surviving son.

Akbar was born in exile in one of the greatest

centuries of history and in it he was the greatest ruler. Not Europe only was in mental ferment; a leaven worked also in Hindūstān, as indications of the presence of which there may be named the Kabīr Panthī, the Rawshānīs and the ṣūfism of which Shaikh Mubārak Nāgūrī was the exponent in closest touch with Akbar.

In the greatness of his accomplished kingly task, Akbar had no equal; second to him ranks the Englishwoman who was his contemporary.

It is a well-attested statement that through his long life of intellectual activity he did not master the arts of reading and writing. This is in him the more singular that he came of a family of traditional culture and that he lived not only amongst men of education but was closely associated with at least two women accomplished in letters, his wife, Salīma Sulṭān, and his aunt, Gulbadan. His lack of instruction in childhood may well have been owing to his father's unsettled position and procrastinating character, but in adult life, only his own deliberate choice will explain it. A keen observer, avid of knowledge, a student of at least one branch of knowledge, Religion, his dependence on the ear is a fact of great interest which falls into place only when one recalls blind men who have been distinguished. It seems as though Akbar learnt best by the living word.

The long story of his military success does not lend itself to summary and it will suffice here to set in apposition his territory at accession and at death. He had gone with his father to Hindūstān in January 1555 from Kābul and had been present at the decisive battle of Sihrind over Sikandar Sūr on the 22[d] June 1555, which gave Āgra and Dehlī again to the Tīmūrides. When his father died (24[th] January 1556), he was with his beg-atka, Bairām Khān Bahārlū, pursuing Sikandar in the Pandjāb. On that day the only land he owned was a small part of the Pandjāb; Āgra had been taken by Hemū, Dehlī had been evacuated by his general; Ḥaram Begam and Sulaimān Badakhshī had seized Kābul. He was then fourteen years old. When in 1605 he laid aside the cares of empire, he left to Salīm a stable heritage of the whole of Upper India, Kābul, Kashmīr, Bihār, Bengal, Orisa and a great part of the Dekkan.

Great as he was as a soldier, it is as an administrator that he has gained highest fame. His revenue reforms with which the Hindū, Todar Mall, is closely associated were pushed through all opposition and pursued untiringly; so too was the safe-guarding of lowly people; he had the genius of taking pains and the open-mindedness which is symbolized by his favourite motto, „Peace with all.“ Changing perennial Muḥammedan practice in Hindūstān, he ruled for the Hindū majority of his subjects, and set these free from insulting and oppressive enactments. In return they provided him splendid and faithful servants.

Perhaps what rivets attention to Akbar more than his genius as a sovereign, is his own pursuit of truth. It is well-known that he broke away from orthodox Islām and promulgated an eclectic *Tawḥīd-i ilāhī*, a Divine Faith. This appears to have been pure Theism, the common element of all the creeds he sought into. If men craved for a symbol, as in truth his own researches must have convinced him they did crave, he recommended for this the Sun or its earthly counterpart, fire. He allowed of no priesthood and inculcated purity and plainness of living.

What adherence the *Tawḥīd-i ilāhī* obtained outside the inner Court circle cannot now be said; eighteen names are recorded as those of members of the Faith. Most of those inscribed are literary men, poets; one great emīr only is there, ʿAzīz Kūka, whom extortion in Mekka had driven from orthodoxy. There are men to whose ṣūfī influence Akbar's perversion from Islām was ascribed, Shaikh Mubārak Nāgūrī and his sons. Akbar's earliest interest was with the sects within Islām itself and he became disgusted by the rancour of orthodox disputants; he married a Rādjpūtnī, the mother of Salīm, and he studied Brāhmanism from learned priests and through Hindū Scriptures which he had translated for himself; ṣūfī free-thinking was strong round him and Persians were of his home circle; he acquired special sympathy for the Sun-worship of the Pārsīs, a sympathy not likely to be less that Rādjpūts claim to be the children of that luminary. To none of the Eastern creeds, however, did he give such close and admiring attention as to Roman Catholic Christianity. Shaikh Nūr al-Ḥaḳḳ who writes without the bias of either Abu'l-Faḍl or ʿAbd al-Ḳādir Badāʾūnī, says that the Emperor tried to take the good from all differing opinions and this with one sole object, the ascertaining of truth. What he finally accepted was but the basal fact of all creeds, man's first tenet, and to this he added a plain rule of conduct.

Abu'l-Faḍl ʿAllāmī, *Akbar-nāme*; ʿAbd al-Ḳādir Badāʾūnī, *Muntakhab al-tawārīkh*; Shaikh Nūr al-Ḥaḳḳ, *Zubdat al-tawārīkh*; *Dabistān al-madhāhib*; Shams al-ʿUlamāʾ Mawlāwī Muḥammed Ḥusain, *Darbār-i akbarī* (Lahore, 1898); Blochmann, *Āīn-i-akbarī*; Count von Noer, *Kaiser Akbar* (Leipzig), French and (revised) English translations; Elphinstone, *History of India*; Father Goldie, *Missions to the Great Mogul* (Dublin, 1897); H. AḲČA (T.) = whitish; as noun: silver coin, coppercoin, especially small coins, f. i. in Russian countries = kopecks or half-kopecks. In Turkey a coin of this name was used worth one third of a para = one asper (comp. the art. ʿALĀʾ AL-DĪN PASHA). In the same way *fals* and *pul* (q. v.) are used in Arabian and Persian countries.

ʿAḲD (A.) = agreement, contract, treaty, occurs in many compounds, f. i. *aḳd al-nikāḥ*, marriage-contract, *aḳd al-dhimma*, treaty of protection etc.

AKDARĪYA is the name of a well-known difficult law-question about inheritance which belongs to the *masāʾil mulaḳḳaba* (i. e. questions "called by special names"). When a woman leaves behind as her heirs: 1. her husband, 2. her mother, 3. her grandfather, and 4 her sister (whether she be her *shaḳīḳa*, i. e. her real sister, or her *ukht li 'l-ab*, i. e. her half-sister on the father's side), then her husband gets ½, the mother ⅓ (*comp.* Ḳorʾān iv, 12-13), so that there would only remain ⅙ of the inheritance for the grandfather and the sister. The latter two are generally considered, when they inherit together, as *ʿaṣabāt*, that is the sister inherits half of the grandfather's part, and together they get every-

thing that remains when the *aṣḥāb al-farā'iḍ* (i. e. the heirs to whom the Ḳor'ān grants a definite part of the inheritance) have been satisfied.

Now the grandfather can, according to the current interpretation of Ḳor'ān iv. 12, in any case lay claim to a sixth part of the whole inheritance. But then the sister would not get anything. This is actually the way the Ḥanafites look at it. They say: the grandfather here excludes the sister from the inheritance. But the other fiḳh-schools are of opinion that in this case the grandfather and the sister are not to be regarded as *'aṣabāt*, but that in the same way as the husband and the mother, they get the parts to which the Ḳor'ān entitles them. Then the division is as follows:

the husband inherits $\frac{1}{2} = \frac{3}{6}$
" mother " $\frac{1}{3} = \frac{2}{6}$
" grand-father " $\frac{1}{6} = \frac{1}{6}$
" sister " $\frac{1}{2} = \frac{3}{6}$

By means of *awl* [q. v.] these nine sixths are reduced to nine ninths.

Then the husband receives:
the mother
the grand-father
the sister

But as the sister can after all only lay claim to half the grand-father's part, the right proportion between these two parts has again to be re-established. Together they inherit $\frac{4}{9} = \frac{12}{27}$, but the grandfather receives $\frac{8}{27}$ of this and the sister $\frac{4}{27}$.

About the meaning of the name *Akdariya* the Arabian scholars hold different opinions. Some f. i. say that the question itself is *akdar* (i. e. troubled, obscure) as it has ever proved subject to great difference of opinion, or because the otherwise generally accepted principles are "troubled" in this case: others are more inclined to think *Akdar* the name of a man, to whose decision 'Abd al-Malik b. Marwān submitted this question. Besides these there are still many more such explanations of the name *Akdariya*.

(TH. W. JUYNBOLL.)

AKH (A.) = brother.

AKHALČIKH, Russian Akhaltsikh, Turkish Akhiska or Akhiskha, nowadays the capital of a district of the government of Tiflis, was originally a Georgian fortress (the name means in Georgian "new fortress"). In the year 1045 (1635) it was taken by the Ottomans after a siege of 23 days and is later on mentioned as the chief town of a separate Wilāyet. After having been taken by the Russians in 1828, the fortress had to be yielded to Russia at the peace of Adrianople (1829). About Akhalčikh under Turkish government comp. Ḥādjdjī Khalīfa, *Djihān-numā* p. 408 *et seq.*

(W. BARTHOLD.)

ĀKHĀL TEKKE is a region of Russian Turkistān. Under the name Ākhāl (which only appears in modern times) are gathered together the oases on the Northern slope of the mountain-ranges Kopet-Dagh and Küren-Dagh, between the present railway-stations Ḳizil-Arwat and Gjaurs. The second part of the name is taken from the present inhabitants of this region, the Tekke, a tribe of Turkomans. Abu'l-Ghāzī already mentions the Tekke in the 10th (16th) century as inhabitants of the region between the Balkhān mountains and the town of Darūn (near the present railway-station Baharden). In the year 1881 Ākhāl Tekke was taken by the Russians and since 1882 it has formed a separate district (*uyezd*) of the Trans-Caspian territories (*oblast'*); until the year 1890 the name of Ākhāl Tekke was kept for this district; now it is called after the metropolis Askhabad (really Ashkābād, q. v.). The geographers of the Middle Ages have no special name for this region; it is described as forming part of Khorāsān together with the town of Nasā (already an important town under the Parthians; now only two heaps of ruins near the Aul Bagir, about 5 miles to the west of Ashkābād) and the border fortresses Farāwa or Afrāwa (near the present Ḳizil Arwat) and Shahristāna (3 arab. miles to the north of Nasā, on the border of the desert.) The country has often been in the possession of the lords of Khwārizm, even at the time of the rule of the Özbegs in the 10th and 11th (16th-17th) centuries; to distinguish it from the real Khwārizm or Ṣu-Boyu ("waterside") Ākhāl Tekke together with the Atek (q. v.) was formerly called, Ṭagh-Boyu ("mountainside"); at that time the town of Nasā seems to have existed still; in the west the town of Darūn [v. s.] is still mentioned. At the time of the Russian conquest the country had no towns; Askhabad and Ḳizil-Arwat have only become towns under Russian rule.

(W. BARTHOLD.)

AKHARNAR (ACHARNAR) is the name of the star α (of the first size) in the constellation Eridanus. The latter was called by the Arabs and also by the ancients "the stream" (*al-Nahr*), and as the star α stood at the end of this group, it was called the last in the stream" or "the last stream" in Arabic *Ākhir al-nahr*, or *Ākhir nahr*; whence its present name. Comp. Ideler, *Untersuchungen über den Urspr. u. d. Bed. der Sternnamen* p. 232 *et seq.*

AKHBĀR MADJMŪ'A; "collected stories" is the title of an anonymous historical work of the 11th cent. of the Christian era, which tells at length about the conquest of Spain by Ṭāriḳ, the time of the first governors and the civil wars, as also about the reign of 'Abd al-Raḥmān I, whereas about the time of Hishām I until that of 'Abd al-Raḥmān III it only contains anecdotes, letters and poems. The full title is: *Akhbār madjmū'a fi 'ftitāḥ al-Andalus wa-dhikr umarā'ihā wa-l-ḥurūb al-wāḳi'a baināhum fīhā...* [illegible] *Akhbār madjmū'a fī 'ftitāḥ al-Andalus wa-dhikr man waliyahā min al-umarā' ilā dukhūl 'Abd al-Raḥmān b. Mu'āwiya wa-taghallubihi 'alaihā wa-mulkihi fīhā huwa wa-walad^uhu wa'l-ḥurūb al-wāḳi'a fī dhālika bainahum*. Comp. Ibn 'Adhārī, *al-Bayān al-mughrib* I. Intr. 10—12. — *Ajbar Machmuâ (Coleccion de tradiciones), crónica anónima del Siglo XI, dada à luz por primera vez, traducida y anotada por Don Emilio Lafuente y Alcántara* (= *Coleccion de obras arábigas de historia y geografia que publica la Real Academia de la Historia*, Tomo I; Madrid 1867).

(C. F. SEYBOLD.)

AL-**AKHDARĪ** AL-ṢADR B. 'ABD AL-RAḤMĀN B. EMIR B. AL-WALĪ AL-ṢĀLIḤ AL-SAIYID AL-ṢUGHAIYIR B. MUḤAMMED AL-BNTYŪSĪ AL-MĀLIKĪ was an Arabian author, about whose life nothing further is known. He wrote two much-used didactic poems:

1. *al-Djawhar al-maknūn fī ṣidf al-thalātha al-funūn*, about rhetoric with a commentary by the author, lithographed at Cairo 1290; with a commentary by al-Damanhūrī (who died 1192 = 1778) lith. at Cairo 1290, printed ibid. 1308, 1310; with glosses added by Makhlūf al-Minyāwī ibid. 1305. — 2. *al-Sullam al-murawnaḳ fi 'l-manṭiḳ*, about logic in 94 radjaz-verses, written in 941 (1534), printed at Cairo in 1318 with a commentary by the author, and glosses by Sa'īd b. Ibrāhīm al-Tūnisī al-Djazā'irī Ḳaddūra (d. 1066 = 1656), and in 1282, 1306 and 1308 with glosses by al-Bādjūrī (d. 1277 = 1861); glosses by Muḥammad b. 'Alī al-Ṣabbān (d. 1206 = 1792) on the commentary by Aḥmed b. 'Abd al-Fattāḥ al-Mollawī (d. 1181 = 1767) printed at Cairo 1310-1311; commentary by al-Ḥasan al-Derwīsh al-Ḳawīsnī about 1210 (1795), with glosses in the margin by Khaṭṭāb 'Omar, printed at Cairo 1322; commentary by Muḥammad al-Bannānī (about 1211 = 1796) lith. at Fez 1313, with glosses by Ḥassūra, printed at Fez 1313. — Four other small writings are to be found in Brockelmann, *Gesch. d. arab. Litter.* ii. 356. (BROCKELMANN.)

AL-**AKHFASH** is the surname of several grammarians, of whom al-Suyūṭī, *Muzhir* ii. 228 enumerates eleven. The best-known are the following three:

1. AL-AKHFASH AL-AKBAR 'ABD AL-ḤAMĪD B. 'ABD AL-MADJĪD ABU 'L-KHAṬṬĀB, a freedman of a tribe of Hadjar (al-Baḥrain), the collector of numerous dialectical expressions only known through him, and the teacher of the grammarians 'Īsā b. 'Omar and Abū 'Ubaida; he died in 177 (793). Comp. Ibn Taghrībardī i. 485.

2. AL-AKHFASH AL-AWSAṬ SA'ĪD B. MAS'ADA ABU 'L-ḤASAN, the most famous man bearing this name, a freedman of the Tamīmite tribe of Mudjāshi' b. Dārim, born at Balkh, a pupil of Sībawaihi, whom (although his elder) he survived, and whose "book" he propagated by his teaching. He died in the year 221 (835), according to others in 215 (830). Of his own writings (*Fihrist* i. 52) nothing remains. His *Kitāb gharīb al-Ḳor'ān* was still used by al-Tha'labī (who died 427 = 1035), *Cat. Brit. Mus.* nº. 821, and his *Kitāb al-mu'āyāt*, which after the manner of the books *fī abyāt al-ma'ānī* explained difficult verses, is often quoted in the *Khizānat al-adab* (i. 391, 15; ii. 300, 17; iii. 36 at the bottom, 527, 20). Comp. Ibn Ḳotaiba (ed. Wüstenf.) p. 271; Ibn Khallikān (ed. Wüstenf.) nº. 250; Ibn al-Anbārī p. 184—188; Brockelmann, *Gesch. d. arab. Litter.* i. 105.

3. AL-AKHFASH AL-AṢGHAR 'ALĪ B. SULAIMĀN B. AL-MUFAḌḌAL ABU 'L-ḤASAN, the pupil of al-Mubarrad and Tha'lab, was not famous as an author, but he did a meritorious work by transporting grammatical study from Bagdad to Egypt, where Aḥmed al-Naḥḥās was his pupil. He died at Bagdad in the year 315 (928). — Comp. Brockelmann, *Gesch. d. arab. Litter.* i. 125; about all three of the name: Flügel, *Die Grammatischen Schulen der Araber* p. 61 *et seq.* (BROCKELMANN.)

ĀKHIR (A.) = "The last" is one of the "beautiful names" of God. — *Ākhir-i Čarshamba*, the last Wednesday in the month of Ṣafar, a Mohammedan festival, celebrated in India, it is said, because the prophet's suffering in his last illness was relieved a little on this day. The Indian Shī'ites, however, consider this day an unlucky one and call it *Čarshamba-i sūrī*, i. e. the Wednesday of the last blast of the trumpet (on Doomsday). Sweet cakes are baked for this day, over which the *Fātiḥa* is many times spoken in the name of the Prophet. Another custom is the drinking of the "7 *salāms*", that is of the seven Ḳor'ān-verses xxxvi. 58; xxxvii. 77; xxxvii. 109; xxxvii. 120; xxxvii. 130; xxxix. 73 and xcvii. 5. These verses are written by a mullā on a banana- or mangoleaf or on a piece of paper, and while the writing is still wet, they are washed off. Whoever drinks the water used for this purpose may be certain of future peace and happiness. Comp. Herklots, *On the customs of the Mooselmans of India* p. 230 *et seq.*; Sell, *The faith of Islam* (2nd ed.) p. 313; Garcin de Tassy, *L'islamisme d'après le Coran* (3rd ed.) p. 334 *et seq.*

ĀKHIRA (A.), the fem. of the preceding word, is a term already used in the Ḳor'ān for the life to come, according to the commentators properly *al-dār al-ākhira*, "the last dwelling", as opposed to *al-dunyā*, "the nearer (dwelling place)", that is the present world.

AKHLĀḲ (A.), plur. of Khuluḳ ("character"). The *akhlāḳ* are the traits of man's moral character, and the science of the *akhlāḳ* (*'ilm al-akhlāḳ*) is moral philosophy when presented in a didactic form. Passages concerning morality are found in many diverse branches of literature: they are found in the poets, in proverbs and in fables; naturally they are found in the Ḳor'ān and its commentaries, and in the collections of traditions; also in the writings of lawyers, to whom morality chiefly appears in the form of casuistry, then in the historians and compilers of anecdotes, who are occasionally moralists. But the science of moral philosophy differs from all this; it has an existence of its own; it is not an extract from different literary works, it is a science which is in fact connected with the tradition of Greek philosophy, whether it be with the oral traditions transmitted by the schools and convents of Egypt, Syria and Persia, or with the written traditions handed down and restored by the work of the translators.

Ḥādjdjī Khalīfa has defined the science of the *akhlāḳ* as: "a part of practical philosophy" (ed. Flügel, i. 200 *et seq.*) This definition presupposes a distinction between practical philosophy and speculative philosophy, which is already found in Plato, but which the Arabs chiefly knew through the tradition of the schools. Ḥādjdjī Khalīfa adds, quoting Ibn Ṣadr al-Dīn al-Shirwānī (died 1036 = 1626-1627), ḳāḍī, companion of the vizier Naṣūḥ and the author of *al-Fawā'id al-khāḳāniyya* ("useful things for the Khāḳān"): This is the science of virtues and the way to acquire them, of vices and the way to guard against them. Characters and acquired virtues, which are joined with the reasonable soul, are its data. — So this definition limits moral philosophy to the methodical study of virtues and vices (*al-faḍā'il wa'l-radhā'il*); thus represented, the doctrine of the *akhlāḳ* is nothing but the ethics of the peripatetic philosophy.

A preliminary objection may be raised against the very possibility of a part of that science: as it is a man's character which constitutes his personality, his individuality, it seems that character is an inherent part of the very nature of man, and cannot therefore be changed. So there may

exist a science the object of which is to describe different characters, but there can be no art that can possibly alter them. Ḥādjdjī Khalīfa reports this objection, raised by Ibn Ṣadr al-Dīn; it is also found in many other moralists, for instance in Yaḥyā b. ʿAdī, Ghazālī et Naṣīr al-Dīn al-Ṭūsī. Ibn Ṣadr al-Dīn even defends this objection with the inspired words: "morals correspond with the physical body and cannot be modified". His answer is that some traits of character are natural and others acquired by habit; that if those that are natural are fixed, those that are the consequence of habit may be changed; and that way of looking at it, which is in accordance with Greek tradition, is corroborated by a *ḥadīth* of the prophet saying: "I have been sent to bring good morals (*makārim al-akhlāḳ*) to perfection." — The objection and the answer are about the same in Ghazālī; but he develops them at greater length and more brilliantly.

Moral philosophy thus defined should not be confounded with what the Arabs call *adab*, good education, refinement of spirit and deportment, "l'honnêteté" in the sense this word had in France in the 17[th] century. *Adab* is something less deep than moral philosophy, and of wider compass, as the term comprises a good literary education, which can hardly be numbered among the virtues, at least not among the principal ones. With moral philosophy are connected the *naṣīḥa*, admonition or counsel, and the *waṣīya*, recommendation or testament; under these two heads Arabic literature possesses pieces, attributed to important personages, which contain moral precepts, but they do not treat of moral philosophy in a methodical way; therefore those essays have to be classed among the proverbs, apophthegms and maxims. Let us only mention, by way of example, the recommendations of the dying Nizār to his four children, as told by al-Aṣmaʿī (*Madjānī 'l-adab*, Beyrout, 1896, i. 53). — Moral philosophy is primarily concerned with man in general; yet there are some treatises on morals (the *akhlāḳ*) which apply to certain particular categories of individuals. The most important ones are those concerning the morals of princely personages. These treat of politics, which, in the eyes of the Arabs as in those of the ancient philosophers, are a branch of moral philosophy, it is true, but a branch important enough to be studied apart. There are also treatises on the morals of pious men, but these works do not really treat of moral philosophy, for morality, taken by itself, must be distinguished from mysticism and piety.

We are not perfectly sure which Greek works about moral philosophy were known to the Arabs. *The Nicomachean Ethics* are said to have been translated by Ḥunain b. Isḥāḳ, in 12 books, under the title *Kitāb al-akhlāḳ*, but the *Nicomachean Ethics* only consist of ten books; have we to suppose that to this translation have been joined the two books of the *Magna moralia*? Or is this only a variant of another piece of information with which we are furnished elsewhere, according to which Isḥāḳ the son of Ḥunain, and not Ḥunain the son of Isḥāḳ, is said to have translated the commentary of Porphyrius on the *Ethics* of Aristotle in 12 books, where the number of 12 books has also been obtained by annexing the *Magna moralia*? We know that Isḥāḳ the son of Ḥunain translated the commentaries of Themistius into Syriac and perhaps also into Arabic. Al-Fārābī knew the *Nicomachean Ethics*, the *Magna moralia* and the *Moral Philosophy of Eudemus*; he himself wrote a commentary on part of these treatises; Averroës afterwards paraphrased the *Nicomachean Moral Philosophy*. A certain Ibn al-Khammār translated a book on ethics which Wenrich thinks must have been the *Ethics* of Aristotle. We do not possess in our libraries the Arabic translation of the *Nicomachean Ethics*. The physician Abu 'l-Faradj ʿAbd Allāh b. al-Ṭaiyib (died 435 = 1043) is said to have written a commentary on the *Ethics*; we possess a translation from the Syrian into Arabic by him of Aristotle's περὶ ἀρετῆς, *fi 'l-faḍīla*.

The moral writings of Plato treat more of politics than of moral philosophy properly so-called; let us only remember that his treatise about the Laws was studied by Ḥunain the son of Isḥāḳ and by Yaḥyā the son of ʿAdī. Of Plutarch there was known a *Kitāb al-riyāḍa*, a book on moral exercise, on virtue, translated by Ḳosta the son of Lūḳa. A treatise on the "education of children" (*Adab al-ṣibyān*), translated by Abū ʿAmr Yoḥanna, the son of Yūsuf, was also attributed to Plato. Wenrich proposed, without very strong reason however, to change the name of Plato into that of Plutarch here.

Of the Pythagorean school the Arabs have known the golden verses (*carmina aurea*) which must be classed among the maxims, and also the maxims of the philosopher Secundus. Ibn Miskawaihi has preserved an interesting moral treatise, entitled the *Tabula Cebetis* which seems to be a work of the stoical school (edited by Elichman, Leyden, 1640, and by René Basset, Algiers 1898). Another methodical moral treatise, specially representing the Platonic doctrines, is that which bears the title *Muʿātabat al-nafs*, the restoration of the soul; this treatise, edited by Bardenhewer (*Hermetis trismegisti qui apud Arabes fertur de castigatione animae libellum*; Bonn, 1873), is attributed sometimes to Hermes Trismegistus, sometimes, by Ibn Abī Uṣaibiʿa, to Socrates and to Plato, and sometimes, in a manuscript at the Bodleian, under the title *Zadjr al-nafs*, to Aristotle. Its real origin is unknown; Bardenhewer thinks it is the work of a Musulman and compares it to the writings of the Brothers of Purity; Steinschneider (*Die arabischen Übersetzungen aus dem Griechischen*, p. 23) prefers to see in it a Greek work of an oriental Christian.

Passing by several „testaments" (*waṣāyā*) and the "book of the apple" (*Kitāb al-tuffāḥa*), an apocryphal dialogue between the dying Aristotle and his pupils, written in imitation of Phaedon, we must still mention: a treatise on *Economics* written by a Christian, which is at the Escurial; a work by ʿAlī b. Riḍwān (died in 453 = 1061 or 460 = 1068), a kind of autobiography into which the author has inserted a passage about morality and politics, which was afterwards attributed to Aristotle and translated into Hebrew; and a lesson in morals (*fi 'l-ādāb*) supposed to have been written by Aristotle for Alexander, preserved in the British Museum (p. 203 of the catalogue).

About all these translations, authentic or apocryphal, see: Wenrich, *De auctorum Graecorum versionibus et commentariis*, Leipzig, 1842; M. Steinschneider, *Die arabischen Übersetzungen aus*

den Griechischen (in *Beihefte zum Centralblatt für Bibliothekswesen* xii.; Leipzig 1893).

The Musulman authors who have written in a methodical manner about moral philosophy are comparatively few; those amongst them who are famous have nearly all of them earned their fame by other writings, so that we must conclude that moral philosophy, considered as a pure and independent science, has not been cultivated with great predilection in the Musulman world. There are three titles which recur with more insistence than the others. These are: *Kitāb al-akhlāḳ* or treatise on morals; *Tahdhīb al-akhlāḳ* or correction of morals, in Latin *De castigatione morum*; and *Makārim al-akhlāḳ*, what is honorable in morals. We have already met this last expression above; the treatises which take that as their title are as a rule collections of traditions attributed to the Prophet and to various other persons and tend to recommend or eulogise the different virtues.

The first moralist, who wrote in the Arabic language, is the celebrated translator of *Kalīla wa-Dimna*, Ibn al-Muḳaffaʿ; after him the principal writers on ethics are the Brothers of Purity (*Ikhwān al-ṣafāʾ*), Ibn Maskawaih, al-Ghazālī and Naṣīr al-Dīn al-Ṭūsī, whose treatise entitled *Akhlāḳ-i nāṣirī* one often meets; let us also mention the *Akhlāḳ-i djalālī* and the *Akhlāḳ-i kāshifī*, works widely read in the east. See Carra de Vaux, *Gazali*, Paris, 1902.

It is impossible to sum up in a few lines the moral lessons which these treatises contain. Let us therefore content ourselves with offering some indications suited to prepare the mind for the study of works of this kind.

From the remark, which we have made, that most of the moralists of Islām were chiefly famous for works other than their books on ethics, may be concluded that their moral philosophy reflects the nature of their mind and of their work, known from the rest of their productions. Thus the moral philosophy of a specially mystical author will not be the same as that of a chiefly dogmatic one; that of a dogmatic author will differ from that of a philosopher, and that of philosopher from that of a poet or an historian. Moreover, according to what one knows of the school to which an author belongs, one will see at once whether his moral philosophy is likely to come closer to that of Plato or to that of Aristotle, to that of the writers of maxims or to that of the Fathers. Thus in the book entitled *Muʿāsharat al-nafs*, which, it is true, may not be the work of a Musulman, one finds the virtues described in the Platonic fashion: the principal virtues are here namely temperance, wisdom and strength. In Naṣīr al-Dīn al-Ṭūsī, who belongs to the school of the Philosophers, one finds them divided and described in the peripatetic and scholastic fashion, although the author reserves a prominent place for justice, according to the Platonic idea. In al-Ghazālī, who has fought against the spirit of the school of the Philosophers, and has in a large measure assimilated himself to that of the Fathers, one finds an acuteness of analysis, a profundity of views, an intensity of sentiment which have nothing systematic about them, but remind one on the contrary of the experience of ecclesiastics, accustomed to the direction of souls. And in Abshīhī one perceives especially a praiseworthy effort to unite by an appearance of philosophical order a large number of small facts which are in a way the crumbs of history.

There are some features which all these moral philosophies have in common. The admiration specially accorded to certain virtues such as resignation, contentment with one's fate, command over one's tongue, patience, is a disposition which one finds in all these different authors and which is specially islamitic. The idea of considering the vices as maladies of the soul and moral philosophy as a kind of medical science is also common to them all; with the mystics the comparison is completed by comparing the spiritual director to the doctor. Thus moral philosophy is the art to cure diseases and to keep in health. Its aim is the attaining of felicity; this aim is taught by Aristotle and by Plato. One also notices in all these authors a certain rather scholastic wish to effect a methodical division of the virtues; that division is founded on the analysis of the faculties of the soul, each faculty having its virtue and its vice, and sometimes the vice is conceived as the opposite of the virtue and sometimes the moralist admits two vices the one the result of excess, the other of want, lying on either side of a middle state, where the virtue resides; this is the well-known idea of the golden mean. The virtues which are often spoken of in Musulman ethics are, besides those we have already mentioned: the delight of the soul, exaltedness of thought, liberality, gratitude, indulgence, gentleness, chastity; often blamed vices are: lying, envy, anger, intemperance, pride. Special chapters are often devoted to friendship, sociability and to the duties of the different classes.

Bibliography: Ḥādjdjī Khalīfa, under *Akhlāḳ*. Among printed works we may mention: Ibn abī 'l Rabīʿ, *Kitāb sulūk al-mālik fī tadbīr al-mamālik* (Cairo, 1286); Ibn Maskawaihi, *Fī tahdhīb al-akhlāḳ* (Cairo, 1298-1299); al-Māwardī, *Ādāb al-dunyā wa 'l-dīn* (Constantinople, 1299; Cairo 1309-1310); al-Ghazālī, *Kitāb aiyuha 'l-walad* (*O Kind! Die berühmte ethische Abhandlung Gazalis arab. u. deutsch von Hammer-Purgstall*; Vienna 1838); the same, *Kīmiyā-i saʿādat* (pers.; published at Calcutta, Lucknow, Bombay; English translation by Homes, Albany N. Y. 1873), the same, *Mīzān al-ʿamal*, Hebrew translation *Mōznē ṣedeḳ* (ed. Goldenthal, 1839); Naṣīr al-Dīn Ṭūsī, *Akhlāḳ-i Nāṣirī* (pub. at Bombay, Calcutta, Lucknow, Lahore, etc.); Djalāl al-Dīn al-Dawwānī, *Akhlāḳ-i djalālī* (or *Lawāmiʿ al-ishrāḳ*); Ḥusain Wāʿiẓ Kāshifī, *Akhlāḳ-i muḥsinī* (pers., publ. many times in the east); ʿAlī b. Amr Allāh Ḳinālīzāde, *Akhlāḳ-i ʿalāʾī* (turkish ed. Būlāḳ, 1248) — Conc. the Persian works about the *akhlāḳ* comp. Geiger and Kuhn, *Grundr. der iran. Philol.* ii. 348-349, and index ii. 722 s. v. *Akhlāḳ*.

(CARRA DE VAUX.)

AKHLĀṬ or KHILĀṬ (better than Khalāṭ; comp. f. i. *Marāṣid*, ed. Juynboll, p. 360) is a town on the western shore of lake Wān, in the Middle Ages one of the largest towns of Armenia, very populous and strongly fortified. Comp. Ritter, *Erdkunde* x. 324-328; G. le Strange, *The lands of the eastern Caliphate* (Cambridge, 1905) p. 183; Ch. Schefer, *Sefer-Nameh* (Paris, 1881) p. 21 *et seq.* In the 9th century after Christ Akhlāṭ was taken by the Arabs, but in the year 928 it was again taken from them by the Byzantines,

comp. Weil, *Gesch. d. Chalifen* ii. 638. Later on Akhlāṭ came again under the rule of native princes. In the year 1100 the family of the Seldjūḳ Sukmān al-Kuṭbī took the town from the Merwānides, then its lords, and established his own rule. Comp. Tomaschek, *Sasun* (= *Sitzungsberichte der phil.-hist. Classe der kais. Akademie d. Wissensch.*, vol. 133, n°. iv. p. 31 *et seq.*). About later sieges and conquests see Saint-Martin, *Mémoire sur l'Arménie*, i. p. 103 *et seq.* and Stanley Lane-Poole, *The Mohammedan Dynasties* p. 170. In the years 1232 and 1244 Akhlāṭ was taken by the Mongols; cp. Tomaschek, *loc. cit.* p. 34 *et seq.*; Quatremère, *Hist. des Mongols de la Perse* (Paris, 1836) i. 340, 344. The Byzantine writers call the town Χλιάτ or Χαλιάτ; the Armenian authorities Chlat' (Chelāt); according to the latter the town belonged to the canton Bznunik' of the province of Tu(a)ruberan; cp. Hübschmann, in the *Indogermanischen Forschungen* xvi. (1904) 328. The place still exists to this day and possesses very interesting ruins; cp. Ritter, *loc. cit.*; Reclus, *Nouv. géogr. univers.* ix, 376.

(STRECK.)

AKHMĪM is a town in upper Egypt. Akhmīm is the old-Egyptian Epu or Khentī-Min, hence Coptic Shmin, Arabic Akhmīm or Ikhmīm; the Greeks called it Chemmis or Panopolis. It lies on the eastern bank of the Nile 26° 35′ N. Lat. and has now 28 000 inhabitants. In the early Arabian time it was the metropolis of a separate canton (*kūra*), from the end of the time of the Fāṭimides until the time of the Mamelukes it was the capital of the province of Ikhmīmīya. To-day it belongs to the district Sōhāg in the province of Girgā.

In the Middle Ages Akhmīm was a flourishing town, surrounded by arable land, sugar-cane plantations, vineyards and date palms. It possessed two mosques and several Christian churches. Also weaving was practised on a modest scale, as it had already been done in Strabo's time and is still to-day; linen and probably also cotton materials were manufactured there for the inhabitants of the neighbourhood. As in all industrial towns of Egypt the Christian element predominated at Akhmīm; today 8000 Copts are still living there. They were famous for their magic art. All sorts of superstitions and legends are connected with the templeruins, called *Birba* or *Barba*, which were still well preserved in the Middle Ages, and the sculpture of which (human beings, animals, stars etc.) has given occasion to all sorts of fancies. According to Ibn Djubair one of these temples covered a surface of 220 × 160 metres, and numbered 40 pillars. His description of the temple has special interest for Egyptologists.

Michaelis) p. 17; Ibn Djubair (ed. de Goeje) p. 60 *et seq.* (transl. by Schiapparelli, p. 31 *et seq.*); Ḳalḳashandī (transl. by Wüstenfeld) p. 94, 107; Ibn Baṭūṭa i. 103 *et seq.*; *Bibl. geogr. Arab.* (ed. de Goeje) iii. 201; vii. 332; viii. 22; Idrīsī p. 46 *et seq*; Quatremère, *Mémoires sur l'Égypte* i. 448; Amélineau, *Géographie de l'Égypte* p. 18 *et seq.*; Baedeker, *Egypt* (6th ed., 1908) p. 229. (C. H. BECKER.)

AKHNŪKH, arabic form of the name Henoch [see IDRĪS].

ĀKHOR (P.; pehl. *ākhwar*, zend *ā-hwara*, corresponding to *nava-khwarema*: *Yaçna* i. 45; "stable" Darmesteter); = "stable"; passed into Turkish and thence into the Arabic of Syria (Cuche, *Diction. arabe-français*, s. v.). — *Ākhor-sālār* = "master of the stables"; about his functions, see Quatremère, *Hist. des sultans mamlouks* i. 119, note 3.

al-**AKHRAS** 'ABD AL-GHAFFĀR B. 'ABD AL-WĀḤID B. WAHB, an Arabian poet, who was born about the year 1220 (1805) in al-Mawṣil, and died 1290 (1874) in al-Baṣra. His surname al-Akhras (the dumb one) he owed to an impediment in his speech. One of his patrons, the wālī of Baghdad Dāwūd-Pasha, sent him to India, in order that he might undergo an operation. As this could not be done without endangering his life however, the operation never took place. In his poems, which were very popular in his native country 'Irāḳ, he follows the example of his predecessors. He wrote many *Ghazals* and *Muwashshaḥs*, but did not take the trouble to collect them into a dīwān. This was done after his death by Aḥmed 'Izzat-Pasha al-Fārūḳī, who in 1304 (1886/1887) had the collection printed at Constantinople under the title of *al-Ṭirāz al-anfas fī shi'r al-Akhras*.

Bibliography: Djirdjī Zaidān, *Mashāhīr al-shark* ii. 200 *et seq.*; Cl. Huart, *Littérature arabe* p. 426.

AKHSHĀM (P.) = "evening", one of the five *ṣalāt*-times with the Persians and the Turks.

AKHSIKATH was in the 4th (10th) century the capital of Farghāna; under Bābūr it was the second of the large towns and was then called Akhsī; still in the 11th (17th) century the present capital Namangān is spoken of in the *Baḥr al-asrār* (Ethé, *India Office* n°. 575, f°. 108b as one of the less important sisters (*tawābi'*) of Akhsī. According to Bābur, Akhsīkath was situated on the right bank of the river Sir, near the place where the Kāsān-Sai joins it. At present there still exist (near the villages Akhsī and Shāhand) the ruins of the old citadel (Iski Akhsī, 1000 steps from west to east, 600 steps from north to south, about 150 feet above the level of the water of the Sir; explored in the year 1885 by professor Veselovsky from St. Petersburgh). Information concerning the state of the ruins may be found in the *Srednеaziatski Wiestnik* (russ.) Tashkent, July 1896.

(W. BARTHOLD.)

al-**AKHṬAL**, an Arabian Christian poet, born about the year 640 of the Christian era at al-Ḥīra (*Aghānī* vii. 170) or in the Syrian desert not far from Ruṣāfa, where his clan camped; comp. the *Dīwān al-Akhṭal*, ed. of 1891—1892 (hereafter referred to as *D.*), p. 82, , and *Aghānī* xi. 59 *et seq.* His real name was Ghiyāth b. Salt b. Tāriḳa. He belonged to the taghlibite clan of the Djusham b. Bekr (comp. *D.* pp. 176, 178; *Aghānī* vii. 169; *Machriq*, 1904 (hereafter referred to as *M.*), at the bottom of p. 479), one of the most illustrious clans of Arabia. His mother Lailā belonged to the Christian tribe of Yād. As he himself adopted the surname Akhṭal, it cannot have reminded him of anything disagreeable; his enemies called him Dawbal ("pig, wolf") (*D.* p. 1). From his eldest son he took the *kunya* Abū Mālik. Being descended from the Christian Taghlibites, he lived

and died a Christian; if necessary the satires of Djarīr would prove it. His dīwān shows few traces of his Christianity, which was, moreover, superficial as all religious faith among the Bedouins; mention is made of Saint Sergius, of the cross, of monks, of Christian oaths; to these may be opposed Islamitic expressions — comp. *D.* pp. 78, 119, 184, 204; dīwān, ed. of 1905 (hereafter referred to as *B.*), p. 171, 5 — current expressions which prove the influence of his surroundings (comp. *Aghānī* vii. 173). He appeared in public with a golden cross round his neck, according to the custom of the Arabian Christians, turned to the east when praying, received communion and humbly submitted to the public penance that his confessor imposed on him. He proudly repulsed the Caliph's offers, inviting him to change his religion (*D.* p. 154) and reproached his adversaries that "hunger and not conviction" had led them to Islām (*D.* p. 315, 13). The way he practised evangelical morality is more unpleasant: he was divorced and married again a divorced woman, a common practice among Arabian Christians. Did he add to these a slave-wife which a son of Ziyād had given to him (*D.* p. 315, 13)? Margoliouth (*Mohammed* p. 40) states it but does not prove it. Al-Akhṭal was a great drinker. But, apart from the influence of the ancients, whom he knew and imitated, drinking was to the Christians a proof of their independence from Islām. Personally al-Akhṭal, together with several fellow-Musulmans (*Aghānī* viii. 15; ix. 78; xi 39) saw in it a source of inspiration. He was seen in public houses in the company of Hāshimides and a son of ʿOthmān (*D.* p. 27, 1; *B.* p. 174). In his whole conduct it seems more difficult to condone his intercourse with female singers of very loose morals, than his *nasībs*, a kind of platonic love (*M.* p. 479: *ḥubb bi-ghair faḥsh*) which became a common place subject of poetry. His dīwān is chaste, some very realistic passages (comp. *B.* p. 105, 106, 109-110, 165, 13) excepted, as is easily explicable considering the obscene character of Arabian satire. Let us only think of Djarīr, Farazdaḳ and a great lady of the Anṣār, Hamida (*Aghānī* viii. 139-140). Like all the Taghlibites, al-Akhṭal belonged to the monophysite confession; this, however, did not hinder him from being the friend of the very influential Melkite family of Ibn Sarḍjūn.

When Kaʿb b. Djuʿail, the poet of the Umaiyades, was invited by Yazīd, the son of Muʿāwiya, to attack the Anṣār, he let the young al-Akhṭal, who belonged to the same tribe as he, take his place. But the success of this virulent *hidjā* (*D.* p. 314) would have cost him his life, if Yazīd had not intervened. From that time he shared his table and accompanied him to Mecca. At this period his panegyrics on the Umaiyades began: Yazīd, ʿAbd Allāh b. Muʿāwiya (according to commentators in *D.* p. 167—176; comp. *B.* pp. 63—72; however the battle of Mardj Rāhiṭ, which took place after Yazīd's reign, is mentioned); Khālid b. Yazīd; on their lieutenants: Ziyād and his sons, al-Ḥadjdjādj etc. Having been appointed official poet of the dynasty (*Aghānī* vii. 172, 176) by ʿAbd al-Malik, he sings the praise of the Caliph, his relations such as ʿOmar b. ʿAbd al-ʿAzīz, his sons al-Walīd, Sulaimān, exalts the memory of ʿOthmān (*D.* pp. 39, 6, 172—174), attacks their enemies: ʿAlides, Zubairides, Anṣār, (*D.* pp. 58—64, 73—76, 93—94, 264, 277—278, 289 etc.) the Ḳaisites, hostile to the Marwānides since Mardj Rāhiṭ; a real political poet, petted by those in power and feared by the opposition! That part of his dīwān has great historical importance: in it one finds the old *djāhilīya* still surviving, the echo of contemporary passions, and in the proud and independent attitude of al-Akhṭal (*M.* p. 478—482) the tolerance of the Umaiyades, who are still Arabs rather than Musulmans. The influence exercised by this Christian is not one of the least instructive aspects of that period of transition. According to *B.* p. 170—171, ʿAbd Allāh b. Djarīr al-Badjalī (and not Djabalī as *B.* has it) had definitely allied himself with the Umaiyades. The rivalry of al-Akhṭal and Djarīr has remained famous in literary history; as a rule the former had the advantage of his rival, who was less biting and more trivial; their *naḳāʾiḍ* are a favourite theme. Al-Akhṭal, Djarīr and Farazdaḳ together form the first class (*al-ṭabaḳa al-ūlā*), a group of three standing apart, with which Arabian criticism has found nothing to compare since Islām. But critics do not always agree about their respective value, a subject which has raised interminable discussions among the ʿAbbāside grammarians (Baihaḳī, *Maḥāsin* p. 458). If al-Akhṭal had not been the Christian author of mischievous verses against Islām, they would have agreed to accord the palm to him. His style being usually more chastened, he reminded one more of the ancient models. In satire, in the *khamrīyāt*, he is undoubtedly the first. In panegyrics his inspiration carries him to much higher flights than his rivals, who are much more vulgar. Notwithstanding his "Weltanschauung" which is frankly that of a Bedouin, we see the courtier in this Taghlibite, who moreover, loves a roaming life and hates the life at Damascus (*D.* p. 121, 6). The Christian betrays himself, we believe, not so much by professions of faith as by the rarity of obscene passages, which his rivals indulged in. In that respect al-Akhṭal could say like Nuṣaib (*Aghānī* i. 145) that a young girl might read his dīwān. As in the case of Shammākh and Ḥuṭaiʾa (*Aghānī* viii. 102) one might find fault with some of his *ḳaṣīdas* in that they are too artificial, do not run smoothly and are all of them difficult: he was not a *maṭbūʿ* poet and did not care to pass for one either. The eulogy on the Umaiyades (*D.* p. 98—112) is considered his masterpiece, where may be read the verse which immortalizes the *ḥilm* of those caliphs: "Terrible in their wrath, when they are resisted, they are the most merciful men, notwithstanding their power" (*D.* p. 104, 8). Although it is true that al-Akhṭal imitated his predecessors and borrowed their verses, yet he has never committed plagiarism with such brazen-faced cynicism as Farazdaḳ. One part of his dīwān (*D.* pp. 106, 129, 133, 135, 268—269; *B.* pp. 167—169; comp. Ḳuṭāmī, pieces 2, 8, 9, 10, 13) sings the vicissitudes of the wars of his tribe with the Ḳaisites, who had first been their allies against Kalb. Having fought in those wars, in which he lost his son, he assures us that he showed great courage (*D.* p. 27); exaggerated praise! Al-Akhṭal had no warlike temperament; from the butchery of Bishr (Ḳuṭāmī, 23, 40, 41), which his poetic he escaped by flight. Alluding to the connivance of ʿAbd al-Malik he cried out before him: "If

intemperance (*Aghānī* xi. 59-60) had provoked, the Ḳoraishites in their power refuse justice to us, we can leave them alone" (*D.* p. 11)! — a revolutionary verse which comes close to that in which he declares the obscure ʿAbd Allāh b. Saʿīd b. al-ʿĀṣī, the descendant of a Taghlibite (*B.* p. 117-118) and the brother of the one who had all but overcome ʿAbd al-Malik, "worthy to command". These audacious utterances did not deprive him of the favour of the Caliph. Walīd I — his poet was called ʿAdī b. al-Riḳāʿ (*Aghānī* viii. 179—184) — showed no very warm admiration for al-Akhṭal. This Caliph, not a very cultured man, paraded a Mussulman fervour (*Aghānī* vii. 69, 3). The Bakrites, for a long time the enemies of the Taghlibites (comp. *B.* p. 161-162), chose him as an arbitrator and al-Akhṭal pronounced judgment in the mosque. He must have died before the end of the reign of Walīd I. Ibn ʿAbd Rabbihi (ʿ*Iḳd* i. 155; iii. 70) prolongs his life until the reign of ʿOmar II, doubtless deceived by some verses (*D.* p. 277-278) recited before the accession of that Caliph. If we have been right in giving ± 640 as the year of his birth, al-Akhṭal attained his seventieth year and in that case his poetic career lasted about forty years. No descendants of his are mentioned.

(H. Lammens.)

AKHTAR (P.) = star.

AKHTARĪ is the *takhalluṣ* of Muṣliḥ al-Dīn Muṣṭafā b. Shams al-Dīn al-Ḳaraḥiṣārī (d. 968 = 1561). He wrote an Arabic-Turkish Dictionary (952—1545), known by the name of *Akhtarī kabīr* (there are also concise recensions), and printed at Constantinople (1242, 1256, 1292). Cp. Flügel, *Die arab. pers. u. türk. Hss. zu Wien* i. 119—120.

ĀKHŪND, also *ākhūn* (Castelli; Shakspear; Polak, *Persien* i. 269) and *ākhawānd* (Shakspear, Richardson, Vullers) = "schoolmaster"; East Turkish *akhond*, *akhon* (Vambéry, *Čagataische Sprachstudien* p. 205; Sulaimān-Efendi, *Lughat-i Čagatāi* p. 6); *ākhūndī* and *ākhawāndī* = "office of schoolmaster" (Quatremère, *Hist. des Sultans mamlouks*, i. 69). — The original meaning of the word is "under-master", "substitute", from *ā* + *khwānd* (*khwand*, *khund*), contraction of *khudāwand*), which occurs in the compound names of Mīr-Khond and Khond-Emīr. According to Quatremère (*ibid.* i. 65, note 96), it is not found in use until after Tīmūr's invasion; — Akhwand-Shāh is the name of a poet of Shīrāz (Pertsch, *Cat. Hss. Berlin* p. 682; Justi, *Iran. Namenbuch* p. 13b); Ākhūndzāde = "the schoolmaster's son" is the surname of Mīrzā Fatḥ ʿAlī [q. v.], a playwright, who wrote comedies in Āzarī Turkish [see KHAWAND.] (Cl. Huart.)

ʿAḲĪD (A.) = commander-in-chief in the wars and expeditions of the Arabian Bedouins.

ʿAḲĪDA (A.; plur. ʿ*aḳāʾid*) is a word which signifies the article of faith, the proposition, to which the faith is strongly attached, as it is illustrated by the concrete term ʿ*uḳda* "knot". The writer of the *Taʿrīfāt* gives the following definition of the ʿ*aḳāʾid*: "that in which the dogma itself is kept in view, not the practice". They are indeed formulas, in more or less concise phrasing, serving to express the principles of religion, the *uṣūl*; the latter, according to the definition of the *Taʿrīfāt*, are the truths, "the reason of which consists in themselves, and on which the others are based". There is a science of the *uṣūl*; the ʿ*aḳāʾid* do not properly constitute a science; they are only sayings. They can be considered as a preface to the *uṣūl*; the ʿ*Aḳāʾid* of Ṭaḥāwī bear the double title of "creed (ʿ*Aḳīda*) of the people of the *Sunna*, or preface (*muḳaddima*) to the principles of religion".

In Islām as a matter of course an official redaction of the dogmas of faith has never existed, the Islāmic theory of the revelation precluding the appearance of personalities like the apostles of Christianity, composing a creed with help from above. But many doctors, mystics and even philosophers, have tried to give substantial expression to their faith; and several of these texts have since been adopted, taught and commented on by the theologians in the Islāmic schools.

This kind of writings seems to go back as far at least as the 4th century of the Hidjra. The one that has enjoyed the greatest vogue is that of Nadjm al-Dīn ʿOmar al-Nasafī (d. 537 = 1142-1143); on it various commentaries have been written, notably by Saʿd al-Dīn Masʿūd al-Taftazānī (d. 791 or 792 = 1389-1390). To this commentary glosses were afterwards added by Mullā Aḥmad b. Mūsā, commonly called Khayālī (d. 860 = 1456), by Mullā Ḳasṭallānī (d. 901 = 1495-1496), by Mullā Ṣalāḥ al-Dīn, tutor of Sultan Bāyazīd, and by still another. Ḥādjdjī Khalīfa, who has a long article on this subject, even quotes glosses on the glosses of Khayālī. It is on the treatise of Nasafī that d'Ohsson founded his exposition of the Mussulman doctrine.

When one studies theology at the universities from a series of works like those mentioned, the student, during the first four years, may only read the original treatise (*matn*) and its commentary (*sharḥ*); only during the ensuing years he may study the glosses and the paraphrases (*ḥawāshī* and *taḳārīr*; see Pierre Arminjon, *L'enseignement, la doctrine et la vie dans les universités musulmanes d'Égypte*; Paris 1907).

Besides Nasafī, the oldest scholars who have written ʿ*Aḳāʾid* are al-Ṭaḥāwī (d. 321 = 933) and al-Samarḳandī (d. 342 = 953-954); and the most celebrated are: the Imām al-Ḥaramain, the tutor of Ghazālī (d. 478 = 1085-1086); Ghazālī himself, who wrote a book under the title of "ʿ*Aḳāʾid*" as part of his great work *Iḥyāʾ ʿulūm al-dīn*; al-Īdjī, the author of the *Mawāḳif* (d. 756 = 1355); the mystics and founders of orders Shihāb al-Dīn ʿOmar al-Suhrawardī, ʿAbd al-Ḳādir Gīlānī and Abū Madyan; the voluminous

writer on philosophy Muhyi 'l-Dīn b. al-'Arabī (d. 638 = 1240-1241); the shaikh Abū 'Abd Allāh al-Sanūsī, Ṣūfī of Tlemcen (d. 892 = 1487). There are also *'Aḳā'id* of the learned Naṣīr al-Dīn Ṭūsī, of the celebrated commentator of the Ḳor'ān al-Baiḍāwī [q. v.] and others of the mahdī Ibn Tūmart. There are *'Aḳā'id* in verse, e. g. the well-known poem of al-Ūshī al-Farghānī (edited by von Bohlen under the title of *Carmen arab. Amali dictum*; Königsberg 1849), and that of al-Laḳānī (see Brockelmann, *Gesch. d. arab. Litter.* ii. 316 *et seq.*). — The treatises which amongst all these have been most commented on, are those of Taḥāwī and al-Īdjī. The following gives for example a summary of three of them:

The *'Aḳā'id* of Nadjm al-Dīn 'Omar al-Nasafī are the almost direct enunciation of the dogma; the author inserts hardly any explanations and scholastic terms. After a short preamble on the theory of knowledge, he declares that the world was created, and composed of substance and accidents, that its creator was God, and that God is unique; he explains what are the qualities of God; he treats of the creation, the will of God, and the vision of God in the other world. In this connection he states the dogmas concerning the creation of the Ḳor'ān, the last judgment, and the resurrection, and farther on various creeds relative to death and doom: the chastisement in the grave, the interrogatory by *Munkar* and *Nakīr*, the scales, the guarded tablet and the sword bridge. Then follow some propositions concerning the eternity of Hell: like Paradise, Hell is created and eternal; but the faithful guilty of a serious sin are not to remain there for ever; next come other propositions concerning faith and works, and the everlasting life obtained in the other world; finally he treats of the mission of the prophets, from Adam down to Muḥammed, of the Angels, the revealed books and the miracles of the Saints. After these strictly theological creeds he gives an exposition of the perfect caliphate, completed by that of the imāmate. The rest of this little treatise contains propositions a little less direct, some of which have the object of preventing heresies; one article for instance on the literalness of the scriptures is aimed against the Bāṭinites, another, on the Nothing, against the Mu'tazilites; other sayings, without exactly logical order, refer to the prayer at funerals, to the prayer for the living and the dead, to indifference in religious matters, to the situation of the saints placed below the prophets, and to the place of man in general who is subordinate to the angels. — In the commentary and in the gloss, explanations of a philosophical nature abound.

In Ghazālī philosophical considerations of some length go along with the exposition of the articles of faith, in accordance with the intellectual and literary habits of the author; with him the *'aḳā'id* develop immediately into *uṣūl*. The book of this long treatise, in which the *'aḳā'id* are contained, is entitled *Ḳawā'id al-'aḳā'id*, the foundations of the articles. It is divided into several sections, one of which is devoted to the formulation and demonstration of the essential dogmas of the theodicy, and has often been copied separately, under the title of "Epistle from Jerusalem"; each of these dogmas, accompanied by its traditional and rational proofs (*burhān*), forms a principle (*aṣl*). For example the principles in the section on "the essence and the unity of God" are: the existence of God, his eternity, that he is not in a place, that he has no body, that he has neither accidents nor directions, that he is "established on his throne", as the Ḳor'ān says, that he will be seen in the other life, that he has no associate. The rational proof of the existence of God is: that every product needs a cause to produce it, that consequently the world, being a product, needs a cause which is God. — In other sections of the same book, Ghazālī treats of the qualities of God, of his works and à propos of his works, of the problem of free will in man. One section is especially devoted to the traditional beliefs relating to the resurrection, the judgment, the perfect caliphate and the imāmate. In the course of his exposition Ghazālī introduces very interesting speculations on faith, its nature, its degrees, the means to produce it, to defend it and make it grow; sometimes he calls it "attachment" (*i'tiḳād*), sometimes "confidence" (*imān*); he distinguishes faith from Islām, faith being the belief in proposed dogmas, whereas Islām is the abandonment not of the spirit only, but of the heart and of the whole being to the will of God. Ghazālī also discusses in which degree speculation is useful to the establishment and the defence of faith. This book of the *'Aḳā'id* is preceded by another one on science, which forms the preamble to it, just as Nasafī places a definition of what science really is at the head of his *'Aḳā'id*.

To the mystic 'Abd al-Ḳādir Gīlānī *'Aḳā'id* in rhythmical prose are attributed, which are both poetical and very philosophical. In this short treatise one observes moreover a painstaking care to preserve the purity of faith against the various heretical sects. Here is no theorising about knowledge; it is the theodicy which appears at the very beginning: "Glory to God who is the mode of the mode, and is himself free of modality; who is the place of the place, and cannot himself be localised; who is to be found in everything, but is too holy to be adorned by anything; who abides in every place, but is above every abode........" This very abstract expression of the dogmas of the theodicy is followed by protestations of faith on such and such a point denied by the sects: "We believe, contrary to the Hāshimites", the author says, "that God leads the infidels (*kuffār*) astray; that the Moslem sinners (*fussāḳ*) are better than the Jews, the Christians, and the Magi, which is denied by the Dja'farites; that God sees himself, and that he sees and hears everything, both of which beliefs are opposed by the Ka'bites; that he has created man in the most beautiful state, and that he will make him return to his former state, a theory rejected by the Dahrites; and we maintain against the Mu'tazilites that the friends of God will see him on the last day".

Then follow exhortations; the scholar addresses the soul in a more poetical than dogmatic manner; he praises the benefactions of God and the beauties of Paradise.

(CARRA DE VAUX.)

'ĀKIF PASHA MUḤAMMED was a Turkish statesman and man of letters during the reign of Sultan Maḥmūd II; he held the posts of Minister for Foreign Affairs and of Home-minister. He was the son of the ḳāḍī 'Aintābī-zāde Maḥmūd and was born at Yozghad on 15 Rabī' I 1202 (25 Dec. 1787). In 1228 (1813) he came to Constantinople and entered the administration under the auspices of his uncle Muṣṭafā-Maẓhar, re'īs-efendi, whom he succeeded afterwards; when in 1251 (1836) this function was abolished, he was appointed Prime Minister for Foreign Affairs of the reform (*Tanẓīmāt*), but was soon supplanted by his rival Pertew-pasha. In the beginning of the reign of 'Abd al-Madjīd, 'Ākif retired to private life (1255 = 1839) at Adrianople and at Brussa, undertook for the second time the pilgrimage to Mecca (1263 = 1847), and died on his way back at Alexandria (1264 = 1848).

Turkish owes first of all to him a reform of its written language. He tried as much as possible to exclude from the ordinary vocabulary of authors all the Arabic words excepting those which had been borrowed for scientific terms, and all those Persian words which were not indispensable to the rhetoric of the poets. He created a simpler and clearer style than the old phraseology of the Ottoman authors. His poetry of which the most famous piece is the *'Adam-ḳaṣīdasi* (Ode of nothingness), is written in the ancient manner.

'AḲĪḲ (A.; *nomen unitatis*: 'Aḳīḳa) is the name of the cornelian, which is found in Arabia in various colours and qualities, of which the red shade is especially in demand. The cornelian has of old been exported from Yemen (al-Shiḥr) via Ṣan'ā' to the ports of the Mediterranean. It was used for seal-rings, for ladies' ornaments and even costly mosaics, for example in the miḥrāb of the great mosque at Damascus (according to Muḳaddasī). It was used as a medicine for the preservation of the teeth; superstitious belief ascribed to the cornelian in the seal-ring the power of soothing the heart — especially in a combat — and of stopping hemorrhage. Even Muḥammed is said, according to some traditions, to have shared this belief and to have confirmed the power of the seal to give happiness and to protect from poverty. Down to the present day the cornelian has remained a favourite neck-ornament for women, and the name 'aḳīḳ has been transferred to any kind of necklace which is of a red colour, whether made of glass or shells or other materials.

'AḲĪḲ is the name of a valley. Two miles south-west of Medina its depression began, forming a valley of considerable width, in which the water of a wide-spread net of affluents was collected. Distinction was made between the greater and the lesser 'Aḳīḳ. The abundant moisture under-ground supplied the two principal wells with excellent drinking-water, to the use of which the people of Medina were supposed to owe their good-tempered nature. Numerous norias watered the palm plantations and the fields, the freshness of which formed a contrast to the surrounding volcanic aspect of the country. At one end 'Omar had established a *ḥimā* or large stud. In the shelter of the trees villas were visible, country-houses of distinguished Musulman families, such as the 'Alides, and of men such as Sa'd b. Abī Waḳḳāṣ, Sa'īd b. Zaid, Sa'īd b. al-'Āṣī (Belādhorī, ed. de Goeje, pp. 6, 12, 13, 21; *Aghānī*, V 144; xvi. 46; xxi. 165, 168; Ṭabarī III, 2322, 2330; Ibn Sa'd, III. 104, 174, 204, 279-280; Ibn Ḥadjar, *Iṣāba* ii. 195). They went there for the spring season, until the heat drove them away to Ṭā'if.

But the greatest attraction of the valley was afforded by the wādī 'Aḳīḳ itself, as it was the only spot in the Ḥidjāz, which gave one the illusion of a river. If in winter rains were exceptionally frequent (Belādhorī pp. 53-54), the bottom of the valley was transformed into a stream of the width of the Euphrates, foaming and overflowing like the latter river. At the news that "the 'Aḳīḳ was beginning to flow", the whole town was astir at once (Ibn 'Abd Rabbihi, *'Iḳd* iii 241). In a moment the banks of the temporary river were covered with a motley crowd, anxious to bathe their feet and enjoy the various pleasures of hydrotherapy. In short the valley of the 'Aḳīḳ was what might be called the "Bois de Boulogne" of Medina, or to borrow a phrase from the *Kitāb al-aghānī* (ii. 173): "the pleasure-ground of Medina during the rainy season and spring", the place where elegant society met, the favourite promenade, the rendezvous of fashionable parties, a veritable other Daphne, extension of the dissolute town, into which the Rome of Islam had been transformed. Among the very mixed crowd one might notice, besides licentious poets such as 'Omar b. Abī Rabī'a and al-Aḥwaṣ, musicians, singers, and a special class of men known by the significant name of "mukhannath of the 'Aḳīḳ". Wine was drunk there in public; parties were organised in the depth of night, which were visited not only by the "jeunesse dorée" of Ḳoraish (the Hāshimides, the descendants of 'Alī, of Zubair, of Ḥassān b. Thābit and of 'Abd al-Raḥmān b. 'Awf), but also by the women of the first families such as the famous Sukaina. —

The 'Aḳīḳ of the Ḥidjāz must not be confused with another valley of the same name, which belonged to the country of Ṭaiy and was situated in the neighbourhood of Kūfa (Wright, *Opuscula arab.* p. 110; *Ḥamāsa* p. 468; *Aghānī* vii. 123; Dīnawarī p. 260, 17). A third 'Aḳīḳ discharged its waters near Ṭā'if. Various other valleys of the same name are found all over Arabia.

(H. LAMMENS.)

'AḲĪḲA (A.) is the name of the sacrifice on the seventh day after the birth of a child. According to religious law it is recommendable (*mustaḥabb* or *sunna*) on that day to give a name to the new-born child, to shave off its hair and to kill a victim (for a boy two rams or two he-goats; for a girl one of these suffices). If the offering of the 'aḳīḳa has been neglected on the seventh day, it can be done afterwards, even by the child itself when it has come of age. The greater part of the flesh of the sacrifice is distributed amongst the poor and indigent.

Some of the older scholars (amongst other Dāwūd al-Ẓāhirī) have looked upon the offering of the 'aḳīḳa as a duty. Abū Ḥanīfa on the contrary regarded it as optional.

The shorn hair of the child is also called 'aḳīḳa, and the law recommends to the faithful to spend not anything less than the weight of this hair in silver (or gold) in almsgiving.

The 'aḳīḳa sacrifice was doubtless derived from old Arabian heathenism. The Prophet is said to have observed: "When some one wishes to offer a sacrifice for his new-born child, he may do so". In heathenish times it was the custom to wet the child's head with the blood of the animal. According to some tradition Muḥammed had allowed the Moslems to do the same. But the jurisconsults maintain that this custom is not desirable (*sunna*).

According to Doughty (*Travels in Arabia Deserta* i. 452) the 'aḳīḳa is one of the most frequent sacrificial ceremonies in the Arabian desert, but there it is only performed at the birth of a boy, never when a girl is born. In Mecca on the seventh day after the birth of a child a wether is usually killed, but it does not occur to the Mecca people that this custom has anything to do with the 'aḳīḳa ceremony (cp. Snouck Hurgronje, *Mekka* ii. 137.

'AḲIL (A.) = "in the full possession of one's mental faculties", in the Moslem law-books often combined with the adjective *bāligh*, i. e. "grown up", "of age". Such a person is capable of acting with a purpose in view and deliberately. That is why the jurisconsults briefly describe the *'āḳil-bāligh* as *mukallaf*, i. e. "some one who is obliged to fulfill the precepts of the law", to whom the commandments and prohibitions of the religious law refer in general. (TH. W. JUYNBOLL.)

Amongst the Druses and a few other sects the name *'āḳil* (plur. *'uḳḳāl*) is used to denote some one, who is an adept in the doctrines of the sect, as contrasted with the *djuhhāl* (sing. *djāhil*), who form the majority. See the art. Druses).

'AḲĪL B. ABĪ ṬĀLIB was a brother of 'Alī; for a long time he refused to believe in the message of Muḥammed. In the battle of Bedr he fought on the Mecca side (according to accounts of later date he did so in spite of himself, cp. Nawawī, ed. Wüstenf., p. 427); he was taken prisoner, but was soon ransomed by al-'Abbās (cp. the account in Ṭabarī i. 1344 *et seq.*, which was omitted by Ibn Hishām, Vā'ḳidī, ed. Houtsma p. 46). Later on, after the conquest of Mecca, — according to others already after the agreement of al-Ḥudaibiya (cp. Ibn Ḥadjar, *Iṣāba* ii. 1175) — he embraced Islām and went to Medina. He accompanied his brother Dja'far in the unfortunate campaign to Mu'ta. Illness prevented him from taking part in the succeeding expeditions; some authorities however assert that he fought in the battle of Ḥunain. When 'Alī was proclaimed Caliph, 'Aḳīl deserted him and went over to Mu'āwiya's side, with whom he fought in the battle of Ṣiffīn (cp. Belādhorī ed. de Goeje in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xxxviii. 391). 'Aḳīl died during the reign of Mu'āwiya (according to others in the beginning of Yazīd's reign). He was famous for his knowledge of the old genealogies, and was consulted by 'Omar when the latter made the lists of the dīwāns.

'AḲILA (A.) is the name of a man's male relatives who according to the precept of the religious law have to pay the penalty (the *'aḳl*) for him, when unintentionally he has caused the death of a Moslem. This decree was based on a verdict of the Prophet. One day in a quarrel between two women of the Hudhail tribe one of them, who was with child, was killed by the other with a stone, which hit her in the womb. When, soon after, the other woman also died, the Prophet decided, that her kin (*'āḳila*, or, according to a different reading, her *'aṣaba*, i. e. agnates), in accordance with an old custom, had to pay the penalty to the relatives of the woman who had been killed.

The original custom with the ancient Arabs

was that the whole tribe was obliged to pay the wergild (Robertson Smith, *Kinship and marriage in early Arabia* p. 53; O. Procksch, *Über die Blutrache bei den vorislamischen Arabern* p. 56 *et seq.*) It made no difference whether the author of the deed had acted premeditatedly or not. According to the Moslem law however the penalty can only be claimed from the kinsmen in case of manslaughter, because according to the generally accepted version of the abovementioned tradition the Hudhailian woman had also slain her adversary unintentionally. The majority of the jurisconsults agree that the author of the deed should not be obliged to pay the penalty. Only the Ḥanafites and a few Mālikite scholars maintain, that he should be treated in the same manner as the other members of the family and therefore should contribute his share to the amount.

There are moreover various contradictory opinions regarding most of the special problems which refer to this matter. For example the majority of the Moslem scholars consider only the male relatives of the author of the deed as 'āḳila. But the Ḥanafites maintain that in consequence of the altered political and social conditions not only the members of the family, but rather all persons who are obliged to help one another (such as the members of the guild to which the perpetrator belongs, his neighbours, or the inhabitants of the same part of the town etc.) should be compelled to share in the payment. They defend this theory with an appeal to the example given by the second Caliph. The latter had commanded that in the various districts, lists (*dīwān*) of Moslem brothers-in-arms should be drawn up. The persons whose names were contained in those dīwāns owed one another annual assistance and had to contribute to the payment of the penalty for manslaughter committed by one of their community.

The kinsmen (the 'āḳila) have to pay the money within three years' time. The full amount, precisely fixed by the law, is a so-called "light" penalty [cp. the article DIYA]. The question as to the amount of the share which each separate person has to contribute, is solved again in different ways. According to the Ḥanafites no-one need give more than three or, at the highest, four dirham, i. e. only one (resp. 1⅓) dirham a year. According to the Shāfi'ites ½ dīnār or 6 dirham may be claimed from well-to-do people, and according to the Mālikites and Ḥanbalites each person is liable to pay as much as he is able. Moslem tradition makes the Prophet proclaim emphatically, that neither will the children have to atone for the sins of their fathers, nor the fathers to answer for the sins of their children. This statement implies, according to many jurisconsults, that neither ascendants nor descendents are obliged to pay the penalty. Consequently they consider as bound to pay: first the brothers of the perpetrator, next the sons of these, then the uncles, then the uncles' sons etc. If the author of the deed has no kindred at all, the penalty must be paid out of public funds.

AḲINDJI = "skirmisher", "scout" (from *aḳin* "incursion", "razzia", "raid of cavalry", from the root *aḳ-maḳ* = "flow", "gush".) At the beginning of the Ottoman conquests the aḳindji, in the van of the regular troops of the invading army, struck Oriental Europe with terror by the rapidity of their movements; they received neither fiefs nor pay, but lived on the booty they captured from the enemy. They appear for the first time in the early years of 'Othmān's dominion, first in Asia Minor, notably in a combat, which Er-Toghrul gave to an army composed of Greeks and Tatars, in the plain of Brusa, towards the close of the 13th century. During the first siege of Vienna (935 = 1529), they advanced as far as Ratisbon, far beyond Linz which they passed on their way, devastating the whole country by fire and sword according to the account of Paulus Jovius. The family of Mikhal-Oghlu, which was descended from Köse-Mikhal and related to the Paleologues, boasting besides of a relationship on the mother's side to the Duke of Savoy and the King of France, possessed for a long time the dignity of commander of this troop.

(CL. HUART.)

'AKK is the name of an Arabian tribe. *'Akk* means "excessive heat" and "very hot"; consequently the name belonged originally to a *mikhlāf* (province), and was afterwards transferred to its inhabitants. As a curiosity we may mention here that the 'Akkites are said to have founded Acre (*'Akkā*).

Their genealogy is given by Wüstenfeld, *Geneal. Tabellen*, A. There 'Akk and Ma'add are mentioned as the sons of 'Adnān. Others consider the southern Arab 'Udthān as their ancestor which has often caused mistakes in the texts. They appear always as southern Arabs. The 'Akkites shared the place al-Mahdjam with Khawlānites, the place al-Kadrā' with Ash'arites and the place al-Salm with Rakbites, Madjdites, Farasānites and Kinānites. But in the main their province is inhabited by them and Ash'arites, with whom they are closely connected; occasionally the origin of both tribes is traced back to the same ancestor. They often appear in joint action; for example they have their governors in common. Also certain peculiarities of language are common to them both.

H a b i t a t i o n s. Geographically their country belongs to southern Arabia; it is the *Tihāma* (lowland, littoral) of Yemen. Their settlements extended north as far as the region of Djidda. Also according to its administration their country belonged to southern Arabia; sometimes however it was under the government of Mecca.

The M o u n t a i n s in the Sharāt, the mountainous

country by which the *Tihāma* is bounded on the east side, were called: Djurāli, Harāz, Khāmis, Kaihama and al-Madjrib.

The Waters were: Dhu'al, Mawr (after which also a province is called, north of Surdud), Sahām (south of 15° N. Lat.) and Surdud (north of 15° N. Lat.)

More or less important places were: al-A'lāb (far away in the north), Baldja (on the Wādī Mawr), al-Kadrā' (on the Wādī Sahām, east of Hudaida on the coast), Lu'sān (a district in the mountains), al-Mahdjam (also called Surdud), al-Mawṣil, al-Ṣuḥārī (on the coast), al-Sakn (on the coast), al-Sanatān (in the region of the Hamdān). There were also 'Akkites in Khorāsān, in Syria (on the Jordan), in Egypt and in the Maghrib. In Kūfa they shared one and the same quarter with northern Arabians.

History. Ptolemaeus calls them 'Αγχῖται (var. 'Αγχῖται etc.). Some genealogists state a close connection between the 'Akkites and the Aadites (through the medium of 'Udthān, ut supra); which seems in accordance with the story that the Aadites in the period of their peregrinations had lived for some time in the territory of the 'Akkites. The 'Akkites were amongst the first who after Muhammed's death abandoned the Muhammedan realm; but with their allies, the Ash'arites, they were defeated in the extreme north of their country. The better elements of the tribe, it is true, seem to have kept aloof from this hostile action against Islām. At the outbreak in Yemen of the insurrection against Abū Bekr's governor Fērūz, the 'Akkites and 'Uḳailites hastened to his assistance and forced a way for Fērūz to escape to Ṣan'ā' at the very moment when he seemed irrevocably lost. Supported by these auxiliaries he acted on the offensive and defeated the rebels. The 'Akkites took a prominent part in the conquest of Egypt by 'Amr. In 'Alī's wars with Mu'āwiya they deserved the latter's thanks for venturing at his command into one of the most dangerous situations of the battle of Ṣiffīn, when together with the Ash'arites they had to face the attack of al-Ashtar. In the battle on the Ḥarra, 'Akkites fought in the Syrian army, and during the succeeding siege of Mecca they took part in the burning of the Ka'ba. In 207 (822-823) mention is made of an 'Alide causing disturbance amongst the 'Akk, which was soon quelled however by al-Ma'mūn.

(Rhodokanakis.)

'AKKĀ is the present name of the ancient 'Akko, called Ptolemais by the Greeks, a port on the west coast of Palestine. 'Akkā was captured by the Arabs under Shuraḥbīl b. Ḥasana. Mu'āwiya had the town rebuilt, as it had suffered a great deal in the wars with the Byzantines. He also caused dockyards to be built in 'Akkā, which afterwards were removed to Tyre by Caliph Hishām. At a later period Ibn Ṭūlūn had the harbour surrounded by large stone embankments; Muḳaddasī, whose grandfather was the architect, gives an interesting description of their construction. With the crusades a new epoch began for the town. In 1104 king Baldwin I, after a previous abortive assault, succeeded in conquering the important sea-port town, which now became one of the principal possessions of the crusaders in the Holy Land.

To the 'Akkā of this period the description refers, wich is given of the town by Idrīsī: it is there called a large, widely-extended place with many farms, a beautiful and safe harbour, and a mixed population.

After Saladin had won the great battle of Ḳarn Ḥaṭṭīn, 'Akkā was surrendered to him in 1187. But to the Christians the possession of "Acre" (the French transformation of the name) was of vital importance. That is why they soon afterwards began a new siege, which dragged on for a couple of years, until the arrival of Philip of France and Richard Coeur-de-lion finally turned the scale and 'Akkā was taken in 1191. From 1229 onwards 'Akkā was the centre of the Christian power in Palestine and the seat of the great orders of knighthood, amongst others of the order of St. John, after which the town was called St. Jean d'Acre. In 1291 Sulṭān al-Malik al-Ashraf put an end to the dominion of the Christians in Palestine by conquering 'Akkā. The town was completely destroyed, and lay waste for a long time, a collection of grand ruins, only inhabited by a few living beings. About the middle of the 18th century it was called to new life by Shaikh Ẓāhir, the founder of a dominion in Galilee, who chose 'Akkā for his capital. The town was rebuilt and regained actual prosperity during the reign of terror of the cruel Aḥmed al-Djazzār (1775—1804). In the year 1799 Napoleon in vain laid siege to the town, which was protected by the English fleet. During the peaceful rule of al-Djazzār's successors 'Akkā retained its prosperity; but in 1832 it was again razed to the ground after Ibrāhīm Pasha had succeeded in conquering the town. It revived a second time, only to be shelled in 1840 by the Turkish fleet supported by the English and Austrians. Since that time it has recovered a little under Turkish government.

AKKERMAN. [See AK KERMĀN, under AK.]

'AKL (A.) is a philosophical term = νοῦς, "ratio" (so for example Gerhard of Cremona) or "intellectus", "intelligentia". In neoplatonic speculation, which in many respects resembles the late-Hellenic doctrine of the Logos and also corresponds with Logos-christology, *'aḳl* is the first, sometimes the second, entity, which emanates from the divinity as the first cause, or proceeds from it by means of intellectual creation, the *nafs*, the *ṭabī'a* etc. coming after the *'aḳl* in succession. As first created entity the *'aḳl* is also called "the representative" or "the messenger" of God in this world, and various sects acknowledge incarnations of the *'aḳl*. — As a cosmological, purely intellectual principle of motion it corresponds with the νοῦς of the Aristotelian metaphysical system and its expounders. The purest adherents of peripateticism in Islām call the divinity itself *'aḳl*, because they maintain that the definitions of the *'aḳl*, to wit *'āḳil* and *ma'ḳūl*, ought not to derogate from the

essential unity of God. The *'aḳl*, thus defined, is followed by the *'uḳūl* of the spheres, usually ten in number: the encompassing sphere, the spheres of the fixed stars and of the seven planets, finally the terrestrial or sublunary sphere. The spirit of the last-mentioned sphere is called *'aḳl fa''āl* (ποιητικός, agens) in a more restricted sense, although the attribute *fa''āl* is also due to the higher spirits and to God. In theological or harmonising expositions the spirits of the spheres are identified with the angels who stand next to God; the *'aḳl fa''āl* is then called the angel Gabriel. — The speculation concerning the *'aḳl* has acquired the greatest development in psychological and ethical treatises, not only from philosophers and sectarians, but also from orthodox Mussulmans. Taking for their basis the commentaries on Aristotle's *De anima* and especially the thus-entitled work of Alexander of Aphrodisias, they enumerated (as a rule according to the Pythagorean quaternary), and also explained the consecutive degrees of man's mental and active development, though preeminently of the former. They are mostly given in the following order:

1. The *'aḳl hayūlānī* or *bi 'l-ḳūwa* (ὑλικός, materialis; ἐν δυνάμει, potentia): the intellectual turn or capacity in man either for understanding, by way of abstract thinking, the essence of special material things, or for receiving this understanding from above.

2. The *'aḳl bi 'l-malaka* (ὁ καθ' ἕξιν, habitu): the intellect trained in the rudiments or principles of knowledge.

3. The *'aḳl bi 'l-fi'l* (ὁ κατ' ἐνέργειαν, actu), which must not be confused with the *'aḳl fa''āl*. The former is man's intellect at the moment when it is active, the latter is superhuman and ever active.

4. The *'aḳl mustafād* (ἐπίκτητος, adeptus sive adquisitus). Thus is called man's intellect as a perfect gift from the "dispenser of forms", the *'aḳl fa''āl*. Those who teach a faculty of appropriation in man, speak about an *'aḳl muktasab*.

As generally distinction is made between *'aḳl 'ilmī* and *'aḳl 'amalī* (θεωρητικός-πρακτικός), the various degrees of practical intelligence as also the mystical conditions of the soul are often so defined as to correspond with the degrees of theoretical intelligence. The antithesis of *'aḳl* is *ḥiss*.

(T. J. DE BOER.)

AKLA (A.) = cancerous tumour. Ibn Sīnā describes this disease as follows:

"When a member begins to corrupt and inflames the adjacent part of the body, the end is corrosion, and it is this process which is called *akla*. And it is said of that part of the member, which is infected by the putrefaction, that it is dead; and but for the thickness of its matter it would not hold, and fall off.

The following remedies may prevent this issue: Take equal quantities of chalcotrichits (copper-bloom), of honey and of alum, and with their mixture rub the affected spot; that will hinder its development, making the putrid part drop off and protecting the contiguous flesh.

And when the process has passed the stages of inflammation and discolouring, a more gentle treatment must be tried, wetting it gradually (or: by a little wetting).

And here follows another cure for the putrefaction:

Powder it with rolled hollow-root and gall-nut mixed together in equal quantities until it becomes dry. Vitriol and yellow vitriol are equally effective, especially together with vinegar and nut-leaves, and also with the wild cucumber or its juice. And if part of the flesh is already corrupted, cut it away or make it fall off by means of sarcocolla pastilles; still stronger than this is euphorbium. And after one layer has fallen off, get oil ready and put it on the sore spot; then the rest will come off and the sound flesh will appear. Red vitriol may be sprinkled on the wound to spare the skin. When the pus has become visible, it must not be cut away nor be removed by uncovering it, lest the taint should spread. And if the inflammation round the putrid part increases, barley water with henbane juice is recommended as a good expedient for stopping it. But I cannot approve of that, although I consider it indispensable for the treatment of the sound parts of the body to keep the disease away from them. When the rotten member has been cut away, the adjacent parts ought to be burnt with fire — which requires resolution — or with caustic and burning remedies, especially in cases where such members are affected as soon decay in consequence of their own heat and the contiguity of secretions, for example the penis and the anus.

The foregoing is what we wanted to say here; in our discussion on ulcers useful matter may be found in addition to the present chapter".

(J. LIPPERT.)

'AḲRAB (A.) is the name of the scorpion. The scorpions belong to the class of the arachnida. They are not found beyond 45°. N. Lat. In Europe and the other countries on the Mediterranean their class (otherwise dangerous for its sting) is mostly represented by the harmless field-scorpion (buthus occitanus). But in Asia and Africa other varieties are found, which by their sting not only cause paralysis, fever, fainting fits and nausea, but sometimes even death. The scorpion is a very common insect in hot climates, where it even finds its way into people's houses and hides in warm clothes and footwear, by which habit it has stirred of old the imagination of the oriental peoples. It was given a place amongst the stars as a constellation and as the eighth sign of the zodiac; it played a part in the interpretation of dreams; and to find one was considered a good omen. — It was gene-

rally believed to be more dangerous than it really was; magic spells (afterwards verses from the Kor'ān) engraved in seal-rings were used as a safeguard against its sting, of which, according to tradition, even Muḥammed did not disapprove. Modern investigation has proved the Arabian scientists to have been right in observing that the scorpion escapes extreme heat and other evils by a prick with its own sting, in other words by committing suicide, and also that the mother carries her young on her back until she perishes under the weight. The scorpion, like most poisonous animals and insects, played an important part in mediaeval Arabian medicine: the best cure for the scorpion's sting was either to eat it roasted or to lay it, pulverised or soaked in oil, on the wound; its ashes were considered a remedy for weak eyes and the gravel; another mixture extracted from the most poisonous of all scorpions, the black scorpion (scorpio afer), was even said to be an efficacious remedy for leprosy. But especial healing power was attributed by the Arabs (who herein followed the Greeks) to the scorpion oil which was prepared in various ways; it was used for virulent sores, for back-ache and sciatica, and especially as a remedy against loss of hair. Concerning the use of scorpions in war cp. a remarkable communication in Elliot and Dowson, *Hist. of India* v. 550-551. — In Arabian literature the scorpion is often mentioned, and always as the embodiment of perfidious hostility (*Ḥamāsa*, ed. Freytag, p. 105, verse 1, p. 156, verse 2; *Hudhailian poems* nº. 21, 24; *Mufaḍḍaliyāt*, ed. Thorbecke, nº. 19, 12; Nābigha, ed. Ahlwardt, nº. 1, 4), as a symbol of caustic speech ('Urwa nº. 15, 2), and of slander ('Urwa nº. 5, 6; Farazdak, *Dīwān* nº. 61, 3). It is used in like manner in the proverb: "More stinging than a scorpion" Freytag, *Proverbia* nº. 902). The coldest winter days (the time of the new moon in November, December and January) were called the "three Scorpions" because of their "piercing" cold (already in Farazdak's *Dīwān* nº. 122, 2; cp. *Calendrier de Cordoue* p. 10).

Bibliography: Damīrī i. 161 *et seq.*; Kazwīnī (ed. Wüstenf.) i. 439-440; Ibn al-Baiṭār, *al-Djāmi'* (Būlāk, 1291) iii. 1281; Dozy, *Supplément* ii. 152-153; Hommel, *Ursprung und Alter arabischer Sternnamen und Mondstationen*, in the *Zeitschr. d. Deutschen Morgenl. Gesellsch.* xlv. 605. (HELL.)

'AKRABĀ' is the name of two localities:

1. A place on the frontier of Yamāma, famous for the bloody battle in which Musailima and the Banū Ḥanīfa were defeated by Khālid. In its neighbourhood was a grove (*ḥadīḳa*), surrounded by a wall and, before this battle, known by the name of "Raḥmān's garden"; later on it was called "garden of death".

2. A place of residence of the Ghassānide princes in Djawlān; it is probably identical with the present 'Akrabā' in the province of Djēdūr.

Bibliography: Yāḳūt, *Mu'djam* iii. 695; Nöldeke, in the *Zeitschr. der Deutsch. Morgenl. Gesellsch.* xxix. 430; cp. in the *Zeitschr. des Deutsch. Palästina-Vereins* xii. the map of the Djebel Ḥawrān A B 3. (F. BUHL.)

AKRĀBĀDHĪN (A.; also KARĀBĀDHĪN) = pharmacopoeia. The word is derived from Syriac *grāfādhīn*, which in its turn was borrowed from the Greek (γραφίδιον = short treatise). 'Alī b. 'Alī defines it as *rasm al-adwiya au ma'ā au mufrad*, for which the modern equivalent is pharmacopoeia.

Ibn Sīnā's *Ḳānūn* iii. 309 contains the following comment on the subject: Not every disease can be cured by a simple drug, especially not those of a complicated character; if we did find one we should prefer to use it. But we may perhaps find a composition, corresponding with the complicated nature of the disease; or we may find only such a one as needs strengthening in one of its components by an additional element. In that case we have to add a simple drug which enhances its virtue, as is done with camomile; for in this physic the dissolving power is stronger than the astringent power, so the latter must be increased by the admixture of a simple drug.

And sometimes we find a warming simple medicament; but supposing our need of warmth is less than the quantity of warmth it supplies, we have to add a cooling medicine. If on the other hand we require more heat, another warming medicine must be added.

And sometimes we need a warming medicine composed of four parts, and we only find one of three and one of five; in that case we mix the two to see whether the mixture will yield one of four parts.

And sometimes the medicine, which we want to apply, is efficacious in the case under consideration, but it is detrimental in another. In case of the latter we must mix it with such an element as neutralises the harm it might do.

And sometimes the medicine is bitter and the patient loathes it; the stomach is nauseated and sends it back; then we must add something to make it palatable.

Sometimes we want the medicine to work at a remote part of the body, but we are afraid that the first and the second digestion might diminish its strength; in such cases we wrap it up in a cover, which prevents the two digestions from doing it any harm on its way to the member in question, as for example opium is mixed with theriaces.

Sometimes we want the medicine to disperse. For instance camphor pastilles contain a portion of saffron to enable them to reach the heart; but when they have reached it, the dispersing faculty begins to operate; it expells the saffron, deprives it of its power, and makes the cooling and quenching elements affect the heart, in the same way as the separating power does, by separating the dissolving and astringent faculties. It is all the same whether the medicine be natural or artificial; it lets the dissolving element escape towards the affected member to dissolve the matter, and the dispersing element towards the canals of the matter to prevent its flow.

Sometimes we want a medicine, which slackens a little on its way to the affected part, so that it can have a fine and thorough effect; but supposing the medicine is quick in passing through, we have to mix it with that which retards its passage. Such is the case with many aperients, for they are quick in passing through the liver. So if we require a retardation of the medicine in the liver, we add such medicines as tend towards a direction away from the liver — such as radish seed, which tends towards the opening of the

stomach. In that way the passage of the medicine is slackened to such an extent as to allow its useful element to reach the liver and to pervade it.

Sometimes the medicine which we employ serves two ends, whereas we aim at one only. Then we have recourse to an admixture of a drug, which compells it towards the desired end. Spanish flies for example are put into diarrhoetic and purgative medicaments, in order to turn them away from the direction of the veins and towards that of the kidneys and the bladder.

Understand that a large majority of medicines have a place of operation and a place from whence they operate. Sometimes it is required that the medicine operates beyond the place where it stops. In that case something is needed which can prepare the way to it. Another time we want it to operate nearer the place where it stops, and then we require a medicine to arrest it.

Understand that the thing which has been tried is better than the thing which has not been tried, and that a few drugs are better than a great many for each individual case.

The reason why the thing which has been tried is to be preferred, lies in the fact that in each composition both its component parts and their totality are operative. That which has not been tried can only be considered useful on the strength of our knowledge of its components, but we do not know what will be the effect of their mixture, whether it will yield something better than we expected, or not. For sometimes the result of the mixture is more efficacious than its component parts would seem to promise.

The compound medicines are arranged into eleven categories, which in their turn can be analysed into countless separate drugs, which are either called after the method of preparation or after physicians, countries etc.

The eleven categories are the following:

1. *Al-tiryāḳāt*, Greek θηριακά, universal antidotes, those prepared with the flesh of vipers being preferred most; *aḳrāṣ* (pastilles), *maʿādjīn* (electuaries), comfits.

2. *Iyāradjāt*, Greek ἱερά, amongst which are especially famous the ἱερὰ πικρά, the sacred bitter medicines.

3. *Djawārishnāt* (Pers.), aperients and non-aperients.

4. *Safūfāt*, powders, medicines which are taken dry.

5. *Luʿūḳāt*, electuaries.

6. *Ashriba* and *rubūbāt*, the difference between them being, that the former are juices that work independently, and the latter are such as operate by the admixture of something sweet.

7. Nursed and sugared medicines.

8. *Aḳrāṣ*, pastilles.

9. *Sulāfāt* and grains.

10. Ointments.

11. *Marāhim wa-ḍimādāt*, salves and dressings.

(J. Lippert.)

AKRĀD (A.) plur. of Kurd [q. v.].

AḲRĀṢ (A.) corresponds with what we call pastilles. The medicinal signification of the word does not seem to have been recorded in any original Arabic dictionary, not even by Ibn Sīda. Ibn Sīnā, *Ḳānūn* iii. 382 (in the text erroneously 372) restricts himself to giving a collection of recipes of various sorts of pastilles after their titles, without any explanation concerning their meaning, as he is otherwise wont to do.

First he mentions the *aḳrāṣ al-kawākib*, i. e. constellation pastilles, and says that they stood in the highest esteem with the ancient physicians, who for that reason gave them this name. After that he speaks about the effect of these pastilles: They act upon the weak stomach, counteracting the secretions which other members discharge into it, and they stop the bitter crudity. They are rubbed upon the forehead and soothe head-ache; they are useful in cases of catarrh and toothache, and together with galbanum are applied to a corroded (probably cancerous) part of the body. They are good for ear-ache, for loss of blood, for a discharge from any part of the body, for chronic coughs and intermittent fevers when taken in pyritic water containing silver, and for poisons when taken in rue water.

Then follows the recipe:

Take myrrh, castoreum, nard, cassia, sealed potter's clay and mandrake skins, 5 drachms of each; opium, saffron, bryony, star of earth (*kaw-kab al-arḍ*), aniseed, violet seeds, fluid storax resin, and celery seed, 8 drachms of each. Pound all these drugs and knead them with gum which has first been moistened with flavoured wine, and divide the dough with pastilles of half a drachm each, which must be put to dry in the shade before use.

Then follow seven rose pastilles with their recipes:

1 Rose pastilles for the whole
2 „ „ of *Asculapius*
3 „ „ of *Sakmunia*
4 „ „ of *Tabāshīr*
5 „ „ called *Dantawanda*
6 „ „ another recipe
7 „ „ of *Sunbul* (hyacinths).

Then five camphor pastilles are enumerated, usually with the addition „camphor pastilles" (another recipe).

Then follow *tabāshīr* pastilles.

Then pastilles of Emir Bashīr.

Then six more pages of other kinds, all of them with an account of their effect and a recipe.

(J. Lippert.)

ʿAKS (A.) = inversion, used in a pregnant sense (= *ʿaks al-kalām*) to designate a certain figure of rhetoric, which consists in the transposition of two parts of a clause, or of two clauses, with the result that what comes first in the former comes last in the latter, and what comes last in the former comes first in the latter. The Arabian philologists call this figure of rhetoric also *tabdīl*, and look upon it as one of the most beautiful plays upon words, which at the same time define the meaning accurately (*al-muḥ-sināt al-maʿnawiya*). They distinguish three different kinds: 1. In one nominal clause the transposition of the subject and the genitive which is dependent on it, e. g. *ʿādāt al-sādāt sādāt al-ʿādāt*. — 2. In two nominal clauses the transposition of the subject and a word dependent on the clause, e. g. (Sūra 60, 10) *lā hunna ḥillun la-hum wa-lā hum yaḥillūna la-hunna*. — 3. In two verbal clauses the transposition of two words which are dependent on the verb, e. g. (Sūra 10, 31) *man yukhridj al-ḥaiya min al-maiyit wa-yukhridj al-maiyita min al-ḥaiy*.

Bibliography: Mehren, *Rhetorik* p. 104;

Dict. of techn. terms p. 978, 3 towards the end, 979, 14. (WEIL.)

AKSARA. [See AK SARAI, under AK.]

AL, the article in Arabic, is the particle of determination, and as such called *adāt* (or *ḥarf*) *al-taʿrīf*. According to Sībawaihi and a vast majority of grammarians the *alif* of *al* is only a prefix, whereas the *lām* is the actual vehicle of the determination. Al-Khalīl on the other hand maintains that the *alif* has always formed part of the stem but was slurred down to an *alif waṣla* in consequence of the frequent use of the word. He therefore calls the article *al-alif wa 'l-lām*, the majority of the other grammarians simply *lām al-taʿrīf*. The Arabian philologists take the *lām* to be a demonstrative (still preserved for example in *dhālika, alladhī*), just as the Hebrew article has demonstrative meaning (the primary form of the latter article seems to have been the demonstrative *hā*, and not *hal*, which would correspond with Arabic). In such forms as *al-ān*, *al-yauma* a trace is preserved of the original demonstrative sense of *al*, which afterwards has become a simple particle of definition. The article and the noun following are always written in one word; if the initial sound of the noun is a dental or a sibilant, the *lām* is assimilated to it. (Zamakhsharī, *al-Mufaṣṣal* p. 193, 19 *et seq.*). *Al* is used to single out a certain special individual (*lām al-ʿahd*), or to define the species (*lām al-djins*). It is occasionally used also as a relative pronoun. In the south of Arabia the dialectical pronunciation of the article is *am* (*Mufaṣṣal* p. 169, 4, 174, 18 *et seq.*).

Bibliography: Lane, *Lexicon* p. 74, col. 1 *et seq.*; Wright, *Arabic Grammar* (3rd ed.) i. § 345; the same, *Comp. Grammar* p. 114-115; Zamakhsharī, *al-Mufaṣṣal* p. 155, 1—9; Zimmern, *Vergl. Grammatik* § 57. (WEIL.)

ĀL (A.) = fata morgana, a kind of mirage, caused by the heightened temperature of the earth due to the heat of the sun, in consequence of which the ground looks like an expanse of water; cp. Jacob, *Altarab. Beduinenleben* (2nd ed.) p. 9 *et seq.*; Geyer, *Zwei Gedichte von al-Aʿshā* (Vienna, 1905) p. 107-108; al-Ḥuṭaiʾa nº. 7, 31; al-Ḳuṭāmī, nº. 3, 24. — A synonym of *āl* is *sarāb*.

Āl is also the name of a demon, who attacks women in childbed, to judge from the descriptions a personification of puerperal fever; cp. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xxxvi. 85; Goldziher, *Abh. zur arab. Philologie* i. 116.

(A. HAFFNER.)

ĀL (A.) = family, kindred, relatives, in the widest sense of the word. According to accounts dating from Islamic times the pre-Islamic Ḳuraish had called themselves *Āl* (or *Ahl*) *Allāh* (references are given by Margoliouth, *Mohammed* p. 19), because they were the keepers of the Kaʿba and the sacred treasures. In Islām the word obtained a wider sense in the combination *Āl al-Nabī*, particularly through the medium of the prayer attributed to Muḥammed: "Oh God, pray for (*ṣalli ʿalā*) Muḥammed and his *Āl*!" Similar to the definition of the idea *Ahl al-Bait* [q. v.] the Shīʿites restrict also the expression *Āl al-Nabī* to the family of the Prophet in the line descending from ʿAlī and Fāṭima. (This lineal succession is especially called *al-ʿItra*). Those who stand aloof from Shīʿitic tendencies understand by *Āl al-Nabī* the Banū Hāshim in the most comprehensive sense of the word; others the wives of the Prophet or his kinsmen in general; the most explicit denial of the Shīʿitic claims is contained in the interpretation, that the *Āl* of the Prophet comprehends all votaries irrespective of relationship, or in a still wider sense all Mohammedans collectively, the entire *Umma*.

Ibn Khālūya (d. 314 = 926-927) wrote a treatise *Kitāb al-Āl* (quoted by Baḥrānī, *Manār al-hudā*, Bombay 1320, p. 200), in which he divides the *Āl* of the Prophet into 25 classes (Flügel, *Die grammatischen Schulen der Araber* p. 231). The pamphlet of the Shīʿitic theologian al-Raiyān b. al-Ṣalt of Ḳumm, which contains the collected apophthegms of the Imām al-Riḍā concerning the difference between *Āl* and *Umma* (Ṭūsī, *List of Shy'a books*, nº. 294) was probably meant as a reaction against the Sunnitic tendency to extend the acceptation of *Āl* over the whole *Umma*. Concerning *Āl* in the eulogies see Goldziher in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* l. 114—117. (GOLDZIHER.)

ĀL ʿIMRĀN (A.) is the title of the 3rd Sūra.

ĀLA (A., plur. *ālāt*) = instrument. In the classification of the sciences *ālāt* is the name of such attainments as are acquired not for their own sake (as an end in itself), but "as a means to something else", e. g. philological discipline and logic, which are a help in the study of religion; *al-funūn al-āliya* along with *al-ʿulūm al-sharʿiya*. Cp. the expression *ālāt al-munādama* = knowledge and capacities which are useful in social intercourse. Consequently that what is called *āla* differs only in so far from what is called *adab* [q. v.], as the former takes into account the attainments in their relation to the *ʿilm*; cp. also *ʿUyūn al-akhbār* (ed. Brockelmann) i. 4, 10, 15. The appellation *ālāt* corresponds exactly to the expression ὄργανα in the classification of the philological branches of learning by Tyrannion of Amisos; see Usener, *Philologie und Geschichtswissenschaft* (Bonn, 1882) p. 23.

Bibliography: Ghazālī, *Iḥyāʾ*, *Kitāb al-ʿilm*, ch. ii. (*Itḥāf al-sāda* i. 149); Snouck Hurgronje, *Mekka* ii, at the bottom of p. 206; Goldziher, in the *Steinschneider-Festschrift* p. 114 (where some more references are given). (GOLDZIHER.)

AʿLĀ (A.) = higher, highest, also used as a technical term [see ISNĀD]. *Al-Aʿlā* is one of the titles of the 87th Sūra.

ALA (T.) = spotted. This word is often found in geographical names (see the two following articles).

ALA DAGH ("the spotted mountain") is the name of two massifs to the west of mount Ararat on Russian and Turkish territory. The north-eastern continuation of the Bulghar Dagh (Taurus) also bears this name.

ALA-SHEHR (ALA-SHEHIR (T.) = "the spotted town", the ancient Philadelphia) is the capital of a ḳaza in the sandjaḳ of Ṣārūkhān (wilāyet of Aidin-Smyrna), at the foot of the Būz-dagh (Tmolus), 5·1 miles from the Ḳūzu-ćai, at an elevation of 574 ft; it has 22 000 inhabitants, amongst whom there are 17 000 Musulmans and 4326 Greek Orthodox. Ala-Shehr is the terminus of the railway Smyrna-Ḳasaba. There are cotton-mills, liquorice factories, spinning-mills and tanneries, and it is famous for its *ḥalwā*. The place was conquered by the Ottomans in 1391, though not until 1425

a definitive occupation was carried out by Sulṭān Murād II. Near Ala-Shehr, in 607 (1210-1211) a battle was fought between Theodore Lascaris and Kai-Khosraw I, the Seldjūḳide Sulṭān of Rūm, in which the latter was killed with a javelin by a Frankish soldier of the Greek Emperor.

(CL. HUART.)

'ALĀ' (A.) = elevation. Hence the honorific surnames of 'Alā' al-Dawla = Elevation of the dynasty, 'Alā' al-Dīn = Elevation of religion.

'ALĀ' AL-DAWLA. [See DUSHMANZIYĀR.]

'ALĀ' AL-DĪN. [See ḤUSAIN DJAHĀNSŪZ, KAI ḲOBĀD B. KAI KHOSRAW, MUḤAMMED KHWĀRIZMSHĀH, AL-DJUWAINĪ.]

'ALĀ' AL-DĪN MUḤAMMED B. ḤASAN was the last Grand-Master but one of the Assassins [q. v.]. He was born in 609 (1210), and obtained the dignity of Grand-Master after his father's death in 618 (1220). Soon afterwards he is said to have lapsed into a state of melancholy and insanity in consequence of sexual excesses, for which reason some people wanted his son Rukn al-Dīn Khurshāh to take his place. Schism within the order and massacres were the result, until at last, in Dhu'l-Ḳa'da 653 (Dec. 1255) the Grand-Master himself was murdered.

Bibliography: Rashīd al-Dīn, *Djāmi' al-tawārīkh*, *Ta'rīkh-i guzīdeh*; d'Ohsson, *Histoire des Mongols* iii. 174 *et seq.*; Browne, *A literary history of Persia* ii. 456 *et seq.*

'ALĀ' AL-DĪN MUḤAMMED KHALDJĪ, Prince of Delhi, nephew and son-in-law of Djalāl al-Dīn Fīrōzshāh, caused his uncle to be murdered treacherously in 695 (1296), had his uncle's son cast into prison and blinded, and himself ascended the throne. Before his accession he had made conquests in the Deccan; in the early years of his reign he repeatedly put to flight the Mongols, who often afflicted the Pandjāb with their predatory incursions; and after he had made himself safe from rebellious relations, he resumed his former conquests and commissioned his generals to subject Deogiri (the present Dawlatābād) and Warangal. They were successful, and having advanced still further south, conquered Dwarasamudra, destroyed a heathen temple in Ma'bar and brought home an enormous booty. 'Alā' al-Dīn proved a powerful and unscrupulous ruler. Although he possessed no culture whatever, poetry and sciences were zealously cultivated during his reign. He died towards the close of the year 715 (1316). Cp. the art. KHALDJĪ.

Bibliography: Baranī (Barnī), *Ta'rīkh-i Fīrōzshāhī*; Firishta, *Ta'rīkh* i. 175 *et seq.*; Elliot and Dowson, *History of India* iii; *Imperial Gazetteer* ii. (1908) 361-362.

'ALĀ' AL-DĪN PASHA was the first notable legislator of the Ottoman realm. He was a son of the founder of the realm 'Othmān, the second according to the official Turkish historian Idrīs from Bitlīs (d. 930 = 1523-1524), who had the largest store of information at his disposal, the eldest according to Meḥmed Kātib Za'īm, who wrote considerably later (d. 982 = 1574-1575) and for this epoch mainly relied on Neshrī, a writer of the first half of the 15th century, in whose account however just this question of the brothers' ages is passed over in silence. In spite of that, the latter statement has been promulgated with some zeal by later Turkish historians, for what reason it is not easy to see. In all descriptions 'Alā' al-Dīn appears as a rather dispassionate, passive nature. That explains why his father, a few years before 708 (1308), when he settled down in the newly conquered town of Yeñi-Shehr, kept 'Alā' al-Dīn at home, whereas the warlike Orkhān at this time already was sent in all directions to extend the empire. The second half of Othmān's reign rings with the praises of Orkhān's victories, but of 'Alā' al-Dīn nothing is heard for a period of twenty years. No wonder then that 'Othmān before his death, amongst other testamentary directions, consigned the succession to Orkhān, who had deserved so well of the empire and of Islām; this grant however was of a strictly private character, as no mention is made of the presence of any witnesses. Not a single word in the long admonitions refers to 'Alā' al-Dīn. After Othmān's death (726 = 1325-1326) the two brothers had first of all some amicable discussions together. 'Alā' al-Dīn "Čelebi", who liked to take things easy, was so struck with consternation at discovering that their father, that brave conqueror, had left them no fortune, that he suggested to his brother that they should choose the more lucrative occupation of herdsmen, but impulsive Orkhān declined this mode of life for himself. 'Alā' al-Dīn observed indifferently: "well, our father during his lifetime indeed bequeathed the principality (*beylik*) to Orkhān's charge", and submitted to the testamentary disposition. He paid his brother homage without delay, gaining thereby every one's praise for his conciliatory disposition. 'Alā' al-Dīn evidently having been initiated by his father into the state-affairs, Orkhān asked him for his help, which he granted without reserve (according to Idrīs). Neshrī asserts that he refused the post of vizier, which was offered to him on that occasion, but according to a Turkish history in manuscript (Königl. Bibl. Berlin, acc. ms. 1894, n°. 177), which is brought down to the year 917 of the Hidjra, he accepted the offer. Although the latter statement is not made explicitly by Idrīs, who indulges rather too much in general expressions, we may conclude as much from his practice of referring henceforth to 'Alā' al-Dīn as Pasha. About this time 'Alā' al-Dīn asked his brother to give him the village of Fōdra, which lay on the left-hand side of the main road from Brusa to Mikhālič in the plain of Kele (written: Kiteh) and he obtained it at once as his property. In the *Taḳwīm al-tawārīkh*, written more than three centuries later, the year 727 (1326—1327) is given as the date of the proclamation of Ottoman laws in compliance with the advice of 'Alā' al-Dīn Pasha, but to this isolated statement little importance can be attached. Perhaps it was the author's sole intention to imply that in the year mentioned 'Alā' al-Dīn received the highest dignity, as shortly afterwards he again refers to the well-known laws of Orkhān's reign under a different date!

But 'Alā' al-Dīn's activity becomes especially noteworthy during the years that follow. In 729 (1328—1329), on the occasion of a visit to his

brother, whom he had come to congratulate on the recent conquest of Izmīd, the principal port on the sea of Marmora, he suggested three important *innovations* to Orkhān. They are the achievement of a race, which felt conscious of having opened a new era, and dared look on all sides without fear. They proclaim their wish that all the Turkish nomads living under the rule of 'Othmān's family, shall be united under the shield of a firm dominion able to enforce obedience on every side. The three innovations are the following: a *monetary system*, an *official costume* and an *organisation of the army*.

It is almost certain that, after the collapse of the dominion of the Seldjūks in 1307, 'Othmān as a feoffee of the last Seldjūk prince 'Alā' al-Dīn Kai Kobād III, had the right to stamp coins in his own name; but according to a reliable authority he never made use of this sovereign's right. At 'Alā' al-Dīn's suggestion the *first coins* were stamped in *Orkhān's name* in 729 (1328-1329). They show on one side the article of faith and on the other the name of the prince together with the optative formula *khallada 'llāhu mulkahu* (may God make his reign eternal). The technical error which has crept in, the spelling Okhān in stead of Orkhān, is due to the Turcoman practice of slurring the *r*. The name of Orkhān's father, the year and the place of coinage and also the prince's title are omitted. The characters are kūfic. We only possess silver coins of Orkhan Bey, as gold pieces as a rule were not stamped in the Ottoman realm until the second half of the 9th (15th) century. The old Arabian basis of the monetary system was abolished by the Ottomans and supplanted by a standard of coinage which was first brought into practice by the last sultans of the Seldjūks ('Alā' al-Dīn Kai Kobād III and his uncle Mas'ūd II), and has remained the coinage of the Ottoman rulers ever since. Its basis is the *aḳče*, which is a translation of Greek ἄσπρον, the name of a silver coin of the Byzantines, which had been current since the tenth century or even earlier. Owing to the want of contemporary authorities for the history of Asia Minor, the word is not found in the epoch of the first Ottoman ruler except, towards the close of the reign of the Mongol prince Ghāzān Khān (d. 703 = 1304), amongst the Turcomans of Ādharbaidjān. The new coin was called *aḳča-i 'othmānī*, soon simply *'othmānī* in daily use. Its full weight amounted to six *ḳīrāṭ* (i. e. a quarter of a dirhem as fixed with great precision in Moslem law), although it was allowed a latitude of 1/10 of the full weight. The actual amount of metal at that time was $5\frac{1}{2}$ *ḳīrāṭ*, exceeding by far the lowest limit (*'iyār*) of $5\frac{1}{4}$ *ḳīrāṭ*. Consequently the *aḳče* corresponded in weight to the present piastre, being bigger, as its circuit was 18 millimetres, but also thinner than the latter. Besides the simple *aḳče* no other silver coin was stamped during Orkhān's reign. Of an explicit prohibition of the circulation of Seldjūk money nothing is heard.

It is not very probable that the asper of eight carats, which in 1334 was current in Rhodes (cp. P. Paciaudi, *De cultu S. Johannis Baptistae*, Rome 1755, p. 319), was identical with the Ottoman *aḳče*. Also at Trebizond, in Caucasian Armenia and the bordering countries of the Mongol Sultan Abū Sa'īd the asper was current coin about 1334 (cp. Pegoletti, *Della decima e delle altre gravezze*, vol. iii. ed. by Pagnini, Lisbon and Lucca, 1766, p. 9, 13).

The second reform of 'Alā' al-Dīn consisted in the choice of an *official costume* for the Ottomans, after the example of the Byzantines. Whereas the Grecian castellans were conspicuous at a remote distance by their rich gold-embroidered head-gear, and even their servants wore a gold embroidered head-dress though of a simpler style, for the Ottomans a *coniform cap* of white felt was prescribed, on the ground of the highly esteemed Arabian maxim: "the best garment is the white one". This head-dress however was only intended as a mark of distinction for civil and military servants of the Sultan, whereas the rest of his subjects evidently remained free in the choice of their clothes.

The third suggestion, the *organisation of the army*, was the most important of the three, not so much because of the motives, which brought 'Alā' al-Dīn to its conception, but because of its result. For it met with such appreciation from the side of the warlike nomadic people, that in a short time the Ottoman nation underwent a complete metamorphosis and became the most wonderful military mechanism, which had been seen in Europe for centuries. What 'Alā' al-Dīn desired was a division of the troops into *subdivisions*, and the appointment of *officers* over the latter. Hence we may evidently conclude that until then the Turks, as far as they had sworn allegiance to 'Othmān's race, were free to band together at random and to go marauding in hostile territory, which would account for the absence of an officially recognised supreme command. The right of warfare now became state privilege. Economical considerations seem to have had just as much weight with 'Alā' al-Dīn as military motives. For details he referred to the "judge" *Ḳara Khalīl*, a relative of their father 'Othmān, who was far superior to 'Alā' al-Dīn in knowledge and energy. Whereas the latter was more concerned about outward things and unable to realise the actual faults and deficiencies, the Sultan with his military experience and the judge with his commanding view of the entire domain of state-affairs went at once down to the core of the matter. They came to the conclusion that lack of infantry had made the Turks waste so much time on prolonged sieges, not the least on that of Brusa. The three men discussed the matter together, and the outcome was a decision to form an army of *foot-soldiers*, which should only be summoned in case of war. It should be formed of young men of Turkish nationality, and have divisions and sub-divisions of 1000, 100 and 10 men, an organisation which seems to be a fundamental idea with all nations. The men during their service in time of war should receive a daily payment of one *aḳče* each. This organisation, an army without drilling, had the germs of death already in itself, and was soon supplanted by the institution of the *janizaries*, which was the exclusive work of Ḳara Khalīl. The name of 'Alā' al-Dīn is not mentioned in connection with the formation of the latter corps; he certainly had no prominent share in it. His merit consists in having referred his brother to the incomparable organising genius of Kara Khalīl.

We have no means to ascertain whether 'Alā'

al-Dīn at a later period played a prominent part once more, whether he held the post of vizier, or as later authorities have it with great pretensions to exactitude, whether he lived the retired life of a pious private man. In the Kükürtli quarter at Brusa he built a dervish monastery, and erected two mosques in the fortress which bars the approach to Kāplīdja, near one of which he chose his abode.

He died at Bigha in the year 732 (1331-1332), or according to Chalkondylas, who wrote, it is true, after the conquest of Constantinople by the Turks and took great freedom in handling the historical facts, Orkhān had made away with him. He was interred at Brusa; his coffin is still shown there in the mausoleum of his brother who, more fortunate than he, had come to power.

Descendants of 'Alā' al-Dīn were still to be found at Brusa in the middle of the 9th (15th) century.

The above account, which differs in details from those of Hammer and Zinkeisen, is mainly founded on Neshrī's and Idrīs' histories of the Ottoman realm. Sa'd al-Dīn, having no further material at his disposal, was the first to draw a little on his imagination, which he was outdone again by Mouradgea d'Ohsson in his *Tableau de l'Empire Ottoman* (1788; vol. iii. of the Folio edition). Zinkeisen's version is based on an analysis of the accounts by Sa'd al-Dīn and d'Ohsson. Special articles on the monetary question are found in Belin's *Essay sur l'histoire économique de la Turquie* (*Journ. Asiat.* 6th ser. vol. iii. p. 421 *et seq.*) and particularly in Ismā'īl Ghālib's *Taḳwīm-i maskūkāt-i 'othmānīye* (Constantinople, 1307); also in Aḥmed Djewdet's *Waḳā'i-i dawlat-i 'alīya* v. (1278) p. 301, and finally in Stanley Lane-Poole's *The coins of the Turks in the British Museum* (London 1883), of which only a discreet use should be made. (K. Süssheim.)

ALAČA (T.; originally a diminutive of *ala* [q. v.] = spotted, variegated) = chintz with coloured stripes (cp. Yule and Burnell, *Hobson-Jobson*, s. v. Alleja p. 8 and 756); it is also found in geographical names (see for example the next article).

ALAČA DAGH is the name of a mountain, constituting a spur of the Ḳara Dagh in the territory of Kars. Near it the Russians gained their well-known victory over the Turks on October 16th 1877.

ALACTAGA (Mongolic; also Alakdaga, Alakdagen, Alakdagha) = "horse-jumper", a species of the family of sand-jumpers (*scirtetes*) which is closely related to the jerboas (Arab. *yarbū'* q. v.). The "horse-jumper" is found in south-eastern Europe, especially in the steppes along the Don and in the Crimea, although its native country is Asia below 52° N. Lat. and west of Mongolia. It is about the size of a squirrel and its graceful little head is like that of a hare, for which reason it is called "ground-hare" or (on the Jaik) "little hare" by the Russians, and "camel-hare" by the Tartars. Its body and the long tail remind one of a mouse, the hind legs are almost four times as long as the front legs. The alactaga is the object of a rather energetic persecution, partly because of its eatable flesh, which is considered a dainty by the steppe-dwellers, partly because of the harm which popular superstition ascribes to it. Its flesh dried and pulverized is taken as a medicine in various places. Cp. Brehm, *Tierleben* (3rd ed.) ii. 485 *et seq.* (Hell.)

ALADDIN (= 'Alā' al-Dīn) is the hero of the tale of the magic lamp, which for the first time is found in Galland's translation of the Arabian Nights' Entertainments. The Arabian original was discovered again by Zotenberg and published in 1888.

Bibliography: *Notices et Extraits des manuscr. de la Biblioth. Nation.* xxviii.; Chauvin, *Bibliographie des ouvrages arabes* v. 55 *et seq.* (J. Horovitz.)

ALAHORT. [See AL-ḤURR B. 'ABD AL-RAḤMĀN AL-THAḲAFĪ.]

ALAI (T.) = "procession", "pageant", "ceremony"; also "regiment" in the military organisation of the Turks. — *Gelin ālāyi* = bridal procession to the husband's home. — *Ṣurre ālāyi* = ceremony at the departure of the *ṣurre-emini* (d'Ohsson, *Tableau de l'empire ottoman* iii. 202). — *Bairām-ālāyi* = the Sultan's solemn procession to the mosque for the mid-day prayer on the two Bairāms. — *Ālāi čawushlari* = "sergeants of the procession", the title of twelve subaltern officers charged with the organisation of the public processions; they were dressed in red velvet and carried a silver-mounted stick in their hand (d'Ohsson, *ibid.* vii. 179). — *Ālāi-bei* = a name formerly assigned to a feudal officer, subordinate to the sandjak-bey, who in time of war had to conduct to the latter the contingents of the *sipāhis* (d'Ohsson, *ibid* vii. 374); at the present day it is a title borne by the colonel of the gendarmery of a province (*wilāyet*).

Bibliography: Barbier de Meynard, *Diction. turc-français* i. 101. (Cl. Huart.)

'ALAḲ (A.) = "clot of blood"; *Sūrat al-'alaḳ*, title of the 96th Sūra.

'ALĀḲA (A.) = "relation", used in grammar to denote the correlation between noun and verb (de Sacy, *Grammaire arabe* ii. 582), and in logic as a term for the connection of ideas, especially of judgments in a conditional proposition, which are necessarily associated, e. g.: "If the sun has risen, it is day". (*Diction. of techn. terms* p. 1012 *et seq.*) (De Boer.)

'ĀLAM (A.), plur. *'ālamūn*, *'awālim* = "world", a Hebrew (resp. Aramaic) loanword (= *'ōlam*, *'ālam*), which already occurs in the Ḳor'ān. In the technical language of the philosophers and ṣūfīs it is often connected with various nouns and adjectives to distinguish between the visible and the invisible world, between the various degrees of mystic perception etc. Cp. *Diction. of techn. terms*, p. 1053 *et seq.*; Zenker, *Türk. Arab. Pers. Wörterb.* p. 620; Dozy, *Supplément* ii. 165.

'ALAM (A.), plur. *a'lām* = "finger-post", "banner" (in the latter sense Arabic uses also *liwā'* and *rāya*). Already in pre-Islamic times each Bedouin tribe had its own banner, which differed in colour from those of other tribes. The banner was tied on to the lance, and it was usually the chieftain himself who carried it in the war. The Prophet also had his own banner, called *'Uḳāb*, which is said to have been black, although tradition also attributes white banners to Muḥammed. The black banner was afterwards chosen by the 'Abbāsides, whereas the Umaiyades adopted the white one and the 'Alides the green colour. A miniature in the famous Ḥarīrī manuscript (reprod. in Migeon, *Manuel d'art musulman* ii. 3) shows the black banner of the 'Abbāsides.

Also the Persians and the Turks had their banners, concerning which the articles BAIRAK and SANJAK may be consulted.

Not only in warfare, but also in the religious life of the Moslems the banners played an important part. In the latter case they are of various kinds, often embroidered with devices, particularly the Muhammedan articles of faith, and are fastened to a decorated staff. A great number of such banners are carried in religious processions, especially at the Muharram feast in Persia and India. Especially noteworthy are those standards amongst them, which are decorated at the top by the figure of a human hand with out-stretched fingers. Finally may be mentioned that during the solemn religious service on Fridays a banner is planted on either side of the pulpit.

Sprache* p. 262 *et seq.*; Jacob, *Altarabisches Beduinenleben* (2nd ed.) p. 126; Van Vloten, *De ophomst der Abbasiden* p. 137 *et seq.*; the same, *Les drapeaux en usage à la fête de Husain à Téhéran* (*Internat. Archiv für Ethnographie* v.); Herklots, *On the customs of the Moosulmans of India* p. 176 *et seq.*

'ALAM (A.) = "sign". In grammar it is used as a general term for "proper names" of men, animals and things. The *ism al-'alam* (nomen proprium) always denotes one single definite thing of a sort; consequently it is considered as determinate in itself, and is as such opposed to the *ism al-djins* (nomen generis). The Arabian philologists give a classification of the *ism al-'alam* from various points of view. The principal classes are the three following:

I. With regard to the contents:
1. *Ism* = name in its proper sense.
2. *Kunya* = the compound name with *Abū*, *Umm*, *Ibn* or *Bint* as its first element.
3. *Laḳab* = surname,
   a. *Nabaz* = nickname, f. i. *Baṭṭa* (duck).
   b. Name of honour, f. i. *Shams al-Ma'ālī* (sun of the high dignities).

II. Syntactical:
1. *'Alam mufrad*, the name which consists of one word.
2. *'Alam murakkab*, the compound name, which is either
   a. *Djumla*, i. e. a complete sentence, such as *Ta'abbaṭa Sharran* (he has taken misfortune under his arm), as such also called *murakkab isnādī* (predicative compound), or
   b. *Ghair djumla*, i. e. no sentence, but either
   α. *Ismāni dju'ilā 'isman wāḥidan*, formed by the unconnected juxtaposition of two nouns, f. i. *Ba'labakk*, *ma'dīkarib*, hence also called *Murakkab mazdjī* (mixed compound), or
   β. *Muḍāf wa-muḍāf ilaihi*, consisting of two nouns, one in the genitive case being dependent on the other, f. i. *'Abd Manāf*. This class comprehends all *kunyas*.

III. Formative:
1. *'Alam murtadjal* (= improvised), i. e. the form exists only as an element of proper names (f. i. *Fak'as*), or else it would have to be altered if used in the ordinary formation of nouns (f. i. *Maḥbab*, *Mawhab*, instead of *Maḥabb*, *Mawhib*);
2. *'Alam manḳūl* (metaphoric), i. e. the form of the proper name is derived from the ordinary word-formations and designated originally
   a. a concrete noun, f. i. *Asad* (lion),
   b. an abstract noun, f. i. *Faḍl* (excellence),
   c. an adjective, f. i. *Ḥārith* (judging),
   d. a verb, f. i. *Taghlib* ("thou vanquishest", the name of a tribe),
   e. an onomatopoeia, f. i. *Babba*, or
   f. a compound expression, f. i. *Ta'abbaṭa Sharran*.

Bibliography: Zamakhsharī, *al-Mufaṣṣal* p. 5—8; Wright, *Arabic Grammar* (3rd ed.) i. § 191, note b; Sprenger, *Diction. of techn. terms*, at the bottom of p. 1048—1052, s. v.

(WEIL.)

AL-**A'LAM** (i. e. "the man with the harelip") ABU 'L-ḤADJDJĀDJ YŪSUF B. SULAIMĀN AL-SHANTAMARĪ, a Spanish-Arabian philologist, was born at Santamaria in 410 (1019), came in 433 (1041) to Cordova, where he had the benefit of the instruction of Ibrāhīm b. Muḥammed al-Iflīlī (d. 441 = 1049), gained for himself great renown as a teacher, and died in 476 (1083) at Seville.

After he had assisted his master al-Iflīlī with his commentary on Mutanabbī (which perhaps is still extant at Berlin — cp. Ahlwardt, *Verz. d. arab. Hss. d. kgl. Bibl.*, n°. 7369), he himself wrote a commentary on the six poets (mss. in Paris, *Supplément* 1424 and 1425 — cp. de Slane, *Le diwan d'Amro'lkais* p. xi *et seq.*; Ahlwardt, *The divans of the six ancient Arabic poets* p. xvii — and in Vienna; from the latter manuscript its previous owner C. Landberg has edited the commentary on Zuhair (*Primeurs Arabes* fasc. ii. Leiden 1889; cp. also Dyroff, *Zur Geschichte der Überlieferung des Zuhair-dîwans*, Munich 1892). He also wrote a commentary on the *Shawāhid* in the *Kitāb* of Sībawaihī under the title of *Taḥṣīl 'ain al-dhahab fī ma'dan djawhar al-adab fī 'ilm madjāzāt al-'Arab*, which he finished in 457 (1064) (Mss. at Oxford, cp. Nicoll, *Bibliothecae Bodleianae codd. Mss. Catalogus* ii. n°. 243; at the Escorial, cp. H. Derenbourg, *Les Mss. arabes de l'Escurial* n°. 310, and at Constantine). This commentary was used by Jahn for his translation of Sībawaihī. Al-A'lam's *Kitāb al-ḥamāsa* is quoted by 'Abd al-Ḳādir al-Baghdādī in the *Khizānat al-adab* i. 563, near the end, iii. 165, iv. 330, 21.

Bibliography: Maḳḳarī (ed. Dozy and others) ii. 471; Ibn Khallikān (Būlāḳ 1299) ii. 465, n°. 812; Ibn Bashkuwāl, *al-Ṣila* (ed. Codera) n°. 1391; Brockelmann, *Gesch. d. Arab. Litter.* i. 309.

(BROCKELMANN.)

ALAMAK is the name of star γ of the second size in the left foot of the constellation of Andromeda. The name is derived from the Arabic designation *'Anāḳ al-arḍ* = "earth-goat", i. e. badger (?). Cp. Ideler, *Untersuchungen über den Urspr. u. d. Bed. der Sternnamen* p. 126-127.

(MAHLER.)

ALAMEDA (Spanish) = avenue of poplars, from Arab. *al-Maidān* [q. v.]

ALAMGĪR. [See AWRANGZĪB.]

ALAMŪT is the name of a mountain-fortress north-west of Ḳazwīn, which owes its fame to its having been the seat of the Grand-Master of the Assassins from 483 (1090-1091) until 654 (1256). The name admits of two explanations, either "eagle's nest" or "eagle's instruction"; but the former sense seems to be the correct one; cp. C. Huart, *La forteresse d'Alamut*, in the

Mémoires de la société de Linguistique de Paris xv. The fortress was built by the ʿAlide Ḥasan al-Dāʿī ila 'l-Ḥaḳḳ (246 = 860), remained after the Mongol conquest, and was used as a state-prison during the reign of the Ṣafawides. Ruins of it were still to be found in the last century, and may be seen perhaps even now.

Bibliography: Ḳazwīnī (ed. Wüstenf.) ii. 200; Schefer, *Chrestom. persane* ii. 113; Ibn al-Athīr (ed. Tornb.) x. 215; le Strange, *The lands of the eastern Caliphate* p. 220—221; J. Shiel, *Itinerary from Teheran to Alamut and Khurrem Abad in May 1837*, in the *Journal of the Royal geogr. Society of London* viii. 431.

ALAN. [See ALLĀN.]

ALARCOS (by its full name NUESTRA SEÑORA or SANTA MARIA DE ALARCOS) is the name of a holy shrine (santuario, ermita) one legua (6.687 kilometre) west of Ciudad Real. It is situated on a hill, formerly the site of the ancient town called al-Ark and al-Arkah in Arabic, which was destroyed by the Almohades after the great victory which under Yaʿḳūb they gained here over Alphonse VIII of Castile. On historical maps the situation of al-Ark is always erroneously displaced towards the south, down into the Sierra Morena. Ibn al-Athīr (transl. by Fagnan p. 611) calls the battle-field "Mardj al-Ḥadīd" and ʿAbd al-Wāḥid al-Marrākushī (p. 205) "Faḥṣ al-djadīd". — Cp. Madoz, *Diccionario geográfico-estadístico-histórico*, s. v.; Seybold, *Die geogr. Lage von Zallāḳa-Sacralias (1086) und Alarcos (1195)*, in the *Revue hispanique* xv (1906). (C. F. SEYBOLD.)

ALARIFE (Spanish) = "inspector of public works", from Arab. *al-ʿarīf* ("expert", espec. "architect").

ĀLĀT. [See ALA.]

ĀLĀTĪ (A., derived from *ālāt* = instruments), plur. *ālātiya* = professional musician, who performs both instrumental and vocal music, whereas the singers (in Egypt) are called *ʿālima* (Almée). Cp. Lane, *Manners and customs* (1842) i. 285, ii. 71.

ʿALĀYA is a port in Asia Minor, the capital of a ḳaza of the same name in the sandjaḳ of Adalia, with 5000 inhabitants. The town received its name from the founder ʿAlāʾ al-Dīn Kai Ḳobād, who about 1220 supplied the place with walls and buildings and chose it, together with Adalia, for his place of residence during winter. There was formerly a castle here called Galonoros because of its beautiful situation (Galonoros = Καλὸς ὄρος; hence the name of Candelor or Skandelor found in European mediaeval authorities); it was possessed by an Armenian baron when it was captured by Kai Ḳobād. For a long time after the fall of the Seldjūḳ realm descendants of the dynasty of Kai Ḳobād have asserted themselves in ʿAlāya, until the last of them saw himself obliged in 1471 to surrender the town to the Ottomans.

Bibliography: Houtsma, in the *Actes du 6e congrès intern. des orientalistes* ii. vol. 1, p. 381; V. Cuinet, *La Turquie d'Asie*, i. 867.

ALBACETE is the capital of the Spanish province of the same name, which forms the north-western part of the ancient kingdom of Murcia, south-east of the Mancha and the province of New Castile. It is situated on the south-eastern slope of the central Iberian Meseta, at an elevation of 2300 ft. The modern name comes from Arabic al-Basīṭ, "lugar ancho y estendido y llano y raso", not from al-Basīṭa, "the plain", as one still often reads. The place and its name are found for the first time in al-Ḍabbī of Cordova and in Ibn al-Abbār of Valencia, who both wrote in the 13th century; they mention it in connection with the great battle of 20 Shaʿbān 540 (11 Febr. 1146) between Alphonse VII of Castile and the ephemeral king of south-eastern Spain Saif al-Dawla (Span. Zafadola, Çafadola, Çahedola) al-Mustanṣir Aḥmed Ibn Hūd, in which the latter together with his ally and governor of Valencia ʿAbd Allāh b. Muḥammed b. Saʿd lost his life. ʿAbd Allāh has since been known amongst the Arabs as Ṣāḥib al-Basīṭ, i. e. "Master (martyr) of Albacete". This battle, which in Christian authorities is neither dated nor localised, is also called the battle of al-Ludjdj (Ibn al-Abbār: *bi 'l-mawḍiʿ al-maʿrūf bi 'l-ludjdj wa-bi 'l-basīṭ ʿalā maḳraba min djindjāla*) in the neighbourhood of Chinchilla. We cannot now ascertain whether al-Ludjdj is identical with the place (and river) Lezuza west of Albacete, or with Alatoz east of that town on the northern declivity of the Sierra de Chinchilla (in the latter case we should have to read al-Latudjdj); Faḥṣ al-Ludjdj is already mentioned by Ibn al-Kardabūs (cp. Dozy, *Scriptorum arabum loci de Abbadidis* ii. 19).

Bibliography: al-Ḍabbī (ed. Codera and Ribera) p. 33; Ibn al-Abbār, *al-Ḥulla al-siyarāʾ* (Dozy, *Notices* p. 215, 219, 226); Codera, *Decadencia y desaparicion de los Almoravides en España* (Saragossa 1899), p. 86, 109; Remiro, *Murcie musulmane* (Saragossa 1905) p. 179 *et seq.*; Seybold, in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* LXII. (C. F. SEYBOLD.)

ALBARRACIN is a town on the upper Turia (Guadalaviar) in the present province of Teruel, the southern extremity of Aragon. The earliest reference to it is found in Ibn ʿAdhārī, who mentions it only incidentally under the year 346 (957), in an account of a journey made by one of the even then almost independent princes of the Berber family of the Banū Razīn, from al-Sahla (the fertile valley of the upper Turia) to Cordova, at which place he was to take the oath of allegiance to ʿAbd al-Raḥmān III. Gayangos (i. 70) calls ʿIzz al-Dawla the builder (prob. re-builder) of the town. Its Arabic name is always Shant Mariyat al-Sharḳ, i. e. Santamaria del Oriente, eastern Santamaria (in distinction from Shant Mariyat al-Gharb, in Algarve), or Shant Mariyat Ibn (or Banī) Razīn, i. e. Santamaria of Ibn (or of the Banū) Razīn, whence the name of Albarracin was derived; Idrīsī (p. 175, 189) however gives the form Shant Māriya. After the fall of the Spanish Umaiyades (411 = 1010) the town became entirely independent under Abū Muḥammed Hudhail I b. Khalaf b. Lope b. Razīn, who was succeeded by his brother Abū Marwān ʿAbd al-Malik I b. Khalaf ʿAbbūd, who in his turn was succeeded by his son Abū Muḥammed Hudhail II ʿIzz al-Dawla, who again was followed by his son Abū Marwān ʿAbd al-Malik II Ḥusām al-Dawla (d. 496 = 1102; other dates are not known). The son of the last mentioned, called Yaḥyā, was expelled by the Almoravides even before they had taken Saragossa (1110). In 1087 the lord of Albarracin and the Cid Campeador had become friends, and together they had marched against Valencia (1094). Afterwards the town belonged

to the house of Don Pedro Ruiz de Azagra, who had taken it from the Moslems, and in 1231 it passed into the possession of Aragon.

ALBATEGNIUS. [See al-Battānī.]

ALBISTĀN (Abulustain) is the capital of a ḳaza in the sandjak of Mar'ash (wilāyet of Aleppo), on the river Djaihān (Pyramus) at the foot of the Kurd Dāgh, at an elevation of 3600 ft. It numbers 6500 inhabitants, of whom 3546 are Moslems and 2954 Christians. The town is surrounded by woods and gardens, and a great many ruins of castles from the time of the little-Armenian kings are scattered about the environs. There are 10 mosques and 1085 houses. The people earn a livelihood mainly by agriculture. Various spellings are found for the name of the town, owing to popular etymology: The Arabs take it to be a compound of *al* and *bustān* (garden), or else of *abū*, *li* and *stān*. This gave rise to spellings such as Abulustain (Yāḳūt), Āblastān, Āblastīn, which however must all be traced back to an older form *Ablastha*; cp. Saint-Martin, *Mémoire sur l'Arménie* i. 192. The town was from 1097 till 1105 in the possession of the crusaders, and afterwards in that of the Seldjuks. In the plain of Albistān a great victory was gained by the Mameluke Sultan Baibars over the troops of Abāḳā, on 13 Dhu'l-Ḳa'da 675 (18 April 1277). In 921 (1515) the place was conquered by Selīm I.

Reclus, *Nouv. géogr. univ.* ix. 657; Ritter, *Erdkunde*, xix, 15 *et seq.*; Saint-Martin, *Diction. de géographie* viii; A. Müller, *Der Islam im Morgen- und Abendland* ii. 261, 343.

(Cl. Huart.)

ALBOHALI = Abū 'Alī. [See al-Khaiyāṭ.]

ALBOHAZEN, Alboacen etc. = Abu'l-Ḥasan. [See ibn abi 'l-Ridjāl.]

ALBUBATHER = Abū Bekr. [See al-Ḥasan b. al-Khaṣīb.]

ALBUCASIS = Abu 'l-Ḳāsim. [See al-Zahrāwī.]

ALBUFERA (Portuguese: Albufeira, variants Albuhera, Albufera; from Arabic *al-buḥaira*, small sea, lake) is the name of a lagoon near Valencia, the Palus Naccararum of the ancients. Part of it has been drained both with the alluvium and by artificial means, and is now used for growing rice.

(C. F. Seybold.)

ALBUFEIRA (for the etym. cp. the preceding article) is a Portuguese sea-port town in Algarve.

(C. F. Seybold.)

ALBUMASAR. [See abu 'l-Ma'shar.]

ALBURZ (also Elburz), old Persian *Hara Berezaiti* (high mountain), is a mountain-chain in northern Persia, bounding the Iranian plateau on the side of the Caspian Sea. The average height in the western part is 9850 ft., culminating in the Demāwend [q. v.] (18000 ft.). The northern slopes are covered with dense woods, the southern declivity on the contrary has no vegetation whatever. In Firdawsī Alburz is the name of a mythical mountain in India; the Arabian geographers do not know the name, Ḥamd Allāh Mustawfī is the first who mentions it. Alburz, Elburz must not be confused with the name Elbrus in the Caucasus. Cp. G. le Strange, *The lands of the eastern caliphate* p. 368, note; Melgunof, *Das südliche Ufer des Kaspischen Meeres* p. 21.

ALCABALA, ALCAVALA (Spanish) = "duty on mercantile transactions", from Arab. *al-ḳabāla* (guarantee).

ALCABITIUS. [See al-Ḳabīṣī.]

ALCAIDE. [See alcalde.]

ALCALA (from Arabic *al-ḳal'a* = castle, fortress, citadel) is the name of numerous Spanish towns. The most famous are: Alcalá de Henares, the ancient Complutum, taken in 1118 from the Arabs by the Archbishop of Toledo, and afterwards in vain attacked by the Almohades; Alcalá la Real, northwest of Granada, in Arabic called Ḳal'at Banī Sa'īd or Ḳal'at Yaḥṣib because this family, which owes its fame to the learned Ibn Sa'īd, was descended from Yaḥṣib of Yemen; Alcalá del Río; Alcalá de Guadaira (near Seville). [Cp. cala . . ., cal(a)ta . . .]. — Cp. Maḳḳarī i. 681.

(C. F. Seybold.)

ALCALDE (from Arabic *al-ḳāḍī* = judge) is a Spanish name for "mayor", not to be confused with alcaide (from *al-ḳā'id* = leader, general) which in Spanish means "commandant of a fortress", "steward of a castle".

(C. F. Seybold.)

ALCANTARA (from Arabic *al-ḳanṭara*, probably a Greek loanword = κέντρον, centrum), Spanish = "bridge" (mostly with stone arches), also "aqueduct". The town of Alcántara (Arabic Ḳanṭarat al-Saif) on the Tagus, close to the Portuguese frontier, owes its fame to the order of knighthood, which was founded in 1156 for the war against the Moors and from 1213 had its seat in this town, which in 1166 had been captured by Ferdinand of Leon. The order has since been called after it. — The name of Alcántara is also given to the valley of a rivulet west of Lisbon, so called after the arches of the aqueduct thrown across it; this valley is well-known as the scene of Alva's victory over Antonio de Crato, which made Portugal subject to Spain from 1580 until 1640. — As an appellative alcántara has become obsolete; hence for example the pleonasm "Puente de Alcántara"; cp. the old "Alcántara" of Cordova, Saragossa etc.

(C. F. Seybold.)

ALCARAZAS, ALCARRAZAS, Spanish and Provençal: earthenware in which water is kept cool, from Arab. *al-karrāz* (= *dawraḳ, ibrīḳ*).

ALCATIFA, Spanish (*Alquatifa* Portug.; *Alkatif* in the Dutch East Indies): carpet; from Arab. *al-ḳaṭīfa*.

ALCAZAR, Spanish (from Arab. *al-ḳaṣr*): castle, citadel (Portug. Alcacer). Famous are the Alcazars of Seville, Cordova, Segovia, Toledo etc. Alcazar is also a frequent name of places, e. g.: Alcazar de San Juan, a town in the Spanish province of Ciudad-Real, Alcazar Quivir, the Spanish name of Ḳaṣr al-Kabīr [q. v.], a town in Morocco.

ALCHEMY. [See kīmiyā'.]

ALCIRA, a contraction of Arabic al-Djazīra, "the island" (usually called in full Djazīrat Shuḳ(a)r, rarely Shuḳr alone, = Shuḳr Island, in the Shuḳr = Sucro = Júcar), the capital of a district

in the Spanish province of Valencia, south of the city of Valencia, in a fertile, abundantly watered plain in the lower Júcar. In 1242 it was conquered by Don Jaime of Aragon. In 1609 it suffered severe damage in consequence of the expulsion of the industrious manufacturing Moriscos.

(C. F. Seybold.)

ALCOLEA, from Arabic *al-ḳulai'a* ("small fortress, castillejo"), the diminutive of *al-ḳal'a* [cp. ALCALA], is the name of various places in Spain (f. i. at the south-eastern foot of the Sierra Nevada), in most cases with a specifying addition: Alcoléa de Tajo, de Cinca, del Rio, de Calatrava etc. — Alcoléa is also the name of the massive bridge and the old locality 7½ miles above Cordova on the Guadalquivir, which played a part in 1236, 1808 and 28 September 1868 (victory of the insurgents over the troops of Isabella II).

(C. F. Seybold.)

ALCORAN. [See ḲOR'ĀN.]

ALDEBARAN is the name of the star α of the first size in the head of the constellation of the bull. The name is derived from the Arabic appellation *al-Dabarān*, which according to Ideler (*Untersuchungen über den Urspr. u. d. Bed. der Sternnamen* p. 141-142) is synonymous with another *Tāli' 'l-nadjm*, "the one that follows the star" (viz. the Pleiads).

ALEMBIC is an old name for that part of the distilling apparatus which is also called "head" or "cap". The word comes from Arabic *al-anbīḳ*, which in its turn was borrowed from Greek ἄμβιξ. *Al-anbīḳ* occurs as early as the 10th century in a translation of Dioscorides, in the *Mafātīḥ al-'ulūm* and in al-Rāzī (Kopp, who follows Weil, is incorrect in his statements). The *anbīḳ* is often referred to as "one of the apparatuses used in distilling rose-water".

The complete distilling apparatus consists of three parts: the "cucurbit" (*ḳar'a*), the "head" or "cap" (*anbīḳ*) and the "receiver" (*ḳābila*). Modern retorts have the "cap" and the "cucurbit" made into one. — Illustrations of distilling apparatuses in Arabian manuscripts are to be found in al-Dimishḳī's *Cosmography* (ed. Mehren) p. 194 *et seq.* Whereas usually however the cucurbit is surmounted by the cap, here it is placed in front of it. In the former case the cap has the shape of a cupping-glass, as it is represented in the *Mafātīḥ* (ed. van Vloten p. 257). The *anbīḳ* is described by Ibn al-'Awwām (transl. by Clément Mullet ii. 344) where he explains how rose-water is distilled. But in this description the name does not always refer to the entire "cap", but often to the additional faucet-pipe only, which fits into it (if at least the text is not corrupt). The *anbīḳ* is also called the *ra's* (head) of the cucurbit.

The *anbīḳ* is mentioned in the various lists of chemical apparatuses, amongst others in the *Mafātīḥ al-'ulūm*, in the *Kitāb al-asrār* of al-Rāzī (Cod. n°. 266 of the Leipzig municipal library, f°. 4 v.-5 v.) and in a text written in Karshūnī, which has been published by Berthelot and shows close similarity to al-Rāzī's account.

Special kinds of *anbīḳ* are the blind *anbīḳ*, which has no additional faucet and is consequently closed, the *anbīḳ* with a beak, and others of various shapes. In Ibn al-'Awwām the appendix is also called *dhunāb* (as Cl. Mullet prefers to read it) or *dhubāb* as the text has it and as Dozy would like to retain, because he combines the additional faucet with a worm-pipe used in condensing (but no illustrations of the latter can be found).

As the Arabian alchemists mainly depend on the Greek alchemists, the illustrations which are found in the works of the ancients can be turned to account. Some also occur in the Latin translations of works which are attributed to Geber (Abū Mūsā Djābir Ibn Ḥaiyān).

ALF (A.) = thousand.

ALF LAILA WA-LAILA (A.), "Thousand and one nights", is the title of the most famous of all Arabian collections of fairy tales. Like all Orientals the Arabs from the earliest times enjoyed imaginative stories. But the intellectual horizon of the true Arabs being rather narrow, the material for these entertainments was borrowed mainly from elsewhere, from Persia and India, as we gather from the accounts concerning the Prophet's competitor, the merchant al-Naḍr. So the relations between Arabia and Persia (and even more distant eastern countries), which were commenced during the seventh and eighth centuries, gave rise to an active importation of subject-matter for fables and fairy-tales. The individual stages of this process cannot now be traced with absolute certainty, a few cases only excepted such as the history of the origin of the book *Kalīla wa-Dimna*. For everything which was of the nature of a fairy tale lay outside the scope of the professional man-of-letters.

In later centuries, when Arabian civilisation had grown richer and more comprehensive, new, original tales were invented in the centres of Arabian culture, and along with the entire intellectual development fairy tale fiction also migrated gradually from the East to the West. A comprehensive view of this whole process is afforded by Alf laila wa-laila, the largest and most diversified Arabian collection of fairy tales; in it we find the foreign elements of eastern origin side by side with genuine Arabian matter. The account of the growth of this book constitutes a highly characteristic chapter of the history of the development of Eastern civilisation in general, but owing to the above mentioned lack of information it can only be sketched in brief outline with approximate accuracy.

The question concerning the origin of the Alf laila wa-laila was for the first time thoroughly discussed in the beginning of the nineteenth century. The first scholar who expatiated upon this subject was the founder of modern Arabian philology, Silvestre de Sacy (in the *Journal des savants*, 1817, p. 678, afterwards in the *Recherches sur l'origine du recueil des contes intitulé les mille et une nuits*, Paris 1829, and in a dissertation under the same title in the *Mémoires de l'Académie des inscriptions et des belles lettres* x., 1833.

p. 30). He denied a possible authorship of one single writer, and (in the two last-mentioned discourses) took it for granted, that the book was written at a very late period. He flatly disaffirmed the existence of Persian and Indian elements, and a passage in the Arabian author Mas'ūdī, where this statement is expressly made, was on that ground declared spurious by de Sacy. This passage being of the greatest importance for the entire history of the Alf laila wa-laila, I hope to be excused for translating it here. Mas'ūdī (ed. Barbier de Meynard iv. 89) expresses himself as follows: "It is a similar case about these legends (of Shaddād b. 'Ād and his town of Iram dhāt al-'Amād) as about the books which were translated into our language from Persian, Indian (one manuscript has here: Pehlevi) and the Greek, such as for example the book of *Hezār efsāneh* — which in Arabic means "thousand tales", because the Persian word *efsāneh* corresponds to the Arabic *khurāfa* (tale) —; this book is usually called *Alf laila* (two manuscripts have here: *Alf laila wa-laila*) and it narrates of the King, his daughter and her nurse (according to other readings: slave-girl); these two are called Shīrāzād and Dīnāzād".

Contrary to de Sacy, Joseph von Hammer (*Wiener Jahrbücher*, 1819, p. 236; *Journal asiatique*, 1st series x.; 3rd series viii.; Preface to "*Die noch nicht übersetzten Erzählungen der Tausend und einen Nacht*", Stuttgart 1823) maintained the genuineness of the passage in Mas'ūdī with all its consequences.

William Lane, the excellent translator of part of the Alf laila, tried to prove that the whole book was the work of one single author and had been written in the period 1475—1525 (Preface to *The Arabian nights entertainments*, London 1839—1841).

In recent years the discussion was resumed by de Goeje (*De Arabische Nachtvertellingen* in *De Gids* 1886, iii. 385 and *The Thousand and one Nights* in the *Encyclopaedia Britannica* xxiii. 316). On the ground of a collation of a passage in the *Fihrist* of Muhammad b. Ishāk al-Warrāk, in which the *Hezār efsāneh* are said to have been written at the instigation of Humāi, the daughter of King Bahman, with a passage in Tabari (i. 688), where Esther is called the mother of Bahman and the name Shahrāzād is assigned to Humāi, de Goeje endeavoured to show a connection between the frame-work of the Alf laila and the Book of Esther. The same idea was further developed by A. Müller (*Zu den Märchen der Tausend und einen Nacht*, in *Bezzenbergers Beiträge* xiii. 222); he distinguished various layers in the work, one of which he supposed to have been written in Bagdad, whereas to another and larger one he assigned Egyptian origin.

The idea of the various layers was worked out with greater accuracy by Nöldeke (*Zu den ägyptischen Märchen* in the *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xlii. 68), who gave an approximate definition of the tests, by which each could be recognised.

Stimulated by these studies Oestrup (*Studier over 1001 Nat*, Copenhagen 1891; Russian translation: *Izsliedowanie o 1001 noči*, Moscow 1905) attempted to group the separate tales into three layers, of which the first one was to comprehend the fairy tales from the Persian *Hezār efsāneh* together with the framework of the book, the second those which had come from Bagdad, and the third one the stories which had been added to the body of the work in Egypt; certain tales as for example the extensive chivalric romance of 'Omar b. No'mān and his sons were qualified as later insertions. To this elimination of the said romance exception has lately been taken by Seybold (*Verzeichnis der arabischen Handschriften der Kgl. Universitätsbibliothek zu Tübingen*, Tübingen 1907, p. 75). To the above mentioned Russian translation a number of supplementary and critical notes have been added by A. Krimski.

The sifting of the separate layers of the large collection was continued by Chauvin; in *La recension égyptienne des mille et une nuits* (Brussels 1899) he has demonstrated that the Egyptian layer consists again of two separate parts, one of Jewish origin. The same (in his *Bibliographie des ouvrages arabes* and in various short articles) and René Basset (*Notes sur les 1001 nuits*, in the *Revue des traditions populaires* xiii. 37 and 303) have also contributed a good many valuable observations concerning details.

At the present stage of the investigation this much can be stated with certainty: "the original nucleus of the Alf laila wa-laila was derived from a Persian book of fairy tales called *Hezār efsāneh*, which perhaps in the third century of the Hidjra was translated into Arabic; the subject-matter of these tales was for the greater part of Indian origin". The tests for the tales belonging to this oldest layer are parallels in Indian and Persian books, which can be proved to have been written prior to the Arabian version. Such a parallel may be one of two kinds: It is either a complete duplicate of the Arabian tale, or it is some isolated trait which we recognise; the more characteristic such traits are and the more importance they have for the entire structure and the plot of the story, the more value we attach to them. Besides these we also have purely outward criteria, such as old Persian names or the mention of Persian institutions. Lane, while striving to defend the Arabian origin of the tales, overestimated the value of such outward criteria as could be adduced in favour of his theory. For it is much easier to account for an Arabian story-teller or copyist inserting Arabian appellations and allusions to modern Arabian conditions, than for the occurrence of old Persian designations, unless we assume that the latter are fossil remains of an older stage of development. The outward tests therefore, which point towards India and Persia, must have comparatively greater weight than the others; the Arabian narrators knew how to add local colouring to their foreign tale, how to adapt it to native surroundings, but on the other hand they were destitute of that conscious artistic fiction, which enables one to lend to native matter a foreign touch and different local colour.

In the very first tale, which forms the frame-work of the book, both criteria for its foreign origin are found side by side. The names of Shāhzemān, Shāhriyār and others occurring in it are Persian, and the story of the infidelity of the wives of the two princely brothers, which occasioned the journey of the latter, has its Indian parallel in *Katha Sarit Sagara* (see *British and Foreign Review* xxi. July 1840, p. 266). Also the three incidental little fables, contained in the frame-work story, about the merchants, who under-

stood the language of beasts and his cattle, have their analogues in Indian literature. Of special importance is the analogy between the manner, in which certain tales in the Alf laila wa-laila are fitted into the frame-work, and the method used in Indian books. This practice of interlacing one story with another is something specifically Indian; it is observed in the *Mahabharata*, in the *Pañcatantra*, in the *Wetalapañcaviṃśati* etc. The improbable, sometimes downright unnatural result of this arrangement, by which the narrators or the listeners occasionally appear on the scene in situations entirely unfit for telling or listening to a tale, is no matter of concern to the Hindu. The leading motive of the Alf laila wa-laila, that the tales are told in order to gain time and prevent rashness, occurs again in the original Indian *Seven Viziers* and, in a different form, in the Indian *Śukasaptati*, where the clever parrot prevents the wife of his master from visiting her lover in the absence of her husband, by arresting her at home with the narration of a fragment of a fairy tale each day, always ending up with the remark: "Tomorrow I will tell you the rest, if you remain at home tonight." In this way the wife is hindered from executing her plan until the husband returns.

This frame-work system is just as common in India as it is rarely met with outside that country. I do not know a single book of ancient date, which is constructed in such a way, with the sole exception of Ovid's *Metamorphoses*. Consequently this practice may be considered a test of the Indian origin of certain parts of the Alf laila wa-laila. And not only the practice but also the phrasing belonging to it, recurs in the same form. In the Indian popular books it usually runs like this: "You may not do such and such a thing or else you will go the same way as so and so". — "How was that?" asks the other, and then the admonisher begins his story. Exactly the same form is found in the Alf laila wa-laila, and even the same words are used to introduce a new tale: Arabic *wa-kaifa dhālika* corresponds word for word to Sanskrit *katham etat* ("how was that?"), and I feel inclined to assume that the fundamental words occurred in this very same form both in the *Hezār efsāneh* and in their Indian original.

The tales which come first in all manuscripts and editions of the Alf laila wa-laila (*the merchant and the jinnee; the fisherman and the jinnee; the porter, the three calenders and the three ladies in Bagdad; the humpback;*) are themselves examples of the frame-work system, and show besides various traits, which remind us of Indian prototypes, traits such as the trick which the fisherman uses to get the jinnee back into the vase from which he has released him; analogues are found in the mongolian version of the *Siṃhāsanadvātriṃśati*, i. e. the story of Ardji Bordji Khān, and in the so-called "southern" *Pañcatantra* translated by Dubois. Then there is the motive of the combat between the black and the white serpent, which are both demons, a motive which has its parallels in Tatar tales (*Journal asiatique* 7th series iv. 259), which are not of Islāmic origin as their editor Pavet de Courteille is inclined to believe, but were borrowed from India; also the combat between the demon and the princess who understands magic art, to which the Mongolian version of *Wetalapañcaviṃśati* affords an exactly corresponding parallel (see Benfey, *Pañcatantra* i. 411). Finally such details as, in the history of the king and the physician Dubān, the poisoning by means of the leaves of a book smeared with venom, a practice which points to Indian customs (cp. Gildemeister, *De rebus indicis scriptorum Arabum* p. 89). — Several of the tales in the beginning of the book, on the other hand, have so many features in common, that we can scarcely suppose that they existed independently from the first in their present form: probably every one of them was really taken from the *Hezār efsāneh*, but afterwards underwent some important alterations.

Other tales which doubtless are of Indian-Persian origin, are the following: (1) the *story of the magic horse* (Persian names such as Sābūr and the Persian feasts of Newrūz and Mihirdjān being mentioned in it), the fundamental idea of which can be traced back to the *Pañcatantra* (cp. Benfey, *ibid* i. 161); — (2) the *story of Ḥasan of Baṣra* (in the translation by Habicht and Hagen the hero is called "'Āṣim, the dyer" instead of "Ḥasan, the jeweller", probably owing to the confusion of *ṣā'igh* with *ṣabbāgh*); the two main features of this story are the rape of the swan's feathers, and the stratagem, by which the hero outwits the men who quarrel about the inheritance, and procures for himself a means of bringing his runaway sweetheart back again; both these traits originated in India (see Benfey, *ibid.* i. 263) and were also circulated towards the East (cp. *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* vi. 536 and Stanislas Julien, *Avadanas*, Paris 1859, ii. 74); the first and greater part of the *story of Ḥasan of Baṣra* occurs once more in the *Alf laila wa-laila*, in the story of Djānshāh, inserted in the fairy tale *of Ḥāsib Karīm al-Dīn and the queen of serpents*, a fairy tale, which originally perhaps was mixed with Jewish elements; the story of Djānshāh is a later and, from the artistic point of view, unsatisfactory imitation. Curiously enough this very story of Ḥāsib Karīm al-Dīn was assigned to the *Hezār efsāneh* by the contributor to the *Edinburgh Review*, July 1886, p. 166, who otherwise most zealously denies the Persian origin of the Alf laila wa-laila; without laying too much stress on purely aesthetic criteria, one may state this much with safety, that this fairy tale, with its many absurd exaggerations and tasteless repetitions, can certainly not have been derived from the same source to which we owe such excellently composed fairy tales as that of the magic horse, as that of Ḥasan of Baṣra and others; — (3) the *story of Saif al-Mulūk*, the only one in the Alf laila wa-laila, of which we possess a complete Persian parallel; the Persian manuscripts in question are mentioned by Lane (*Arabian nights entertainments* iii. 744; — (4) the *story of Ḳamar al-Zamān and of princess Budūr*; — (5) *the story of prince Badr and princess Djawhar of Samandal*; — (6) the *story of Ardashīr and Ḥayāt al-Nufūs*; this tale also appears again in a different version in the manuscripts of the Alf laila wa-laila: in the *story of 'Omar b. Nu'mān*, (which in spite of Seybold I venture to qualify as only a late insertion within the frame-work of the Alf laila wa-laila), an inset *story of Tādj al-Mulūk and princess Dunyā* is found, which corresponds almost literally to that *of Ardashīr and Ḥayāt al-

Nufūs. — Uncertain is the relation between the *story of 'Alī Shīr* and the Persian original, the former containing many details which recur in the probably later *narrative of Nūr al-Dīn 'Alī and the girdle-girl*, also to be found in the Alf laila wa-laila; and no less uncertainty prevails in the case of the *story of the jealous sisters* and the *story of Aḥmed and Parībānu*, these two only to be found in Galland.

These tales then from the *Hezār efsāneh* constituted the nucleus, round which on Arabian ground various layers of other matter gathered. The first of these consists of matter from Bagdad and attaches itself to the name of the 'Abbāside Hārūn al-Rashīd; some tales of this group are the product of free invention, others spun out and re-modelled historical anecdotes. An example of the latter category is the *story of Abu 'l-Ḥasan or the sleeper awakened*; the anecdote is given by al-Isḥāḳī (Lane, *ibid.* ii. 376). Also several of the anecdotes which were circulated about Abū Nuwās and Abū Dulāma, were in a similar way turned to literary account. We must of course not forget that the name of Hārūn al-Rashīd had at an early period become a common symbol of the good old times, of everything miraculous and fairy-like. Consequently we are not justified in assigning a tale to the Bagdad group on the mere ground of its containing the name of that Caliph; only internal evidence is here decisive. Apart, of course, from many details, which must remain doubtful, this general statement may be made, that the novels of middle-class life, short, simple tales of good and solid composition, with a love intrigue solved by the caliph as "deus ex machina" for their leading motive, are made up of Bagdad matter, whereas the picaresque novels and also the fairy tales (generally of clumsy composition), in which the element of the Djinns (demons) is excessively prominent, are of later, Egyptian origin. It is worthy of notice that in the oldest fairy tales of Indian and Persian origin the demons, as a rule, act on their own account and independently, whereas in the more recent tales they are always subject to some talisman or other; hence its owner decides the development of the action, not the Djinns and 'Ifrites themselves. In the Bagdad novels everything, as a rule, happens without any magic art. In the picaresque novels we possess something specifically Egyptian, as has been demonstrated by Nöldeke (*Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xlii. 68); the classic model example of this entire genre is Herodot's famous tale of the treasure of king Rhampsinit; an interesting analogue to part of the latter story is also found in the Alf laila wa-laila, in the story told by the eighth Muḳaddam to Sultan Baibars (Edition of Habicht and Fleischer xi. 375). The other, more recent part of the Egyptian group with its common fairy tales is probably the work of a Jewish-Egyptian author, as Chauvin has tried to prove in *La récension égyptienne des 1001 nuits* (Brussels 1899); from the aesthetic point of view these tales are the least important of the whole book.

Besides these four different layers, which, as has been observed above, cannot with perfect certainty be distinguished from one another in the present version of the Alf laila wa-laila, the book also comprises a number of larger collective stories, each of which is only found in a few manuscripts, and evidently inserted for the sole purpose of making up the number of nights required. Such stories are: *The seven viziers* (with the imitations *The ten viziers* and *The forty viziers*), which are of independent Indian origin, and the story of *Ḳalʿād and Shīmās*. Questionable is the position of the cycle of Sindbād the sailor, which evidently dates from the time when Bagdad and Baṣra had reached the zenith of their prosperity; it seems originally to have been an independent work. It is a well-known fact that we possess a number of very old Egyptian and Greek analogues of the Sindbād matter. Originally foreign to the Alf laila wa-laila are the large chivalric romance of *'Omar b. Nuʿmān and his sons*; the *story of Sūl and Shamūl* (ed. by Seybold, Leipzig 1902), and two didactic tales, which are widely different from each other: *the history of the wise Tawaddud*, which afterwards became a favourite chap-book in Spain (*La donzella Teodor*; Teodor or Tudur is a mistake for Tawaddud, for which palaeography can easily account; cp. Ticknor, *Historia de la literatura española, traducida por Pascual de Gayangos y Enrique de Vedia* ii. 554), and the originally Jewish *tale of the wise Haiḳar*.

The final redaction of this voluminous matter took place in Egypt, probably during the reign of the later Mamelukes, and, as may be concluded from the frequent and minute mention of places in Cairo, it was done in the latter town. The same can be inferred from the language of the present version, which, in many respects bordering on the vulgar tongue, constitutes a free and easy development of late literary Arabic. But the redactors have not succeeded in completely effacing the original marked differences of style between the interwoven and concatenated parts. Also the various manuscripts diverge especially in this respect. Chauvin (*ibidem*) has made an attempt to establish more precisely the literary identity of the man who revised the two Egyptian layers, and believes him to have been a Jew converted to Islām. But the number of redactors and professional narrators, who in consecutive periods had a share in remodelling the Alf laila wa-laila was probably so great, that from this entanglement to unravel the work of each individual reviser would be a task which no one will dare to undertake.

In the above mentioned quotation from Masʿūdī it is said that the Persian book *Hezār efsāneh*, which translated literally into Arabic would mean *Alf khurāfa*, was called instead *Alf laila* (the thousand nights). The formation of later date *Alf laila wa-laila* ("1001 nights") owes its origin to the superstitious aversion to round numbers amongst the Arabs (and Orientals in general), as has first been proved by Gildemeister (*ibidem* p. 86); the usual preference for a certain assonance in book-titles may also have contributed to the alteration. But just as the Persian book *Hezār efsāneh* did certainly not contain exactly 1000 tales, the numeral only indicating an indefinitely large number, neither was the fairy tale matter of the Alf laila wa-laila originally divided into 1001 nights, this arrangement being the work of later times. This is sufficiently evident from the fact that in this point the manuscripts diverge to a great extent, and it was just owing to the endeavours to make up the full number, that the va-

tions large insertions crept into the work. Besides, the name Alf laila wa-laila being so popular, the copyists liked to conglomerate under that title all sorts of extraneous matter along with that which all manuscripts contained. A good example of the latter kind of manuscripts is the Paris codex n°. 1723.

A large majority of the tales in Alf laila wa-laila contain a great many more or less lengthy verse quotations; the Bagdad layer is conspicuous in this respect. The usual practice is to put these quotations into the mouth of the speakers; in all passages where the narrator aims at the expression of strong emotion, whether it be grief or joy, the person in question commences his speech in verses. These verses, however, in by far the majority of cases, are not in the least sense instrumental in continuing the action, but, like the verses in the Indian dramas, rather serve as pauses, sometimes interspersed with reflections and moralisings. This circumstance is a sufficient indication, that those verses are not equally old with the rest of the context, but were inserted at a later date. This inference is corroborated by the repeated occurrence of the same quotations in identical situations; and also the frequent accumulation of different verses conveying the same meaning and linked together by the well-known expression *wa-ḳāla aiḍan fi 'l-ma'nā* ("and again he spoke in the same sense"), seems to point at the same conclusion. There are also examples of verses sounding absurd in the mouth of the speaker, evidently owing to a mistaken or clumsy insertion. Only in exceptional cases the name of the poet who wrote the quotation in question is mentioned; those who are referred to most are Abū Nowās, Ibn al-Mu'tazz and Isḥāḳ al-Mawṣilī. In most cases stands the stereotyped phrase *wa-ḳāla 'l-shā'ir* ("the poet speaks"). The majority of verses are of a later date and as a rule plainer and simpler than the older Arabian poetry.

The manuscripts of the Alf laila wa-laila belong to three different groups, as has been demonstrated by Brockelmann (*Gesch. d. arab. Litter.* ii. 60) after Zotenberg: an older Asiatic group (the manuscripts belonging to this group are all except one incomplete, containing only the first part of the book) and two later Egyptian groups. The differences between the manuscripts are very great, though less important between those of the first group. Brockelmann gives a list of the editions and European translations (*ibid.*), which was enlarged and continued by Krimski (in his above mentioned introduction to the Russian translation of Oestrup's *Studier*). An extensive bibliography is found in Chauvin *Bibliographie des ouvrages arabes* iv. 12—120). The most complete and exact translations of the fairy tale cycle in European languages are the English one by Burton (Benares-London 1885, lately also published in German in the "Inselverlag") and the French rendering by Mardrus (Paris 1899 and after). The most reliable Arabic text edition is still always the Būlāḳ one in two volumes (1251); although the more recent Cairo edition in four volumes is more practical and more easily obtainable, as it has been published repeatedly.

(J. Oestrup.)

ALFARABI. [See al-Fārābī.]

ALFARD is the star α of the second size in the upper part of the body of the Hydra. The name is Arabic and means "the isolated one." Cp. Ideler, *Untersuchungen über den Ursprung u. d. Bed. der Sternnamen* p. 269. (Mahler.)

ALFĪYA (A.) = "thousand-liner", a poem in a thousand verses, a favourite number with the Arabs, especially for rhymed manuals. Ḥādjdjī Khalīfa (ed. Flügel i. 407 *et seq.*) mentions several of them; the best known are the *Alfīya* of Ibn Mālik, the one by Ibn Mu'ṭī, both dealing with grammar, and also the *Alfīya* of al-'Irāḳī on the *Uṣūl al-ḥadīth* (fundamental doctrines of the science of tradition). Farther particulars are to be found in the articles on the authors.

ALFRAGANUS. [See al-Farghānī.]

ALGARVE, from Arabic al-Gharb (= west), was formerly a name for the entire south-western part of the Iberian peninsula; but it has since become the special designation of the southern province (the "kingdom") of Algarve in Portugal. After the fall of the Umaiyades of Cordova petty kings also rose in Algarve (*Mulūk al-ṭawā'if* = *Reyes de Taifas*), amongst others the Banū Muzain in Silves (Shilb): Abū Bakr Muḥammed b. Sa'īd b. Muzain 419—442 (1028—1050) and Abu 'l-Aṣbagh, 'Īsā 443—444 (1051—1052); in Santa Maria de Algarve: Abū 'Othmān Sa'īd b. Hārūn 407—435 (1016—1043) and his son Muḥammed 435—444 (1043—1052) (in Mertola Ibn Ṭaifūr until 1044), who all were finally swallowed up by the 'Abbādides [q. v.] of Seville. In 539 (1144) the Ṭā'ifa rebel Aben Casi (Ibn Kasī) rose in arms against the Almoravides, but in 546 (1151) he was supplanted by the Almohades. In 1189 Sancho I of Portugal conquered Silves, Sancho II (1223—1248) took Tavira and Affonso III completed the conquest of Algarve in 1249. — In the 15th and 16th century the Portuguese conquests on the Moroccan coast, Ceuta, Alcazar, Tangier, A(r)zila etc. were called "Algarve d'alem mar (ultramar)", Algarve across the sea.

(C. F. Seybold).

ALGEBRA. [See al-Djabr.]

ALGECIRAS. [See Algeziras.]

ALGAZEL. [See al-Ghazālī.]

ALGEDI (from Arabic *al-djady* = young he goat) is the ancient name of both the pole-star and the constellation of the capricorn; cp. Ideler, *Untersuchungen über den Urspr. u. d. Bed. der Sternnamen* p. 3, 13, 191.

ALGER (Arabic al-Djazā'ir; English: Algiers) is a town on the northern littoral of Africa. It is the capital of Algeria, and the seat of the Governor General and the heads of the various military and civil services of the colony. Its geographical situation is 36° 47′ N. Lat., 0° 44′ E. Long. (meridian of Paris). The number of inhabitants according to the census of 1906 is 144 000.

We do not know anything definite concerning Algiers previous to the establishment of the Romans in that part of Africa, except that on the place of the present town a locality was situated, known by the name of Icosium. Archaeological discoveries, together with a legend about the foundation of Icosium by twenty companions of Hercules (Solinus iii. 3) would at the most justify the supposition that on this spot of the African littoral a Phoenician or Carthaginian factory had existed. The information concerning Icosium is also very scanty. It became a Latin colony during the reign of Vespasian, was captured in 371 or 372 by the Berber prince Firmus, but some time afterwards restored by him

again to the Romans. It was the seat of a bishopric, which amongst others was occupied by bishop Victor, who assisted at the conference held at Carthage in 484 by order of the Vandal king Huneric. After the fifth century Icosium is no longer mentioned in history. The town, which seems to have covered nearly the same surface as Turkish Algiers, was doubtless destroyed by the Arabian invasion of the 7th century and abandoned by the inhabitants. Some traces of ancient buildings were still to be seen in the 11th century. Al-Bakrī (*al-Masālik* or *Descr. de l'Afrique septentr.* transl. by de Slane p. 156) actually mentions the existence, at al-Djazā'ir of the Banū Marghannā, of ancient monuments, of antique vaults, of a theatre with a mosaic pavement, and finally of an apse-shaped wall of a church. Other constructions and some inscriptions have been unearthed since 1830 (cp. *Corpus inscript. latin.* viii. b; xv. and supplement; Gsell, *Atlas archéologique de l'Algérie*, number 1. plate v and note.)

The site of Icosium remained deserted until the middle of the 10th century, although at a date which cannot possibly be fixed, a Berber tribe of the family of the Ṣanhādja, the Banū Marghannā, had settled down in the neighbourhood. During the reign of Zīrī b. Menād (945—971), Bolugghīn, the son of this prince, obtained permission to found on this spot a town which received the name of Djazā'ir banī Marghannā (Ibn Khaldūn, *'Ibar*, transl. by de Slane: *Hist. des Berb.* ii. 6) because of the rocky islets which, at some distance off the coast, formed a kind of natural mole. Towards the end of the tenth century the new town had arrived at a certain degree of prosperity, as appears from the description given of it by Ibn Ḥawḳal. "Djazā'ir, this traveller writes, is built on a bay and surrounded by a wall; it comprises a great many bazaars and some wells near the sea, which yield excellent water...... The territory of this town encompasses very extensive fields and mountains inhabited by various Berber tribes. The principal wealth of the inhabitants consists of cattle and sheep, which graze upon the mountains. Algiers supplies so much honey that it forms an export article, and such a quantity of butter, figs and other provisions that part of these are exported to Ḳairawān and elsewhere. A short distance from the coast, an island is situated, where the inhabitants find a safe refuge, when threatened by their enemies" (Ibn Ḥawḳal transl. by de Slane, *Journ. As.*, Febr. 1842, p. 185). Al-Bakrī, in his description of Africa (*ibid.*) refers to Algiers as a port well sheltered and "frequented by sailors from Spain, Ifrīḳiya and other countries".

The history of Algiers is closely connected with that of the central Maghrib. For during the period between the 11th and the 16th century, al-Djazā'ir endured the domination of all the conquerors or the pretenders, who disputed this country amongst themselves. After it had formed part of the Ḥammādide kingdom, it passed into the possession of the Almoravides, after which, in 1152, it submitted to the authority of the Almohades. During the efforts of the Banū Ghāniya to re-establish in Africa the power of the Almoravides, 'Alī b. Ghāniya conquered Algiers (1185), but kept the place but a short time: the inhabitants rose in arms against him and submitted themselves to al-Manṣūr. In spite of that Algiers was occupied by Yaḥyā b. Ghāniya in 623 (1226), but re-captured in 628 (1230) by the Almohade al-Ma'mūn. In 632 (1234-1235) it came under the rule of a Ḥafṣide governor. But already in 664 (1255-1256) the people of Algiers expelled the representative of the Sultan of Tunis, organised a kind of republic, and remained independent until 676 (1277), when, after two abortive attempts, the Ḥafṣide governor of Bougie succeeded in vanquishing the rebels. When afterwards the Ḥafṣide Abū Zakariyā' established an independent kingdom at Bougie, the inhabitants of Algiers recognised the authority of that prince (684 = 1285). However, they did not show themselves scrupulously faithful to him. A certain Ibn 'Allān usurped the power (1307), expelled the representatives of the king of Bougie and, for fourteen years, withstood the attacks directed against him. He was at last vanquished by the king of Tlemcen, Abū Ḥammū I, who laid siege to the town, forced it to surrender, and annexed it to his dominion (712 = 1312-1313). From 1347 till 1351, the period of Abu'l-Ḥasan's successful achievements, and again in 1360 and 1393, the Marīnides, in the course of their struggles against the 'Abdalwādides, in their turn succeeded several times in mastering the town. As for Abū Ḥammū II, he recovered it twice, but never gained definitive possession of the place. The exactions of his officers exasperated the inhabitants, and drove them successively into the arms of Abū Zaiyān, king of Bougie, and of the Marīnide 'Abd al-'Azīz. In the midst of this confusion, the Tha'āliba, an Arabian tribe of the Mitīdja, profited by the prevailing anarchy and made themselves the actual masters of Algiers, having previously repelled the Ṣanhādja out of the Mitīdja plain into the Atlas. One of their chieftains, Sālim b. Ibrāhīm, disposed of Algiers arbitrarily, swearing allegiance alternately to the Zaiyānides, to the Ḥafṣides, to the Marīnides and breaking his faith to one dynasty after the other, until Abū Ḥammū II, who had repeatedly forgiven him, had him put to death (1378). Algiers, at that time, had nearly become the capital of the Zaiyānide realm. Being afraid of the intrigues of his son Abū Tāshfīn, Abū Ḥammū had actually considered a change of residence from Tlemcen to Algiers; but he was obliged to give up the plan. In the 15th century, fresh disorders began. In 1438 a Zaiyānide pretender, Abū Zaiyān Muḥammed, rose in arms against the sovereign of Tlemcen, captured Algiers after a long siege, and made it the capital of a kingdom which comprised the Mitīdja, Medea, Miliana and Tenes. He put on the royal insignia and took the name of al-Musta'īn bi-'llāh. But his relentless rule irritated the people of Algiers to such an extent, that they massacred him in September of that same year. From that time until the establishment of the Turks, Algiers formed a sort of little municipal republic, governed by a civic oligarchy, under the self-interested protection of the Tha'āliba. The Berber Algiers, the history of which has been sketched above, was, in reality, but a market-town of modest size. Only the neighbourhood of the Mitīdja imparted some importance to the harbour, which was frequented not only by Musulman sailors, but still also by Christian merchants. In the 15th century the Venetian and

Florentine fleets came into port every year (Mas-Latrie, *Traités entre Chrétiens et Arabes.... Introd. histor.* pp. 330, 333). The inhabitants were neither remarkable for their intellectual capacities, nor for their artistic taste. Men-of-letters were rare amongst them. "On my arrival at Algiers", says Muḥammed al-ʿAbdarī (who lived in the second half of the 7th = 13th century) "I inquired whether there were any learned people of exquisite erudition, but I felt like one who, as the proverb says, looks for a stallion with foal or for camel's eggs." We must, however, make an exception for the marabout Sīdī ʿAbd al-Raḥmān al-Thaʿālibī, renowned for his saintlike life and his theological learning (789—873 = 1387—1468); this pious personage was to become the patron-saint of Algiers, where his memory is still greatly revered. The mosques in Algiers were as a rule clumsy buildings, without any ornamental work, with irregular naves and covered with a roof of red tiles. Some of them still exist: Sīdī Heddi, Sīdī Ramaḍān and especially the Great Mosque, mentioned in an inscription of the year 409 (1018), which in 1324 was furnished with a minaret by Abū Tāshfīn, king of Tlemcen.

In the last years of the 15th and the early years of the 16th century, Algiers together with the other towns of the African littoral suffered from the effects of the Spanish "reconquista". Its population increased, it is true, in consequence of the arrival of fugitive Jews and Moors from Spain, but the Christian crusade had to be resisted. The Catholic kings had resolved to subject to their authority all the places on the northern coast of Africa. The conquest of Oran by Pedro Navarro and Ximenes (1509) and the occupation of Bougie (1510) warned the people of Algiers of the imminent danger. Unable to offer vigorous resistance to the Spanish arms, they declared themselves willing to submit, promised to recognise the Catholic king for their suzerain, to pay him an annual tribute, to give up the Christian captives, to refrain from piracy, and to prevent the enemies of Spain from entering their harbour (31 January 1510). The shaikh Sālim al-Tūmī, escorted by a delegation of notables, went himself to Spain, to take the oath of obedience and deliver some presents to Ferdinand. Finally, in order to assure the execution of the stipulations with regard to piracy and to watch the people of Algiers, Pedro Navarro took possession of the islet of the Peñon, at cannonshot range from the town; he built a fortress on it and garrisoned it with 200 men. Ruined by the suppression of their piracy, the Algerines were soon tired of this state of affairs and tried to free themselves from the Spanish yoke. Profiting by the agitation caused all over the Barbary States by the news of the death of Ferdinand the Catholic, they persuaded Sālim al-Tūmī to send a deputation to the Turkish corsair ʿArūdj, who since 1513 had been master of Djidjelli, and solicit his help. ʿArūdj went to Algiers and was received as a liberator, but he was powerless against the Peñon. He rid himself of Sālim al-Tūmī by murder and had himself proclaimed Sulṭān by his own soldiers. The Algerines then came to terms with the Thaʿāliba and the Spaniards to expel the Turks; but their conspiracy was discovered, the leaders of the plot were arrested and beheaded, and those who were under suspicion and the discontented were thrown into prison and executed. In that way all desire of resistance was broken and ʿArūdj remained master of Algiers. In vain the Spaniards attempted to take the place from him. The expeditions against Algiers conducted by Don Diego de Vera (1516) and by Don Ugo de Moncada (1519) both ended in disaster. The Turkish power however could not be considered solidly established as long as the Peñon remained in the possession of the Christians. The fall of the Spanish fortress was long delayed, in consequence of ʿArūdj's death and the subsequent difficulties which his brother and successor Khair al-Dīn had to face at the beginning of his reign. But in 1529 Khair al-Dīn had at last vanquished all his adversaries: Algiers, from whence the Kabyles had expelled him five years before, had received him again; and now he was resolved to put an end to the Spanish possession. He attacked the Peñon at the beginning of May 1529. The governor Don Martin de Vargas had neither received victuals nor reinforcements from Spain. He nevertheless endured the cannonade for twenty-two days. At last, on May 27th 1529, the fortress was stormed, and Vargas saw himself obliged to surrender, having only twenty-five men left who were able to fight. He was cudgelled to death at Khair al-Dīn's command, the Peñon was razed to the ground and part of its building-materials were employed to construct a connecting dike between the islets of the roadstead. In that way the mole was built, which at the present day is still called the mole of Khair al-Dīn, and which, after having been completed by a perpendicular mound, protected the harbour against the north and north-west winds, affording safe shelter to the Algerian vessels in winter-time, so that they need not fear tempests or attacks from the Christians. Batteries planted on the sea-front and a wall enclosing the town on the land-side combined to make the place almost impregnable. All these works of fortification were commenced by Khair al-Dīn and continued by the Beylerbeys, his successors.

The installation of the Turks at Algiers was a permanent menace to the Christian nations. Charles V, therefore, undertook to crush their power. Already in 1535 he had conquered Tunis and subjected it to the rule of a sovereign who owed allegiance to Spain; he then contemplated achieving this work by the occupation of Algiers. After long negotiations with certain native chieftains and Khair al-Dīn himself, he crossed to Africa in September 1541. The expedition, which the emperor conducted personally, comprised a fleet manned by 12 330 sailors under the command of André Doria, and an army of 24 000 soldiers. Charles V was no more fortunate than Vera and Moncada had been before him. He disembarked on October 23rd at the mouth of the Harrāsh and at first succeeded in effecting a lodgment on the height of the Kudyat al-Ṣābūn, which commanded the town. But in the night of August 24th the troops, while exposed to a violent storm, had to endure a very vigorous sally of the besieged. They were thrown into confusion, and the disaster would perhaps have been complete but for the courage of the knights of Malta, who repelled the assailants into the town, where Ḥasan Agha had the gates shut with all possible haste. One of the knights, Savignac, thrust his poniard into the gate of Bāb ʿAzūn. A tempest which rose during that same

night and destroyed 140 ships, deprived the army of provisions and made retreat inevitable. The emperor regained Cape Matifou with great difficulty and at the expense of unheard-of hardships. There he embarked the remains of his army. This expedition, which was to bring about the destruction of Algiers, proved in the end an advantage to the Barbary corsairs, who made an immense booty and henceforth believed themselves invincible.

From that moment the Algerines could indulge in piracy to their hearts' content; they continued to do so until 1830. But the free-booting had gradually changed its original character: from a mode of warfare against the infidels it had degenerated into a lucrative industry and become the only occupation of the Algerines. It enriched the government, which received part of the booty, the private persons, who went into partnership to equip vessels, the whole population also, which profited by the liberality of fortunate corsairs and ship-owners. It attracted moreover to the capital of the Regency adventurers from all countries, most of them of Christian origin, who "took the turban", that they might satisfy their desire of rapine or their longing for adventures. The excesses indulged in by the corsairs, the outrages committed against Christian sailors, the ignoring of the treaties concluded with the European states, inevitably provoked the sufferers to make reprisals, which, however, were quite innocuous to the town of Algiers itself. The brave attempt of a Spanish sailor, Don Juan Gascon, to penetrate into Algiers, deliver the captives and put the corsair ships on fire, unfortunately miscarried (1567). In vain the town was successively bombarded by the English (1622, 1655, 1672) and the Danes (1770). As France, because of its geographical situation and the importance of its commerce in the Levant, was especially interested in the maintenance of free navigation, it made repeated attempts to chastise the insolent Algerines. The French squadrons cannonaded the mole in vain in 1661 and 1665. Duquesne conducted two naval expeditions against Algiers in 1682 and 1683. A first bombardment, lasting from August 20th till September 20th 1682, laid 50 houses in ruins and killed 500 inhabitants; a second (June-July 1683) caused heavy material damage, but elicited a riot, in which the French residents were massacred, amongst others the consul, Father Levacher, who was corded to the muzzle of a canon. A third one, conducted by d'Estrées (1688) proved even more disastrous to the Algerines, and compelled them to sue for peace. But too much money and too many lives were wasted on these expeditions to repeat them very often. In the 18th century, whenever France had to complain of the deys, it restricted itself on that account to simple naval demonstrations. Spain, on the other hand, having received a declaration of war from the dey Muhammed b. 'Othmān (1775), attempted an act of violence against Algiers. A fleet of 20 men-of-war and 24 bomb-ketches, and an army of 25 000 men were placed under the command of admiral Don Pedro Castejo and general O'Reilly. The Spanish troops disembarked near the mouth of the Ḥarrāsh on July 8th 1775, but being surrounded by an enemy, who far outnumbered them, and being commanded injudiciously, they had to re-embark on the following day, with a loss of 2800 men. A successful bombardment, which the Spanish admiral Don Angelo Barcelo directed against Algiers in 1783, was no sufficient compensation. The piracy experienced a veritable revival, owing to the wars of the Revolution and the Empire, which turned the attention of the maritime powers into a different direction. After 1815, however, the European powers seemed determined to put an end to this intolerable state of affairs. Lord Exmouth, who, on May 15th 1816, had been to signify to the dey the decisions of the congress of Vienna regarding the abolition of slavery, having met with insulting treatment at Algiers, the English government, supported by public opinion, resolved to revenge this outrage. A fleet of 32 sail under the command of Lord Exmouth, who was joined by the Dutch admiral van Cappellan, appeared before Algiers, penetrated into the harbour under the shelter of the white flag, and opened fire upon the town. Five hundred Turks were killed, the batteries on the sea-front destroyed, and a thousand inhabitants wounded. But the Algerines defended themselves energetically and inflicted on the squadron of the allies a loss of 883 men (August 27th 1816). Only slight damage was caused to the place by a second bombardment, which admiral Neal conducted in June 1825, after a difference which had arisen between Dey Husain and the English government. Algiers was evidently able to resist successfully an exclusively maritime attack. Consequently the French government, when resolved, after a fruitless blockade of three years, to revenge the insult offered by the dey to consul Deval, turned to account the ideas suggested by commander Boutin of the corps of military engineers. This officer, who in 1808 had been commissioned by Napoleon to reconnoitre the defensive works of Algiers, suggested that the attack should be made from the landside, and first of all directed against the Emperor's fort, from whence one could command the town. This plan, revised and completed by the French general staff, was adopted and carried out. The French expeditionary corps landed at Sīdī Ferrush, 14 miles west of Algiers, on June 14th 1830, defeated on the 19th the army of the dey on the plateau of Staweli, and appeared on the 29th in front of the Emperor's fort. On the fourth of July, at day-break, the French batteries opened fire, and at ten o'clock the fort, partly dismantled and left by its defenders, was occupied by the assailants. The day after, Husain signed the terms of capitulation drawn up by the commander-in-chief, and the latter entered Algiers at once.

The establishment and the persistence of the Turkish domination had made of Algiers one of the most original towns in the mediterranean world. The small Berber market-place had become a prosperous and populous town. Turkish Algiers extended on the rocky slopes that descend from the Ḳaṣba to the beach. Haëdo, who has given a detailed description of Turkish Algiers, compares its circuit to a cross-bow, the walls constituting the bow and the sea-shore the string. The perimeter of the town, measured along the exterior walls, was about 10 170 ft. The defensive works commenced by Khair al-Dīn and continued by his successors afforded absolute security to Algiers. This defensive system consisted of a wall, of the Ḳaṣba, and of a certain number of forts and batteries. The wall was about 36 to 42 ft high, surrounded by a ditch and flanked with towers.

It had five gates: the sea-gate and the fishery-gate on the side of the harbour; the gate of Bāb ʿAzūn on the southern side of the town, near which the executions took place; the gate of Bāb al-Wād on the north-side, where Christians and Jews were put to death; and the New Gate on the south-western side, through which the road passed which led to the Emperor's fort. The Ḳaṣba, built on the highest point of the town, had replaced since 1556 the ancient Berber citadel, which had occupied a slightly lower elevation. The Ḳaṣba became the residence of the deys in 1816, when ʿAlī Khodja abandoned the Djenīna, the seat of his predecessors, which was situated in the lower town and consequently exposed to a coup de main of the janizaries. The Ḳaṣba comprised barracks and arsenals, and, besides, the treasury and private appartments of the sovereign. Outside the town, on a height which even commanded the Ḳaṣba, rose the Emperor's fort (Turk. Sulṭān Ḳalʿasi; Arab. Bordj al-Ṭāwūs), built by Ḥasan Agha on the place once occupied by the camp of Charles V. The sea-front was protected by the New Fort, the fort Bāb al-Wād, the fort of the English, the fort Bāb ʿAzūn and the batteries on the mole, which, in the 18th century after O'Reilly's expedition, and again in the 19th after the bombardment by Lord Exmouth, were reinforced with new armament, amounting to no less than 180 pieces of large calibre.

Within, the town extended on the slope of the hill. In its highest part, the "Djebel" as it is still called by the natives, the white-washed houses supported by wooden shores stood closely pressed together, the upper floors projecting the one over the other so as almost to meet at the top. Steep lanes with flights of steps, darkened by the vaults, mostly too narrow for two men to pass without pressing their backs against the wall, wound up the slopes. The lower part, traversed by the only street deserving of that name, the connection between the gates of Bāb al-Wād and of Bāb ʿAzūn, had, since the close of the 16th century, served as the favourite residence of the raʾīs or corsair captains. "Their sumptuous dwellings, clustered near the sea, were peopled with their crews; they guarded the harbour and theirs was the mole, so that this whole quarter seemed no less than their arsenal, in which they felt safe from a coup de main of the soldiery (de Grammont, *Hist. d'Alger sous la domination turque* s. 127). There rose the palaces of the most famous raʾīs of the 17th century, such as Mâmī Arnawt, Sîmūn Raʾīs, Murād Raʾīs, ʿArabadjī, ʿAlī Bicenin, there also stood the mosques, on the building of which these adventurers had spent part of their wealth. Religious edifices were indeed very numerous in ancient Algiers. Towards the end of the 16th century it comprised 100 mosques, chapels and zāwiyas. On the eve of the French conquest, one counted 13 large mosques, 109 small ones, 32 chapels and 5 zāwiyas. The majority of these were certainly of modest dimensions, and only of slight artistic interest. The most noteworthy besides the Great Mosque, which dated from the Berber period, were the new Mosque (now called Mosquée de la Pêcherie), built in 1660 for the Turks belonging to the Ḥanafite rite; the Mosque of the Ketshāwa, ornamented with polychrome decorations; the Djāmiʿ Safa; the Mosque of Mezzo Morto; the Mosque of the Andalusians, built in 1623 by the Spanish refugees; the Zāwiya of the Shurafāʾ, erected in the time of dey Muḥammed Baktash (1709), etc. .... Public buildings were few in number. One need only mention the Djenīna, an assemblage of palaces and barracks, the seven large "Casseries" or barracks of the janizaries, and the bagnios where the slaves were detained. But a great many private houses hid behind their bare façades an elegant or sumptuous decoration; patios with finely sculptured marble colonnades all round, panellings of cedar-wood, revetments of Italian and especially Dutch faïence, furniture of which the separate pieces were either of European make or had been fabricated by native artisans in imitation of European models (See G. Marçais *L'exposition d'art musulman*, in the *Revue africaine* 3rd and 4th quarters 1905).

The population of Algiers varied perceptibly during the three centuries of Turkish dominion. Haëdo, whose work appeared in 1612, estimated the number of houses and inhabitants at 12 000 and 60 000. In 1634, when the piracy flourished more than ever, 15 000 houses and 100 000 inhabitants were counted by Father Dan. The decay began with the decrease of the piracy. In 1789 Venture de Paradis estimated the population at 50 000; which number had dwindled down to 30 000 in 1830. This population consisted of various elements, which can be arranged into three groups: Turks, Moors, and Jews. The Turks formed a very close aristocracy. They had for the greater part come from Asia Minor, and enlisted in the ranks of the Yoldashes. The regulations, to which this army was subjected, allowed the Yoldashes to aspire to the highest degree, that of agha, and even to the highest civil functions. The Turks, no matter though they were simple janizaries, were saluted by the title of "Effendi", as "great and magnificent signiors", and formed the upper ten at Algiers. Even after the militia had lost its political importance, its members did not lose their arrogance in the least. Many amongst them married women of the country, but the children born from such unions, the Kuloghlus, were kept apart. Since the close of the 16th century they had been excluded from public employments, and in spite of their revolts, of which that which broke out in 1663 was especially dangerous, they never succeeded in getting this interdict abolished. The Turks consequently always remained in a minority in the capital, as well as in the Regency itself. Their number may be estimated at 10 000 in the time of Khair al-Dīn, at 30 000 under the Beylerbeys, at 22 000 in 1634, at 5000 in 1789. In 1830 they numbered 4000. Immediately after the conquest General de Bourmont decided that the unmarried janizaries should be expelled and conducted to Asia, a measure which soon afterwards was extended to all the members of the militia. Besides the Turks, mention should be made of the renegades of European origin, who supplied the Algerian navy with engineers, artisans, pilots and some of its most illustrious corsairs. Their number kept on decreasing at the same rate as the piracy became more difficult and less lucrative in consequence of the cruises and naval demonstrations of the European powers. From 20 000 in Haëdo's time it dwindled to 200 or 300 at the close of the 18th century.

The Moors formed a large majority amongst the citizens or *baladīs*. Some were descended from

the ancient inhabitants of Algiers, others had come from abroad and, since the Turkish epoch, settled in the town, such as Andalusians expelled from Spain by the Christian persecution, European adventurers, Ḳuloghlus etc. Excluded from all share in public affairs, exempt from military service, they did not offer any resistance to the Turkish rule, and remained indifferent spectators at the tragedies, which were performed on the stage of Algiers. The rich amongst them restricted their occupations to taking their share of the gain which the piracy procured, by contributing with their money to the equipment of the ships and by speculating on the sale of the booty and the slaves; the poor did nothing whatever, although they also derived enjoyment from the general affluence. This Moorish element of the population supplied the tradespeople and the craftsmen, who were incorporated in various guilds under the direction of syndics or *amīn*. Some natives from the inland had also settled down in Algiers. Kabyles, strictly watched by the Turkish authorities, were handicraftsmen and day-labourers; Biskris earned a living as carriers, Mzābites as bakers. Each of these groups of *berrānīs* formed a small community governed by an *amīn*, who was responsible for their orderly behaviour. The Moors numbered 18 000 (the Ḳuloghlus included) in the year 1830; the negroes 2 000; the natives of Berber origin 1000.

The Jews occupied a place which grew more and more important in Algerian life. The small number of native Jews had since the 15th century been joined by their co-religionists from Spain. The first settlement of the latter took place about 1391, under the rabbis Duran and Barfat, but the great exodus was accomplished in the 16th century. Khair al-Dīn allowed the Jews to take domicile in Algiers, but he limited the number of shops they might open, and compelled them to pay a poll-tax. In spite of all sorts of vexations with which they were plagued by Turks and Moors, such as the coercion to wear a special costume, in spite even of the enormous fines which were inflicted upon them repeatedly, they increased their numbers rapidly. According to Haëdo only 150 Jewish families were living in Algiers at the end of the 16th century; in 1634 Father Dan estimated the number of Jews at 10 000; in 1725 Laugier de Tassy at 15 000, certainly not without some exaggeration. About that time a very sharp distinction began to establish itself between the "indigenous Jews", who were always miserable and badly treated, and the "Frankish Jews" of Italian origin, especially from Leghorn. Profiting, in their quality of foreigners, by the regime of the „Capitulations" and the protection of the French consul, and consequently exempt from the vexations which harassed their indigenous fellow-believers, they grew rich by their commerce with Europe and by the exploitation of monopolies, which the deys had reserved for themselves. The most influential amongst them in the 18th century, such as Soliman Jackets (d. 1725) and especially the Bacris and the Busnachs, having become the bankers of the deys and the official intermediaries between the Regency and the European powers, played a considerable, sometimes even preponderant, part in the Algerian affairs. For twenty-five years (1780—1805) Nephtali Busnach exercised his power in making and unmaking the beys and the deys, had the disposal of the resources of the country, in short, conducted the domestic and foreign politics of the Regency to the advantage of his own interests. This excessive power, however, brought on its own reaction. The murder of Nephtali Busnach, "the king of Algiers", by a janizary (1805) was followed by a bloody riot. The wealthiest Jews were massacred or banished, their shops plundered, their property confiscated. The Jewish "nation" never recovered from this disaster. Reduced to 4000 individuals (Rozet) it endured the Turkish yoke with difficulty. They welcomed on that account the fall of Ḥusain with the greatest satisfaction, and sided, without any opposition, with the conquerors.

The Europeans in Algiers were represented by the slaves and the free tradespeople. The former had fallen into the hands of the corsairs along with their prizes made at sea, or on their razzias along the mediterranean coasts, especially on those of Spain, Italy, Corsica and Sardinia. Part of the slaves formed the share due to the "beylik"; the rest were sold to the highest bidder on the place of the Badestān. The captives, according to the will of their masters, were either set to work in the house, or employed in the town itself, or else in the gardens outside the walls; they were also compelled to row on the galleys for a fixed number of days. At night they were shut up in special establishments, belonging to the government or to private persons, which were known by the name of bagnios The condition of these captives was less miserable than has been asserted. Except on days when a riot of janizaries or the appearance of a Christian squadron roused the fanaticism of the Musulmans, their lives were perfectly safe. The bagnios were even provided with a chapel with officiating priests, with an infirmary and a tavern. But the slaves could not recover their liberty, except when they were either ransomed by their families with the help of ecclesiastics such as Trinitarians, Redemptorists and Lazarists, who devoted themselves to that mission, or released in consequence of diplomatic negotiations. The number of slaves varied naturally according to the more or less flourishing condition of the piracy. It reached its maximum in the first half of the 17th century: 25 000 captives, according to Dan, 35 000 according to Gramaye, peopled the Algerian bagnios at that period. These figures went down during the following century. In 1740 only 1442 slaves remained, in 1767 there were no more than 2062; in 1769, 1800; in 1813, 1669; in 1816, finally, 1200, who were released after the successful naval expedition of Lord Exmouth.

Europeans, who enjoyed unrestrained liberty, were always few in number, as Algiers never had a commercial importance comparable to that of the other Barbary towns, least of all to that of the Levant ports. The consuls, amongst whom the consuls of France and England disputed between themselves for pre-eminence, and the employees at their offices, together with a few merchants, constituted a small colony, of a hundred people at the most.

Algiers during the Turkish epoch was governed by a separate administration, placed under the supervision of the "*khaznadjī*", minister of finance of the Regency. The various ethnic groups (negroes, Mzābites, *etc.*) and the different trades formed

several corporations ruled by *amīn*, the Jews constituted a nation governed by a chosen leader. All these *amīn* were subject again to the *shaikh al-balad*. The inspection of the markets was the task of the *muḥtasib*, that of the streets in the day-time of the *ḳiahya* (from Pers. *ket-khudā*) and during the night of the *aghā 'l-ḳuli*, who must always be a Turk. The *mizwār* was charged with the inspection of the baths and houses of ill fame. The *amīn 'l-ʿuyūn* had to keep the wells in repair and to see that their foundations worked satisfactorily. This administration system answered its purposes and, according to all travellers who have visited Turkish Algiers, secured absolute safety. It disappeared along with the Turkish dominion.

Since 1830, Algiers has witnessed incessant modifications. It would be transgressing the limits of this Islamic encyclopaedia to give a detailed account of them and describe the European city, which gradually supplanted Berber and Turkish Djazāʾir. A few facts however ought to be stated here: First of all the increase of the population, which, according to the census of 1901, had then risen to 138 000 inhabitants, and to 144 000 according to the census of 1906, of which only the rough estimate was known at the time of the composition of this article. The population of modern Algiers is just as composite as that of ancient Algiers. But the European elements have supplanted those of indigenous origin, as may appear from the figures of the census of 1901: 69 000 Frenchmen, 11 750 naturalised Jews, 28 250 foreigners, for the greater part Spaniards. Then the development of the harbour deserves notice. The ancient basin of the port, where the corsairs lay thronged side by side, was enlarged by the continuation of the mole of Khair al-Dīn and the construction of a new pier thrown into the sea from the fort of Bāb ʿAzūn, forming a vast basin of 237 acres where ships of the heaviest draught can anchor. The continuous progress of the traffic (an aggregate tonnage of 6 600 000 in 1904) has even rendered it necessary to plan new works which are in course of construction. Finally the territorial extension of the modern town must not be passed over in silence. A long time ago it exceeded the limits of Turkish Algiers, its buildings and those of the suburbs Ḥusain Dey, Muṣṭafā, Bāb al-Wād, and Saint-Eugène extending over an average length of 7.5 miles.

This transformation was not carried out without a profound alteration of the general aspect and originality of ancient Algiers. In the very first days after the conquest it appeared necessary to create ways of communication, to procure barracks for the troops and offices for the various services of administration, all of which could not be achieved without the destruction of private houses and religious buildings. The Djenina was demolished stone by stone and disappeared altogether in 1856. Of the palaces it enclosed within its wall only the Dār Bint al-Sulṭān exists, now used as the archbishop's palace. The Mosque of the Ketchawa was allowed to fall into ruins from 1845 till 1860 and yielded its place to the Catholic cathedral. The mosque of al-Saiyidīya was pulled down, that of Mezzo Morto transformed to a church. Others were turned into barracks or military depots. Of the 176 places of worship, which were found in Algiers in 1830, only 48 remained in 1862 (9 large mosques, 19 small ones, 20 chapels and zāwiyas). Amongst the Moslem temples that are still in existence, only three possess any archeological and artistic interest: the Great Mosque, with its portico constructed with the columns from the mosque al-Saiyidīya; the "Mosquée de la Pêcherie", constructed in 1660 on a plan in the shape of a cross like the Byzantine churches in Constantinople; and finally the mosque of Sīdī ʿAbd al-Raḥmān al-Thaʿālibī, erected in 1696 by the dey al-Ḥādjdj Aḥmed on the spot of a more ancient building. The Turkish fortifications were for the greater part demolished and replaced by a modern rampart, which now is being pulled down. The Ḳaṣba contains only a few traces of its former state (vaulted rooms, the gate, a fountain, the so-called pavilion of the fan stroke, and the mosque). The batteries and the forts on the sea-front have also disappeared under the demolishers' hands. The town itself has been almost completely modernised, European streets running across the lower part, and transverse roads crossing the high town, which have deprived it of its originality. These acts of Vandalism, explicable in the early days of the conquest, when a safe shelter had to be secured to the European population within the ramparts, were no longer justifiable after the extension of the town towards the north and the south. European life is gradually moving to these new quarters. The high town, on the other hand, has remained the centre of Moslem life. In its narrow and dark streets the indigenous population is crowded together, exercising their small native trades and crafts. It seems that enlightened minds have realised the necessity of preserving that part of the town from utter ruin, although they have arrived rather late at this conclusion. A society called "Society of old Algiers" was founded for that purpose in 1905, which has set itself the task of tracing and preserving what is still left of Moslem Algiers.

Not satisfied with being the political capital of Algeria, Algiers has also been striving of late years to become a centre of intellectual life and of Moslem learning. A law of 20 December 1879 has organised four schools for higher education (law, medicine, science and letters), which together constitute a veritable university, numbering, in 1904, 916 pupils and auditors. Although the same general education, as the Universities of the metropolis supply, is also taught in the schools of Algiers, still the activity and the researches of the latter tend especially towards African questions. Oriental studies occupy an important place at the Law school and particularly at the school of Letters, which conducts a thorough investigation concerning the literature, the languages, the folklore, the ethnography and the civilisations of northern Africa. There is a professorship of Moslem law at the first of these schools, and, at the second one, others of Arabic, Persian and Berber languages and literature, of Moslem civilisation, of Egyptology, and African history. The work which has been accomplished is already considerable (see Doutté: *L'oeuvre de l'École des Lettres d'Alger*; *Revue Africaine* 3rd and 4th quarter 1905). Various learned societies contribute to the researches which have been undertaken since 1830 concerning the past and the present state of northern Africa, in the first place the Historical Society, which in

its paper, the *Revue Africaine*, since 1856 has published a great many valuable articles and precious documents about the history of Africa. The Geographical Society has organised an historical and archaeological section, and prints in its "Bulletin" not only studies on the geography but also on the history and the civilisation of the Islāmic world. Superior Moslem education is finally given in the madrasa al-Tha'ālibiya, placed under the patronage of Sīdī 'Abd al-Raḥmān. Moslem theology and law, together with some rudimentary knowledge of European sciences, are taught there to the natives, amongst whom the Mussulmans, employed in the legal and ecclesiastical professions, are recruited (ḳāḍīs, 'adūl, imāms etc.). The National Library possesses 2000 Arabic, Turkish and Berber manuscripts. It may be added that, apart from its efforts to maintain Mussulman culture at its height, the French government also endeavours to develop artistic taste amongst the natives, and to revive the local industries. A section of Moslem art has been organised at the Mustapha Museum in 1903, and encouragement has been given to professional schools, where the manufacture of carpets and embroidery is practised.

(G. YVER.)

ALGÉRIE (English: Algeria) is a possession of France in northern Africa, bounded on the north by the Mediterranean, on the south by the Sahara, on the east by Tunis and on the west by Morocco. It is situated between 30° and 37° N. Lat., 6° E. Long. and 5° W. Long. (meridian of Paris).

1. GEOGRAPHY.

Algeria occupies the central part of the Maghrib or Barbary. It is a country of varied relief, which is formed by a compact mass of highlands, separated from the mediterranean littoral on the one side and the desert of the Sahara on the other by two mountainous borders, the Tell Atlas and the Sahara Atlas [see ATLAS]. In western Algeria in the province of Oran, these outer borders are about 250 miles distant from each other, but, owing to the inclination of the Sahara Atlas from south-west to north-east, they converge gradually, until finally they meet in eastern Algeria, in the province of Constantine. The northern mountains, towards the side of the sea, generally descend by abrupt slopes, rarely incised by valleys, thereby isolating the coast region from the inland. Those of southern Algeria, on the contrary, slope down very gently towards the Sahara, their different groups being divided from one another by large openings, which facilitate the relations between Algeria and the Sahara. Being placed between the Mediterranean and the desert, between a focus of evaporation and a focus of heat, Algeria is contested between contrasting climatic influences, which together form various combinations, according to the proximity or the remoteness of the sea, the elevation, and the orientation, so that adjacent regions are often subject to largely different systems, constituting a great variety of "local climates" rather than an Algerian climate. General phenomena are: — the predominance of rains in winter, the irregularity of their fall, their progressive diminution from north to south and, at least as far as the littoral is concerned, their augmentation from west to east (Nemours 468 millimetres, — la Calle 860 millimetres). The climate, no less than the relief, does not favour the existence of regular rivers of considerable length and with an abundant water supply. In most cases the Algerian wādīs appear under the aspect of stony or sandy beds with low banks, and are dry for one half of the year, but after showers or thunder-storms are transformed into destructive torrents. Not one of them is navigable; some are or may be utilised for irrigation by the construction of barrages on the spot where they leave the mountains. Only the Tafna, the Macta (formed by the confluence of the Sig and the Habra), the Chélif, the Sebaou (Sebāw), the Wād Sahel, the Wād el-Kebīr, the Seybouse, the Medjerda and its tributary the Wād Mallag have a permanent course, and the lower course of the two last ones does not even belong to Algeria.

The variety of elevations and depressions affords a means of dividing Algeria into a certain number of longitudinal zones, parallel to the sea, each of which possesses sufficiently sharp characteristics.

1. The coast zone or Tell, comprising itself an outer and an inner mountain border, which are separated from each other by valleys or tablelands. The external zone is covered by massifs of an elevation ranging between 1300 and 6300 ft., of which the extreme spurs project themselves straight on the littoral. Such are, from west to east, the massif of the Traras culminating in the Filhaousen or, more exactly, Fellāsen (3796 ft), the Sahel of Oran and that of Mostaganem, the Dahra, the Zakkara dominating the town of Miliana (5026 and 5183 ft), the Atlas of Blida culminating in the Abd el-Kader (5339 ft) and the Mouzaia (5262 ft), the massif of Great Kabylia and the Djurdjura with the Akouker (7546 ft) and the Lalla Khedidja (7572 ft) [see Kabylia], the Babors culminating in the Babor (6575 ft), the Sahel of Collo and the Edough (3307 ft). The shore being almost immediately dominated by the mountains, it is very difficult for ships to approach it. They can only find shelter there in deep crescent-shaped bays (Bay of Bona, of Philippeville, of Bougie, of Algiers, of Arzeu, of Mars al-Kabīr). The coast lends itself badly to maritime activity, and the construction of the ports has required considerable works. — The

second mountain-range is formed by the mountains of Tlemcen, from whence a great many waters take their source, to which the vegetation all around the town of Tlemcen owes its continual freshness. These mountains are the Tessala and the Beni Chougran, the massif of the Ouarsenis (6545 ft), the Dira of Aumale (5942 ft), the Biban, traversed by the route from Algiers to Constantine through the pass of the Iron Gates, the mountains of Constantine, the Maadid, and the Rirha (Righā). Between the two bordering mountain-ranges, river valleys (Chelif, Wed Sahel, Seybouse) and plains alternate. Some of those plains, lying not far from the sea, are low and often swampy, such as the plain of the Sig, of the Mitidja and the plain of Bona. Others are higher and more salubrious, such as the plains of Tlemcen, of Mascara, of the Arībs (ʿArīb), of the Medjana, and of Sétif. The Tell as a whole may be considered a cultivable region. On the littoral market-gardens and nurseries flourish, owing to the relatively abundant rains and the generally mild temperature; in the middle zone the basin-shaped plains, collecting the waters from the mountains, offer a good soil for the cultivation of corn. The mountains finally, although too often bare, are frequently covered by thick copse-wood. In Kabylia, especially in the massifs of the littoral, they are overgrown by woods of cork oaks and green oaks; in some places, amongst others in the Atlas of Blida and at Teniet el-Ḥâd (Thaniyat al-Aḥad) some cedar plantations can be found. These natural conditions account for the fairly dense groups of population in the Tell. There are to be found the principal town-like agglomerations: Oran, Mostaganem, Ténès, Cherchell, Algiers, Dellys, Bougie, Philippeville, Collo and Bona on the Coast, Tlemcen, Sidi bel Abbès, Mascara, Miliana, Médéa, Blida, Aumale, Sétif and Constantine in the interior country. The Tell is also, pre-eminently, and apart from Kabylia, the domain of European colonisation, which prevails in the environs of Oran, in the plains of the Sig, of Mascara, of the Mitidja and of Bona, and shares with the natives the valley of the Chelif and the high plains of the province of Constantine. The surface of the Tell is estimated at about 54 000 square miles.

2. The Region of the High Plateaux, which with greater exactitude should be called the "Region of the high interior plains", extends between the Tell Atlas and the Sahara Atlas. It is the very heart of Algeria. It comprises a series of plains with central depression, decreasing in height from west to east. The high plateaux of Oran maintain an average elevation of 3280 ft; the region of the Zahrez is not higher than about 2625 ft; the Hodna sinks down to 1300 ft. Between the Hodna and Tébessa, the country is grooved by secondary mountain-chains isolating plains of somewhat narrow confines from one another. The aspect of these plateaux is greatly different from that afforded by the Tell. "They are vast spaces where nothing arrests the eye, without a stone, without a rock, without a tree; there are neither valleys nor hills, only slight undulations" (A. Bernard and Lacroix, *l'Évolution du nomadisme* p. 19). The Sahara Atlas forms the southern border of this second zone. It appears as a series of narrow hill-crests, surmounting the neighbouring regions by about 1000 ft, and separated from one another by undulated plains. Even in the most hilly parts such as the Aurès, it does not lose the aspect of a table-land [See AURÈS]. One distinguishes three principal ranges: the mountains of Figuig and the mountains of the Ḳṣūr (Djebel Mekter 6500 ft) — the Djebel ʿAmūr, flanked by the Ksell (5600 ft) on the west side and on the east side by the Bū Kaḥil (Abū Kāḥil) — and the mountains of the Ulād Nail and the Aurès. The Sahara Atlas does not constitute an uninterrupted barrier. Large openings intersect the various massifs, facilitating the relations between the Sahara and the plateaux, and allowing the desert to make its influence felt a long way north. The region of Bu Saada, for example, with its dunes and its oasis, seems just an annex of the Sahara. Being isolated from the sea by the Tell Atlas, the plateaux are a region of moderate rainfall (0.40 millimetres a year). The waters, which do not flow towards the sea, are lost in depressions called chotts (*shaṭṭ*), sebkhas, or gueraas (*ḳarāʿa*), which in winter are filled with a muddy, salty water, and in summer are desiccated and covered with a stratum of salt. The most important of these depressions are the Chotts Gharbi and Chergui (*sharḳī*), the Zahrez, the Hodna, and the Gueraa of the Tarf. The climate is one of extremes, the differences of temperature between day and night and between the seasons being considerable. However annoying this climate may be, it is not unhealthy. The plateaux, dry and barren as they are, are not fit for the cultivation of cereals, not even in the best favoured parts near the border of the Tell (plateaux of the Sersou). They are nothing but steppes, which in the spring are covered by an ephemeral herbaceous vegetation, and also by perennial plants capable of resisting the drought, the alfa in flinty places, the artemisia or *shīḥ* in the depressions, the *drin* on the sands. The arboreal vegetation is only found in the lower grounds, the daias or beds of the wâdis where some traces of humidity remain. Owing to its height the Sahara Atlas possesses some massifs wooded by junipers, thujas, Aleppo pines, and, in the Aurès, by cedars. The valleys of the Djebel ʿAmūr give shelter to some pasture and some arable fields of only limited extent. Under these conditions the region of the plateaux is neither fit for European colonisation nor even for the establishment of native settlers. It is a region especially favourable to cattle-breeding, although the breeding of big cattle is hampered by the scarcity of water. But the sheep adapts itself very well to the meagre vegetation of the steppes. Ever since the remotest antiquity the 42 000 square miles of the plateaux have been the scene of the wanderings of the nomads and their herds.

3. The Sahara. The Sahara is in all respects a distinct region, no less vast than Algeria proper. A considerable part of the Sahara, moreover, was disjoined from Algeria and received an organisation and a budget of its own, by the law of December 6th 1902, which created the "Territories of the South". [See SAHARA.]

B. HISTORY.

During the first nine centuries of the Hidjra (7th — 16th centuries after Christ) the history of Algeria proper cannot easily be separated from that of northern Africa, and, for some periods, from that of Spain. The Musulmans appeared

there for the first time in the second half of the 7th century after Christ, at the period of their establishment in Ifrīḳiya. Their first expeditions are insufficiently known and bear a legendary character. This much may be ascertained that 'Oḳba, having founded Ḳairawān in the year 50 (670), undertook to convert the Berbers in the west. His rival Abu 'l-Muhādjir, however, dispossessed him of the government of Africa, and is said to have himself advanced as far as the neighbourhood of Tlemcen, to have defeated the confederacy of the Awraba, and captured their chieftain Kusaila. 'Oḳba, having been taken into favour again and reappointed governor of Africa, advanced to the Atlantic, without venturing however into the Awrās (Aurès) or attacking the towns on the coast occupied by the Byzantines. On his return he was surprised and killed at Tehūda (65 = 685) [see 'OḲBA B. NĀFI']. The Berbers took advantage of this disaster to recover their independence and abjure Islām, which they had been compelled to embrace. The indigenous realm, however, which Kusaila had founded, was only short-lived, although in the mountains of the Aurès resistance was continued under the leadership of the Kāhina [see KĀHINA.] To triumph over this prophetess meant five years of hard struggle to the Arabian general Ḥassān b. al-No'mān, who at first had been defeated and repelled into the country of Barca. In the meantime the last Byzantine places were conquered and at the beginning of the 8th century after Christ Arabian authority was acknowledged all through the central Maghrib. The Christian and Jewish Berbers were converted to Islām, not so much because of religious conviction as in hope of the booty which was promised to them by the Arabian generals, who enlisted them in their armies and led them on to the conquest of Spain.

Consequently the Arabian conquest did not thoroughly modify the population; it simply introduced into the country a military aristocracy of comparatively few members, and propagated a new religion. The Arabian power was at the mercy of the Islamised Berbers. They gave it a hard blow in the second half of the 8th century. Being exasperated by the exactions of the governors, who claimed the right to impose upon them the *kharādj*, as they did on the infidels, and being vexed by the pride of the Arabian chiefs, they adopted eagerly the Khāridjite doctrines imported from the East. These doctrines appealed to their democratic instincts and their desire of vengeance. So they rose in arms against the Arabs. The insurrection began in 123 (740), in the neighbourhood of Tangier, under the leadership of Maisara, and spread all over the Maghrib. It lasted until the close of the 8th century. Their victory over the Arabian general Kulthūm at Bagdūra rendered the Berbers masters of the whole of minor Africa. The disorders, which accompanied in the East the accession of the 'Abbāsides, retarded the suppression of the rebellion. Yazīd b. Ḥātim, commissioned by Caliph al-Manṣūr, re-established Arabian authority at Ḳairawān and in Ifrīḳiya; but not in the central Maghrib and the extreme Maghrib, where Berber states had been organised. The Benī Ifren, who confessed to the Ṣufrite doctrines, had founded a kingdom at Tlemcen; 'Abd al-Raḥmān b. Rostem, having been proclaimed imām by the Abāḍites, had built the town of Tagdemt (near the present town of Tiaret), which was the capital of a state extending soon afterwards as far as Touggourt, Wargla and even Gabès and the Nefzāwa. Finally, in the last years of the 8th century, the 'Alide Idrīs b. 'Abd Allāh conquered Tlemcen with the help of the Awraba; in 193 (808-809) his son Idrīs II founded the town of Fez and submitted the extreme Maghrib to his dominion. In spite of the rapid decadence of these various states, the Aghlabides, (descendants of Ibrāhīm b. al-Aghlab, to whom Caliph Hārūn al-Rashīd had intrusted the government of Africa), did not succeed in reconquering the central and western Maghrib, which remained in the power of the Berbers. They were only obeyed in Ifrīḳiya and in the province of Constantine.

The Aghlabides disappeared in the 10th century, vanquished by the Fāṭimides. The latter owed their victory to the Ketāma Berbers, who had adopted the Shī'ite doctrines preached by the dā'ī Abū 'Abd Allāh and owned the mahdī 'Ubaid Allāh as their chief [See FĀṬIMIDES, 'UBAID ALLĀH]. The last Aghlabide was expelled from Raḳḳāda, the kingdoms of Tiaret and of Sidjilmāsa, were overthrown, and the Idrīsides reduced to the condition of vassals. The remains of the Abāḍite tribes were transported to Djerba or emigrated towards the south [See DJERBA, WARGLA, MZĀB]. The Nekkārian Ṣufrites, who, headed by Abū Yazīd, „the man with the ass", had risen up in arms, were exterminated (331—335 = 942—947). Profiting by these dissensions, the Umaiyades of Cordova had installed tributary princes at Tlemcen and at Tiaret. Successful expeditions enabled the Fāṭimides to recover these countries and to subject the whole of the Maghrib down to the Atlantic. The Fāṭimide Caliph al-Manṣūr, not being able to take the government of the central Maghrib into his own hands, entrusted it to the chieftain of the Ṣanhādja tribe, Zīrī b. Menād, whose son Bologgīn became the founder of Algiers, Médéa and Miliana. But as the caliphs lived far away in Cairo, where, after the conquest of Egypt in 358 (969), they had fixed their residence (362 = 973), fresh disorders were elicited. The governors left in charge of the Maghrib no longer acknowledged the authority of the Fāṭimides and made themselves independent. One of them, called Ḥammād, founded a state extending from the sea to the Zībān and from the Hodna to Tiaret. He built himself a capital, the Ḳal'a of the Banū Ḥammād between Msīla and Bordj Bū Arreridj, which became one of the most prosperous towns of Africa. His successors had to sustain continual fights against the Zīrides, the Hilālian Arabs and the Almoravides. Some of the Banū Ḥammād were princes of considerable importance, such as al-Nāṣir, who removed his residence from Ḳal'a to Bougie and entertained friendly relations with Pope Gregory VII and the Italian sea-towns, and also his son al-Manṣūr (481—498 = 1088—1105), who succeeded in repelling to the west the Almoravides, who had advanced as far as the neighbourhood of Algiers [See ḤAMMĀDIDES].

So, at the beginning of the 11th century, Algeria was entirely divided between Berber sovereigns, when the discord between the Zīride sultans of Ifrīḳiya and the Fāṭimides of Cairo brought on the Hilālian invasion [See HILĀL]. After having

devastated Ifrīḳiya, the Arabian troops penetrated into the Maghrib. Leaving aside the mountain massifs and the towns of the Tell, which they were unable to capture from the Berbers, the invaders spread over the plateaux and the plains of the inland. As they drove their cattle along with them, they destroyed all agriculture and substituted nomadism for settled life. The Athbedj reached the oriental Zāb and the flanks of the Aurès, and pushed on as far as the Djebel ʿAmūr; the Ghorfa advanced into the eastern Zāb and the Hodna, the Maʿḳil into the steppes of the province of Algiers. The Berbers, at any rate part of them, sought a refuge in the mountain massifs (Kabylia, Aurès), in the oases and in the Sahara (Mzāb, Wēd Ghīr, Sūf), where they have succeeded in preserving their language and customs down to the present day. In the steppes and the plains, on the other hand, the Arabian and Berber elements pervaded each other, their mixture giving birth to new associations. Towards the close of the 12th century the invasion proper had come to an end, although in migratory movements of the population its reaction made itself felt until the 14th century. By it the ethnography of Algeria was so profoundly changed, that, in the history of Algeria, the Hilāl invasion may be looked upon as the principal event, which unfortunately is not yet sufficiently known in its details. The Hilālians, destitute of creative faculty, did no more than augment the disordered state of the country by their brigandage, and by aiding the princes who disputed for the country amongst themselves, especially with the Zīrides and the Ḥammādides. This incorrigible anarchy left the central Maghrib a ready prey to the new invaders from the west. The Almoravides, after having subjected the whole of Morocco, crossed the Mulūya. Yūsuf b. Tāshfīn conquered Agadir (the ancient Tlemcen), founded Tagrart (the present Tlemcen), and for a short time ruled the whole country as far as Algiers. But he did not succeed in maintaining his position [See ALMORAVIDES]. The Almohades were more successful. ʿAbd al-Muʾmin captured Algiers and Bougie without a blow (547 = 1152), destroyed the Ḳalʿa of the Banū Ḥammād, of which the population was dispersed, put to flight the Hilālians in a four days' battle near Sétif (Saṭīf), and retook the ports, which, profiting by the prevailing disorder, the Christians of Sicily had occupied. After the conquest of Ifrīḳiya, he ruled over the whole of Barbary from the Atlantic to the bay of Gabès [See ALMOHADES, ʿABD AL-MUʾMIN]. During the reign of his successors peace was disturbed by the enterprises of the Banū Ghāniya, who, by alliance, were descended from the Almoravides. The eldest one, ʿAlī, succeeded in conquering all the country between Bougie and Miliana (580—583=1184—1186). After his death his brother Yaḥyā continued the hostilities until 633 (1236), with the support of the Hilālian bands. Being an indefatigable adventurer, one day victorious and the next defeated, but never despairing, he crossed the Maghrib in all directions from the coast to the Sahara. Algiers, Bougie, Tiaret, and even Biskra were taken and plundered.

In the course of that same period the dominion of the Almohades became dislocated. The governor of Ifrīḳiya, Abū Zakarīyāʾ b. Ḥafṣ, belonging to the family of the Almohades, proclaimed himself independent at Tunis (634=1236—1237) and founded the dynasty of the Ḥafṣides. The ʿAbdalwādide Berbers, repelled by the Hilālians from the Sahara towards the north, established themselves at Tlemcen, where their chief Yaghmurāsan b. Zaiyān usurped the power, which after him passed into the hands of his descendants the Zaiyānides. The Banū Marīn, finally, occupied the valley of the Mulūya, from whence they advanced towards the west until they supplanted the Almohades at Fez in 668 (1269). These three dynasties disputed for the central Maghrib amongst themselves. At first the Ḥafṣides succeeded, during the reign of Abū Zakarīyāʾ, in subjecting the entire Maghrib as far as Tlemcen, but his successors could not even enforce obedience beyond Sétif and Bougie. Eastern Algeria, moreover, was troubled by the rivalry of Ḥafṣide princes, who several times founded ephemeral principalities at Constantine and at Bougie, and shook off the authority of the sovereign of Tunis. All through the 14th century, Ḥafṣides, Marīnides and Zaiyānides warred amongst themselves, without one of the three dynasties being able to establish definite supremacy over the central Maghrib. The main events in the conflicts between the Zaiyānides and the Marīnides were the two sieges of Tlemcen (698—706=1299—1307 and 736—738=1335—1337), and the occupation of that town by the Marīnides (738—761=1337—1359). The temporary disappearance of the Zaiyānide realm allowed the Marīnides to advance victoriously across the whole of the central Maghrib and occupy Bougie, Constantine and even Tunis. But after the Arabs had defeated the Marīnide Abū ʾInān near Ḳairawān, the kingdom of Tlemcen was restored and experienced an epoch of glory and prosperity during the reign of Abū Ḥammū II (q. v.; 760—791=1359—1389). After his death, however, it rapidly declined to complete ruin. Foreign wars and domestic struggles impaired its strength: The Ḥafṣide Abū Fāris conquered Tlemcen three times. A prince of the Zaiyānides, Abū Zain Muḥammed, founded a state which comprised Tenès, Miliana, Algiers and the Mitidja; his son al-Mutawakkil succeeded in asserting himself at Tenès and in the valley of the Chelif. The towns on the littoral, enriched by the piracy, organised themselves into independent republics. Finally the Spaniards, at the instigation of Ximenes, set foot on Algerian ground, in order to continue in Africa the crusade which they had brought to an end in the Peninsula. They conquered Mars al-Kabīr (1505), Oran (1509) and Bougie (1512). Algiers, which they kept in awe by the threatening canons of the fortress on the Peñon, and Dellys and Tenès offered submission and paid tribute. The same thing happened to the kingdom of Tlemcen, over which the Spaniards exercised a veritable suzerainty.

The arrival of the Turks stopped the progress of the Christian invasion and saved Islām in Africa. On the ruins of the small Berber states, which long anarchy had enervated, the Turks, by force of arms, established a Mussulman state, which comprised the whole of the central Maghrib. Its founders were ʿArūdj [q. v.] and Khair al-Dīn [q. v.]. ʿArūdj laid the foundations of the Turkish power by conquering Algiers (1516), but soon afterwards his successful career came to an untimely end. Khair al-Dīn was more fortunate. By rendering homage for his states to the Ottoman

Porte and accepting the titles of pas̲h̲a and beylerbey, he procured himself the moral support and the material means necessary for the success of his enterprises. In the period between 1518 and 1536 he made himself master of most of the towns on the littoral and in the Tell (Bona, Collo, Cherchell, Constantine), compelled part of Kabylia to pay tribute to him, and, by the capture and demolition of the Peñon (1529) secured a definite possession of Algiers. The beylerbeys who came after him, and their lieutenants continued his work. They repelled the attacks of the Spaniards, who attempted a renewal of hostilities (discomfiture of Charles V before Algiers 1541), and captured all the places possessed by them, with the sole exception of Oran. This town was to remain in the power of the Spaniards until 1707; they retook it in 1732, but abandoned it finally to the Mussulmans in 1792. In the west, the successors of K̲h̲air al-Dīn conquered the kingdom of Tlemcen and warred successfully against the Saʿdian Sherifs, who contested that region. Ṣalāḥ Raʾīs even occupied Fez (1553) and re-established a descendant of the Marinides on the throne; Ḥasan Pas̲h̲a and after him ʿEuldj ʿAlī made successful razzias even into the environs of the Moroccan capital. In the east the Turks established their dominion in the whole province of Constantine. At the close of the 16th century the "Regency" of Algiers had reached the limits which it maintained until 1830. The western frontier, however, was the scene of sharp conflicts between the Turks and the Moroccans. Twice, in 1691 and in 1703, Mūlāi Ismāʿīl attempted, although without success, to take the region of Tlemcen from the Turks. His successors had recourse to stratagem and diplomacy to weaken the power of their adversaries; they gave encouragement and subsidies to the marabouts and the fraternities which were hostile to the Turks, such as the Derḳāwa and the Tid̲j̲āniya, and their intrigues were privy to the revolts which disturbed western Algeria at the end of the 18th and the beginning of the 19th century. On the east side the Turks of Algiers were in conflict with the natives of Tunis during the 18th century. Benefiting by the dissensions of the Ḥusainide family, the Algerians conquered Tunis in 1756, plundered the town and compelled the beys to the payment of an annual tribute. Fresh hostilities between the two Regencies broke out early in the ensuing century, and did not cease until 1821.

The Turks have by no means exercised actual authority over the whole of the territory comprised between the sea, the Sahara, Tunis and Morocco. According to Rinn, the regions placed under their direct administration covered a surface not exceeding 29 000 square miles, being one sixth of the territory of French Algeria. The rest of the country belonged to populations, which were either independant or connected with the Turks by ties of vassalage more or less close. To the former category may be reckoned: the confederacies of the Kabyles, of the Traras etc., veritable federal republics; the nomadic tribes of the plateaux and of the south (Ṣaḥārī, Banū 'l-Aghwāṭ, S̲h̲aʿānba etc.); and warlike or maraboutic principalities, such as Touggourt or ʿAin Mahdi. Having failed to subject these groups or to make them obey, the Turks were satisfied to tolerate them at their side. The second category consisted of tribal unions, that had preserved an almost complete autonomy, but in their relations with the Turks were dependent on treaties which it was the interest of both parties to respect. Such was the condition of the Ulād Sīdī S̲h̲aik̲h̲, of the Ḥarrār, the Ḥanench̲a, the ʿAmūr etc. But the Turkish policy was careful to keep the tribes disunited, to keep up the discord between the aristocratic families and the *ṣoff* quarrels in the republics, so as to prevent all agreement that might prove dangerous to the rulers of the Regency. The Turks also secured to themselves, in the bosom of each group, devoted partisans of their cause. This same system of "divide and govern" was also applied to the populations which the Turks had under direct authority. They were distinguished into two categories: subjected tribes or *raʿāyā* and tribes under command or *mak̲h̲zen*. The former were constrained to the payment of the poll-tax, the *ʿashūr* and the *zakāt*, and also of a tribute in kind or in money (*lezma* = *lāzima*). The latter were exempt from all taxes, canonical rates excepted, but they were at the service of the government and had always to be ready to march at the first signal. They supplied the Turks with warriors, conveyers and camel-drivers, looked after the payment of the taxes and formed the police of the country. Recalcitrant or rebellious tribes were plagued relentlessly by their razzias. The Turkish government maintained its authority with the help of this force, which was a great deal more effective than that which they derived from the *nūbas* of the janizaries. These Mak̲h̲zen tribes, hated by the natives whom they utilised, remained necessarily faithful to the Turks. Military colonies or *zmūl* (plur. of *zmāla*) were also established at all points of some strategical importance. Finally, large stretches of uncultivated land isolated the principal indigenous groups from one another. In spite of these precautions, revolts were frequent, provoked in most cases by the extortions of the Turkish agents. The Kabyles were in a state of almost permanent insurrection during the 18th century and the earlier years of the nineteenth. Towards the close of the Turkish domination, the province of Oran was entirely disarranged by the intrigues of the Moroccan agents and by the preachings of the Derḳāwa and the Tid̲j̲āniya. The revolts, of which that of Ben S̲h̲erīf (1805) was the most dangerous, were only suppressed with the greatest effort. As to the inhabitants of the towns, the so-called *ḥaḍar*, being deprived of all share in political life, they did not even attempt to shake off the yoke. The Ḳulog̲h̲lus alone, half-breeds of Turks and native women, inspired the Turks with some fear in the 17th century. After that period they were consequently excluded from all the higher offices.

The exercise of power and the enjoyment of its benefits were the privilege of the Turks who belonged to the militia (*od̲j̲aḳ*). This institution, to which K̲h̲air al-Dīn owed his success in establishing his authority, formed a small military aristocracy, of never more than 15 000 members. These were recruited from amongst the populace of the towns in Asia Minor, and also, at least in the 16th and 17th centuries, from amongst the European renegades, who were attracted to Algiers by the desire and the profits of a life of adventure. After their enlistment, the *yoldas̲h̲* were either assigned to the service on land or on the

ships; their pay was raised gradually; they were dependent on no one except their officers: they passed through all the successive grades of the hierarchy according to priority of appointment, until they became agha, and might even then aspire to the highest civil functions. Those amongst them, who formed the army proper, served alternately one year in the garrisons or *nūbas* (*nauba*), which were found in the towns or at the most important stations (Algiers, Bougie, Bordj Sebaou, Constantine, Médéa, Miliana, Mazouna, Mascara, Tlemcen), and one year in the ranks (*maḥalla*) to collect the rates, after which they went for a year on furlough. Their insolence and turbulency made them dangerous, not only to the natives, but even to the government itself, which tried to win them by gratifications and presents. The palace revolutions, which were the cause of repeated bloodshed in Algiers, were the work of the militia. The influence of the janizaries, however, was counterbalanced in the 17th century by that of the Taïfas of the raïs (*ṭaifat al-ru'asā'*), or corps of the corsair captains.

The organisation of the Algerian state, although in principle it remained the same as it had been conceived by Khair al-Dīn, underwent, nevertheless, modifications of some importance in the course of the three centuries of Turkish rule. In this respect four different epochs must be distinguished: that of the beylerbeys (1518—1587); that of the triennial pashas (1587—1659), that of the aghas (1659—1671) and finally that of the deys (1671—1830).

The beylerbeys Khair al-Dīn, his son Ḥasan, 'Euldj 'Alī and Ḥasan Veneziano, as representatives of the Ottoman Porte, sometimes exercised their functions personally, and at other times had them discharged for them by governors or *khalīfas*. Although acknowledging the suzerainty of the Grand Seignior, they behaved as independent sovereigns. Haëdo, not without reason, calls them the "kings of Algiers." All of them dreamt of creating, to their own advantage, a kingdom comprising the whole of Barbary: they even tried to neutralise the excessive power of the janizaries by relying on the troops which were recruited from the Kabyles (*zwāwa*). — But their ambition caused so much anxiety to the sultans of Stambul, that these decided to have themselves represented in Africa by pashas appointed for a period of three years. These officers, being first of all bent on the acquisition of a large fortune, did not give umbrage to their sovereign. During this period, the piracy developed considerably. Towards the middle of the 17th century, a military revolution broke out which brought the aghas or chiefs of the militia into power. The pashas only preserved some honorific attributions. The period of the aghas was one of disorder and anarchy. The rivalry between the janizaries and the raïs provoked bloody tumults; all the aghas perished by assassination. — After the elapse of twelve years, the raïs, in their turn, succeeded in usurping the power and appointed a dey. His first three successors were also elected by the corsairs, but the others were chosen by the militia, which finally reconquered and maintained its influence. This period is marked by the disappearance of the pashas and the rapid decline of Algerian power. The Ottoman supremacy, it is true, was solely attested by the bestowal of the caftan of honour and the diploma of investiture upon the new deys. But, on the other hand, the cruises and naval demonstrations of the great European powers impaired the piracy to such an extent, that, whereas in the preceding century it had enriched the Algerians, it now proved insufficient to maintain the treasury. The deys had to take recourse to extortions from the natives, at the risk of provoking revolts, or to the help of the Jews, who were steadily gaining power. The favour enjoyed, at the end of the 18th century, by Nephtali Busnach and Joseph Bacri, "the king of Jews", called forth bloody riots in 1805. The militia, greatly reduced in number and gradually deprived of military qualities, became more and more exacting. They raised and dethroned the deys according to their own caprice. Of 28 deys, who reigned successively from 1671 till 1830, 14 perished by murder. Not until 1816 it occurred to 'Alī Khodja to abandon the palace of the Djenina, in the low town, and shut himself up, with his treasure and his guards, in the Kaṣba where he would be safe from military rebellions. [See ALGIER.]

Having been elected by the militia, the dey enjoyed absolute power. He was assisted by a council or dīwān, consisting of five ministers with the official name of "Powers". These were the Khaznadji, the minister of finance; the agha of the camp, the commander-in-chief; the wakīl al-khardj, minister of marine; the bait al-māldji, steward of the domain; and the khodjat al-khawl, the receiver of the taxes. The shaikh al-medina was in charge of the police and the jurisdiction in the capital. The dey governed the province of Algiers, which constituted the dār al-sulṭān, by the intermedium of four Turkish ḳā'ids. The rest of the Regency was divided into three provinces or *beyliks*: the west *beylik*, which had successively for its capital the towns of Mazouna, Mascara (from 1710) and Oran (since 1792); the central *beylik* or the *beylik* of the Tītari with the capital Medea; and the east *beylik* with the capital Constantine. These *beyliks* were again subdivided into *waṭans*, comprising the territory of several tribes; these tribes again into *duars* or assemblages of tents. Each *beylik* was governed by a bey, each *waṭan* by a ḳā'id, either a Turk or an Arab, and each *duar* by a shaikh. The beys were appointed by the deys, as a rule by means of money; the beys, in their turn and under the same conditions, chose the various authorities placed under their commands. They exercised extensive power in their beylik, but were responsible for the security of the district, and for the collection, with the help of the Makhzen tribes, of the taxes. Every year, in the spring and in the autumn, they sent the proceeds of these taxes to Algiers, by means of their *khalīfas*. Every third year they had to appear there personally, to deposit the amount of customary duties (*'awā'id*) which was called the *denwūsh*. This journey was not always without danger for them; for the dey took advantage of their presence at Algiers to make them pay back what they had stolen and even to get rid of them, if he suspected them. They certainly might be tempted to govern independently as they had the disposal of an army and an uncontrolled authority. Some of them, amongst others Muhammed al-Kabīr at Oran, conducted themselves like independent sovereigns. The beys of Constantine, in the 18th

and 19th centuries, caused the gravest annoyance to the Algerian government.

Although the representatives of the beylik were principally concerned about the collection of the taxes, still the main resource of the Algerian treasury, for a period of three centuries, was to be found in the piracy. Originally having been one of the forms of the holy war, the piracy became, towards the close of the 16th century, a veritable industry which enriched the government and the entire population. Private persons and functionaries supplied the capital necessary for the equipment of the ships. A fixed duty was levied by the state on the sale of captured individuals and merchandise; what remained was divided between the ship-owners and the crew. The captives, especially those who belonged to well-to-do families, gave rise to a lucrative trade: they were bought and sold; their owners entered into negotiations regarding their ransom, in some cases with the captives themselves, in others with the deputies of their families or the members of the religious congregations (Trinitarians, Mercenarians, Lazarists), who devoted themselves to this pious mission. During the time of these transactions the slaves either lived in the house of their masters or in the establishments appointed for that purpose, the so-called *bagnios*. The piracy attained its highest prosperity during the first half of the 17th century, when even the coasts of Spain, Provence and Italy were exposed to the incursions of the Barbary corsairs; it was still redoubtable in the second half of that century, in spite of the naval demonstrations of England and France (cruise of Blake, 1659; expedition of Beaufort to Djidjelli, 1664; bombardments of Algiers by Duquesne in 1682 and 1683, and by d'Estrées in 1688. But in the 18th century the freebooting diminished. The great maritime powers, France and England, succeeded in enforcing respect for their flag. The states of secondary rank (Sweden, Denmark, Holland, Naples etc.) had to make up for this by submitting to the compulsory payment of an annual tribute either in money or in kind, in exchange for a guarantee of more or less precarious security for their nationals. The wars of Napoleon, which turned public attention away from the Mediterranean, gave the piracy a chance to recover its former prosperity. After general peace had been restored, the diplomatists, in reply to the appeal of publicists such as Sidney Smith and Châteaubriand, sought means of putting an end to that state of affairs. But the Algerians refused to carry out the decisions of the congress of Aix-la-Chapelle. Even the bombardment of Algiers by Lord Exmouth [see ALGIERS] could not make them give up their old practices. The piracy was to last as long as the Turkish dominion itself, until the year 1830.

The conquest of Algiers and the destruction of the Turkish State were the achievement of France. After vain endeavours to obtain satisfaction for the insult offered to the consul Deval in 1827, the government of Charles X abandoned the blockade, which had lasted for three years, and, instead of the useless conciliatory negotiations, decided on punishing the dey Ḥusain. In spite of the opposition of England, the minister Polignac organised an expedition against Algiers. The dey capitulated on July 5th. The town was immediately occupied, and Ḥusain and the Janissaries were compelled to embark. Polignac was determined that France should retain the ports on the littoral, but he intended to let a congress decide what was to be the final destiny of the country. But even before the diplomatists had time to assemble, the revolution of 1830 overthrew the Bourbons. The July monarchy received Algeria as an "embarrassing legacy". The politicians who had come into power were undecided whether to yield to the wishes of the "colonistes", who demanded the occupation and colonisation of the ancient regency, or, on the other hand, to abandon the conquest which was likely to prove a burdensome enterprise. Not until 1834, after the "Africa Committee" had finished its task, the government declared itself in favour of the maintenance of the French occupation. At the same time, also, a first attempt was made to organise the administration of the "French possessions in Northern Africa", which, until then, had been subject to military rule. The decree of July 22nd 1834 constituted the general government. In spite of some bold advocates (such as Marshal Clauzel) of the occupation by France of the whole territory formerly occupied by Turkish Algeria, the chambers and partly also public opinion preferred the system of limited possession or, in other terms, the occupation of the towns on the coast and their surrounding districts. The inland, since 1830, had been the prey of anarchy. The former bey of Constantine, Aḥmed, asserted himself in the eastern province, and ʿAbd al-Ḳādir [q. v.] was scheming to establish a kingdom in the west of the country. Consequently the French advanced but slowly between 1830 and 1840. From 1830 until 1836 they only occupied Bona, Oran, Mostaganem, Arzeu and Bougie. The capture of Constantine in 1837, after an abortive attempt in the year before, involved the occupation of the east province from the sea to the Sahara. In 1844 the French troops appeared at Biskra and penetrated into the massif of the Aurès. In the west they had a harder struggle against ʿAbd al-Ḳādir. After an energetic and methodical warfare under the conduct of Bugeaud, which lasted from 1841 till 1847, the power of ʿAbd al-Ḳādir was crushed and possession was taken of the towns of the Tell and of the plateaux (Tlemcen, Miliana, Mascara, Médéa, Saïda, Boghar, Tiaret). The convention of 1845, which was the outcome of the treaty of Tangier concluded after the Franco-Moroccan war of 1844, demarcated the frontier between Algeria and Morocco. The sending of French troops to the borders of the Sahara, and the establishing of fortified posts on the plateaux secured the submission of the nomads in the south. The oases of the Zībān had to recognise the authority of France after the suppression of the revolt headed by Bū-Ziyān and the capture of Zaatcha (1849). Equally unsuccessful as an agitator was the sherīf Muḥammed b. ʿAbd Allāh, who, in his turn, tried to rouse the Sahara tribes. The French defeated him, captured Laghwāt, and advanced as far as Wargla (1852—1854). Until then part of Kabylia had remained independent, the two expeditions of Bugeaud (1844 and 1847) and the campaigns of Saint Arnaud and of Randon (1851—1854) having effected only a preliminary occupation. Kabylia of the Babors, the region of the Wād Sahel which was defended in vain by Bū Baghla, and the valley of the Sé-

baos had been conquered, but the Kabyle confederacies of the Djurdjura remained to be subjected. It was achieved by Randon in 1857. He persecuted the Kabyles into the very heart of the massif until they were forced to lay down their arms. They recognised the authority of France, but preserved their customs and municipal institutions. The fortress "Napoleon" (now called "Fort national") was erected to keep them under control. So the administration of the native tribes was organised while the conquest was drawing near its completion. In regions outside the area of colonisation, which, in spite of the efforts of Bugeaud and the attempts at plantation made after 1848, still remained of limited compass, the natives were placed under the command of Mussulman chiefs (*khalîfas*, *aghas* etc.), whose authority was again controlled by the French general and superior officers assisted by "Arabian bureaux".

The submission of Kabylia marks the end of the conquest. Since then peace has only been disturbed by more or less serious insurrections, which, however, never acquired a general character. The agitations of Moroccan tribes of the frontier made it necessary to send an expedition under General de Martimprey against the Banû Snassen in 1859. In the south of the province of Oran the revolt of the Ûlâd Sidi Shaikh dragged on for a period of three years (1864—1867). The rebels found refuge and support amongst the Moroccan tribes of the Banû Gil, the Dhawî Menia and the Ûlâd Djerîr, whom General Wimpfen went to punish as far as the region of the Wâd Gîr. However slow and difficult the quelling of these different tumults sometimes was, it never caused any serious danger to the colony. But the case was different in 1871. The real cause of the revolt must be sought in the diminution of the prestige of France after it had been vanquished by Germany; but its rise and growth were favoured by the disarrangement of the administration, the inconsiderate measures taken by the government of national defence, especially the naturalisation of the native Jews, and finally by the reduction of the military contingents. The rebellion was headed by the former agha of the Medjâna, Mokrânî, who represented the vindictive and apprehensive native aristocracy and, out of self-interest, opposed the establishment of the civil administration, and by two marabouts, Shaikh Haddâd and especially his son Sî ʿAzîz, who, disguising their ambition under a show of fanaticism, called the Raḥmânîya Khwân to arms. The insurrection became general in the two Kabylias; it also spread through the south of the province of Constantine and some parts of the province of Algiers. The west, however, remained faithful. At first the rising caused great anxiety. The towns and the fortresses of Kabylia were actually blockaded, the village of Palestro was destroyed, the Mitidja menaced by the insurgents. But the appointment of an energetic man, Admiral de Gueydon, as governor general, the arrival of French troops, and the organisation of an army under the command of the generals Saussier, Lallemand and Cérez, made it possible for the French to gain the advantage. The blockaded towns were relieved, and Mokrânî was killed in an encounter at the Wâd Soufflat near Aumale. Bû Mezrâg, his brother, undertook the conduct of the rebellion; but he was chased from lesser Kabylia and repelled towards the south, where he was finally taken prisoner at Roulssat (Ru'isât) on January 20th 1872. The number of rebels had grown to 200 000, and 540 combats had been fought. The Kabyles were punished by the loss of their municipal autonomy, the payment of a war indemnity, and the sequestration of 1 120 000 acres, which were destined for colonisation. The risings, which afterwards took place at al-Amri (1876) and in the Aurès (1879), were of no importance. More serious was that which in southern Oran was roused by the marabout Bû Amâma (1881). In consequence of this, permanent posts were established on the southern border of the plateaux, where they afterwards served as bases of operations in the Sahara region. [See FIGUIG, SAHARA].

During this period (1859—1908), the military operations only occupied a secondary place, administrative and economical problems demanding special attention. The higher administration of Algeria has been altered several times; even a special department for Algeria was organised at Paris (1858—1860). There existed a fierce antagonism between the advocates of the supremacy of military power and those of civil government. The latter, who obtained a few reforms in details from the imperial government, definitely gained the upperhand after the fall of Napoleon III. Since 1871 the governors-general, even those of military rank, have taken the title of "gouverneur général civil"; and since 1879 these high functions have only been entrusted to civil officers. No less severe were the struggles between assimilators and autonomists: the former holding the view that Algeria is only a continuation of France and, consequently, ought to be ruled by the same political, administrative and economic regime; the latter, on the contrary, asserting that Algeria ought to be given institutions adapted to the country and the population, or, in any case, that the French institutions must be altered in such a way as to make them conformable to local wants. The decrees of 1881, which diminished the competency of the governor-general and attached the various Algerian services to the respective French departments, marked the triumph of the doctrines of assimilation. The reforms which have been realised since 1896 were inspired by the principles of the opposing party. But the all-prevailing achievement in the Algerian history of the last half century is the utilisation of the land. The domain of colonisation has extended over the entire Tell and even to the plateaux beyond it. To the cultivation of cereals (which has always been a tradition in Africa), new cultivations have been added, especially that of the vine. Mines (iron, zinc, phosphates) were explored and worked. New public works (roads, railways, irrigation, hydraulic works) were constructed. The European population has doubled since 1870; new centres of habitation have been created on all sides. We shall not enlarge upon this transformation: it is the work of European initiative and capital; the natives have endured it rather than promoted it.

c. POPULATION.

The population of Algeria, according to the census of 1906, amounts to 5 231 650 inhabitants, who are to be divided into the following groups:

A. Europeans 658 567

I. French subjects 492 369

French	278 976
Foreigners naturalised according to the law of 1889	148 748
Native Jews naturalised by the decree of October 23rd 1870, and their descendants	64 645

II. Foreigners 166 198

Spaniards	117 475
Italians	35 153
Maltese	6 217
Others	9 353

B. Native Mussalmans 4 477 788

I. French subjects	4 447 149
II. Foreigners (Moroccans, Tunisians, etc.)	30 639

From this it appears that the native Mussalman population, which in 1830 did not amount to more than 2½ millions, now forms about $\frac{7}{8}$ of the entire population. It is far from being homogeneous, the different groups being usually distinguished as follows: (1) the Berbers, who are descended from the people who inhabited northern Africa at the time when Islām was planted in those regions; (2) the Arabs, descendants of the conquerors of the 7th century and especially of the Hilāl invaders of the 11th century, intermixed with the aborigenes; (3) the Moors or Ḥaḍars, living in the towns, who are descended from various African populations, which were joined by foreign elements, in the 15th, 16th and 17th centuries by Spanish emigrants (Andalusians), in the 16th and 17th centuries by European renegades; (4) the Ḳuloghlus, half-breeds born from the union of Turks and native women; (5) the Turks who remained in the country after 1830; (6) the negroes, who either have been brought into Barbary as slaves, or are the descendants of slaves. This classification, confirmed by usage, does not correspond to the actual state of affairs. All these elements have become intermixed, and now the fusion is so complete, that it is almost impossible to distinguish the separate races. Not even the two most important groups, the Berbers and the Arabs, can be distinguished from one another, neither their language nor their mode of life affording sufficient criteria for such a division. For the Arabicized Berbers have renounced their language and their customs, and have even lost memory of their origin, amongst others the Harakta and the Nememsha in the province of Constantine, who call themselves Arabs in spite of their actual descent from the Howāra Berbers, the Laghwāṭ Ksel, who are descended from the Ketāma, and the Banū Wasin on the Moroccan frontier. Of Arabian tribes, on the other hand, nothing is left but their names, the infiltration of Arabicized Berber elements having transformed them completely. This Arabicization has taken place all over Algeria, but it has been more general in the province of Oran than anywhere else. To summarise: "the dispersion of the Arabian families was accompanied by an equally strong dispersion of the Berber families, and since the 14th century their vicinity has enabled the Africans either to absorb the Arabs or to transform themselves so far as to resemble them at the present day". As to their way of living, similar habits are found in both groups: nomadism is not especially Arabian, nor is a settled life a distinctive of the Berbers; outside the towns one actually finds settled Arabs and nomadic Berbers. In spite, however, of this general fusion, some Berber groups that were repelled into the mountains inaccessible to the invaders, have preserved their language and customs, such as the Kabyles [q. v.], the Shāwiya of the Aurès [q. v.], the Traras of the Nedroma region [q. v.], the Banū Snūs of the Tafna country, the Banū Menāṣer of Cherchell, some tribes of the Blida Atlas and finally the Mzābites, the descendants of the Abāḍitic Zenātiya, who, besides the customs and the dialect of their ancestors, seem to have preserved their physical characteristics, which doubtless stamp them as representatives of one of the most ancient Berber tribes [see MZAB]. A numerical estimate of the various linguistic groups has not yet been made with adequate precision. Suffice it to say that, in 1859, the number of people speaking a Berber dialect was estimated at 850 000. At the present day their number would amount to about one sixth of the entire population. Groups which have preserved easily noticeable marks of distinction of the Berber race are but rarely found. Everywhere else the Arabs have imposed their institutions and their language on the tribes they converted. Although, in some respects, they were influenced by the aborigines, whose mode of life presented some features very similar to their own (part of the Berbers, for example, according to ancient authors, led a pastoral life, just like the Arabs), the conquerors, in their turn, exerted an undeniable ascendency over the African natives resulting in their assimilation to the Arabs. The common appellation of Arabs for the entire population of Algeria is, in fact, a convincing proof of this final process.

On the ground of their way of living the Algerian natives can be grouped into two categories: settled and nomadic tribes. Between the former, distinctions are obvious: the townspeople do not resemble the inhabitants of the Kabyle villages, any more than they do the Ḳṣūrians or the fellāḥs of the Tell. For a number of centuries they have occupied the towns of the littoral and of the Tell: Algiers, Blida, Médéa, Constantine, Bougie, Oran, Nedroma, Tlemcen. They form a class of tradespeople, artisans, and men of letters, peaceful and indolent citizens, whose numbers have been increased since the French conquest by a proletariate of day-labourers, handicraftsmen, and also less commendable individuals. They live in separate families, and, where they come in contact with Europeans, seem inclined to adopt western habits. The Kabyles throng together in large villages, agglomerations of stone houses affording shelter to the inhabitants and their cattle, and built in rows on the crests rising between the valleys [see KABYLIA]. Judging from the number of people who live in these places they would for the greater part deserve to be called towns. In the mountains of the south (the Figuig, the Ksūr, the Djebel 'Amūr) the settled part of the population occupies fortified villages (*ḳṣūr*) built of "pisé" or rammed earth, which, at the same time, serve as storehouses for the provisions, as markets and as fortresses (see SAHARA, 'AMŪR). In the plains of the Tell, the fellāḥ or husbandman is equally settled: he lives in a "gourbi", a hut constructed of twigs,

covered with *dīs* (a kind of reed) and surrounded, at some distance, by a hedge of thorns or *zerība*; a collection of several of these huts arranged in a circle is called a *dūar*. Elsewhere he erects stone houses or *mashta* (literally "winter camp"), of the same size and shape as the *gourbi*'s, surrounded by threshing-floors used in harvest time, and by cellars, where the corn is stored. The fellāḥ, however, is not so definitely settled as the townsman; he likes to live in a tent just as well as in his *gourbi*, and easily changes his abode. Some spend the winter in the *gourbi*, and live under a tent in summer; others remove their camps several times a year, in order to utilise pieces of land lying far apart. They generally cultivate triticum turgidum and barley. Their agricultural implements and methods are still of a rudimentary nature; the results obtained depend first of all upon the abundance or the scarcity of rains. The farther one moves away from the Tell, the less favourable the climatic conditions become to agriculture, which thus is substituted by cattle-rearing. In that way the settled or almost settled life, which predominates in the Tell, passes gradually into the nomadic mode of existence, which predominates on the Plateaux.

It is very difficult to give an exact list of the nomads, as the majority of the African tribes are "more or less nomadic and more or less settled". According to Villot, the natives usually called Arabs are best divided into two categories: Arabs with a limited range of migration, and Arabs *al-Riḥāla* (i. e. Arabs "of the migration"), the latter being the nomads properly so called. Bernard and Lacroix distinguish the following categories: (1) the nomads with a very small range of migration (from 15 to 30 miles), circulating on the border of the Tell at definite periods in search of fresh pasture grounds for their cattle; (2) the nomads with different winter and summer camps, lying only a short distance from each other; some of these nomads hibernate in the south, others in the north of the Sahara Atlas; (3) the actual nomads, who spend the winter in the Sahara, and, in the spring, have their migration grounds in the south in quest of pasture and water amongst the tribes of the Tell, which allow them a right of usage. The Laʿārba (Arbāʿ) of Laghwāṭ, for example, advance as far as Teniet al-Ḥaad; the tribes of the Zibān and the Sherāḳa Arabs to Châteaudun du Rhummel, between Constantine and Sétif, other tribes of the southern region of Constantine even push as far as la Calle on the littoral. These pastoral migrations are called *raḥla*; they are undertaken by sections under the conduct of their shaikhs, according to definite rules and along fixed routes. Formerly they used to give rise to active barter in the towns lying on the border of the Tell and the plateaux. The Turks, who exacted from the nomads the payment of certain duties called *ʿūsa*, took care to establish Makhzen tribes in the neighbourhood of those market-places, that they might secure or, if necessary, enforce the payment of this tribute. Wool and dates, in exchange for corn, used to be the principal articles of traffic; to these, at the present day, must be added a certain number of objects manufactured in Europe, which have become indispensable to the nomads. Their own industry is extremely primitive and mainly practised by the women; it only consists in the making of *flīdj* (being bands of wool and camel hair which, sown together, form the tent), of woollen clothes, of rugs and of some domestic utensils. Both nomadism and the settled mode of life are not only closely dependent on geographical and climatic conditions, they are also subject to the effects of historical events and of economical changes. The Hilāl invasion, for example, which ruined Africa, compelled certain nomadic tribes to become settled. The French occupation, which guaranteed both safety and relative prosperity, produced either similar or contrary effects. At various places, especially on the border between the Tell and the plateaux, an evident tendency towards the building of *mashta* and a definite settlement can be observed amongst the natives. In other regions, however, tribes may be found, which at one time had been reduced by misery and insecurity to thronging together in permanent abodes, but, under the present improved conditions, have renounced their settled life, abandoned the house for the tent, collected fresh herds and returned to pastoral and nomadic habits. This seems to be the case in the country of the Ḳṣūr.

The social organisation of the natives is still thoroughly patriarchal. The family has remained the basis of society. The father possesses absolute authority. The woman, being in most cases deprived of the guaranties which Musulman law affords her, lives under unfavourable conditions. She is married at an early age, in spite of the attempts to prohibit the marriage of girls not having arrived at puberty, and, as a rule, is compelled to the heaviest tasks, being no more than a servant. Nevertheless her influence remains considerable, in consequence of the passions she excites; adultery is frequent, in spite of the women being watched jealously by their husbands and heavy punishments being inflicted on transgressors. Polygamy, however, is rarely practised, lack of resources preventing the men from keeping more than one wife. According to a statistical estimate of 1891, the number of polygamic households in proportion to the totality of marriages was as one to six (149 000 to 950 000). The family has almost complete autonomy, can do what it likes with its movables and immovables, may even abandon the tribe it belongs to and join another. These tribes (*ḳabīla*), into which the families are grouped, comprise the descendants of the eponymous ancestor and families connected with that of the founder by ties of clientage. Tribes which can trace their origin back in a direct line to Arabian or Berber ancestors, without the immixture of foreign elements, are extremely rare; for the greater number have sprung from a commingling of various elements effected in the course of centuries. During the Turkish epoch, for example, veritable tribes were formed by individuals of various origin living round military colonies. An analogous phenomenon has taken place in the neighbourhood of the most venerated *zāwiyas*; there so-called marabout tribes have constituted themselves, the members of which pretend to be the descendants of a saint, whose children they style themselves (*Ulād Sīdī X.*), claiming, on that account, a kind of religious nobility. Such are, for example, the Ulād Sīdī Shaikh. The tribe possesses a domain of its own (*ʿarsh*; in the province of Oran *sabega* = *sābiḳa*), a real collective and inalienable property, of which the possessors are but the usufructuaries. Before the

French conquest the beylik was considered the owner of the 'arsh land, which it could claim and dispose of as it chose; each member of the tribe was entitled to the personal enjoyment of the produce of the land. The "sénatus-consulte" of 1863 transformed this right of enjoyment into a collective proprietorship by the tribe, a much discussed measure, which, according to the intention of its authors, was to prepare a change from collective to individual ownership, and also to facilitate transactions between natives and Europeans. It resulted in the demarcation of the tribal territories, and the constitution of native communes, or *douars*, each with an assembly of notables or *djamā'* competent to act on behalf of their individual members on questions of property. But the expected results were not realised; collective property continued to exist side by side with personal property; and the necessity of establishing a system of personal title compelled the government to undertake the registration of the natives. To this end a bill was passed in 1883, which has been put in force throughout the civil territory, 3 069 368 natives having, by the end of 1896, been registered under a family name.

Community of religion is a marked characteristic of Algerian natives. Islām, first introduced by the conquerors of the 7th century, ousted almost entirely from the whole of the Maghrib the Christianity and Judaism of the Berber tribes. In spite of heretical doctrines (Khāridjism, Ṣufism, Shī'ism) which assailed it from the very beginning, orthodoxy has triumphed. Abāḍism alone has survived in the Mzāb [q. v.]. The Mālikite rite is the one adhered to by an overwhelming majority of natives, and seems since the eleventh century to have definitely gained the upper hand over the Ḥanafite rite which until then had prevailed in the Maghrib; but is now practised only by some descendants of the Turks, who reintroduced it into Algiers in the 16th century. Northern Africa, however, has lost, rather than gained, by the change: "The triumph of the Mālikite doctrine", writes René Basset, "has been perhaps the main cause of the decay of literature and science in Spain and in the Maghrib". Mālikite law is studied from the *Mukhtaṣar* of Khalīl b. Isḥāk (Sīdī Khalīl), the principal authority on Muslim law in Algeria. The Kabyles have remained faithful to their *Ḳānūn*.

The diffusion of Mālikism over the whole of northern Africa has not, however, prevented the continuance of superstitious customs and festival observances, doubtless the remains of ancient cults and tenets, such as the worship of the sun, of trees, of well-springs and of elevated places. Sorcery and magic art are also in favour with the natives. The temporary adherence of the Berbers to Shī'ism has left its traces in the doctrine of Mahdism, by which the people understand the expectation of the "master of the hour" (*Mawla 'l-sā'a*), who is to appear one day to drive away the Christians. This belief has been utilised since the year 1830 by most of the agitators who have attempted sedition, and, in spite of their repeated failures, it has never yet been eradicated nor even shaken. The prominent place held by the worship of saints under the form of maraboutism, is a no less characteristic feature of Islām in Algeria, where, as elsewhere throughout the Maghrib, it found a field favourable to its development. From the earliest times the populations of these countries have shown a marked tendency to deify human beings and the worship of saints has, as it were, taken precedence of the Islām of the Ḳor'ān. The Maghrib saints assume the name of marabouts. Be they men or women, sages or charlatans, ascetics or mere madmen, once they have succeeded in imposing on the people by their virtues or their conjuring tricks, they become objects of public veneration. The spark of divine favour they possess, the so-called *baraka*, passes to their descendants, and their tomb (*ḳubba*, marabout) becomes a place of pilgrimage by which the family or the tribe of the deceased is apt to profit, for public veneration entails annual feasts with religious banquets (*waʿda*, *ṭaʿām*), pilgrimages which by the mob are held to rank with that to Mekka, sacrifices performed according to certain rites, and personal visits or *ziyāra*, during which offerings in money or in kind are bestowed upon the keepers of the tomb. Public calamities, drought, or epidemics are also an occasion for pilgrimages, with their inevitable offerings, and further resources are found in the tribute (*ṣadaḳa*, *hadiya*, *ghifāra*) collected by the wandering marabouts, whose influence is very great. Accordingly the Turks strove to win their good graces by a lavish bestowal of marks of respect and presents, and by exempting them from taxation.

The influence of the marabouts is mainly local; that of the religious brotherhoods, on the other hand, is exerted over wider regions. Depont and Coppolani state that in Algeria 23 of these brotherhoods exist, numbering 295 189 members, and employing a staff of 57 shaikhs and 6000 agents of various sorts (*muḳaddams*, *wakīls*, *nāʾibs* etc.); they possess 349 *zāwiyas* and levy an annual sum of about 7 millions of francs on their members or *khwān*. The most flourishing fraternity is that of the Raḥmāniya, with 156 000 members, of whom 13 000 are women. It is the true national brotherhood of Algeria; its founder was Sīdī Muḥammed b. 'Abd al-Raḥmān Bū Ḳabrain, a pious character who lived in the 17th century, and whose remains, according to legendary tradition, lie in two separate tombs, one situated amongst the Aït Smā'īl (Ismā'īl) in Kabylia, the other in the Ḥamma outside Algiers. The order of the Raḥmāniya is divided into several branches, and its influence extends over all Algeria, its parent houses being independent and sometimes rivals. Such are: Château-dun du Rhummel near Sétif (40 000 members); al-Hamel (43 000); Nefta (13 000); Tolga (16 000); Constantine (10 000); and Akbou (9000). The brotherhood next in importance is that of the Tidjāniya, whose chief resides at 'Aïn Mahdi. Its 26 000 members are found in the Sahara and southern Oran. Other brotherhoods are the Ḳādiriya (24 000); the Ṭaïbiya (22 000), whose head is the sherif of Wazzan in Morocco; the Shaikhiya (Ulād Sīdī Shaikh), an association rather political than religious of 10 000 members; the Derḳāwa (9000), fanatics and puritans, who, for a century and a half, have had a finger in all the revolts against the Turks and the French; the 'Ammāriya (6000) and the Aïssaoua ('Isāwiya; 3500), famous for their devotional exercises and their jugglery; the Ḥanṣāliya, dissenters from the Shādhiliya, and scattered through the province of Constantine, to the number of 4000; the Ziyāniya (3000); the Zerwāḳiya (2700); the Kerzāziya; the Shādhiliya; the Madaniya; the Yūsufiya, followers of the saint

of Miliana, Sī Aḥmed b. Yūsuf; and finally the Senūsīya, scarcely a thousand in number.

Both the marabouts and brotherhoods tend to keep alive superstition and fanaticism which prevail in all Algerian tribes. To make any distinction, as regards fanaticism, between Arabs and Berbers is contrary to fact; for the Mzabites, who are Berbers, outdo all other Muslims in intolerance, and the Kabyles put blind trust and faith in the marabouts. "The sight of *ḳubbas* scattered all over the mountains", writes M. Wahl, "and of marabouts swarming and revered, makes one imagine oneself in a Muslim Spain". As compared to the marabouts, the Muslim official clergy lacks prestige. It owes its organisation to the French government, which, on the annexation of the *ḥubūs* to the state, undertook to keep places of worship in repair and to pay the clergy. These comprise 25 muftis (amongst whom is one Ḥanafite) who are in charge of the principal mosques, imāms who have to preside at the Friday prayer, mudarris who teach theology, ḥazzāb who recite the Ḳor'ān, and mu'adhdhins whose mission it is to summon the faithful to the prayer, in all 573 functionaries officiating at 174 mosques, and recruited from the pupils of the three madrasas of Algiers, Constantine and Tlemcen.

d. The present organisation of the country.

The Government. Algeria was declared, by the constitution of 1848, an integral part of French territory. Its administration, however, differs in more than one respect from that of the mother-country. The numerical disproportion between the Europeans and natives, and discrepancy in customs, religions and social conditions, did not allow of the unqualified introduction of French institutions desired by the advocates of racial assimilation. The government and the higher administration are centralised at Algiers in the person of the governor-general, who represents the government of the French republic through the whole of Algerian territory. All the various branches of the civil service are placed under his control, with the exception of the non-Muslim jurisdiction, public education and the treasury. He takes all measures necessary for the maintenance of internal order and the defence of the country; and the military and naval officers, charged with the carrying out of these measures, cannot correspond with the respective ministers except through the governor-general, who, moreover, is entitled himself to correspond directly with the minister resident of France at Tunis and the minister of France in Morocco on matters concerning both these countries and Algeria, especially on such as concern peace on the frontiers. He is assisted by a government council consisting of the heads of the civil service, whilst a "conseil supérieur", formed of high functionaries and delegates from the elective assemblies, prepares the budget in co-operation with him. An elective assembly, the so-called "délégations financières", divided into four sections, colonists, non-colonists, Arabs and Kabyles, enables the French tax-payers and subjects to express their opinion on financial questions, and, in the discussions on the budget, to indicate the measures or reforms which they consider necessary. French citizens also return three senators and seven deputies to Parliament.

Further, Algeria is divided into **civil and military territory.** The former comprises the whole of the Tell and the greater part of the plateaux. It has been enlarged considerably since 1870 at the expense of the military territory. In that year it covered an area of 1 279 361 hectares peopled by 493 000 inhabitants; in 1906 both the area and the number of inhabitants had increased tenfold (14 millions of hectares and 4 560 317 inhabitants). Each territory has an administrative organisation of its own. The civil territory is divided into three departments (Algiers, Oran, and Constantine), which are governed on much the same lines as the mother-country. Two kinds of communes, however, must be distinguished in those parts: the so-called "communes de plein exercice", established in regions where European interests predominate, and provided with an elective municipal council; and the "communes mixtes". The latter, to the number of 92, are mainly peopled by natives. Each covers an area of about 146 000 hectares and comprises a population of about 36 000 inhabitants, and is governed by an official, "administrateur", generally called *ḥākim* by the natives, assisted by a municipal council partly elective, and by native assessors, who are called *ḳā'ids* in Arab parts, and presidents in Kabylia. These assessors are appointed by the prefects and are dismissable at will by the governor-general. They serve as intermediaries between the French authorities and the native population, and receive a salary of one tenth of the total proceeds of the taxes paid by the latter. — The **military territory**, the extent of which decreases gradually, covers a part of the plateaus and of the Sahara. Peopled almost exclusively by natives, it is ruled by the generals of the three military divisions, Algiers, Constantine and Oran and their subordinates, and is divided into "cercles" governed by superior officers, and into "annexes" and "postes", which are under subalterns belonging to the staff of the "affaires indigènes", — a mere continuation of the "Bureaux Arabes" system with a few alterations in detail. Immediate authority is exercised by native chiefs, *bash-aghas*, *aghas*, *ḳā'ids*, or *shaikhs*, under the control of the officers. There are five "communes mixtes militaires", and native communes. The population of the military territory amounts to 225 242. Its extent has been diminished not only by the gradual increase of the civil territory, but also by the creation, in 1902, of the "Territoires du Sud" (Twāt, Gurara etc.) with separate budget and organisation.

Legal status of the natives. The Muslims are subjects but not citizens of France. The "sénatus-consulte" of July 14th 1865 declares them Frenchmen, with this restriction that they are to continue under Muslim law "so far as concerns personal status, the family, succession, and real estate in so far as it be not held under a French title to proprietorship". The natives, however, have a right to disclaim their status in matters of justice, although the case be one for Muslim law. They are admitted to military service and may even attain to the rank of officer (with the native title only, unless they come out of a special school); they are competent to fill certain civil posts, and may even become French citizens on request, but in that case they must disclaim their personal status and submit themselves to French law; but inasmuch as this, by the majority of the natives is

regarded as a form of apostasy, it is not of frequent occurrence. The natives who are not naturalised are not completely deprived of political rights: they are excluded, for example, from political elections, but have a vote in municipal elections, although the voters are very limited in number by the system, and the deputies who represent them in the various assemblies, financial delegations, and general and municipal councils, are sometimes appointed by the government, and sometimes chosen by their fellow-believers but never by manhood suffrage. Each municipal council, under the system, numbers from two to six native councillors amongst its members, each general council six Muslim assessors, and the financial delegations 21 Arab and Kabyle members.

In matters of finance the natives are subject to a régime different from that applied to Europeans. They are liable to various taxes, making up together the "impôt arabe". Two of these taxes are of a general character and are collected all over Algeria on an almost uniform system. These are: the *'ashūr* nominally one tenth of the produce of the soil; and the *zakāt*, on cattle and beasts of burden. Others, local in character, are: the *ḥokr*, originally rent paid to the beylik for the use of the *'arsh* land, and still collected as a ground-tax in the province of Constantine; the various *lezma* such as that of Greater Kabylia, paid in 13 of its communes, which is a sort of poll-tax and a substitute for all other taxes; the fireplace *lezma*, imposed on every fireplace in Lesser Kabylia; and the palmtree *lezma*, levied in places where this tree is cultivated by the natives, for example at Bū Sa'āda and in the oases of southern Constantine. These so-called "impôts arabes" are identical with those collected during the Turkish epoch, except that they have lost their religious character and are paid into the Treasury.

The Legal system offers some particular features. Penal justice is exclusively the province of the French courts ("cours d'assises", "tribunaux correctionels", "justices de paix" in the civil territory; "conseils de guerre" in military districts). Violations of the law by natives are dealt with by special courts with a view to securing efficient, speedy, and cheap justice, suited to the customs and the intelligence of the natives. Such are, for minor offences, "délits", the so-called "tribunaux répressifs", founded by decree of March 29th 1902 and reorganised by decree of August 19th 1903. The sessions are held in the chief town of each "justice de paix", and are presided over by the "juge de paix" assisted by two judges, one French and the other native, drawn respectively from the functionaries and notables. Criminal cases are dealt with by the "cours criminelles", organised by decree of December 30th 1902. These hold their sittings in the towns appointed to be seats of the "arrondissements judiciaires", and consist of three magistrates and four sworn assessors (two French and two native). Finally, both civil and military governors have a rather wide disciplinary power which enables them to prosecute offences peculiar to the natives who are subject as such to particular rules. They are bound, for example, to provide themselves with a licence for travelling in the interior of the country, for possessing weapons, for starting on a pilgrimage to Mekka, for organising religious manifestations etc. Seditious speeches against France, neglect in the execution of the orders regarding the rights of property and of personal status, the refusal to do forced labour when ordered by the government, are also dealt with on warrant by the "administrateurs". This much questioned system is justified by the necessity of immediately suppressing, by means of light penalties, such offences as are likely to disturb public order. The *maḥākama*, or tribunals of the *ḳāḍīs*, are reserved for civil suits, but their powers have been gradually restricted to the gain of the European tribunals. There is a Hanafite ḳāḍī at Algiers, and, in various places in the three "départements", the Mzābites have their Abāḍite *maḥākama*.

Public education for Europeans is subject to the same conditions as in France. Higher education is given in the "Ecoles supérieures" of Law, Medicine, Science and Letters at Algiers, which are open to both Muslims and Europeans. The teachers at these schools are largely concerned with native questions. The School of Medicine tries to better the natives' lot by training a staff of "auxiliaires médicaux" able to give immediate aid to their fellow-believers, and to spread amongst them elementary notions of hygiene. Muslim law and native customs are taught at the School of Law; lectures on Arabic language and literature, on vulgar Arabic, on Berber dialects, on Muslim sociology, and on the history and geography of northern Africa are given at the "Ecole des Lettres". Public chairs of Arabic, in connection with this school, exist at Oran and at Constantine. Secondary education is given in "lycées" and colleges, which are open to natives. Muslim primary education long neglected, has, since 1881, received close attention from the government. A decree of November 9th 1887 laid down the principle that primary education was to be given in public schools open to children of all nationalities and in special schools reserved for the Muslims. These special schools have to supply instruction adapted to the requirements of native life, under special programmes, which prescribe instruction in agriculture and in handicrafts, together with the study of the French language. The principle of compulsory attendance at school applies only to boys, and in districts indicated by the governor-general. At the present day the native schools, which are particularly numerous in Kabylia, are attended by about 30 000 children. Muslim education properly so-called is given in the Ḳor'ān schools (*msīd*) and in classes of theology held in the principal mosques by *mudarris*. And the *madrasas* were reorganised in 1895, so as to adapt them for preparing for official service, both legal and ecclesiastical, persons possessing, in addition to a knowledge of Islāmic law and theology, some acquaintance with French law, history, geography, literature and science. Pupils coming from these schools may play a large part in bringing about a better understanding between natives and Europeans.

Whether this be possible is a question which, since 1830, has often been put, discussed and answered, sometimes in the affirmative, sometimes in the negative. The dreams entertained by early enthusiasts of fusing natives and Europeans into one single nation by the mere force of institutions and systems, have long since been dispelled, and their failure has lent force to the contrary belief that Islām opposes an insurmountable barrier to all attempts at mutual amity, and that the relations

between Europeans and natives are destined to remain for ever those of conquerors and conquered. The truth seems to lie half-way between those two extremes. Even if the fusion of the two populations be but an illusion, the policy of subjugation and of isolating the natives is quite out of date. A policy of association based on community of material interests is inevitable. That Muslims are not impervious to such a policy has been evidenced by the improvement in agricultural methods, by the institution and development of friendly societies, and by the favourable reception given to the founding of native dispensaries and infirmaries. And besides, although we may have to give up all hope of radically transforming the native turn of mind, it is far from visionary to aim at developing Muslim civilisation within its own limits. To effect this will indeed be a work of patience, and one requiring much lapse of time for its result to become apparent.

ALGEZIRAS (or ALGECIRAS), Arabic: al-Djazīra al-Khaḍrā', "the green island" (named after the Isla Verde lying in front of it), sometimes called Djazīrat Umm Ḥakīm, the first Spanish town taken by Ṭarīf, in Ramaḍān 91 (July 710). It lies on the bay of Algeciras or of Gibraltar, and, together with the latter place, served the Arabs as a harbour and dockyard. The first governors, and after them the Umaiyads, the petty kings, the Almoravids, the Almohads and the Naṣrids all used to cross to the African coast from Algeciras until it was captured by Alfonso XI of Castile in 1342, after his victory on the Salado in 1340. In 1369 it was retaken and temporarily occupied by the King of Granada, who had its fortifications razed to the ground. — From 428 till 440 (1036—1048) it was in the possession of the Ḥammūdid petty monarch Muhammed, son of the Caliph Ḳāsim, and of Muhammed's son Ḳāsim 440—450 (1048—1058), and then fell to the 'Abbādids of Seville. — It was in Algeciras that between January 1st and April 7th 1906, the international conference was held which, at the request of Morocco, and in the name of the Powers, guaranteed the political and economical independence of that country, and resolved upon the establishment of a Moroccan national bank and the formation of a police-force under the command of French and Spanish officers.

ALGIERS. [See ALGER.]

ALGOL is the ancient name of the star β in that part of the constellation of Perseus which is called "head of Medusa", known among us for its variations in intensity and, consequently, in apparent size. The name "head of Medusa" was translated by the Arabs into *Ra's al-ghūl* (head of the female demon), the latter part of the name being afterwards attributed to the star β, in the form "Algol". Cf. Ideler, *Unters. über den Urspr. u. d. Bedeut. der Sternnamen*, p. 88. (E. MAHLER.)

ALGOMAIZA is the ancient name of star α of the first size in the constellation of the lesser Dog. The name is derived from the Arabic name (*al-Shi'rā*) *al-ghumaiṣā'*, the "blear-eyed" (Sirius); on its origin, see Ideler, *Unters. über den Urspr. u. d. Bedeut. der Sternnamen* p. 252. (E. MAHLER.)

ALGORITHM is the old name for the process of reckoning with Arabic numerals. In mediaeval treatises the word is spelt in various ways: e. g. *Algorismus*, *Alchoarismus*, *Alkauresmus*, etc., corruptions of the *nisba* of the oldest known writer on Arabic arithmetic: Muhammed b. Mūsā 'l-Khwārizmī. His book was translated into Latin in the 12th century by an unknown author, and the only known copy at Cambridge has been edited by B. Boncompagni (*Trattati d'aritmetica* I.; Rome 1857). It opens with the words: "dixit Algorithmi", the word is here correctly given in the form of an Arabic *nisba*, i. e. as a proper name: it is strange that it should afterwards have come to mean the new process of reckoning with Arabic figures, as contrasted with the system of counting by the Greco-Roman abacus. Of the numerous attempts to explain the word it is enough to mention a derivation from a philosopher Algus, and a supposed origin from the Arabic article *al* combined with the Greek ἀριθμός, hence the form "Algarithmus". The right explanation was given by M. Reinaud in his *Mémoire sur l'Inde* p. 303-304, in the year 1849, before the Cambridge manuscript had been edited, but the false acceptation prevailed, and Algorithm (or Algorism) is still used in the sense of "system of numeration, arithmetic". (H. SUTER.)

ALGUACIL, ALGUAZIL, ALGUAZIR, AGUACIL, AGUAZIL, ALVAZIL, ALVAZIR etc., from Arabic *al-wazīr*, was originally used in Spain to denote a minister of state, the Prime Minister being called *ḥādjib* (chamberlain; e. g. al-Manṣūr, *ḥādjib* of the Umaiyads al-Ḥakam II and Hishām II). It was further applied to a governor of a city, and to the chief or even to the usher of a court, in which sense it is still in use in modern Spanish: see Dozy and Engelmann, *Glossaire des mots espagnols et portugais* (2nd ed.) p. 129-130; Gayangos, *History* i. XXVIII *et seq.*, 102, 397. (C. F. SEYBOLD).

ALHABOR is the ancient name of Sirius (the star α of the Greater Dog). The name comes down from the Arabic *al-'Abūr*, which originally may have signified "penetrating", "brilliant" but was understood by the Arabs as "the passer over (sc. the milky way)". This explanation gave rise to a myth as to which see Ideler, *Unters. über den Urspr. u. d. Bedeut. der Sternnamen* p. 245—246.

ALHAGI (from Arabic *al-Ḥādj*), of the species "leguminosae", stiff, strongly ramified shrubs with small single leaves and red flowers. The different kinds which are found on the steppes of nearer Asia, in Egypt, Arabia, Persia, and India are doubtless but slight variations of the Alhagi Maurorum T. or Alhagi shrub, also called Hedysarum alhagi L. or Manna hebraica Don. (sainfoin). The last name arose from its secreting a sugary substance, which appears at dawn on the leaves and branches, and thickens into tiny reddish grains. Common in Persia and Bukhārā, this phenomenon seems unknown in Arabia, Egypt and India, and it is ignored by the ancient Arabic philologists who only describe it as a shrub (or tree) with a great profusion of thorns and leaves. It seems to have been much in use for fencing off enclosures, as indeed the etymology of the word *ḥādj* seems to indicate (root: *ḥdj*, "encircle") thus perhaps in Arab Spain, see Ibn al-'Awwām, *Kitāb al-falāḥa*, transl. Clément-Mullet i. 458 and 380). Arab mediaeval natural science identified the *ḥādj* of Arabia with the *'āḳūl* of Syria and Egypt, and realised that, in Syria, 'Irāḳ, Khorāsān and Transoxania, the plant was covered with the manna *tarangubīn*, believed to be a dew fallen from heaven. Both the juice of the *ḥādj* shrub and its sugary product were regarded as medicines, the latter being held especially beneficial against acute fever, cough and indigestion.

Bibliography: *Lisān al-'Arab* iii. 70; Ḳazwīnī (ed. Wüstenf.) i. 278; Ibn al-Baiṭār, *al-Djāmi'* (Būlāḳ 1291) ii. 3 and i. 157; I. Löw,

Aramäische Pflanzennamen p. 145; H. Baillon, *Bot. médic.* p. 653, and *Hist. des Plantes* iii. 298 (with references to special literature). (Hell.)

ALHAIOT is the ancient name of the star α of the first size in the constellation Auriga, and known by the name Capella. The original form of the word was Alhaioc, a transcription of the Arabic *al-ʿAiyūḳ*. For the probable origin and meaning of this name, see Ideler, *Unters. über den Urspr. u. d. Bedeut. der Sternnamen* p. 92; *Lisān al-ʿArab*, s. v. (E. Mahler.)

ALHAMA (from Arabic *al-Ḥamma* and *al-Ḥamma*, "the hot bath") is the name of various places and of a few streams in Spain, the best known being (1) Alhama, south-west of Granada at the northern foot of the Sierra de Alhama and on the Rio Alhama; in 1482 it was surprised and taken by Ferdinand the Catholic of Aragon, the prelude to the conquest of Granada 1492, cf. the well-known popular ballad); on December 25th 1884 it was almost completely destroyed by an earthquake. (2) Alhama on the upper Jalón, south-west of Saragossa, the ancient Aquae Bilbilitanae. (3) Alhama between Murcia and Lorca. (C. F. Seybold.)

ALHAMBRA, the fortress of Granada, situated on the plateau formed by a rock round which the Darro, just before joining the Genil, describes a curve open on the south-east. Its name (Arab. *al-Ḥamrāʾ*, i. e. "the red one") is due to the reddish colour of the castle walls constructed mainly of "tapia", a kind of concrete made of clay, lime and gravel.

Our knowledge of the history of this Moorish acropolis is, unfortunately, extremely scanty. At what time and by whom buildings were first erected on the fortress rock of Granada is a point upon which tradition is silent. The earliest mention of the name occurs in connection with an incident of war: in the year 277 (890), during the reign of the Umaiyad ʿAbd Allāh, Sawwār with his Arabs of the Ḳais tribe was compelled to retire into the Alhambra by rebellious Spanish renegades and their escape was due to a bold sally coupled with a successful stratagem. A similar occurrence is said to have taken place about 30 years before; but of this we have no further record. — In 556 (1161), when Granada was under the Almohades, a bold Almoravid leader, Ibrāhīm b. Hamushk, took advantage of the absence of Abū Saʿīd, the son of the Almohade ʿAbd al-Muʾmin, to enter the town by treason. The Almohade garrison retired into the Alhambra, and had to undergo a long siege by the Almoravids before being relieved. — With the advent of the Naṣrids or Banu ʾl-Aḥmar in 629 (1232) the history of the Alhambra becomes less obscure (the name of the castle was formerly erroneously derived from Banu ʾl-Aḥmar). They established an independent emirate with Granada as its capital, and it was the founder of this rule Muḥammed I b. al-Aḥmar, who built the world-renowned royal castle on the plateau, the outer wall of which, together with the citadel, may have already existed. There he and his successors resided, and of them Abū ʿAbd Allāh Muḥammed III (701—708 = 1302—1309), Abu ʾl-Ḥadjdjādj Yūsuf I (733—755 = 1333—1354) and Muḥammed V al-Ghānī bi'llāh (755—760 = 1354—1359) deserve the chief credit for extending and embellishing the palace as well as the other buildings. Under the Naṣrid rule the citadel frequently played a part in dynastic struggles. In the year 759 (1360), Ismāʿīl II was besieged in the Alhambra by his relative Abū ʿAbd Allāh Muḥammed, who captured it, put him to death, and ascended the throne as Muḥammed VI. The Alhambra was indeed the scene of the rise, decline, and fall of the dynasty. In 1492, on the morning of January 2nd, Cardinal Don Pedro de Mendoza planted the silver cross on the "watch-tower" (*Torre de la Vela*) of the Alcazaba, the highest of its towers, and thereby marked the close of the last Muslim dominion in Spain. The deposed Moorish king Abū ʿAbd Allāh (Boabdil) Muḥammed XI went into exile, casting from the hill of Padul a last sad look at the castle of his ancestors, from a spot still called "the last sigh of the Moor". — Of the later history of the Alhambra it is enough to record that Charles V changed the lesser mosque, which adjoined the Court of Myrtles, into a chapel, and further disfigured the old royal abode by demolishing the southern wing which had probably contained the chief porch. He did even worse, he replaced it by a building in the Renaissance style, with a showy façade, in harsh contrast with the simple outer walls of the old palace. This work of desecration, however, was never completed; nor were later attempts by Spain at restoring other parts of the Moorish castle, ever carried out. Another act of pious vandalism however succeeded more completely: the Great Mosque of Muḥammed III was pulled down and replaced by the church of Santa Maria, the work of Juan de Vega, in 1581.

Our knowledge as to the history of the separate buildings of the Alhambra is even more scanty. Inscriptions containing names and dates exist, but most of them seem to refer to the decoration not the erection of the buildings. In 749 (1347-1348) Yūsuf I pierced the outer wall, which measures 2 miles in circumference and is surmounted by many towers, by an entrance known as the "Gate of the Law", a name perhaps indicating that it was the place where, according to old oriental custom, justice was administered by the kings. Further on, in the "Place of the Cisterns", stands a second smaller gate, now called Puerta del Vino, inscribed with the name of Muḥammed V in the stone. From this gate one gets a view of the Alcazaba on the left, and of the Palace on the right. The former, i. e. the citadel (*al-Ḳaṣaba*), occupies the western extreme of the plateau, and is probably the oldest of its extant buildings. The latter consists of many structures, all of them, excepting the building erected by Charles V, being grouped round two large courts: (*a*) the Court of the Pool, "Patio de la Alberca", also called Court of Myrtles, "de los Arrayanes", near which, on the northern and shorter side of the court, stands the comares tower, on the west, the lesser mosque still called "Mezquita", and on the east the baths; (*b*) the "Court of the Lions", and adjoining it the "Hall of the two Sisters", the "Hall of the Abencerrages" [q. v.], the tombs of the kings of Granada (now completely destroyed), the "Hall of the Tribunal", etc. The inscriptions shew that the former group of buildings were decorated by Yūsuf I, and those round the "Court of the Lions", situated further eastward, by Muḥammed V. The site of the church of Santa Maria,

south of the Palace, was formerly the site of the "Great Mosque". According to Ibn al-Khaṭīb, *Iḥāṭa fi akhbār Gharnāṭa* (Cairo 1319, i. 359—360) and *Ḥulal al-marḳūma*, apud Casiri, *Bibl. arab.-hisp.* ii. 273, it was erected by Muḥammed III towards the close of his reign. In order to adorn it in the most lavish manner he expended on it the proceeds of the *djizya*, or poll-tax paid by his non-Muslim subjects, and he also built and endowed baths for its benefit (= waḳf), which according to Ibn al-Khaṭīb lay opposite it.

Built in the 13th and 14th centuries, the Alhambra is a specimen of the transition from the culminating point of Seldjūḳ art in Asia Minor to the style of the majority of the monuments which are now gradually being discovered in Persia. Its originality is best realised by comparing it with the many contemporary buildings in Cairo, such as the stupendous Mosque of Sultan Ḥasan built between 1356—1359. No more striking contrast can be imagined. Beside the enormous shrine of stone, the Alhambra appears as a little, highly decorated structure of such perishable material as to make us wonder how it can have survived to the present day. Its value for the history of Art is incalculable. Whereas the Mosque of Ḥasan is the principal specimen of a type of which examples are numerous, the Alhambra is unique. No other example of an Islāmic palace of so early a date and in such relatively good condition has yet been found, if we leave out of account the Umaiyad buildings in the desert east of Moab and a few ruins such as the ʿAbbāsid remains at Samarra and Raḳḳa. These, like the scanty remains of the Fāṭimid palace in Cairo, are constructed on a very solid plan, whereas the Alhambra, on the other hand, with its walls of concrete (tapia), and its arches, cupolas, entablatures, and roofs constructed of boards and mouldings, shows an entirely different "technique", carried out with a consistent wealth of detail, but without solidity. Its origin, therefore, must certainly not be sought in Spain or in northern Africa; but, as is the case also with whole groups of ornament which starting from Asia, have gained a temporary predominance throughout the whole of Europe, is more probably to be sought in the vanished buildings of Mesopotamia constructed from equally fragile material.

The Alhambra is usually described as merely a building, but it would be more correct to call it a villa in the midst of extensive gardens and parks. The whole extent of the grounds, from the point where the palace of Charles V now intrudes upon the original plan of the building, to the Alcazaba on the west, as well as the whole eastern plateau within the castle walls, where the monastery of St. Francis now begins, must be imagined as a "paradise" of plants, fountains and animals. We then understand why the remote towers on the walls of the northern slope are decorated inside with no less splendour than the Alhambra itself: joined on to the palace by the "paradise" they constitute an artistic whole. A like combination of nature and art is afforded in the Generalife which lies on the other side of a ravine, opposite the Alhambra.

The buildings of the Alhambra proper are grouped round two courts (see the plan): the "Court of Myrtles" (or "Patio de la alberca") running lengthwise from the southern entrance to the massive tower of Comares on the northern end, which encloses the "Sala de los embaxadores"; (35 ft. square); and the famous "Court of the Lions" (fig. 2), at right angles to the "Court of Myrtles", with an entrance in its south-east corner, and terminating in the so-called Tribunal, consisting of three alcoves, separated by narrow cells; on its transverse axis it leads into two halls, the "Sala de las dos hermanas", (25 ft. square) on the north, and the "Sala de los Abencerrages", (20 ft. square) on the south. These two courts serve as a transition from the interior to the landscape outside, the Court of Myrtles, by its tank and fountains surrounded by myrtles on the longitudinal axis, and the Court of Lions, by its narrow water-courses which flow into the centre of the two Halls and there form fountains, as also in the vestibules of the two shorter sides. The water meets in the centre under the fountain of the Lions. The fountain itself was once surrounded with orange-trees.

The conventional names of the rooms do not throw any light upon their original purpose, except, perhaps, the "Hall of the Ambassadors" at the end of the Court of Myrtles, for it is probable that this outer court was used for public receptions, as the mosque adjoined it immediately on its west side. The inner court on the other hand, with its splashing fountain, was doubtless, destined for domestic purposes. This arrangement reminds one of the ancient house as seen at Pompeii: there we find the atrium, destined for outside intercourse, and, generally lying behind it and separated from it by the tablinum, the so-called peristyle, i. e. the court with the family apartments and the garden. The Alhambra was on this assumption, a typical structure, and we have no cause to regret the loss of the remaining buildings and courts, except that of the mosque pulled down by Charles V. Unfortunately no other specimen of the same type as the Alhambra has as yet been found. The study of Islāmic art has to deplore the complete loss of all the numerous palaces and villas, which enraptured the poets. It is for philologists to collect the scattered notices about them. We can only deal with the monuments left to us. The castles of the Umaiyads do not resemble the Alhambra, and of the ʿAbbāsid buildings nothing but outer walls or façades have as yet been found. There exists indeed a small bath house excavated in Sidi Bou-Médine near Tlemcen (see Marçais, *Les monuments arabes de Tlemcen* p. 267), which does contain a longitudinal court similar to the Patio de la alberca, but without a hall at its end, and from the court a staircase leads to the adjoining bath on a slightly lower level. If with this we compare the bath house of ʿAmra, where a vaulted hall with three aisles takes the place of the court, it becomes evident how close the relationship is between the Alhambra and the building at Tlemcen, which dates from the middle of the 14th century. In the Alhambra too the bath lies at a lower

level, in the angle between the Court of Myrtles and the Court of Lions.

That, at one time, courts in the style of the Patio de los Leones existed everywhere in the Islāmic countries on the Adriatic sea, and especially in Sicily, can be proved indirectly, because the well-known courts in the style of the Cosmati in Rome with their exotic and fairy-like ornament can only be accounted for as imitations of these Moorish palace courts. The many coloured colonnades surrounding the cloisters of the monasteries of S. Giovanni in Laterano and of S. Paolo are akin to the famous cloisters of Monreale, whose scheme of ornament is clearly related to that of the Alhambra. Again in the "Court of the Lions" we notice, on its longitudinal axis recesses with three or four columns in the corners and two in the middle; and the fountain in the centre. In the Court of Monreale the same recess occurs, but in one corner only; the number of arches is the same, nor is the fountain lacking. Another point of resemblance between the "Court of the Lions" and the cloisters of the Italian monasteries is the bold rythmical variety of their supports. In the Alhambra single columns alternate, apparently at hap-hazard, with pairs or with groups of three or four. Such groups occur likewise at Monreale and, alternately with pillars, in Rome. The shafts of the Alhambra columns are smooth but for the series of rings above and below; but the fine inlaid work in stone on the walls, which is also found in Sicily, and throughout the East, proves beyond all doubt that the "technique" of the columns fashioned in the style of the Cosmati was borrowed from Islām.

The capitals of the Alhambra (fig. 3) have a circular base, decorated with an undulating ornament, above which rises a square superstructure with a profusion of arabesques. Analogous forms are frequent in northern Africa; in the East, however, not a single one has yet been found. Nevertheless, this design must also have been imported from thence: the bell-shaped capitals of the Ṭūlūn Mosque at Cairo, are an indication of the oriental origin of this design. For the rest, the Alhambra decorations differ from the Persian decorations of the Ṭūlūn Mosque, which is about 500 years older, in that they were cast in moulds and were put together so as to form a continuous surface, whereas the Ṭūlūn Mosque exhibits bands of decorative work fashioned with a free hand. A comparison with the wood-carvings of the Minbar (the pulpit) of Ḳairawān, which are of nearly the same period as the Ṭūlūn Mosque, and the fact that designs on flat surfaces based on one fundamental element were already in use in the ancient East, suggest the conclusion that the designer of the decorations of the Alhambra did not strike out any new path of his own. They are a combination of the usual polygonal ornament, which predominates on the lower parts of the walls, the arabesque which prevails in more elevated parts and leads up to the stalactites, and, finally, inscriptions, employed for decorative purposes, those in the Alhambra being of special interest, as they are often represented as addressing the visitor in their function of ornament (cf. Schack, *Poesie und Kunst der Araber in Spanien und Sicilien*, 2nd edition, ii. 349-350). The niches, for example, in which pitchers are placed, praise themselves in the following words:

> My diadem and my robe are matchless in [splendour;
> The stars of heaven gaze down to me full [of longing.....

or:

> The artist's hand has embroidered me like a [robe of silk
> And has adorned my diadem with glittering [jewels.....

The Hall of the Sisters sings:

> I am a garden full of beauty, clad with [every ornament,
> Recognise what I am, while you feast your [eyes upon my charms!....
> The stars would gladly descend from their [zones of light,
> And wish they lived in this hall instead of [in heaven;
> Fain would they join themselves to the com-[pany of thy slaves, Lord,
> And, full of reverence, do thee service in [both halls.

The Tower of the Captives praises itself in a similar way:

> Nothing can match this work etc....

And round the edge of the famous fountain of the lions one reads:

> Incomparable is this basin! Allah, the exalted [one, desired
> That it should surpass everything in wonder-[ful beauty!

It is worthy of note that this kind of inscription, is, outside the Alhambra, of rare occurrence as compared with the usual historical inscriptions and verses from the Ḳor'ān. It would be a matter of interest to the historian of art if the origin of this class of inscription were exactly determined.

The Alhambra exhibits two monuments of art, which, even amongst the surrounding profusion of decoration, are particularly striking: the Fountain of the Lions and the three ceiling-pieces of the so-called "Hall of Justice". In the centre of one of the two courts twelve lions are standing in a circle, each ejecting water through a tube in its mouth; they are designed in somewhat the same style as the animals' heads on the Persian vessels amongst the treasures discovered at Nagy-Szent-Miklos. Such fountains are often mentioned in literature; they originated in ancient oriental art, and have also passed into Christian art. — The ceiling-pieces of the Hall of Justice are of interest not only in connection with the Gothic art of Spain; they represent scenes from tales of chivalry and hunting episodes, and also ten kings seated in a row on a long bench. One feels tempted to connect the former with the hunting and harem scenes of Ḳuṣair 'Amra, and the kings with the enthroned figure on the front-wall of this castle of the desert. Their explanation will need to be based upon an examination of Persian miniature painting.

ALHANDEGA (Arabic *al-Khandak* = "the moat") was the scene of the crushing defeat of 'Abd al-Raḥmān III of Cordova by king Ramiro of Leon and Queen Tota of Navarre, in the year 939. The name is, at the present day, only found in Fresno- and Torre-Alhándiga, south of Salamanca and Alba de Tormes.

ALHAZEN. [See IBN AL-HAITHAM.]

ALHIDADE. [See AL-'IḌĀDA.]

ALHUCEMAS (Arabic al-Khuzāmā, i. e., according to Mouliéras, "lavender") is an islet off the coast of the Rif, facing the territory of the Banū Uryāghel. It is the ancient Ḥadjrat Nakūr. On the coast opposite lies the village of Adjdhir (Mouliéras), which perhaps corresponds to the ancient al-Mazamma, unless the latter is identical with Nakūr, formerly a famous town at a distance of five miles from the sea, according to Ibn Khaldūn. It is doubtful whether Alhucemas is a corruption of al-Mazamma. However this may be, the island of Alhucemas was, towards the year 1554, surrendered to the Spaniards by Mūlāi 'Abd Allāh, in order to prevent the Turks of Algiers, who just then had retaken the neighbouring Peñon de Velez from Spain, from capturing that position also. But not until 1673 was the islet definitely occupied by Spain. In 1666, a Frenchman, Roland Fréjus, made an attempt, in the course of a rather remarkable journey, to found a commercial establishment on the island, under the name of "Compagnie d'Albouzème"; however, he did not succeed (concerning this journey cf. Roland Fréjus, *Relation d'un voyage fait en 1666 aux royaumes de Fez et de Maroc*, Paris 1698, and Mouette, *Hist. des conquestes de Mouley Archy*, pp. 92—98).

Alhucemas is now a *presidio* (the Spanish word for "penal establishment"); the island, which slopes down from east to west, does not rise very high above the sea. The garrison consists of a hundred men; there seem to be about sixty convicts and 120 inhabitants (de la Martinière and Lacroix). Three large reservoirs collect the rain-water, but do not yield a sufficient water supply for the inhabitants. Hence a "cistern-ship" provides the place, at the same time as Peñon de Velez and the Zaffarine islands, with fresh water at certain intervals.

ĀLĪ (A.) = "high, elevated, eminent" etc. [cp. 'ALI]. Concerning the use of this word as a technical term in the science of traditions cp. the articles ḤADĪTH and ISNĀD. 'Alī is also a Turkish proper name; see the next article.

'ALĪ, properly called Muṣṭafā b. Aḥmed b. 'Abd al-Mawlā Čelebi, was one of the most brilliant men-of-letters of the 16th century in Turkey. He was born in 948 (1541-1542), or in 949, at Gallipoli, and had the rare good fortune, when a boy of nine years old, to hear Surūrī, the greatest scholar in the Persian language and literature that the Ottoman nation ever produced. No other teachers of his are known except Muḥyī 'l-Dīn, the master of Arabian versification (who must not be confused with another Arabist of the same name who lived a century earlier). His career was made, when, in 965 (1557-1558), he succeeded in presenting his romantic poem *Mihr we-māh* (Dozy, *Cat. cod. or. bibl. acad. Lugd.-Batavae* ii. 128) to the crown-prince Selīm. He obtained a post under the master of the royal household of this prince, called Lala Muṣṭafā, a countryman of his, and in the employment of this daring intriguer he was to witness events of the greatest importance. During the fierce quarrel which broke out between the sons of the Sultan, 'Alī, in his capacity as private secretary, had to conduct the correspondence of Selīm and Muṣṭafā. After the death of Sulaimān the Great, when Selīm had come to power, 'Alī retained his privileged position. It must have been during this period that he made the acquaintance of the great Nishāndji, from whom he prided himself upon having received so much information concerning important events. In 1567 he went to Egypt as Muṣṭafā's dīwān secretary, but was soon obliged to return with his master, who, owing to a disgraceful slander, had fallen into disgrace. But in 1570 Muṣṭafā was appointed commander-in-chief of the land-forces and entrusted with the conquest of Cyprus (1570-1571), and again 'Alī acted as his private secretary, in which capacity he had the satisfaction of sharing in the achievement of the maritime power of the Ottoman realm. After the triumphant entrance into the capital 'Alī spent several years in west Roumelia. During this period (980 = 1572-1573) he wrote the *Seven Tales* (*Heft dastān*; Library of the Mosque Laleli at Constantinople, n°. 2114; printed at Constantinople in the Kitābkhāne-i Iḳdām), in which the close of Sulaimān's reign and the first acts of his successor are described in a pompous style. A number of minor works were probably written in this same period. In 982 (1574-1575) he published his Turkish Dīwān, which consists mainly of ḳaṣīdes and ghazals (he also wrote a Persian dīwān, cp. Flügel, *Die arab., pers. u. türk. Hss. der K. K. Hofbibl.* i. 651). As a poet, however, he ranks with second-rate celebrities; he seldom succeeded in imbuing his poetry with the raptures of a great passion.

Early in the year 1578 he visited Egypt and the sacred places in the Ḥidjāz, from whence he was called back by his patron Muṣṭafā Pasha, who, having been appointed commander-in-chief in the war against Persia, wished 'Alī to act as his secretary. The numerous reports and accounts of Muṣṭafā's victories, which reached Constantinople from the wild Caucasus regions, proceeded from his pen. He used the opportunity of his sojourn in those parts to collect reliable information concerning the legendary lore and the customs of the mountain tribes, especially of the inhabitants of Gīlān, Shirwān and Gurdjistān. When, however, the Turkish successes came to a standstill, Muṣṭafā was dismissed and his secretary returned to Constantinople. The unexpected death of the grief-worn Muṣṭafā plunged his protégé into the great-

est difficulties, which compelled him to redouble his literary activity. He dedicated to his sovereign a concise narrative of the creation and the miracles of the prophets under the title of *Mirror of the worlds* (Flügel, *ibid.* ii. 94; Pertsch, *Verz. d. türk. Hss. . . . . zu Berlin*, n⁰. 36 and 358). A year after his return from the Persian war he completed the *Book of Victory*, containing an account of this campaign (see especially the mss. in Rieu, *Cat. of the Turk. Mss. in the Brit. Mus.* p. 61). He could already claim the authorship of 17 works, when, much as he had gained the good-will of Selīm 25 years before, he succeeded in ingratiating himself with the crown-prince Meḥmed, who had then arrived at manhood, by his description of Meḥmed's circumcision festival, one of the most remarkable in Ottoman history (Nūr-i 'othmānīya Library in Constantinople, n⁰. 4318).

'Ālī became more and more engrossed in history. In 995 (1587) or shortly afterwards he collected the most interesting material concerning several hundreds of masters of calligraphy and the art of book-binding (both important branches of industrial art in the East) under the title of *Talents of the artists* (Flügel, *ibid.* ii. 386). His *Selection of histories* (*ibid.* ii. 90), a Turkish translation of an admired work of the late Arabian epoch, seems to belong to this same period. He even thought it worth while to cultivate the mystical and pantheistic literature which flourished exuberantly in Persia: in his *Ornament of men* (cf. Rieu, *ibid.* p. 19 and Pertsch, *Die Türk. Hss. . . . . zu Gotha* p. 75) he gave an accurate account of the grades of saints and of the power of their works (999 = 1590-1591). About that time he also arranged a collection of poems both of a general and of a personal tenour, entitled *Expressions of truth*, which are of great interest for the knowledge of his character (Rieu, *ibid.* p. 261). Finally he attained to a high post in the administration of the public revenue, and, shortly afterwards, was appointed chief secretary of the Janissaries. No wonder that at this time, when he had the disposal of the necessary means, 'Ālī undertook the tempting task of giving a general survey of historical events down to his own time. Sultan Meḥmed, immediately after he had ascended the throne, allowed him a considerable salary. But he wanted to write the work in Cairo, at that period the greatest book-market of the Muhammedan world. The Sultan made no objection, and but for the intrigues of jealous viziers he would have obtained the post of director of finance in Egypt. From 1002 at latest until 1007 (1593—1599) he was engaged in writing his maturest work, his *Sources of History* (1277—1285) in four parts, which, in conjunction with Munadjdjim Bashi's work, is the most important General History which was ever produced by the Ottomans. It was printed at Constantinople in five volumes, though without the final part of the book, which treats of the 150 last years of Ottoman history. Although frequent allusion is made to European nations, it never occurs to the faithful Moslem to state any details concerning them. In the first section he expatiates upon the old myths of the prophets, in the second part the personality of Muhammed and the first glorious achievements of the new religion come into prominence. The author is so convinced of the importance of his race for the extension of Islām, that he gives the title of "Turkish-Tataric" to the third section which contains the history of the caliphs and of the Muhammedan feudal princes. The fourth part, comprising the Ottoman history, represents this epoch as the crowning achievement of universal history. A detailed gazetteer is added to the whole of the work. 'Ālī's compilation of references concerning pre-Islāmic history is not more reliable than that of other Muhammedan works of history. The value of his book is to be found in the two last sections. It is a curious fact, that, amongst the 130 predecessors, whom he quotes as his authorities, not a single one, as far as we know, has ever touched upon the subject of Ottoman history. The 16th century especially has received thorough treatment at 'Ālī's hand. His love of truth in discussing the acts of his sovereigns and his tolerance when writing about heterodox people, are specially pleasing features of his work. The style of the first volumes is so much overburdened with poetical ballast, that one is reminded of Waṣṣāf, but towards the end he descends to an unaffected mode of writing. After the completion of this work, yielding to the urgent requests of his friends, he wrote a concise history of the Islāmic realms under the title of *Decay and formation of states*, which has become one of the most widely read books and is to be found in all libraries of any importance. Not long after his appointment to the post of Pasha of Djidda (a reward for his great literary achievements), he closed his literary career with the publication of his interesting little work *Ḥalāt al-Ḳāhira min al-'ādāt al-ẓāhira* (Library Es'ad Efendi at Constantinople, n⁰. 2407; Turk. Cat. of the Khedive Library at Cairo, p. 197). He died in the same year 1008 (1599-1600).

'Ālī is one of the most attractive personalities of the Turkish bureaucracy. In an epoch, in which intrigue and violence were paramount, he shines forth as a model of rectitude and integrity. No wonder that his honest and steady character did not appeal to the iron-handed men of that pitiless period, and that they did not require his services. The Grand-Vizier Sinān Pasha, one of the most striking personalities of the warlike Ottoman world, looked down upon him with especial contempt. But, on the other hand, hardly a single author can be found who was not a personal friend of 'Ālī's.

The number of his works amounts to more than thirty, according to a statement which has been controverted by Hammer without cause. The fullest account of his life and writings is given by Hammer, *Gesch. d. osman. Reiches* iv. 308 and 651 *et seq.*, *Gesch. d. osman. Dichtkunst* iii. 115 *et seq.*, and by Meḥmed Ṭāhir b. Rif'at, *Mu'errikhīn-i 'othmānīyeden 'Ālī we-Kātib Čelebiniñ tardjume-i ḥālleri* (Selānīk 1322 of the official Ottoman era = 1906). See also *Cat. cod. or. bibl. acad. Lugd. Bat.* v. (1873) p. 57; Flügel, *l. c.*, ii. p. 94; *Journ. Asiat.*, 6th series xiv. (1869), 76, 90-91. Writings of inferior authors are often attributed to 'Ālī.

(K. SÜSSHEIM.)

'ALĪ (A.), adj.: "high", often used as a personal noun. *Al-'Alī* is one of the surnames of Allāh.

'ALĪ B. 'ABD ALLĀH B. AL-'ABBĀS was the ancestor of the 'Abbāsides. According to Muhammedan tradition, 'Alī was born in the year 40 (661), the very same night, in which the caliph 'Alī was assassinated: but there are also other statements concerning the year of his birth. His

mother was called Zur'a bint Mishrah. His grandfather 'Abbās was the uncle of the Prophet, and on account of his high birth and his personal gifts 'Alī attained to great distinction. He was looked upon as the handsomest and most pious Kuraishite of his time, and received the surname of "al-Sadjdjād" (he who prostrates himself often) because of his constant praying. His piety did not prevent him from plotting secretly against the Umaiyades, and was therefore banished from the capital by Caliph Walīd I. He went to live in the province of Sharāt on the border between Arabia and Palestine. Here he died in 117 (735-736) or 118 in the village of Humaima. This place remained the headquarters of the 'Abbāside propaganda, after 'Alī's son Muḥammed, the father of the future Caliphs al-Saffāḥ and al-Manṣūr, had been recognised as the head of the 'Abbāsides.

'ALĪ B. ABŪ ṬĀLIB was a cousin and the son-in-law of the Prophet Muḥammed and the fourth orthodox caliph. His father, Abū Ṭālib, whose *kunya* concealed the heathen name 'Abd Manāf, was the son of 'Abd al-Muṭṭalib b. Hāshim; his mother was called Fāṭima bint Asad b. Hāshim. 'Alī received the surname Abū Turāb [q. v.] from Muḥammed, whose daughter Fāṭima he married. Concerning his descendants comp. 'ALIDES. He embraced Islām at an age which cannot be ascertained with exactitude, and, after Khadīdja, was the first Muslim (Buraida b. al-Ḥuṣaib, acc. to Abū Dharr, al-Miḳdād, Abū Sa'īd al-Khudrī etc.), or the second (after Abū Bekr; Mas'ūdī, *Tanbīh*, ed. de Goeje, p. 231; transl. by Carra de Vaux, p. 306). He was one of the ten to whom Paradise was expressly promised by the Prophet, and one of the six councillors on whom the Prophet on his death-bed set his hopes. He had a dark brown complexion and big protruding eyes; he was corpulent, bald, and rather short than tall; he wore a thick, long, white beard, which he dyed sometimes; his face was handsome; he showed his teeth when he smiled (*Tanbīh* p. 297, transl. p. 388; Nawawī p. 441).

History. When Muḥammed had decided to emigrate to Yathrib and suddenly disappeared from Mecca, his escape was facilitated by 'Alī, who made people believe that he was still in the house he had occupied. He also stayed behind a few days in order to return to the owners the deposits which had been entrusted to the Prophet. 'Alī accompanied Muḥammed in the battles of Bedr, Oḥod, al-Khandaḳ ("the ditch"), and in nearly all his expeditions, except that of Tabūk, during which he had the command at Medina in the absence of Muḥammed; he himself conducted an expedition to Fadak against the Jewish tribe of Sa'd (6 = 628). He received sixteen wounds at Oḥod, and on the day when Khaibar was stormed he carried the banner. The Prophet sent him to Minā (9 = 630) to read in public several verses from the ninth Sūra *(al-Barā'a)*, which had been revealed to him shortly before and, at the same time, to proclaim four decisions with regard to the prohibition of polytheists from the pilgrimage; to the circumambulation of the Ka'ba, which no-one was to make naked; to the entrance of the Muslims into Paradise; and to the observation of the time granted for their conversion. In the year 10 (631-632), he conducted an expedition to Yemen, in consequence of which the Hamdānides were converted. It was 'Alī who advised 'Omar to adopt the *hidjra* or the emigration of the Prophet as the starting-point of the Muhammedan calendar. He was entrusted with the task of making representations to 'Othmān on account of the complaints which came from the provinces; when 'Othmān began to feel uneasy about his safety, 'Alī was the intermediary between him and the discontented, in the name of whom he accepted the three days' delay demanded by the caliph; during the siege of 'Othmān's house *(waḳ'at al-dār)*, he showed himself favourable to him and inclined to support him. At first he modestly refused to take the power into his own hands, but five days later he accepted it, and on Friday 25 Dhu 'l-ḥidjdja 35 (June 24th 656) allegiance was paid to him as Khalīfa in the Mosque of the Prophet at Medina; he was the first to ascend the pulpit for this ceremony. In the year 36 (656) he left Medina never to enter it again; he marched against Baṣra where 'Ā'isha, Ṭalḥa and Zubair refused to acknowledge him and defeated them in the "battle of the camel" which took place at Khuraiba, outside Baṣra on 10 Djumādā II (Dec. 4th 656). He bewailed the fallen, had them honourably buried, and waited three days before entering the town. He sent 'Ā'isha back to Medina, escorted by a train of attendants amongst whom were forty women of distinction. He distributed amongst the inhabitants the money which he found in the treasury, and promised the same amount to them for the projected campaign in Syria. A month later he entered Kūfa, where his faithful lieutenant al-Ashtar had prepared the way for him. From thence he went to Ctesiphon (al-Madā'in), crossed the Euphrates at Raḳḳa, and, in the plain of Ṣiffīn, gave battle to Mu'āwiya in a series of combats which lasted 110 days (Dhu 'l-ḥidjdja 36 till Ṣafar 37 = June-August 657). 'Alī had almost gained the final victory, owing to the bravery of al-Ashtar, when 'Amr b. al-'Āṣ thought of advising Mu'āwiya to have recourse to a stratagem which proved successful. The Syrian troops fastened five hundred copies of the Ḳor'ān to their lances, to indicate that they appealed to the judgment of the book of God. This stratagem disconcerted the troops of 'Irāḳ and made them think of submitting to God's word. 'Alī, therefore, yielded to the urgency of his companions in arms and accepted the arbitrament proposed by Mu'āwiya. The latter appointed 'Amr b. al-'Āṣ his arbiter; 'Alī was urged, against his will, to choose Abū Mūsā 'l-Ash'arī. The two arbiters met in Ramaḍān 38 (Febr. 659), furnished with a written document *(ṣaḥīfa)* giving them full power. Abū Mūsā, who wished to see his son-in-law 'Abd Allāh b. 'Omar become caliph, let himself be outwitted by 'Amr, who made him admit that Mu'āwiya was fully entitled to avenge the murder of 'Othmān, of which, it was falsely rumoured, 'Alī had been an accomplice. So Abū Mūsā deposed 'Alī (Ṭabarī i. 3359; Mas'ūdī, *Murūdj* iv. 397 adds: "by taking off his turban", which detail seems to have been inserted afterwards). 'Amr followed his example, after which he proclaimed

Mu'āwiya caliph, in spite of the protests of the Prophet's old companion, whom he had deceived (variants in Mas'ūdī, *ibid.* pp. 399, 402; cp. also the article ADHRUḤ).

The Khāridjites, i. e. the old-muslim party that refused to negotiate with the rebels, forsook 'Alī after he had submitted to the arbitration (*taḥkīm*), rose in arms against him to the number of 4000 under the leadership of 'Abd Allāh b. Wahb al-Rāsibī, with shouts of *Lā ḥukma illā li 'llāh* ("to God alone belongs the decision"). They conquered Ctesiphon and committed all sorts of atrocities there. 'Alī was persuaded to march against them. He advanced to Nahrawān, where he defeated and exterminated the Khāridjites, of whom only ten escaped (38 = 659). This battle is known in history by the name of *waḳ'at al-nahr* (Brünnow, *Die Charidschiten* pp. 19 *et seq.*; Ṭabarī i. 3386; Mas'ūdī, *Murūdj* iv. 418; al-Mubarrad, *Kāmil*, pp. 528 *et seq.*).

'Alī, forsaken by part of his troops, withdrew to Kūfa, while Mu'āwiya despatched one expedition after another to make the best of his opportunity. At Kūfa 'Alī was assassinated by the Khāridjite 'Abd al-Raḥmān b. Muldjam al-Ṣārimī, who, with two of his fellow-believers, had concerted a plan to murder 'Alī, Mu'āwiya and 'Amr b. al-'Āṣī on the same day, in order to revenge the slaughter of their relatives at Nahrawān. Ibn Muldjam, accompanied by two accomplices, waited for the caliph in a narrow passage and struck him on the forehead with a poisoned sabre that penetrated to te brain (17 Ramaḍān 40 = 24 Jan. 661; cp. Abū Ma'shar and Wāḳidī in Ṭabarī i. 3456; other dates *ibid.*; Mas'ūdī, *Tanbīh* p. 387 gives the 21st, which seems more probable, that day being nearer to the 22nd, which was a Friday). 'Alī died three days afterwards and was interred at Kūfa, according to the usual tradition (other traditions in Mas'ūdī, *Murūdj* iv. 289; *Tanbīh* p. 387), close by the dike which protected the town against the inundations of the Euphrates, on the spot where afterwards the town of Nedjef (Yāḳūt, *Mu'djam* iv. 760), the present Meshhed 'Alī, arose. He was either 58 years old, according to his son al-Ḥasan, or 63, as is affirmed by his other son Muḥammed b. al-Ḥanafiya.

Sunnite doctrine. — 'Alī is said to have transmitted 586 ḥadīth, twenty of which were accepted unanimously by Bukhārī and Muslim; nine others were also acknowledged by Bukhārī alone, and fifteen by Muslim only. They have been recorded by his three sons al-Ḥasan, al-Ḥusain and Muḥammed b. al-Ḥanafiya, and further by Ibn Mas'ūd, Ibn 'Omar, Ibn 'Abbās, Abū Mūsā 'l-Ash'arī, 'Abd Allāh b. Dja'far, 'Abd Allāh b. al-Zubair, etc. At Medina his opinions had authority, so that he was consulted upon difficult questions. He was very pious, inflicting mortifications on himself, such as burdening his stomach with a heavy stone in order to diminish the pains of hunger, and giving away all his possessions in alms. (Aḥmed b. Ḥanbal, *Musnad*). He despised the world and used to say: "The world is carrion; whoever wants a part of it, must be satisfied to live with dogs". He also said: "Blessed are those who have renounced this world and only aspire to the life to come!" When he died he only left 600 dirhem.

Shī'ite doctrine. By the Shī'ites, 'Alī is styled the *walī Allāh*, "the friend of God", the man who is attached to the divinity by the mystical tie of the *wilāya*, "proximity, friendship"; a sense of the word, which soon developed into that of "sanctity". 'Alī is pre-eminently the saint of Islām, by which quality he is clearly distinguished from Muḥammed, who is only the *nabī*, "the prophet of God". All Shī'ism, with its numberless sects, is based on this conception. The Shī'ites are also unanimous in attributing to 'Alī the threefold character of *imām*, of warrior and of saint. According to them, the investiture of 'Alī as Imām goes back as far as the sermon near the pool of Khumm, when Muḥammed, on his return from his farewell pilgrimage, said to the people: "I shall soon be called back to Heaven; I leave amongst you two important bequests, one more important than the other: the Kor'ān and my family". Already on his return from the expedition to al-Ḥudaibiya (18 Dhu 'l-ḥidjdja 6 = April 29th 628; Mas'ūdī, *Tanbīh* p. 338; Goldziher, *Muh. Stud.* ii. 116), Muḥammed had said: "He, whose master I am, has also 'Alī for his master". One day, the Prophet assembled 'Alī, Fāṭima, al-Ḥasan and al-Ḥusain, covered them with a mantle (*kisā'*) which he used to put on when he went to sleep, and pronounced a prayer which gave rise to the revelation of Kor'ān xxxiii. 33; hence the expression *aṣḥāb al-kisā'* to denote the family of the Prophet (cp. St. Guyard, *Fetwa d'Ibn Taimiyyah* p. 24, note 1 = *Journ. As.* 1871, and *Fragments* 217). 'Abd Allāh b. Saba', a Jew from Yemen, is said to have been the first to attribute divine honour to 'Alī: "Thou art God", he is reported to have said to him, in allusion, perhaps, to 'Alī as one of the epithets of God (Kor'ān iv. 38; xiii. 51; Hirschfeld, *Journ. of the Roy. As. Soc.* 1904, p. 151). The Shī'ites have never been able to understand, how the caliphate, which implied the quality of imām (the right to lead the Ṣalāt), could be conferred by election; that accounts for the fact that their adherents were especially recruited from amongst the Persians, the inveterate champions of divine right. The following titles and surnames are most frequently employed by the Shī'ites: *Murtaḍā* (he in whom God is well pleased), *Ḥaidar* (the lion), *Ḥaidar-i karrār* (the impetuous lion), *Asad Allāh al-ghālib* (the lion of God, the Victorious), *Shīr-i Yazdān* (the lion of God), *Shāh-i wilāyet* (the king of sanctity) or *Shāh-i awliyā'* (the king of saints). There are a great many others, a detailed list of which is found in the *Djannāt al-khulūd* tab. VII.

Legends. — The legends, which, especially amongst the Shī'ites, have gathered round the name of 'Alī, had their root in his twofold character of warrior and saint. Their early development is visible in Mas'ūdī (*Murūdj* iv. 376), where, in the account of the battle of Ṣiffīn, the author tells us that 'Alī, with his own hand, killed 523 men in one day. Afterwards extraordinary feats were told of him, how he had severed heads from their bodies and had hewn bodies in two with his sabre Dhu 'l-Faḳār (mod. Arab. Fiḳār), the upper part rolling on the ground while the lower part of the body remained on horseback. He is represented as waiting unmoved for the attack of the enemy, and knocking down 33 assailants by simply extending his arm. But however great he may be as a warrior, he is incomparable as a saint; he works miracles (*karāmāt*) which his adherents do not hesitate to compare to the

miracles of the prophets (*mu'djizāt*). Already in Ya'ḳūbī ii. 39, God is represented as giving orders to the archangels Michael and Gabriel to descend to Mecca and protect 'Alī while occupying the place of Muḥammed in the night of the hidjra: One takes his stand at the head of the bed, the other at the foot, to defend him against his enemies and to avert the stones which are thrown at him. But afterwards other feats, much more miraculous, are mentioned: at Ṣahbā', God made the sun come back after it had set, to enable 'Alī to finish the 'aṣr prayer; in the mosque of Kūfa, he restored the severed hand of a negro, whom he had sentenced to the punishment which canonical law inflicts on thieves; the head of a Khāridjite who brought a charge before 'Alī against a woman, and, while doing so, indulged in crying, was changed by him into a dog's head; at his prayer, 80 camels which the Prophet had promised to a Bedouin rose out of the ground; when, in the environs of Babylon, a lion struck the inhabitants with terror, some one was charged by 'Alī to show his ring to the animal, and the lion disappeared; he raised somebody from the dead; he reappeared, several centuries after his death, in a vision in order to blind his detractors. The Persians of the present day speak of more than a thousand of 'Alī's miracles, but sixty only have been placed upon record, amongst which, apart from those mentioned above, are found his command to the Euphrates to decrease when it had inundated the country; the transformation of the bow, which he threw on 'Omar's shoulder, into a dragon; the iron made soft by the touch of his hands; the change of the iron pivot of a millstone into a ring when hung on the neck of Khālid b. al-Walīd; the apparition of the Prophet's figure, after his death, rising at his summons from the earth on behalf of Abū Bekr; his calling down from heaven a bucket of water wherein to wash the corpse of Muḥammed and a ready-made checkered shirt, etc. (*Djannāt al-khulūd*, tab. VII). His judgments deserve to be compared to those of David and Solomon; his maxims and aphorisms have always been celebrated all through the Muhammedan East; a hundred were collected by the Persian poet Rashīd al-Dīn Waṭwāṭ (*Maṭlūb kull ṭālib*, ed. and transl. by Fleischer, *Ali's hundert Sprüche*, Leipzig 1837), and some of them, at the command of Fakhr al-Dawla 'Alī b. Husain, the minister of the Seldjukide of Rūm, Ghiyāth al-Dīn Kai-Khosraw III, were graven, in 670 (1271—1272), on the walls of the Gök-Medrese at Siwās (Cl. Huart, *Épigr. ar. d'Asie-Mineure* pp. 91 *et seq.*). Some Arabian poems, a forgery of Shī'ite origin of uncertain date, have erroneously been attributed to 'Alī (Brockelmann, *Gesch. d. arab. Litter.* i. 43; Huart, *Littér. ar.* p. 44; Goldziher, *Abhandl. zur arab. Philol.* i. 126; *Transactions of the IXth Congr. of Orient.*, London 1893 ii. 115).

Incarnation of the divinity in the person of 'Alī. The Shī'ites who are called *ghāliya*, *ghulāt* ("ultras"; cf. the art. 'ALĪ ILĀHĪ) have even gone to the lenght of believing that God had become incarnate in the person of the Prophet's son-in-law by "descent" (*ḥulūl*). Cf. Shahrastānī p. 132 = Haarbrücker i. 199. The best known of these sects is that of the Nuṣairī, who regard 'Alī as the first of the three persons of the Trinity (R. Dussaud, *Histoire et religion des Nosairîs* pp. 45, 52, 55, 65; Sulaimān, *Bākūra* p. 5; Huart, in *Journ. As.* ser. 7, XIV, 260; see also 'AMR); this sect is still known in Persia by the name of 'Alī-ilāhī (Gobineau, *Trois ans en Asie* p. 338).

'ALĪ B. DJAHM AL-SĀMĪ, an Arabic poet and a friend of Abū Tammām. He was a native of Khorāsān, and, for some time, occupied the post of *ṣāḥib al-maẓālim* at Ḥulwān. In Bagdad, he lived at the court of the Caliph al-Mutawakkil, and made himself many enemies there by writing sharp, invective poetry. Having composed a satire on the Caliph, or, according to some, on the Caliph's court-physician Bokhtīshū', 'Alī was sent to prison and detained there until 232 (846), according to some until 239 (853), when he was released and banished to his native country. This punishment was aggravated by the ignominy of being, on his arrival, tied to the cross for a whole day by order of the governor who acted in compliance with a command of the Caliph. Afterwards he went to Syria, not, however, according to some authorities, from Khorāsān, but from Baghdād, which he had revisited; but his satirical vein had aroused so much enmity against him, that it had become impossible for him to remain there. When, one day, he started from Ḥalab (Aleppo) to return to 'Irāḳ, his caravan was surprised by a party of horsemen of the Banū Kalb, and 'Alī fell in the fray (249 = 863). His comparatively small dīwān is now lost; a poem in praise of the 'Abbāsides is contained in the Escurial Ms. (H. Derenbourg, *Les Mss. arab. de l'Esc.*) nº. 369, 3, another on al-Mutawakkil is extant in Berlin (Ahlwardt, *Verzeichn. der arab. Hss. der Kgl. Bibl.*) nº. 7539, 4.

'ALĪ B. GHĀNIYA, leader of the Almoravids who revolted against the Almohades. — The name of Banū Ghāniya is given to all the descendants of the lady Ghāniya, a relative of the great Yūsuf b. Tāshfīn, the founder of the Almoravid empire. Ghāniya had married a certain 'Alī b. Yūsuf al-Massūfī. The last of the Banū Ghāniya are famous in the history of the Maghrib and Spain for their struggle against the Almohades. But the best noted of all is the one to whom the present article refers.

In the family of the Banū Ghāniya, the members of which occupied high posts as governors

in Spain and the Balearic islands during the era of the Almoravid rule, three members were called ʿAlī b. Ghāniya: one was the son of Muḥammed, who was appointed governor of the Balearic islands in 520 (1126): he was the grandson of the lady Ghāniya; the second was governor of al-Mahdiya (in Ifrīḳiya) in the year 600 (1203-1204); he was the son of al-Ghāzī b. ʿAbd Allāh and great-nephew of the former; the third was a son of Isḥāḳ, who succeeded Muḥammed as governor of the Balearic islands, which post he occupied until 579 (1183-1184). This third personage, in the family of the Banū Ghāniya, who bore the name of ʿAlī, was the nephew of the first ʿAlī (see the genealogical table in A. Bel, *Les Benou Ghânya* p. 26). It was this last one, ʿAlī b. Isḥāḳ b. Muḥammed b. ʿAlī, great-grandson of Ghāniya, who rose in arms against the Almohades.

The rapid annihilation of the Almoravid rule in Africa and Spain by the Almohades, became a cause of serious solicitude to Isḥāḳ b. Ghāniya, who governed the Balearic islands on behalf of the Almoravids. Every year he sent presents to the sovereign of Marrākush. In 578 (1182-1183), the Almohade emperor Abū Yaʿḳūb summoned the governor of the Balearic islands to appear before him and pay official homage as his vassal. The reply to this summons was delayed until Isḥāḳ's death in 579 (1183-1184). He left thirteen sons to take possession of the encumbered inheritance. His eldest son, Muḥammed, was appointed governor of the Balearic islands by the Almoravids settled there. But Muḥammed realised that this Almoravid fief could not much longer maintain its independence; he also knew, however, that neither the members of his council, nor the numerous Almoravid nobles who had sought refuge in the islands would ever let him submit himself to the Almohades. Nevertheless, in compliance with the urgent solicitations of the sovereign of Marrākush, he finally swore the oath of allegiance required of him, whereupon an Almohade officer came to establish himself in Majorca to superintend the governor Muḥammed's administration and represent the Almohade government.

A conspiracy was formed, headed by the brothers of Muḥammed; the latter was thrown into prison, together with the Almohade representative. The government was entrusted to ʿAlī, brother of the dismissed governor (580 = 1184).

While these grave events took place on the Balearic islands, the Almohades sustained the terrible defeat of Santarem, which compelled them to concentrate all their forces upon Christian Spain in order to recover their lost prestige of arms. So their attention was momentarily diverted from the Balearic islands.

But ʿAlī b. Isḥāḳ did not doubt but the hour of revenge was near at hand. He began, therefore, to organise the defence of the islands with great activity. But fearing, on good grounds, that he would not be able to sustain for a long time the attack of the Almohades, he began to negotiate with the Africans, especially with the inhabitants of Bidjāya (Bougie). As soon as he recognised that he could count upon the support of at least a part of them and that he could land without difficulty on the coast by that town, he armed all the ships he possessed (20 according to some, 32 according to others), embarked 200 horsemen and 4000 foot-soldiers, and, well supplied with money, set sail for Bidjāya, where he landed without difficulty; he captured the town on 6 Shaʿbān 580 (Nov. 12th 1184), during the absence of the Almohade governor of the place. ʿAlī had only reigned over the Balearic islands for a few months; on leaving for Bidjāya, he committed his post to his brother Talḥa. ʿAlī and his companions were never to return to the Balearic islands, which, however, did not until the year 600 (1203-1204) fall into the power of the Almohades.

At Bidjāya, ʿAlī found supporters of his cause amongst all the discontented, especially amongst the partisans of the ancient Ḥammādide realm which the Almohades had destroyed, including numerous Kabyles. Afterwards, as we shall see, the Arabs wo had invaded Northern Africa in the 11th century [see p. 266a] joined him in troops. Having learnt that the governor of Bidjāya, the Sīd (= Saiyid) Abu 'l-Rabīʿ, had turned back and was coming to attack him, ʿAlī advanced against him and defeated him so completely that he dared not stop in his flight until he was safe behind the walls of Tlemcen. After this victory, ʿAlī organised the administration of Bidjāya and appointed his brother Yaḥyā military governor of the place, after which he left it to march towards the west and conquer other countries.

It seems to have been the intention of the leader of the Almoravids to penetrate to the very heart of the Almohade realm, the capital Marrākush. Numerous Arabs and Berbers came to join him in hope of booty. Al-Djazāʾir (Algiers) was conquered. He left it under the command of his nephew Yaḥyā b. Ṭalḥa, and captured the towns of Māzūna and Miliana. Considering himself not sufficiently strong to continue his conquests any further, and feeling perhaps not perfectly sure of the fidelity of his allies, he thought it wise to check his march at Miliana and turn eastwards again, along a different route, further south than the one by which he came. He captured the ḳalʿa of the Banū Ḥammād on his way back, and laid siege to Constantine.

The Almohades became disconcerted by so many successful attacks; the Caliph al-Manṣūr dispatched against ʿAlī an army of 20.000 men and a fleet with a view to the recapture of al-Djazāʾir and Bidjāya. At the approach off his expedition, all the towns that ʿAlī b. Ghāniya had conquered, expelled the Almoravides and submitted themselves again to the Almohades. ʿAlī's two brothers Yaḥyā and ʿAbd Allāh, who had remained at Bidjāya, left the place precipitately when the hostile fleet appeared, and went to join ʿAlī before the walls of Ḳusanṭīna (Constantine). Bidjāya was retaken in Ṣafar 581 (May 1185), after an Almoravide interregnum of only seven months.

ʿAlī b. Ghāniya, seeing all his late allies forsake him after the successive reverses that he had suffered, did not consider it safe to wait for the arrival of the enemy's army before the town of Ḳusanṭīna. He fled to the desert across the Hodna, while the commander-in-chief of the Almohade army, the Sīd Abū Zaid, took possession of Bidjāya, that town being the capital of the government which the Caliph al-Manṣūr had consigned to him.

In the Jarīd (*Djarīd*), ʿAlī scattered money freely among the natives, and so succeeded in securing the help of the Riyāḥ and Djusham Arabs. Together with his new allies, he conquered

Tawazr and Gafṣa; after that he went to Tripoli and concluded an alliance with Ḳarāḳush, prince of that region. All the unsettled and marauding hordes of the Hilāl Arabs of that country joined the two new allies, who soon conquered the whole of the Jarīd. Ḳarāḳush captured Gabès and made it his capital (581 = 1185-1186).

In 582 (1186-1187), the whole of Ifriḳiya, except Tunis and al-Mahdiya, had fallen into the power of the rebels and the Arabs, who committed the most outrageous excesses. ʿAlī b. Ghāniya was recognised as the head of the whole country, and ordered the prayer to be said in the name of the ʿAbbāside Caliph al-Nāṣir b. al-Mustaḍī, to whom he sent an embassy to swear the oath of allegiance, following, herein, the custom of the Almoravide sovereigns. He acquired, thereby, the official title of legitimate head in the eyes of his adherents, and, at the same time, hoped to secure the definite support of the caliphs of the East for the complete overthrow of the Almohades.

Yielding to the urgent entreaties of the Almohade governor of Tunis, the Caliph al-Manṣūr decided to take upon himself the command of an expedition for the re-establishment of Almohade authority in Ifriḳiya. Early in 583 (1187) he advanced towards Tunis. At his approach, ʿAlī retreated into the Djarīd. From Tunis, where he had established his head-quarters, al-Manṣūr despatched an attacking column against Gafṣa; but this expedition, numbering 6000 horsemen, was completely defeated by ʿAlī near Gafṣa (Rabīʿ I 583 = May-June 1187). Al-Manṣūr, at this news, marched, at the head of all his troops, against the Almoravide, who, in his turn, was vanquished at al-Ḥamma and fled into the desert. Gabès, Tawzar and Gafṣa were retaken successively by the Almohades, and Ifriḳiya became again subjugated. Al-Manṣūr transported ʿAlī's former allies, the Djusham and Riyāḥ Arabs, to the western provinces of the extreme Maghrib, and returned to his capital.

But no sooner had al-Manṣūr left Ifriḳiya, than Ḳarāḳush and ʿAlī reappeared in the south and recommenced the campaign. The events subsequent to the departure of al-Manṣūr from Ifriḳiya and the reappearance of the two leaders of the revolt are insufficiently known. It is, however, on record, (if we may believe the historian Ibn Khaldūn), that ʿAlī met his death in a battle against the tribe of the Nafzāwa, in the year 584 (1188-1189). The chronicler of the Almohade dynasty, al-Marrākushī, states, to the contrary, that ʿAlī died of the wounds he received in the mortal battle at al-Ḥamma, where he was defeated by al-Manṣūr.

His death, in any case, did not put a stop to the struggle which the last representatives of the Almoravide empire had commenced against the Almohades. ʿAlī was replaced, at the head of the rebels, by his brother Yaḥyā, who waged war to the knife against the Almohades for nearly half a century, dealing such terrible blows to the empire of Marrākush, that he contributed largely to the dismemberment and the final destruction of this Berber empire.

Bibliography: al-Marrākushī, *al-Muʿdjib*; French transl. by Fagnan, in the *Revue africaine*, 1891—1893 (printed separately at Algiers 1893); Ibn al-Athīr (ed. Tornb.); French transl. of the extracts relating to the Maghrib by Fagnan, in the *Revue africaine*; al-Tidjānī, *Riḥla* (see A. Bel, *Les Benou Ghânya* supplement); apart from these authorities, which may be considered of primary importance, reference should also be made to chapters relating to the history of the Almohades during the epoch of ʿAlī b. Ghāniya, in the Arabian chronicles of later date and in the works of the polygraphs, for example Ibn Abī Zarʿ, *al-Karṭās*; *al-Ḥulal al-mawshiya*; Ibn Khaldūn, *ʿIbar*; al-Zarkashī, *Taʾrīkh al-dawlatain*; Ibn Abī Dīnār al-Ḳairawānī, *al-Muʾnis*; al-Maḳḳarī, *Nafḥ al-ṭīb*, etc. It is also advisable to consult the works of the western authors who have treated of this subject: Gayangos, *The history of the Mohammedan dynasties in Spain* II, supplement p. LXII; Alvaro Campaner, *Bosquejo historico de la dominacion islamita en las islas Baleares* (Palma 1888); Codera, *Decadencia y desaparicion de los Almoravides en España* (Saragossa 1899); Alfred Bel, *Les Benou Ghânya* (Paris 1903).

(A. Bel.)

ʿALI b. al-Ḥasan b. al-Muslima. [See Ibn al-Muslima.]

ʿALI (Sīdī ʿAlī) b. Husain, who as a poet called himself Kātib-i rūmī (also simply Kātibī or Rūmī), was a Turkish admiral who distinguished himself as an explorer and oceanographer. Following the example of his grandfather and father who had both been administrators of the arsenal at Galata, he entered the navy and was present at the conquest of Cyprus (1522). After that we lose sight of him; we only know that he took part in the famous voyages on the Mediterranean of Khair al-Dīn Pasha, Sinān Pasha and other captains, and that he boasted of knowing every corner of that sea. In 1548 he accompanied the Sultan across Caucasia and Ādharbaidjān on his expedition against Persia. He availed himself of the cessation of hostilities during the winter to take lessons at Aleppo from a philosopher and astronomer, and, at the latter's instigation, undertook an amplified Turkish translation of the classical work which Mawlānā ʿAlī Ḳalaḳī had written in Persian, entitled, in ʿAlī's translation, "Outlines of Astronomy" (Rieu, *Cat. of Turk. Mss. in the Brit. Mus.* p. 120; Pertsch, *Verzeichn. d. türk. Hss. . . . . zu Berlin* p. 214). The sailor's literary fame was greatly enhanced by Sulaimān's third Persian campaign in 1553. Again he accompanied the Sultan and, as before, they spent the winter at Aleppo.

While the European wars of the Ottomans brought desolation to their western frontier, heroic efforts were made by them to prepare the complete overthrow of the Persian Ṣafawides by a series of conquests on the Persian Gulf and on the coast of the Indian Ocean; but they all ended in bitter disappointment. After a fresh discomfiture of the Turkish admirals in the Indian ocean, Sulaimān commanded ʿAlī at Aleppo to save the Turkish fleet which was anchored at Baṣra by conducting it to Egypt. But ʿAlī was defeated by the Portuguese as others had been before him, and, with the wretched remainder of his fleet, which had never been numerous, he was tossed about by repeated gales which lasted for months, and finally driven on the Indian coast, where, in his extremity, he was glad to mortgage his fleet to one of the khāns of that country. At Aḥmadābād, the capital of Gudjerāt, he finished, in 1554, his great compilation, *The Ocean* (*al-Muḥīṭ*), which,

founded as it is on the books of Arabian and Persian pilots of the 15th and 16th centuries and on his own experience, contains a complete geographical and nautical description of the sea, being, besides, the only work, as far as we know yet, which supplies us with information concerning the progress and the state of Moslem oceanography at the end of the Middle Ages. The author is not unaware of the importance of the Spanish and Portuguese discoveries in the new world. The remotest country that he knows in the far East is Djūr (Corea). — Sīdī 'Alī remained in India for some time. Everywhere, especially at the court of the Grand Mogul, the deepest respect was paid to him and his Emperor. Repeatedly he received the offer of a brilliant post, such as the government of a province or the command of troops, that he might remain in those parts. Early in 1556 he started on his journey back to Turkey, travelling by land across Sind, the Panjab, Afghānistān, Turkistān, Khorāsān, Ādharbaidjān and Irān. During his long journey he learnt the East-Turkish language and even wrote poetry in that dialect. He arrived at Adrianople in April 1557, and delivered his delayed account of the failure of his expedition to the Sultan. He received pardon at his hands and was even honoured by an appointment at the Court. Afterwards he appears in the office of keeper of the accounts for the lesser fiefs.

'Alī was one of the most popular, though not one of the most famous, poets of his time. Especially his poems on the element which he might claim as his own, the sea, were long afterwards still in every one's mouth. His poetical efforts are more the effusion of feeling than works of art; but for that very reason they can be read with greater pleasure than many a thoroughly artistic creation of a professional poet. — Cf. W. Tomaschek and M. Bittner, *Die topographischen Kapitel des indischen Seespiegels Mohīt mit 30 Tafeln* (Vienna 1897) and the complete edition of the *Mir'āt al-mamālik* by Nedjīb 'Āṣim, which was printed in 1313 (1897) at the Iḳdām printing-office at Constantinople. The *Mir'āt* has been translated several times into European languages, recently by A. Vambéry: *The travels and adventures of the Turkish admiral Sidi Ali Reis* (London 1899). (K. SÜSSHEIM.)

'ALĪ B. AL-ḤUSAIN ZAIN AL-'ĀBIDĪN is the name of an 'Alide. 'Alī, frequently called 'Alī the Younger in order to distinguish him from an elder brother, received the surname "Zain al-'Ābidīn" (the ornament of the worshippers of God), on account of his piety, and is revered as one of the twelve Shī'ite Imāms. After the death of his father Ḥusain b. 'Alī in 61 (680) at the battle of Kerbelā', Shamir b. Dhi 'l-Djawshan also wished to put to death the young 'Alī who lay sick; but the latter was saved by 'Omar b. Sa'd. He was then sent to the Caliph Yazīd by 'Ubaid Allāh b. Ziyād, together with the few surviving members of the family of Ḥusain; they were well received and were allowed to return to Medina. When the inhabitants of this city rose up against Yazīd, 'Alī was one of those who refused to make common cause with the rebels. He was accordingly treated kindly by the general Muslim b. 'Oḳba by the command of the Caliph, on the occasion of Muslim's entrance into Medina after his victory on the Ḥarra in 63 (683). According to some, 'Alī died in 92 (710-711), but according to the most usual account he lived till 94 (712-713) and died at the age of 58.

'ALĪ B. 'ĪSĀ. [See IBN AL-DJARRĀḤ.]

'ALĪ B. 'ĪSĀ was the best known oculist (*kaḥḥāl*) of the Arabs. His work, the *Tadhkirat al-kaḥḥālīn*, deserves the greater claim to our attention from the point of view of the history of civilization in that it is the oldest Arabic work on ophthalmology, that is complete and survives in the original. The name of the author is also recorded in the inverted form: 'Īsā b. 'Alī. Preference is to be given to the first form as follows from a reference in Ibn Abī Uṣaibi'a (*Kitāb 'uyūn al-anbā' fī ṭabaḳāt al-aṭibbā'*, ed. A. Müller, i. 240, 22) and from quotations in later authors as al-Ghāfiḳī, Khalīfa b. Abi 'l-Maḥāsin and Ṣalāḥ al-Dīn. The uncertainty as to the form of the name is due to confusion with the Court Physician of the Caliph al-Mutawakkil, 'Īsā b. 'Alī, who lived some 150 years earlier (*Fihrist* i. 297, 19; Ibn Abī Uṣaibi'a, *l. c.* i. 203, 3), and also wrote medical treatises.

'Alī b. 'Īsā's life falls in the first half of the 5th (11th century); for (according to Ibn Abī Uṣaibi'a, *l. c.*) he was a pupil of Abu 'l-Faradj b. al-Ṭaiyib, the commentator on Galen, at Baghdad, who died in the third decade of the 5th (11th) century (according to Ibn al-Ḳifṭī, ed. Lippert, p. 223). 'Alī, who, like his above mentioned teacher, professed the Christian religion, seems likewise to have practised at Baghdad. We know nothing of the external details of his life. As a physician he was full of foresight and prudence and of kindly feeling. This is evidenced by many a counsel given to the operator in the interests of the patient.

His *Tadhkirat al-kaḥḥālīn* (promptuary for oculists), — sometimes also designated *Risāla* (epistle), on account of the introductory words — is a very detailed treatise. According to the Preface the first Book treats of the anatomy of the eye, the second of diseases externally visible and their treatment (diseases of the lid, of the corners of the eyes, of the conjunctiva, cornea, uvea, cataract and its operation), the third of hidden diseases and their treatment (visual illusions, diseases of the albumen, crystalline lense, spirit of vision, long sightedness, short-sightedness, blindness during the day, and during the night, diseases of the vitreous humour, of the retina, of the visual nerve, of the choroid, of the sclerotic, squinting and weak sight). After a chapter on the preservation of health, the work closes with an alphabetical treatment of 141 simple remedies and their particular action on the eye. — We cannot judge to what extent the work can lay claim to originality, since the older Arabic works on the subject are not preserved. 'Alī himself observes in his Preface: "I have searched the works of the Ancients throughout, and merely added the little of my own thereto, which I have learned publicly from the teachers of our own time and which I have acquired in the practice of this science". He mentions the work of Ḥunain together with Galen as his principal

sources. In addition he cites in the *Tadhkira* the Alexandrians, Dioscorides, Hippocrates, Oribasius and Paulus.

The large comprehensiveness of his work laid the foundation of his fame [see art. ʿAMMĀR]; it has been considerably used by later Arab oculists — until the present day — both for the practical and theoretical portions (Ibn al-Ḳifṭī, *l. c.* "the physicians of this branch work at all times in accordance with this") and has frequently been quoted whole chapters at a time. A commentary on it, written by Dāniāl b. Shaʿyā, is mentioned by Khalīfa b. Abi 'l-Maḥāsin [q. v.] in the introduction to his ophthalmological work. This commentary is not preserved; on the other hand a large number of manuscripts of the *Tadhkira* itself have come down to us. Even in the Middle Ages it was translated into Hebrew and twice into Latin (*Tractatus de oculis Jesu b. Hali*, Venice 1497, 1499, 1500; edited once more by Pansier with a second translation, made from the Hebrew version, under the title *Epistola Ihesu filii Haly de cognitione infirmitatum oculorum sive Memoriale oculariorum quod compilavit Ali b. Issa*, Paris 1903). That the great importance of the *Tadhkira* in the history of medicine has been entirely unrecognised is due to the barbarous character of the Latin translation and the fact that whole sentences are frequently omitted therein. So the continuity is destroyed and the sense made unrecognisable.

A German translation of the *Manual for oculists* based on the Arabic manuscripts is contained in Vol. I. of *Die arabischen Augenärzte nach den Quellen bearbeitet* by J. Hirschberg, J. Lippert and E. Mittwoch (Leipzig 1904).

Bibliography: cf. the introduction of the last-named work. (E. MITTWOCH.)

ʿALĪ B. MAHDĪ was the ancestor of the Mahdīs at Zabīd. ʿAlī, a Himyarite of the village of ʿAnbara on the sea-coast not far from Zabīd, made his first public appearance as a preacher of Khāridjite doctrines in his native town (531—536 = 1136—1141) and won many followers. The mother of the prince of Zabīd took him especially under her protection, and at her death (545 = 1150) he went to a mountain stronghold named al-Sharaf together with his faithful adherents, whom he named *Muhādjirūn*, after the example of the Prophet. He named those who joined him there *Anṣār*. He then began to make raids, to plunder and lay waste the district of Zabīd. In 551 (1156) the governor of the town, the ḳāʾid Abū Muḥammed Surūr al-Fātikī, was murdered in the mosque by one of his followers, and after this open war was carried on between ʿAlī and the inhabitants of the town, who called to their assistance the Zaidide prince of Ṣaʿda. The latter complied, on condition that they murdered their chief Fātik. This they did in 553 (1158), but the Zaidide prince was no match for ʿAlī. The latter conquered Zabīd in 554 (1159), but died three months later. His successors remained rulers of the city until 569 (1173). Cf. art. MAHDĪS.

Although ʿAlī professed the *Madhhab* of the Ḥanafites, he was an extreme Khāridjite. Every one who disobeyed his teachings or violated the commands of Islām, did not attend the religious assemblies on Fridays, drank wine or was present where there was music and song, passed as an infidel and incurred the penalty of death. His soldiers were also similarly punished if they absented themselves from the sermons which he was accustomed to preach every Monday and Thursday at his father's tomb.

Bibliography: ʿOmāra, in Kay, *Yaman, its mediaeval history* pp. 124—134, 161—165; Johannsen, *Historia Jemanae* pp. 143 *et seq.*

ʿALĪ B. MAIMŪN B. ABI BEKR AL-IDRĪSĪ AL-MAGHRIBĪ, a mystic of Morocco, a Berber by birth, though falsely called an ʿAlid, was born about 854 (1450). In his youth he is said to have been Emir of a *ḳabīla* of the Banū Rāshid on the Djebel Ghumāra, but he resigned this dignity since he could not bring about the prohibition of the use of wine among his people. In 901 (1495-1496) he left Fās (Fez), visited during his wanderings Damascus, Mecca, Ḥalab (Aleppo) and Brussa, finally settling at Damascus, where he died in 917 (1511).

He represented a temperate attitude in mysticism and combatted the excrescences of religious and social life which he had observed in the East, in his treatise *Bayān ghurbat al-Islām bi-wāsiṭat ṣinfai al-mutafaḳḳiha wa 'l-mutafeḳḳira min ahl Miṣr wa 'l-Shām wa-mā yalīhā min bilād al-Aʿdjām* (cf. Goldziher, in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xxviii. 293 *et seq.*). This is a work of his old age, which he began on the 10th of Muḥarram 916. For his mystical writings, among which a justification of Ibn ʿArabī deserves to be mentioned, see Brockelmann, *Gesch. d. arab. Litter.* ii. 124. — Cf. also Ṭāshköprüzāde, *al-Shaḳāʾiḳ al-Nuʿmānīya* (in the margin of Ibn Khallikān, Būlāḳ 1299) i. 540. (BROCKELMANN.)

ʿALĪ B. MAʿṢŪM. [See ʿALĪ KHĀN.]

ʿALĪ B. MUḤAMMED was the founder of the dynasty of the Ṣulaiḥides in Yemen. The son of a Sunnite ḳāḍī in the district of Ḥarāz in Yemen, he was won over to the Ismāʿīlite movement by an emissary of the Fāṭimides, while still of youthful years, and after the latter's death he himself began to enrol others secretly, his pilgrimage to Mecca affording him an excellent opportunity of so doing. In 429 (1037-1038), he occupied a strong position on the Masar, one of the loftiest mountain peaks of Ḥarāz, and after removing Nadjāḥ, the prince of Tihāma, by poison in 452 (1060), in the following year he sent an embassy to the Fāṭimide al-Mustanṣir, in order to obtain permission from him to come forward openly. After having been granted this, he conquered the whole of Yemen before the end of 455 (1063) and removed his residence to Ṣanʿāʾ; even in Mecca, whither he came in this year, he appointed one of the Sherīfs as ruler of the city. In 473 (1080-1081) or according to other accounts in 459 (1067) he was however unexpectedly attacked and murdered by a son of Nadjāḥ, Saʿīd al-Aḥwal. Cf. art. ṢULAIḤIDS.

Bibliography: ʿOmāra, in Kay, *Yaman, its mediaeval history* pp. 19—31, 145 *et seq.*; Ibn al-Athīr (ed. Tornb.) ii. 422 *et seq.*; x. 19, 38; Ibn Khallikān (ed. Wüstenf.) nº. 495; Johannsen, *Historia Jemanae* pp. 127 *et seq.*

ʿALĪ B. MUḤAMMED was the leader of the insurrection (end of the 3rd = 9th century) of the numerous negro (*zendj*) slaves, principally from the east coast of Africa (Zanzibar), who had been brought to the region of the lower Euphrates; whence he was generally named "Ṣāḥib al-zendj". The wily deceiver who, in Arabic sources, is often simply called *al-khabīth* (the rogue) sur-

ceeded in exciting to rebellion those slaves employed in the saltpetre mines, claiming to be of the house of the 'Alides and to have been called to their deliverance by visions and occult science. It was in this manner that he aroused the terrible negro insurrection which occupied the Caliph al-Mu'tamid for nearly 15 years (255—270 = 869—883). During this time 1½ million Muslims, or, according to some reports, as many as 2½ million lost their lives. It is at all events certain that the slaves, who succeeded in surprising the rich commercial cities of Obolla, Ahwāz, Baṣra and Wāsiṭ, plundering them and laying them waste, spared no one and butchered the entire population of the captured cities with the most horrible cruelties. Their leader sought to palliate this by making the principles of the Azraḳites [q. v.] his own. The extreme difficulty of putting these excesses to an end was due to the nature of the ground on which the insurrection took place. The swampy district, divided up by many canals, by the lower Euphrates offered the rebels numerous hiding-places that were difficult of access and which rendered a successful attack on the part of the troops sent out against them impossible, so that the latter more than once sustained heavy losses, and were obliged to retreat without having accomplished anything. It was not till al-Muwaffaḳ, the brother of the Caliph, took the management of the war into his own hands and proceeded systematically, shutting up the negroes in al-Mukhtāra, the fortress erected by them, that he succeeded, after a wearisome siege, in storming it and rendering their leader harmless. — That the latter was not an 'Alid is certain; but he was probably an Arab of the tribe of 'Abd al-Ḳais.

'ALĪ B. MUḤAMMED AL-ASH'ARĪ. [See AL-ASH'ARĪ.]

'ALĪ B. MUḤAMMED AL-ḲŪSHDJĪ, i. e. the "falconer" (so called because his father was the falconer of Ulugh-Beg [q. v.]), was a famous astronomer and grammarian, who died in 879 (1474). He studied at Samarḳand and afterwards went to Kermān, where he wrote a commentary on Naṣīr al-Dīn al-Ṭūsī's *Taḏjrīd al-kalām* for the Tīmūride Abū Sa'īd Gürgān. Later he returned to Samarḳand, finished the astronomical tables named after Ulugh-Beg and went to Tibriz to Uzun Ḥasan, the prince of the Aḳ-Ḳuyunlu, who sent him on an embassy of peace to the Ottoman Sultan Muḥammed II. The latter induced him to return to Constantinople after carrying out his mission and appointed him Professor at the Aya Sophia. Here he wrote astronomical treatises both in Persian and in Arabic. For his Arabic works cf. Brockelmann, *Gesch. d. arab. Litter.* ii. 234; Wöpcke, in *Journ. asiat.*, 5th series, xix. (1862), 120 *et seq.*; for his Persian productions Kraft's catalogue of mss. (p. 139), that of Dorn (p. 304) and that of Rieu (ii. 456) and Pertsch (Berlin; p. 351).

'ALĪ B. ṢĀLIḤ. [See WASI' 'ALISH.]

'ALĪ B. SHAMS AL-DĪN was the author of a history of Gīlān entitled *Ta'rīkh-i Khānī*, and comprising the years 880—920 (1475—1514). According to the introduction, the book would appear to have been written by Sultan Aḥmed Khān, but 'Alī seems to be the real author. The work has been edited by B. Dorn, *Muhammedanische Quellen zur Geschichte der südl. Küstenländer des kaspischen Meeres*, vol. ii. Cf. the preface of this volume, pp. 15 *et seq.*

'ALĪ B. YŪSUF B. TĀSHFĪN (477—537 = 1084—1142) was an Almoravid Sultan. He was one of the five sons of Yūsuf b. Tāshfīn, the founder of the Almoravid empire and dynasty; he was born at Ceuta (Sībta) in 477 (1084) and was the son of a Christian female slave named Ḳamra, not of Yūsuf's wife, the famous Zainab, who died in 464 (1071). It is noteworthy that this son — who seems to have been the eldest of Yūsuf's children — was born when his father was already 77 (lunar) years of age if the chronicles are to be believed, which are unanimous in giving the date of the father's birth as 400 (1009).

Being chosen by Yūsuf as his successor, 'Alī was proclaimed Sultan, first at Marrākush on the 1st Muḥarram 500 (September 2,1106), the day of his father's death, and on the third of the same month he assumed the title of *Amīr al-Muslimīn*, which was borne by all the Almoravide Sultans, while that of *Amīr al-Mu'minīn* was left to the 'Abbāside Caliphs, whose spiritual supremacy they recognized.

Once acknowledged in his capital, 'Alī sent messengers throughout the whole extent of the empire, to announce his accession to all the governors of cities and of provinces, Yaḥyā b. Abī alone, the Governor of Fez and cousin of the new monarch, neglected to pay homage; 'Alī marched against him, compelled him to submit and pardoned him; but he deprived him of his governorship. Following his father's political attitude, he continued the war in Spain against the Christians; it was more lucrative than expeditions in Africa and also more meritorious in the eyes of Muslims, and so the new king did not think of extending his sway further east than Bidjāya (Bougie).

In Africa the empire retained the limits which Yūsuf b. Tashfīn had fixed: it comprised the districts of the Tell included between the meridian of Bougie and the Atlantic Ocean; to the south-west it stretched to the oases and seems to have reached the Sudan; to this must be added the whole of Spain and the Balearic Isles.

Arab chroniclers are fond of representing 'Alī as abandoning the administration of his empire to the clergy and doing nothing without the advice of the *fuḳahā'* who surrounded him.

"None had access to the Prince of the Muslims, nor had any influence over him, save those who knew the science of jurisprudence, according to the Mālikite science. So the treatises of this school were then in favour and served as guides to the exclusion of all else, so much so that they even began to neglect the study of the Korān and the Traditions; no famous man of this period was entirely devoted to these two branches of study, and at that time any one who studied any branch of scholastic philosophy was treated as impious. The *faḳīhs* around the prince vilified this science, and declared that the first Muslims abhorred it, carefully avoiding everyone who had any taint thereof; it was, they said, a novelty introduced into religion, which often ruined the faith of its disciples. These and similar discourses roused in the mind of the prince a hatred of theology and of those who studied it, in such a manner that he sent out into the land strict prohibitions against

its study and threats against those who should be found to possess any treatise whatever on this subject. When the works of 'Abū Ḥāmid al-Ghazālī reached the West, the prince ordered them to be burned and threatened with pain of death and confiscation of property anyone who should be found to have any fragment of these books; the most severe commands were issued on this matter" ('Abd al-Wāḥid al-Marrākushī, transl. Fagnan, *Histoire des Almohades*, Algiers 1893, and *Revue africaine* xxxvi. 198-199).

The administration of cities and provinces was of two kinds: civil and military. The ḳāḍī was the supreme head; he was aided by a military governor. For Spain, see Dozy, *Hist. des Musulmans d'Espagne* iv. 248 *et seq.*

The reign of 'Alī was on the whole brilliant; but it was troubled by the foundation of the Almohade community by the Mahdī Ibn Tūmart (515 = 1121), who declared a Holy War against the Almoravids [see ALMOHADES]; and by the great expedition to the modern Morocco by the founder of the Almohade dynasty, 'Abd al-Mu'min. The end of this campaign was the victory of the Almohades; it was marked by the capture of Marrākush, which happened in 541 (1146-1147), about 4 years after the death of 'Alī.

'Alī, who died a natural death, had appointed his son Tāshfīn to succeed him; he himself seems to have abandoned the actual exercise of administrative functions in 533 (1138-1139), to devote himself to deeds of charity, living as a recluse, fasting and praying, if certain chroniclers are to be believed. [For bibliography, see ALMORAVIDS.]

(A. BEL.)

'ALĪ B. ẒĀFIR AL-AZDĪ ABU 'L-ḤASAN DJAMĀL AL-DĪN, Arabic historian and man of letters, was born in 567 (1171); he became his father's successor as Professor at the Madrasa al-Kāmiliya at Cairo, and later, as Wezīr, he entered the service of al-Malik al-Ashraf Muẓaffar al-Dīn Mūsā, who reigned in Mesopotamia from the year 607 (1210). His principal work is a history of the Islāmic dynasties *Kitāb al-duwal al-munḳaṭi'a*, in 4 volumes, of which only the last, dealing with the history of the Ḥamdānids, Sādjids, Ṭūlūnids, Ikhshīds, Fāṭimids and 'Abbāsids, until the year 622 (1225), is preserved (Pertsch, *Die arab. Hss. . . . zu Gotha* n°. 1555; Rieu, *Supplement* n°. 461); the history of the Sādjids has been published by Freytag in *Locmani Fabulae* (Bonn, 1823); that of the Ḥamdānids in *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* x. 439 *et seq.*; in Wüstenfeld's *Statthalter von Ägypten und Geschichte der Fatimiden* use has been made of this work for the Egyptian dynasties. In addition he wrote an adab-book *Kitāb badā'i' al-badā'ih*, a collection of jokes, witty replies, improvisations, etc., pr. Cairo 1287 and 1316, in the margin of the *Ma'āhid al-tanṣīṣ*. The *Dhail al-manāḳib al-nūriya*, written in 587 (1191), dedicated to Ṣalāḥ al-Dīn, and dealing with poetic comparisons, forms a supplement to it (Cp. H. Derenbourg, *Les mss. arabes de l'Escurial*, n°. 425).

'ALĪ AKBAR KHIṬĀ'Ī, author of a Persian book, *Khiṭā'ī Nāme*, on China, lived under the Sulṭāns Selīm I and Sulaimān. Schefer has published selections from the original (*Mélanges Orientaux*, p. 31 *et seq.*). The work was translated into Turkish under Murād III (1575—1595), with the title *Ḳānūn nāme-i Čīn u-Khiṭā* (lithogr. Constantinople 1270 = 1853).

Bibliography: Pertsch, *Verzeichn. d. türk. Hss. . . . zu Berlin* n°. 183.

'ALĪ 'AZĪZ GIRIDLI, Turkish novellist, a native of Crete, died in 1213 (1798-1799). He composed three *Mukhaiyalāt* (Reveries), one of which was translated by Gibb in 1884, under the title *The Story of Jewād*. Cp. Gibb, *History of the Ottoman poetry* v. 13.

'ALĪ BEY (al-Ḥādjdj 'Alī Bey b. 'Othmān Bey al-'Abbāsī), pseudonym of the well-known traveller Badia y Leblich. See Seetzen, *Reisen* iii. 373.

'ALĪ BEY, famous for his successful revolt in Egypt against the Sublime Porte in 1185 (1771), was a Caucasian by birth. According to his contemporary biographer Lusignan, he was born in the year 1728 and named Yūsuf by his father David, a priest of the Greek Church. At the age of thirteen, i. e. in 1741, he is said to have fallen into the hands of brigands who sold him to a certain merchant named Aḥmed. This man, soon after, is said to have brought him to Egypt where he was transferred to Ibrāhīm Katkhudā who immediately had him circumcised and renamed 'Alī. 'Alī was then put under the care of a tutor whose duty it was to instruct the youth in reading, writing and the recitation of the Ḳor'ān. As he was an apt pupil and showed signs of genius, Ibrāhīm at the end of eighteen months made him one of his domestics. By the year 1750 he advanced from the humblest position to that of *kāshif*, enjoying the complete confidence of his master. In the same year, Ibrāhīm was obliged to accompany the *ḥadjdj* caravan as emīr. 'Alī, who went with him on this journey, distinguished himself both on the way to Mecca and return home by repelling the attacks of marauding Arabs, thus winning for himself the nickname of Djinn 'Alī and a caftan or robe of honour. Ibrāhīm thereupon took steps to have his favorite, whom he had granted his liberty some time before, advanced to the rank of bey (Lusignan uses the term as governor of a province, *sandjaḳ*), among twenty-four of whom Egypt was divided and who formed the dīwān or governing body under the Pasha at Cairo. This, after some opposition, was finally accomplished, but Ibrāhīm Katkhudā thus made an enemy of one of the Beys named Ibrāhīm whose party later in 1758 put him to death. The chronology of these events given by Lusignan does not agree with that of al-Djabartī. According to this author, who in turn varies from Marcel and Volney, Ibrāhīm Katkhudā commanded the pilgrim caravan in 1151 (1738), in the year 1166 (1752) he dispatched another under 'Alī Bey and died a natural death in 1168 (1754), Djinn 'Alī only receiving a *sandjaḳ* later.

However this may be, the biographers agree that the period of 'Alī's life following his master's death was a strenuous one. Continually busied in taking part in the petty squabbles of the beys, 'Alī did not fail to strengthen his power by purchasing numerous slaves and elevating them to high positions, so that finally in 1177 (1763) 'Abd al-Raḥmān Bey, the son of his former master, recognizing that 'Alī's good will and assistance

was necessary in order to retain his position, proposed that he should be made their leader, the shaikh al-balad or mayor of Cairo, to which all agreed. 'Alī's first act after leading the *hadjdj* caravan was to elevate his mamlūk Muḥammed al-Khāzandār, likewise known as Abū Dhahab, to the rank of Bey and to exile 'Abd al-Raḥmān and numerous others. Of these, Ṣāliḥ Bey, not content with his lot, gathered other exiles about him and established himself in Upper Egypt. Here he was attacked by 'Alī's forces under Husain Bey al-Kashkash and forced to retreat. Husain had no sooner gained this victory than he was sent into exile. Instead of following the instructions contained in the mandate of exile and going to Lower Egypt, he returned to Cairo. From this moment 'Alī and Husain plotted to get rid of each other; the strife finally culminated in 'Alī being exiled to Syria in 1179 (1765-1766). For two months he stayed at Jerusalem. At the expiration of this time he betook himself to 'Akkā where he became acquainted with the Shaikh 'Omar al-Zāhir who later was to become his ally. Thence 'Alī suddenly returned to Cairo where he forced the beys to exile him to al-Nūsāi in Lower Egypt, whence later he was removed to Asyūṭ. At this place he succeeded in mustering a large force of exiles and Banū Hawāra, and with some difficulty won over Ṣāliḥ Bey, his former enemy, by promising him Upper Egypt if he ever regained control of Egypt again. This he finally accomplished by defeating the forces of Husain Bey Kashkash. On the 30th of Djumādā I 1181 (24th October 1767) he entered Cairo and was reinstated as shaikh al-balad. The defeated leaders, especially Husain Bey and Khalīl, now levied forces at Ghazza, whither they had fled, and invaded Egypt in 1182 (1768). Their attempt was futile. Surrounded by 'Alī's forces under Abū Dhahab, they were forced to ask for a truce and induced to believe that Abū Dhahab would act as intermediary for them. Upon their arrival at his house for a conference, they were assassinated. Ṣāliḥ Bey's assistance was rewarded in a similar manner.

In the mean time, the strained relations between Turkey and Russia had resulted in the declaration of war by the sultan Muṣṭafā; and at the end of Radjab 1182 (November 1768), a letter ordering the departure of troops arrived from Constantinople. While employed in the levying of these troops, 'Alī's enemies, among whom was the pasha Muḥammed, wrote to Muṣṭafā that the levied forces were in reality for the Russians. 'Alī, informed of this and the fact that the sultan had demanded his head, assembled the beys of whom sixteen owed their position to him and proposed an open revolt. The dīwān immediately agreed and the pasha was expelled. Thereupon an invitation to join was sent to Zāhir of 'Akkā. This the shaikh accepted and rendered valuable aid in repelling the pasha of Damascus whom the Sultan had dispatched against 'Alī. The Egyptian attack was first directed under the leadership of Abū Dhahab against Mekka and the neighbouring territory to the North. Mekka itself was captured in Rabī' I 1184 (July 1770) and 'Abd Allāh made sherif instead of Aḥmed, the brother of sherif Musā'id, who had just died. In return for this, 'Abd Allāh gave 'Alī the title of "Sultan of Egypt and the two Seas". In the following year (1185 = 1771), a much greater conquest, that of Palestine and Syria, was undertaken by Abū Dhahab, an alliance being made with count Orloff the commander of the Russian troops. With remarkable celerity Abū Dhahab accomplished his task advancing as far as Damascus after capturing Jaffa and the coast north to Ḥalab (Aleppo). 'Alī, elated at the success of his general, commanded him to carry his conquest as far as possible. Abū Dhahab, however, perceiving that his officers were tired of waging war and secretly harbouring designs to become ruler of Egypt, called them to a conference and persuaded them to return home with him. Upon his unexpected reappearance, 'Alī endeavoured to have him put out of the way. Abū Dhahab, well aware of the fate in store for him, fled to Upper Egypt where he collected an army. Against these Ismā'īl Bey was dispatched; but, upon meeting the enemy, he deserted to them. A second expedition in Muḥarram 1186 (April 1772) met with overwhelming defeat. 'Alī was once more forced to flee to Syria. Here he remained for almost a year capturing Sidon and besieging Jaffa with his friend Shaikh Zāhir and some Russian battle-ships. In 1187 (1773), led to believe that he would be welcomed back at Cairo, he mustered as many troops as possible, 6310 men in all, and set out for Egypt by way of Ghazza. On the 8th of Ṣafar (1st of May; Luisigan: 13th of April = 20th of Muḥarram), near Ṣāliḥiya, Abū Dhahab met 'Alī's forces; victory for a short time favoured the latter, but the infantry deserting, the invading army was put to flight. 'Alī, wounded and crippled, was left on the field of battle. In this condition he was taken prisoner and transported to Cairo, where he either died of his wounds or was poisoned to death seven days later, the 15th of Ṣafar 1187 (8th of May 1773; Luisigan: 20th of April = 27th of Muḥarram) and was buried with his predecessors in the Karāfa at Cairo.

'ALĪ ČELEBI. [See Wāsi' 'Alīsi.]

'ALĪ EFENDI. [See 'Alī.]

'ALĪ EKBER. [See 'Alī Akbar.]

'ALĪ ILĀHĪ (also 'Aliyu 'ilāhī, i. e. "deifier of 'Alī"), a sect of extreme Shī'ites (*ghulāt*), which is even now widely diffused in Persia, and whose name is due to the fact that they consider 'Alī an incarnation of God. This has caused them to be identified with the Nuṣairis, but wrongly, according to Zhukofski and Dussaud. They give themselves the appellation of Ahl-i

Ḥaḳḳ. They do not frequent the mosques, nor recognize any ritual uncleanness; they eat pork and drink wine; they do not permit polygamy. At their wedding festivities, they have round dances, in which the women, who are unveiled, join hands with the men. Divorce is not allowed. In their cosmogony, the creation is the work of five emanations from the godhead, i. e. five powers: Pīr Pādi̲s̲h̲ahem, Pīr Benyāmīn, Pīr Dāwūd, Pīr Rehber, Pīr Mūsā. They have a kind of communion, called *K̲h̲idmet*, which consists in sharing and eating in common sugar candy, a sheep, and on solemn occasions, an ox; in the case of the sheep, the service is named *ḳurbān*, and in that of the ox, *gāw-ḳurbān*. Man is held by them to be swayed by two moral forces, *'aḳl*, "reason", and *nefs*, "lust". The hereditary head of their religion bears the title of *pīr*, he is represented by *delīls* (*k̲h̲ādim*) who conduct the ritual ceremonies, and by *k̲h̲alīfa's*, who are charged with the task of distributing the portions of the communion. They are divided into eight sects: Ibrāhīmī, Dāwūdī, Mīrī, Sulṭān-Baburī, K̲h̲āmūs̲h̲ī, Yādgārī, S̲h̲āh-i eyāzī, K̲h̲ānta̲s̲h̲ī. They claim that Bābā Ṭāhir-i 'Uryān, his sister Bībī Fāṭima, and the Saiyid al-Ḥimyarī, belonged to their religion. They possess books written in a Kurdish dialect, of which the principal one is said to be entitled *Kitāb-i Serdjemā'*, or *Kitāb-i Čahār-Malik*. Their priests practise juggling, and sit on burning coals without suffering any harm. Their head quarters, in Persia, are at Kirmāns̲h̲āh; they are also numerous in India. Cp. the artt. BEKTĀS̲H̲Ī and ḲIZIL-BĀS̲H̲ (sect). — The other S̲h̲ī'ites give them the nickname of K̲h̲orūs̲h̲-kus̲h̲ (cock-killers), because they have the custom of sacrificing a cock at the end of the three day's fast which they observe.

'ALĪ K̲H̲ĀN. [See MAHDĪ 'ALĪ K̲H̲ĀN.]

'ALĪ K̲H̲ĀN AḤMED B. MUḤAMMED MA'-ṢŪM B. IBRĀHĪM ṢADR AL-DĪN AL-ḤUSAINĪ AL-MADANĪ, author of biographical works and a book of travel, was born about 1053 (1642) at Medina. He was a descendant of G̲h̲iyāth al-Dīn [q. v.]. In 1083 (1672), he followed his father to Ḥaidarābād, whither the latter had been summoned in 1054 (1644) by Prince S̲h̲āhins̲h̲āh 'Abd Allāh b. Muḥammed Ḳuṭbs̲h̲āh. When 'Alī's father died in 1082 (1671), a year after his patron, 'Alī himself incurred the displeasure of the new Sulṭān Abu 'l-Ḥasan, and was thrown into prison. He succeeded, however, in escaping to the court of Awrangzīb, who named him K̲h̲ān and Dīwānī at Burhānpūr. He died at S̲h̲īrāz in 1104 (1692).

In 1074 (1663) he wrote a description of his journey from Mekka to Ḥaidarābād, entitled *Sulwat al-g̲h̲arīb wa-uswat al-arīb* (Ahlwardt, *Verz. d. arab. Hss. d. Königl. Bibl. zu Berlin* nº. 6136). He is best known for his work on the poets of the 11th century of the Muḥammedan era; this was written as a supplement to the *Raiḥāna* of al-K̲h̲afādjī (died 1069 = 1658; q. v.), in 1082 (1671), under the title *Sulāfat al-'aṣr fī maḥāsin ahl al-'aṣr* (printed Cairo 1324). As a supplement to the commentary on his *Badī'iya*, he gives biographies of writers on rhetoric. Lastly he wrote a work on the classes of the S̲h̲ī'ite Imāmites.

Bibliography: *Ḥadīḳat al-'ālam* (lithogr. Ḥaidarābād 1266) i. 363—365 (quoted by Rieu, *Supplement* nº. 990); Wüstenfeld, *Die Geschichtschreiber der Araber* p. 589; Brockelmann, *Gesch. d. arab. Litter.* ii. 421. (BROCKELMANN.)

'ALĪ MERDĀN is a name borne by three important personages:

1. Name given by the S̲h̲ī'ites to 'Alī, abbreviated from *S̲h̲āh-i merdān*, "king of men".

2. A certain K̲h̲aladj king of Lak̲h̲naw̲atī, whose honorific title was 'Alā' al-Dīn; accused of the assassination of his benefactor Muḥammed, son of Bak̲h̲tiyār, he fled, and sought the protection of Ḳuṭb al-Dīn Aibeg, the ruler of Dehlī, whom he accompanied to G̲h̲azna. During the hasty retreat of his protector, he was taken prisoner by Turks, the partisans of Tādj al-Dīn Yoldūz, and taken to Kās̲h̲g̲h̲ar, whence he escaped. Aibeg invested him with the fief of Lak̲h̲nawatī (Gawr); but at the death of his overlord, he declared himself to be independent, massacred most of the K̲h̲aladj emirs, extended his rule in India, and conceived vast plans of conquest, but his cruelty brought about a conspiracy which caused his death at the close of a reign of about two years, 604-605 (1207-1208). These dates are uncertain.

3. A Bak̲h̲tiyārī k̲h̲ān of Luristān, Persian general in the service of S̲h̲āh-Ṭahmāsp, who fought against the Ottomans (1136 = 1723), and commanded the Persian army at the battle of Kūrīdjān (13 Rabī' I 1144 = 15 Sept. 1731), under Ṭahmāsp-Ḳulī-K̲h̲ān, who retained him in his office. In 1164 (1750), he captured Iṣpahān, and, together with Karīm-k̲h̲ān Zand, he established the Ṣafawide S̲h̲āh Ismā'īl III; afterwards he quarrelled with Karīm, was defeated by him on the banks of the Karun, established a puppet-king at Iṣpahān under the name of Sulṭān Ḥusain, fled before Karīm, and was assassinated by Muḥammed-k̲h̲ān Zand (1165 = 1751).

(CL. HUART.)

'ALĪ PASHA is a name and title borne by numerous statesmen and generals of the Ottoman Empire. — 1. Vizier and general of Murād I K̲h̲udāwendigār, rejected the proposals of peace made by 'Alā' al-Dīn, prince of Ḳaramān, at the time of the advance of the Ottomans on Ḳonya, was then ordered to invade Bulgaria; he captured Tirnovo, Shumla and Nicopolis, where the Kral Sisman capitulated (791 = 1389); chosen as minister by Bāyazīd I, he aided the latter to indulge in his shameful debauches, while at the same time he introduced improvements in the administration;

he obtained from the Sultan the appointment of fixed emoluments for judges, and caused a new coinage to be issued. He was charged with the execution of Theodore Palaeologus, brother of the Emperor Manuel, and went to besiege Constantinople in order to compel the Emperor to appear before the Ottoman Sultan, his over-lord; but he was won over by the bribes of John, the nephew and successor of Manuel, whom he left in possession of the town (799 = 1396). — 2. Eunuch and beilerbei of Roumelia, received orders from Bayazîd II to invade Moldavia, whose voivode had attempted to retake Ak Kermân (891 = 1486); in the same year, after the defeat of the Ottoman troops fighting against the Egyptians in Cilicia, he was ordered to rejoin the Grand Wezîr Dâwûd Pasha, and assist in the campaign; he took the field in 893 (1488), captured 'Ain Zarba and other strongholds, lost the battle of Agha Čairi against Öz-beg (8 Ramadân 894 = 16 August 1489) and was deprived of his command; in 897 (1492) he was expelled from Transylvania and defeated by Stephen of Thelegd at the entrance of the Red Tower Pass; in spite of these disasters, he succeeded Masîh Pasha as Grand Wezîr, and later Hersek Ahmed Pasha (909 = 1503); being a partisan of Ahmed, son of Bayazîd, he wished to aid his accession to the throne; and to this end he defeated the troops of Salîm I, Ahmed's rival, at Čorlu (8 Djumâdâ I 917 = 3 August 1511); he took command of the army in Asia Minor raised to subdue the rebel Shâh-kulî, surnamed Shaitân-kulî, and perished at the same time as the latter in the battle of Sârimsaklîk (Djumâdâ I 917 = August 1511). He was the first Grand Wezîr to die on the field of battle; an enlightened patron of learning, he assembled once a month in his palace scholars and poets, and acted generously towards them; he founded two mosques and an academy; the poet Masîhî has celebrated him in an elegy and the Persian Idrîs on whom he bestowed the title of Historiographer (*waḳâ'i' nuwîs*), dedicated to him his history. — 3. Governor of Buda (Ofen), successor to Kâsim Pasha, marched to the help of Khiḍr Bey, who was being besieged in Szegedin by the haiduks, and delivered him, as the result of which he became the object of the Sultan Sulaimân's attention (959 = 1552); he afterwards captured Weszprim (Weissbrunn), the castle of Dregely, and other strong positions, but was unsuccessful at Eger (Erlau), in consequence of which he fell into disfavour. He was later reinstated at Buda, besieged Szigeth without success (963 = 1556), was defeated near Babocsa, and shortly afterwards died of grief on that account. He was an eunuch, and very ugly, but was a man of great courage and of unusual military ability. — 4. 'Alî Pasha, surnamed Semiz (the fat) because of his corpulence, governor of Egypt, was the son of a Dalmatian from Brazza, had been enrolled in the host of the janissaries; he became their agha, and governed Egypt for four years; he succeeded Rustem Pasha as Grand Wezîr, arranged the treaty of Prague with the Austrian ambassador Busbek on June 1, 1562; he died in 1565. He has become famous for his witty sallies. — 5. 'Alî Pasha, surnamed Güzeldje (the handsome) and Čelebî (the elegant), son of Ahmed of Kos, was successively Sandjak-Bey of Damietta, Beilerbei of Yemen and of Tunis, Wezîr entrusted with the administration of Cyprus and of Morea, afterwards Kapûdân-Pasha, and he succeeded Öküz Muhammed as Grand Wezîr; he had great influence over Sultan 'Othmân II, and made himself conspicuous by his harsh treatment of the representatives of Christian powers; he ordered the Venetian interpreter Borisi, who demanded the restitution of a galley, to be strangled (Feb. 1620); he extorted money from the Greek contractor Scarlati, from the Patriarch, and from numerous Muslims, as the result of which he was able to offer his lord magnificent presents; he died of calculus on March 9, 1621. — 6. 'Alî Pasha, surnamed Sürme-li (the man with collyrium), a native of Dimetoka, occupied in succession various posts in the treasury and finally became first Defterdâr; afterwards in the quality of Wezîr, he governed Cyprus and Tripoli in Syria and lastly was chosen as Grand Wezîr by Sultan Ahmed II (16 Radjab 1105 = 12 March 1694). He carried on the campaign against Hungary, which proved unsuccessful. He arranged that a council of the ministers should be held on four days every week, and changed the Egyptian crown-lands which had previously been let on lease and burdened with a yearly rent (*muḳâṭa'a*), into fiefs on a life tenure (*mâlikâne*). The mutiny of the janissaries which marked the beginning of the reign of Mustafâ II cost him his life (1106 = 1695); his prodigality had ruined him: the confiscation of his property only produced a ridiculously small sum. — 7. Čorlili 'Alî Pasha, the son of a peasant (Paul Lucas, *2e Voyage* I. 116) or of a barber (Cantemir, La Motraye) from Čorlu, first page (içoghlan), then čokadar, (pall-bearer) silihdâr (sword-bearer), Wezîr, ka'im-maḳâm (chief officer of a Ḳaza), Governor of Tripoli (Syria), then once more silihdâr, was appointed to succeed Baltadji Muhammed as Grand Wezîr by Ahmed III (19 Muharram 1118 = May 1706); the kidnapping of Avedik, the Armenian Patriarch who was hostile to the Catholics from Chio, by Ferriol, the French Ambassador, occasioned persecutions of the Catholic Armenians and the Jesuits of Galata, who were accused of complicity in the plot; 'Alî Pasha attempted to restrict the power of the Shaikh al-Islâm, and to reform the administration; he instituted the supervision of the expenses of the imperial kitchens, fixed the number of the *eşkerîs* (soldiers released from military service in times of war); he built vessels, cast cannons and anchors, for which he established a special foundry at the arsenal; he built the mosque which stands before the Bagnio and repaired the aqueduct of Halka-lî, at Constantinople. He married one of the daughters of the deposed Sultan Mustafâ II. As he wished for war with Russia, he promised Charles XII of Sweden the assistance of the khân of the Crimea in consequence of which he ventured upon the battle of Poltawa (July 8, 1709); the difficulties created Sublime Porte by the stay of the king of Sweden at Bender for the annoyed the Sultan, who removed 'Alî Pasha from office (18 Rabî' II 1122 = June 16, 1710) and banished him as Governor of Kaffa; he died at Mitylene in 1123 (1711). — 8. Hekimzâde (Hekim oghlû) 'Alî Pasha, son of Nûh Efendi, a Venetian renegade and physician to Mustafâ II, born 15 Sha'bân 1100 (June 4, 1689); Ser'asker under the Sultan Mahmûd I, in the campaign against Persia; marched on Hamadhân; defeated Shâh Tahmasp III on the plain of Kurdjân (13 Rabî' I 1144 = Sept. 15, 1731); captured

Urmiya (15 Djumâdâ I = Nov. 15), and Tibriz; was elected Grand Wezîr when peace was concluded (15 Ramaḍân = March 12, 1732); improved the coinage; awarded Bonneval the title of General of Bombardiers (*kumbaradji*), with the insignia of the two horse tails (*tugh*); built a large mosque at Constantinople; was dismissed from office, in spite of his wise, considerate and beneficent administration, because he had expressed the wish that he himself might command the army sent out against Persia (22 Ṣafar 1148 = July 14, 1735); was appointed Governor of Bosnia; shut himself up in Trawnik in order to check the Austrian generals who had invaded the province, ordered the inhabitants to be enrolled en masse; fought Field-Marshal Hildburghausen beneath the walls of Banjaluka, and relieved the town (August 4, 1737); reduced the Albanian insurgents; ravaged the country between the Kulpa and the Unna; was re-instated as Grand Wezîr to succeed al-Ḥâdjdj Aḥmed (1 Ṣafar 1155 = April 7, 1742) and once more deposed in the following year, when it became known that the Persians had marched on Baghdâd and Baṣra; was elected Governor of Aleppo (1158 = 1745), and chosen to command, as Ser'asker, the troops sent out to Ḳars, against Nâdir-Shâh; the peace which shortly followed rendered his mission useless. On the accession of 'Othmân III, he was for the third time appointed Grand Wezîr, while he was Governor of Kütahia (4 Djumâdâ I 1168 = Feb. 16, 1755), and dismissed from office fifty-three days later in consequence, as was alleged, of a terrible conflagration, but in reality on account of his quarrel with the favourite Silîḥdâr of the Sultan; imprisoned in the tower of Leander (Ḳiṣḳalesi), then banished to Famagusta, and later sent to Egypt as Governor; he found this province in a state of absolute anarchy, and when he was recalled (1170 = 1757), he was permitted to settle down in any district of Asia Minor; he died in the first year of the reign of Muṣṭafâ III (1171 = 1758). He left behind him some mystical hymns (Wâṣif, 135—137; Hammer-Purgstall, *Osm. Dichtk.* iv. 177). — 9. 'Arabadji 'Alî Pasha, a native of Okhri, Ḳâ'im-maḳâm of the Imperial Stirrup, was appointed to the post of Grand Wezîr by Sulaimân II, after the death of Muṣṭafâ Köprülü at the battle of Slankamen (Aug. 19, 1691); punished Muḥammed Egirli, the Agha of the janissaries, by dismissing him from office, and ordering him to be driven home on a chariot drawn by oxen (whence the surname of 'Arabadji given him by the people, — "coach-man"); when he wished to use the same procedure with Ismâ'îl the Ḳizlar-agha, Neṣîr, the latter's successor, obtained his discharge and his exile to Rhodes (5 Radjab 1103 = March 23, 1692).

Bibliography: 'Othmân-zâde, *Ḥadîḳat al-wuzarâ'* (Constantinople 1271) pp. 20, 31, 51, 65, 118, 121; 1st *dhail* pp. 10, 19, 42, 83; 2nd *dhail* p. 39; Hammer-Purgstall, *Gesch. des osman. Reiches*, see Index. (Cl. Huart.)

'ALÎ PASHA Dâmâd, Turkish statesman and general born at the village of Seloz, on the banks of Lake Nicea, succeeded the Abaze Sulaimân as Silîḥdâr; became the favourite of Sultan Aḥmed III, who gave him his daughter Fâṭima, then aged four years, in marriage (6 Rabî' I 1121 = May 16, 1709); succeeded in bringing about the dismissal from office of his enemy, 'Alî Pâsha of Čorlu, and the appointment in his stead of the incapable No'mân Köprülü, afterwards of Baltadji Muḥammed Pasha; the Ḳapûdân-pasha, Ibrâhîm Khodja, who had been appointed Grand Wezîr, plotted to assassinate him, but was detected and 'Alî Pasha succeeded him in the highest dignity of the Empire (1 Rabî' II, 1125 = April 27, 1713). He concluded the Peace of Adrianople with the Russians, by which the frontier between the Samara and the Orel was fixed (Sept. 1714); he sent 'Abd Allâh Pasha Muḥsinzâde to Egypt, to put an end to the revolt of Ḳaiṭas-Beg; he commanded the Ottoman troops against the Venetians in the Morean Campaign (1127 = 1715), crushed the Mainotes, and captured Modon; he re-established at Ghalaṭa-Serâi the school of the Ič-oghlâns, maintained the established order of promotion in the college of the 'Ulamâ' and organised the postal service and administration of Anatolia. An alliance between Austria and Venice and a letter sent by Prince Eugene demanding the entire fulfilment of the treaty of Carlowicz, decided him to declare war (1128 = 1716). He fell, struck by a bullet on the forehead, during the battle of Peterwardein, when the Turks were already completely routed (Aug. 5). He was interred at Belgrade; seventy years later, Loudon conveyed his coffin to Vienna, where it remains to-day, in the forest of Hadersdorf (*Fundgruben des Orients* v. 331; Fleischer, *Kleinere Schriften* iii. 609 *et seq.*). He was the patron of the historian Râshid.

Bibliography: Râshid, *Ta'rîkh* ii. 161; Hammer-Purgstall, *Gesch. des osman. Reiches*, vii, 166, 176, 182 *et seq.* 207 *et seq.*; Jouannin and van Gaver, *Turquie* pp. 324—327. (Cl. Huart.)

'ALÎ PASHA Mubârak, officer of the Egyptian engineer corps, statesman, and man of letters, was born in 1239 (1823-1824) at New Berumbâl (Daḳahliye, Nile Delta). Though of humble origin and of the peasant class, his industry, ambition and ability enabled him to become a pupil of different schools. It was decisive for his later career that, in 1251 (1835-1836), he went to the school of Ḳaṣr al-'Ainî, afterwards (in 1252) to that of Abû Za'bal at Cairo, and that in 1260 (1844) he was sent to Paris with the "Mission égyptienne". In this city, and at the artillery-school at Metz, he perfected himself both as an officer, and in the duties of an engineer, which had already been the object of his ambition in his native country. On his return to Egypt (in 1266 = 1849-50) he won the favour of 'Abbâs, and gained high positions; in the Crimean War, he was actively engaged at Constantinople, in the Crimea, and at Gümüshkhâne; under Sa'îd he resigned, but under Ismâ'îl he occupied one after another almost all the ministerial posts, and other responsible offices. Everywhere he introduced reforms, although acting with well-meant zeal rather than deep understanding. To him is due the establishment of printing-offices, and the printing of school-books, especially technical ones, the work at the barrage near Cairo (*al-Ḳanâṭir al-Khairîya*), and at the Conference of Suez, the construction of railways, and irrigation-works, the foundation of the "Dâr al-'Ulûm", which may be described as an "École normale", and of the "Bibliothèque Khédiviale" (1870). In matters of education he was fortunate enough to obtain the advice and co-operation of that admirable Swiss

pedagogue, Ed. Dor Bey (who died in 1880). In June 1888, in the Riyāḍ Pasha Ministry, he undertook for the last time the charge of public instruction. The result more and more called to remembrance the saying of Sa'īd Pasha's day: "Instruction publique — destruction publique". For as regards administrative and political morality, he was deeply stuck in the morass of the earlier period, which reached its zenith and fell to ruin under Ismā'īl Pasha. There always stuck to him something of the naive cynicism of the fellāḥ. The vigorous measures of Sir (afterwards Lord) Alfred Milner sufficed in bringing about his resignation (Spring 1891). He then lived as a private person at Cairo, and died on the 5th Djumādā I 1311 (November 14, 1893). For the appreciation of his personality and his works, reference can be made to *Zeitschr. d. Deutsch. Morgenl. Gesellsch.* xlvii, 720 *et seq.*

His earliest publications mostly treat of education, as for example the *Ta'rīf al-handasa*, which appeared in 1858, and the *Ta'rīf al-afhām fī tarbiyat al-adjsām* (Cairo 1289). The question of irrigation is dealt with in: *Nukhbat al-fikr fī tadbīr Nīl Miṣr* (Cairo 1208). I am not acquainted with his *'Alam al-dīn* (Alexandria 1299; cp. his *Khiṭaṭ* xiii. 50, *u.*). Of his metrological studies only Part I appeared, under the title: *al-Mīzān fī 'l-aḳyisa wa 'l-awzān* (1309). During his last period of office he published a reading-book: *Ṭarīḳ al-hidjā' wa 'l-tamrīn*. His principal work, *al-Khiṭaṭ al-djadīda al-tawfīḳiyya*, appeared in 1306 (1888-1889); it is intended to be a continuation of al-Maḳrīzī's *Khiṭaṭ*; cp. *Oriental. Bibliogr.* iii. nº. 1036; Goldziher, in the *Wiener Zeitschr. f. d. Kunde des Morgenl.* iv. 347 *et seq.* I have already discussed elsewhere (*l. c.*) the sources of the work. It is incorrect to maintain (Brockelmann, *Gesch. d. arab. Litter.* ii. 482), that his topographical data are for the most part based on his own observation. The usefulness of the compilation should not cause us to forget the fact that we are dealing with a work which is the result of the collaboration of the most varied talents, and in which every statement must be accepted with caution. The *Khiṭaṭ* also contain his autobiography (ix. 37—61, s. v. *Birinbāl*).

(K. Vollers.)

'ALĪ PASHA Muhammed Emīn, Turkish diplomatist and statesman, was born at Constantinople in Rabī' I 1230 (Feb. 1815). He was a pupil of Rashīd Pasha, chargé d'affaires at London (1838), ambassador (1841), president of the *Tanẓīmāt* (reform) Wezīr Council, Grand (1855), plenipotentiary at the Congress of Paris (1856) while the *Khaṭṭ-i humāyūn* was being proclaimed (Feb. 18), the result of his efforts and those of Fu'ād Pasha; Grand Wezīr 1857 and 1861, and also in 1867; went to Crete in person to treat with the insurgents (Oct. 4), but without success, and he set to work to introduce some more reforms, such as: the extension of the right of succession in the collateral line to the state lands and to the customary *waḳf*; the admission of foreigners to the possession of real estate in the whole territory of the Empire, excepting Ḥidjāz and Yemen; the creation of a Council of State, of the College of Galata-Serai, and of a High Court of Justice; the introduction of the metric system for weights and measures. The title of Khedive was granted to Ismā'īl Pasha, Viceroy of Egypt (1867); the latter's desire for independence led to an energetic intervention on the part of 'Alī Pasha: on his ultimatum (Aug. 29, 1869), the Khedive delivered up his fleet of iron-clads, reduced the effective force of his land troops, undertook to send every year to the Sublime Porte a statement of his financial position, and to contract no loans or sign treaties without the Sulṭān's authorisation. Under his government, the Sublime Porte protested in vain against the decisions of the London Conference (May 13, 1871), which cancelled the clauses of the treaty of Paris, by which the Black Sea was declared neutral, to Russia's advantage. 'Alī Pasha died on Sept. 18, 1871, leaving behind him the reputation of an honourable man and of a convinced reformer; it was by his ability and firmness that he was able to exert considerable influence over 'Abd al-'Azīz, whose suspicious and despotic character rendered the task a difficult one.

'ALĪ PASHA Rizwān Begowić. [See rizwān begowić.]

'ALĪ al-RIḌĀ b. Mūsā b. Dja'far, eighth Imām of the Shī'ahs, born at Medina in 148 (765) or 153 (770). The 'Abbāsid Caliph al-Ma'mūn, while he was at Merw in 201 (816), sent two messengers to summon him; he constituted him heir presumptive to the caliphate, and gave him the surname of *Riḍā min āl Muḥammad* (the Well-Beloved of the family of Muḥammed); he ordered his troops to change the black uniform of the 'Abbāsids for the green one of the 'Alids; he also altered the colour of the flags. He had chosen him on account of his piety and of his learning, excluding the 'Abbāsids (2 Ramaḍān 201 = March 24, 817). This designation was the cause of many uprisings, notably that of the inhabitants of Baghdād, who proclaimed Ibrāhīm b. al-Mahdī as Caliph. 'Alī informed al-Ma'mūn of the disorders which had been taking place among the people since the death of his brother, and which had been hidden from his knowledge by his Minister, Faḍl b. Sahl. On the assassination of the latter at Sarakhs, perhaps at the Caliph's instigation, al-Ma'mūn left Merw, and went to Ṭūs, in order to spend a short time by the tomb of Hārūn al-Rashīd, his father. It was then that 'Alī suddenly died in the same city (in the quarter of Nūḳān) at the end of Ṣafar 203 (early in Sept., 818), from a surfeit of grapes; his followers have always affirmed that he was poisoned, and died after a three days' illness, after eating a pomegranate offered him by 'Alī b. Hishām. He was 44 years, 49 years six months, or 53 years of age, according to the date that is adopted for his birth. The Caliph mourned him deeply, followed his bier, and said the last prayers. He was interred close to the tomb of al-Rashīd, and his mausoleum (Mashhed) has given its name to the present capital of Persian Khorāsān, which has supplanted the city of Ṭūs (Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, and Madjdī, *Zīnat al-madjālis*, in Barbier de Meynard's *Dictionn. de la Perse* p. 306, note 1; Ibn Baṭṭūṭa iii. 78).

Shī'ah dogmatics. — Numerous miracles are attributed to him: rain fell in answer to his prayers, and he indicated for which province every rain-cloud was destined; he caused a gold coin to come from a rock by rubbing it with a piece of wood; he informed 'Abd Allāh b. Mughīra of a prayer which the latter had made at Mecca; he knew what passed in the hearts of men and gave many examples thereof; he knew beforehand the hour of men's deaths. In mid-winter he made the grass grow in a garden and the grapes ripen. The third hour of the day is sacred to him; his intercession is invoked for a favourable journey by land or sea, and in order to be delivered from the sufferings of exile (*Djannāt al-khulūd*, tab. XV).

Bibliography: Ṭabarī iii. 1029; Mas'ūdī, *Murūdj* (Paris) vii. 3, 61; Ya'ḳūbī (ed. Houtsma) ii. 550; Ibn al-Athīr (ed. Tornb.) vi. 249.

(CL. HUART).

'ALĪ SHĪR. [See NEWĀ'Ī.]

'ALĪ-TEGĪN, a prince of Transoxiana (Mā warā' al-Nahr) of the house of the Ilek-Khāns. Nothing is known of the details of his genealogical relationships with the other princes of this house; according to Ibn al-Athīr (ed. Tornb. ix. 523), he was a brother of the conqueror of Mā warā' al-Nahr (Naṣr b. 'Alī), yet this statement (which seems to have originated as a mere interpolation) must probably be rejected. The name 'Alī b. 'Alī is not mentioned on any coins of this period, on the other hand we find that of 'Alī b. Ḥusain, who might perhaps be identified with the 'Alī-Tegīn of literary sources (cp. Howorth in the *Journ. of the Roy. As. Soc.* xxx. 485-486). We know just as little as to when and how he acquired his authority. Baihaḳī (ed. Morley, p. 418) represents the Wezīr Abu 'l-Ḥasan Maimandī as saying in the year 423 (1032), that 'Alī-Tegīn had been in Mā warā' al-Nahr for thirty years. In 416 (1025) 'Alī-Tegīn had to defend himself at the same time against Maḥmūd of Ghazna and the powerful Ḳadr-Khān of Kāshghar; the union of the allied armies took place not far from Samarḳand; 'Alī-Tegīn was forced to evacuate his capitals Samarḳand and Bukhārā, and to retreat to the steppes; during the pursuit his wife and daughter fell into the hands of the enemy (for details see Gardīzī, *Zain al-akhbār*, ms. Cambridge, King's College n⁰. 213, fol. 123-124, and ms. Oxford, Bodleian, Ouseley n⁰. 240, fol. 153-154, quoted by W. Barthold, *Turkestan during the epoch of the Mongol invasion* (*Turkestan v epokhu mongolskago nashestwiya*) texts pp. 14—17; Maḥmūd's union with Ḳadr-Khān is briefly mentioned in Baihaḳī, ed. Morley, pp. 98 and 655). But the land was soon cleared of Maḥmūd and his allies, so that 'Alī-Tegīn was able to maintain his rule. In 423 (1032) the Khwārizmshāh Altūntāsh appeared before Bukhārā with an army, by order of the Sultan Mas'ūd, and captured the city; he was however mortally wounded in the battle of Dabūsiya, as the result of which his Wezīr was compelled to conclude a treaty with 'Alī-Tegīn, and to lead his army back to Khwārizm (Baihaḳī pp. 424-425). 'Alī-Tegīn's death must have taken place towards the end of 425 or the beginning of 426 (in Autumn 1034). When Mas'ūd received in Dhu'l-ḳa'da, 425 (beginning of October, 1034) a report from Khorāsān, 'Alī-Tegīn was mentioned therein as a living ruler (Baihaḳī p. 535); yet in the middle of Rabī' I, 426 (end of January, 1035) the tidings of his death was only known in Nīshāpūr as a vague rumour (*ib.* p. 551); not until the beginning of Djumādā II (April) of the same year, did the Sultan Mas'ūd, who was then in Ṭabaristān, receive certain tidings from Balkh that 'Alī-Tegīn was dead and that his eldest son had succeeded him (*ib.* p. 575). Yet Baihaḳī in another passage (p. 856) regards the departure of the Seldjūḳs from Mā warā' al-Nahr, which took place as early as the year 425 (Autumn of 1034), as a consequence of the events occurring after 'Alī-Tegīn's death. (W. BARTHOLD.)

ALĪ TEPEDILENLI, born at Tepe-dilen (Albania) in 1741, was a descendant of the old Beys of the land. His father having been deprived of his fief, 'Alī gathered together a number of brigands and succeeded in re-capturing Tepe-dilen. To the Sublime Porte he rendered the service of subduing the Pashas of Scutari (Shkodra) and Delvino; was confirmed in his office of Bey; became Pasha of Trikala in 1787; took Janina in the following year and became Governor of it; in 1797 he had it fortified by French engineers; the English ceded Parga to him in 1817. He ruled in Albania, Epirus and part of Thessaly, and declared himself independent in 1234 (1819), when he was summoned to Constantinople to justify his conduct. In order to defend himself, he enrolled Greek volunteers and klephts (brigands) in the Morea, in Livadia and in Boeotia, as well as Servians and Walachians. His sons, Aḥmed Mukhtār, Walī and Ṣāliḥ, who were in command at Berāt, Prevesa, and Lepanto (Ḳ'ine-bakhti) respectively, were either defeated, or abandoned him, in succession. Overpowered himself near Janina by Pehlīwān and Ismā'īl Pasha (22 Dhu'l-ḳa'da, 1235 = Aug. 31, 1820), he shut himself up in the citadel, with 800 men and 200 pieces of cannon; held out for several months, so bravely that Khurshīd Pasha, discouraged retired to Arta and did not succeed in regaining his advantage till the year following (1237 = 1821). Hemmed in at close quarters in a tower of the castle on the lake, 'Alī Pasha surrendered on condition of a safe-conduct; but the Sultan Maḥmūd having ordered his death, he died defending himself against the soldiers sent to arrest him (13 Djumādā I, 1237 = Feb. 5, 1822). Avaricious, cruel and treacherous, but of remarkable energy, he lent powerful aid to Greek independance by calling the insurgents of Greece to his assistance.

'ALĪ WĀSI'. [See WĀSI' 'ALĪSI.]

ALIDAD(E). [See AL-'IḌĀDA.]

'ALIDS, descendants of 'Alī b. Abī Ṭālib, who had fourteen sons and at least seventeen daughters, namely: 1. by Fāṭima, daughter of the Prophet, his only lawful wife while she lived: al-Ḥasan, al-Ḥusain, Muḥassin (Muḥsin among the

Persian Shī'ites) who died in infancy, Zainab the elder, Umm Kulthūm the elder; 2. by Umm al-Banīn bint Ḥizām: al-'Abbās, Djaʿfar, 'Abd Allāh, 'Othmān (all killed at Kerbelā', without issue, save the first); 3. by Lailā bint Masʿūd b. Khālid: 'Ubaid Allāh, Abū Bekr; 4. by Asmā' bint 'Umais al-Khathʿamiya: Yaḥyā, Muḥammed the younger (according to Hishām b. Muḥammed), or Yaḥyā, 'Awn (according to Wāḳidī, Muḥammed the younger being the son of a slave); 5. by Umm Ḥabīb bint Rabīʿa, surnamed al-Ṣahbā', a slave captured by Khālid b. al-Walīd at 'Ain al-Tamr: 'Omar, Ruḳaiya; 6. by Umāma bint Abi'l-'Āṣ b. al-Rabīʿ, whose mother was Zainab, daughter of the Prophet: Muḥammed the second; 7. by Khawla bint Djaʿfar: Muḥammed the elder, surnamed Ibn al-Ḥanafiya; 8. by Umm-Saʿīd bint 'Urwa b. Masʿūd al-Thaḳafī: Umm al-Ḥasan, Ramla the elder; 9. by Maḥyāt bint Imru' al-Ḳais b. 'Adī: a daughter who died in infancy; 10. by different mothers whose names are not known: Umm Hāni', Maimūna, Zainab the younger, Ramla the younger, Umm Kulthūm the younger, Fāṭima, Umāma, Khadīdja, Umm al-Kirām, Umm Salama, Umm Djaʿfar, Djumāna, Nafīsa (Ṭabarī i. 3471 *et seq.*).

Five of these sons left issue, namely: al-Ḥasan, al-Ḥusain, Muḥammed b. al-Ḥanafiya, 'Omar and 'Abbās (Wāḳidī in Ṭabarī i. 3473; Masʿūdī, *Murūdj* v. 149; *id.*, *Tanbīh*, transl. Carra de Vaux p. 388). The most celebrated line is that of al-Ḥusain; the last nine of the "twelve Imāms" of the Shīʿahs are directly descended from it: 'Alī Zain al-'Ābidīn, Muḥammed al-Bāḳir, Djaʿfar al-Ṣādiḳ, Mūsā 'l-Kāẓim, 'Alī al-Riḍā, Muḥammed al-Djawād, 'Alī al-Hādī, Ḥasan al-'Askarī, Muḥammed al-Mahdī [see the separate articles].

The descendants of 'Alī b. Abī Ṭālib were, for the most part, unfortunate; and their misfortunes fill the pages of Muslim history. The 'Alids were persecuted by the Umaiyads (Ibrāhīm the Imām at Ḥarrān, Zaid b. Zain al-'Ābidīn at Kūfa); and they were outwitted by the 'Abbāsids, who diverted to their own advantage the sympathies of the Persian adherents to the Shīʿah cause. Many among them died by poison, as al-Ḥasan and Djaʿfar al-Ṣādiḳ at Medina; Mūsā 'l-Kāẓim at Bagdad; 'Alī al-Riḍā at Ṭūs; Muḥammed al-Djawād at Bagdad; others revolted against the authority of the Caliphs, and died fighting or at the hands of the executioner. Above all the branch of al-Ḥasan has furnished a large number of unsuccessful pretenders: Muḥammed al-Nafs al-Zakiya (brother of the Idrīs who founded a dynasty in the Maghrib) at Medina in 145 (762-763); a brother of his, Ibrāhīm, at Baṣra; Ḥusain b. 'Alī at Mecca in 169 (785-786); Muḥammed b. Ṭabāṭabā in the 'Irāḳ (169 = 785-786); Muḥammed b. Sulaimān at Medina; 'Alī b. Muḥammed at Baṣra (at the same time as Zaid b. Mūsā 'l-Kāẓim); Ibrāhīm b. Mūsā in Yemen; al-Ḥasan b. Zaid in Ṭabaristān (250 = 864); al-Ḥusain at Kūfa; Ismāʿīl b. Yūsuf at Mecca; Muḥammed b. Zaid in Ṭabaristān (281—287 = 894—900); Aḥmed b. Muḥammed in Upper Egypt; Ḥasan b. 'Alī in Ṭabaristān (301 = 913-914); etc. The branch of al-Ḥusain, which was distinguished for its piety, its holiness, and the purity of its morals, has furnished fewer insurgents; yet in addition to Zaid b. Mūsā, who is mentioned above, Muḥammed b. Djaʿfar al-Ṣādiḳ, who revolted at Mecca in 200 (815-816), may be cited; so also al-Ḥusain al-Afṭas, at Medina; Muḥammed b. Ḳāsim in Khorāsān (219 = 834), al-Ḥasan al-Karkī at Ḳazwīn (250 = 864), Muḥassin (Muḥsin) b. Djaʿfar, surnamed Ibn Riḍā, at Damascus. The Idrīsids are certainly 'Alids (al-Ḥasan's branch); the case of the Fāṭimids and the Almohades (al-Muwaḥḥidūn) is less certain. A list of the 'Alids who died a violent death may be found in Masʿūdī, *Murūdj* vii. 404. Among the Umaiyads, 'Omar II b. 'Abd al-'Azīz was the only one who felt qualms of conscience on account of the fact that the family of the Prophet had been deprived of its rights; he distributed ten thousand dīnārs among the descendants of 'Alī by Fāṭima who resided at Medina (*Murūdj* v. 421); among the 'Abbāsids, al-Ma'mūn wished to make 'Alī al-Riḍā a joint-ruler, and to appoint him as his successor; but the persecutions began again with al-Mutawakkil, who broke open and ransacked the tomb of al-Ḥusain at Kerbelā', and lasted until the time of al-Muntaṣir.

At the present day the descendants of the Prophet are very numerous and are diffused throughout all Muslim countries; they are distinguished from the other Muslims by the title of *saiyid* or *sherīf*, and the right to wear the green turban. Their descent is established more or less authentically by a certificate or genealogical tree (*shedjere*, *silsile nāme*). In the Ottoman Empire, they are subjected to the supervision and the authority of the *naḳīb al-ashrāf* (inspector of the 'Alids) whose office was re-established by Sultan Bāyazīd II; there is one in every large city; he controls the certificates, gives them to those who have proved their descent, and punishes offenders who make use of the rank of *sherīf*.

'Alid dynasties. [For criticism of Alid descent, see the separate articles.] Branch of al-Ḥasan: 1. Idrīsids, descendants of Idrīs b. Idrīs b. 'Abd Allāh b. Ḥasan II in the Maghrib until 296 (908); 2. Sulaimānids, descendants of Sulaimān b. Dāwūd b. Ḥasan II, at Mecca, then in Yemen (al-Suwaidī, *Sabā'ik al-dhahab* p. 77); 3. Sulaimānids, descendants of Sulaimān, brother of Idrīs b. 'Abd Allāh b. Ḥasan II, in the Maghrib (al-Suwaidī, *l. c.*); 4. Banū Ukhaiḍir, descendants of Mūsā 'l-Djawn, brother of Muḥammed al-Nafs al-Zakiya, at Mecca and in Yemen from 251 till 350 (865—961; cp. Munadjdjim Bāshī ii. 420); 5. Banū-Ṭabāṭabā in Yemen, 288 (901); 6. the Hawāshim (Banū-Falīta), descendants of Abū-Hāshim b. Muḥammed, of the branch of 'Abd Allāh b. Ḥasan II, Emirs of Mecca from 460 till 598 (1067—1202); 7. Banū-Ṣāliḥ, descendants of Ṣāliḥ b. 'Abd Allāh b. Mūsā, of the same branch, at Ghāna in the Sūdān; 8. the Ḥasanids of Āmul, from 250 till 300 (864—913); 9. the Banū Ḳatāda, Emirs of Mecca, from 598 (1201-1202) to the present day; 10. the Saʿdid Sherīfs in Morocco, from 957 (1550) till 1070 (1659); 11. the Filālī Sherīfs in Morocco, from 1075 (1664) until the present; 12. and 13. the Wazzānī and Kittānī Sherīfs in Morocco, up to the present time.

Branch of al-Ḥusain: 1. the Fāṭimids or 'Ubaidids, descendants of Djaʿfar al-Ṣādiḳ; 2. the Ḥusainids of Ṭabaristān and of Dailam, from 301 to 318 (913—930); 3. other branches in Djordjān, from 304 to 356 (916—967); 4. Banū-Mohannā at Medina, since before 601 (1204; cp. Munadjdjim Bāshī ii. 665); 5. Rassids, descendants of Ḳāsim

Rassī, who died in 246 (860), of the branch of Zaid b. 'Alī b. al-Ḥusain, at Ṣa'da in Yemen, until 680 (1281); 6. Zaidids of Ṭabaristān, from 250 to 316 (864—928); 7. Zaidids of Ṣan'ā', descendants of Ḳāsim b. Muḥammed.

Uncertain descent: 1. Banū Mūsā at Mecca and at Medina, from 350 to 453 (961—1061); 2. Banū-Ḥammūd at Cordova and Malaga, from 407 to 449 (1016—1057). (Cl. Huart.)

ALIF is the name of the first letter of the Arabic alphabet, with the numerical value 1. Being ignorant of the origin of the name, the Arabs have invented a curious etymology (*Lisān* xx. 310, 11: *wa-summiyat alif^an li'annahā ta'laf^u 'l-ḥurūf^a kullahā*, i. e. because it can be associated with any of the other consonants). According to the character of the Semitic alphabets, which can only include consonantal sounds, we understand by it solely the voiceless laryngal explosive, which, according to tradition, was pronounced with an especially strong intonation by the Tamimites, almost like *'ain* (e. g. *'an* instead of *an*) — hence the designation *'an'ana* for this dialectic peculiarity; Arab philologists, however, saw in alif, when as mater lectionis it denotes the prolongation of the sound *a*, a sign to be distinguished from the consonant alif, and go so far in their error as to assign it in this case another place of articulation. This latter, which cannot be combined with a vowel of its own, is named by them *al-alif al-laiyina* or *al-sākina*, while on the other hand they call the true consonantal alif *al-alif al-mutaḥarrika*. As, however, in this last character the alif is always written with the sign *hamza* (ء), they also give it the appelation of *al-alif al-mahmūza* or briefly *hamza*. This distinction between *alif* and *hamza* which they which they lay down and strictly adhere to in their linguistics, is untenable; in practise they themselves frequently use *alif* in the wider sense to denote the consonantal sound. The alif of the article, of the verbal forms 7—10, and of a few nouns (e. g. *ism*, *imru'*) is only a prosthetic alif, which is not pronounced in continuous speech (al-Zamakhsharī, *al-Mufaṣṣal* p. 169, 1 *et seq.*) and hence it is called *alif al-waṣl* (alif of union), as opposed to the constant alif, *alif al-ḳaṭ'*, i. e. alif of separation. On account of the difficulties which the articulation of alif as an laryngal explosive produces, especially at the end of a syllable, attenuation of the sound takes place in the pronunciation. The Arabs, who name this phenomenon *takhfīf al-hamza* ("lightening of the hamza" — *Mufaṣṣal* p. 165, 11—167, 14), distinguish three kinds of *takhfīf*: 1. The transformation of the alif into *wāw* or *yā'* (*ibdāl al-hamza*), 2. the approximation to either of these two letters in the pronunciation (*dja'l al-hamza baina baina*) and 3. the complete elimination (*al-ḥadhf*). Doubling or assimilation of the consonantal alif can only take place in cases like *al-ra''ās* (*Mufaṣṣal* p. 192, 4—5); with regard to the alif of prolongation, this is of itself inconceivable.

On account of its manifold application in Accidence, the Arabs have introduced names (*alḳāb al-alifāt*) for the different functions of alif. The *alif al-wiḳāya* or *al-alif al-fāṣila* (the "diacritic" alif), occurring at the end of some verbal forms (e. g. 3[rd] pers. pl. masc. perf.) has only orthographical significance; the *alif al-ilḥāḳ* (the affixed alif) has a constructive etymological force in the case of masculine and feminine nouns, and is either *alif maḳṣūra* (alif liable to abbreviation) as in *al-arṭā*, *al-ṣabrā*, or *alif mamdūda* (alif always long) as in *al-ḳiṣā'*, *al-ḥawrā'*; as a prefix it can be used either as *alif al-tafḍīl wa'l-taṣghīr* (alif expressing superiority and inferiority), to form the elative, or as *alif 'āmila* or *alif al-'ibāra* (the alif which influences meaning) to form the 1. pers. sing. fut. — In addition mention must be made of the interrogative alif (*alif al-istifhām*), the alif of the vocative (*alif al-nidā'*), the alif expressing a lament (*alif al-nudba*), further that which forms the plural (*alif al-djam'*; e. g. in *djibāl*) and that which forms the dual (*alif al-tathniya*). In all Arabic lexicons at the beginning of the articles *Hamza* and *Alif laiyina*, these and other cases are specified, and also most grammarians treat alif as an auxiliary and supplementary letter (*ziyādat al-alif wa'l-hamza*) in special paragraphs (e. g. *Mufaṣṣal* p. 170, 6—15).

ALIGARH is the capital of the district in British India of the same name, division Meerut (Mīrat) in the "United Provinces". The district (1946 sq. miles, or 5024.5 sq. km.) had 1 200 822 inhabitants in 1901, and the town 70 434 (of whom 27 518 were Muhammedans). The town was originally called Coil (Kol), while the citadel, which was erected in 1524, was denoted by Aligarh ("high fortress") after its restoration in 1776 by Nadjaf Khān. Before this the fortress was called Ramgarh, and occasionally one also comes across the name Sābitgarh, after a certain Sābit Khān, and Muḥammedgarh. The modern Aligarh is principally noted for its Anglo-Oriental College. This was founded in 1875 by Saiyid Aḥmed Khān [q. v.], although it was not until January 1877 that the Viceroy, Lord Lytton, laid the foundation-stone of the present College. The erection was considerably enlarged later by the foundation of a hospital and of the so-called "English House". During the lifetime of Saiyid Aḥmed Khān (i. e. until 1898), the management of the affairs of the College, especially the finance, were in his hands, and caused him considerable anxiety. He had, however, the good fortune to possess in Th. Beck an excellent principal for the College, who during his term of office (1883—1899) was able to surmount all difficulties, and raised the establishment to a flourishing condition. He found worthy successors in Th. Morison (1899—1905) and W. A. J. Archbold, who at present holds the position. Although the original intention of the founder aimed at juvenile instruction, the school soon developed into a College on English lines, which the directors are now striving to convert into a Muhammedan University. In 1891 the number of students was 310; ten years later it increased to 560, and at the present time has reached to upwards of 800. Instruction is given in the following subjects: English, Arabic, Persian, Sanskrit, History, Mathematics etc. Eight teachers of European origin, and a certain number of Indian graduates, are engaged in the work; the appointment of Dr. J. Horovitz

to the Chair of Arabic arose from the efforts which are being made to familiarise the students with European methods of research in this branch also. The management of the College lies in the hands of a number of Muhammadan trustees, and is independent of the British Government, although the latter promotes the enterprise in different ways.

History: Coil, which was certainly of ancient foundation, was captured towards the end of the 12th century by Kutb al-Dīn Aibeg [q. v.]. After this it is often mentioned in the history of the Muhammedans of India and has been described by many Muslim authors, as for example by the famous traveller Ibn Baṭūṭa (cp. the Paris edition of his *Travels*, iv. 6), who visited it in 1342 A.D. In 1785, the town fell into the hands of the Mahratta chiefs of the Sindhia family, who with the help of the Frenchman De Boigne drilled their troops in European fashion, but were finally compelled to yield the town to the English under Lord Lake (1803).

ALIHA, pl. of Ilāh [q. v.].

ALILAT, according to a much discussed but very doubtful passage in Herodotus, is the name of an Arabian goddess. As deities of Arabia in iii. ch. 8 he mentions Dionysos, called Opatal by the Arabs, and Urania (i. e. Aphrodite Urania), whom they name "Alilat". On the other hand he says (i. ch. 131), that Aphrodite Urania is called Mylitta by the Assyrians, and "Alitta" by the Arabs. Hence the question arises, which form is the correct one. Blochet proposes to change Alilat to Alidat; but it is just as probable that in the second passage the name Mylitta which precedes may be responsible for the corruption of the authentic Alilat. Proceeding from Alilat, the form can be explained either as *al-Ilat* (i. e. fem. of *El*; cp. *'Il* of the Phoenicians and the South Arabians) or as a contraction of *al-Ilāhat* (i. e. fem. of *Ilāh*). According to the latter explanation, whose upholders have in part proposed to read "Alilaat" for Alilat, the name would be identical with al-Lāt [q. v.]. Glaser and Hommel compare the Egyptian "Wereret" with Alilat.

ALĪSA' (or Alyasa') b. Ukhṭūb, the Biblical prophet Elisha, is mentioned twice in the Ḳor'ān (vi. 86; xxxviii. 48), both times after Ismā'īl (Ishmael). Baiḍāwī (on Ḳor'ān, *loc. cit.*) says that Ḥamza and al-Kisā'ī read Allaisa', and he remarks that in either reading the first syllable is the definite article. Although in I Kings xix. 16, 19 it is said that Elisha was the son of Shaphat, the Muslim commentators on the Ḳor'ān and chroniclers call Alīsa''s father Ukhṭūb. Khondemīr makes him a descendant of Ephraim son of Joseph. His first meeting with Ilyās (Elijah) is related as follows: Ilyās once came into the house of a poor old Israelite widow, whose deceased husband was called Ukhṭūb and who had a young paralytic son named Alīsa'. Ilyās cured the latter through his prayer, and since then Alīsa' accompanied him in all his errands. This has evidently been adapted from I Kings xvii. 9 *et seq.*, although in xix. 20 it is said that Elisha when he first met Elijah had both his parents living. Certain authors identify Alīsa' with the prophet generally designated as *Ibn al-'adjūz* ("the son of the old woman"), but Ṭabarī (i. 535) applies this appellation to Ḥazḳīl (Ezekiel). Alīsa' was the successor (*waṣī*) of Ilyās in prophecy; he was also in charge of the Ark of the Covenant, which according to Muslim writers was handed over from one prophet to the other. After having preached to the Israelites the unity of God, Alīsa' prayed to God to take him away from this world and place him near Ilyās. His first wish was granted; he died leaving Dhu 'l-Kifl as his successor. — The Muslim authors assign Alīsa' a much earlier epoch than that in which the Biblical narrative places him, i. e. long before King Saul. Ṭabarī (i. 559) even says that it was Alīsa' whom the witch of En-dor made to rise from the grave for King Saul (see 1 Samuel xxviii. 8 *et seq.*). But there is much confusion as to his identity; both Ṭabarī and Tha'labī quote the opinion of certain authorities who identify Alīsa' with al-Khiḍr, while Khondemīr quotes the opinion of one who identifies him with Dhu 'l-Kifl.

ALIZARI (Alizzari, Lizari, Izari, Azala; according to M. Devic, *Dictionnaire étymologique des mots d'origine orientale* from the Arabic *al-'aṣāra*, i. e. *'uṣāra* pressed-out juice) denotes the portion of the root of the madder which is under the earth, from which alizarin was formerly obtained; cf. H. Baillon, *Dictionnaire de Botanique* i. 116a. (J. Hell.)

ALJAMIA and Aljamiado are the Spanish designations for "Spanish, written in Arabic characters". The word is derived from the Arabic *al-'adjamiya*, which primarily denotes any foreign, non-Arabic language; so in the East, especially Persian; in Syria and the whole of North Africa, the "lingua franca", which consists chiefly of Romance and some Arabic elements; in the Iberian peninsula, the native, Romance dialects (in

opposition to the Arabic, *al-ʿarabiya*) especially, the Castilian, the Aragonian and the Valencian: el romance castellano, aragonés, valenciano (rarely named *rūmī*, i. e. Romance, and *lafinī*, i. e. Latin). For the rest, Saavedra has rightly extended the term aljamía to include all the literary productions of the Mudejares and Moriscos (Muḥammedans under Christian rule from about 1085, the date of the capture of Toledo, till 1609), whether these are written in Arabic or in Latin characters. These works, "textos aljamiados", have an especial value historically and philologically: in spite of the difficulties of reproducing Spanish in Arabic characters, and Arabic names in Latin letters, it is extremely interesting from the philological and phonetic point of view, to learn how the Mudejares and Moriscos of different centuries pronounced Spanish and transcribed it in Arabic letters and how they reproduced Arabic names and expressions in Latin letters. Moreover these documents give evidence of the faith, the customs, the social and political vitality of that people without a country of its own, which was indeed tolerated at first, but was more and more oppressed, until finally as the result of the growth of Spanish fanaticism owing to the Inquisition and the Reformation, it fell a victim to Christian intolerance. Yet the literary value of this whole literature is not very considerable: diction, construction and style are strange, forced, and feeble; though to a certain extent it improved side by side with the development of Spanish literature. The *Poema*, however, or the *Historia de José* (*Alhadits de Yusuf*; 14th century), the later "Panegyric on Muḥammed" and the cyclic poem of the Aragonian Muḥammed Rabadan, are noteworthy literary productions as regards metre, poetry, and matter. After the banishment of the Moriscos in 1609, the exhausted Aljamiado completely dies out, both in Spain and in Africa.

ʿALḲA (A.) = bastinado.

ALḲALI. [See al-ḳily.]

ʿALḲAMA b. ʿAbada al-Tamīmī surnamed al-Faḥl, early Arab poet, lived in the 6th and 7th centuries. His poetry relates to the combats which took place between the Lakhmids and the Ghassānids; by reciting a few ḳaṣīdas, he obtained liberty for his brother Shaʾs and the other Tamīmites, whom al-Ḥārith b. Djabala, king of Ghassān, had taken prisoner. He had poetical contests with several contemporary poets, among them Imruʾ al-Ḳais. The wife of the latter, Djundab, whose decision, it was said, had been asked by the two poets, decided in favour of ʿAlḳama; in consequence she incurred her husband's anger, and was afterwards divorced by him. ʿAlḳama married her, whence his surname of al-Faḥl. If the two poems which deal with the second day of al-Kulāb are really the work of ʿAlḳama, it is possible to fix more precisely the period in which he flourished. For most historians believe that Shaʾs was taken prisoner in the battle of ʿAin Ubāgh (c. 583 A. D.), when ʿAlḳama was no longer young (see poem nº. 2 in Ahlwardt's edition), and the battle of al-Kulāb took place, according to Caussin de Perceval, in 612 (*Essai sur l'histoire des Arabes* ii. 579). — The Dīwān of ʿAlḳama was first published, together with a German translation, by A. Socin (Leipzig 1867), then the text alone, by Ahlwardt in *The Divans of the six ancient Arabic poets* (London 1870).

al-ʿ**ALḲAMĪ** is the name of a canal by the lower Euphrates, now called Nahr Hindīya (cp. Le Strange, *The lands of the eastern Caliphate* p. 74). It gave the Vizier Ibn al-ʿAlḳamī [q. v.] his name.

ALKANNA. [See al-ḥinnāʾ.]

ALKEKENGI (Persian: *kākunadj*, arabicised: *kākandj*), the winter cherry (Physalis alkekengi), is a herbaceous plant of the solanum L. family (night-shades), found in Central and Southern Europe and in Asia, with oval leaves, small, whitish flowers and bright-red berries of the size of cherries. Alkekengi has been known since antiquity as a medicine and food (the ἁλικάκαβον of Dioscorides), as have all the members of the solanum family (Arabic: *ʿinab al-thaʿlab*, in Spain: *ʿinab al-dhiʾb*, i. e. fox- or jackal-cherry); the Arabs distinguish two varieties, one cultivated, which may have served as food (hence its Spanish name *ḥabb al-lahw*, joy-berry) and another kind which grows wild on the mountains (*ʿabūd*, in Spain *ghālīka*), which was held to possess more medicinal virtue. Alkekengi was used as a remedy for asthma and urinary diseases. As a food it was prized, and is still prized as an entrée or as dessert.

ALLĀH, the Supreme Being of the Musulmans;

I. *Before Islām.* That the Arabs, before the time of Muḥammed, accepted and worshipped, after a fashion, a supreme god called Allāh, — "the *Ilāh*", or the god, if the form is of genuine Arabic origin; if of Aramaic, from *Alāhā*, "the god" — seems absolutely certain. Whether he was an abstraction or a development from some individual god, such as Hubal, need not here be considered. For the archaeological and non-Arabic evidence see Wellhausen, *Reste arabischen Heidentums*, 2d ed., pp. 117 *et seq.*) and especially Nöldeke's article on Arabs (ancient) in Hasting's *Dictionary of Religion and Ethics*, i. 662. Here it will suffice to give the evidence of the Ḳor'ān. There, the Meccans admit that Allāh is creator and supreme provider (xiii. 17; xxix. 61, 63; xxxi. 24; xxxix. 39; xliii. 8, 87; it is surely a strain on xiii. 18 and xxix. 63 to make them prove that Allāh was a rain-god); they call upon him in times of special peril (x. 23; xvi. 55; xxix. 65; xxxi. 31, but these passages hang together and hardly have independent weight); they recognize him by swearing solemnly and specially by him (vi. 109; xvi. 40; xxxv. 40); they assign him a separate portion, distinct from that of all other deities (vi. 137); they urge that he had never forbidden them to worship other gods with him (vi. 149; xxxvii. 168). But they also recognized and tended to worship more fervently and directly other strictly subordinate gods. Here it is not always easy to distinguish between their views and the interpretation of their views adopted by Muḥammed, especially between their vocabulary and that of Muḥammed. It is certain that they regarded particular deities (mentioned in liii. 19-20 are al-'Uzzā, Manāt or Manāh, al-Lāt (?); some have interpreted vii. 179 as a reference to a perversion of Allāh to Allāt) as daughters of Allāh (vi. 100; xvi. 59; xxxvii. 149; liii. 21); they also asserted that he had sons (vi. 100). But whether the Meccans used of these the term *shurakā'* we cannot tell; perhaps less probable is that they spoke of them as *malā'ika*. On all ordinary occasions they worshipped these rather than Allāh; their offerings were made by preference to them, and Allāh was defrauded (vi. 137 *et seq.*); at least these would intercede with Allāh (liii. 26); yet the Meccans were uncertain as to whether these were creators (xiii. 17 *et seq.*) and in all extremities they came back to Allāh; as to him there was no doubt. Certain also is that they asserted a "kinship" (*nasab*) between Allāh and the Djinn (xxxvii. 158; comp. for Ḳor'ānic use of the word xxv. 56, xxiii. 103), made them partners of Allāh (vi. 100); made offerings to them (vi. 128); sought aid of them (lxxii. 6). Whether they had the idea of angels and asserted their "partnership" is not so certain; that may be Muḥammed's interpretation (vi. 100; iii. 28). As for Muḥammed, his attitude in these matters is also clear. Besides Allāh, there existed angels and Djinn with Satan and the Satans in some relationship to the two latter. These, in reality, are the beings on whom the Meccans call; but they can do nothing for them (xvii. 58); making them feminine and giving them names is unwarranted invention. It will be seen, then, that whatever may have been the earlier case in Mecca and whatever the case in the rest of Arabia, and whatever may have been the origin of the names applied, the religion of Mecca in Muḥammed's time was far from simple idolatry. It resembled much more a form of the Christian faith, in which saints and angels have come to stand between the worshippers and God. And Muḥammed naturally regarded himself as a reformer who was preaching an earlier and simpler faith and putting angels and Djinn back into their true places.

II. *Muḥammed's Doctrine of Allāh.* His attitude is stated most simply in the first article of the essential Muslim creed: *Lā ilāha illa 'llāh*, "There is no god save Allāh". This meant, for Muḥammed and the Meccans, that of all the gods whom they worshipped, Allāh was the only real deity. It took no account of the nature of God in the abstract, only of the personal position of Allāh. "Allāh", therefore, was and is the proper name of God among Musulmans. It corresponds to Yahwe among the Hebrews, not to Elōhīm. No plural can be formed from it. To express "gods", the Muslim must fall back upon the plural of *ilāh*, the common noun from which Allāh is probably derived; this Muḥammed does frequently when speaking of the "other gods" (e.g. *ālihatun ukhrā* vi. 19) which the Meccans joined to Allāh, and Islām has followed him, with, however, a preference to use instead the more distinctive *aṣnām* or *awthān*, "idols". Comp. article *Allāh* in Hasting's *Dictionary of Religion and Ethics*.

But, though the name was the same for the Meccans and for Muḥammed, their conceptions of the nature of the bearer of the name must have differed widely. The Meccans, evidently, had in general no fear of him; the fear of Allāh was an essential element in Muḥammed's creed. Allāh lay in very shadowy remoteness from Meccan life; he was very terribly near to Muḥammed at every moment — nearer than the neck-artery (l. 15). The Meccans did not hesitate to disregard him and to cultivate the minor gods; Muḥammed knew him as a jealous and vindictive sovereign, who would assuredly judge and condemn in the end. A vague abstraction had become an overwhelming personality.

We must now analyse that personality, as Muḥammed conceived it. Fortunately, the exigencies of the *saḏj'* rhyme led him to characterize Allāh by a number of epithets, and later Islām, in gathering up these "Most Beautiful Names" (*al-asmā' al-ḥusnā*) — the phrase itself occurs several times in the Ḳor'ān (vii. 179; xvii. 110; xx. 7; lix. 24) and shows Muḥammed's own relish for such descriptions — and using them devotionally, has followed a sound instinct. They express the concrete directness of Muḥammed's God far better than the lists of qualities (*ṣifāt*) of the scholastic dogmaticism, and may be used safely as an aid in correlating and stating Muḥammed's too often spasmodic and contradictory utterances. Comp. on them the article by Redhouse in *Journ. of the Roy. As. Soc.*, 1880, xii. 1—69.

First, Allāh in and by himself. The descriptions are at first sight a strange combination of anthropomorphics and metaphysics. Yet when Muḥammed speaks of Allāh's two hands (v. 69; xxxviii. 75) or of his grasp (xxxix. 67) or of

his eyes (liv. 14) or of his face (ii. 109, 274; vi. 52; xviii. 27 and often) or describes him as settling himself upon his throne (xx. 4 and often) we are not to regard that as due to an anthropomorphic theology but rather as the still plastic metaphor of a poet. To speak technically, we have here only *madjāz*; *tadjsīm* and *tashbīh* lay with the future exegetes. Similarly in the case of the metaphysics. The fire of Muḥammad's imagination expressing itself with concrete directness could call Allāh the First (*al-awwal*) and the Last (*al-ākhir*), the External (*al-ẓāhir*) and the Internal (*al-bāṭin*; all lvii. 3), and even the Self-Subsisting (*al-ḳaiyūm*, ii. 256; iii. 1) — the poets had already developed in Arabic a vivid power of wielding descriptive epithets; but the Existing (*al-wādjid*) does not occur in the Ḳorʾān, though it easily might, and the Necessarily Existing (*wādjib al-wudjūd*) belonged to the future scholasticism. Allāh, then, is the One (*al-wāḥid*, often), the Living (*al-ḥaiy*, ii. 256; iii. 1 etc.), the Exalted in and through himself (*al-mutaʿālī*, xiii. 10 only), the Exalted (*al-ʿalī*, often), the Comprehensive (*al-wāsiʿ*, ii. 248 etc.), the Powerful (*al-ḳādir*, ii. 19, etc.), the Self-Sufficing (*al-ghanī*, ii. 265 etc.), the Absolute Originator (*al-badīʿ*, ii. 111; vi. 101 only), the Enduring (*al-bāḳī*; as an epithet this does not occur in the Ḳorʾān: but the verb is very frequent of Allāh; see below), the Eternal (*al-ṣamad*, cxii. 2 only; but the exact meaning and origin of this ἅπαξ λεγόμενον were uncertain to the earliest commentators: comp. Ṭabarī, xxx. 196, 7), the Mighty (*al-ʿazīz*, often), the Grand (*al-ʿaẓīm*, often); the Dominant (*al-ḳahhār*, xii. 39, etc.), the Haughty (*al-mutakabbir*, lix. 23 only; an epithet of dispraise when used of any one but Allāh), the Great (*al-kabīr*, often), the Laudable (*al-ḥamīd*, often), the Glorious (*al-madjīd*, xi. 76; lxxxv. 15 only; otherwise of Ḳorʾān itself; another of the Names, "*al-mādjid*", does not occur in the Ḳorʾān), the Generous (*al-karīm*, often; in Arabic means strictly *generous*), He of Majesty and Generosity (*dhu 'l-djalāl wa 'l-ikrām*, lv. 78), the Majestic (*al-djalīl*; as epithet not in Ḳorʾān but the idea in other forms is very frequent), the Strong (*al-ḳawī*, often), the Firm (*al-matīn*, li. 58 only), the Knower (*al-ʿalīm*, often), the Subtile (*al-laṭīf*, vi. 103 etc.), the Aware (*al-khabīr*, often), the Wise (*al-ḥakīm*, often), the Hearer (*al-samīʿ*, often), the Seer (*al-baṣīr*, often), the Holy King (*al-malik al-ḳuddūs*, lix. 23; lxii. 1 only; *ḳuddūs* alone is reckoned as one of the Names; but it occurs only in combination with King; what idea Muḥammad associated with it is quite obscure, perhaps only of separateness; elsewhere the root is used only of the Holy Spirit, Gabriel; of the Holy Land; of the Holy Wādī in which Allāh met Moses; of the angels sanctifying Allāh; the commentators explain it, of course, as a term of *tanzīh*), the Peace (?; *al-salām*, lix. 23 only; again the idea is quite obscure but is almost certainly not "peace"; the commentators explain as *salāma* = "immunity from lack or defect", which is not at all impossible. It may be only a reminiscence of some phrase of a Christian religious service caught up by Muḥammad), Justice (?; *al-ʿadl*; occurs in tradition only but is worth adding, as no other of the Names represents the same idea; nearest comes the Best of Judges = *khair al-ḥākimīn*, vii. 85; x. 109; xii. 80 only; but *ʿadl* in the Ḳorʾān is used differently), the Benefactor (*al-barr*, lii. 28 only), the Light of the heavens and the earth (*al-nūr*, xxiv. 35 only; the context seems to point to worship in Christian churches and monasteries, and in that case the picture is derived from the lighted altar, and the Ḳorʾānic phrases in the context recall "the Light of the World" in the Gospel and "Light of Light" in the Nicene Creed), the Real, or Reality (*al-ḥaḳḳ*; used frequently in the Ḳorʾān of the content of the message of Muḥammad, *al-ḥaḳḳ min rabbika*, but also of Allāh in xx. 113; xxii. 6, 61; xxiv. 25; xxxi. 29 in phrases "the real king", "he is the reality".

These epithets state for us a Being who is self-sufficing, all-powerful, all-knowing, all-encompassing, eternal; who is the only Reality. His few ideal qualities are rarely and obscurely stated. What "holiness", "peace", "light" meant for Muḥammad, in regard to Allāh, we can hardly guess. That he would have thought fit to call him "just" may be doubted. The epithet frequently translated "truth" means, rather, "reality".

Next, Allāh in relation to others, that is, in relation to his creation; for nothing exists save him and that which he has made. He is the Creator (*al-khāliḳ*, lix. 24 etc.; *al-bāriʾ*, ii. 51; lix. 24 only; the last was evidently taken over by Muḥammad from the Hebrew, and is used without especial meaning), the Shaper (*al-muṣawwir*, lix. 24 only), the Beginner (*al-mubdiʾ*), the Restorer (*al-muʿīd*, these two not as epithets in the Ḳorʾān, but the idea frequently, e. g. xxix. 18; lxxxv. 13) the Giver of Life (*al-muḥyī*, xli. 39 only, but the idea often); the Giver of Death (*al-mumīt*, not as epithet in Ḳorʾān, but the idea frequently, *e. g.* xv. 23), the Heir (*al-wārith*, *ib.* 3) of all when all save him are dead, the Reckoner and Recorder of all things in a book (*al-muḥṣī*, not as epithet, but idea frequently, comp. xxxvi. 11; lxxviii. 29), the Sender of the dead from the graves (*al-bāʿith*, not as epithet in the Ḳorʾān, but idea very frequently), the Assembler of all, again, at the last (*al-djāmiʿ*, iii. 7; iv. 139), the Strengthener (*al-muḳīt*, iv. 87 only), the Guardian (*al-ḥāfiẓ*, lxxxvi. 4 only), the King (*al-malik*, often), the Lord of Kingship (*mālik al-mulk*, iii. 25 only), the Governor (*al-wālī*, xiii. 12 only), the Prevailer (*al-muḳtadir*, xviii. 43 etc.), the Tyrant (*al-djabbār*, lix. 23 only, the word elsewhere, 9 times, is used of men and in a bad sense only, coupled with *ʿanīd*, *shaḳī*, *ʿaṣī*, *mutakabbir*, comp. the last as applied to Allāh).

Allāh is thus the absolute Creator, Sustainer, Ruler, Destroyer, Restorer, Recorder; there is no power nor strength save in him. Expressions can be used of him in his absoluteness, which would mean evil, if used of men, who have no such primal right. He is the Exalter (*al-rāfiʿ*) and the Honourer (*al-muʿizz*), and he is the Abaser (*al-mudhill*). He is the Withholder (*al-māniʿ*) and he is the Advantager (*al-nāfiʿ*); he is the Deferrer (*al-muʾakhkhir*) and he is the Advancer (*al-muḳaddim*). He is the Contracter (*al-ḳābiḍ*) and he is the Spreader (*al-bāsiṭ*); he is the Distresser (*al-ḍārr*). It is true that these last do not occur as epithets in the Ḳorʾān; but their roots are common as used of Allāh. Curiously enough, the epithet form of the last, the Distresser, is used in the Ḳorʾān of Satan (lviii. 11).

Next, Allāh in relation to mankind. He is the Compassionate Compassionator (*al-raḥmān al-*

raḥīm) or the Compassionate Raḥmān, according to the degree of nominality which we assign to *Raḥmān*. These are the most frequent of the epithets, and stand at the head of all the Sūras but one. Also al-Raḥmān was at one time used by Muḥammed as a proper name, equivalent to Allāh, and the Meccans regarded this as one of his innovations. Compare the story of the treaty of Ḥudaibiya where they rejected the formula containing it and insisted on the old Meccan form "In thy name, O Allāh!" (Baiḍāwī, on Ḳorʾān xlviii. 26; Ibn Hishām, ed. Wüstenf., i. 747).

That Muḥammed derived the formula from South Arabia seems proved; see a paper by Mordtmann and Müller in *Wiener Zeitschr. f. die Kunde d. Morgenl.* x. 285 *et seq.* But it was no mere formula. Man's standing naked, defenceless and excuseless in God's presence was one of Muḥammed's most dominant ideas, and is expressed in these Names more frequently than any other. From the root meaning "to forgive" comes a crescendo of three: the Forgiver (*al-ghāfir*, vii. 154; xl. 2 only), the Much Forgiver (*al-ghafūr*, often), the Forgiver *par métier* (*al-ghaffār*, xx. 84 etc.). He is also the Pardoner (*al-ʿafūw*, iv. 46 etc.), the Clement (*al-ḥalīm*, often), the Repenter (*al-tawwāb*, ii. 35 etc.; used also of man), the Grateful (*al-shakūr*, xxxv. 27 etc.; used also of man, and explained by commentators as meaning in the case of Allāh, "the acknowledger of thanksgiving"), the Very Patient (*al-ṣabūr*, not as epithet in the Ḳorʾān, but idea frequently). Two more intimate Names of the same class, are the Kind (*al-raʾūf*, ii. 138 etc.) and the Loving (*al-wadūd*, xi. 92; lxxxv. 14 only). But he is also the Watcher (*al-raḳīb*, iv. 1 etc.), the Reckoner (*al-ḥasīb*, iv. 88; xxxiii. 39 only), the Witness (*al-shahīd*, often). Again, on man's behalf, he is the Faithful (*al-muʾmin*; of man it means "the believing"), the Protector (*al-muhaimin*, lix. 23 only), the Guide (*al-hādī*, often), the Guardian (*al-wakīl*, often), the Patron (*al-walī*, often). The last word is used of men also, and is the basis of the doctrine of saints in Islām. It means, literally, one who is near, a comrade or companion, and thus can be either the aiding patron or the dependent client. That there is a special class of the latter, the *walīs* or saints, the proof text is Ḳorʾān, x. 63: "Ho! the walīs of Allāh, there is no fear upon them, and they sorrow not". Naturally, then, he is the Avenger (*al-muntaḳim*, not as epithet in Ḳorʾān; but comp. v. 96), and the final Opener (*al-fattāḥ*, xxxiv. 25, and in other forms) who judges and distinguishes and divides between men — used also to indicate the "opener" of gain and victory. And as all things are in his hands, so all comes from him. He is the Giver (*al-wahhāb*, iii. 6 etc.), the Provider (*al-razzāḳ*, li. 58 only as epithet; but the idea of the dependence of all creation upon *rizḳ* from Allāh is very frequent), the Answerer of prayer (*al-mudjīb*, xi. 64 only; but the conception of prayer and petition is frequent); the Giver (*al-muʿṭī*) and the Sufficer (*al-mughnī*), taken later in sense of the Enricher do not occur as epithet in the Ḳorʾān, but their ideas are fundamental. Comp. e.g. xx. 52 and iv. 129.

Man's relation to Allāh, then, is that of dependence. He needs Allāh's forgiveness and patience. Allāh is a watcher and reckoner over him; but he is also a faithful protector and guide. From him comes all "sustenance" in the widest sense. He does everything directly — hence these epithets — and, logically, no angels or intermediaries are needed in the scheme. They must be in Islām, because Muḥammed found them in the fundamental religion of his day and had to accept them. And all is by his will: "he leadeth astray whom he wills, and guideth aright whom he wills" (xiii. 27; xvi. 95; lxxiv. 34). Each one can but hope that Allāh will guide him aright, submit himself to Allāh in absolute fear, and trust that Allāh will not cause him to forget and be of the losers in the Fire (lix. 19, 20). Antinomies had no terrors for Muḥammed. He, evidently, never thought about predestination and free-will, whatever later traditions may have put into his mouth; he expressed each side as he saw it at the moment, and as the need of the moment stood. So Allāh is kind, loving, patient (see above) on one side, and on another he says: "I created not the Djinn and mankind save that they should worship me. I seek not from them any sustenance, and I seek not that they should feed me". Allāh is the Sustainer, He of strength, the Firm! (li. 56—58). Again he is the Haughty (*al-mutakabbir*), the Tyrant (*al-djabbār*); if he aids, he also distresses (*ḍarr*). Again: "Whom Allāh guideth aright, he allows himself to be guided aright, and whom he leads astray, they are the losers" (vii. 177). And so frequently Allāh is said to lead astray (*aḍall*). And whenever the root *ṭbʿ* occurs (iv. 154; vii. 98, 99; ix. 88, 94; x. 75; xvi. 110; xxx. 59; xl. 37; xlvii. 18; lxiii. 3) it expresses the fundamental fact that Allāh "seals" the hearts of the unbelievers that they may not believe. These aspects of Allāh may not be contradictory; but their separate statement thus and the emphasis upon the last were full of meaning for the future theological development.

Muḥammed's position, then, was theistic in the highest degree, and his theology was theocentric. Yet it might rather be said that he was God-intoxicated, than that he had a theology. Certain ideas and phrases dominated him, and he neither thought nor cared whither they might lead. Thus Allāh was for him the Reality (*al-ḥaḳḳ*); but he never asked what that meant. He would have said, without hesitation, that there was when there was nothing but Allāh. Whether he would have gone on to say that there would be when there would be nothing but Allāh — as did some later sects — is uncertain. If put in a rhetorical form, he would probably have accepted it as an exalting of Allāh over his creatures. In fact, he pushed in certain phrases the absolute existence of Allāh so far that the later, pantheistic development is amply conditioned and explained. This occurs especially in connection with the phrase "the Face of Allāh", a phrase of unknown origin, but which for some reason seems to have impressed him deeply. The word "face" (*wadjh*) in the Ḳorʾān is used frequently with the meaning "self" (*nafs, dhāt*) in connection with men (e. g. ii. 106; iii. 18; iv. 124; vi. 79; x. 105; xxx. 29, 42; xxxi. 21; xxxix. 25; perhaps the origin of the idiom), but when used of Allāh, more colour and flavour of the original metaphor seem to remain, though the ultimate meaning is undoubtedly "self". Thus, men act out of desire for the Face of Allāh (ii. 274; xiii. 22; xcii. 20); they "desire" or "make for (*yurīdūna*) the Face of Allāh" (vi.

52; xviii. 27; xxx. 37, 38); they "act for the sake of the Face of Allāh" (lxxvi. 9). Then come the great texts: "Allāh's are the East and the West: wherever ye turn, there is the Face of Allāh" (ii. 109); "Everything goes to destruction (*hālik*) except his Face" (xxviii. 88); "Whoever is upon it (the earth) is fleeting (*fānī*); and the Face of the Lord abides, He of Majesty and Generosity" (lv. 26). In each case, "Allāh Himself" could be substituted with no essential loss; but Muḥammed, undoubtedly, felt the picturesqueness of the phrase, and later Ṣūfism built thereon its theories. With the commentators, the explanation is that all things besides Allāh are only "possible of existence" (*mumkin*), while he is "necessary of existence" (*wādjib al-wudjūd*); they may, therefore, be described according to their essential definition as "non-existent" (*ma'dūm*); i. e. because they *may* go to destruction, they *are* going to destruction. It may be doubted whether such a distinction, or, in fact, any clear thought was in Muḥammed's mind.

He left, then, this problem for the future Islām. It had to reconcile the intense personality and clear separateness of Allāh from the world with a direct working in the world, which amounts to immanence. The problem was further complicated by diverse phrases which suggested the essential non-existence of everything except Allāh. It may be said here, in short, that the scholastic theologians followed the idea of personality, and separated Allāh from his creation to a point where it was hard for them to explain how he could affect the world; in doing this they developed the doctrines of *tanzīh* (removal) and *mukhālafa* (difference), i. e. removal from Allāh of all qualities of impermanence, and assertion of the essential difference of his qualities and the similarly named qualities of human beings. The history of the development of Ṣūfism, on the other hand, is that of a gradual merging of the world in Allāh, until it could be asserted that Allāh was All. The Aristotelian-Neoplatonic philosophers followed a third line. Working essentially in independence of the exegesis of the Ḳor'ān, but seeking, for protection at least, to adapt themselves to its statements, they reached the other pantheistic position that All, i. e. the Aristotelian World, was Allāh. It was the life work of al-Ghazālī to mediate, and to state a position which orthodox Islām has not yet passed.
